Shillem shil'uhm (שִׁלֵּם *H8973,* prob. short form of שֶׁלֶמְיָהוּ *H8983,* "Yahweh has repaid" [see Shelemiah]; gentilic שִׁלֵּמִי *H8980,* "Shillemite"). Son of Naphtali, grandson of Jacob, and eponymous ancestor of the Shillemite clan (Gen. 46:24; Num. 26:49; in 1 Chr. 7:13 most versions, following the MT, have Shallum).

Shiloah sh*i*-loh'uh (שִׁלֵחַ *H8942,* from שָׁלַח *H8938,* "to send"; possibly alternate form of שֶׁלַח *H8940,* which may mean "canal" [see Shelah and cf. *HALOT,* 4:1518]). The prophet Isaiah, in the days of King Ahaz, accused his people of rejecting "the gently flowing waters of Shiloah" (Isa. 8:6). The Septuagint renders this name as *Silōam G4978,* but one should not assume that the passage refers specifically to the Pool of Siloam mentioned in Jn. 9:7; more likely it has in view an aqueduct connecting the Gihon Spring to the southern side of Jerusalem (cf. H. Wildberger, *Isaiah 1 – 12: A Continental Commentary* [1991], 342). See discussion under Siloam.

Shiloh sh*i*'loh (usually שִׁלֹה *H8926,* but also שִׁלוֹ *H8931* [Jdg. 21:19 et al.] and שִׁילוֹ *H8870* [only Jdg. 21:21; Jer. 7:12], meaning uncertain; the original form was probably שִׁלֹן, for the gentilic is שִׁילֹנִי *H8872* [see Shilonite]). A city in the territory of Ephraim, located by the biblical text as N of Bethel, S of Lebonah, and to the E of a road that connected Bethel to Shechem (Jdg. 21:19). It is identified with modern Khirbet Seilun, 20 mi. NNE of Jerusalem. The ark of the covenant and the tabernacle were there from the time of Joshua through that of Samuel. Shiloh was thus an important religious center for the Israelites. Its location was well suited to be a quiet place of worship. The town was surrounded by hills on all sides except the SW, and pasture lands and a water supply were nearby. The position is not strategic, however, and did not lend itself to defense nor to control of highways and land areas.

I. Excavations. Shiloh was identified with Seilun by E. Robinson in 1838 on the basis of surface explorations and the similarity of names. Danish expeditions in 1926, 1929, and 1932 confirmed this identification. There were traces of occupation in the Middle Bronze period (c. 2100 to 1600 B.C.), but no evidence of Canaanite occupation was found for the Late Bronze period (c. 1600 to 1200). Evidence was found, however, for the occupation of the site again beginning about 1200 and continuing to about 1050, when Shiloh or parts of it were destroyed, probably by the Philistines.

The Israelites were evidently the first to build extensively at the site. No sign of the shrine that played a central role in the life of Samuel was found (1 Sam. 1:9; 3:3). Evidence of a city wall, however, and also of a synagogue and a Christian church were discovered, and these suggest that the

site was remembered for many centuries later.

II. Shiloh in the Bible. After the conquest, Joshua first dwelt at GILGAL and then at Shiloh (Josh. 14:6; 18:1). Why Shiloh was chosen is not known, though the fact that it was seemingly uninhabited in Canaanite times may have suggested it as an "uncontaminated" location for worship. The tent of meeting was set up in Shiloh and the Israelites assembled there. Three men from each tribe were selected to travel the length and breadth of the Promised Land and to write a description of it. They then returned to Shiloh, and Joshua cast lots to give the seven remaining tribes their inheritances (18:1; 19:51). Shiloh did assume some military importance for Israel when the Reubenites, the Gadites, and the half-tribe of Manasseh built their own large altar by the Jordan (22:9, 12).

Shiloh.

The importance of Shiloh as a center for Israelite worship continued into the time of the judges (see JUDGES, PERIOD OF), although the ark of the covenant was in Bethel at least for a time (Jdg. 20:26 – 27). The biblical writer remarks upon the length of time that the house of God was there (18:31). There was a yearly feast of Yahweh held at Shiloh in which hundreds of dancing girls took part (21:20 – 23). Some 400 virgin girls had been brought from JABESH GILEAD to Shiloh to serve this purpose, and they eventually became wives to the Benjamites who had suffered tragic defeat and who, through the loss of their wives, no longer had the means to perpetuate the tribe. This annual festival with dancing girls has suggested to some the existence of a kind of FERTILITY CULT at Shiloh.

Remains of ancient Shiloh in the hill country of Ephraim. (View to the E.)

Shiloh continues to figure largely in the religious life of Israel during Samuel's time. ELKANAH, Samuel's father, went to Shiloh year by year to sacrifice to Yahweh. E LI and his two sons, HOPHNI and PHINEHAS, were priests in Shiloh at the time. It was in the temple at Shiloh that HANNAH prayed for a child and there she brought him to be dedicated to Yahweh's service (1 Sam. 1:9 – 28). The two sons of Eli had largely corrupted the sacrificial system as it was meant to be practiced at Shiloh, and their conduct with the women who served at the entrance of the shrine was scandalous (2:12 – 17, 22 – 25). This account has again suggested to some the presence of a kind of Canaanite fertility cult at Shiloh. Yahweh's appearance to the boy Samuel at Shiloh and his establishment as a prophet there also emphasize the centrality of the place in the religious history of early Israel (3:21).

When the ark of God was captured and Israel was defeated at the hands of the Philistines, Shiloh lost its significance (1 Sam. 4:3 – 4, 12), and the priests evidently fled to NOB just N of Jerusalem (22:11). Shiloh, or at least its temple, was evidently destroyed in about 1050 B.C., but the visit of JEROBOAM'S wife to the home of AHIJAH the prophet in Shiloh probably implies the existence of some kind of shrine there at least as late as 922 (1 Ki. 14:2, 4). It was generally recognized that God had "abandoned the tabernacle of Shiloh, / the tent he had set up among men. / He sent the ark of his might into captivity, / his splendor into the hands of the enemy" (Ps. 78:60 – 61). JEREMIAH implies that in his day the ruins of the shrine at Shiloh could still be seen, and this fact he used to give force to his declaration that the TEMPLE at Jerusalem would suffer a similar fate because of moral and religious corruption (Jer. 7:12, 14; 26:6, 9). The site of the city itself seems to have experienced some occupation as late as the time of GEDALIAH (41:5).

III. "Until Shiloh come." In Gen. 49:10, part of JACOB'S blessing to his son JUDAH, we find the Hebrew phrase ⟨*ad kî-yābō*⟩ *šîlōh* (*Qere šîlô*). Rendered "until Shiloh come" by the KJV, these words have been the occasion of a great deal of discussion and difficulty. It seems impossible to give a truly satisfactory explanation of the problem.

Shiloh in this passage has been taken traditionally as a name designating the MESSIAH. The name in this case might be derived from the verb *šālâ H8922*, "to be at ease," and would mean something like "the peace-giver." This derivation, however, is linguistically difficult. Shiloh is not found elsewhere in the Bible as a personal name, and the passage is not cited in the NT (as it likely would

be if it had been regarded as a prediction of the Messiah).

Interestingly, the QUMRAN compilation known as *Patriarchal Blessings* understands the verse thus: "until the Messiah of righteousness [*or* righteous Messiah] comes, the branch of David" (*ʿd bwʾ mšyḥ hṣdq ṣmḥ dwyd*, 4Q252 V, 3 – 4). The Dead Sea community took the passage to mean that royal power belonged forever to the house of DAVID (who was of the tribe of Judah), in contrast to the HASMONEAN priest-kings who ruled over them. Thus Gen. 49:10 was interpreted messianically before the Christian era, though Shiloh was not taken as a personal name, as far as is known, until much later (cf. in the TALMUD, *b. Sanh.* 98b). Further support for a messianic understanding comes from the various TARGUMS to the Pentateuch; for example, *Targum Onkelos* paraphrases, "until the Messiah comes to whom the kingdom belongs" (*ʿd dyyty mšyḥ, dlylyh hyʾ mlkwtʾ*).

A second interpretation suggests that Shiloh does refer to the city mentioned above, and the passage indicates that Judah or Judean rule was to continue until it extended as far as Shiloh (or until the Messiah came to Shiloh). If Shiloh is understood as being the center of Israelite worship and therefore as representative of Israel as a whole, the passage would find fulfillment in the prominence which the tribe of Judah gained and in the extension of her sovereignty by David. If in patriarchal times Shiloh was reckoned as a kind of foe to be conquered, this interpretation would be beset by perhaps the least difficulties.

Another suggestion, which involves a minor textual change, is based on the ancient versions, such as the Targumic paraphrase cited above as well as the SEPTUAGINT rendering (*heōs an elthē ta apokeimena autō*, "until the things stored up for him come"). According to this view, the word should be read as *šellô*, "what belongs to him" (i.e., the particle *ša-* H8611, "which," plus *lô*, "to him"). In support of this rendering, appeal can be made to Ezek. 21:27 (*ʿad-bōʾ ʾăšer-lô hammišpāṭ*, "until he comes to whom it rightfully belongs," probably an echo of Gen. 49:10). Thus the NIV renders, "until he comes to whom it belongs" (so also the Syriac version). Alternatively, some scholars understand the first element of the word to be *šay* H8856, "gift," and translate, "until tribute comes to him" (NRSV; similarly, NJPS).

Among various emendations proposed, a popular suggestion is *mōšĕlōh*, "his ruler." Interestingly, the Akkadian word for "prince" or "ruler" is *šêlu* (*šîlu*), and "his ruler" would appear as *šayyālô*. Other Assyrian technical terms are found in the OT (e.g., RABSHAKEH; TARTAN), and this may be a possible solution. It should be noted, however, that such terms occur in the OT only in the literature dating from the time that Assyria was in contact with the Hebrews, namely the 9th cent. B.C. and later.

(On the city and its excavations, see W. F. Albright in *BASOR* 9 [Feb. 1923]: 10 – 11; A. T. Richardson in *PEQ* no vol. [1927]: 85 – 88; H. Kjaer in *PEQ* no vol. [1927]: 202 – 13 and [1931]: 71 – 88; id. in *JPOS* 10 [1930]: 87 – 174; I. Finkelstein in *BAR* 12/1 [Jan.-Feb. 1986]: 22 – 41; *NEAEHL*, 4:1364 – 70. On the interpretation of Shiloh in Gen. 49:10, in addition to the commentaries on Genesis, see G. R. Driver in *JTS* 23 [1922]: 70; J. Lindblom in *Congress Volume: Copenhagen, 1953* [1953], 78 – 87; O. Eissfeldt in *Volume du congrès: Strasbourg, 1956* [1957], 138 – 47.)

H. G. ANDERSEN

Shiloni shi-loh'n*i*. KJV alternate form of SHILONITE (only Neh. 11:5).

Shilonite sh*i*'luh-n*i*t (שִׁלֹנִי H8872 [in 1 Chr. 9:5, שִׁלוֹנִי], gentilic of שִׁלֹה H8926; see SHILOH). (1) Descriptive term applied to AHIJAH the prophet, who tore the garment of JEROBOAM into twelve

pieces and prophesied that ten tribes would be given him (1 Ki. 11:29 [NIV, "of Shiloh"]; 12:15; 15:29; 2 Chr. 9:29; 10:15).

(2) A clan descended from JUDAH, mentioned in two lists of those who returned from the Babylonian EXILE (1 Chr. 9:5 [TNIV, "Shelanites"]; Neh. 11:5 [NIV and TNIV, "of Shelah"; KJV, "Shiloni"]). If the Masoretic vocalization is correct, these may have been persons who traced their relationship and ancestry to the city of Shiloh and who after the exile resettled in Jerusalem. Many scholars, however, believe that both passages should read *šēlānî H8989*, "Shelanite," that is, descendants of SHELAH son of Judah (cf. Gen. 38:5; Num. 26:20). See also ASAIAH #4; MAASEIAH #16.

<div align="right">M. H. HEICKSEN</div>

Shilshah shil'shah (שִׁלְשָׁה *H8996*, perhaps "gentle" [cf. SHELESH]). Son of Zophah and descendant of ASHER (1 Chr. 7:37); some emend the text to "Shelesh" (v. 35).

Shimea shim'ee-uh (שִׁמְעָא *H9055*, prob. short form of a name such as שְׁמַעְיָהוּ *H9062*, "Yahweh has heard" [see SHEMAIAH]). (1) Son of JESSE (1 Chr. 2:13; KJV, "Shimma"; 20:7). See SHAMMAH #2.

(2) Son of DAVID (1 Chr. 3:5). See SHAMMUA #2.

(3) Son of Uzzah and descendant of LEVI through MERARI (1 Chr. 6:30 [Heb. text, v. 15]).

(4) Son of Michael, descendant of Levi through GERSHOM, and grandfather of ASAPH the musician (1 Chr. 6:39 [Heb. text, v. 24]).

Shimeah shim'ee-uh (שִׁמְאָה *H9009* [1 Chr. 8:32], derivation uncertain; שִׁמְעָיָהוּ *H9056* [2 Sam. 13:3 et al.], prob. short form of a name such as שְׁמַעְיָהוּ *H9062*, "Yahweh has heard" [see SHEMAIAH]). (1) Son of JESSE (2 Sam. 13:3, 32; 21:21). See SHAMMAH #2.

(2) Son of Mikloth, descendant of BENJAMIN, and relative of King SAUL (1 Chr. 8:32; called "Shimeam" in 9:38).

Shimeam shim'ee-uhm (שִׁמְאָם *H9010*, derivation uncertain). See SHIMEAH #2.

Shimeath shim'ee-ath (שִׁמְעָת *H9064*, prob. short form of a name such as שְׁמַעְיָהוּ *H9062*, "Yahweh has heard" [see SHEMAIAH]). An "Ammonite woman" who was the mother of ZABAD, one of the murderers of King JOASH of Judah (2 Chr. 24:26). In the parallel passage (which has JOZABAD, 2 Ki. 12:21), Shimeath is not identified as a woman; the name could be masculine (in spite of the apparently feminine ending), and some scholars argue that Shimeath was in fact the father of Zabad/Jozabad. See also SHIMRITH.

Shimeathite shim'ee-uh-th*i*t (שִׁמְעָתִי *H9065*, prob. gentilic of a place name such as שֶׁמַע *H9054*). Among the descendants of CALEB (through his son HUR and grandson SALMA) are listed three "clans of scribes who lived at Jabez: the Tirathites, Shimeathites and Sucathites. These are the Kenites who came from Hammath, the father of the house of Recab" (1 Chr. 2:55). Nothing else is known about these clans, and their names cannot be traced to a particular person or place. On the relationship between Calebites and KENITES, see discussion under JABEZ.

Shimei shim'ee-i (שִׁמְעִי *H9059*, "my listening" or short form of a name such as שְׁמַעְיָהוּ *H9062*, "Yahweh has heard" [see SHEMAIAH]). (1) Son of GERSHON, grandson of LEVI, and eponymous ancestor of the Shimeite clan; usually paired with his brother LIBNI (Exod. 6:17 [KJV, "Shimi"]; Num. 3:18, 21; 1 Chr. 6:17). In one passage (1 Chr. 6:42 – 43) Shimei is identified as son of Jahath and *grandson* of Gershon. Elsewhere (23:7 – 11) Shimei is paired with LADAN, while Jahath is listed as first son of Shimei. Some scholars posit two different descendants of Gershon named Shimei (cf. KD, *Chronicles*, 256); others believe that the genealogies have suffered textual corruption. The descendants of Shimei are mentioned unexpectedly in Zechariah's prophecy of future mourning, which focuses on the Levites in general and on the Shimeite clan in particular (Zech. 12:13). "Of two tribes he mentions one leading family and one subordinate branch, to show that not only are all the families of Israel in general seized with the same grief, but all the separate branches of those families" (KD, *Minor Prophets*, 2:392).

(2) Son of Gera, descendant of BENJAMIN, and relative of SAUL (2 Sam. 16:5). When DAVID was seeking to escape from his son ABSALOM, Shimei met the fleeing party at BAHURIM and began hurling stones as well as ugly words at the king (vv. 6 – 8). David's men offered to silence the insolent Benjamite but the king refused, believing that Yahweh would take note of the affliction he suffered under the tormenting tongue of Saul's house. A bit of the king's faith (or theology) showed itself in his response. God would reward such suffering with good, and he needed divine support right then more than he needed peace with Saul's house (16:11 – 12). With the turn of events that brought deliverance to David and his faithful followers, Shimei found it necessary to reverse his former behavior. As David returned to Jerusalem, Shimei met him again, but this time at the Jordan River with 1,000 Benjamites; in great humility and penance, he pleaded for mercy (19:16 – 23). The king restrained his men from seeking vengeance and assured the trembling Benjamite that he would not be executed. Later, however, as David saw his death approaching, he instructed SOLOMON to see to it that Shimei receive the punishment befitting his deeds (1 Ki. 2:8 – 9). Solomon brought Shimei to Jerusalem and warned him that he would be put to death if he ever left the city (vv. 36 – 37). Things went well for Shimei for three years, but when his slaves ran away he left the city to retrieve them. Upon his return, Solomon carried out the threatened penalty; Shimei was slain (vv. 38 – 46).

(3) Son of JESSE (2 Sam. 21:21 NRSV). See SHAMMAH #2.

(4) Son of Ela; he was appointed by Solomon from the tribe of BENJAMIN to provide food for the royal household (1 Ki. 4:18). Shimei was one of the twelve officers whose task it was to provide supplies one month of the year. If this appointment was a reward for faithful service under David, this Shimei may be the same man who with Rei remained faithful to David in ADONIJAH'S attempt to usurp the throne (1:8).

(5) Son of Pedaiah, descendant of David, and brother of ZERUBBABEL (1 Chr. 3:19).

(6) Son of Zaccur and descendant of SIMEON; the text notes that he had twenty-two children (1 Chr. 4:26 – 27). Some interpret the Hebrew to mean that Shimei, Zaccur, and Hammuel were all sons of MISHMA.

(7) Son of Gog and descendant of REUBEN (1 Chr. 5:4).

(8) Son of LIBNI and descendant of Levi through MERARI (1 Chr. 6:29).

(9) A head of family in the tribe of BENJAMIN (1 Chr. 8:21; KJV, "Shimhi"). He is probably the same as Shema son of Elpaal (v. 13). See SHEMA #4.

(10) Son of the musician JEDUTHUN; he and his brothers, under their father's supervision, "prophesied, using the harp in thanking and praising the LORD" (1 Chr. 25:3 NIV and NRSV on the

basis of one Heb. MS, the LXX [B et al.], and v. 17). He was also the head of the tenth company of temple musicians appointed by lot under DAVID (v. 17).

(11) A RAMATHITE whom David placed in charge of his vineyards (1 Chr. 27:27).

(12) Descendant of HEMAN the musician; he and his brother Jehiel were among the Levites assigned to consecrate the temple in the days of HEZEKIAH (2 Chr. 29:14). This may be the same Shimei who is later identified as brother of CONANIAH; the latter was in charge of the contributions brought to the temple, and Shimei assisted him (31:12 – 13).

(13) One of the Levites who agreed to put away their foreign wives in the time of EZRA (Ezra 10:23; 1 Esd. 9:23 [KJV, "Semis"]).

(14) One of the sons of Hashum who agreed to put away their foreign wives (Ezra 10:33; 1 Esd. 9:33 [KJV, Semei"]).

(15) One of the sons of Binnui who agreed to put away their foreign wives (Ezra 10:38; 1 Esd. 9:34 [KJV, "Samis"]).

(16) Son of Kish, descendant of Benjamin, and grandfather of MORDECAI (Esth. 2:5).

J. J. EDWARDS

Shimeon shim'ee-uhn (שִׁמְעוֹן *H9058,* possibly "[God] has heard"; see SIMEON). One of the sons of Harim who agreed to put away their foreign wives (Ezra 10:31; called "Simeon Chosamaeus" in 1 Esd. 9:32). The distinction in English between "Shimeon" and "Simeon" has no basis in the Hebrew.

Shimhi shim'h*i*'. KJV alternate form of SHIMEI (only 1 Chr. 8:21).

Shimma shim'uh. KJV alternate form of SHIMEA (only 1 Chr. 2:13).

Shimon sh*i*'muhn (שִׁימוֹן *H8873,* derivation uncertain). A descendant of JUDAH (1 Chr. 4:20); his place in the genealogy is unclear, but he was probably the head of a clan.

Shimrath shim'rath (שִׁמְרָת *H9086,* possibly short form of שְׁמַרְיָהוּ *H9080,* "Yahweh has watched over" [cf. SHEMER]). Son of SHIMEI (#9) and descendant of BENJAMIN (1 Chr. 8:21).

Shimri shim'r*i* (שִׁמְרִי *H9078,* "my protection" or short form of שְׁמַרְיָהוּ *H9080,* "Yahweh has watched over"). (1) Son of Shemaiah, descendant of SIMEON, and ancestor of Ziza; the latter was one of the clan leaders in the time of HEZEKIAH who invaded the land of the Hamites and the Meunites (1 Chr. 4:37; cf. vv. 38 – 41).

(2) Father of Jediael and of Joha the Tizite; both of his sons were among DAVID'S mighty warriors (1 Chr. 11:45).

(3) Son of Hosah and descendant of LEVI through MERARI; listed among the gatekeepers appointed by David (1 Chr. 26:10; KJV, "Simri"). Although Shimri was not the firstborn, he was designated by Hosah as first in rank.

(4) Descendant of Levi through ELIZAPHAN; he was among the Levites who assisted in the temple reforms under Hezekiah (2 Chr. 29:13).

J. J. EDWARDS

Shimrith shim'rith (שִׁמְרִית *H9083,* possibly "guardian"). A "Moabite woman" who was the mother of JEHOZABAD, one of the murderers of King JOASH of Judah (2 Chr. 24:26). In the parallel passage (2 Ki. 12:21), the name is given as the masculine SHOMER, which is not likely to have been applied to a woman. Possibly the final consonant (Heb. *t,* transliterated *th*) dropped out by a scribal mistake. Some have argued that Shomer was the father of Shimrith (in which case the latter passage could be rendered "Jehozabad grandson of Shomer"), but others consider such a solution to be artificial and argue that, for theological reasons, the two Israelite fathers mentioned in 2 Kings were deliberately turned by the Chronicler into non-Israelite mothers. See also SHIMEATH.

Shimrom shim'rom. KJV alternate form of SHIMRON (only 1 Chr. 7:1 in some editions).

Shimron (person) shim'ron (שִׁמְרוֹן *H9075,* possibly "[God] has watched over"; gentilic שִׁמְרֹנִי *H9084,* "Shimronite"). Son of ISSACHAR, grandson of JACOB, and eponymous ancestor of the Shimronite clan (Gen. 46:13; Num. 26:24; 1 Chr. 7:1 [some editions of KJV, "Shimrom"]).

Shimron (place) shim'ron (שִׁמְרוֹן *H9074,* derivation disputed; the original form may have been מְעוֹן). A Canaanite city whose king was included in a military alliance initiated by JABIN of HAZOR, the purpose of which was to resist the Israelite invasion under JOSHUA (Josh. 11:1). It was later included in the territory assigned to the tribe of ZEBULUN (19:15). Shimron is usually thought to be the same as the "Shimron Meron" mentioned in 12:20; but the SEPTUAGINT may be correct in listing Shimron and Meron as two distinct towns, in which case the latter name corresponds to MADON (often emended to MEROM), found in the MT of the previous verse, but omitted by the LXX there.

Because the name appears as *Symoōn* in the LXX (Codex B), many scholars believe that the original name of the town was "Simeon" *(šimʿôn)* and that early in the transmission of the text the consonant ʿ*ayin* was inadvertently changed to *r* (possibly under the influence of the Hebrew name for Samaria, *šōměrôn;* cf. D. Barthélemy, *Critique textuelle de l'Ancien Testament,* 3 vols. [1982 – 92], 1:18 – 20). On that basis, the town is usually thought to be the same as the *Šmʿn* of Egyptian texts and the *Šamḫuna* of the TELL EL-AMARNA documents. Further evidence from JOSEPHUS and rabbinic literature leads to the same conclusion and supports the identification of Shimron/Simeon with modern Khirbet Sammuniyeh, some 5 mi. W of NAZARETH and 8 mi. NNE of MEGIDDO (see Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 118).

T. E. MCCOMISKEY

Shimron Meron shim'ron-mee'ron (שֶׁ מְרוֹן מִרְאֹון *H9077*). Also Shimron-meron. See SHIMRON (PLACE).

Shimshai shim'sh*i* (שִׁמְשַׁי *H10729,* possibly "child of the sun" or "my [little] sun"). A Persian secretary (see SCRIBE) who, with another official, REHUM, wrote a letter to ARTAXERXES asking him to prohibit the rebuilding of the TEMPLE by the Jews (Ezra 4:8 – 16; cf. 1 Esd. 2:16 – 24, where KJV has "Semellius"). They succeeded in their purpose; work on the temple was halted (Ezra 4:17 – 24; 1 Esd. 2:25 – 30).

S. BARABAS

shin shin (from ‍‍‍‍ *H9094,* "tooth"). The twenty-first letter of the Hebrew ALPHABET (ש), with a numerical value of 300. It is named for the shape of the letter, which in its older form (similar to English *w)* resembled the outline of sharp teeth. Its sound corresponds to that of English *sh.* Originally, the Hebrew alphabet made no distinction between *shin* (transliterated *š*) and *sin* (ש, transliterated *ś*); the pronunciation of the latter is uncertain, but it was probably an intermediate sound between *š* and *s* (see P. Joüon and T. Muraoka, *A Grammar of Biblical Hebrew, 2* vols. [1991], 1:28 – 29).

Shinab shi'nab (שִׁנְאָב *H9098,* prob. from Akk. *Sinabum,* "[the god] Sin is his father" [but see *ABD,* 5:1219 – 20]). The king of ADMAH, who joined four other S Palestinian rulers in a failed rebellion against KEDORLAOMER (Gen. 14:2).

Shinar shi'nahr (שִׁנְעָר *H9114,* derivation debated, though possibly from Akk. *Šanḫar* [the name of a region in SYRIA, but also applied to SUMER] or *Samḫarū* [the name of a Kassite tribe]; see *HALOT,* 4:1607-08). A designation for the land of Babylonia. See ASSYRIA AND BABYLONIA.

In Genesis the name Shinar is used early to describe the land that included the cities of BABYLON, ERECH, and AKKAD (possibly also CALNEH) within the kingdom of NIMROD (Gen. 10:10). This was the place where migrants from the E settled and built the city and tower of BABEL (11:2). A king of Shinar (AMRAPHEL) took part in the coalition that raided SODOM and GOMORRAH (14:1) and was defeated by ABRAHAM. A fine garment looted by ACHAN near JERICHO was described as a "fine Shinar mantle" (Josh. 7:21 NJPS; NIV, "beautiful robe from Babylonia"). It was to this land that NEBUCHADNEZZAR took the captives from Jerusalem (Dan. 1:2), and from it the prophet foresaw that the faithful remnant would be gathered (Isa. 11:11). It was a distant and wicked place (Zech. 5:11).

The references to known Babylonian cities within Shinar (Gen. 10:10; 11:2) and the mention of Shinar as the place of EXILE (Dan. 1:2; cf. NIV mg.) makes the identification with Babylonia almost certain. In this way the SEPTUAGINT reads "Babylonia" in Isa. 11:11 and "land of Babylon" in Zech. 5:11. No undisputed equivalent of the Hebrew *šin⟨ār* has, however, yet been found in early texts from Babylonia itself. Egyptian lists of Asiatic countries known to Seti I and Amenhotep II include the name Shan(k)har *(ANET,* 243a, 247b), which has been taken to be the Babylonian Shinar (A. H. Gardiner, *Ancient Egyptian Onomastica, 2* vols. [1947], 2:209).

An example of a Sumerian text, typical of the early cuneiform writing style of the region of Shinar.

Others, however, interpret this Egyptian name as a reference to an Upper Mesopotamian Singara (the modern Sinjar, W of Mosul); such a northern identification might suit Gen. 14:1 but is of itself not evidence for it. An etymology for the southern (Babylonian) Shinar has been proposed in the name *Šingi-uru;* moreover, in late Syriac (8th cent. A.D.) *Sen(ar* denoted the land around Baghdad. (For a discussion of the origin of the name Shinar, see R. Zadok in *Zeitschrift für Assyriologie* 74 [1984]: 240 – 44.)

The region of Shinar is associated with the cities of Babylon, Akkad, and Erech.

<div align="right">D. J. Wiseman</div>

Shion sh*i*'uhn (שִׁיאֹן *H8858,* meaning unknown). KJV Shihon (some editions). A town within the tribal territory of Issachar (Josh. 19:19). Its location is uncertain. Proposed identifications include ʿAyun esh-Shaʿin (c. 3 mi. E of Nazareth), Khirbet Mugheir (c. 4 mi. SE of Nazareth), and Sirin (c. 14 mi. SE of Mount Tabor; cf. W. F. Albright in *ZAW 44=N.F.* 3 [1926]: 228 – 29, who suggested that an original *šʾwn* was corrupted to *šrwn*).

Shiphi sh*i*'fi (שִׁפְעִי *H9181,* "my abundance" or "[Yahweh] is fullness"). Son of Allon, descendant of Simeon, and father of Ziza; the latter was one of the clan leaders in the time of Hezekiah who invaded the land of the Hamites and the Meunites (1 Chr. 4:37; cf. vv. 38 – 41).

Shiphmite shif'm*i*t (שִׁפְמִי *H9175,* possibly gentilic of שֶׁפָם *H9172*). Descriptive applied to Zabdi, an official under David (1 Chr. 27:27). The reference of this term is uncertain, but some scholars have suggested that it designates a native of Shepham.

Shiphrah shif'ruh (שִׁפְרָה *H9186,* "fair, beautiful"). One of the two Hebrew midwives who were ordered by the king of Egypt to kill all male children born to the Israelites (Exod. 1:15). See Midwife.

Shiphtan shif'tan (שִׁפְטָן *H9154,* prob. from שָׁפַט *H9150,* "judgment," plus diminutive ending). Father of Kenuel; the latter was a leader from the tribe of Ephraim appointed to assist in dividing the land of Canaan among the tribes (Num. 34:24).

shipmaster. See Ships IV.

ships. The most common Hebrew term for "ship" or "boat" is *ŏniyyâ H641* (Gen. 49:13 et al.; cf. the collective *ŏnî H639,* "fleet," 1 Ki. 9:26 – 27). In the NT, Greek *ploion G4450* occurs more than sixty times (Matt. 4:21 et al.; the diminutive *ploiarion G4449* is used occasionally, e.g., Mk. 3:9).

I. In OT times. Ships and navigation in general find small place in the OT, save in metaphorical or poetic contexts (e.g., Pss. 98:7; 107:23 – 29; Prov. 23:34). The "ark" or "basket" in which MOSES was set adrift on the NILE (Exod. 2:3 – 6; see BULRUSHES, ARK OF) was probably a smaller version of the river and swamp boats that were built of bound fascines of PAPYRUS stems and were in common use on the inland waters of Egypt for hunting waterfowl, for fishing, and for transportation. Long before this time the Egyptians had built competent seagoing vessels, as is evidenced by the frescoes of Hatshepsut's expedition to open trade contacts with the Somali coast (mid-15th cent. B.C.).

The Hebrews generally, who were nomads turned agriculturalists, were not attracted by the SEA and had little experience of seafaring. They had the disadvantage of a harborless coastline, bereft of natural shelter for ships, except where the northern butt of Carmel provided a shelter from the sirocco and southerly weather in the shallow bay where modern Haifa stands (see CARMEL, MOUNT). Furthermore, over long periods of their history, the Hebrews were not in full control of the coastal plain. See PALESTINE III.D. Except for a cryptic reference in Jdg. 5:17, where some maritime activity on the part of the northern tribes of ASHER and DAN is envisaged, Hebrew seafaring was secondhand, and a fruit only of the partnership of the great SOLOMON with the Phoenicians of TYRE and SIDON.

The Phoenicians, on the other hand, racially and linguistically akin to the Hebrews, were the greatest seafaring folk of the ANE. In the dawn of history they had drifted, like other Semitic tribes, around the curve of the FERTILE CRESCENT and found themselves pinned by the presence of earlier occupying peoples to the narrow fringe of coastal territory between the LEBANON ranges and the sea. Accepting the challenge of their environment, they used the timber of the great forests behind them to conquer the sea in front and thus become the premier shipbuilders of the Mediterranean world. Until their maritime engineering revolutionized the building and navigation of ships, the vessels of the eastern Mediterranean had been little more than large canoes or barges. The caïque of the modern AEGEAN is probably the linear descendant of the ships of Homeric times, by which Agamemnon staged his seaborne assault on Troy. The *dhow* of Arab countries is probably, in the same fashion, the descendant of the ships of the Persian Gulf, the waterway where humans first taught themselves seafaring and shipbuilding.

Relief from Corinth showing a sailing vessel with sailor.

The distinction between the naval vessel, built for speed and ready maneuver, and the merchant ship—slower, more seaworthy, and designed to hold a large cargo, a feature of all ancient maritime history—goes back to the days of Phoenician shipbuilding. The "ships of Tarshish," which find frequent reference in the OT (Ps. 48:7 et al.), were evidently a highly successful type of Phoenician merchantman designed for the ore trade. The word TARSHISH—often thought to refer to Tartessos in Spain, whither the fleets went to fetch silver ore, as they fetched tin from Cornwall—is, according to W. F. Albright, a term from the vocabulary of metallurgy and mining. Does the word mean "ore ship"?

Significantly, it was a Tarshish fleet that plied from the Gulf of AQABAH in the maritime partnership of Solomon and Tyre (1 Ki. 10:22 NRSV). Solomon's great smelting works were N of the head of the gulf. It was also a "ship going to Tarshish," harboring in the narrow roadstead behind the offshore reef at JOPPA, which JONAH boarded for his ill-starred attempt to escape the distasteful journey to NINEVEH (Jon. 1:3 NRSV). There seems little doubt that the term was applied after the fashion of "East Indiaman" and "China clipper" to describe vessels sturdy enough for the distant voyaging and the heavy cargoes implied.

Solomon's fleet on the Gulf of Aqabah was composed of Phoenician vessels, manned by Phoenician crews (1 Ki. 9:26 – 28; 10:11, 22). They plied to OPHIR (prob. in S Arabia) for gold or gold ore, and possibly to the Malabar coast. The ivory, apes, and baboons that came back with the returning merchantmen (10:22) suggest monsoon-riding voyages to India and Ceylon, and the traces of ancient Jewish communities on this distant coast may indicate that the Hebrew-Phoenician partnership extended to the establishment of commercial agents in the areas touched and served by the trade. For the purposes of this article, the significant point is the seaworthiness of the ships that undertook such navigation. JEHOSHAPHAT's later attempt to revive the RED SEA trade ended in considerable disaster, apparently in the homeport of the merchant fleet, EZION GEBER (22:48). In the divided kingdom, Judah was cut off by Israel from communications with the Phoenicians, and the enterprise of Jehoshaphat was in all probability brought to ruin by Jewish inexperience in shipbuilding and navigation.

II. Boats of Galilee. The boats of the Galilean fishermen were roomy, sturdy vessels, designed to carry a load of fish and also to withstand the squalls of the lake. See GALILEE, SEA OF. The lake lies at the upper end of the trench of the Rift Valley, which deepens to the DEAD SEA down the JORDAN Valley and then shallows to sea level down the ARABAH to the Gulf of Aqabah. Sudden fierce winds are contained and funneled by it, and the storms of Galilee are thus occasioned. It is not known how the boats were built, but they could hold a dozen men, and a man could sleep in their stern sheets. An unusually heavy load of fish could embarrass them.

This mosaic of a Galilean sailboat was discovered at Magdala, on the NW shore of the Sea of Galilee.

III. Ancient Greek ships. The distinction noted above between warships and merchantmen, which emerged with the shipbuilding of the Phoenicians, was also observed in the ships of the AEGEAN. The earliest type of Greek ship was the *pentēkontoros*, named from its fifty oarsmen who sat twenty-five to a side. These were the vessels of early piracy and early trade—swift ships easy to handle and well adapted to the illegal trading ventures. They took the first Greek adventurers, like the later English intruders in the Spanish Main, into those areas of trade in the W Mediterranean where Carthage, Phoenicia's greatest colony, dominated commerce and forbade poaching on her preserves. The "fifty-oar" could easily escape the Carthaginian galleys.

With the emergence of Greek colonization and consequent commerce, the heavy merchantman appeared, a vessel designed to keep at sea day and night and face rough weather. For the warship, efficiency in swift and complicated maneuver were still given precedence over simple seaworthiness and carrying capacity in the determination of construction and design. The commonest type of Greek warship from the 6th cent. onward was the famous *trireme* (a Latin term meaning "three-oar" and corresponding to Gk. *triērēs*), so called because of its three "banks" of oars. It was light, undecked, and slim, measuring at the highest point of its development, in the 4th cent. B.C., some 120 ft. by 20 ft. The prow of the trireme rose into a lofty hooked post, and it was fitted commonly with a bronze-sheathed ram. On each side of the prow was painted an eye to ward off evil.

How the trireme was rowed is a matter of live controversy. There is a detailed description in a Victorian classic, *The Voyage and Shipwreck of St. Paul* (1848), by James Smith, a veritable mine of information. A more recent publication (L. Sprague De Camp, *The Ancient Engineers* [1963]) gives a useful summary of the controversial theories involved in the arrangement of the banks of oars in a trireme. It is probable that the term "banks" is quite misleading, and no certain theory has been worked out. Coins and vase paintings give no final solution. The ships raised from Lake Nemi, and

destroyed by the retreating Germans in 1943, were moored pleasure barges dating from Caligula's era and give no help in the matter. Diagrams on p. 82 of the last work quoted above set out the four main possibilities as modern scholars envisage them. They related to the trireme only, and assume, as it appears must have been the case, that there was a rower to each oar. This can hardly have applied, however, to the *quinquereme* or "five-oar." There is a fifth possible arrangement mentioned, but not set out diagrammatically by the last-mentioned writer, which insures that each rower, however tiered, had an oar to pull of equal length with his fellows.

The trireme, at any rate, was the standard war vessel of Greek and Phoenician history. Its crew of about 200 men had cramped quarters, and the speed is variously estimated as four to seven knots. The proportion of length to beam was six or seven to one. The ships were built of larch, cypress, and fir, principally of the third. Hence the desperate attempts during the Peloponnesian War between Athens and Sparta, which filled the last generation of the 5th cent. B.C., to keep open the northeastern seaways, and to retain control of the coastline of the Thracian peninsulas from which Athens drew her vital shipbuilding timber (the British had similar problems of access to the Baltic pine during the wars with Napoleon). Steering was effected by rudder oars on both sides of the stern, a method that was retained until a comparatively late period. In a bas-relief over the doorway of the leaning tower of Pisa built in the 12th cent., ships are represented with the paddle rudders as those in the Bayeux tapestry representing the Norman invasion. They must have been in use until after the middle of the 13th cent., for the contracts to supply Louis IX with ships stipulated that the contractors were bound to furnish them with two rudders. This may, of course, mean a spare one; but we learn from Join-ville (1224 – 1317) that the king's ship had rudders, expressed in the plural *gouvernaux*.

The merchant ship was propelled by sweeps or sails. At first it had one mast which bore a square sail made of hides, and, according to coin designs and vase decorations, a small forward mast was sometimes added to lift a smaller sail. De Camp discussed the question of sailing into the wind, and quoted Achilles Tatius's Greek novel of the 3rd cent. A.D. decisively. There is an account of a storm in which the narrator is wrecked on a voyage from Beirut to Alexandria, including what De Camp properly described as "a landlubber's account of an unsuccessful effort by the crew to keep from being blown ashore by tacking against the wind" (*Ancient Engineers*, 123). The passage is worth quoting at length, as it is germane to the problem faced by Paul's pilot as he drove W before a "nor'easter," and feared the Syrtes sandbanks far to the S on her starboard beam:

> On the third day of our voyage, the perfect calm we had hitherto experienced was suddenly overcast by dark clouds and the daylight disappeared, a wind blew upwards from the sea full in the ship's face, and the helmsman bade the sailyard be slewed round. The sailors hastened to effect this, bunching up half the sail upon the yard by main force, for the increasing violence of the gusts obstructed their efforts; for the rest, they kept enough of the full spread to make the wind help them to tack. As a result of this, the ship lay on her side, one bulwark raised upward into the air and the deck a steep slope, so that most of us thought that she must heel over when the gale next struck us. We transferred ourselves therefore to that part of the boat which was highest out of water, in order to lighten that part which was down in the sea, and so if possible, by our own added weight depressing the former, to bring the whole again to a level; but all was of no avail: the high part of the deck, far from being weighed down by our presence, merely lifted us higher still away from the water. For some time we thus ineffectually struggled to bring to an equilibrium the vessel thus balanced on the waves: but the wind suddenly shifted to the other side so that the ship was almost sent under water, and instantly that part of the boat which had

been down in the waves was now violently thrown up, and the part formerly raised on high was crushed down into the waters. Then arose a great wailing from the ship, and all changed their station, running, with shouts and cries, to the position in which they had been before they moved; and the same thing happening a third and a fourth, nay, many times, we thus imitated the motion of the ship; and even before we had finished one transmigration, the necessity for a second and contrary one was upon us. (Achilles Tatius, *Leucippe and Clitophon*, 3.1)

IV. Ships of Hellenistic and Roman times.

The Hellenistic Age came the closest of all eras of ancient Mediterranean culture to producing industrialization. SLAVERY, and consequent free labor in unlimited supply, put a brake on invention and labor-saving devices, but there was a great deal of basic mechanical knowledge and competent engineering, especially at ALEXANDRIA. This was evident at sea, especially in the growth of the large ship. There was a species of naval race between the Hellenistic kings in the 3rd cent. B.C. References to ships of vast oarage, propelled by great lead-weighted sweeps manned by forty and fifty men each, are encountered here and there. There is a reference in Athenaeus to something in the nature of a dry-dock designed to launch a 300-ft. pleasure barge.

For those primarily interested in the ships of the Mediterranean in the 1st cent., there are one or two sources of information that should be recorded. Wall paintings from Herculaneum and Pompeii, the two towns on the Bay of Naples overwhelmed by the eruption of Vesuvius in August A.D. 79, depict ships that are contemporary with the Alexandrian grain ship which brought Paul from Palestine to Rome. The general impression is that of a vessel that differed little in form of hull and lower portions from the common ship designs of the next eighteen centuries, except that both ends were similarly shaped. The contour of the top of the sides was almost straight along the middle section, but swept upward to some height at each end, sometimes terminating in ornaments like the backward bent neck of a goose; hence, the term *chēniskos* for the stern of a ship (Gk. *chēn*, "wild goose"). In the stern ornament of the ship depicted on the tomb of Naevoleia Tyche at Pompeii, the *chēniskos* terminates in a head of Minerva, a device like the later figurehead.

Isis (see OSIRIS) adorned the prow of the Alexandrian grain ship described in detail by Lucian, who wrote voluminously in the middle decades of the 2nd cent. His dialogue, *The Ship*, opens in Piraeus, whither a great Alexandrian grain ship had been driven by stress of storm. It was on its way to Italy in the days of Commodus. Three friends—Lycinus, Samippus, and Timolaus—are speaking. They had lost track of a fourth, Adimantus, who had slipped away, said Lycinus. "Then we stood a long time by the mast, looking up and counting the layers of hide and marveling at the sailor going up among the shrouds and then running quite safely along the yardarm up there holding on to the ropes." They discuss the elusive Adimantus, but Samippus is full of the size and sophistication of the great ship. He has been collecting statistics. He runs them off:

A hundred and twenty cubits long, the shipwright said, and well over a quarter as wide, and from deck to bottom, where it is deepest, in the bilge, twenty-nine. Then, what a tall mast, what a yard to carry! What a forestay to hold it up! How gently the poop curves up, with a little golden goose below! And correspondingly at the opposite end, the prow juts right out in front, with figures of the goddess, Isis, after whom the ship is named, on either side. And the other decorations, the paintings and the topsail blazing like fire, anchors in front of them, and capstans, and windlasses, and the cabins on the poop—all very wonderful to me. You could put the number of sailors at an army of soldiers. She was said to carry corn enough to feed all Attica for

a year. And all this a little old man, a wee fellow, had kept from harm by turning the huge rudders with a tiny tiller.

The rule by which tonnage was calculated was to multiply the length of keel by the extreme breadth, and the product by half the breadth or depth, and divide the whole by ninety-four. Falconer has thus made the ship of Lucian to measure 1,938 tons. Her length, according to Lucian, was 120 cubits, which, at a foot and a half each, is 180 ft.; her breadth one-fourth, or 45 ft., and if one takes the extreme length of 180 ft. as the multiplier, the tonnage is exactly what he makes it: 180 x 45 x 22.5 divided by 94 = 1,938 tons. Timolaus had a conversation with the captain who described the storm which drove them into Piraeus. The passage, like other tales of storm in Ovid, Juvenal, and others, serves only to underline the reality and authenticity of the superbly told storm story in Acts 27, which is rich in illustrative detail.

V. The evidence of Paul's shipwreck. Acts 27 details a most illuminating story. The grain ship on which PAUL's party traveled was a vessel of considerable size. There were 276 people aboard. (Cf. JOSEPHUS, *Life* 3: "I reached Rome after being in great jeopardy at sea. For our ship foundered in the midst of the sea of Adria, and our company of some six hundred souls had to swim all that night. About daybreak, through God's good providence, we sighted a ship of Cyrene, and I and certain others, about eighty in all, outstripped the others and were taken on board.")

Paul's ship was following a northern route under the shelter of the ASIA MINOR coast, possibly because of the lateness of the season (Acts 27:9). W. M. Ramsay may be correct in his statement that this was the regular route from Egypt to Rome (*St. Paul the Traveller and Roman Citizen*, 14th ed. [1920], 319). According to Vegetius (*De re mil.* 4.39), the period from mid-September to mid-November was considered a particularly perilous time for navigation. No doubt the autumnal heat over the Sahara, combined with the continental chill in central Europe, provoked a heavy flow of southward moving air. The shipmaster used this strong wind to run rapidly S from CNIDUS, on the SW tip of the Asia Minor peninsula, to make for the S coast of CRETE. He hoped to sail along its 140-mi. barricade against the NE wind, and made FAIR HAVENS, or Good Harbors, halfway along the coast without mishap. The eastern half of the island is comparatively low, and was an effective windbreak.

Rejecting competent advice to spend the winter there, and no doubt anxious to deliver his cargo to OSTIA, the shipmaster took a risk and ran along the rest of the coast, which gathers itself suddenly and spectacularly into a solid mountain mass. The NE wind (see EUROCLYDON), piling hard against the northern coast of this elevated mass of high country, poured over the summits and through the passes down to the sea with that notorious frenzy which winds so funneled and channeled develop. They were unable to make the more suitable harbor of PHOENIX, which had been the shipmaster's pretext for sailing, and were forced to drive before the wind. The offshore island of CLAUDA gave them brief shelter, sensibly used to recover the ship's boat which, towing erratically and waterlogged behind, was disrupting steering and dragging on the ship. At all costs it was necessary to keep a westerly course and avoid a southward drift into the shallow SYRTIS bay, the oblong indentation in the N coast of Africa which was a veritable graveyard of ancient ships (a fact that promises much for underwater archaeology).

They were probably helped in this purpose as the wind veered when the center of the cyclone shifted and developed a more easterly thrust. At this point "they took measures to undergird the ship" (Acts 27:17 NRSV). Considerable misunderstanding and controversy has surrounded this phrase, and some have tried to prove that ropes designed to brace and contain the timbers were run lengthwise

down the ship from stem to stem. If any such "helps" (KJV) were used they were not the "undergirding" of the passage in dispute, but tautened cables run from stem to stern and designed to hold and steady the mast whose straining and levering against the keel timbers might have been a real hazard in such a situation. The "undergirding" was surely ropes (cf. NIV), perhaps a loose network which could be lowered over the prow and slipped under the keel. These would be strengthened above the bulwarks by twisting the cables running at right angles to the line of the keel, until the whole became a taut and steadying net to aid the straining timbers. "See you not," says Horace, writing of the laboring ship of state in a metaphorical ode (1.14), "that your side is stripped of oars, the mast crippled by the rushing south wind and that without ropes the hull can scarcely bear the too peremptory sea?" This equipment was probably carried for such an emergency. The "tackle" cast overboard (v. 19) was the rigging, the sails perhaps waterlogged and weighty. Perhaps the long spar from which the mainsail hung, an overweight above, was likely to increase the rolling of the ship, or, if it could be lowered, was a clutter on the deck.

The ship in which the castaways continued from MALTA to PUTEOLI sailed under the sign of Castor and Pollux (see DIOSCURI), the Twin Brothers who were patrons of sailor men. The electrical discharge which Mediterranean sailors call "St. Elmo's fire" when they see it play around the mast was thought to indicate the presence of the Twins. Macaulay wrote: "Safe comes the ship to harbour, / Through tempest and through gale, / If once the Great Twin-Brethren / Sit shining on the sail" (see also Horace, *Odes* 1.12.27 – 32).

Other points of shipcraft and navigation mentioned in Luke's classic passage are soundings of depth, and the bracing of a ship against sea and wind by a system of compensatory anchors, a practice still followed. The writer has seen a Greek steamer thus braced and steadied under the shelter of Scyros in the Aegean, with a northeasterly wind blowing hard on the N coast of the island. (See further S. McGrail, *Boats of the World: From the Stone Age to Medieval Times* [2002]; C. M. Reed, *Maritime Traders in the Ancient Greek World* [2004]; C. Reynier, *Paul de Tarse en Méditerranée: Recherches autour de la navigation dans l'Antiquité (Ac 27 – 28, 16)* [2006].) E. M. BLAIKLOCK

Shisha sh*i*'shuh (שִׁישָׁא *H8881*, meaning uncertain, but possibly an Egyp. word). A royal secretary (see SCRIBE) in SOLOMON's court (1 Ki. 4:3). For the variations on his name and further discussion, see SHAVSHA.

Shishak sh*i*'shak (שִׁישַׁק *H8882*, a Libyan name of unknown meaning; the form שׁוּשַׁק [1 Ki. 14:25, *Ketib*] is considered the more correct vocalization, for it appears in Akk. as *Susinqu* and *Šusanqu*). Also Sheshonk, Shishonk, Shoshenq. King of EGYPT (c. 945 – 924 B.C., but dated a decade later by some) who founded the 22nd (or Bubastite) dynasty. Several of his less important successors bore the same name.

I. Rise to power. Shishak's ancestors were among the Libyan lords of the Meshwesh who entered Egypt as mercenary soldiers (see LIBYA). In Egypt, the Meshwesh became the dominant members of a militaristic, land-holding aristocracy. At the same time, they attempted to become completely Egyptian, that is, to adopt the language and culture of Egypt.

Shishak's family settled in Heracleopolis in the NILE delta and, in several generations, succeeded in establishing a small feudal principality. His grandfather was important enough to have been given a royal princess of the 21st dynasty as a bride. (Though nominally rulers of all Egypt, the 21st dynasty effectively ruled only N Egypt, leaving the southern part of the country in the hands of the

Theban priests of Amun.) When the last ruler of the previous dynasty died, Shishak's power was such that he was able to assume royal power in Bubastis (see Pɪ Bᴇsᴇᴛʜ). He gained legitimacy for his dynasty by marrying his son to a princess of the former dynasty. Within five years he had extended his power to include S Egypt also.

II. Relations with Palestine. Shishak's predecessors had maintained an interest in Asia. Hᴀᴅᴀᴅ of Eᴅᴏᴍ took refuge in Egypt, probably with Siamun of the 21st dynasty (c. 978 – 959 B.C.; cf. 1 Ki. 11:14 – 22). The identity of the Pʜᴀʀᴀᴏʜ who conquered Gᴇᴢᴇʀ (9:16) is not clear. J. Breasted (*A History of Egypt*, 2nd ed. [1912], 529) argues that only Shishak of the Egyptian kings of that time was capable of such a venture. On the other hand, a bas-relief from Siamun shows this king striking at the Asiatics, and this has been taken by many as an indication that Siamun was the pharaoh who captured Gezer. Evidence does not permit a firm conclusion.

With Jᴇʀᴏʙᴏᴀᴍ's flight to Egypt (1 Ki. 11:40) Shishak's personal role is clearly attested. He continued the policy of sheltering enemies of the Jewish kings while keeping an eye on Palestinian affairs. Sᴏʟᴏᴍᴏɴ's death, the division of the state, and the weakening of Hebrew power are well known to Bible readers.

III. Shishak's raid into Palestine. In the fifth year of Rᴇʜᴏʙᴏᴀᴍ, about Shishak's twentieth year, the latter raided Judah and Israel. The Bible reports only the plundering of Jerusalem (1 Ki. 14:25 – 26; 2 Chr. 12:2 – 12), but Egyptian records reveal the true scope of the raid. This record is found on a huge relief in the classical Egyptian stela at Karnak. The god Amun (see Aᴍᴏɴ #4) and a goddess are shown presenting ten lines of Asiatic captives to Shishak. Each of the 156 captives bore the name of a site captured by Shishak. From these names one learns that his raid extended N as far as the Sea of Galilee; thus he had plundered Israel as well. About half the names are legible and include the following: Taanach, Beth Shan, Gibeon, Beth Horon, Aijalon, and Socoh. There is little doubt that Jerusalem was originally included in the list. The name "Field of Abram" was the first extrabiblical occurrence of the patriarch's name known to scholars.

The raid was not a conquest; Egypt no longer had sufficient strength for permanent rule. However, Shishak still may have aimed at more than the plunder which helped to finance his building program. He also may have desired to intercept the profitable trade routes from the Red Sea to the Mediterranean, and to divert them from Hebrew territory to Egypt by destroying the cities located along the routes through Israel. (See further J. Breasted, *Ancient Records of Egypt,* 4 [1906], 344 – 61; B. Mazar in *Volume du congrès: Strasbourg, 1956* [1957], 57 – 66; Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 323-30; K. A. Wilson, *The Campaign of Pharaoh Shoshenq I into Palestine* [2005]; *SacBr,* 158, 185-89.) A. Bᴏᴡʟɪɴɢ
Karnak inscriptions describing Shishak's campaign in Palestine.

Shitrai shit'it (שִׁטְרַי *H8855,* meaning uncertain [for possibilities, see *HALOT,* 4:1445]). A Sha-ronite who was DAVID's chief shepherd of the herds that pastured in SHARON (1 Chr. 27:29).

shittah tree. See ACACIA.

Shittim shi'tim (שִׁטִּים *H8850,* "acacia trees"; see ACACIA). A region in the plains of MOAB just NE of the DEAD SEA. It is probably the same as ABEL SHITTIM (Num. 33:49). Although some have questioned this identification, Abel Shittim is cited as the last encampment site in the record of the journey from Egypt to the Jordan River, while Shittim was the scene of the final events before the passage of the Jordan (25:1-3). If the two designations refer to the same place, Shittim would then be a commonly used abbreviation of the longer Abel Shittim ("meadow of the acacia trees"). While the modern Tell-el Kefrein (c. 5 mi. NNE of the Dead Sea) was previously regarded as the location of the site of ancient Shittim, most scholars today follow Nelson Glueck *(Explorations in Eastern Palestine IV,* AASOR 25-28 [1948], 371-82) in identifying the site with Tell el-Ḥammam (c. 5 mi.

farther E). This site gives evidence of settlement in Iron Age I and II and probably Early Bronze Age I.

Shittim figures prominently in the history of the Hebrews. As mentioned above, it was the site of the last encampment of Israel before crossing the Jordan River into Canaan. Here the people fell into grave error, for many Israelites took wives from among the Moabites. This was apparently done at the instigation of BALAAM, who otherwise failed in his attempts to aid the Moabites in driving out the Hebrews (Num. 31:16). A plague in which 24,000 died was the punishment for their intermarriage and idolatry (25:9). It was here also that a census was taken of those twenty years of age and over. Apparently it was a military conscription, but it was done with a view toward the eventual settlement of the people in Canaan (26:2; cf. v. 53).

MOSES learned in Shittim that he would not see the Promised Land and that JOSHUA was to succeed him as the leader of the people (Num. 27:13-23). A successful military campaign against the Midianites was conducted by the Israelites during the encampment, which resulted in the gain of much booty. The tribes of Reuben and Gad and half of the tribe of Manasseh determined to remain on the E side of the Jordan River, but only after Moses exacted a promise from them that they would aid the rest of the Israelites in their conquest of Canaan. Moses delivered his farewell address here, then viewed the Promised Land from Mount Nebo just before his death. Later, it was from Shittim that Joshua sent two spies to scout the city of JERICHO (Josh. 2:1), and from here the Israelites departed for the passage of the Jordan (3:1).

Shittim.

MICAH refers to "what happened from Shittim to Gilgal" (Mic. 6:5), evidently reminding the Israelites of the grace of God revealed in the Jordan crossing. JOEL speaks of a fountain that will "water the valley of Shittim" (Joel 3:18 RSV; NIV, "the valley of acacias"), but this reference probably has in view a different location, such as the Wadi en-Nar, a section of the KIDRON as it runs toward the Dead Sea (see L. C. Allen, *Joel, Obadiah, Jonah, and Micah,* NICOT [1976], 124). It may be representative of the arid wilderness that Joel envisions as being transformed. T. E. MCCOMISKEY

Shiza sh*i*’zuh (שִׁיזָא *H8862,* derivation uncertain, although Noth *[IPN,* 31, 156] regarded it as a short form of מְשֵׁיזַבְאֵל *H5430,* "God delivers"; see MESHEZABEL). Father of ADINA; the latter is described as "chief of the Reubenites" and included among DAVID's mighty warriors (1 Chr. 11:42).

Shoa shoh’uh (שׁוֹעַ *H8778,* derivation uncertain). A people group who, along with the Babylonians and others, would be brought by God against Judah (Ezek. 23:23). They have not been identified with certainty, but the name (cf. the verb *šāwa*ʿ *H8775,* piel "to cry out for help") is probably a deliberate distortion of *Sutu,* an Akkadian word referring to a nomadic people who for a time lived E of the TIGRIS and also in the Syrian desert. They were often at war with the Assyrians, but were never completely conquered. See KOA; PEKOD.

<div align="right">S. BARABAS</div>

Shobab shoh’bab (שׁוֹבָב *H8744,* prob. short form of מְשׁוֹבָב *H5411,* "brought back"; see MESHOBAB). (1) Son of CALEB (apparently by AZUBAH) and descendant of JUDAH (1 Chr. 2:18).

(2) Son of DAVID, listed among the children born to him in Jerusalem (2 Sam. 5:14; 1 Chr. 3:5; 14:4).

Shobach shoh’bak (שׁוֹבָךְ *H8747* and שׁפָךְ *H8791* [in Chronicles], an Aram. name of uncertain meaning). TNIV Shobak. A general of the Aramean forces under HADADEZER who battled DAVID at HELAM (2 Sam. 10:16, 18; called "Shophach" [TNIV Shophak] in 1 Chr. 19:16, 18). The attack was an Aramean attempt to reverse two previous defeats at the hands of Israel. The army of Hada-dezer had been defeated at ZOBAH (2 Sam. 8:3 – 8). Again when Israel was engaged in conflict with the Ammonites, the latter sought the Arameans as allies. JOAB sent his brother, ABISHAI, against the Ammonites while he met the Arameans, who fled (10:6 – 14). Bitter from defeat, the Arameans sent for their forces beyond the EUPHRATES and under Shobach attacked David at Helam. David's men were victorious again; Shobach was struck down and died.

<div align="right">J. J. EDWARDS</div>

Shobai shoh’b*i* (שׁוֹבָי *H8662,* meaning uncertain). Ancestor of a family of gatekeepers who returned with ZERUBBABEL from the EXILE (Ezra 2:42; Neh. 7:45; 1 Esd. 5:28 [KJV, "Sami"]).

Shobak shoh’bak. TNIV form of SHOBACH.

Shobal shoh’buhl (שׁוֹבָל *H8748,* perhaps "lion" [see discussion in *HALOT,* 4:1436]). (1) Son of SEIR the HORITE; he was a clan chief of EDOM (Gen. 36:20, 23, 29; 1 Chr. 1:38, 40).

(2) Son of HUR and descendant of CALEB, included in the genealogy of JUDAH as the "father" (i.e., founder) of KIRIATH JEARIM (1 Chr. 2:50, 52). This Shobal is evidently the same that is later called a "son" (i.e., descendant) of Judah (4:1 – 2; see G. N. Knoppers, *I Chronicles 1 – 9,* AB 12 [2004], 343 – 44). Some believe that the inclusion of Shobal in these genealogies reflects an immigration into Judahite territory by the Edomite clan referred to in #1 above. See discussion under MANAHATHITE.

Shobek shoh’bek (שׁוֹבֵק *H8749,* possibly "leader"). One of the leaders of the people who sealed the

covenant with NEHEMIAH (Neh. 10:24).

Shobi shoh'bi (שֹׁבִי *H8661,* meaning uncertain). Son of NAHASH king of AMMON. Shobi and two companions, MAKIR son of Ammiel and BARZILLAI the Gileadite, brought provisions to DAVID and his men as they fled from ABSALOM and his supporters (2 Sam. 17:27 – 29). When Absalom's leaders rejected the counsel of AHITHOPHEL and followed that of HUSHAI, David and his followers succeeded in escaping an immediate conflict with Absalom and in making camp at MAHANAIM, where they received aid from Shobi. The provisions of food supplies brought by Shobi and his associates were sufficient to meet David's needs while he rested and prepared for his next move.

<div align="right">J. J. EDWARDS</div>

Shocho, Shochoh, Shoco shoh'koh. See SOCO and SOCOH.

shoe. See DRESS IV; SANDAL.

Shoham shoh'ham (שֹׁהַם *H8733,* "jewel"). Son of Jaaziah and descendant of LEVI through MERARI (1 Chr. 24:27).

Shomer shoh'muhr (שֹׁמֵר *H9071,* "guardian"). (1) Father of JEHOZABAD, one of the murderers of King JOASH of Judah (2 Ki. 12:21). In the parallel passage, however, Jehozabad is described as "son of Shimrith a Moabite woman" (2 Chr. 24:26). See discussion under SHIMRITH.

   (2) Son of Hemer and descendant of ASHER (1 Chr. 7:32); two verses later he is called SHEMER (v. 34 NRSV, following MT, which has the pausal form *šamer*, thus KJV, "Shamer"). It is difficult to determine which form is original. Moreover, some scholars have suggested that Shomer and Shemer in this genealogy are two different individuals.

Shophach, Shophak shoh'fak. Alternate forms of SHOBACH.

Shophan shoh'fan. See ATROTH SHOPHAN.

shore. The meaning "shore" or "seashore" is usually represented in Hebrew by the noun *śāpâ H8557* (lit., "lip," Gen. 22:17 et al.), less frequently ḥôp *H2572* (Deut. 1:7 et al.) and *ʾî H362* ("coastland, island"; cf. Ps. 72:10 NIV). As in Hebrew, so also in Greek the word for "lip," *cheilos G5927,* can be used metaphorically of the shore (Heb. 11:12), but more frequent is *aigialos G129* (Matt. 13:2 et al.). The seashore plays little part in the Bible narrative, mainly because the Israelites were not a seafaring nation, nor was their grip upon the Mediterranean coastlands ever secure for long periods (see GREAT SEA; SEA; SHIPS). The frequent NT references to shores relate to the Sea of Galilee (see GALILEE, SEA OF). With these the Galileans were, of course, entirely familiar, since so much of their livelihood originated at the lake shore. In the almost continuous circle of shoreline towns that surrounded the lake in biblical times, not only lake fishing but all kinds of cross-lake transport (such as wheat from the rich arable lands E of the lake) formed the basis of employment. Consequently, Jesus might be said to have chosen the focal point of the region's life and activity for his pulpit when he went down to the lake shore to fulfill his ministry.

<div align="right">J. H. PATERSON</div>

Shoshannim, Shoshannim-eduth shoh-shan'im, shoh-shan'im-ee'duhth. See MUSIC VI.B.

Shoshenq shoh'shenk. See SHISHAK.

shoulder. This word is used in the Bible both literally and figuratively. In both cases the shoulder is usually shown as the part of the body bearing a burden. This is natural since it is the only part of the body with an appreciable horizontal portion. The ancients carried heavy objects such as water jars on the shoulder (Gen. 21:14; Heb. *šĕkem H8900*). The shepherd who found his lost sheep is depicted as carrying it back upon his shoulders (Lk. 15:5; Gk. *ōmos G6049*). There is an echo here of Yahweh's dealings with his children: "the one the LORD loves rests between his shoulders" (Deut. 33:12; Heb. *kātēp H4190*). Both passages illustrate human helplessness and total dependence on God in dealing with personal sin.

Figuratively, the shoulder usually indicates submission, whether it be to an unwelcome burden or to an accepted responsibility. Matthew, in reference to the unnecessary laws imposed by the PHARISEES, quotes Jesus as saying, "They tie up heavy loads and put them on men's shoulders" (Matt. 23:4). Isaiah relates the Lord's promise to break the Assyrians' yoke upon his people and remove the burden from their shoulders (Isa. 14:25). The early priests were instructed to wear an EPHOD with a stone on the shoulder pieces in which were engraved the names of the tribes (Exod. 28:1 – 12). This meant that the priests bore the responsibility of the people's spiritual life. Finally, ISAIAH, speaking prophetically of Christ, referred to the responsibility of judgment when he said, "the government will be upon his shoulder" (Isa. 9:6).

D. A. BLAIKLOCK

shovel. This English term usually renders Hebrew *yā(H3582*, which refers to a ceremonial implement used in removing the debris from the altars of the TABERNACLE and TEMPLE (Exod. 27:3; 38:3; Num. 4:14; 1 Ki. 7:40, 45; 2 Ki. 25:14; 2 Chr. 4:11, 16; Jer. 52:18). In one other passage (Isa. 30:24) the uncommon words *raḥat H8181* (only here) and *mizreh H4665* (also in Jer. 15:7) are paired with reference to winnowing implements; the NIV translates "fork and shovel," whereas the NRSV has "shovel and fork" (KJV and NJPS, "shovel…fan").

W. WHITE, JR.

showbread. The consecrated unleavened bread ritually placed on a table in the TABERNACLE (and TEMPLE) each SABBATH. This unusual English term (KJV, "shewbread") has traditionally been used to render the Hebrew phrase *leḥem happānîm* (*H4312* + pl. of *pāneh H7156*), meaning literally "bread of the face." References to the face of God allude to his special presence, as in the statement that "he brought you out of Egypt by his *pānîm* and his great strength" (Deut. 4:37). Therefore the NIV and NRSV use the rendering "the bread of the Presence" (NJPS, "the bread of display"; Exod. 35:13 et al.). The ritual bread in question is also referred to as a "memorial portion" (*)azkārâ H260*, Lev. 24:7), as bread of the "row" (*ma(ăreket H5121*, Neh. 10:33), and as "continual" (*tāmîd H9458*, Num. 4:7; cf. *ma(ăreket tāmîd*, "row of continuity," 2 Chr. 2:4 [Heb., v. 3]). Such language indicates the importance of this provision in the tabernacle. Just as the lampstand (see CANDLESTICK) was important for the OIL that was lit on it and the ALTAR of incense was significant for the INCENSE burned on it, so the third article of furniture in the holy place, the table of showbread, had meaning for Israel

for the bread that was placed on it.

The showbread consisted of twelve loaves of unleavened bread (so JOSEPHUS, *Ant*. 3.6.6), each made of one-fifth of an ephah of fine flour. Such bread was usual for honored guests and especially for the king (Gen. 18:6; 1 Ki. 4:22). The loaves were placed on the table in the Holy Place, one above the other, in two columns. They remained on the table for a week, then were removed and eaten by the priests in the precincts of the sanctuary (Lev. 24:5 – 9). It was sacrilegious for anyone not a priest to eat the showbread (1 Sam. 21:2 – 3; Matt. 12:4), for the bread was referred to as "consecrated [holy] bread" (1 Sam. 21:6). The twelve loaves represented the twelve tribes of Israel (Lev. 24:8). The Koha-thites had the charge over the showbread (1 Chr. 9:32; see KOHATH).

The "loaves" (KJV, "cakes"; Heb. ḥallâ *H2705*) were literally, according to some, "pierced" or "ring-shaped" because they were perforated, probably to permit quick and thorough baking. There is no indication that a cloth or covering was placed on the loaves. The dishes connected with the table of showbread may have been used to hold the showbread; the spoons were employed in placing the FRANKINCENSE on the bread; the bowls served for the wine of the drink offering. The saucers for the frankincense would permit a pleasant fragrance to permeate the holy place during the week. What remained in them was burned on the bronze altar every Sabbath (Lev. 24:7 – 9) along with what was not eaten of the stale loaves. The twelve loaves represented national unity (cf. 1 Ki. 18:31 – 32; Ezek. 37:16 – 22). When the tabernacle was moved in the wilderness journeys, the table of showbread was carried with the dishes, spoons, bowls, and cups that were connected with its use (Num. 4:7).

In the historical books of the OT the first reference to the showbread was in relation to DAVID at NOB. David and his men were permitted to satisfy their hunger with the hallowed bread since they were ceremonially clean (1 Sam. 21:6). All the synoptists mention this occasion (Matt. 12:4; Mk. 2:26; Lk. 6:4). In the temple of SOLOMON a special table overlaid with gold was made for the showbread (1 Ki. 7:48). Arrangement was made in the restoration temple for the showbread through a sacred tax (Neh. 10:32). It is known that ANTI-OCHUS Epiphanes carried away the table of showbread when he stripped the temple of its treasures (1 Macc. 1:22). Judas MACCABEE replaced it with another (1 Macc. 4:49). When TITUS destroyed the temple in A.D. 70, he carried the table with other spoil to Rome. Its representation can be seen on the Arch of Titus at Rome, which depicts the triumphal procession.

H. F. Beck (in *IDB*, 1:464), speaking of similar practices among neighboring peoples, points to the component parts of a Babylonian sacrifice, one of which was the placing of unleavened loaves before the deity in multiples of twelve. External similarities cannot becloud the vast differences. For one thing, the bread in Israel was never technically a SACRIFICE. Furthermore, the bread symbolized in simple fashion the fact that God was the source in Israel's strength and nourishment. Similar sacred loaves are represented on Egyptian monuments, but care must be taken not to assume identity in content or purpose.

The showbread is said to have reminded the people of God's supply of daily need for bread and their continued dependence on God's provision for spiritual as well as physical needs. (Cf. the discourse in Jn. 6, esp. vv. 51 – 53.) Even later rabbinical authorities who added many minute details as to the number, size, position, and covering of the loaves could not obscure the original intention and thrust of the injunctions regarding the showbread. (See further J. Strong, *The Tabernacle of Israel in the Desert* [1952], 41 – 43.)

C. L. FEINBERG

shrine. This English term (from Lat. *scrinium*), meaning originally "case, receptacle," refers in

particular to a box where sacred relics or objects of worship are deposited, and by metonymy to a small building where such objects are kept or more generally to any place where devotion to a deity or saint is paid—thus a "sanctuary." The word is used by the KJV only once to render the common Greek term for "temple," *naos G3724* (Acts 19:24), referring to certain small idol houses made by the silversmith DEMETRIUS. He sold these shrines to worshipers of Diana (ARTEMIS); it was a lucrative trade and one which he was not willing to lose. His opposition to the preaching of the gospel, which had hurt his business, instigated a riot in EPHESUS while PAUL was preaching there.

Modern versions also use "shrine" variously to translate other terms, such as Hebrew *bayit H1074*, "house" (e.g., Isa. 44:13; cf. *bayit⁾ĕlōhîm*, lit., "house of God/gods," in Jdg. 17:5), and *bāmâ H1195*, "high place" (1 Sam. 9:12 – 14 et al., NRSV). In the NT, the adjective *esōteron G2278*, "inner," is used as a substantive with reference to the Holy of Holies once (Heb. 6:19), and here the NRSV renders, "the inner shrine" (NIV, "the inner sanctuary"). See also TEMPLES I.A.

<div align="right">J. B. SCOTT</div>

shroud. This English noun is used once by the KJV in the archaic meaning, "shelter" (Ezek. 31:3). Modern versions use it occasionally either in the general sense of "a covering" (Isa. 25:7; Heb. *lôt H4287*, which occurs only here) or more specifically of the winding sheet with which the dead were covered (see RSV at Matt. 27:59; Mk. 15:46; Lk. 23:53; Gk. *sindōn G4984*, meaning "[fine *or* linen] cloth").

<div align="right">S. BARABAS</div>

Shua sh*oo*'uh (שׁוּעַ *H8781*, "salvation, prosperity" [cf. ABISHUA and MALKI-SHUA]; also שׁוּעָא *H8783* [only 1 Chr. 7:32], but the derivation of the latter is less certain [cf. HALOT, 4:1445]). (1) A Canaanite man whose daughter married JUDAH (Gen. 38:2, 12 [KJV, "Shuah"]; 1 Chr. 2:3); she gave birth to three sons, ER, ONAN, and SHELAH. In Genesis the SEPTUAGINT, incorrectly, views Shua (*Saua*) as the name of the daughter (cf. J. W. Wevers, *Notes on the Greek Text of Genesis* [1993], 631, 636). In the Chronicles passage, the words *bat-šûa⁾* ("the daughter of Shua"; cf. KJV and NIV) are rendered as the name BATH-SHUA by the NRSV and other versions (but the same Hebrew expression occurs in Gen. 32:12).

(2) Daughter of Heber and descendant of ASHER (1 Chr. 7:32). The LXX reads *Sōla*, and some scholars suspect textual corruption (cf. *ABD*, 5:1225).

Shuah sh*oo*'uh (שׁוּחַ *H8756*, meaning uncertain; gentilic שׁוּחִי *H8760*, "Shuhite"). (1) Son of ABRAHAM and KETURAH (Gen. 25:2; 1 Chr. 1:32). Some scholars link Shuah with the Akkadian place name *Šūhu*, which refers to a region near the confluence of the rivers EUPHRATES and HABOR (cf. ABD, 5:1225 – 26). One of JOB's friends, BILDAD, is identified as "the Shuhite" (Job 2:11 et al.), but his connection with either Abraham's son or the Akkadian toponym is uncertain.

(2) KJV alternate form of SHUA (Gen. 38:2, 12).

(3) KJV form of SHUHAH (1 Chr. 4:11).

Shual (person) sh*oo*'uhl (שׁוּעָל *H8786*, "fox, jackal"). Son of Zophah and descendant of ASHER (1 Chr. 7:36). Some scholars link him with SHUAL (PLACE) and infer that the Asherite clan of Shual had settled not within the tribal territory of Asher but rather in the southern hill country of EPHRAIM (cf. Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 244; *ABD*, 5:1226).

Shual (place) sh*oo*'uhl (שׁוּעָל H8787, "fox, jackal"). A region in the vicinity of OPHRAH to which one of three detachments of PHILISTINES went while encamped at MICMASH (1 Sam. 13:17). The three-pronged maneuver was part of the retaliation of the Philistines for JONATHAN's attack on their outpost at GEBA. Two of the detachments went W and E, while the third headed N of Micmash in the direction of Ophrah. Shual is possibly an alternate form of SHAALIM, the country through which SAUL passed in seeking the lost donkeys of his father KISH (1 Sam. 9:4). The precise location is uncertain. See also SHUAL (PERSON).

<div align="right">T. E. McCOMISKEY</div>

Shubael sh*oo*'bay-uhl (שׁוּבָאֵל H8742 [1 Chr. 24:20; 25:20] and שְׁבוּאֵל H8649 [23:16; 25:4; שְׁבָאֵל in 26:24], meaning possibly "Return, O God!"). Also Shebuel. (1) Descendant of LEVI through AMRAM, MOSES, and GERSHOM (1 Chr. 23:16 [KJV and other versions, "Shebuel"]; 24:20). On the basis of the first passage listed, Shubael is usually thought to be a son of Gershom, but if so, he must then be distinguished from the Shubael who was in charge of the temple treasuries at the time of DAVID (26:24 [KJV and other versions, "Shebuel"]).

(2) Son of HEMAN, the king's seer (1 Chr. 25:4 [KJV and other versions, "Shebuel"]). The fourteen sons of Heman, along with the sons of ASAPH and JEDUTHUN, were set apart "for the ministry of prophesying, accompanied by harps, lyres and cymbals" (v. 1). The assignment of duty was done by lot, and the thirteenth lot fell to Shubael, his sons, and his relatives (25:20).

<div align="right">S. J. SCHULTZ</div>

Shuhah sh*oo*'huh (שׁוּחָה H8758, meaning unknown). KJV Shuah. Brother of Kelub and descendant of JUDAH (1 Chr. 4:11). His place in the genealogy is unclear.

Shuham sh*oo*'ham (שׁוּחָם H8761, meaning unknown; gentilic שׁוּחָמִי H8762, "Shuhamite"). Son of DAN and eponymous ancestor of the Shuhamite clan (Num. 26:42); elsewhere called HUSHIM (Gen. 46:23).

Shuhite sh*oo*'h*i*t. See SHUAH.

Shulammite sh*oo*'luh-m*i*t (שׁוּלַמִּית H8769, derivation uncertain). The name of, or a designation given to, the bride in SONG OF SOLOMON (Cant. 6:13). The Hebrew form suggests that this term is the gentilic of an otherwise unknown place (or clan) named Shulam. Many scholars, however, suspect that the consonant *l* reflects an original *n* (the interchange between these two "liquid" consonants is attested in many languages, including Semitic). If so, the term would be *Shunammite,* referring to someone from the town of SHUNEM (cf. 2 Ki. 4:12 et al.). In this light it has been suggested that since ABISHAG was a "Shunammite" taken to minister to DAVID in his old age (1 Ki. 1:1 – 4, 15; 2:17 – 22), she was perhaps the "Shulammite" of SOLOMON's Song. It was common in ancient times for a conquering or succeeding king to take over the former king's HAREM, the background against which ABSALOM made it a point to go to David's harem (2 Sam. 16:22). Solomon, as David's successor, may have acquired Abishag along with other women of David's harem.

Several other interpretations of the term have been proposed (cf. *HALOT,* 4:1442; *ABD,* 5:1227). H. H. Rowley, for example, suggested that it might be a feminine formation of *šĕlōmōh*

H8976 and thus a title that served as a companion to Solomon (see *The Servant of the Lord* [1965], 228 – 29 n. 8). If so, the word would be vocalized *šĕlōmît* and might mean something like "Solomoness" or "queen."

<div align="right">H. E. FINLEY</div>

Shumathite sh*oo*'muh-th*i*t (שֻׁמָתִי *H9092,* gentilic form of a presumed ancestor or place named שָׁמָה). The Shumathites were a Judahite clan descended from CALEB through HUR and SHOBAL; they made up one of several families associated with KIRIATH JEARIM (1 Chr. 2:53).

Shunammite sh*oo*'nuh-m*i*t. See SHUNEM.

Shunem sh*oo*'nuhm (שׁוּנֵם *H8773,* meaning unknown; gentilic שׁוּנַמִּי *H8774,* "Shunammite"). A town in the territory allotted to the tribe of ISSACHAR (Josh. 19:18). Shunem is identified with modern Solem, about 3 mi. N of JEZREEL and just S of Mount MOREH. The town appears as *šnm* in a list compiled by THUTMOSE III (1490 – 1436 B.C.), describing the extent of his dominion and conquests (Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 160). A number of Palestinian towns are included, indicating the extensive nature of Egyptian control of Syria-Palestine at this time. Shunem also appears as Shunama in the TELL EL-AMARNA letters, where its overthrow by Labaya early in the 14th cent. is cited. It must have been rebuilt shortly thereafter, however, for the presence of a working party there, under Biridiya, is mentioned in the Amarna material *(ANET,* 485b).

The village of Shunem, located on the SW side of Mount Moreh in the Jezreel Valley. (View to the E.)

The PHILISTINES encamped here in preparation for battle against the Israelites (1 Sam. 28:4); this maneuver led SAUL to occupy Mount GILBOA, about 8 mi. SSE of Shunem (the resultant conflict led to Saul's death on the slopes of the mountain). ABISHAG, DAVID's nurse who cared for him shortly before his death, was a Shunammite; ADONIJAH sought unsuccessfully to marry her, evidently in an attempt to strengthen his weak claim to the throne (1 Ki. 2:13-18, 22). The prophet ELISHA lodged frequently at Shunem in the home of a benefactress, the birth of whose son he accurately predicted; he later restored the child to life (cf. Jesus' raising of the widow's son at NAIN, which is on the N side of Mount Moreh and thus very close to Shunem). Elisha's use of Shunem as a stopping place on his way

from SAMARIA indicates that the prophet ministered in an extensive circuit. (See further W. F. Albright, "The Topography of the Tribe of Issachar," *ZAW 3* [1926]: 226-34.)

<div align="right">T. E. MCCOMISKEY</div>

Shuni sh*oo'*n*i* (שׁוּנִי *H8771,* meaning unknown; gentilic שׁוּנִי *H8772,* "Shunite"). Son of GAD, grandson of JACOB, and eponymous ancestor of the Shunite clan (Gen. 46:16; Num. 26:15).

Shupham sh*oo'*fuhm (שׁוּפָם *H8792,* meaning unknown; gentilic שׁוּפָמִי *H8793).* Son of BENJAMIN, grandson of JACOB, and eponymous ancestor of the Shuphamite clan (Num. 26:39 KJV and NIV; other versions, "Shephupham," following MT). See discussion under SHEPHUPHAM.

Shuppim shuh'pim (שֻׁפִּם *H9173* [not in NIV], meaning unknown). (1) Son of Ir and descendant of BENJAMIN (1 Chr. 7:12, 15 KJV and other versions; NIV, "Shuppites"). See HUPPIM; HUSHIM #2; SHEPHUPHAM.

(2) A doorkeeper who, along with HOSAH, was responsible for the SHALLEKETH Gate on the W side of Jerusalem (1 Chr. 26:16). Many scholars, however, believe that Shuppim is the result of dittography (cf. *hā ăsuppîm* at the end of v. 15) and delete the name.

Shunem.

Shuppites shuh'p*i*ts (שֻׁפִּים *H9157,* meaning unknown). A clan descended from BENJAMIN through Ir (1 Chr. 7:12, 15 NIV; the KJV and other versions have "Shuppim"). See discussion under HUPPIM.

Shur shoor (שׁוּר *H8804,* "wall"). A desert region along the eastern border of EGYPT (Gen. 16:7). Because the name means "wall," some have argued that the reference is to a line of fortifications. Reference is first made to such a fortified wall on the eastern border of the NILE delta in the *Tale of*

Sinuhe, where Sinuhe says he "came up to the Wall-of-the-Ruler, made to oppose the Asiatics and to crush the Sand-Crossers" *(ANET,* 19a; cf. p. 446a; see also Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 142, 197). This net of forts, set up to keep out the BEDOUIN tribes, is possibly referred to in the account of the ISHMAELITES who "settled in the area from Havilah to Shur, near the border of Egypt, as you go to Asshur" (Gen. 25:18). Similar descriptions occur elsewhere (1 Sam. 15:7; 27:8).

It is more likely, however, that the ancient fortifications gave their name to the region E of it, and it is to the latter that the above instances of Shur may refer. In Exod. 15:22 such is obviously the case, for Moses led "from the Red Sea and they went into the Desert of Shur" (this wilderness area, or possibly part of it, was also identified as the Desert of ETHAM, Num. 33:8). The same region is probably also intended when it is said that ABRAHAM "dwelt between Kadesh and Shur" (Gen. 20:1). The possibility must be left open, however, that Shur could refer to a more specific locality not yet identified.

The Desert of Shur.

In the account of HAGAR's flight from SARAH, mention is made of "the spring that is beside the road to Shur" (Gen. 16:7). Such a road was probably an ancient caravan route, the last segment of the northern route of the KING's HIGHWAY, which came out of EDOM, passed through the wilderness of ZIN to KADESH BARNEA, and reached Egypt via "the Desert of Shur" (Exod. 15:22). (See further C. L. Woolley and T. E. Lawrence, *The Wilderness of Zin,* new ed. [1936], 57 – 62; *ABD,* 5:1230.)

F. G. CARVER

Shushan sh*oo*'shan. KJV form of SUSA.

Shushan-eduth sh*oo*'shan-ee'duhth. See MUSIC VI.B.

Shuthalhite sh*oo*'thuhl-h*i*t. KJV form of Shuthela-hite; see SHUTHELAH.

Shuthelah sh*oo*'thuh-luh (שׁוּתֶלַח *H8811,* meaning uncertain; gentilic שֻׁתַלְחִי *H9279,* "Shuthela-hite"). (1) Son of EPHRAIM, grandson of JOSEPH, and eponymous ancestor of the Shuthelahite clan (Num. 26:35-36 [KJV, "Shuthalhites"]; 1 Chr. 7:20). There are some unexplained differences between the genealogies in these two passages (see G. N. Knoppers, *I Chronicles 1-9,* AB 12 [2004], 463-64).

(2) Son of Zaba and descendant of Ephraim (1 Chr. 7:21). Some suspect textual corruption and delete Shuthelah here as a repetition from the previous verse. Others insert Shuthelah in v. 25; see RESHEPH (PERSON).

shuttle. A device containing a reel or spool; it is used in WEAVING to carry the woof thread back and forth between the warp threads (Job 7:6). The Hebrew word (ʾ*ereg H756)* apparently refers to the LOOM in its only other occurrence (Jdg. 16:14).

<div align="right">S. BARABAS</div>

Sia, Siaha si'uh, si'uh-huh (סִיעָא *H6103* [Neh. 7:47], an Aram. name possibly meaning "help"; the alternate spelling סִיעֲהָא *H6104* [Ezra 2:44] appears to be a combination of the otherwise unattested Heb. form סִיעָה and an Aram. ending). A descendant of temple servants (NETHINIM) who returned from the EXILE with ZERUBBABEL (Ezra 2:44; Neh. 7:47; called "Sua" 1 Esd. 5:29 [KJV, "Sud"]).

Sibbecai sib'uh-k*i* (סִבְּכַי *H6021,* derivation uncertain, although one proposal is סֹבֶךְ *H6018* ["to entangle"], perhaps yielding the sense, "Yahweh has intervened"). KJV Sibbechai; TNIV Sibbekai. A Hushathite (see HUSHAH) who was among DAVID's mighty warriors and who slew a GIANT named Saph or Sippai during a battle with the PHILISTINES at GOB (2 Sam. 21:18; 1 Chr. 11:29; 20:4; called MEBUNNAI in 2 Sam. 23:27). Sibeccai was the commander heading the eighth division (1 Chr. 27:11, where he is also referred to as a Zerahite; see ZERAH).

<div align="right">H. E. FINLEY</div>

Sibbechai sib'uh-k*i*. KJV form of SIBBECAI.

Sibbekai sib'uh-k*i*. TNIV form of SIBBECAI.

sibboleth sib'uh-lith. See SHIBBOLETH.

Sibmah sib'muh (שִׂבְמָה *H8424* and שְׂבָם *H8423* [only Num. 32:3], possibly "cold" [referring to the water in that place; see *HALOT,* 3:1302]). A city in the territory allotted to the tribe of REUBEN (Num. 32:3 [where it is called "Sebam"; KJV, "Shebam"], 38 [KJV, "Shibmah"]; Josh. 13:19). Sibmah was apparently known for its vines and grapes: both Isaiah and Jeremiah predicted that its vines were to languish under the judgment of God (Isa. 16:8 – 9; Jer. 48:32). The town, usually mentioned in connection with such other places as HESHBON and KIRIATHAIM, was located in the pastoral plateau area of MOAB acquired by conquest from SIHON king of the AMORITES. The oracles of Isaiah and Jeremiah indicate that Sibmah must have fallen back into Moabite hands.

The precise location of the town is unknown. JEROME *(Commentary on Isaiah* at 16:8) reported that it was a mere half-mile (500 paces) from Hesh bon. Modern scholars have often identified it with

Qarn el-Qibsh, a ruin on a flat-topped hill some 3 mi. WSW of Heshbon overlooking Wadi Salmah (cf. N. Glueck, *Explorations in Eastern Palestine II,* AASOR 15 [1935], 110), though there is no archaeological evidence to support it (cf. Z. Kal-lai, *Historical Geography of the Bible* [1986], 441). Others think it should be located farther S.

H. E. FINLEY

Sibraim sib'ray-im (סִבְרַיִם *H6028,* derivation uncertain). A place between DAMASCUS and HAMATH, mentioned in EZEKIEL's prophecy as part of the N border of Israel (Ezek. 47:16). Some have suggested that that Sibraim is the same as SEPHAR-VAIM. In any case, its exact location is unknown.

Sibylline Oracles sib'uh-leen. A Jewish collection of prophecies, with many Christian additions, written in imitation of pagan oracles attributed to the sibyl (originally the term *sibyl* may have been a proper name, but it was applied to some ten prophetesses from various countries). The work consists of books that date as early as c. 150 B.C. (book 3, which focuses on the eschatological restoration of the Jewish kingdom) and as late as the 7th century A.D. (book 14, of uncertain origin). Some of the material is clearly Christian; for example, book 6 consists simply of a brief hymn to Christ, while book 7 includes oracles against various nations and may reflect Gnostic influence.

(For a discussion and trans. of the Christian material only, see *NTAp,* 2:652 – 85. A trans. of the whole work, including extensive introductions, may be found in *OTP,* 1:317 – 472. See also *HJP,* rev. ed. [1973 – 87], 3:618 – 54; J. J. Collins, *The Sibylline Oracles of Egyptian Judaism* [1974]; H. W. Parke, *Sibyls and Sibylline Prophecy in Classical Antiquity* [1988]; D. S. Potter, *Prophecy and History in the Crisis of the Roman Empire: A Historical Commentary on the Thirteenth Sibylline Oracle* [1990]; R. Buitenwerf, *Book III of the Sibylline Oracles and Its Social Setting: With an Introduction, Translation and Commentary* [2003]; J. L. Light-foot, *The Sibylline Oracles: With an Introduction, Translation, and Commentary on the First and Second Books* [2008].)

Sicarii si-kahr'ee-*i*. See ASSASSINS.

Sichem sik'uhm. KJV alternate form of SHECHEM (only Gen. 12:6).

Sicily. This great three-cornered island off the toe of ITALY was first colonized by Italian or Indo-European stocks, whose language, not dissimilar from early Latin, suggests that the Sicani or Siculi were part of the folk-wandering of the 2nd millennium B.C. Phoenician settlement followed and produced a wide occupancy of the S and W of the island, especially after Phoenician Carthage became strong and expansive on the confronting African coast.

Toward the end of the 8th cent. B.C., the great influx of Greek urban colonists began. Syracuse was founded in 734 and became one of the major cities of the Mediterranean world. The Greek cities of the E and N grew into strong prosperous trading communities, and inevitably clashed with the rival colonizers of Sicily, the Carthaginians. The year 480 saw Greek victory at Himera, as well as a great upsurge and penetration of Greek culture through the island. It was at the end of this century that ATHENS attacked Syracuse and suffered naval and military disaster from which she never recovered completely. It was inevitable that Carthage and ROME should contend over Sicily, which lay an essential bridgehead between their expanding spheres of power. After Rome's victory in the Second Punic War (218 – 201 B.C.), the island became part of the Roman provincial system, and the main source of her wheat for over 150 years.

(See E. A. Freeman, *History of Sicily* [1891 – 94]; T. J. Dunbabin, *The Western Greeks* [1948]; M. I. Finley, *Ancient Sicily*, rev. ed. [1979]; R. J. A. Wilson, *Sicily under the Roman Empire: The Archaeology of a Roman Province, 36 BC – AD 535* [1990]; C. Smith and J. Serrati, eds., *Sicily from Aeneas to Augustus: New Approaches in Archaeology and History* [2000].)

E. M. BLAIKLOCK

sick, sickness. See DISEASE.

sickle. A curved cutting tool for harvesting grain. One Hebrew word for "sickle" (*ḥermēš H3058*) occurs in Deut. 16:9 and 23:25 (by emendation also in 1 Sam. 13:20, where the MT has *maḥărēšâ H4739*, "plowshare"). The other one (*maggāl H4478*) is found in Jer. 50:16 and Joel 3:13. The NT word (Gk. *drepanon G1535)* occurs in Mk. 4:29 and Rev. 14:14 – 19. In usage the NT follows the Joel passage in presenting the sickle as the instrument of divine WRATH and FULFILLMENT.

W. WHITE, JR.

Sicyon sish'ee-uhn (Σικυών [with orthographic variants], "cucumber [town]"). An ancient Greek city in the northern Peloponnesus, c. 11 mi. NW of CORINTH, located in a fertile plain c. 2 mi. from the sea. Sicyon was founded from Argos and was under its domination until it gained its independence by Orthagoras c. 660 B.C.; it was then ruled by tyrants for more than a century, reaching its greatest power under Cleisthenes. In the Pelopon-nesian War (431 – 404) it was an ally of Sparta, and in 251 it became a democracy under the leadership of Aratus and was given an important place in the Achaian Confederacy.

From the 6th to the 3rd cent. Sicyon was famous for its painting, sculpture, and pottery (Pliny the Elder, *Natural History* 35.151 – 52) as well as for its industrial skills in all kinds of manufacturing (Strabo, *Geogr.* 8.6.23). In 146 B.C., when the Romans destroyed Corinth, Sicyon inherited the Corinthian territory and the Isthmian Games. In 139 it was among the list of places to which the Roman consul LUCIUS wrote in behalf of the senate, begging them to be friendly to the Jews and to deliver all Jewish fugitives to SIMON MACCABEE (1 Macc. 15:23). That a considerable number of Jews resided in this area is confirmed by PHILO JUDAEUS *(Legatio ad Gaium* 281; *In Flaccum* 46). (See further C. H. Skalet, *Ancient Sicyon* [1928]; A. Andrewes, *The Greek Tyrants* [1956], 54 – 61; R. and K. Cook, *Southern Greece: An Archaeological Guide* [1968], 107 – 8; A. Griffin, *Sikyon* [1982].)

H. W. HOEHNER

Siddim, Valley of sid'im (שִׂדִּים H8443, derivation uncertain). A place identified with the "Salt Sea" where KEDORLAOMER and his allies defeated the kings of SODOM, GOMORRAH, and the other cities of the Jordan pentapolis (Gen. 14:3, 8, 10). The armies apparently followed the KING'S HIGHWAY in TRANSJORDAN to the field of battle somewhere in the locality of the DEAD SEA. J. P. Harland (in *BA* 5 [1942]: 17 – 32) suggested Siddim was the plain S of el-Lisan, which has been down-faulted and submerged beneath the lake. Certainly, the lake terrain around the shores of the Dead Sea indicate that as a consequence of climatic oscillations, drainage evolution, and faulting, possibly twenty-five distinct lake levels have occurred in the trough since Pleistocene times. The exact locale of the Valley of Siddim remains speculative.

J. M. HOUSTON

Side s*i'*dee (Σιδη). A city in PAMPHYLIA to which a letter favoring the Jews and requesting the return of Jewish renegades who had fled there was sent by the Roman consul LUCIUS in 139 B.C. (1 Macc. 15:23). Side was located near the mouth of the river Eurymedon, at the site of the modern Eski Adalia. It was occupied by ALEXANDER THE GREAT and later was the site of the sea battle between the naval forces of Rhodes and the fleet of ANTIOCHUS the Great, in which Antiochus was defeated. Early in the 1st cent. it was the base for activity by Cilician pirates.

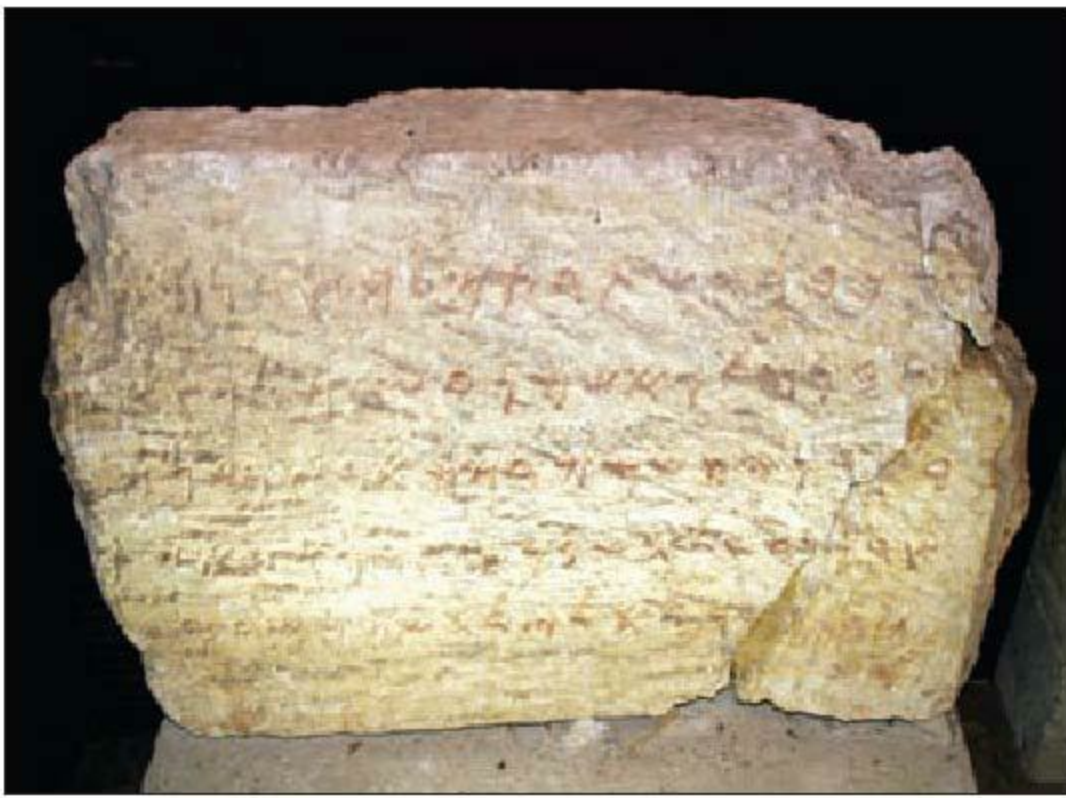
Side was particularly known for its harbor complex, which is still distinguishable. The ruins, extant today on the original promontory of the city, consist of a wall separating it from the mainland, several protective fortifications, and a theater of characteristically Roman construction. Evidence has been found of an extensive Jewish population in Byzantine times. (See G. E. Bean in *The Princeton Encyclopedia of Classical Sites,* ed. R. Stillwell et al. [1976]: 835 – 36; id. in *OCD,* 1404.)

<div align="right">T. E. MCCOMISKEY</div>

Sidon s*i'*duhn (צִידוֹן H7477, possibly "fishing town"; gentilic צִידֹנִי H7479, "Sidonian"). KJV Zidon (Sidon in Gen. 10:15, 19, and NT). The first biblical occurrence of this name is in reference to the firstborn son of CANAAN (Gen. 10:15 = 1 Chr. 1:13), but elsewhere it designates an important coastal city-state of PHOENICIA. As a geographical term, it first occurs in Gen. 10:19 in a description of the territory of the Canaanites, which is said to have extended from Sidon to the S as far as GAZA. JACOB prophesied that the territory of ZEBULUN would reach all the way to Sidon (49:13; cf. Josh. 19:28). The city is mentioned at various points in the historical books of the OT (Josh. 11:8; Jdg. 1:31; 10:6; 18:28; 2 Sam. 24:6; 1 Ki. 17:9; Ezra 3:7) and figures in a number of prophetic oracles (Isa. 23:2 – 12; Ezek. 28:21 – 22 et al.).

Sometimes in the OT (Jer. 25:22 et al.), and often in the NT, Sidon is combined with TYRE, almost as a formula. One visit by Jesus to the region of Tyre and Sidon is recorded in the Gospels, at which time he had the encounter with the SYRO-PHOENICIAN woman (Matt. 15:21 – 28). This is the only recorded instance in the ministry of Jesus that he went outside the boundaries of Palestine. In his invectives upon the cities of GALILEE, Jesus compared KORAZIN and BETHSAIDA to Tyre and Sidon and declared that the latter cities would have responded more quickly than the former (Matt. 11:21 – 22; Lk. 10:13 – 14). The people of Tyre and Sidon were involved in difficulties with HEROD Agrippa at the time of his death (Acts 12:20). On PAUL's shipwreck voyage to Rome a port call was made at Sidon (27:3).

The modern Lebanese city of Sidon is built over the ruins of the ancient city, also known as Saida. It is located about 28 mi. SSW of Beirut and about 25 mi. N of Tyre. On the N side of the city there was a good harbor, protected by a low line of rocks joining the promontory and the mainland. To the S of the city there was a large bay.

The ancient history of Sidon is closely related to that of the Phoenicians generally, an aggressive sea-faring people on the eastern Mediterranean coast. Sidon was one of the four most important towns of the Phoenicians—the other three being Aradus in the N (almost directly E of CYPRUS), Byblos (GEBAL, c. 28 mi. N of Beirut), and Tyre in the S. Each of these cities was a more or less independent political unit, its immediate territory forming its kingdom. Occasionally some cities would have control over some neighboring territories, but they never fully united into a confederacy or nation.


Limestone foundation inscription from the Eshmun temple in Sidon (6th cent. B.C.). The Phoenician text reads: "Bodastarte, the son of Eshmunazar, the king of Sidon, has ordered this temple to be built for the god Eshmun."

During the 2nd millennium B.C. and the first half of the 1st millennium, Sidon was somewhat under the shadow of Tyre politically. Egyptian inscriptions of the 16th cent. mention Tyre and Sidon by name. In the TELL EL-AMARNA letters (1370 – 1348 B.C.) a king of Sidon named Zim-reda is mentioned (no. 147; see *ANET*, 484). Under TIGLATH-PILESER I (1114 – 1076), the Assyrians made an expedition to the Mediterranean coast and received tribute from Byblos, Sidon, and Arvad (*ANET*, 275). HIRAM was king of Tyre at the time of DAVID and SOLOMON, and provided workmen and material to Solomon for the construction of the TEMPLE in Jerusalem (2 Chr. 2). He also assisted Solomon in the development of RED SEA trade (2 Chr. 8:17; cf. 1 Ki. 9:26 – 28; 10:11).

In the 9th cent. B.C., the Assyrians had control over a number of Phoenician cities. ASHURNASIR-PAL II (883 – 859) received tribute from Tyre, Sidon, Byblos, and other cities consisting of gold, silver, tin, copper, linen garments, ebony, boxwood, ivory (*ANET*, 276). SHALMANESER III (858 – 824) also received tribute from the "countries of the inhabitants of Tyre, Sidon, and Byblos" in his twenty-first year (*ANET*, 280). A century later SENNACHERIB (704 – 681) in his third campaign marched against Luli, king of Sidon, and in his annals boasted about his complete rout of the Sidonian monarch, who fled to Cyprus where he died (*ANET*, 287 – 88). Sennacherib placed ETHBAAL on the Sidonian throne and exacted tribute from the land.

Later, Abdimilkutte became king of Sidon and refused to recognize the authority of the Assyrian king ESARHADDON (680 – 669), or to comply with his severe economic demands. Esarhaddon, however, in a battle in 677 – 676 destroyed Sidon, and the Sidonian king was killed at sea. The Assyrians took much booty—all the riches of the city and many subjects captive. With the help of neighboring peoples, Esarhaddon built a new city on a new location which he called Kar-Esarhaddon (*ANET*, 291). This Assyrian commercial colony was to replace the Phoenician merchant cities in handling Assyrian trade on the Mediterranean coast. Nevertheless, the Assyrians were never able to subjugate completely all the cities of the Phoenicians.

The first eastern king to gain complete control of the Phoenician territory was NEBUCHADNEZZAR II (605 – 562), in whose court the king of Sidon was a "subject" (*ANET*, 308). His destruction of the power of Tyre in 574 made Sidon the leading city of the area. Under the Persians, Sidon was a major city and the seat of a palace of the Persian king. Sidon gained a measure of independence in the 5th cent., as suggested by the inscription of the coffin of Eshmunazar (now in the Louvre), which reports that he added the Philistine cities of DOR and JOPPA to his kingdom. With the Greek conquest under ALEXANDER THE GREAT, epitomized in his spectacular siege of Tyre, the Phoenician cities became Greek and subsequently Roman in character and culture.

The skill of the artisans of Sidon is well attested in ancient times. The carving of IVORY to decorate furniture, architecture, and small objects was a flourishing industry in Sidon. The Assyrian documents record great quantities of ivory articles sent to the Assyrian kings as gifts and tribute. Homer lists one of the prizes at the funeral games of Patrocles as a beautiful Sidonian silver bowl (*Iliad* 23.741ff.). Such trade in ancient times reflects an extensive Sidonian influence in E and W.

The chief god of the Sidonians was Eshmun, and of the Tyrians, Melqart. These two were part of the familiar ANE FERTILITY CULT and harvest myth, represented in Babylonia as ISHTAR and TAMMUZ, in Egypt as Isis and OSIRIS. Eshmun also became the chief god of Carthage.

Unfortunately, the modern Sidon is built largely over the ruins of the ancient city, making any extensive and systematic excavation of the site very difficult. It is hoped that the increased archaeological investigation along the Phoenician coast may reveal more of the past history of Phoenicia, and of some of her major cities. (See further F. Eiselen, *Sidon: A Study in Oriental History* [1907]; N. Jidejian, *Sidon through the Ages* [1971]; R. Saï-dah, *Sidon et la Phénicie Méridionale au Bronze Récent: à propos des tombes de Dakerman* [2004].)

B. VAN ELDEREN

siege. See WAR, WARFARE V.

sign. An unusual phenomenon interpreted as of supernatural origin and designed to provide instruction, give warning, or encourage faith. In this sense it is a rough synonym of MIRACLE. I.

I. Vocabulary

A. In the OT. The term *sign* in contemporary English and in the English versions of the Scriptures has a great variety of meanings ("distinguishing mark, token, symbol," etc.—see also SYMBOLISM). The same is true of the biblical languages; in the OT there are five different terms with very similar meanings. The most common of these is *,ôt H253*. In addition to its general sense (Gen. 1:14; 9:12; 17:22 et al.), it is used to designate the prodigies or wonders by which MOSES sought to convince PHARAOH that he was sent of God (Exod. 4:8 – 30). The great plagues which accompanied the exodus of the Israelites from Egypt are also described with this term (Exod. 7:3; 8:23; 10:1 – 2; 13:9). See EXODUS, THE; PLAGUES OF EGYPT. The same term is used in describing the means by which SAUL was certified to be the man of God's choice (1 Sam. 10:7, 9).

A term with which the foregoing is often linked is *môpēt H4603*, usually translated "wonder." The two words occur together, especially in the book of Deuteronomy, and are practically synonymous (Deut. 4:34; 6:22 et al.). A similar combination appears repeatedly in the NT (esp. the book of Acts, e.g., Acts 2:19, 22, 43); in general it is used to designate deeds by which God makes known his purpose and his power. Also translated "wonder(s)" or the like are *niplā)ôt* (niphal fem. pl. ptc. of *pālā) H7098*, Exod. 3:20 et al.) and its cognate noun *pele), H7099* (15:11 et al.).

B. In the Septuagint. The Hebrew term *)ôt* is rendered by the SEPTUAGINT with *sēmeion G4956*, a word that already in classical Greek could be used in the sense of "omen" (i.e., "sign from the gods"). And as the Hebrew term is often combined with *môpet*, so is *sēmeion* linked with *teras G5469*, "signs and wonders." This combination occurs so frequently in both OT and NT that its use is idiomatic. The idiom is not limited to canonical literature. It is used, for example, in Jewish Hellenistic writings (e.g., Wisd. 8:8; 10:16; Philo, *Moses* 1.95; Jos. *Ant.* 20.8.6) and even by pagan authors (as early as Polybius, *Hist.* 3.112.8; more examples in BDAG, 920). Here as elsewhere, the LXX is the literary bridge between the OT and NT.

C. In the NT. In addition to the two Greek terms already mentioned, the NT often uses the common word for "power," *dynamis G1539*, with reference to miraculous deeds (esp. in the pl., Matt. 11:20 – 23 et al.; in combination with *sēmeion*, Acts 2:22 et al.). Similarly, the noun *ergon G2240* ("work, deed") can be used of the miracles performed by God and Jesus (esp. in the Gospel of John, e.g., Jn. 7:3; 9:3).

II. Meanings

A. Portents, prodigies. Even the sophisticated Romans and Greeks were superstitious and were often awed by supernatural portents or prodigies that were believed to foretell coming events. Julius CAESAR is reported to have seen certain of these on the morning of his assassination. JOSEPHUS reports similar omens preceding the destruction of Jerusalem, A.D. 70. These people for the most part were God-fearers in the sense that they were afraid of the supernatural and looked eagerly for indications of the divine will and of future events in a prescientific age. Many natural phenomena were explained on the basis of supernatural agencies which priests, soothsayers, or ordinary citizens sought to interpret. PLUTARCH, for example, speaks of a monstrous birth as "a sign and a wonder" (*sēmeion esti kai teras, Sept. sap. con.* 3 [149.C]). It is applied to a freak of nature rather than to a supernatural event with religious significance.

In the OT certain messages indicate that one meaning of the term is in the nature of prodigies, portents, or omens (Ezek. 12:6; Dan. 4:2 – 3; 6:27). King AHAZ was offered a token of divine will (Isa. 7:10, 14; 8:18; 19:20; 20:3). HEZEKIAH asked and was granted similar tokens (Isa. 37:30; 38:7, 22). These were not miracles in the ordinary sense but were simply phenomena, supernatural in origin, which lent authenticity to the prophet's statement and served to strengthen the confidence of the skeptical and ignorant. The "sign" in such contexts is one means by which God communicates his thought to human beings and thus indicates his will. GIDEON, for example, obtained assurance and confirmation of God's directives through signs (Jdg. 6:17 – 22 et al.).

The same connotation of portent or omen is seen in NT usage, as when the Jews sought for a sign (Matt. 12:38) and the Master attributed their request to lack of real faith (12:39; cf. 16:1 – 4; 24:3). Sometimes it may indicate simply a means of identification (26:48). Repeatedly a demand for evidence of this kind is discouraged in the NT. It is regarded as an alibi to justify unbelief and was seldom, if ever, gratified. PAUL declared this desire for a "sign" to be characteristic of the Jews (1 Cor. 1:22; cf. 14:22). The story of LAZARUS AND DIVES teaches that more impressive "signs" are not a cure for unbelief; that even if one returned from the dead he could not effectively preach repentance (Lk. 16:31).

B. Supernatural acts. Both in the OT and NT the significance of miracles is that they indicate God's activity, and thus are a mode of divine REVELATION. Commonly a sign indicates God's power (Neh. 9:10; Ps. 78:43) and is often linked with the miracles attending the exodus (Jer. 32:21). At other times it represents something linked with a COVENANT (Gen. 1:14). These signs were regarded by the writers of the Bible as interventions by the Creator into the sphere of creation for the purposes of revelation and redemption. As such, they were an encouragement to faith and many times they provided a basis for faith. They were also the basis for hope. A supernatural act as a sign both from and for Yahweh would help remedy the existing situation with which the Israelites found themselves confronted (Isa. 55:13; 66:19). Often the "sign" or "signal" to the Israelites was for the benefit of the non-Israelites. The ensign or SIGNAL of the Lord, for example, could be a rallying point or marshaling ground for the armies being recruited to crush Babylon (13:2).

In a few incidents it is reported that phenomena similar to miracles were occasioned by sources other than Yahweh. The magicians were said to have done this in Egypt (Exod. 8:7). However, their success was only very limited as compared with that of Moses (v. 18). The magicians reported to Pharaoh, "This is the finger of God" (v. 19). SIMON MAGUS in Samaria was credited with the ability to perform what seemed to be miracles by his magic (Acts 8:9 – 11). For the most part, however,

people in NT times had one explanation for miracles: they could be performed only with God's power (cf. Jn. 3:2). This conviction was shared by Jews and Gentiles, believers and unbelievers; this was what lent such cogency to the argument of the former blind man (Jn. 9:31) and left Jesus' enemies often speechless (Acts 4:14, 16) and frustrated (v. 21).

In addition, DEMONS are credited with the power to perform supernatural acts. Paul speaks of certain signs and wonders as originating in SATAN, but being permitted by God as punishment (2 Thess. 2:9). Even more pronounced is a picture of the future in which a profusion of so-called miracles is performed so that the majority of the people on earth are deceived. The healing of the beast is regarded as miraculous (Rev. 13:3) and results in worship of the beast. That apparent miracles can have demonic origin is implied also in 1 Jn. 2:26. Their purpose is deception. That deception can be a basis for divine punishment is also indicated in Rom. 1:28 – 32. Rejection of the true light may lead one to mistake evil for good. Jesus accused the PHARISEES of this when they were unwilling to regard his miracles as of divine origin but instead attributed them to Satan (Mk. 3:21 – 27). This spiritual blindness exposes one to the danger of an eternal sin (3:28 – 29). Thus the Scriptures warn, on one hand, against that nondiscrimination which fails to distinguish between the spurious and genuine miracles, and on the other hand, against spiritual blindness which refuses to acknowledge God as the source of supernatural acts.

C. A basis for faith. The OT writers accepted the reported miracles at face value. They attributed them to the activity of Yahweh. They used them as a basis for their own faith and as a means of convincing others that their God was the true God and was all-powerful. They sang of the mighty acts of God, and their creed consisted largely in reciting these divine deeds. This factor in their heritage stood them in good stead in times when they were hard-pressed and when evil seemed to overwhelm them. At such times they would look to God in faith and expect him to deliver them again. This was the germinal seed of their expectations for the future—a conviction that God would dramatically intervene for the redemption of his people (Pss. 85; 95; Hab. 3). The memory of such "mighty acts" was the basis of their optimism.

As for the NT, there is a paradoxical quality in the signs as reported in the Synoptic Gospels. On the one hand, the desire for signs was discouraged and rebuked because it indicated a lack of faith (Mk. 8; 11; 12). On the other hand, Jesus himself was a sign. In his message in the synagogue of NAZARETH it is obvious that Jesus regarded his previous acts of healing as a fulfillment of the messianic prophecy (Isa. 61:1 – 9) and thus as the basis of faith which recognized him as the MESSIAH. In a similar manner Paul appealed to the apostolic signs that accompanied his ministry as evidence of divine endorsement (2 Cor. 12:12). Repeatedly these signs or miracles were regarded as evidences of the authenticity of the gospel (Heb. 2:4). The miracle par excellence was the RESURRECTION OF JESUS CHRIST; again and again it was made the basis for belief in the veracity of the gospel. Apart from the divine intervention which resulted in Jesus' resurrection, Paul argues, faith is groundless (1 Cor. 15:14).

The relationship between miracle and unbelief is nowhere so clearly expressed as in the fourth gospel (see JOHN, GOSPEL OF). John does not use any word except *sēmeion*. The few miracles chosen for inclusion in this gospel are those in which the reaction of the people is the important thing. John is interested not only in the event but also in its meaning or significance. In this gospel, among the Pharisees and everyone else, a miracle or a work of God has only one explanation. It indicates God's power and approval. NICODEMUS accepted this as a basis for belief in Jesus (Jn. 3:2). The Pharisees' arguments with the restored blind man were powerless to resist his logic, the same logic Nicodemus

used; namely, that such things as divine healing had no other explanation than the energy of God. Jesus used this argument repeatedly in his dialogues with the Jews as evidence that God favored his message and his person (ch. 5). At the same time a clamor for mere evidence received little encouragement (6:26; 20:29). In the Gospel of John the greatest miracle is the one incarnate in the man Jesus, as when he said, "I am the resurrection and the life" (11:25). (On the so-called "semeia source" of the Gospel of John, see G. van Belle, *The Signs Source in the Fourth Gospel: Historical Survey and Critical Evaluation of the Semeia Hypothesis* [1994].)

III. Significance. The relationship between MYTH, fact (HISTORY), and FAITH is always a live issue. There are those who argue that the validity of faith does not depend upon fact, a view popular since the days of A. Ritschl and never more so than now. Religious "myth" is often understood as a religious *interpretation* of an event. Sometimes it is assumed that the important thing is the interpretation, regarded as more significant than the event it interprets. This sophistication was quite unknown to the writers of the Bible. In both OT and NT the authors were sober historians endeavoring to provide a basis for faith by citing the facts; this is especially true of the Gospels. In the Epistles also the authors were confident that God's endorsement of the message is to be seen in the lives transformed as well as in the intrinsic merit of the proclamation. This is quite different from credulously accepting an alleged vision or apparition as a substitute for evidence verifiable by ordinary means of discerning truth. The biblical authors needed no vision.

It is often said that one can believe the miracles because of the miracle of Jesus Christ, rather than in Christ because of the miracles. Today, it is true, the miracle of Jesus' character makes other miracles seem inferior by contrast. In the biblical record itself the "signs and wonders" are either the basis for belief in Jesus' authenticity (Jn. 5:36) or an important source of confirmation of apostolic testimony (Heb. 2:4). (See further A. Richardson, *Miracle Stories of the Gospels* [1941], ch. 3; P. Minear, *Eyes of Faith* [1946], 143 – 45, 183 – 87; J. C. Exum, ed., *Signs and Wonders: Biblical Texts in Literary Focus* [1989]; F. J. Moloney, *Signs and Shadows: Reading John 5 – 12* [1996].)

G. A. TURNER

signal. The standard method for communicating in times of war and peace in antiquity was by signal fires. Such are mentioned in the OT (e.g., Jer. 6:1; Heb. *maśʾēt H5368)* and in the records from TELL EL-AMARNA and LACHISH. However, banners or flags are also mentioned (e.g., Isa. 5:26; Heb. *nēs H5812);* this latter term can be used specifically in the sense of "warning" (Num. 26:10). See also SIGN.

signature. This term is used by the NRSV once (Job 31:35) to render *tāw H9338,* the name of the last letter of the Hebrew ALPHABET, which in its earlier form resembled the English letter *X* (see TAU). The same Hebrew word is translated "mark" elsewhere (Ezek. 9:4, 6). In sealing documents, individuals would have used their own recognizable signs, thought to correspond with the fingernail impressions made on CLAY TABLETS (see discussion in *HALOT,* 4:1693 – 94).

signet. A seal used to indicate ownership or to give official authority to a document. In the NIV this English word occurs only in the phrase "signet ring" (Gen. 41:42). In the NRSV it also occurs by itself in a number of passages, usually as the rendering of Hebrew *hôtām H2597* (Exod. 28:11 et al.). For discussion, see SEAL.

Signet mold with the throne name of Tutankhamen (from Tell el-'Ajjul, c. 1330 B.C.).

signs of the heavens (sky). See ASTRONOMY, III.

Sihon s*i'*hon (סִיחוֹן *H6095,* meaning unknown). A king of the AMORITES defeated by the Israelites on their way to Canaan (Num. 21:21 – 30). MOSES had sent messengers to Sihon, hoping to obtain permission to lead the Israelites through his land. The king refused to grant this permission; rather he went out against Israel with his army, but was defeated and slain. Israel then claimed Sihon's land as its first conquered area. HESHBON had been his capital city; his S boundary was the river ARNON; and his N boundary was the river JABBOK (Num. 21:24). Further, his country was a land of many villages and cities (21:25); it became a part of the TRANSJORDAN claimed and settled by the tribes of REUBEN, GAD, and part of MANASSEH. See TRIBES, LOCATION OF, I.

Moses' defeat of Sihon was a great event remembered centuries later. Ballad singers made a poetic account of Sihon's downfall a part of their repertoire (Num. 21:27 – 30). Moses used it as a meaningful reference to the past when he "proclaimed to the Israelites all that the LORD had commanded him concerning them" (Deut. 1:3 – 4). He retold the great victory over Sihon (2:24 – 37) in order to recall how it had been a rallying point in going against OG of BASHAN (3:1 – 11), and to inspire confidence in God with respect to nations still before them across the Jordan (29:7; 31:4). It is of interest to observe that other peoples told about Sihon's defeat and spread the news, causing dread among the inhabitants on the W side of the Jordan (Josh. 2:10; 9:10).

JOSHUA used Sihon's defeat as a significant point of reference in Israel's past as he recounted great victories and apportioned the conquered land to certain tribes (Josh. 12:2, 5; 13:10, 21, 27). Historians included occasional references to it: JEPHTHAH, confronted by the belligerent Ammonites, related to them how Sihon dared to engage Israel in battle and how he had been defeated (Jdg. 11:12 – 28, esp. vv. 19 – 20); the territory assigned by SOLOMON to GEBER in Transjordan was known as GILEAD and also as "the country of Sihon king of the Amorites" (1 Ki. 4:19). EZRA, addressing his

people in a public confession of sin, spoke about great events of Israel's past, including the defeat of Sihon (Neh. 9:22). Psalmists reviewing and retelling past events wrote and sang about the way God gave victory over Sihon (Pss. 135:11; 136:19). JEREMIAH, in an oracle against MOAB, declared that destructive fire would come forth "from the house of Sihon" to bring about the collapse of Moab (Jer. 48:45 NRSV).

<div align="right">H. E. FINLEY</div>

Sihor s*i*'hor. KJV alternate form of SHIHOR.

Sikkuth sik'uhth. See SAKKUTH.

Silas s*i*'luhs (שָׁאִלְא *G4976* [in Acts], apparently from Aram. שָׁאֵל [= Heb. Σιλουανός *H8620*, SAUL]; the form Silouanoß *G4977* [2 Cor. 1:19; 1 Thess. 1:1; 2 Thess. 1:1; 1 Pet. 5:12] is thought to be either a surname [cognomen from Lat. *silva*, "wood, forest"] or a latinized form of Silaß, though some have suggested that the latter was rather a shortened form of his original name, *Silvanus*). A prominent member of the Jerusalem church and companion of the apostle PAUL on most of his second missionary journey. When the COUNCIL OF JERUSALEM decided that GENTILE believers were not obligated to be circumcised, Silas was one of two delegates appointed to accompany Paul and BARNABAS to ANTIOCH OF SYRIA with the letter announcing the council's decision (Acts 15:22 – 23). The sentiments of the council were orally expressed as well (v. 27), together with strengthening words of exhortation by Silas and Judas Barsabbas (see JUDAS #9), who are referred to as "prophets" (v. 32). After some time in Antioch, their mission accomplished, they returned to "those who had sent them" (v. 33; according to v. 34 in the KJV, Silas remained in Antioch, but this verse is omitted by most witnesses, including the earliest MSS).

Paul chose Silas as his companion for the second missionary journey after the apostle and Barnabas had a falling out over the John Mark incident (Acts 15:36 – 40; see MARK, JOHN). Not much is said directly of Silas until the incident at PHILIPPI when he and Paul were beaten and imprisoned, accused of causing a breach of the peace and preaching false doctrine (16:12 – 40). Undaunted, the two prisoners prayed and sang praises to God at midnight until an earthquake secured their miraculous release. After the conversion of the jailer and his family, and the realization by the magistrates that Paul and Silas were Roman citizens (see CITIZENSHIP), they took leave of Philippi and the brethren there for THES-SALONICA (17:1 – 9). Later, in BEREA, Silas was left with TIMOTHY while Paul went to ATHENS to escape the riots (17:1 – 15). The apostle had asked his companions to join him when they could, but it was not until he had left Athens and arrived at CORINTH that they caught up with their leader (18:5).

Silas may be identified with Silvanus. As in the case of Paul, this man may have had both a Roman and a (hellenized) Semitic name. If the one who is invariably called Silas in Acts and the one who is invariably called Silvanus in the Epistles are one and the same, then the preaching mission of Silas in Corinth with Paul and Timothy is mentioned in 2 Cor. 1:19. This fits with the salutations of 1 and 2 Thessalonians (written from Corinth during the second missionary journey), where the same three send greetings to the saints at Thessalonica (1 Thess. 1:1; 2 Thess. 1:1).

The use of "we" throughout the main body of these epistles may mean that Silas and Timothy were actually coauthors with Paul, who adds his own personal postscript (1 Thess. 5:27; 2 Thess. 3:17; most scholars however consider that the companions are mentioned only in a supporting role). Such literary activity of Silvanus is alluded to by PETER: "With the help of Silas [Silvanus], whom I

regard as a faithful brother, I have written to you briefly" (1 Pet. 5:12). While the full meaning of this remark is uncertain, it has been taken to mean that he was not simply bearer of the epistle, but also its AMANUENSIS, or he may have been only responsible for much of the style and arrangement of the letter. It is well known that ancient secretaries were allowed considerable freedom in writing down their master's ideas, even to the extent of filling in the contents of a bare outline. The master would check over and authenticate the finished product. Although the language would be that of the amanuensis, the fundamental ideas would be those of the master. In this case Peter would have regarded Silvanus as a trustworthy secretary ("a faithful brother"), "better fitted than anyone else to express in an intelligible and effective manner the thoughts and feelings which Peter entertained toward the Gentile Christians of Asia Minor" (T. Zahn, *Introduction to the New Testament* [1909], 2:150 – 51).

If the Silvanus of 1 Peter can indeed be identified with the Silas of Acts, who was associated with Paul in the production of the Thessalonian letters (see the detailed discussion of L. Radermacher in *ZNW* 25 [1926]: 287 – 99; cf. also C. Bigg, *A Critical and Exegetical Commentary on the Epistles of St. Peter and St. Jude,* ICC [1903], 83 – 84), it is quite probable that a similar relationship with Peter existed in the writing of 1 Peter. E. G. Selwyn (*The First Epistle of Peter* [1952], 365 – 466) argues strongly for this probability on the grounds of a close connection of thought and language between 1 Peter, 1 and 2 Thessalonians, and the Apostolic Decree in Acts 15, of which Silas was one of the bearers. Also, it is not likely that a man of such stature should have been relegated by Peter to the office of a mere scribe or postman (ibid., 10 – 11). While similarities of thought and expression are capable of various explanations, the Silvanus hypothesis may be a reasonable alternative for those whose main objection to Petrine authorship is that an illiterate Galilean fisherman could not have written with such elegant diction and facility in Greek (but see PETER, FIRST EPISTLE OF, I).

However, this hypothesis has been challenged by F. W. Beare (*The First Epistle of Peter,* 3rd ed. [1970], 47 – 48, 212 – 16). His main objection—the meager references to the Holy Spirit—is a precarious criticism that has been adequately answered (see A. F. Walls's introduction to A. M. Stibbs, *The First Epistle General of Peter* [1959], 25 – 30). Another problem is the nonmention of Silvanus in the salutation of 1 Peter (as he appears in 1 Thess. 1:1 and 2 Thess. 1:1; cf. Rom. 16:22, where TER-TIUS the scribe sends greetings). This suggests that Silvanus may have played a less important part than the amanuensis hypothesis implies.

Since *dia Siluanou* ("through Silvanus") is ambiguous, the amanuensis theory is inconclusive without stronger supporting evidence. The dynamic personal authority and tone of the whole letter (esp. 1 Pet. 5) makes it improbable that Peter's helper was allowed too much freedom in its basic message as we know it. When Peter says he has written "briefly" (v. 12), he is not minimizing his responsibility for the weight of the epistle, but suggesting that his words were shortened because he knew that Silvanus his delegate would enforce and supplement them in person.

On the basis of his association with the writings of Paul and Peter, as well as certain literary resemblances between 1 Peter and Hebrews, Silvanus (Silas) has been considered as a possible author of the epistle to the HEBREWS, but there is no corroborating evidence. (In addition to the commentaries, see F. F. Bruce, *The Pauline Circle* [1985], 23 – 28.)

A. M. ROSS

silk. This English term is used by the KJV in two passages (Prov. 31:22 [Heb. *šēšes* , "fine linen"] and Ezek. 16:10, 13 [*mešî H5429,* only here, meaning possibly "rich fabric"]). It is doubtful that the

woven thread of the Chinese silkworm (*Bombyx mori*) was known in the ANE in OT times. The Greek term for "silk" (*sirikos G4986*) appears only in Rev. 18:12. It is derived from a Hellenistic term (*Sēres*) that referred to people from China; certainly by the 1st cent. B.C. Chinese silk was known in Asia Minor.

W. White, Jr.

Silla sil'uh (סִלָּא *H6133*, meaning unknown). An unidentified place cited in connection with the murder of King Joash, an event that is said to have taken place "at Beth Millo, on the road down to Silla" (2 Ki. 12:20). Its association with Beth Millo (KJV and other versions, "the house of Millo") suggests that it may have been a sector of Jerusalem or a place within its environs. See Millo.

Siloam si-loh'uhm (Σιλωάμ *G4978*, from Heb. שִׁלֹחַ *H8942*; see Shiloah). A pool and tower in biblical Jerusalem; the term is also currently applied to the water tunnel that empties into the pool. As a defense against the attacks by Assyria, which culminated in Sennacherib's campaign of 701 B.C. (cf. 2 Chr. 32:4), King Hezekiah of Judah constructed the Siloam water tunnel from the Gihon Spring, southwestward through the rocky core of Mount Zion, and out into the central Tyropoeon Valley of Jerusalem (v. 30).

The tunnel is square cut, averaging 2 ft. wide and 6 ft. high. It follows an S-shaped course, so that the direct distance of 1,090 ft. involves 1,750 ft. of actual tunneling. This may reflect attempts to avoid harder rock formations or deeply cut structures at higher levels, such as tombs; certain of the turns were produced as the crews, working inward from both ends simultaneously, sought to contact each other. Considerable additional construction became necessary in the S portion, namely, a lowering of the tunnel floor in order to allow a gravity flow of the water.

An inscription just inside the SW portal was discovered in 1880, which has now been cut out from the rock and removed to the Istanbul Museum. Literally translated from the archaic Hebrew letters it reads: "The boring through [is completed]. And this is the story of the boring through: while yet [they plied] the drill, each toward his fellow, and while yet there were three cubits to be bored through; there was heard the voice of one calling unto another, for there was a crevice in the rock on the right hand. On the day of the boring through the stonecutters struck, each to meet his fellow, drill upon drill; and the water flowed from the source to the pool for a thousand and two hundred cubits, and a hundred cubits was the height of the rock above the head of the stone cutters" (GKC, frontispiece: photograph, tracing, and transcription into square character).

While the aforementioned pool may have remained outside the city walls as a covered cistern, with additional, concealed access tunnels and overflow channels (K. Kenyon, *Jerusalem: Excavating 3000 Years of History* [1967], 70 – 77), the water seems actually to have come "into the city" (2 Ki. 20:20), probably through an as yet unrecovered extension of the SW fortifications of Zion (cf. 2 Chr. 32:5, "another wall"). Isaiah appears to speak of Hezekiah's project when he mentions "a reservoir between the two walls for the water of the Old Pool" (Isa. 22:11). The "Old Pool" may refer to an original Upper Pool (7:3) near the Gihon Spring. The Lower Pool (22:9), possibly modern Birket el-Hamra, at the S tip of the pre-Hezekian city is known to have received water from it by a surface conduit called *haššilōah H8942* (LXX, *tou Silōam*), "the sending [one]" or "canal." The course of its upper 200 ft., with a minimal drop along the E side of Mount Zion—"gently flowing waters"—is still traceable. Thus it appears that the original Siloam Pool predated Hezekiah. However, by postexilic times, at least, the Lower Pool itself came to be called Shelah (*šelah H8940*), with the same

meaning (Neh. 3:15), since it seems to have continued in use for overflow from Hezekiah's newer pool.

By Christian times the name Siloam had, understandably, become transferred to the newer pool, for JOSEPHUS (*War* 5.4.1 – 2) refers to the *pēgē* ("spring, fountain"), by which he meant the water at the outlet of Hezekiah's tunnel. The tower of Siloam, which collapsed at the cost of eighteen lives (Lk. 13:4), must have stood on the slope of Mount Zion to its E. The NT thus designates this pool, to which Jesus sent the man who had been born blind, as the Pool of Siloam and appropriately interprets it to signify "Sent" (Jn. 9:7). Traces remain of a Herodian reservoir and bath structure, c. 70 ft. square, with steps on the W side. Here the man would have washed, and he miraculously received his sight (vv. 8, 10).

A commemorative Byzantine church was constructed just NW of the reservoir in c. A.D. 440 by the Empress Eudocia, together with elaborate porticoes about the pool. Only fragments remain visible, and the pool itself now rests 18 ft. below the surrounding ground level. The surviving pool carries the title Birket Silwan, may be reached by a steep flight of stone steps, and measures 16 x 50 ft. A small mosque stands over the ruins of the church, and the name Silwan has become attached to the Arab village across the KIDRON Valley to the E.

Staircase leading to the depression that once functioned as the Pool of Siloam. The excavation remains here have been dated as early as the 1st cent. B.C.

J. B. PAYNE

Silvanus sil-vay'nuhs. See Silas.

Silvanus, Teachings of. A loosely structured didactic work included in the Nag Hammadi Library (NHC VII, 4). This 4th-cent. Coptic MS is a translation of an earlier Greek composition, possibly to be dated late in the 2nd cent. A.D. The name Silvanus, which appears only in the title, may be a pseudonymous attribution to Silas, companion of the apostle Paul , but perhaps it refers to an otherwise unknown author. The work may be regarded as Wisdom literature, few examples of which exist within the early Christian tradition. Among the Nag Hammadi treatises, this one is the least affected by Gnosticism. Although its contents are primarily ethical in character, it includes theological discussion, especially regarding the nature of God and Christ. (English trans. in NHL, 379 – 95; discussion in *ABD*, 6:341 – 43.)

silver. One of the precious Metals, white in color, ductile, and so malleable that it can be beaten into leaves as thin as 0.00025 mm. Silver has a density of 10.5 and melts at 961°C. It forms alloys with other metallic elements, including Gold, Copper, nickel, and zinc; 10 – 15 percent silver is commonly present in native gold. *Electrum*, which was used for many early coins, is the natural alloy of gold with 15 – 45 percent silver; it was called *asem* in ancient Egypt. The crystal structure of silver, like that of gold and copper, is a face-centered cubic lattice. The cell dimensions of the basic cubic units of four atoms of silver and of gold are almost identical, and therefore silver substitutes for gold, and vice versa, right up to 100 percent.

Because of its comparative scarcity, white color, high luster (silver is the most lustrous of all metals), resistance to atmospheric oxidation, and malleability, silver has been used in the manufacture of articles of value such as ornaments (e.g., 1 Chr. 18:10; Acts 19:24), jewelry, and coinage (e.g., Lev. 5:15; Matt. 26:15). The oldest silver probably came from N Syria (the Aramean state of Zobah in 1 Sam. 14:47) and from parts of Asia Minor. Silver was known c. 4000 B.C. in Egypt, but was very rare. Menes, who founded the 1st dynasty c. 3100, set the value of silver at about one quarter that of gold. Chaldean silver ornaments are known from c. 2850, and silver formed part of Abraham's wealth (Gen. 13:2). It is probable that by 800 B.C. all the countries between the Nile and the Indus used both silver and gold as money. Early Roman records indicate that before the term *argentum* was used, silver was referred to as *Luna* with a crescent moon symbol. The alchemists used the same symbol and termed silver either Luna or Artemis (the great mother goddess of Asia— cf. Acts 19:10, 22, 26 – 27).

Sumerian silver lyre from Ur (c. 2600 B.C.). Silver covers the lyre itself and the bull's head.

Native silver occurs much more rarely than native gold, but it is widely distributed in small amounts and would have been the earliest source of the metal, as at Laurion, Greece (see MINES, MINING). It sometimes is of primary origin, but generally is secondary, occurring in a zone of secondary enrichment, in a silver lode or deposit. Together with other silver sulphides occurring in this zone, the silver developed by the action of hot water vapors or oxygen upon the primary silver sulphides, of which argentite is the most important ore mineral. The uppermost, weathered parts of silver lodes or deposits, above the zone of secondary enrichment, include cerargyrite (silver chloride), another important ore. These silver ores are mined primarily for their silver content. Much of the world production of silver comes from smelting ores of lead, such as galena, a lead sulphide, and sulphides of copper and zinc, all of which contain a small percentage of silver.

Silver can be extracted from its ores by a number of simple metallurgical processes, one being the process of cupellation with lead, thought to have been used by the Babylonians, and still used today. The silver ores are smelted with lead or lead ores in a simple furnace. The resultant lead-silver alloy is then melted on a porous hearth of bone-ash or marl. The lead is oxidized by the oxygen in the air to form a layer of molten lead oxide. Any other base metal impurities are also oxidized and dissolved in the molten lead oxide, which is skimmed away ("dross," Ezek. 22:18) or run off the top of the crucible or vessel. Only the silver, with any gold or platinum present, remains and is free of base metals (cf. Isa. 1:22).

The tarnish which forms on silver results from the action of sulphur or sulphur compounds in the air forming a film of silver sulphide on the surface. Such an effect is particularly marked in industrial cities, but in biblical times it would be a very rare occurrence and only adjacent to places where sulphide ores were being smelted. (See J. R. Par-tington, *A Textbook of Inorganic Chemistry*, 6th ed. [1950], 733 – 38; H. H. Read, *Rutley's Elements of Mineralogy*, 26th ed. [1970], 255 – 62.)

D. R. BOWES

silverling. This archaic term, meaning "small silver coin," is used once by the KJV (Isa. 7:23, where modern versions have "shekels").

silversmith. An artisan that crafts objects made of SILVER (see ARTIFICER). The English term is used to translate Hebrew *sôrēp* (Jdg. 17:4; Prov. 25:4), which is the participial form of the verb *sārap H7671,* meaning "to smelt, refine" (see REFINE).Thus the Hebrew word can also be used of goldsmiths (e.g., Isa. 40:19) and other refiners. In the NT, the Greek term used is *argyrokopos G737,* which does refer specifically to a silversmith; it is applied to DEMETRIUS, an artisan in EPHESUS "who made silver shrines of Artemis" (Acts 19:24).

Simalcue si-mal'ky*oo*-ee. KJV Apoc. form of IMALKUE (1 Macc. 11:39).

Simeon sim'ee-uhn (שִׁמְעוֹן *H9058,* possibly "[God] has heard" [but see *HALOT,* 4:1576 – 77, and cf. SHIMEON and SIMON]; gentilic שִׁמְעֹנִי *H9063,* "Sim-eonite"; Συμεών *G5208).* Also Symeon (some versions in the NT). (1) Son of JACOB and ancestor of the Israelite tribe that bears his name. See discussion below.

(2) Grandfather of MATTATHIAS (#2) and thus great-grandfather of the Maccabean leaders (1 Macc. 2:1). See MCCABEE.

(3) Son of Judah, included in Luke's GENEALOGY OF JESUS CHRIST (Lk 3:30). This Simeon had a son named Levi, but nothing else is known about him.

(4) A devout man of Jerusalem who had been promised by God that he would see the MESSIAH before he died (Lk. 2:25 – 26). When Jesus was taken by his parents to the temple for the performance of the purification rites, Simeon was prompted by the HOLY SPIRIT. Recognizing the baby Jesus as the MESSIAH, Simeon took him in his arms and uttered the famous prayer known by its first two Latin words, NUNC DIMITTIS (2:29 – 32). He further predicted the necessity of suffering involved in Jesus' redemptive work, especially as it would affect Mary. This incident is apparently related by Luke as a part of his program of locating independent witnesses to Christ's messiahship. (For the doubtful view that this Simeon was the supposed son of the rabbinic scholar HILLEL, see A. Cutler in *JBR* 34 [1966]: 29 – 35; contrast *HJP,* rev. ed. [1973 – 87], 2:367 – 68.)

(5) One of the prophets and teachers of the church at ANTIOCH OF SYRIA (Acts 13:1). See NIGER.

(6) The name used by JAMES with reference to Simon PETER (Acts 15:14 most versions; NIV, "Simon"). This use of Peter's Hebrew name may well have been intended to remind troubled Jews in the group that it was through a faithful Jew like Peter that God had inaugurated the Gentile mission.

The rest of this article is devoted to Simeon son of Jacob.

According to the book of Genesis, Jacob loved RACHEL more than he loved his other wife, LEAH (Gen. 29:30). Because of this, God opened Leah's womb and she bore first REUBEN and then Simeon; the latter received that name because God had "heard" Leah's grief (vv. 31 – 33). It was Simeon and his younger brother LEVI who used deception to avenge themselves upon SHECHEM the HIV-ITE after that prince violated their sister DINAH (34:25 – 31). The act made Jacob persona non grata in the area and aroused his anger upon the two brothers (34:30). Jacob's last testament indicates that his anger did not abate through the years, for he predicted that the descendants of the two would be scattered throughout the land because of their fathers' violent natures (49:5 – 7).

Some scholars, denying that the tribes ever had only one originator, hold that the Genesis accounts of Jacob's family are actually early history of the twelve tribes. From this point of view, the

Simeon and Levi tribes attempted to settle in central Canaan, but because of their barbarian nature, they brought upon themselves concerted Canaanite attack. The result was that the two tribes were so completely shattered that they were never again cohesive entities (cf. A. de Pury in *RB* 76 [1969]: 5 – 49). This reconstruction, however, is at variance with the biblical data.

Simeon was the brother whom JOSEPH held hostage until BENJAMIN should be brought to him (Gen. 42:24). Some have suggested that this was in punishment for Simeon's violent nature, but it is much more likely that Joseph held him simply because he was the second oldest brother. Reuben, the eldest, was not held either because of his kindness to Joseph (37:21) or because the eldest brother had to be left in charge in order to prevent a perhaps violent struggle for leadership among the remaining brothers.

Simeon and his five sons (including SHAUL, the son of a Canaanite woman) settled in Egypt with the rest of Jacob's family and by the time of the exodus had developed into a tribe (Gen. 46:10; Exod. 1:2; 6:15). In those sections of Numbers that deal with the organization of the Israelite camp, the tribe of Simeon is mentioned several times in its appropriate position, the second (Num. 1:6, 22, 23; 2:12; 7:36; 10:19). However, a comparison of the census figures in chs. 1 and 26 shows that while the nation as a whole lost only 2,000 during the wilderness sojourn (603,000 to 601,000), the tribe of Simeon lost more than 27,000. This represents a decline of more than 50 percent, from 59,300 to 22,100. The next larger tribe after the second census was EPHRAIM, which at 32,500 was nearly one-third larger. There were no smaller tribes than Simeon. Apparently, then, the tribe of Simeon was hard hit during the wandering. The man whom PHINEHAS killed at BAAL PEOR (25:14) was the head of a Simeonite clan. If the Simeonites were leaders in this apostasy, the resulting plague may have rested upon that tribe especially heavily and may partially account for the decline.

The tribal territory of Simeon.

At any rate, it was perhaps because of the weakness of the Simeonite tribe that it seems to have lost its independent status at an early stage, for the Simeonites were not accorded a separate inheritance in the land (Josh. 19:1 – 9). Simeon alone, of all the tribes, was rather given certain villages within the boundaries of another tribe, JUDAH (19:2 – 9; cf. 15:20 – 63; for a recent discussion of the Simeonite town lists, see Z. Kallai in *VT* 53 [2003]: 81 – 96). These villages were located in the southern area of Judah, the NEGEV. (On the topography of Simeon's territory, see W. F. Albright in *JPOS* 4 [1924]: 149 – 61; more generally, K. H. Graf, *Der Stamm Simeon* [1866].)

It is not clear whether Simeon ever actually possessed these villages, for when DAVID became a vassal of ACHISH, this PHILISTINE king of GATH evidently controlled ZIKLAG, one of the Simeonite cities (1 Sam. 27:6). This suggests that Simeon, like several other tribes, had not been able to capture all its allotted territory. The tribe, nevertheless, must have remained important in the far southern area, for 1 Chr. 12:24 – 25 states that a greater number of men (7,100) came to David from Simeon in the early monarchy than did from Judah (6,800).

Simeon's special situation within Judah meant that the two groups were more and more melted into one, with Judah taking the lead (Josh. 21:9; Jdg. 1:3, 17 – 19). This is especially plain in that Simeon is not mentioned in the numerous tribal lists of Judges. Its absence from the books of Samuel and Kings is also noteworthy. According to 1 Chr. 4:29, Simeonites lived in their allotted cities until the reign of David. Whether this is meant to imply that they did not live there after that time is not clear. During the reign of HEZEKIAH, however, a group of them migrated to GEDOR (prob. modern Khirbet Judur, c. 8 mi. SW of BETHLEHEM), while another group migrated S into EDOM (1 Chr. 4:39 – 43). If the identification of Gedor is correct, this may indicate that the Simeonites, deposed from their cities, spread both northward and southward in the area of Judah during the monarchy.

The treatment of Simeon in 2 Chr. 15:9 and 34:6 is difficult to interpret. In both instances, the tribe appears to be grouped with Ephraim and Manasseh as typifying the northern kingdom versus Judah and Benjamin. This seems impossible unless one presumes that a majority of the Simeonites had migrated into the northern area, or unless one credits the Chronicler with a memory of the Simeonite tribe's ancient attempt to take Shechem. As noted above, the latter of these is contrary to the biblical witness, while the former, though possible, is without scriptural warrant. Perhaps the statements intend to say that peoples from both N (Ephraim and Manasseh) and S (Simeon) were drawn into Judah and Benjamin at this time. The fact that the second reference (1 Chr. 34:6) appends "as far as Naphtali" immediately after Simeon makes even this interpretation dubious, however.

Further complicating this question is the issue of the tribal make-up of the kingdoms of Judah and Israel. If Judah was composed of Judah and Benjamin (1 Ki. 12:21; 2 Chr. 15:9), then Simeon would have had to be counted as one of the ten tribes of Israel. Only in the unlikely circumstance that Levi was counted as one of the northern tribes would it then be possible to argue that Simeon was simply dropped from the enumeration. Some scholars have argued that SOLOMON so effectively broke the separate identities of the tribes that the idea of ten northern tribes was not literally carried out. See TRIBES, LOCATION OF.

The ideal disposition of the land (Ezek. 48) places Simeon in the S, but Issachar and Zebulun, both northern, are also placed there, thus removing the passage from the realm of historical evidence. The final reference to the tribe of Simeon occurs in Rev. 7:7, which states that 12,000 Simeonites, along with representatives of the other eleven tribes, were sealed against the coming doom.

<div align="right">J. OSWALT</div>

similitude. This English term, meaning "corresponding likeness," is used a number of times in the

KJV. In the OT it can render such terms as Hebrew *tĕmûnâ H9454*, "form, representation" (Num. 12:8 et al.). In the KJV NT it translates *homoiōma G3930* (Rom. 5:14; cognate nouns in Heb. 7:15 and Jas. 3:9). The apostle PAUL can use this Greek term to express the reality of the INCARNATION. God has sent "his own Son in the likeness of sinful humanity" (Rom. 8:3 TNIV); Jesus was born "in human likeness" (Phil. 2:7; conversely, believers are united with Christ "in the likeness" [KJV] of his death and resurrection, Rom. 6:5). Using the cognate verb (*homoioō G3929*), the epistle to the Hebrews states that Jesus "had to be made like his brothers in every way" (Heb. 2:17; cf. 4:15). Though many have taken the "likeness" to point to some remaining "unlikeness," surely the intent of these passages is to teach the agreement of Christ's nature with true humanity. These passages underline the reality of Christ's work, including his continuing care and intercession for his people. On the concept that we "have been made in God's likeness" (Jas. 3:9), see IMAGE OF GOD.

D. C. DAVIS

Simon s*i'*muhn (Σίμων *G4981,* from Heb. שִׁמְעוֹן *H9058;* see SIMEON). (1) One of the twelve disciples of Jesus. See PETER.

(2) Another of the twelve disciples of Jesus, called "the Zealot" (Matt. 10:4; Mk. 3:18; Lk. 6:15; Acts 1:13). See CANANAEAN.

(3) A brother of Jesus (Matt. 13:55; Mk. 6:3).

(4) A leper of BETHANY in whose house a woman anointed Jesus' head with expensive ointment (Mk. 14:3 – 9; cf. Jn. 12:1 – 8).

(5) A PHARISEE in whose house a sinful woman anointed the feet of Jesus with her tears and ointment. Simon's criticism of the act by an unclean woman of such low reputation drew forth from Jesus a parable which taught Simon the relation between forgiveness and appreciation (Lk. 7:36 – 50). Jesus commended the woman for her love and faith.

(6) A man from CYRENE in N Africa who was compelled to carry the cross of Christ (Matt. 27:32; Mk. 15:21; Lk. 23:26). Mark calls him "the father of Alexander and Rufus," who must have been well known to Mark's readers (prob. in the church at Rome, cf. Rom. 16:13 and see RUFUS). Simon was likely one of many Jews living in Cyrene, now visiting Jerusalem. (See S. B. Crowder, *Simon of Cyrene: A Case of Roman Conscription* [2002].)

(7) The father of JUDAS ISCARIOT (Jn. 6:71; 12:4 [KJV]; 13:2, 26).

(8) A magician of SAMARIA. See SIMON MAGUS.

(9) A tanner of JOPPA in whose house PETER stayed "for some time" (Acts 9:43; 10:6, 17, 32). His house was by the seaside outside the city wall, because the handling of dead bodies made tanning ceremonially unclean to a Jew.

(10 – 11) The name of two high priests during the intertestamental period. Simon I ("the Just"), who lived in the first half of the 3rd cent. B.C., was the son of ONIAS I and the father of Onias II. Toward the end of the century, Onias II was succeeded by his son Simon II. The ancient sources (e.g., Sir. 50:1 – 21; Jos. *Ant.* 12.2.5 §43) are sometimes ambiguous regarding which Simon is being referred to (cf. *HJP*, rev. ed. [1973 – 87], 2:359 – 60; J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 137 – 57, 181 – 88).

(12) A man from the tribe of BENJAMIN who was captain of the temple early in the 2nd cent. B.C. (2 Macc. 3:4 et al.).

(13) One of the Maccabean brothers. See SIMON MACCABEE.

(14) Simon ben Kosiba. See BAR KOKHBA.

A. M. ROSS

Simon Maccabee. Also Simon Maccabaeus. Son of Mattathias and ruler over JUDEA from 142 to 135 B.C.; surnamed Thassi (1 Macc. 2:3 et al.). Under his brother Judas MACCABEE, Judea had gained religious freedom after the persecutions of ANTI-OCHUS IV Epiphanes. Judas and his party wished to achieve full political freedom, although he died before it was attained. When another brother, Jonathan, became ruler, the Hellenistic party was driven out and the Maccabees were in firm control. Under Simon, finally, the Jews became wholly independent of the SELEUCID or Syrian empire.

At the time, the Seleucid ruler DEMETRIUS II was being challenged by the general TRYPHO . Simon pledged loyalty to Demetrius on condition that he recognize the freedom of the Jews. Demetrius, who had already lost power in the S of his kingdom, granted remission of all outstanding taxes to the Jews and exempted them from paying tribute thereafter. This meant that Judea was now politically free. Documents were no longer dated according to the Seleucid era, but according to the year of Simon as "High Priest and Prince of the Jews."

Although Demetrius did not have power to bestow favors on Simon, since Trypho was still in power in Syria, Simon was able to take advantage of the Syrian civil war to enlarge his holdings. Gazara (GEZER), W of JERUSALEM, commanded a mountain path essential to commerce between Jerusalem and the port city of JOPPA, already in Jewish hands. Simon conquered Gazara and expelled its Gentile inhabitants, settling there "those who observed the law" (1 Macc. 13:43 – 48). As long as the Syrians controlled the citadel in Jerusalem, however, the capital city was not truly free. In the year 142 B.C., Simon was able to take the citadel from the Syrian garrison, which had to capitulate because of famine. This event had great symbolic as well as strategic value. Enemy soldiers no longer had a foothold in Judea.

Simon is also noted for his administration of justice and the reestablishment of Jewish law in the land. Peace was finally achieved, and attention could be given to the beautifying of the temple and the establishment of a viable civil government. Mattathias and his sons had come to power in a popular uprising against the Syrian rulers. They had no legitimate right to civil rule, but under Simon legitimacy was granted. In the third year of his reign, in September 141 B.C., a great assembly declared Simon to be high priest, military commander, and civil governor "forever, until a trustworthy prophet should arise" (1 Macc. 14:41). Simon's priesthood and rule were declared legitimate and hereditary. The HASMONEAN dynasty thus came into being. The terms of the decree were engraved on bronze tablets and set up in the court of the temple.

At about this time, Simon sent an embassy to ROME in order to gain recognition from the Roman senate. The embassy brought as a gift to Rome a golden shield weighing 1,000 minas. The Roman senate granted the Jews unrestricted possession of their territory and sent information on the contents of the senatorial decree to numerous independent states of Greece and Asia Minor. Evildoers who had fled from Judea were ordered delivered up to the Jewish high priest (1 Macc. 15:15 – 24).

Simon had renewed difficulties closer to home, however. Demetrius II was taken prisoner by the PARTHIAN King Mithridates I in 138 B.C., and his brother Antiochus VII fought against the pretender Trypho. Antiochus sought the favor of the Jews, confirmed the privileges granted by his predecessors, and expressly gave them the right to coin money. Antiochus landed in Syria and gained the victory over Trypho, who fled, but was killed soon after during a siege at Apamea. With Try-pho dead, Antiochus took a hard line toward the Jews. He repudiated his promises and demanded the surrender of Joppa, Gazara, the Jerusalem citadel, and other places Simon had taken. If Simon wished to keep the places occupied, he was to pay 1,000 talents. Simon refused to yield, offering only 100 talents. Antiochus sent an army against Simon, who dispatched his sons Judas and John to face the Syrian

invaders. Judas was wounded, but John was successful in routing the enemy. John returned as victor to Jerusalem (1 Macc. 15:10—16:10).

Simon, like his brothers, died a violent death. His son-in-law Ptolemy, military commander of the Jericho area, wanted the supreme power for himself and planned to kill Simon and his sons. In February of 135 B.C. Simon visited the fortress of Dok, near Jericho, as Ptolemy's guest. During a great feast, Ptolemy had Simon, with two sons, Mattathias and Judas, slain. A third son who was not present, John Hyrcanus, survived to become the next ruling high priest (1 Macc. 16:11 – 24; on Hyrcanus, see HASMONEAN II.A). (See further Jos. *Ant*. 13.6 – 7; *HJP*, rev. ed. [1973 – 87], 1:189 – 99; J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 270 – 85.)

C. F. PFEIFFER

Simon Magus may'guhs. Traditional name given to a man who practiced sorcery in SAMARIA (Acts. 8:9 – 24).

I. The biblical account. In recording the persecution that followed STEPHEN's death, Luke says that Christians "were scattered throughout Judea and Samaria" (Acts 8:1) and "preached the word wherever they went" (v. 4). He then particularizes with PHILIP's mission in Samaria. Philip's preaching commanded great attention and was attested by "miraculous signs" (v. 6), healings, and exorcisms (v. 7). The result was a wide acceptance of the gospel. Two significant incidents follow, the encounter with Simon Magus and (at the conclusion of the Samaritan tour) the encounter with the ETHIOPIAN EUNUCH.

In the case of Simon, Luke has compressed much information, showing that firm handling of material which marks the whole of Acts. As to Luke's reason for its inclusion, J. E. Roberts describes it as an indication that "the Gospel, making its first essay on non-Jewish soil, was discovered to be mightier than the magic which exercised such a powerful influence over the contemporary world" (*DAC*, 2:498). Simon by his magical arts had gained a large following in Samaria and had assumed the title, "the divine power known as the Great Power" (Acts 8:10; there are examples from inscriptions of the use of divine titles by other magicians). C. C. Torrey (*The Composition and Date of Acts* [1916], 18 – 20) suggested, on the basis of a presumed Aramaic original, the rendering, "the power of the God who is called Great," which would imply a combination of the Greek ZEUS and the Hebrew Yahweh ("the Power" was a rabbinical substitute for the divine name). Simon's reputation is emphasized in order to show the dramatic changes now brought about.

Remains of the Roman forum at Samaria (Sebaste), city of Simon Magus. (View to the NE.)

Philip encountered him in a town, probably Sebaste, the capital of the province, but it may have been Gitta, the traditional site of Simon's home. The magician himself became a convert (Acts 8:13, "believed," which is the normal term in Acts), was baptized with many others, and was amazed at the miracles of Philip, which apparently surpassed his own. How genuine was his conversion can only be judged by the sequel.

This remarkable response in Samaria caused the apostles to dispatch PETER and John (see JOHN THE APOSTLE), their most prominent members. Their special function was to lay hands on the converts so that they might receive the HOLY SPIRIT. It was these visible acts of the Jerusalem leaders which aroused Simon to an intense interest in their "craft." Perhaps the gift of tongues was evident, if one follows the analogies of Acts 10:44 – 46 and 19:6. The externality of Simon's faith seems indicated by his bold attempt to bribe the apostles into imparting their "power."

Peter's severe rebuke (Acts 8:20 – 23; the last verse echoes Deut. 29:18 and Isa. 58:6) implies Simon's basic misconception about the gifts of God, which are inward in their nature. Yet there remained the possibility of his seeking in penitence the forgiveness of God. His final plea (Acts 8:24) does not make it clear whether he had penetrated beyond the "signs" and the fear of retribution to any real faith, but his subsequent heretical reputation and the doubts raised by Luke himself make it safer to regard him as a nominal convert only. The story closes with a reference to a preaching tour that may have been partly designed to counter the cult of Simon.

II. Christianity and magic in Acts. A recurring motif in Acts is the conflict between Christianity and the magical practices that were so prevalent in the Graeco-Roman world of the 1st cent. (see MAGIC). It is here relevant only to note two parallels to the Simon Magus narrative, both involving Jewish magicians in a Gentile context.

At PAPHOS in CYPRUS, the proconsul SERGIUS PAULUS kept a Jewish magician ELYMAS Bar-Jesus, and Luke again describes the incident with accurate detail (Acts 13:6 – 12). This man, whose master was "an intelligent man," tried to nullify Paulus's response to the preaching of PAUL and BARNABAS. Paul's denunciation of Elymas recalls Peter's words to Simon in its directness and intensity: the magician is an enemy of the faith and an embodiment of Satan. Simon became

temporarily blinded, so at the outset of the Gentile missionary outreach, an important Roman convert was preserved from the satanic assault.

Luke also describes the Jewish exorcists at EPHESUS (Acts 19:13 – 20) who encountered Paul's mission of healing and casting out of spirits. As Simon had tried to buy miraculous powers with money, so these sons of SCEVA tried to use "the name of the Lord Jesus" as a magic incantation. Their discomfiture resulted in a great turning to the faith in Ephesus and the repudiation of magic arts. The practice of DIVINATION is also illustrated by the story of the slave girl at PHILIPPI (16:16 – 18).

In all these incidents Luke shows an awareness of the "principalities and powers" that lay behind the magicians' actions. In the early Christian expansion were being further fulfilled the words of Jesus recorded in Luke's gospel: "But it I drive out demons by the finger of God, then the kingdom of God has come to you" (Lk. 11:20).

III. The relation between Simon Magus and Gnostic heresies. The name of Simon Magus occurs frequently in the early history of "Christian" GNOSTICISM, and there has been much debate as to whether the Simoniani, a sect that lasted well into the 3rd cent., had its origins in the magician of Acts 8. The earliest postbiblical evidence is that of JUSTIN MARTYR (*1 Apol.* 1.26, 56), who says that a certain Simon from Gitta in Samaria during the reign of the Emperor CLAUDIUS practiced magic in both Samaria and Rome and was given divine honors (he mistakenly appeals to a Roman statue that bore the inscription *Simoni Deo Sancto*, "to Simon the Holy God," but which was actually erected in honor of a Sabine deity, Semo Sancus). Justin mentions that Simon was accompanied by Helena, a former prostitute whom Simon now called his "First Idea" (Ennoia), and says that a disciple of his, Menander, led many astray in Antioch by his sorcery. Justin attributes the movement to the efforts of evil spirits to overcome the spread of the Christian faith in the empire. IRENAEUS (*Adv. Haer.* 1.16) gives further details: Helena was in reality, Simon claimed, the mother of all the angelic orders, but when she came under the bondage of her own progeny he had become incarnate to free her and to bring all people to faith in himself.

These accounts show clearly that the people in view held to perversions of orthodox CHRISTOL-OGY. Hippolytus and EPIPHANIUS also testify to these claims of Simon from their knowledge of Simonian writings, and JEROME quotes as Simon's the saying: "I am the Word of God, I am the Comforter, I am the Almighty, I am all there is of God." This is borne out by other traditions, perhaps deriving from Justin, that Simon evolved his own trinitarian formula. He was said to have revealed himself in Samaria as the Father, among the Jews as the Son, and among the Gentiles as the Holy Spirit. Simon is thus portrayed as the heretic par excellence of the subapostolic age. EUSEBIUS (*Eccl. Hist.* 2.13.1ff.) sums it up by declaring Simon to be the author of all heresy.

In another stream of literature, the CLEMENTINE "Homilies" and "Recognitions" (romances of the mid-2nd cent. about the search of Clement, a Roman, after the truth), Simon emerges as the antagonist of the apostle Peter. First he is linked with JOHN THE BAPTIST, together with another heretic named Dositheus, and is said to have learned his craft at ALEXANDRIA. Prolonged arguments between Peter and Simon are reported, and clashes between them at Caesarea and Antioch. In fact, the apostle is said to have devoted himself to undoing the havoc caused by Simon in numerous places. These encounters appear in other forms in such Gnostic writings as *Acts of Peter and Paul*, with Rome as the center of the conflict, and Peter finally conquering the heretic, who dies and fails to rise again.

To what extent can one link the Simon of Acts 8 with the central figure of these legends and with the Simonian sect? In the 19th cent. German scholars of the Tübingen school interpreted the postbiblical literature, particularly the Clementine romances, in such a way as to exaggerate greatly

the cleavage between Peter and Paul (and between their followers) in the early church, and thus to cast serious doubt on the historicity of many incidents in Acts, the story of Simon Magus among them. However, it is now generally accepted that Luke's account is reliable. Simon's cult in Samaria may well have been the seed of the later aberrations of the Simoniani. How much actually stemmed from the historical Simon's travels and teachings will perhaps never be known. The cult became part of wider 2nd-cent. Gnosticism, and no doubt the church fathers tended to ascribe too much to Simon himself. He became the archsymbol of heresy.

The impression from the patristic evidence is that a real dread existed in the church at the repulsiveness of these deviations from the apostolic doctrine of Christ. This impression is closely akin to the spirit of Luke's account in the Acts of the early encounters with Satan and his instruments of evil. But, in the Acts, as in Luke's gospel, there is the certainty of a continuing victory for Christ and his church. ORIGEN was accordingly able to say in the 3rd cent. that the Simoniani had dwindled to insignificant numbers (*Cels.* 1.57).

(See further R. P. Casey in *BC*, 5 [1933], 151 – 63; A. D. Nock in ibid., 164 – 88; R. M. Grant, *Miracle and Natural Law in Graeco-Roman and Christian Thought* [1952], ch. 7; id., *Gnosticism and Early Christianity* [1960], ch. 3.; E. M. Yamauchi, *Pre-Christian Gnosticism: A Survey of the Proposed Evidence*, 2nd ed. [1983], 58 – 62, 201 – 3; J. Fossum in *The Samaritans*, ed. A. Crown [1989], 357 – 89.)

B. F. HARRIS

Simon the Canaanite. See CANANAEAN.

simple. This English term occurs in the Bible usually as the rendering of Hebrew *petî H7343*, "young, inexperienced, gullible" (Ps. 19:7 et al.; cf. the ptc. of the verb *pātâ H7331* in Job 5:2). The OT usage is primarily in Proverbs. Those who are simple hate knowledge and the fear of the Lord (Prov. 1:29; cf. vv. 22, 32); they are fools (8:5) who shall inherit folly (14:18). While the prudent foresee, the simple just go on their way and are punished (21:11), as when they visit the harlot (7:7). While it is possible to place on one level the simple and the scorner (1:22), there is still more hope for the simple; when the scorner is punished, the simple learn from it (19:25; 21:11), which apparently could not be said of the scorner. Since the simple can still learn, they are invited to the dinner prepared for them by WISDOM (9:4), and the book of Proverbs itself is written to give wisdom to the simple and the young (1:4; cf. also Pss. 19:7; 119:130).

The NT usage is somewhat different. The KJV uses "simple" in one passage (Rom. 16:18 – 19) to render two Greek words that can mean "innocent" or "guileless" (*akakos G179* and *akeraios G193*); the reference is to those who are unsuspecting and can be easily deceived. There is also a noun that can mean "simplicity" (*haplotēs G605*), but the nuance is positive, indicating sincerity and purity of attitude (e.g., 2 Cor. 11:3; Eph. 6:5).

D. C. DAVIS

Simri sim'r*i*. KJV alternate form of SHIMRI (only 1 Chr. 26:10).

sin. A transgression of God's commands or any failure to meet his standards; as a verb, the word means "to violate the divine law, to commit an offense against God or others." The primary Hebrew noun for "sin" is *ḥaṭṭā't H2633* (Gen. 4:7 et al.; cf. the verb *ḥāṭā' H3148*, 39:9 et al.), but also used frequently are such terms as *'āwōn H6411* ("misdeed, iniquity," 15:16 et al.) and *peša' H7322*

("transgression, crime," 31:36 et al.). In the NT, the standard term is Greek *hamartia G281* (Matt. 12:31 et al.; cf. verb *hamartanō G279*, 18:15 et al.); other nouns include *adikia G94* ("unrighteousness, wrongdoing," Acts 1:18 et al.), *paraptōma G4183* ("violation, offense," Matt. 6:14 et al.), and so on. (For a fuller listing of the relevant Hebrew and Greek vocabularies, see *NIDOTTE*, 2:87 – 93; LN, §88.289 – 318.)

I. Origin. Sin "came into the world" (Rom. 5:12) when ADAM and EVE succumbed to TEMPTATION. The full responsibility for the presence and consequences of sin in the world fell full weight upon these human beings. DEATH itself silences every attempt to transfer even partially human guilt upon SATAN in whom sin arose and by whom Adam and Eve were tempted. Neither sin nor death itself, for all its finality, is the last word about the sinner, for if "death came through a man, the resurrection of the dead comes also through a man" (1 Cor. 15:21). If sin was projected through a demonic temptation as a possibility, and through Adam's transgression entered the world as an actuality, sin (and death) is also cosmically defeated and abolished in the world and history through the "second man" (1 Cor. 15:47), JESUS CHRIST. Through Christ sin is undone and forgiven, death ends in RESURRECTION, sinners become saints, and he "who holds the power of death" is destroyed (Heb. 2:14).

II. Sin and freedom. The concept of freedom does not account for sin. While sin is not unrelated to freedom, the latter does not explain the rise of the former (see LIBERTY). God has authentic freedom and cannot sin, and God created Adam with a freedom that was morally qualified and whose continuance depended on refraining from sin. Adam and Eve as created possessed the ability not to sin, and the person re-created in Christ, and begotten of God, "does not sin" (1 Jn. 5:18 RSV). The ability to sin is not of the essence of freedom. True freedom is constituted by ability to do the good, not by a morally unqualified faculty to do either the one or the other. Freedom belongs to the essence of human beings as created by God and as restored by Christ; in neither instance is it a morally neutral and unqualified aspect of humanity.

The effect of human sin upon freedom is defined in biblical thought, therefore, not as another form of freedom, but rather as SLAVERY and bondage (Rom. 6). Human beings as created were no more free to sin than, having sinned and fallen into moral bondage, they are free again to become what they once were. Sin constitutes a loss, not an exercise of freedom. Sin is a mystery, immoral and irrational, whose denouement is not found in the concept of human freedom. Freedom as an explanation of sin leads invariably into some form of Pelagianism (or Arminianism). If Adam was free to sin against his Maker, freedom by the same definition would contain the possibility of his self-propelled return to his Maker. If sin is a true exercise of freedom, such freedom, even after sin, remains also free both to act in Pelagian fashion to undo its sin and to return to God—or to refuse to return to God.

According to the Genesis account of the FALL into sin, Adam and Even were not free to sin, but under divine command not to sin, on threat of death. They were under the restrictive divine command not to do what they in fact did. Freedom, as authority, is comprised of two components: might plus right. An authority that exercises a might without right is a totalitarian perversion of authority; a freedom that does what it has no right to do is an anarchistic perversion of true freedom.

The theological tenet that God created human beings free to sin (*posse peccāre*) is an explanation of sin in terms of sin. If God had endowed them with such freedom, he could not in justice allow them to suffer that bondage which sin inflicts upon freedom. In biblical thought, however, the

fall into sin is regarded as a loss of freedom. According to the Genesis account, Adam and Eve lost their right to existence in the Garden of Eden, their right to life, and their right to be themselves—naked and not ashamed. In the continuing biblical account, sinners are exhibited as no longer free to be themselves. They are either slaves to sin and under the power of death—who in their devotion to idols become subhuman and like their idols (Ps. 115:8)—or they become captives to grace and through this captivity again receive their true freedom as a gift from God, a freedom permitting them to enjoy release from, and FORGIVENESS for, their sinful past and the gift of grace that justifies their right to live in an open and unending future.

III. Sin and divine sovereignty. Nor is the origin of sin accounted for in a biblically acceptable manner by the assertion that mankind is the secondary, and God the primary, ultimate cause of sin. Well-meaning but profoundly misguided defenders of the SOVEREIGNTY OF GOD have often declared that God himself is the source of sin. God is said to have willed sin, to be its primal cause, and even to have created sin. While such assertions are projected in defense of divine sovereignty, they are essentially blasphemous. It is deeply significant that none who make these bold assertions have been known to articulate them in their prayers and worship of God; confessing their sins, they cannot assert before God what they claim in their theology: that the One to whom they pray for forgiveness is the primary cause of their sin.

Rejecting both the notion that God willed sin and that sin is the product of chance, sober Christian thought has never dared say more than that God "permitted sin." The clearest expression of the relationship of the divine sovereign will to sin is not discoverable by a search in the area of the origin of sin, but is found at the cross where God at the cost of the death of his own Son overcomes and banishes sin.

Every rational analysis of sin reveals, as did Kierkegaard's psychological approach, that sin presupposes itself, and the history of Christian thought demonstrates that explanations of sin reduce sin into something that carries no guilt and requires no confession. Sin must be acknowledged and confessed, not explained. The Bible no more explains the rise of sin in the world of the angels and its connection with the origin of sin in our world, than it explains how human beings as God's creation could sin. There is neither a good moral reason nor a valid rational reason for the reality of sin. There can no more be a truly moral reason for EVIL than there can be a valid reason for irrationality. Sin is both immoral and irrational.

IV. History and fall. Sin is an essentially historical phenomenon. It has an event-character. To become real, it must happen. It is not an event within the trinitarian activity of the godhead, an activity both necessary and (therefore) eternal. The historical is neither necessary nor eternal; and sin, also being neither, is historical. Being real, sin happened once upon a time. The fall recorded in Genesis is a historical reality.

The Genesis sequence of creation-fall also clearly teaches that sin is neither an item of CREATION nor a quality of creation that in the process of time is progressively transformed into emerging good. Sin, on the contrary, is a contradiction to all created and uncreated reality. It is destructive of all good. The substitution of an evolutionary development of the good for the biblical historical fall is a misreading of the good that God in history accomplishes through Jesus Christ. The biblical account of the fall into sin is marked by the complex of contradictions between man and God, between husband and wife, and between man and nature, all of which immediately appeared as the consequence of sin.

No Christian can say *why* he or she sinned. If we could give a reason for, and thus an explanation of, our sin, sin would require neither forgiveness nor cancellation; being a justified act, it would have a right to exist. Both the origin of sin and its continuance in the life of every person is and remains an enigma for which there is no apology and no known theodicy. Sin has no defense, no right to existence. Every explanation of sin in terms of human freedom turns sin into something that carries neither guilt nor need of repentance; when explained in terms of the causality of the sovereign divine will, sin is naturalized within the being of God himself.

V. Original sin. The concept of original sin is theological, not temporal, and therefore throws no clear light on the *origin* of sin. Original sin refers neither to the first of all sins, nor to the first sin in human history, but to the first sin of Adam and only to that and not to the subsequent sins of Adam. In human history, Eve sinned first; nonetheless, it was by Adam's (later) sin that "sin entered into the world…and death through sin" (Rom. 5:12). Original sin is the first sin of Adam, the source of all *other* sins, including Adam's subsequent sins, and is that power by which death passed upon all, even though they have not sinned in the manner of Adam's first sinful act (v. 14).

VI. Total depravity. Original sin provides a clue to the nature of sin and of death. According to the Genesis account, original sin is a proud, loveless, rebellious, thankless, destructive act of self-assertion, first against the God who gave human beings their reality and, simultaneously, against both the self and every other form of created reality. By his initial act of sin, Adam broke that relationship to God, to Eve, and to the natural world, on which in real though differing degrees his own life and well-being depended. Adam's sin is a declaration of self-sufficiency; he willed to go it alone. By that original, first sin of Adam everything is alienated; Adam and Eve each hide from the other by donning clothes, Adam hides from God, Adam blames God and Eve, Eve blames the serpent, and the self is alienated from itself.

To this deprivation of the self there is a corresponding total DEPRAVITY in which the self is deprived of all those moral and spiritual qualities that constitute the authentic self and its relation to all that is not-self. The self is totally depraved, for the self can do nothing worse or more destructive to God and to others than sin. Were it not so, death and hell would be an overkill that exceeded sin's guilt quality. Original sin—and all subsequent sins merely reemphasize it—so effectively breaks our relationship to all reality (the self, God, fellow human beings, nature) that we cannot reinstate original, authentic relationships. This is disclosed supremely at the cross, where sinners kill him in whom all reality, divine and created, is centered.

Thus original sin as that act which breaks all God-created relationships is neither merely moral, intellectual, nor affective, but something deeper than all of these. It is in essence religious. As David said, "Against you, you only, have I sinned / and done what is evil in your sight" (Ps. 51:4). It is this divine referent that constitutes the essence of original sin and via this reference becomes also our sin against ourselves, others, and nature. The nature of sin is wholly destructive; sin, therefore, elicits those full realities which the biblical concepts of death and the infinite divine wrath convey.

The truth that sin renders the sinner totally depraved cannot be read from human experience. Although history is saturated with manifold forms of sinful action, a true recognition of sin—as distinct from human error, ignorance, folly, or frailty—does not occur within the field of human observation or experience. No road leads from the experience of sin to the true knowledge of sin. The distinctively religious dimension of sin as an act which is in the first instance against God can be disclosed only by God himself. Human moral behavior is often better than total depravity can account

for, an ambiguity that derives from God's gracious operations upon the sinner, and a truth that can be known only by REVELATION. That every sin against the neighbor, against the natural environment, is also a sin against God, is not a humanly attainable knowledge unless imparted by divine revelation. Similarly, the knowledge that the sinner's right relationship to God, neighbor, and natural environment cannot be reconstituted except by the grace of REGENERATION can also be known only by means of revelation.

VII. Sin and grace. Sin is transgression of the LAW, but it is never merely that. Since the purpose of law is GRACE as indicated by the fact that it was given to Israel within a COVENANT situation (Gal. 3:17) and by the law's own introductory preface (Exod. 20:2), sin is always an act against the goodness and grace of God.

This quality of sin as an act against the grace of God emphasizes that sin is never an individual issue, but always a social matter. Grace is an expression of God's will to be with and for his creatures in a community in which they are both for God and for their neighbors. This social character of grace corresponds to the demand of the law that we love both God and our neighbor. He who loves God cannot hate his neighbor; and he who hates his neighbor cannot love God (1 Jn. 2 – 3). Sin as the rejection of this gracious divine will to community is, therefore, not an individualistic act. It is rather a social act—even in its negative, antisocial form. Further, for the reason that sin is a social act, sin is committed not only by the single individual, but also by social groups, and thus it can be embodied in social structures. A nation can sin no less than an individual; there are national sins, and nations, no less than individuals, are called to repentance and amendment of life. Similarly, the church can sin and be called to confession and amendment of life, though it must be admitted that rarely do churches do what they require of their individual members.

This communal, social character of sin which reflects the communal, social character of divine grace, helps one to understand why justice is never an individual concept, but always and inherently, a social one. There is no individual, as distinct from a social, justice. All justice is social justice, because justice is the expression of God's HOLINESS as it maintains God's gracious purpose to be with and for sinners, but against their sinful assault on that purpose.

It must also be observed that because of the social character of sin, the distinction between a "personal" and a "social" ethic is grounded in a misunderstanding of the nature of sin. A "personal" ethic always turns out to be an ethic of the individual in contrast to a social ethic. All sin is, indeed, personal, whether that of the individual or of the corporate personality of the church or nation—as is also all love and right doing. But there is no individualistic personal ethic, as there is no individualistic grace or individualistic justice. The biblical ideas of grace, love, justice, as the biblical teaching that Adam's original sin is also our sin and Christ's one act of obedience can be our righteousness, are in theory surrendered when sin is individualistically defined by reference to a legalistic understanding of the law, without reference to the social character of God's grace.

This corporate quality of sin is also clearly seen in the NT teachings that we can be forgiven by God only as we forgive others (Matt. 6:14 – 15), can worship God at the altar only when in right relationship with our brothers (5:23 – 24), and can pray properly only when we address God as "our" Father and request daily bread, forgiveness of sins, and deliverance from evil as we pray in plural personal pronouns ("us" and "our").

VIII. Sin and punishment. Sin requires punishment. As an affront against the infinite majesty of God, sin calls for infinite punishment, and that without limit. The Bible, therefore, speaks of the wages of

sin being death and of eternal punishment in HELL. Such punishment is the reflex of the holiness of God whereby he maintains himself against human sin. In responding to sin, God's holiness takes the form of justice expressing itself in infinite wrath and unlimited judgment. See PUNISHMENT, ETERNAL.

This divine response, however, takes place in history only at the CROSS, where the Son of God becomes the object of it—and dies. Elsewhere in human history God's WRATH and punishing justice is always corrective, a form of wrath for the sake of grace, a form of judgment that can be turned aside, averted, and repented of by God as men and women repent and respond to his grace. The only divine judgment and wrath God cannot withdraw or repent of in history is that which occurred at the cross. That all other manifestations of divine judgment upon sin are contingent rather than absolute, corrective rather than final, suggests that all justice which society administers to its criminals should be remedial and corrective, never merely punitive, and never final.

Original sin is the source of all other sins and these are so manifold as to defy number or name, yet each of them reflects something of the highly complex nature of sin. In view of this complexity it is not surprising that the Bible uses many words to denote sin. Sin is, moreover, in biblical thought many other things—unbelief, distrust, ingratitude, lovelessness, hatred. The greatest sin occurs in reaction to the cross where the nature of sin in all its aspects is revealed, and original sin and all its subsequent historical expressions is overcome and forgiven by God's gracious action in Christ. The greatest sin, therefore, is the rejection of Christ crucified, who shall judge everyone according to the gospel (Rom. 2:16), which is to say, in reference to God's gracious will and purpose.

Blocher, *Original Sin: Illuminating the Riddle* [1999]; M. E. Biddle, *Missing the Mark: Sin and Its Consequences in Biblical Theology* [2005].)

<div style="text-align: right">J. DAANE</div>

Sin (city). See PELUSIUM.

sin (letter). See SHIN.

Sin, Wilderness of (סִין *H6097,* derivation uncertain). This desert region—not to be confused with the Wilderness of ZIN in the northern NEGEV—was on the route followed by the Hebrews when they left EGYPT, somewhere between ELIM and Mount SINAI (Exod. 16:1; 17:1; Num. 33:11 – 12 locates it more narrowly between the RED SEA and DOPHKAH). It was here that God provided both MANNA and QUAIL for the Israelites. Assuming that Mount Sinai should be identified with Jebel Musa or another mountain in its vicinity, some have suggested that the Wilderness of Sin is Debbet er-Ramleh, a sandy tract of desert at the foot of Jebel et-Tih, in the SW of the Sinai peninsula. Others believe it refers to the plain of el-Merkha on the W coast, half-way between the head of the Red Sea and the tip of the peninsula. Scholars who argue that the Israelites took a northerly route have proposed various other sites. The location remains unknown. See also EXODUS, THE.

<div style="text-align: right">J. M. HOUSTON</div>

Sinai, Mount si'ni (סִינַי *H6099,* perhaps from Akk. *Sin,* name of the moon god; Σινά or Σινᾶ *G4982* [the mountain is also called Horeb, חֹרֵב *H2998,* "dry, desolate"]). The name of the sacred mountain before which Israel encamped and upon which MOSES communicated with Yahweh. In the Bible, the name occurs almost exclusively in the PENTATEUCH. The Israelites reached Mount Sinai in the third

month after their departure from Egypt and camped at its foot where they could view the summit (Exod. 19:1, 16, 18, 20). Yahweh revealed himself to Moses here and communicated the TEN COMMANDMENTS and other laws to the people through him. God established his COVENANT with the people through Moses as mediator, and this covenant has been remembered throughout Israel's history (e.g., Jdg. 5:5; Neh. 9:13; Ps. 68:8, 17; Mal. 4:4; Acts 7:30, 38). ELIJAH later visited Horeb in a time of particular discouragement and depression (1 Ki. 19:4 – 8). In the allegory of Gal. 4:24 – 25, Mount Sinai is representative of the bondage of the law in contrast to the Jerusalem above, which is free.

JOSEPHUS describes Mount Sinai in fearful terms as being "…the highest of all the mountains that are in that country, and is not only very difficult to be ascended by man, on account of its vast altitude, but because of the sharpness of its precipices also; nay, indeed, it cannot be looked at without pain of the eyes: and besides this, it was terrible and inaccessible, on account of the rumour that passed about, that God dwelt there" (*Ant*. 2.12.1; 3.5.1).

The location of Mount Sinai is uncertain. Some have proposed identifying it with one of a number of mountains in the vicinity of KADESH BARNEA. In a number of biblical references it is mentioned in connection with Edomite territory (including SEIR and TEMAN; see Deut. 33:2; Jdg. 5:4 – 5; Hab. 3:3), suggesting that Mount Sinai may have been N of the Sinai peninsula. The fact that Moses requested Pharaoh to allow Israel a three days' journey into the wilderness is somewhat more in keeping with Kadesh Barnea as an intended destination than is the location of Mount Sinai in the S of the Sinai peninsula (Exod. 3:18; 5:3; 8:27). There is also the fact that REPHIDIM is associated with MERIBAH and the two together are associated with Mount Horeb (17:1 – 7). Meribah is located in the area of Kadesh Barnea in Num. 20:2 – 13, and a number of springs are known to be there.

However, even the northern location for the mountain would hardly allow the journey from Egypt to be made in three days. The fact that Deut. 1:2 speaks of an eleven days' journey from Kadesh to Horeb would seem to militate against the identification of Mount Sinai with a mountain in the vicinity of Kadesh as well. The reconstruction of the route of the exodus is rendered well nigh impossible if this identification is assumed. See EXODUS, THE.

Some scholars have attempted to locate Sinai in NW ARABIA in the ancient land of MIDIAN (some recent claims specifically identify Sinai with Jebel al-Lawz in modern Saudi Arabia; see R. Cornuke and D. Halbrook, *In Search of the Mountain of God: The Discovery of the Real Mt. Sinai* [2000]). One reason given for this is that when Moses fled from Egypt he married into a Midianite family. That in itself, however, would not necessitate a return to Midianite territory following the exodus, though it might have made it more convenient. Besides that, however, is the fact that the tribe into which Moses married, the KENITES, were probably wandering smiths and they may well have been located at the traditional site of Sinai with its mines.

It is also argued that the description of the events on the mountain with its "thunder and lightning, with a thick cloud…and a very loud trumpet blast," as well as smoke and fire (Exod. 19:16 – 19), presupposes a mountain which experienced volcanic activity. The nearest mountains known to have been actively volcanic in ancient times are in Arabia, S of the head of the Gulf of AQABAH. The descriptive language may equally well have been drawn from weather phenomena, however. Alternatively, even if the language itself was drawn from volcanic phenomena, that does not necessitate actual volcanic activity at Mount Sinai.

Another suggestion made especially during the 19th cent. is that Mount Sinai was to be identified with Jebel Serbal (6,730 ft.), which is located by the Wadi Feiran (some distance to the W of the traditional Sinai). Significantly, the city of Pha-ran (Feiran) was the seat of a bishopric in the 4th and

5th centuries, and in the time of Justinian, orthodox monks moved from Jebel Serbal to the traditional site of Sinai. The *Pilgrimage of Sylvia*, edited in 1887 and describing the journey of Sylvia of Aquitaine between A.D. 385 and 388, seems to render this identification impossible, however. The account states that the "mount of God" was 35 Roman mi. from Pharan. This is the actual distance from the oasis at Feiran to the traditional Sinai. Also, there is no wilderness at the foot of Jebel Serbal that would fit the Pentateuch's description of the plain of encampment.

A more recent proposal identifies Sinai with Jebel Sin Bisher, a mountain that is much farther N than the traditional site and only about 15 mi. E of the Gulf of Suez (M. Har-El in *Geography in Israel*, ed. D. H. K. Amiran and Y. Ben-Arieh [1976]: 383 – 91, cited by C. G. Rasmussen, *Zondervan NIV Atlas of the Bible* [1989], 90, 210 nn. 9 and 14). The main argument in its favor is that it can be described—more accurately than is the case with competing sites—as being "a three-day journey" from Egypt (Exod. 3:18 et al.). Moreover, the character of the surrounding area (including various water sources) fits the biblical narrative.

Since the 4th cent., the more or less continuous Christian tradition has been that Mount Sinai is represented by what is now called Jebel Musa (mountain of Moses). This is located in the high mountains of the S tip of the Sinai peninsula. Various legends and traditions are associated with the site, and a number of chapels and shrines have been built in the area. Catherine of Alexandria is said to have been carried by angels after her martyrdom to the top of the mountain that now bears her name (8,536 ft.). This story dates from the 4th cent. The summit of Jebel Katarina is some 2.5 mi. SW of Jebel Musa.

By the 4th cent., communities of monks had retired to the region and were subjected to various massacres at the hands of the Saracens. One of them, Ammonius of Canopus (in Egypt) made a pilgrimage to Mount Sinai in c. A.D. 373, evidently reaching it in eighteen days from Jerusalem. In A.D. 536, Mount Sinai, Raithou (on the coast of the Red Sea), and the church at Pharan are noted as being under the presbyter Theonos. On the NW slope of Jebel Musa, Constantine's mother, Helena, built a small church in the 4th cent. The present Monastery of St. Catherine, famous for the fact that Tischendorf found CODEX SINAITICUS there in 1859, was built on the same site and is traced back to Justinian in A.D. 527.

© Dr. James C. Martin

Approaching the region from the N one may enter the valley of esh-Sheikh to the E or the Valley of er-Raha to the W. The latter is some 2 mi. long and at its SE end opens into a plain about 1 mi. wide at the foot of the steep cliffs of Ras es-Safsaf. Ras es-Safsaf is the NW peak (6,540 ft.) of a ridge that has Jebel Musa as its highest peak (7,363 ft.) 2.5 mi. to the SE. The plain of er-Raha may well have been the site of the encampment of Israel (Exod. 19:1 – 2; Num. 33:15). To the SE of Jebel Musa is the Wadi es-Sebayeh with its valley up to 1 mi. wide and 2.5 mi. long. This valley is sometimes identified as the place of the encampment though the former is generally preferred. Christian tradition generally claims Ras es-Safsaf as the biblical Horeb and Jebel Musa as Sinai.

From St. Catherine's monastery with its Chapel of the Burning Bush (cf. Exod. 3:2), the summit of Jebel Musa can be reached after a hard climb of one and a half hours. Part way up, a little spring is passed and said to have been the place where Moses tended Jethro's flock (3:1); at 6,900 ft. is the Chapel of Elijah (1 Ki. 19:8 – 9). Ras es-Safsaf takes its name from the Arabic word for "willow" and is a reference to Moses' staff (cf. Exod. 4:2). A large block of granite some 11 ft. high is said to be the rock from which Moses brought water (Num. 20:8). A hole in the rock is said to be the mold used for the golden calf (Exod. 32), and the place where the earth swallowed up KORAH and his followers is identified (Num. 16).

Sinaiticus s*in*'i-it'uh-kuhs. This term is applied primarily to two biblical MSS discovered in St. Catherine's Monastery (located at the foot of Jebel Musa, the traditional site of Mount SINAI). One of them is among the oldest copies of the entire Bible in Greek (see CODEX SINAITICUS); the other one, Syrus Sinaiticus, is a Ms dated to c. A.D. 400 that contains the oldest known copy of the Old Syriac Gospels (see VERSIONS OF THE BIBLE, ANCIENT, III.B).

sincere. This term and its cognates *sincerity* and *sincerely* appear rarely in English versions of the OT, although certain Hebrew words, such as the noun ṣĕdāqâ *H7407*, "righteousness," approach this meaning (cf. Isa. 48:1 NJPS). In the NT, the Greek adjective *eilikrinēs G1637* ("unmixed, pure, sincere") and its cognate noun *eilikrineia G1636* occur a handful of times (also relevant are such terms as *hagnōs G56*, Phil. 1:7, and *anypokritos G537*, 1 Tim. 1:5 et al.).

In the NT, sincerity is an all-embracing attitude, not just one virtue among many. In Phil. 1:9 (where e*ilikrinēs* is often rendered "pure") it is a quality required at the judgment, and requires growth in both love and knowledge, fitting one to discern that which is truly excellent (v. 10). The eschatological perspective is in view also in 2 Pet. 3:11; the sincere mind believes God's promises of Christ's return, over against the attitude of the scoffers that covers up God's promises with proud

self-evaluation of the future. In 1 Cor. 5:8, sincerity is the (unmixed, plain) unleavened bread that rejects immorality in the church and the pride that condones it.

Sincerity has also application in ministry to others. PAUL is not a peddler of the word of God, but one who has only LOVE as his motive (2 Cor. 2:17), and he preaches not with earthly wisdom, but "according to God's grace," that is, so he can be understood (1:12 – 14). Singleness of motive and message go together.

D. C. DAVIS

sinew. A tough fibrous band connecting muscle to bone; synonymous with *tendon*. Sinews (Heb. *gîd H1630*) are depicted as holding the bones of the body together (Job 10:11; 40:17; Ezek. 37:6, 8). In the latter case the sinews were the first covering for the dry bones. JACOB's experience at PENUEL (Gen. 32:32; cf. v. 25) may have involved a mighty contraction of the muscle and tendon that tore muscle fibers and left Jacob limping at dawn. "Out of joint" would refer to any injury of the hip region; taken literally, it would imply a dislocation of the hip, a major injury making walking impossible (see THIGH). In the NT, PAUL uses the Greek noun *syndesmos G5278* ("bond, ligament") figuratively when he compares the relationship between Christ and the CHURCH to the human body (Col. 2:19; see BODY OF CHRIST).

singers, singing. See MUSIC II.B.

Sinim, land of s*i*'nim. See SINITES; SYENE.

Sinites s*in*'*i*ts (סִינִי *H6098*, meaning unknown). A people group descended from CANAAN and mentioned in the Table of NATIONS (Gen. 10:17; 1 Chr. 1:15; it is possible, but unlikely, that the same people are referred to by the name *sînîm* in the MT of Isa. 49:12, for which see SYENE). Some scholars have suggested a connection between the Sinites and an ancient fortress on Mount Lebanon that Strabo (*Geogr.* 16.2.18) calls *Sinna*; similarly, JEROME, in his comments on this passage (*Liber quaestionum hebraicorum in Genesim*) refers to a "civitas Sini" in the same area. The discoveries in Ras Shamra have confirmed the existence of a coastal city-state named *syn*, located S of UGARIT (see C. H. Gordon, *UT*, 449 [ch. 19, #1750]), probably the same place that Akkadian sources refer to as *šiannu*; it may correspond to modern Siyano (c. 2 mi. E of Jeble-Gabala; see *HALOT*, 2:751).

sin offering. See SACRIFICE AND OFFERINGS IV.A.1.

Sion s*i*'uhn. (1) KJV form of SIYON (Deut. 4:48). (2) KJV alternate form of ZION (Ps. 65:1 and NT).

Siphmoth sif'moth (שְׂפָמוֹת *H8560,* meaning unknown). One of the cities of JUDAH with which DAVID shared the spoils taken from ZIKLAG (1 Sam. 30:28). It was visited by David during the time in which he was a fugitive from King SAUL. Siphmoth was evidently in the southern part of Judah's territory, but its location is unknown.

T. E. McCOMISKEY

Sippai sip'*i* (סִפַּי *H6205,* meaning unknown). A descendant of the REPHAITES who was killed by

SIBBECAI the Hushathite (1 Chr. 20:4). See SAPH.

Sirach si'ruhk. See ECCLESIASTICUS.

Sirah si'ruh (סִרָה *H6241,* "thorn bush"). The name of a cistern or well from which JOAB summoned ABNER in order to put him to death (2 Sam. 3:26). JOSEPHUS *(Ant.* 7.1.5) states that Abner was in a place called Besira when he was recalled by Joab and locates the area at 20 stadia (c. 2.5 mi.) from HEBRON; on that basis proposed identifications include a spring named Ain Sarah (1.5 mi. NW of Hebron) and a site called Siret el-Bella (farther E).

T. E. MCCOMISKEY

Sirion sihr'ee-uhn (שִׂרְיוֹן *H8590* [some MSS שִׂרְיֹן], possibly "armor" [see *HALOT,* 3:1357]). The Phoenician name that the people of SIDON used for Mount HERMON (Deut. 3:9). This mountain served to indicate the northern limit of the territory held by AMORITE kings (4:48 NRSV, following the Syriac version [but see SIYON]). The name occurs in poetic parallelism with LEBANON (Ps. 29:6); a similar connection is found in Ugaritic material (cf. *ANET,* 134a; L. R. Fisher, *Ras-Shamra Parallels: The Texts from Ugarit and the Hebrew Bible,* 3 vols. [1972 – 81], 1:248 [#328]; 2:333 [#105]).

Sisamai sis'uh-mi. KJV form of SISMAI.

Sisera sis'uh-ruh (סִיסְרָא *H6102,* derivation uncertain; prob. not a Semitic name).

(1) Commander of the army under JABIN, the Canaanite king of HAZOR (Jdg. 4:2 – 22). Although the Israelites led by JOSHUA had defeated the northern coalition and destroyed the city of Hazor (Josh. 11:11), this city had been rebuilt and became the capital of the Canaanites. Jabin may have been the hereditary royal title among the Canaanite kings, even as PHARAOH was the title for Egyptian rulers. It is likely the Israelites were not so much concerned with the city of Hazor, which was the royal Canaanite residence—the real menace was the Canaanite power represented by the army under Sisera's command, apparently stationed near the slopes of Mount Carmel (see CARMEL, MOUNT) in the city or region of HAR-OSHETH HAGGOYIM. The location of Harosheth Haggoyim is uncertain, but it was probably in the narrow valley, less than a mile wide, where the KISHON flows out of the ESDRAELON Plain into the Plain of ACCO and the Mediterranean Sea. It is possible that modern Tell Amr, S of the Kishon, or Tell el-Harbaj, N of the river, represents this ancient Canaanite stronghold, c. 12 mi. NW of MEGIDDO. If so, this strategic site commanded the entrance to the Plain of Esdraelon at the E end of the Mount Carmel ridge.

During a twenty-year period of oppression, the Canaanites paralyzed Israelite commerce and subjected the Israelites to intolerable disruption of normal life. Armed resistance seemed almost impossible until DEBORAH arose as a prophetess to whom the people turned in hope. Apparently Sisera encountered no serious threats from the Israelites until BARAK led a division of 10,000 against him. However, the military superiority of the Canaanites is clearly indicated in the fact that they had 900 CHARIOTS of IRON while the Israelites apparently had none (JOSEPHUS [*Ant.* 5.5.1] credits the Canaanite army with 3,000 chariots, 10,000 horsemen, and 300,000 footmen). These chariots probably were two-wheeled, open behind, carrying a driver, a warrior, and a shield bearer. THUTMOSE III of Egypt had 924 chariots when he advanced Egyptian armies across Palestine during the 15th cent. B.C. (cf. *ANET,* 237).

When Sisera learned that an Israelite army had gathered on Mount TABOR, he advanced his chariot division into the plain. A sudden and probably unexpected rainstorm changed the Kishon Valley into a muddy terrain, benefiting the Israelites, who were prepared to fight without the aid of chariots. Barak was advised by the prophetess Deborah that the Lord God of Israel would direct Sisera with his chariots and army down to the Kishon (Jdg. 4:7). It may have been the dry season, so that when a sudden rain made it impossible for the Canaanites to use their chariots, the Israelites had the real advantage. Probably all the charioteers abandoned their chariots in the conflict—at least, that is what Sisera did. The Canaanites were completely demoralized and were routed by the Israelites.

The Kishon River, a wadi that flows through the Jezreel Valley, was the scene of Sisera's defeat at the hands of Deborah and Barak. (View to the E.)

Sisera's course in fleeing from the battle with the Israelites took him to the home of HEBER the Kenite, who had settled near KEDESH (Jdg. 4:17; cf. v. 11). Whether this was by accident or deliberate planning is not indicated in the biblical account. Heber himself was apparently absent, but his wife, JAEL, invited Sisera into the tent. Accepting Jael's hospitality, Sisera felt quite secure and asked her to lie in his behalf to avoid detection by the enemy. After Jael provided him milk for nourishment and a rug for a covering, he fell asleep. Jael took advantage of this opportunity. With a mallet she drove a tent-peg through Sisera's temple. When Barak came by, Jael invited him into her tent to witness the fact that Israel's oppressor had been slain (vv. 18 – 22).

Similar to previous experiences in Israel's history where they were faced by a superior foe, the Israelites were at this time also keenly conscious of the fact that God had intervened in their behalf. Praise to God was appropriately expressed throughout Deborah's song (Jdg. 5, esp. vv. 20 – 31; cf. also 1 Sam. 12:9 – 11; Ps. 83:9 – 10). The accounts of Jael's heroic deed have been held to be contradictory by some scholars. It seems most reasonable that Jael killed Sisera while he was asleep (Jdg. 4:18 – 21). The poetic record (5:24 – 27) may well represent an embellishment of Jael's feat and was not intended to provide a concrete description of detailed developments. The following verses (5:28 – 30) portray in vivid language the disappointment of Sisera's mother in waiting for the return of her son.

The defeat of Sisera and his army undoubtedly broke the oppressive hold the Canaanites had on the Israelites. In the course of time the Israelites overcame the Canaanites even to the point of

destroying King Jabin.

(2) The ancestor of a family of temple servants (NETHINIM) who returned from the EXILE with ZERUBBABEL (Ezra 2:53; Neh. 7:55; called "Serar" in 1 Esd. 5:32 [KJV, "Aserer"]). Because the temple servants were apparently non-Israelites (see NETHINIM), some have speculated that this family descended from #1, above.

<div align="right">S. J. SCHULTZ</div>

Sisinnes si-sin'es. See TATTENAI.

Sismai sis'mi (סִסְמָי *H6183,* meaning unknown). KJV Sisamai. Son of Eleasah and descendant of JUDAH through the line of JERAHMEEL (1 Chr. 2:40).

sister. See FAMILY.

sistrum. See MUSIC, MUSICAL INSTRUMENTS IV.A.

Sithri sith'ri (סִתְרִי *H6262,* "[God is] my hiding place"). KJV Zithri. Son of Uzziel and descendant of LEVI through KOHATH (Exod. 6:22). One of Uzz-iel's brothers was AMRAM (father of MOSES, AARON, and MIRIAM), so Sithri was Moses' first cousin.

Sitnah sit'nuh (שִׂטְנָה *H8479,* possibly "enmity, contention"). The name of the second well dug by the servants of ISAAC in the vicinity of GERAR (Gen. 26:21). The name reflects the conflict that ensued when the herdsmen of Gerar disputed with Isaac's herdsmen concerning the water rights. Although the exact location is uncertain, it was in the vicinity of REHOBOTH (26:22).

<div align="right">T. E. MCCOMISKEY</div>

Sivan si'van (סִיוָן *H6094,* meaning uncertain). The third month in the Jewish religious calendar (corresponding to May-June; Esth. 8:9).

six hundred sixty-six. See ANTICHRIST V.

sixty. See NUMBER I.B and I.D.

Siyon si'yuhn (שִׂיאוֹן *H8481,* perhaps "small height"). Alternate name of Mount HERMON, possibly referring to a specific part of the range (Deut. 4:48; KJV and NJPS, "Sion"). However, some scholars suspect textual corruption and, following the Syriac Peshitta, emend to *śiryôn H8590* (see SIRION), which was the Phoenician name for the mountain (cf. NRSV and see 3:9).

skin. Biblical references to animal skins used for clothing go back to the narrative of ADAM and EVE (Gen. 3:21). See DRESS; LEATHER. REBEKAH put the skins of kids on JACOB's hands and neck so that he would feel rough, like ESAU, to his blind father (27:16). Animal skins were used also to manufacture leather bags for WINE (Josh. 9:4 et al.). Jesus, in response to complaints that his disciples were not fasting, commented that people do not "pour new wine into old wineskins. If they do, the skins will

burst, the wine will run out and the wineskins will be ruined. No, they pour new wine into new wineskins, and both are preserved" (Matt. 9:17; cf. Mk. 2:22; Lk. 5:37 – 38). New wine was still fermenting, and the expansion caused by the resulting gases was easily accommodated by a new stretch-able bottle. As skin bottles grew old, however, they lost their elasticity, becoming hard and brittle; new wine would cause them to burst.

There are some references to human diseases of the skin. That Job in his affliction suffered from smallpox is a good possibility. He was afflicted with sores from head to toe, to the extent that his friends could not recognize him (Job 2). The condition was very itchy, for he scraped himself with a piece of broken pottery. He commented, "my skin hardens, then breaks out again" (7:5 NRSV). All this fits smallpox, although there are other possibilities. Israelite law addressed the problem of skin disorders (e.g., Lev. 13); see DISEASE (sections on *boil, itch, leprosy, scurvy*).

There are well-known proverbs concerning skin that come from the Bible. Job declared, "I have escaped by the skin of my teeth" (Job 19:20 NRSV). Jeremiah asked, "Can the Ethiopian change his skin or the leopard its spots?" (Jer. 13:23).

D. A. BLAIKLOCK

skirt. This English term, which usually refers to an outer garment (or to part of such a garment) that hangs freely, is used almost twenty times by the KJV, mainly as the rendering of *kānāp H4053* (e.g., Ruth 3:9, where the NIV has "the corner of your garment"). This common Hebrew term means "wing," but by extension it can be applied to the "edge," "hem," or "corner" of a garment (e.g., 1 Sam. 15:27). Less frequent is its near synonym *šûl H8767*, which can also mean "hem" (Exod. 28:33 – 34 et al.); this term is rendered "skirt" not only by the KJV but also by modern versions in several passages (Jer. 13:22 et al.).

sky. See HEAVEN.

slander. A false accusation that defames a person's reputation. The basic character of this sin is shown by its inclusion in the Decalogue (Exod. 20:16; see TEN COMMANDMENTS), and also in the immediate context from which Christ quotes the second and great commandment (Lev. 19:16 [Heb. *rakîl H8215*]; cf. v. 18 and see Matt. 19:19; 22:39; Jas. 2:8). There LOVE for one's neighbor is characterized by not slandering him.

That slander is against God's wisdom is stressed by Proverbs (e.g., Prov. 10:18 [*dibbâ H1804*]). When it is against God's messengers, it is against God himself and is so punished (Num. 14:36, where the reports of the Promised Land are spoken against; Rom. 3:8 [Gk. *blasphēmeō G1059*], where false doctrine is imputed to Paul). It is placing human standards over God's judgment, and is implicit BLASPHEMY (cf. Jas. 4:11 – 12). It belongs in the category of those ultimate sins to which God delivers men and women (Rom. 1:30 [*katalalos G2897*]; 2 Tim. 3:3 for its eschatological character).

The great slanderer is SATAN himself (*diabolos G1333*, "accuser, slanderer"). He attempts to alienate JOB from his God. The Apocalypse describes him as the one who continually accuses the brethren (Rev. 12:10). The deliberate false witness against Christ, particularly at his trial, must be

seen in this context (Matt. 26:59; cf. the command to Christ's disciples to give *true* witness to him). It is on Christ's account that his followers are falsely accused (5:11), but when God has pronounced his judgment on the elect (justification), who dares bring any charge against them (Rom. 8:33)?

Slander is opposed to the whole character of the Christian life, the love for the brethren (1 Pet. 2:1). Instead of slandering, the believer must forgive, remembering how Christ has forgiven him (Eph. 4:31 – 32), and put on the new nature which is not characterized by lying, but which is renewed in knowledge after God's image (Col. 3:8 – 10). See also LIE; TRUTH.

D. C. DAVIS

slave, slavery. The term *slavery* refers to the ownership of one person by another so that the former is viewed in most respects as property rather than as a person. It was a deeply rooted part of the economy and social structure of the ANE of the Greco-Roman world. See also SERVANT.

1. Slavery in the OT
   1. Literary sources
   2. Terminology
   3. Acquisition of slaves
   4. Legal status and rights of slaves
   5. Publicly owned slaves
   6. The importance of slavery
2. Slavery in the NT
   1. Manumission
   2. Status of slaves

I. Slavery in the OT. Slavery was a widespread practice in the ANE during OT times. However, the number of slaves in Israel probably did not run as high as in classical times. In Israel it was cheaper to hire laborers for work than to keep slaves. The use of slaves seems to have been largely confined to household duties and to work in the field alongside the master and his family.

A. Literary sources. The OT legislation is recorded in several passages (Exod. 21; Lev. 25; Deut. 15). There are numerous references to slaves throughout the OT. Extrabiblical data on slavery among the Jews is limited to the papyri from ELEPHANTINE, an Egyptian colony of the 5th cent. B.C. The private and public documents of the ANE from the 3rd millennium B.C. to NT times are full of references to the practice of slavery in the parallel cultures.

B. Terminology. The primary Hebrew term for "slave" (or "servant") is *ʿebed H6269*; female slaves are referred to by the terms *šiphâ H9148* and *ʾāmâ H563*. Some other words, such as *naʿar H5853* ("young man") and *nepeš H5883* ("soul, person") can be used to refer to servants or slaves (e.g., Gen. 18:7; Lev. 22:11; cf. also the expression *miqnat kesep*, "bought with silver [money]," Gen. 17:12 – 13 et al.).

C. Acquisition of slaves

1. War captives. The earliest means for the acquisition of slaves in the ANE was by military conquest.

Relief with gladiator scene (from Ephesus). Initially, all gladiators were either slaves or prisoners who could be freed if they survived at least three years of combat.

Thousands of men, women, and children were thus reduced to servitude. To the ancients this was considered a humanitarian improvement on the earlier practice of killing all of the enemy (Num. 31:7 – 35; Deut. 20:10 – 18; 1 Ki. 20:39; 2 Chr. 28:8 – 15). The ANE legal codes and the OT law sought to limit the excesses of brutal punishment that captives received. The Hebrew was told that if a soldier saw a beautiful woman among the captives and married her, he must treat her thereafter as a free person (Deut. 21:10 – 14). He was not permitted to sell her into slavery after he ceased to delight in her. The Hebrews were subject to enslavement after capture in war at the hands of countless adversaries. The Phoenicians, Philistines, Syrians, Egyptians, and Romans held them in bondage in great numbers.

2. Purchase. The OT provided that foreigners could be bought and sold as slaves and considered as property (Lev. 25:44 – 46). There are infrequent references to foreign slaves who were imported into Palestine (1 Chr. 2:34 – 35). Hebrews were also sold into slavery in other lands; hence the death penalty was prescribed for those who kidnapped and sold a freeborn person (Exod. 21:16; Deut. 24:7). The OT cites examples of a father selling his daughter (Exod. 21:7; Neh. 5:5); a widow selling her children to pay her husband's debt (2 Ki. 4:1); and men and women selling themselves (Lev. 25:39, 47; Deut. 15:12 – 17).

The price of slaves varied widely. Thirty shekels was the price according to Exod. 21:32. A scale of from three to fifty shekels is given in Lev. 27:3 – 7, according to the age and sex of the slave. An appeal could be made to a priest when there was disagreement on price (v. 8). Twenty shekels was the price for a young man (v. 5)—the price paid for JOSEPH (Gen. 37:28). The average price for a slave was forty shekels (2 Macc. 8:11). A ransom of one talent for a captive (1 Ki. 20:39) must indicate that he was an individual of great importance.

Children were sold into slavery under terms of a conditional contract. More frequently this was true of young, unmarried girls. Exodus 21 stipulates that if a man sells his daughter, she must become the wife or concubine of her master or of one of his sons when she reaches maturity. If no male member of the family takes her as a wife, she is to be set free without any payment of money from her (v. 11). This condition was put in the contract because young girls were frequently purchased with the intention of making prostitutes of them when they reached maturity. A forced sale of children into slavery is mentioned in Neh. 5:1 – 5. Presumably a father had pledged his children for loans during a

time of economic hardship. As settlement for the debts the land was seized and the children were sold into slavery.

There is some evidence that the Hebrews did traffic in slaves, a common practice in the ANE. An Egyptian slave is mentioned in 1 Chr. 2:34. Two laws dealt with slave trade. Both Exod. 21:16 and Deut. 24:7 forbid the kidnapping and selling of freeborn individuals; the penalty for such was death. It is quite possible that some were being sold into foreign countries. In earlier times, Joseph certainly was handled in this fashion (Gen. 37:28). A second law (Deut. 23:15 – 16) prohibits the extradition of a runaway slave, presumably a Hebrew who had escaped from his master in a foreign country.

Self-sale into slavery seems to have been a common practice of the Israelites. The law made allowance for persons to sell themselves into slavery voluntarily (Exod. 21:5 – 6; Deut. 15:16 – 17). This provision refers to the person who refused to go free after some years of service. If he refused his freedom because he enjoyed the economic security of his new home, and because he wished to remain with the wife his master provided for him, and with his children, he would serve his master for life. Leviticus 25 describes the way in which an Israelite was to be treated who entered into the state of slavery voluntarily, or who sold himself to a fellow Israelite or resident foreigner. Provision was made for release after fifty years of bondage. The value of a slave was calculated on the basis of the number of years remaining for him to serve. Evidently the SABBATICAL YEAR release of the Book of the Covenant (Exod. 20 – 23, esp. 21:2) had been forgotten or more probably disregarded. The assumption on which the Leviticus code is based is that no Israelite, being a child of God, could fall into perpetual bondage.

3. Insolvency. One of the chief sources of slaves in Palestine was the citizen who was in default of payment for his DEBTS (Exod. 21:2 – 4; Deut. 15:12). The law sought to protect the slave by limiting his service to six years. The principle behind slavery for insolvency is clear in the terms of Exod. 22:2. The law provided that a thief should be sold into slavery, not because he had stolen goods, but rather because he was unable to recompense the owner for the loss of his property.

There are numerous references to Hebrews who were reduced to slavery to satisfy debts. A number of those who joined DAVID at the cave of ADUL-LAM were defaulting debtors (1 Sam. 22:2). Other passages mention instances of children who were seized to satisfy creditors (2 Ki. 4:1; Neh. 5:1 – 5). Isaiah referred to that practice when he wrote these words from God: "Or to which of my creditors did I sell you? / Because of your sins you were sold" (Isa. 50:1).

One of the reasons for insolvency was the high rates of INTEREST charged in the ancient world. The Israelites were protected, in theory at least, from this by legislation—recorded in Exodus and repeated in Leviticus and Deuteronomy—which forbade them to charge interest of their fellow men.

4. Other means. The non-Hebrew slave could be acquired as a gift; in this way LEAH received ZILPAH as her slave (Gen. 29:24). Non-Hebrew slaves could also be passed on from one generation to another; Lev. 25:46 provided for the perpetual servitude of the original inhabitants of Canaan in this manner. Finally, the children of slaves, born within the owner's house, became the property of the master, even if the father should later become a free man (Exod. 21:4; Lev. 25:54).

D. Legal status and rights of slaves

1. Manumission. The OT law regarding the release of slaves is stated in three passages (Exod. 21:1

– 11; Lev. 25:39 – 55; Deut. 15:12 – 18). The first of these provided that a male Hebrew slave should be freed after he had served six years. If he was married before he became a slave, his wife was to be released with him; if he was provided a wife by his master, the slave could go free, but his wife and children would remain the property of the owner. In such instances, if the slave chose to remain with his master and his wife and children, he was to appear before the judges, have his ear pierced, presumably for some tag to be affixed, and become a slave for life.

A female slave was treated quite differently. She was assumed in the sight of the law to be a CONCUBINE or wife of the owner or of one of his sons. Because it was in the best interest of the home for her to remain, a slave girl was released only under extraordinary conditions. If the owner was displeased with her, he could let her be redeemed, probably by her family. If he had promised her to one of his sons, she was to be treated as a daughter. If the owner took another wife, he was still responsible to provide for his slave concubine. If these three conditions were not met, the slave girl was set free.

The Book of the Covenant (Exod. 20 – 23) also provided for the release of slaves who had been maimed by their masters. Questions arise concerning the meaning of Exod. 21:26 – 27. Because in this passage the slave is not specifically described as being a Hebrew, some have suggested that the injunction applied only to non-Israelite slaves. However, it would be extraordinary to suggest that a man was accountable for beating a non-Hebrew slave, but not for beating a Hebrew slave. This, most likely, was a pronouncement that applied to the treatment of all slaves.

The law of release in Deuteronomy has one significant change. It stipulated that female slaves were to be treated in the same way as males. It was no longer assumed that a marriage commitment by the owner for himself, or one of his sons, was a condition of female servitude.

The third law of release is found in Lev. 25:39 – 55. It provided that a Hebrew could never be in perpetual bondage. An Israelite who sold himself into slavery was to be released in the JUBILEE YEAR. He was not to be considered a slave, but a bondservant or hireling. True slaves were acquired from the surrounding nations, and for them there was no release. They were inherited with other property (vv. 44 – 46). A third provision required that if a Hebrew sold himself because of poverty to a resident foreigner, one of his relatives would have the right to redeem him. The price was to be based on the amount for which he was originally acquired, prorated to the number of years left to Jubilee. He was to be released in the year of Jubilee if not redeemed before then.

It is difficult to say if the laws of release were observed by the Hebrews. No document of manumission has appeared. On the contrary, JEREMIAH rebuked the princes of Judah who followed the decree of ZEDEKIAH to release the slaves only to bring them into bondage again (Jer. 34:8 – 17). Some see in the Jubilee release an admission that the Israelites failed to observe the right of release after six years of servitude, according to the terms of the Book of the Covenant.

2. Religious rights. The slave was considered to be a part of his owner's family; hence he shared in their religious life. The laws guaranteed him a right to the SABBATH rest (Exod. 20:10; 23:12) and granted him a share in the religious feasts (Deut. 12:12; 16:11, 14). Thus the sojourner could not partake of the feast until he had been circumcised, but the slave, who as a member of the family had to be circumcised, always took part in the feasts (Exod. 12:43 – 45). Likewise, a slave in the house of a priest was allowed to eat of the offering of the holy things, but a sojourner in the household, or even the daughter of a priest, if she had married into a nonpriestly family, was forbidden to share in the offering (Lev. 22:10 – 12).

3. Civil rights. Slaves were protected in considerable measure from inhumane treatment. The murder of a slave was punishable by death (Exod. 21:12). If a master beat a slave, and he died as a result, the master was to be punished, but it is not clear what the punishment was (21:20 – 21). Again, if a master maimed his slave, the slave was to be set free (21:26). The terms of the prohibition on maiming were quite restrictive. A slave was to be set free if a beating resulted even in the loss of a tooth (21:27). Restrictions were also placed on the illegal sale of persons into slavery and on the return of runaway slaves.

4. Marriage. Hebrew slaves were allowed to marry. The code in Exodus stipulated that a Hebrew slave was to be set free in six years. As mentioned above, if he was married when he went into bondage, his wife and children were to be freed with him (Exod. 21:3), but if he was provided a wife by his master, then the wife and children were to remain the property of the owner. This last provision was evidently the cause of some perpetual servitude: if a man chose to remain with his wife and children, he was taken before the judge, his ear was pierced as a sign of perpetual servitude, and he was declared a slave for life (21:5 – 6).

The law in Exodus is somewhat perplexing in regard to female slaves. On the one hand, it allowed wives to be provided for Hebrew slaves (Exod. 21:2 – 4); on the other hand, it stated that women were to be treated differently (see above, D.1). Evidently a Hebrew woman could go into slavery only on the condition that she was to be a wife or concubine of her master or of one of his sons, and only foreign women were given to Hebrew slaves as their wives.

5. Peculium. From earliest times slaves were granted the right to accumulate *peculium*, that is, almost any form of personal property, including their own slaves (2 Sam. 9:10). The Code of HAM-MURABI recognized this right and even decreed the way in which the peculium would be distributed on the death of the slave owner. The OT (Lev. 25:47 – 55) provided that a man who sold himself into slavery might be redeemed by his nearest kin or by his own acquired wealth ("if he prospers, he may redeem himself," v. 49).

A unique provision for Hebrew slaves is to be found in Deut. 15:13 – 15. A slave who was freed in the sabbatical year was to be provided with goods from the increase of his master's prosperity as a reminder to all that the Hebrews were delivered from bondage in Egypt.

6. Asylum and extradition. The provision of the law of Deut. 23:15 – 16 in this regard is difficult to interpret: "If a slave has taken refuge with you, do not hand him over to his master. Let him live among you wherever he likes and in whatever town he chooses." This could hardly mean that every runaway slave in Israel was to be granted ASYLUM. It must refer, instead, to slaves from foreign countries who sought asylum among the Hebrews. There are parallels to this kind of provision in other ANE law codes.

7. Branding. Since a slave was considered a piece of property, various means were used in the ANE to indicate his status. In Egypt slaves were stamped with the name of their owner and given a unique haircut. In Babylonia both these methods were used, as well as tattoos and small tablets that were worn around the wrist, ankle, or neck. There is no clear indication that the Israelites used any of these signs of servile status. The only provision in the law was that a slave who chose to remain in bondage after six years of servitude should have his ear pierced with an awl (Exod. 21:6; Deut. 15:17), presumably to fasten some sort of tag to him.

E. Publicly owned slaves. State slavery existed from earliest recorded time in the ANE. First mention of it is made in Josh. 16:10 and Jdg. 1:28 in reference to work performed for the state by the Canaanites after the conquest of the land. State slavery evidently became more widespread and more important economically when the Davidic kingdom was established. Under SOLOMON, slaves in large numbers were used by the state to work the copper mines and mills of the ARABAH. Because of extremely harsh working conditions, they must have died in great numbers. Perhaps it was for this purpose that Solomon reduced to slavery all the descendants of "the Amorites, Hittites, Perizzites, Hivites and Jebusites" that the Israelites had not been able to exterminate (1 Ki. 9:20 – 21). After the EXILE they were combined in the census lists with the temple slaves, and their number is given as 392 (Ezra 2:55 – 58; Neh. 7:57 – 60).

Temple slaves or servants (see NETHINIM) were common throughout the ANE in OT times. No mention of them was made in the OT until postexilic times. They were brought back by ZERUBBA-BEL and EZRA from Babylonia (Ezra 2:43 – 54; Neh. 7:46 – 56). Ezra states that there were 220 of them whom David and his officials had set apart to attend the Levites (Ezra 8:20). They apparently lived in separate quarters adjoining the temple, and worked under supervisors (Neh. 3:31; 11:21). Earlier in biblical history, mention is made of captives who served in the TABERNACLE: these included Midianites given to the priests and Levites before the Israelites entered the Promised Land (Num. 31:25 – 40), and later the Gibeonites who became "woodcutters and water carriers for the house of my God" (Josh. 9:23), but it is not clear that they functioned as temple slaves.

F. The importance of slavery. The legal codes define in considerable measure the limits of how slaves should be treated, but they tell little of what it was like to be a slave in the ANE. For that, one can only turn to OT narratives in which slaves were important figures. It should be noted first that slaves were members of the household and were grouped with the women and children (Exod. 20:17). The latter, like slaves, could be bought and sold. The wife and the slave-concubine were often hard to distinguish. As PAUL suggests (Gal. 4:1), the child in Israel was "no different from a slave," for both were flogged (Exod. 21:20 – 27; Prov. 13:24).

Generally slaves were not owned in large numbers in Palestine except by the temple and the state. Slaves were usually domestics in the households of the well-to-do rather than agricultural or handicraft workers in large-scale operations. A warm affection frequently developed between master and slave. The codes in both Exodus and Deuteronomy specifically made provision for the slave who wished to remain in bondage because of his affection for his master. Such a relationship must have existed between ABRAHAM and ELIEZER of Damascus, for this servant was at one time designated the heir of his master (Gen. 15:1 – 4), and later he was sent to negotiate a marriage for the heir (ch. 24). A slave of SAUL was an adviser and confidant of his master (1 Sam. 9:5; 16:22), as was GEHAZI, the slave of ELISHA (2 Ki. 4:12; 8:4). Mention is also made of one JARHA, an Egyptian slave in the household who was given the daughter of his master in marriage (1 Chr. 2:35). Thus the frequent picture that is drawn is one of affection and trust on the part of both master and slave, very much within the confines of the family.

II. Slavery in the NT. There is what some consider an awkward silence on the part of Christ in regard to the slave society of NT times. And the apostles Paul and Peter, far from condemning slavery, urged their converts who were slaves to obey their masters (Eph. 6:5 – 8; Col. 3:22 – 25; 1 Tim. 6:1 – 2; 1 Pet. 2:18 – 21). Paul further suggested that a runaway slave voluntarily return to his master (Phlm. 10 – 16). Nowhere did he suggest that Christians give up their slaves, but he did exhort

masters to treat their slaves with kindness and consideration (Eph. 6:9; Col. 4:1). In short, the institution of slavery was not explicitly condemned, but its abuses were. The apostles' attitude is best explained by the unique way in which Romans of the 1st cent. A.D. treated their slaves and released them in great numbers.

Slavery had a long history in the Greco-Roman world by NT times. During the Roman conquest of the 3rd to 1st centuries B.C., slaves were introduced into Roman society by the hundreds of thousands. However, one must be exceedingly careful not to assign the barbaric treatment of slaves by the Romans in the pre-Christian centuries to the early Christian era. Sweeping humanitarian changes had been introduced into the Roman world by the 1st cent. A.D. which led to radically improved treatment of slaves.

As in OT times, people became slaves in the Greco-Roman world in a number of ways. Most were inherited or purchased. The latter were usually prisoners of war or persons illegally seized and sold by pirates to slave traders. Some few slave traders seem to have engaged in the ugly trade of breeding and selling slaves, a common business in earlier centuries. According to Cicero (*Parad*. 35) indebtedness was a cause of slavery in early Rome, but this practice was forbidden by law in 326 B.C.

A. Manumission. Slavery had become a well-traveled road to Roman CITIZENSHIP throughout the empire by the 1st cent. A.D. Captives were educated and trained in Roman ways before becoming citizens. The younger PLINY (*Ep*. 7.32.1) stated in justification of manumission that he freed his slaves because of a desire to see his native country increase in the number of its citizens. Dio Cassius (*Rom. Hist*. 46.7.6) put similar words in the mouth of AUGUSTUS Caesar, but the statement is less reliable than Pliny's. Behind these statements there is the fact that Rome was faced with a population decline of the freeborn citizenry. The freedman, therefore, under the name and patronage of his former master could fulfill obligations to the state, the most important of which was military service. Whatever the reasons, evidence of various kinds indicates that the Romans freed slaves in great numbers.

1. Frequency of manumission. There is considerable evidence of manumission. Tenney Frank (in *AJP* 53 [1932]: 360) made a study of the sacred treasury of the Romans for the years 81 – 49 B.C., and his conclusions are remarkable. One of the sources for the sacred treasury was a manumission tax of 5 percent of the value of the slave about to be freed. Using a value of 500 denarii per slave, a reasonable evaluation, he came to the conclusion that 500,000 slaves were freed during this period, for 12,000,000 sesterces were derived from the tax during this time. These figures are all the more startling when one learns that the total population of the city of Rome in 5 B.C. has been estimated at about 870,000.

Two other bits of evidence on the frequency of manumission during this period are significant. Julius CAESAR sent 80,000 poor people, mostly freedmen, out of the city of Rome to the provinces as colonists in the years 46 – 44 B.C. Earlier, in 57 – 56, when a dole of grain was established for needy citizens at Rome, many owners set their older slaves free. This indicates that it was not always humanitarianism which prompted some to free their slaves (Dio Cassius, *Rom. Hist*. 39.24).

Evidence from the early empire, since it was the time of the early church, is more significant and most unusual. In a study of 13,900 grave inscriptions from the *Corpus inscriptionum latinarum,* Frank has shown that of 4,485 persons born at Rome and who, with few exceptions, were poor citizens, 83 percent had foreign names and 70 percent had Greek names. This is a sure indication that the individual was a former slave or, perhaps, the son or daughter of a slave or freedman. There is

further evidence that this percentage is probably too low. In instances where a record of succeeding generations appears, the percentage of Greek names shrinks from 64 percent to 38 percent. It appears that a freedman of ambition soon tried to shed a Greek name and presumably any other foreign name in favor of a Latin one (*AHR* 21 [1916]: 689 – 708). The reliability of one aspect of Frank's conclusions is borne out by other studies. At Minturnae 77 percent of all slaves and freedmen were Greek (University of Pennsylvania, *Excavations at Minturnae*, 1 [1935], 106 – 13). Likewise 76 percent of the freedmen and slaves of Cicero were Greeks and 73 percent of the slaves and freedmen of others, mentioned by Cicero, had Greek names.

The legislation of Augustus indicates that on the death of their masters slaves were being freed in wholesale numbers. To curb such activity, which Dionysius of Halicarnassus (*Rom. Ant.* 4.24) says was prompted by the owner's desire that his slaves should grace his funeral wearing the cap of freedom, the *lex Fufia Canina* was passed in 2 B.C. The law stipulated that on their death owners might free a portion of their slaves on a sliding scale. If one owned two to ten slaves, one-half might be freed. If ten to thirty, one-third might be freed. If a master owned 100 – 500, only one-fifth might be freed (*Gai institutiones* 1.42 – 43). In all, the evidence supports the contention that slaves in ancient Rome were freed in great numbers. (For further discussion of manumission in Rome, see T. Wiedemann in *Classical Quarterly* 35 [1985]: 162 – 75.)
Slaves involved in various projects pictured on the walls of the tombs at Beni Hasan, Egypt.

2. Length of service. Information regarding the length of time a slave had to wait for his freedom is scanty. Cicero, however, made the point that a worthy slave could expect his freedom in about seven years (*Phil.* 8.32), a figure that coincides remarkably with the OT requirement (Exod. 21:2). It is not surprising, therefore, to find that in the works of Cicero a number of individuals, such as Tiro, Statius, Dionysius, and Eutychides, to name a few, were first mentioned in connection with some important duties they performed as slaves, and a few years later were called freedmen.

3. Economic status of freedmen. When a master freed his slave, he frequently established his freedman in a business and the master became a shareholder in it. Usually the slave had learned his trade as an apprentice in the master's household or handicraft shop. Then by extra labor he saved enough to buy his freedom, or it was granted gratuitously by his master.

Many examples of the prosperity of former slaves can be cited. Because OSTIA, the seaport of Rome, was a prosperous new community during the late republic and early empire, freedmen flocked there. Even a large proportion of the magistrates of the city were freedmen (Gordon in *JRS* 21 [1931]: 70). Many others became knights; this meant that they possessed property valued at more than 50,000 sesterces. Their names are interesting and indicate their former status and often their nationality: Antistius Agathangelus, Carmin-ius Parthenopaeus, Combarisius Vitalis, Cornelius Epagathanius, Licinius Herodes, and Lutatius Charitonaenus. They amassed their wealth as grain dealers, carpenters, wine merchants, furniture makers, and surveyors. Two other prosperous freedmen at Ostia were a silversmith and a miller.

At Rome the situation was the same. There was a street of shops, the Sacra Via, which specialized in jewelry. All the owners of the shops who could be identified were freedmen. There were seven pearl merchants, two jewelers, two goldsmiths, one engraver, and one maker of silverplate. An inscription found at Rome illustrates the practice of the time. The patron of M. Canuleius Zosimus set up a memorial plaque to his freedman who died at twenty-eight years of age. He said of him, "he excelled in carving Clodian ware" (*CIL* 6.9222). There were two firms of bricklayers at Rome. These were headed by G. Domitius Trophimus and C. Calpetanus Favor, both of whom were freedmen with slaves working under them. One of the slaves, Hermes, was later freed by his master and became C. Calpetanus Hermes (*CIL* 15.319, 904, 1112 – 14).

4. Jewish freedmen. The Jews at Rome were an interesting group (see ROME, CHURCH AT). Many thousands of them came to the city as slaves in the periods of the late republic and early empire. H. J. Leon, in a study of the catacomb inscriptions (*The Jews of Ancient Rome* [1960], 237 – 38), discovered that there was not a single mention of a slave among them. This confirms the statement of PHILO JUDAEUS that many Jews came to Rome as slaves, but were soon set free (*Legatio* 23.155). Moreover, many Jews took lofty Roman names for themselves and, except for the fact that they were buried in the Jewish catacombs, would never have been recognized as Jews.

All of this evidence suggests that the Roman slave, far from living in perpetual servitude, could look forward to a day of opportunity. It became the common practice of the Romans to free their slaves and then establish them in a trade or profession. Many times the former slave became wealthier than his patron.

B. The status of slaves. While an individual was a slave, he was in most respects equal to his freeborn counterpart in the Greco-Roman world, and in some respects he had an advantage. By the 1st cent. A.D. the slave had most of the legal rights that were granted to the free man. Sepulchral inscriptions of the 1st and 2nd centuries indicate the prosperity and family solidarity of the imperial slave. Many had a considerable amount of money at their disposal and had rights to wife and family. In A.D. 20 a decree of the senate specified that slave criminals were to be tried in the same way as free men (Justinian, *Dig.* 48.2.12.3). Pliny the Younger treated the wills of his slaves as valid on the ground that the master's house was the substitute for the state (*Ep.* 8.16.2; 8.24.5). In A.D. 61 the family of a slave owner attempted to use an old prerogative: the execution of all of the slaves of the master, who had been killed by one of them. When the family of Pedanius Secundus ordered this, so

great a riot broke out when the report reached Rome that troops had to be called in to quell it, and the slaves were not killed (Tacitus, *Annals* 14.42 – 45). There was also the interesting incident that took place during the reign of HADRIAN. The emperor was attacked by an insane slave, but, instead of being put to death, the slave was turned over to the care of a physician (*Scriptores historiae augustae: Hadriaus* 12.5).

The living conditions of many slaves were better than those of free men who often slept in the streets of the city or lived in very cheap rooms. There is considerable evidence to suggest that the slaves lived within the confines of their master's house. They usually lived on the top floor of their owner's city house or country villa (Columella, *De rustica* 1.63). In Pliny's Laurentian villa the quarters for the slaves and freedmen were in separate sections of the house, but were considered attractive enough to be used for the entertainment of overnight guests (Pliny the Younger, *Ep.* 2.17.22). At Pompeii in one villa, the Casa del Menandro, separate quarters for slaves were provided on one side of the building. These rooms were on the second floor, included a kitchen and a latrine, and were connected to the rest of the house by a long corridor (A. Maiuri, *La casa del Menandro e il suo tesoro di argenteria*, 2 vols. [1933], 1:186 – 188).

The slave was not inferior to the free man of similar skills in regard to food and clothing. That most slaves at Rome were as well dressed as free persons is indicated in an unusual way. Seneca (*De clementia* 1.24.1) stated that legislation was introduced in the senate that slaves should be required to wear a type of clothing that would distinguish them from free men. It is presumed that the slave ate as well as the poor free man but there is no direct evidence on the subject. At least it is hard to believe that a master would provide well for his slaves in other ways and not feed them adequately.

The free laborer in NT times was seldom in better circumstances than his slave counterpart. The average free laborer at Rome and in the provinces could expect to earn about one DENARIUS a day. This was the pay of the workers in the vineyard of Jesus' parable (Matt. 20:2). Julius Caesar's troops received 225 denarii a year plus fringe benefits of food and booty (Libernam in *RE*, s.v. "Exercitus," 1672 – 74). One of Caesar's scribes, a skilled workman, received one denarius per day (H. Dessau, *Inscriptiones latinae selectae* [1892], 2/1:502 [#6087, LXII]). Augustus raised the pay by giving a bonus of 3,000 denarii for twenty years of service in addition to the salary of 225 denarii per year (Dio Cassius, *Rom. Hist.* 55.23).

Finally, in Diocletian's time, when food prices were approximately the same as those of the late republic and early empire, where they can be compared, the wages of the unskilled were set by imperial decree at one-half to one denarius a day (*Economic Survey of Ancient Rome*, ed. T. Frank, 6 vols. [1933 – 40], 1:404). At this point a comparison of the free man with the slave is worth noting (ibid., 2:266 – 83). The free man might receive one denarius a day in wages or c. 313 denarii a year, if he worked six days a week. He would spend half of that (2 or 2.5 sesterces per day) on food or 184 denarii a year. This would provide him with a diet of bread, vegetables, and fruit. Clothing of poor quality would cost 5 – 10 denarii a year. If the individual did not sleep in the streets as many did, housing would cost 30 sesterces a month or 90 denarii a year. Therefore, of the 313 denarii earned, 279 would be spent on basic necessities. However, the slave, in addition to receiving these basic necessities, was given 5 denarii a month as spending money (Seneca, *Ep.* 80.7). From these statistics one can only conclude that the average free man lived no better than the slave. In fact, in time of economic hardship it was the slave and not the free man who was guaranteed the necessities of life for himself and his family.

Slavonic versions. See VERSIONS OF THE BIBLE, ANCIENT V.E.

sleep. There is nothing unusual about most biblical uses of this word in its literal or physical sense. After JACOB dreamed about the ladder he simply woke from his sleep (Gen. 28:16); when EUTYCHUS fell down during PAUL 's long sermon it was due to a typical human loss of concentration in weariness (Acts 20:9). In a few cases natural sleep was, for supernatural reasons, deepened. This is recorded in the account of the creation of EVE (Gen. 2:21 – 22). The men around SAUL were in a similar deepened sleep while DAVID and ABISHAI took the spear and jar of water from his head (1 Sam. 26:12).

The Bible refers to sleep also in a figurative sense. For example, the term is used to indicate spiritual indolence. SOLOMON was scathing when talking about those who were lazy: "A little sleep, a little slumber, / a little folding of the hands to rest—/ and poverty will come on you like a bandit / and scarcity like an armed man" (Prov. 24:33 – 34; cf. 6:9). Similarly Christ, in talking to his followers about his SECOND COMING, exhorted them to be faithful and watchful: "If he comes suddenly, do not let him find you sleeping" (Mk. 13:36). PAUL , in exhorting Christians in everyday living and in warning them of the enormity of their task, stressed that "it is full time now for you to wake from sleep" (Rom. 13:11 RSV; cf. 1 Thess. 5:6 – 7). The same writer, in speaking of the light coming into the lives of believers, likened this process to an arousing from deep sleep (Eph. 5:14).

Where sleep is used to indicate physical DEATH, the picture is of a temporary state pending a final consummation. " We will not all sleep, but we will all be changed" (1 Cor. 15:51; cf. 1 Thess. 4:13 – 18). It is clear that this reference to death as sleep is figurative, and does not refer to sleep of the soul (cf. Lk. 16:24; 23:43; 2 Cor. 5:8; Rev. 6:9 – 10).

<div align="right">D. A. BLAIKLOCK</div>

sleeves. The NRSV uses the phrase "a long robe with sleeves" as the rendering of Hebrew *kĕtōnet passîm*, which occurs in the stories of JOSEPH and TAMAR (Gen. 37:3, 23, 32; 2 Sam. 13:18). The meaning of the term *pas H7168* is debated. In the Samuel passage, on the basis of the SEPTUAGINT (*ton chitōna ton karpōton* [from *karpos*, "wrist"]) and the VULGATE (*talari tunica* [from *talus*, "ankle"]), some scholars believe that the phrase indicates a garment reaching to the wrists and the ankles. In Genesis, however, both of these versions understand the garment as many-colored (*chitōna poikilon*, *tunicam polymitam*; cf. KJV, "a coat of *many* colours"). In garment inventories from Mesopotamia there is mention of a *kutinnū pišanu* (A. Oppenheim in *JNES* 8 [1949]: 177), apparently a valuable ceremonial vestment with gold work appliqué as its ornamentation (cf. NIV, "richly ornamented"; similarly NJPS). See ROBE.

slug. See SNAIL.

sluggard. Proverbs describes the sluggard (Heb. ʿāsēl *H6789*) as being so lazy and addicted to sleep that he does not keep his fields plowed and free from thorns; thus at harvest time he is bound to go hungry, while the diligent will prosper (Prov. 6:6, 9; 13:4; 15:9; 24:30; 26:13 – 16). Even if he had food, he is so lazy that he wouldn't lift it to his mouth (19:24). He refuses to go out to work by saying that there might be a lion outside (22:13); such private daydreams seem to him wiser than the counsel of seven (26:16). He prefers to desire (dream?) than to work (13:4; 21:25). He brings disaster to himself, and is also offensive to his employer (10:26).

On the other hand, the industry of the virtuous woman (Prov. 31:27) is blessed not only by wealth, but also by the opportunity to care for the poor (31:20), to see her husband become a leader (31:23), and most of all to receive the praise of the Lord (31:30). Sloth is not just one of many sins, but an attitude that harms one's entire duty to God and to neighbor.

Jesus' parable of the talents repeats the theme of foolish fear being the root of sloth (Matt. 25:25 – 26) and stresses the proper fear of the Lord as the source of diligence, making clear that it is at the return of Christ in judgment (cf. Proverbs' day of harvest) when diligent use of God's gifts will be rewarded and sloth punished. PAUL stresses the necessity of serving God up to the proportion of the gifts he has given us (Rom. 12:3 – 8) so that we are not slothful but aglow with the Spirit (12:11): sloth is against the Spirit! Likewise Hebrews emphasizes that after partaking of the Spirit (Heb. 6:4) we must go on to maturity (v. 1)—not becoming lazy, but showing diligence to the end (vv. 11 – 12).

smell. See ODOR.

smelt. See METALS AND METALLURGY.

smith, blacksmith. The Hebrew noun ḥērēš *H3093* commonly means "craftsman, artisan" and thus can be used of gem engravers, carpenters, stonemasons, and so on (e.g., Exod. 28:11; 2 Sam. 5:11). When the context indicates that an ARTIFICER works on IRON or some other METAL, the rendering "smith" or "blacksmith" is appropriate (1 Sam. 13:19; Isa. 44:12; 54:16). The originator of this craft was TUBAL-CAIN, who is said to have "forged all kinds of tools out of bronze and iron" (Gen. 4:22). The context of 1 Sam. 13:19 refers to the PHILISTINE blacksmiths who were the first to bring the craft of working iron into Palestine. The prophet ISAIAH describes how blacksmiths forged idols (Isa. 44:12; however, no iron idols have been found). Elsewhere (54:16) he refers to the making of an iron artifact of some kind, but it is not definitely specified (most versions understand it to be a "weapon"). The KJV and other versions use "smith" also to render *masgēr H4994* (2 Ki. 24:14, 16; Jer. 24:1;

29:2), but the meaning of this term is uncertain (NIV, "artisan"). See CRAFTS; GOLDSMITH; OCCUPATIONS; SILVERSMITH.

<div align="right">J. L. KELSO</div>

smoke. Literal references to smoke in the Bible (Heb. ⁽āšān H6940⁾; Gk. *kapnos G2837*) are relatively few (e.g., Josh. 8:20 – 21; Jdg. 20:38 – 40). The offering of INCENSE produced a cloud of smoke that represented the prayers of God's people (Lev. 16:13; Ezek. 8:11 [in both of these passages the Heb. word is ⁽ānān H6727⁾, "cloud"]; Rev. 8:4).

The most significant references to smoke indicate a visible concomitant of the presence of God in divine self-manifestations. In the instance of the Abrahamic covenant, while ABRAHAM slept "he saw a smoking fire pot with a flaming torch" passing between the pieces of the sacrifices he had divided (Gen. 15:17). When MOSES met with God on Mount SINAI, the mountain was "covered with smoke" (Exod. 19:18). The TEMPLE was filled with smoke when ISAIAH saw the Lord (Isa. 6:4); he also prophesied that God would "create over all of Mount Zion…a cloud of smoke by day and a glow of flaming fire by night" (4:5). In John's vision, the heavenly temple "was filled with smoke from the glory of God and from his power" (Rev. 15:8). Though not explicitly stated, one can assume that other references to the divine self-manifestation (e.g., Exod. 3:2; 13:21; Num. 10:34; 14:14) include also the presence of smoke. See PILLAR OF FIRE AND OF CLOUD.

There are other figurative uses. The fire of God's anger is accompanied by "smoke…from his nostrils" (Ps. 18:8; cf. Job 41:20). MOSES warned that the WRATH of God would "burn" (verb ⁽āšan H6939⁾) against idolaters (Deut. 29:20). The psalmist cried out, "Why does your anger smolder [⁽āšan] against the sheep of your pasture?" (Ps. 74:1). Smoke also symbolizes the transient: enemies (37:20; 68:2), idolaters (Hos. 13:3), the days of one's life (Ps. 102:3), and the heavens (Isa. 51:6).

<div align="right">W. B. COKER</div>

Smyrna smuhr'nuh (Σμύρνα *G5044*, "myrrh"). Smyrna is situated at the head of the gulf into which the Hermus flows, a well-protected harbor, and the natural outlet to the sea for the major trade route which runs inland along the Hermus valley. Aeolian Greeks may have been the first settlers here, a community overlaid and dominated by the later and more powerful Ionian Greeks, but facts are few from the shadowy years at the turn of the 1st millennium B.C., when these AEGEAN settlements were founded.

When history takes more certain shape at the end of the Dark Age, which fell on the Aegean world after the Dorian invasions—that last wave of infiltrating Hellenic tribes which ended the Mycenaean world (see GREECE IV)—Smyrna emerges as a sturdy community, ready to assert itself against the powerful neighboring kingdom of LYDIA. Mimnermus, poet of Smyrna in the 7th cent. B.C., some of whose poems have survived in single lines and fragments, mentions the tension in the Hermus valley between Smyrna and SARDIS. It seems to have brought catastrophe about 600, when Alyattes of Lydia destroyed Smyrna, and left its site devastated for three centuries. Lydian villages are traceable on the shore of the gulf, but the strong Ionian port lay dead.

Excavations at ancient Smyrna.

The city rose from the dead—hence a phrase in the imagery of John's apocalyptic letter (Rev. 2:8). Lysimachus, who ruled Thrace (THRACIA) and the NW part of ASIA MINOR after the division of Alexander's empire, refounded Smyrna in 290 B.C. It became a Greek city again, with assembly and magistrates, and, thanks to the fine site, entered an era of vitality and prosperity that still continues (Izmir is one of the strongest urban communities in modern Turkey). Its progress was aided and promoted by a shrewd recognition of the coming dominance of ROME. ANTIOCHUS the Great of Syria (241 – 187) was pushing W in a determined attempt to consolidate his borderlands. Rome, aware of his encroaching ambitions, was thrusting firmly east. Smyrna was a superb bridgehead in a great peninsula, which Rome now was more and more clearly regarding as her buffer region and coming challenge. And Smyrna, too, in Rome's emerging eastern policy, was a useful counterpoise in the middle Mediterranean to the naval strength of RHODES.

It was to these significant services that the Smyrneans referred in A.D. 26 when they appealed for permission to build a temple to TIBERIUS. TACITUS (*Annals* 4.56) tells the story:

> The Smyrnaeans, having appealed to their ancient records to show whether Tantalus, the son of Jupiter, or Theseus, the son also of a god, or one of the Amazons was their founder, proceeded to the considerations in which they chiefly trusted, namely, their friendly services to the Roman people. They had aided Rome with a naval force, they said, not only in their wars abroad, but also in those they had fought in Italy. It was they, they said, who had first reared a temple in honor of Rome, when the power of the Roman people, though great, had not yet reached their highest glory, for the city of Carthage still stood, and powerful kings governed Asia. Sulla, too, they said, had experienced their generosity, when his army was in imminent peril from the bitter weather and scarcity of clothes. When the matter was made known in the citizens' assembly at Smyrna, all present stripped off their garments and sent them to the legions.

In consequence of the eleven applicants, Smyrna was preferred and became the site for the second Asian temple to the deity of Rome and the emperor, and the seat of the sinister Caesar-cult which was to cause so much suffering in the church (see EMPEROR WORSHIP). At Smyrna as elsewhere the imperial policy of suppression was carried out sporadically, and DOMITIAN, no doubt, was the cause of this outburst with the help of a hostile synagogue, against whose machinations John has a scornful word to say (Rev. 2:9). With legislation on the books against the church, as it had been since the middle sixties of the century, such situations as those which PAUL had found frustrating in an earlier decade, assumed a new possibility of danger. Smyrna had worshiped the spirit of Rome since 195 B.C. The temple to Tiberius increased the pride she held in this historic role.

Hence the exhortation to endure and win a "crown of life" (Rev. 2:10), a piece of imagery caught from a diadem of porticoes surrounding her hilltop, and described by Apollonius of Tyana (1st cent. A.D.): "For though their city is the most beautiful of all cities under the sun, and makes the sea its own, and holds the fountains of Zephyrus, yet it is a greater charm to wear a crown of men than a crown of porticoes, for buildings are seen only in their one place, but men are seen everywhere, and spoken about everywhere, and make their city as vast as the range of countries which they visit" (Philostratus, *Life of Apollonius* 4.7).

Aelius Aristides, who knew Smyrna well, spoke in similar terms (*Orations* 15.404 et al.). He compares the city to the crown of Ariadne, shining in the heavens, and to a statue with its feet in the sea, and rising to its crowned head at the hilltop. Apollonius was probably alive about the time the letter of Rev. 2 was written; he too may have been in peril under Domitian. Aristides wrote half a

century or more later. Both writers show that "the crown of Smyrna" was a recognized image of rhetoric. It remains only to mention Polycarp, the martyr bishop of Smyrna, who died in A.D. 155; as one of the last pupils of John, he made a link between the apostles and the middle 2nd cent.

The story of the actual coming of Christianity to Smyrna is not known. It was probably a result of Paul's activity in Ephesus, followed up and extended by John. On the evidence of the apocalyptic letter, Smyrna's Christians stood well in the 1st cent. They continued to stand, and Smyrna was one of the Asian cities that withstood the Turks, and was among the last to fall to Islam. Such resistance played a part in history. The delaying action of surviving remnants of the empire in the E allowed Europe time to emerge from the Middle Ages, and receive with creative hands those gifts which brought the Renaissance and the modern world to birth.

(See further W. M. Ramsay, *Letters to the Seven Churches* [1904], chs. 19 – 20; C. J. Cadoux, *Ancient Smyrna* [1938]; E. M. Blaiklock, *Cities of the New Testament* [1965], ch. 18; E. Yamauchi, *The Archaeology of New Testament Cities in Western Asia Minor* [1980], ch. 4; C. J. Hemer, *The Letters to the Seven Churches of Asia in Their Local Setting* [1986], ch. 4; J. M. Cook, *Old Smyrna Excavations: The Temples of Athena* [1998]; R. S. Ascough, ed., *Religious Rivalries and the Struggle for Success in Sardis and Smyrna* [2005].)

E. M. Blaiklock

snail. This mollusk (of the class *Gastropoda*) is probably referred to by the Hebrew word *šabbĕlûl H8671*, which occurs only once: "Let them be like the snail that dissolves into slime" (Ps. 58:8; NIV, "a slug melting away as it moves along"). The visible trail formed by the snail's secretion was thought to show that the snail was melting away. Many snails, with a wide range of food habits, live in most regions of Palestine and some have become pests in the irrigated fields, where the added water allows them to be active for a longer part of the year. The KJV uses "snail" also as the rendering of Hebrew ḥōmeṭ *H2793*, a word of uncertain meaning that probably refers to a type of lizard (Lev. 11:30; NIV, "skink"; NRSV, "sand lizard").

G. S. Cansdale

snake. See Serpent.

snake charming. Various kinds of Serpents were numerous in Palestine, and the art of snake charming was practiced in the country. Some snakes were susceptible to such influence (Eccl. 10:11) and others resisted the techniques of the charmer. In Jer. 8:17 serpent charming is used metaphorically to describe the enemies of Judah who are "vipers that cannot be charmed"; and in Ps. 58:4 – 5 it characterizes the wicked who are "a cobra that has stopped its ears, / that will not heed the tune of the charmer."

F. G. Carver

snare. A device used to entangle and capture animals. Several Hebrew nouns can be rendered "snare," especially *môqēš H4613*, which probably refers to a wooden contrivance for catching birds (cf. Amos 3:5). The near synonyms *paḥ H7062* and *reset H8407* seem to indicate trapping nets (all three words are used together in Ps. 140:5). These and other words are almost always used in metaphorical contexts. For example, Idolatry is often described as a snare to God's people (Exod. 23:33). For further discussion see Trap.

sneeze. The verb *sneeze* (rendering Heb. *zārar H2453*) occurs once to indicate that the Shunnamite's son had returned to life as a result of Elisha's work (2 Ki. 4:35). The noun *sneeze* (or *sneezing*) is used by most versions in the description of the Leviathan (Job 41:18; KJV, "neesings"); the Hebrew term in this passage (*ặṭîšâ H6490*) probably refers to the animal's snorting (cf. NIV).

snow. The Hebrew words for "snow" (noun *šeleg H8920*; verb *šālag H8919* in Ps. 68:14) occur nearly twenty times in the Bible (the Aram. cognate *tĕlag H10758* only in Dan. 7:9; Gk. *chiōn G5946* only in Matt. 28:3; Rev. 1:14). Almost all the references, however, are figurative, indicating healing (Exod. 4:6 et al.), purity (Ps. 51:7; Isa. 1:18 et al.), refreshment (Prov. 25:13), and the like.

In the historical record, snow is mentioned only once, when it is said concerning Benaiah son of Jehoiada: "He also went down into a pit on a snowy day and killed a lion" (2 Sam. 23:20; 1 Chr. 11:22). Mention in this context presumably indicates that the event was exceptional, not only as a feat of arms but also as a fact of climate, for the lion's home would be in the Jordan Valley, where snow is unknown. G. Adam Smith comments on Benaiah's exploit: "the beast had strayed up from Jordan, and been caught in a snowstorm. Where else could lions and snow come together?" (*Historical Geography of the Holy Land*, 25th ed. [1931], 63).

Although rare, snow is by no means unknown in the Judean hills. Jerusalem has a mean January temperature of 48°F, with a daily range of some 13°. But there are two areas where snowfalls are both heavy and regular. (1) On the Lebanese mountains in the N, where Mount Hermon rises to 9,100 ft. and snow patches lie throughout the year (cf. Jer. 18:14). It was the distant view of these snows from the hot Galilean trench that prompted so much biblical imagery. (2) On the mountains of Edom, E of the Jordan, where the land rises to over 5,000 ft. (Amman in Jordan has a January mean temperature of 40°F., and a daily range in that month of 7 – 8°). For many Israelites, therefore, snow was better known to them as a distant prospect than as a common experience. See Palestine V; rain.

J. H. Paterson

snuffers. This English term, referring to a device used for cropping the snuff of a candle, occurs in the KJV and other versions as the rendering of two Hebrew words, both of which are applied to instruments made of gold used in tending fires and lamps in the Tabernacle and the Temple. One of the words, *mĕzammeret H4662*, was probably a type of knife used for shearing a wick (1 Ki. 7:50; 2 Ki. 12:13; 25:14; Jer. 52:18; 2 Chr. 4:22); the NIV renders it "wick trimmers." The precise meaning of the second term, *melqāḥayim H4920*, is less certain. According to Isa. 6:6, this tool could be used to handle live coals, and thus most versions render it "tongs" not only here but also in 1 Ki. 7:49 and 2 Chr. 4:21 (where *mĕzammeret* occurs in the same context). It is possible, however, that this instrument was also used as a wick trimmer (cf. Exod. 25:38; 37:23; Num. 4:9).

So soh (סוֹא *H6046*, derivation disputed). According to 2 Ki. 17:4, King Hoshea of Judah betrayed the Assyrians by sending envoys to "So king of Egypt." There have been numerous attempts to identify this Egyptian king. An older proposal that the person in question was Sib)e, an Egyptian general at the Battle of Raphia (c. 720 B.C.), has been discredited; subsequent studies have shown that the name in the Assyrian records should be read differently (namely, Ree; see R. Borger in *JNES* 19 [1960]: 49 – 53). Also unlikely is the view that the biblical text refers to Shabaka, who ruled Egypt at the very end of the 8th cent.; Hoshea's contemporary would have been an earlier pharaoh, Tefnakht I (727 – 720),

whose capital was Sais. K. A. Kitchen has suggested that the name So is an abbreviated form of Osorkon IV (c. 730 – 715), a competing pharaoh at Tanis and Bubastis (*The Third Intermediate Period in Egypt* [1973], 182, 372 – 76). These and other identifications have not won wide acceptance (cf. *ABD*, 6:75 – 76).

Alternative interpretations of the text have been put forward. According to some scholars, *So* should be understood not as a proper name but rather as an Egyptian title (e.g., ṯ⁾,, "vizier," a high-ranking civil official with viceregal authority; see S. Yeivin in *VT* 2 [1952]: 164 – 68). More widely accepted, but not without problems, is the view that the reference is to the city of Sais (H. Goedicke in *BASOR* 171 [Oct. 1963]: 64 – 66; cf. M. Cogan and H. Tadmor, *II Kings*, AB 11 [1988], 196). In this case, the text should be rendered, "he had sent envoys to Sais, [to] the king of Egypt," and the king in question would be Tefnakht.

A. BOWLING

soap. This English term is used to render Hebrew *bōrît H1383*, which occurs twice in figurative passages (Jer. 2:22; Mal. 3:2), and *šeleg H8921*, which occurs once (Job 9:30, although many take this to be the common word for "snow," *šeleg H8920*). The reference is to alkaline salt (see LYE), extracted from the Asiatic soap plants such as *Mesembrianthemum cristallinum, Salicornia solacea, Salsala kali*, and the like (cf. I. Löw, *Die Flora der Juden* [1924 – 34], 1:637), which are reduced by burning to produce a pasty mass used as a bleach, especially in the presence of olive oil.

W. WHITE, JR.

Socho, Sochoh soh'koh. KJV forms of SOCO.

society. The Scriptures do not contain the word *society* nor do they articulate any systematic definition of the human social order. The terms employed in the Bible are concrete and empirical ones, such as *people* and *nation(s)*.

I. Human society in the OT. The relation of the individual to the society of which he was a part varied from one epoch of Israel's history to another. The institution of LEVIRATE marriage (Deut. 25:5 – 6; Lk. 20:28) suggests the solidarity of familial (or clan) life, while the parent-child relationship (e.g., Exod. 20:12) stresses the role of the home as the primary unit of society. See FAMILY. At the same time, the "congregation" of the LORD (cf. the use of the term in Deut. 23:1 – 3, 8) was regarded as possessing a unity of its own, so that exclusion from it amounted to virtual exile.

The solidarity of the human race is more than implied in the narrative describing the creation of ADAM and EVE. With the development, however, of the national self-consciousness within Israel, this resting upon the covenant of ABRAHAM and upon the events surrounding the exodus from Egypt and the giving of the law at Sinai, there developed a division of emphasis within the Hebrew tradition. On the one hand, there was a growing awareness of vocation—of chosenness—which tended toward separateness, both with respect to environing nations, and also at the point of interpersonal relations between Hebrews and non-Hebrews. On the other hand, there was a certain cosmopolitanism within the Levitical legislation, so that Israel's experiences in Egypt were to be regarded as a reminder that the people's treatment of the "stranger" was to be humane and even cordial. This is emphasized, for example, in Exod. 23:9 and Deut. 24:20.

There existed a type of national ambivalence with respect to those of other national stocks. The Levitical order prescribed a sort of prophylactic separation of Israel from her neighbors, this serving

the purpose of maintaining a needed separatism. Such legislation was underlain by a positive humanitarianism. On the whole, it may be said that preexilic relations between Israel and neighboring people *as persons* was moderately cordial, so that URIAH the Hittite was a trusted officer under DAVID (2 Sam. 11:6 – 17), ITTAI the Gittite was captain of David's personal guard (18:2), the KENITES were treated as brethren (Jdg. 1:16; 5:24), and strangers in general had the right of ASYLUM in Israel's CITIES OF REFUGE (Num. 35:15).

Societal relations between the Jewish people and non-Jews deteriorated with the return of the exiles from the captivities. No doubt the ruthless treatment of Jews during the EXILE afforded a background for the growing antipathy of postexilic Jewish society for the Gentiles. Contributive to this polarity was also the strict reform that separated many mixed marriages under EZRA (Ezra 10:18 – 44). As necessary as these reform measures may have been, they could not have failed to generate much tension between Jews and the peoples from whom the "strange wives" came. Tensions during the intertestamental period were aggravated by the SAMARITAN division, and even more by the measures taken both to humiliate and to hellenize the Jews by ANTIOCHUS IV. The hardening of the Jewish institutional structure continued these tensions.

During OT times, the individual enjoyed a real but limited role as a unit within society, although gifted individuals, both men and women, did rise to positions of recognized leadership, outstandingly during the time of the judges (see JUDGES, PERIOD OF). Family life was central to Hebrew society; and within the family, both wifehood and childhood were protected by many safeguards. WIDOWS and ORPHANS, fair game for exploitation in many societies, were accorded special care and solicitude. DIVORCE was restricted, and the reciprocal rights of parents and children were established and safeguarded.

Although polygamy was tolerated during the patriarchal period, the overtones of the Mosaic literature seem clearly to indicate disapproval of the practice (see MARRIAGE). Without leveling any frontal assault upon the practice, the records give prominence to the negative and deleterious elements which derive from polygamy. There were drastic penalties prescribed upon adulterers and incorrigible sons (Lev. 20:9 – 10; Deut. 21:18 – 21). There is evidence, however, that common usage shored up and modified the infliction of these, so that the number of capital crimes was progressively reduced.

Property rights were protected in basic law (Exod. 20:15), and unlawful alienation of property was controlled and restitution carefully specified. Damage to life and limb was controlled early by the principle of equivalence ("an eye for an eye"), but it seems clear that this, along with the ancient practice of blood-revenge, was modified by the imposition of an alternate material restitution. Punishment for unintentional maiming and manslaughter was controlled by the institution of CITIES OF REFUGE. Special value was set upon female chastity, both premarital and within marriage, and rigid safeguards were set about the integrity of the female person.

While there was no overt distinction between public and private morality, it is clear that the ancient Hebrews, guided by divine inspiration, sought to apply principles to both interpersonal and interracial relationships reflective of their high providential origin as a people. There was a progressive elimination of purely tribal usages, a reduction of the number of capital crimes, and a concern for "widow, orphan, and stranger" which marked off Israel's societal life qualitatively from other social patterns of the times. Interracial relationships often were corrupted by the brutalities of invading peoples, and Israel's practices frequently reflected all too clearly the social evils of her environing peoples. At the same time, Israel made a good showing in her overall societal relationship when compared with other peoples of the ancient world.

II. Human society in the NT. As our Lord opened his ministry, he found the exaggerated nationalism that had grown up in the postexilic period to be a stubborn factor. Jews had, formally at least, no dealings with the SAMARITANS (Jn. 4:9), and those nationals of the adjoining nations who dealt with Jews were keenly aware that they were second-class persons (Mk. 7:26 – 28). The mandate to "love your neighbor" had been defiled by the wrongheaded inference, "hate your enemy" (Matt. 5:43).

Jesus, on the other hand, sought to extend the range covered by the term NEIGHBOR, and emphasized the sins of his own people rather than those committed by other nations. The parable of the Good Samaritan opened up to Judaism a whole new world of international concern. Again, our Lord did not hesitate to call attention to the Isaianic promise of mercy for the Gentiles (Matt. 12:18, 21) or to remind his hearers that the men of NINEVEH and the QUEEN OF SHEBA stood as a rebuke to their own hardness of heart (12:41 – 42).

The Scriptures indicate that Jesus Christ, while not ignoring either interpersonal or interracial relationships, sought to deal with society through the individual. The heart of men and women was regarded as a microcosm of the evil world; and the major thrust of the good news was in the direction of making clean the inside of the human heart.

The Pauline teaching stressed, in general, Christian compliance with the regulations of human society and did not elaborate a program for either the external remaking of society or Christian resistance to unjust societies. This does not mean that the Christian Scriptures do not contain elements and principles which when embodied did and do lead to profound modifications of human society, and as well, to monumental changes in the role of individuals with respect to their social groupings.

There is a futuristic thrust in biblical teaching with respect to human society in the endtime. There is an obvious difference between society as Rom. 13:1 – 7 treats it and that envisioned in Rev. 13. The former is to be recognized as God's instrument for our good. The latter is regarded as a final manifestation of the demonic in human life, and presumably should and will be resisted.

The NT makes few pronouncements that bear directly upon the specifics of society with respect to what one regards as modern social problems. At the same time the sacred writings do give expression to principles which, when embodied in significant numbers of individuals within a society, do implement public conscience and ultimately public policy. In the letter to PHILEMON, PAUL launches no direct or frontal attack upon the institution of human SLAVERY; at the same time, this inspired tract enunciates principles with respect to the structures of human relations and of forgiveness that would ultimately sound the death knell of slavery.

In general, however, the NT emphasizes a person's relation to God as primary, and interpersonal relations as being "under God," so that societal consequences should follow as a matter of course. That is to say, the individual in society is a responsible moral being, living in community by divine ordination and providential placement. The Christian faith is designed to cultivate a sensitivity to others, and to direct each person to accord to others the same dignity which one wishes to receive.

Finally, the Christian sustains a special relation to his society, as our Lord suggests in his words, "They are not of the world, even as I am not of the world," even as he prayed for their preservation following his death. Human life in society is always under the divine scrutiny; each person must on the one hand live creatively and redemptively within human institutions; and, on the other hand, maintain final citizenship in heaven. (See further H. W. Robinson, *The Christian Doctrine of Man* [1911]; R. Niebuhr, *The Nature and Destiny of Man*, 2 vols. [1943], 2:244 – 86; W. N. Pittenger, *The Christian Understanding of Human Nature* [1964], 126 – 78.)

III. Sociology and biblical studies. Since the publication of the first edition of this encyclopedia, biblical scholarship has been strongly affected by sociological (and anthropological) approaches to the study of the ancient world. Such a perspective has never been totally absent (cf. W. Robertson Smith, *Lectures on the Religion of the Semites*, rev. ed. [1907]; L. Wallis, *A Sociological Study of the Bible* [1912]; S. J. Case, *The Social Origins of Christianity* [1923]; W. C. Graham, *The Prophets and Israel's Culture* [1934]; E. A. Judge, *The Social Pattern of Christian Groups in the First Century* [1960]), but the last several decades have seen a much more vigorous and focused attempt to use social-scientific methods. Because of the wide diversity of assumptions and theoretical models employed, the value of this approach must be assessed with caution. There is no doubt, however, that sociological exegesis has a significant contribution to make (see the surveys and evaluations in *ABD*, 6:76 – 99).

When applied to the OT, this approach pays special attention to such questions as the origins of the nation of Israel (was it a seminomadic society? was it related to a kind of "peasant revolt"?), the development from a tribal confederacy to a monarchy, the social nature of biblical laws, the social setting of Israelite prophetic and wisdom literature, and the shift from prophecy to apocalypticism. (See J. W. Rogerson, *Anthropology and the Old Testament* [1978]; R. R. Wilson, *Prophecy and Society in Ancient Israel* [1980]; R. R. Wilson, ed., *Sociological Approaches to the Old Testament* [1984]; N. K. Gottwald, *The Hebrew Bible: A Socio-Literary Introduction* [1985]; R. E. Clements, ed., *The World of Ancient Israel: Sociological, Anthropological, and Political Perspectives* [1989]; V. H. Matthews and D. C. Benjamin, *Social World of Ancient Israel, 1250 – 587 BCE* [1993]; C. E. Carter and C. L. Meyers, eds., *Community, Identity, and Ideology: Social Science Approaches to the Hebrew Bible* [1996]; J. D. Pleins, *The Social Visions of the Hebrew Bible: A Theological Introduction* [2001]; P. F. Esler, ed., *Ancient Israel: The Old Testament in Its Social Context* [2006].)

In NT scholarship, various works have appeared that are best described as contributions to the *social history* of early Christianity. Others have sought to make specific use of social-scientific criticism. Also relevant are publications that use cultural anthropology to illuminate society in the 1st cent. (See M. Hengel, *Property and Riches in the Early Church: Aspects of a Social History of Early Christianity* [1974]; G. Theissen, *Sociology of Early Palestinian Christianity* [1978]; A. Malherbe, *Social Aspects of Early Christianity*, 2nd ed. [1983]; B. Holm-berg, *Sociology and the New Testament: An Appraisal* [1990]; J. H. Elliott, *What Is Social-Scientific Criticism?* [1993]; R. A. Horsley, *Sociology and the Jesus Movement*, 2nd ed. [1994]; R. L. Rohrbaugh, ed., *The Social Sciences and New Testament Interpretation* [1996]; B. J. Malina, *The New Testament World: Insights from Cultural Anthropology*, 3rd ed. [2001]; A. J. Blasi et al., eds., *Handbook of Early Christianity: Social Science Approaches* [2002]; W. A. Meeks, *The First Urban Christians: The Social World of the Apostle Paul*, 2nd ed. [2003].)

socket. The base into which the pintle of a DOOR was set to act as a pivot for swinging. Many inscribed door sockets have been found in excavations in MESOPOTAMIA. The socket in Solomon's TEMPLE was a recess cut in the stone sill (1 Ki. 7:50; Heb. *pōt H7327*, but see *HALOT*, 3:983). The KJV and NJPS use "socket" also to render Hebrew *ʾeden H149*, which refers to the base supporting the posts of the TABERNACLE curtains and walls (Exod. 26:19 et al.), some of silver, others of bronze, formed to mortise or tenon the elements supported.

Soco, Socoh soh′koh (שׂוֹכוֹ *H8459* [1 Chr. 4:18; 2 Chr. 11:7; 28:18] and שׂוֹכֹה *H8458* [Josh. 15:35, 48; שׂכֹה in 1 Sam. 17:1; 1 Ki. 4:10], probably "thorny [place]"). KJV Socoh (Josh. 15:35, 48), Sochoh (1 Ki. 4:10), Socho (1 Chr. 4:18), Shochoh (1 Sam. 17:1), Shoco (2 Chr. 11:7; 28:18); TNIV Soko, Sokoh. (1) A town in the SHEPHELAH of JUDAH, listed between ADULLAM and AZEKAH (Josh. 15:35). It was here that the PHILISTINES assembled prior to the confrontation between DAVID and GOLIATH (1 Sam. 17:1). Soco was one of the cities that REHOBOAM repossessed and fortified after the revolt of the northern tribes (2 Chr. 11:7; however, this passage may refer to #2 below). It was retaken by the Philistines in the reign of AHAZ (2 Chr. 28:18). The town is identified with modern Khirbet ʿAbbad, some 17 mi. WSW of JERUSALEM and 7 mi. SSE of Azekah (it is thought that the biblical name is preserved in nearby Khirbet Shuweikeh).

The foreground mound of ancient Soco in the Shephelah.

(2) A town in the southern hill country of Judah, listed between DANNAH and JATTIR (Josh. 15:48; perhaps mentioned in 2 Chr. 11:7, but see #1 above). This site is identified with another Khirbet Shuweikeh, E of modern Dahariyeh and about 10 mi. SW of HEBRON.

(3) A city in the SHARON Plain that was under the administration of Ben-Hesed in the time of Solomon (1 Ki. 4:10). This Socoh is probably no. 67 in the topographical list of THUTMOSE III and no. 38 in the list of SHISHAK. It has been identified with modern Khirbet Shuweiket er-Ras (a little N of modern Tul-Karem), some 11 mi. NW of SAMARIA and about the same distance from the Mediterranean coast.

(4) In 1 Chr. 4:18 it is difficult to know whether Soco is the name of a person or place. It occurs in a genealogy of the descendants of Judah, yet some of the other names listed are place names (cf. Josh. 15:48 – 58). Either the person took his name from the town (possibly #2 above), or "the sons of various clans are mentioned along with the names of their respective settlements in such a way that a clansman becomes the father of the place occupied" (Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 246). In this case HEBER was the founder or settler (not literally the "father") of Soco.

soda. See LYE.

Sodi soh'd*i* (סוֹדִי *H6052,* possibly "[God is] my confidant"). Father of GADDIEL, from the tribe of ZEBULUN; the latter was one of the ten spies sent by MOSES into the Promised Land (Num. 13:10).

Sodom sod'uhm (סְדֹם *H6042,* meaning uncertain; Σόδομα *G5047).* One of the CITIES OF THE PLAIN destroyed by God because of their sin.

I. The biblical record. Sodom is first mentioned in the Table of NATIONS: "the borders of Canaan reached from Sidon toward Gerar as far as Gaza, and then toward Sodom, Gomorrah, Admah and Zeboiim, as far as Lasha" (Gen. 10:19). The next occurrence is in connection with the strife that arose between the herdsmen of LOT and those of his uncle ABRAHAM. To avoid further problems, Abraham offered Lot the choice of the land. Standing on the spine of Palestine at BETHEL, Lot looked eastward and, seeing that the JORDAN Valley was well watered, chose that part of the country (13:8 – 11).

The following chapter of Genesis records the battle of the "four kings against five" (Gen. 14:9). The record seems to indicate that the five cities of the plain, or valley, were vassals to KEDORLAOMER, the king of ELAM. After twelve years of such servitude they rebelled and hence invited the wrath of the suzerain (vv. 1 – 4). Apparently not merely these five cities but all the holdings in S Palestine were in rebellion, since the coalition from MESOPOTAMIA subdued other peoples to the S and W of the DEAD SA before they joined forces in the Valley of SIDDIM against the kings of Sodom, GOMORRAH, ADMAH, ZEBOIIM, and Bela (see ZOAR). An interesting bit of information is inserted about the terrain on which the battle took place: "Now the Valley of Siddim was full of tar pits" (v. 10). The four eastern kings were successful, plundering Sodom and Gomorrah. "They also carried off Abram's nephew Lot and his possessions, since he was living in Sodom" (v. 12). Abraham with his men chased Kedorlaomer all the way to DAN (PLACE) and rescued Lot (vv. 14-16). The king of Sodom wanted to reward Abraham, but the patriarch refused everything except what his men had eaten (vv. 21-24).

The incidents that have given infamy to Sodom and Gomorrah are recorded in Gen. 18 – 19. In the course of the discussions between Abraham and his three heavenly visitors, the Lord mentioned the outcry against Sodom and Gomorrah (18:20 – 21). After some investigation Sodom was deemed worthy of destruction. Then ensued the dialogue between Abraham and God as to the number of righteous people in Sodom and how many should warrant its being spared (18:22 – 33). Since fewer than ten righteous persons could be counted, two angels went to Sodom to visit and warn Lot of the impending destruction. Lot was hospitable enough, but the men of the city wanted to "know" the visitors, evidently in a perverted sexual way (19:1 – 5; this passage has given rise to the English words SODOMITE, SODOMY).

The angelic visitors solemnly warned Lot to flee with his family (Gen. 19:12 – 15). Lot was reluctant to flee all the way to the hills, and asked for and was granted permission to escape to the nearby city of Zoar (vv. 17-22). With no time to spare, Lot fled with his wife and three daughters. "Then the LORD rained down burning sulfur on Sodom and Gomorrah—from the LORD out of the heavens. Thus he overthrew those cities and the entire plain, including all those living in the cities— and also the vegetation in the land. But Lot's wife looked back, and she became a pillar of salt" (vv. 24-26).

Sodom is never mentioned again in the Bible as a living city, but the memory of its sin and consequent destruction was kept alive by Moses, the prophets, Jesus, and the authors of the NT. Sodom and Gomorrah have become bywords and tokens of God's wrath on sin (e.g., Isa. 1:10; Ezek. 16:46; Zeph. 2:9; Matt. 11:23-24; Rev. 11:8 et al.).

II. Location. The most probable location of the five cities of the plain, including Sodom, is beneath the waters of the S end of the Dead Sea. South of the Lisan *(tongue)* peninsula the waters are very shallow, with an average depth of 10 ft. It is possible that at one time the S part was not only dry, but also fertile and occupied. The "tar pits" of Gen. 14:10 may be where the water was beginning to seep into that area. There is a mountain range about 5 mi. long W of the S end of the Dead Sea made up largely of crystalline salt. It is called Jebel Usdum (Mount Sodom); many free-standing pinnacles are there and one is appropriately named "Lot's wife." (There is a modern town called Sodom founded in 1953 on the W bank of the Dead Sea just N of Jebel Usdum.)

Another reason for believing that these cities now lie buried under the sea is the presence of a religious shrine at Bab edh-Dhra͑. This site is 5 mi. SE of the Lisan and is thought to have served worshipers from the valley cities. Its pottery evidence ranges from 2300 to 1900 B.C., which fits well with the date of Abraham. The strongest argument against this location is the use of the phrase "plain of the Jordan" (Gen. 13:10 – 12), which elsewhere refers to the broad plain just N of the Dead Sea (cf. 1 Ki. 7:46), but the term *kikkār H3971* may well designate the whole rift in which are the Jordan and the Dead Sea.

sodomite, sodomy. Historically, the English term *sodomy* (derived from the story of SODOM and GOMORRAH in Gen. 18 – 19) has referred to any kind of nonprocreative sexual act, although it is usually applied specifically to homosexuality. The KJV uses the term *sodomite* to translate Hebrew *qādāš H7728* ("set apart [for the use of the deity]"; Deut. 23:17; 1 Ki. 14:24; 15:12; 22:46; 2 Ki. 23:7), which evidently refers to a male shrine PROSTITUTE. In the NT the NRSV uses the same word to translate Greek *arsenokoitēs G780* (1 Cor. 6:9; 1 Tim. 1:10), probably meaning "pederast," a man who assumes the dominant role in homosexual activity.

solemn assembly. This phrase is used by the KJV and other versions to render the Hebrew term *ʿăṣārâ H6809* (NIV simply "assembly"). It refers to the gathering and sanctifying of the community of Israel for a solemn occasion (in one passage it is used simply in a nonreligious sense, Jer 9:2). The term is used in a technical sense as the eighth day of the Feast of Booths (Lev. 23:36; Num. 29:35; Neh. 8:18; see FEASTS) and the seventh day of PASSOVER (Deut. 16:8). In both instances the people were instructed to do no work for they were in a state of ritual holiness. At the dedication of the TEMPLE, SOLOMON proclaimed a solemn assembly on the eighth day, "for they had celebrated the dedication of the altar for seven days and the festival for seven days more" (2 Chr. 7:9). For quite a different purpose, JEHU ordered the people, "Sanctify a solemn assembly for Baal" (2 Ki. 10:20 NRSV). He was then able to complete his purge of BAAL worshipers from the land of Israel through the massacre of those who gathered in that assembly.

In contrast to the feast days mentioned above, the solemn assembly also was convened for special days of fasting, as when a locust plague threatened the land (Joel 1:14; 2:15). Amos and Isaiah disparaged these solemn assemblies (among other things) as that which God could not endure (Isa. 1:13; Amos 5:21) because the people did not do justice in the land.

W. B. COKER

Solomon sol'uh-muhn (שְׁלֹמֹה *H8976*, prob. "peaceable" [but according to some, "replacement"; see also *HALOT,* 4:1540]; Σολομών *G5048*). Son of DAVID and third king of Israel (c. 970 – 930 B.C.). Shortly after his birth, the boy received the additional name JEDIDIAH, "beloved of Yahweh," from NATHAN the prophet, who had himself received the name from God (2 Sam. 12:24 – 25). In another passage, the name Solomon (which apparently derives from *šalôm H8934,* "peace") is connected with God's promise that he would "grant Israel peace and quiet during his [Solomon's] reign" (1 Chr. 22:9; for the view that the name derives from the verb *šālēm H8966* [piel, "to recompense, restore"]

and that BATHSHEBA regarded Solomon as compensation for the loss of her first child, see P. K. McCarter, Jr., *II Samuel,* AB 9 [1984], 303). It is probable that either Jedidiah or Solomon was a throne name.

I. Family. Solomon was the tenth son of King David and the second son of Bathsheba (her first child had died, 2 Sam. 12:15 – 19). Six of Solomon's half-brothers—Amnon, Kileab, Absalom, Adonijah, Shephatiah, and Ithream—had been born in HEBRON, each of a different mother (3:2 – 5).

Whereas SAUL and David were born from the common people and grew up among them in village and countryside, Solomon was born in the palace at JERUSALEM and grew up among men of power. He had seen the heights of royal glory and the chaos of rebellion. He was well educated and never knew poverty or hunger. But he did know the consequences of intrigue, jealousy, and murderous hate. Before he grew to maturity several of his older half-brothers had met violent deaths and one half-sister had been raped.

II. The world situation at the end of David's death. Solomon never knew other than a unified Hebrew nation that was strong in a chaotic world. True, the rule of David had been shaken several times by internal rebellion, but it was still one nation at the end of David's life. David's personal strength and genius contributed greatly to Israel's unity, but just as important was the weakness of the other nations in the ANE.

EGYPT had suffered a serious international setback at the beginning of the 12th cent. from which she did not recover for two centuries. During this time, Egypt was unable to prevent, militarily, the rise of the kingdoms of Saul and David, or the extensive activities of Solomon. Yet she remained a formidable commercial power and was not above political maneuvers which could embarrass her neighbors. At the same time, the HITTITE empire of Anatolia (modern Turkey) was also eliminated by the same people, the displaced Phrygians and Philistines, who had moved E from W Anatolia, S Greece, Crete, and Cyprus. The same forces had severely crippled a newly rising power, ASSYRIA, with headquarters on the TIGRIS River. Assyria's eclipse continued for 300 years. BABYLON was equally impotent.

Solomon reigned over a vital portion of real estate, Palestine, which has been called the land bridge of the ANE. His country was strategically located for maximum political power and for tight control over trade routes that crisscrossed his realm. Solomon had troublesome neighbors, but no true rivals. It was a golden opportunity for Israel to make an optimum impact on her world; it was her "Golden Age."

III. Solomon's accession to the throne.

Solomon was not the obvious heir apparent to the throne, for he was far from being David's oldest son. It is true that the firstborn, AMNON, and the third son, ABSALOM, had been eliminated by violence, and it is possible that the second son, KILEAB, died young; but there were others who, theoretically, could qualify as David's successor. In fact, the right of succession by age had not been formally established in Israel as yet, and David was slow to make Solomon known as the next king.

The kingdom of Solomon.

According to 1 Chr. 22:7 – 10 (which evidently alludes to Nathan's message, recorded in ch. 17 and in 2 Sam. 7, i.e., before Solomon's birth), the Lord had revealed to David that Solomon would be the next to rule Israel. Moreover, David had sworn to Bathsheba that Solomon would succeed him (1 Ki. 1:13, 17). Then, toward the end of his reign, David assembled the Israelite leaders and informed them that Solomon was picked as the next king (1 Chr. 28:5; 29:1). Apparently, David did not personally move to make Solomon's future position formally legitimate because both he and Saul had been elevated to kingship by manifest acts of God. Surely, the same would happen in the case of Solomon—yet God did not so act.

A serious crisis developed. ADONIJAH (David's fourth son) was older than Solomon, so he could claim some rights to the throne. Accustomed to having his own way, and an easy prey to the intrigues of important men, Adonijah decided to force the issue by engineering a coup. Adonijah had powerful backing for his bid to claim the throne. JOAB, the general of the regular army, had always been a powerful leader and had control over strong forces to support Adonijah. ABIATHAR, a leading priest and, for long, David's close adviser, provided the appearance of religious blessing. There were other powerful public figures who were behind Adonijah; hence, clever strategy demanded a surprise takeover under the guise of a normal religious festival at a sacred spring, EN ROGEL (a short distance below Jerusalem in the KIDRON Valley). Emphasis was placed on the Judean faction in the government (1 Ki. 1:5 – 10).

Remains of the northern palace at Megiddo, dated by some to the period of Solomon.

Word got out that the religious festival had an underlying political purpose. Nathan the prophet, a long-time personal confidant of the king, rushed to Bathsheba with the news. Together, they devised a means to rouse the dying king enough to obtain permission to launch a quick counter-move (1 Ki. 1:11 – 27). The plan succeeded. The king revived sufficiently to give orders that ZADOK, the other high-ranking priest at the GIBEON tabernacle (1 Chr. 16:39), anoint Solomon at the nearby GIHON SPRING. BENAIAH, the trusted commander of David's personal bodyguard, was to protect the procedures. All went as ordered. A trumpet blast signaled the climactic moment and the crowds lifted the cry, "Long live King Solomon!" (1 Ki. 1:34).

The move caught the backers of Adonijah by surprise. They understood immediately the ramifications of the event. The kind of game in which they were engaged was played for keeps, and the losers seldom survived. With Solomon, reprisal moved more slowly. Adonijah sought asylum at the horns of the high altar and was granted his life, provided he behaved himself. But Adonijah could not refrain from subtly maneuvering for power. With a show of innocence, he sought ABISHAG, the most recent member of David's harem, as a wife. He made his request through Bathsheba, assuming that Solomon could not refuse to grant the wishes of his own mother. Adonijah claimed that he had the right to be king and had the support of the people but God had worked against him. Surely, he should at least have one of the HAREM girls as his own (1 Ki. 2:13 – 17).

Bathsheba apparently did not comprehend the thrust of this clever ploy, so she innocently passed on the request to Solomon, who caught the implications of the tactic immediately. In the ANE, those who had possession of any part of a king's harem had a basis to make claims against the throne, especially if the king died. Solomon reacted drastically, too drastically no doubt, for he immediately ordered Adonijah's death (1 Ki. 2:24 – 25).

Solomon was anointed king at the Gihon Spring.

Abiathar was not killed; he was deposed from his high position in the priesthood and confined to his family's ancestral village, ANATHOTH (1 Ki. 2:26 – 27). JOAB was not so fortunate. He had been deeply involved in David's reign and loyal to him, but he had committed two bloody murders—of ABNER and of AMASA (v. 5)—in such a way that they appeared to be loyal acts. Hence, David could not punish Joab without losing army support. Yet, David knew they were vile murders and Joab must be punished, so he admonished Solomon to carry out the delayed justice (v. 6). Joab was now fatally vulnerable. He was openly in the wrong; he had lost public and army support. He fled to cling to the horns of the high altar, but to no avail. He was executed and his body sent home for burial (vv. 22 – 35). SHIMEI, who had reviled David, soon met a similar fate (vv. 36 – 46).

Solomon no longer had opposition from any high-ranking officer in David's government. He was free to reorganize the kingdom according to his own design. Humanly speaking, there were no power checks to his rule except the attitude of his people, the laws of God as summed up in an admonition given by David (1 Ki. 2:2 – 4), and Solomon's personal encounters with God.

IV. Solomon's spiritual life as a young king.

A significant spiritual experience occurred in Solomon's life while he was worshiping at Gibeon, an ancient HIGH PLACE where the Mosaic tabernacle and the bronze altar still stood a few miles NW of Jerusalem (2 Chr. 1:2 – 5). God appeared to Solomon by means of a dream, the structure of which was a dialogue between God and Solomon (1 Ki. 3:5 – 15).

The initial approach was made by God, with a simple request that Solomon ask what he wanted from God, for Solomon had been worshiping God by means of sacrifices. A wide range of

possibilities lay before Solomon, but he made a single request based on what God had done for David and on his own sense of inadequacy. In spite of Solomon's quick and decisive treatment of his rivals, his initial diplomatic success with Egypt (1 Ki. 3:1), and popular response to his religious assemblies, he felt inferior to his task. In the presence of God, the young king saw his need clearly and confessed it. His request was for wisdom from God so he could rule his people properly and justly.

God's response was positive and generous. He granted Solomon wisdom but added to it other gifts: wealth and fame. There was a condition, however. Solomon must live according to God's commands, even as had David. Solomon's gratitude was expressed in a public religious service before the ARK OF THE COVENANT in Jerusalem. He began his reign with the blessing of God upon him, motivated by personal commitment to God.

V. Solomon's administrative organization.

Probably much of Solomon's organization had its roots in David's government, and back of that was an Egyptian model, but Solomon placed the stamp of genius upon its final form. There were two major aspects or divisions to his government: the princes or chief officials (1 Ki. 4:2 – 6; Heb. *śar H8569*) and the twelve provincial officers or district governors (vv. 7 – 19; Heb. *nāṣab H5893*).

The princes were headed by AZARIAH the priest, who was probably the king's closest adviser. Whereas David had one scribe, Solomon appointed two brothers, ELIHOREPH and AHIJAH (their father's name, Shisha, suggests Egyptian extraction; see SHAVSHA). These seemed to be in charge of private and foreign correspondence. JEHOSHAPHAT was in charge of national records and annals, and probably also the public relations aspects of court life. BENAIAH was promoted to Joab's position as commander of the standing army. Both ZADOK and ABIATHAR are listed as priests, but the latter had been retired from service due to his complicity with Adonijah's attempted coup. Another Azariah, Solomon's nephew, had responsibility over the administrative offices, and ZABUD, another nephew, was a close adviser to the king. AHISHAR was the prime minister of the court, having charge of immediate palace affairs and offices. ADONIRAM, apparently the Adoram of David's cabinet (2 Sam. 20:24) and later in REHOBOAM's group of officers (1 Ki. 12:18), was in charge of the labor force.

Twelve officers (1 Ki. 4:7 – 19) were royally appointed governors of artificially established provinces that largely ignored the old boundary lines of the tribes. They were primarily tax collectors and were responsible for supplying the court with a specified amount of food, each having one month of the year (vv. 7, 22 – 23). Each had soldiers and chariots under his control and seemed to provide men for labor or for the general army when needed. They had charge of building projects in their districts and constructed roads. Two of the officers, BEN-ABINADAB and AHI-MAAZ, who had the provinces farthest to the N, were sons-in-law to Solomon. Only N Israelite territories are involved in this list, which suggests that Solomon was accepting the animosity between these areas and Judah and that the latter was administered separately (according to the LXX of v. 19, there was "one officer in the land of Judah"). If N Israel had to bear the main burden of taxation, it is not difficult to see how the tension between the N and S came to the explosion point at the end of Solomon's reign.

Some detail is given of the administration of the corvée (forced labor) gangs: 70,000 men were assigned as burden-bearers and 80,000 as stonecutters, all of whom were non-Israelites (1 Ki. 5:13 – 18; 2 Chr. 2:2, 17 – 18). The strain of the building projects seemed to have become so severe, however, that the king was forced to draft also 30,000 Israelites into the labor gangs. Later, JEROBOAM was to gain fame and power by protesting this violation of the freedom of the Israelites.

It has been assumed by some that the military organization set up by David was continued by

Solomon with but few changes and additions. There were, first, a regular standing army with a main core of seasoned professionals and a body of mercenaries who served as the king's bodyguard. Joab had been the leader of the former, but, after his death, Benaiah, head of the mercenaries, became commander of both. Second, a militia was drawn from all the tribes for a minimum of one month's service each year (1 Chr. 27:1 – 15). Under Solomon these seemed to be under the twelve provincial governors (1 Ki. 4:7).

There were some chariots, horses, and mules in David's army, and these were greatly expanded under Solomon (1 Ki. 4:26; 10:26; 2 Chr. 9:25). The chariots and horses were mainly quartered in three major fortresses: HAZOR, MEGIDDO, and GEZER. For several decades it was assumed that the stables discovered at Megiddo belonged to Solomon, but subsequent work ties them to AHAB a century later, as are the extant stables at Hazor. Solomon, however, did have stables in the three cities, which served as strategic defensive points.

VI. Solomon's building operations. During Solomon's reign Israel experienced a sudden spurt of improvement in standard of living and in economic activity. The king was extravagant and spared no pains to turn his humble capital into a magnificent city. His first big project was one already started under his father, the construction of the TEMPLE.

Solomon determined that only the best was good enough for God's house. Already much material had been gathered, but the final size, style, and ornamentation was left largely to Solomon, who in turn procured the artisans of TYRE to insure high-quality work. Basic woods such as CEDAR and CYPRESS were purchased from Tyre, floated to a port on the coast, and hauled to Jerusalem. The fact that craftsmen from Tyre worked on the temple has led some to believe that the temple possessed many architectural features common to ancient PHOENICIA; all that remains to aid our knowledge of the temple, however, is limited largely to the detailed description of it in the Bible (1 Ki. 6:2 – 36; 7:13 – 50; 2 Chr. 3:1—4:22; cf. Ezek. 40:5 – 16).

The temple was modeled primarily after the Mosaic TABERNACLE, though its measurements were almost doubled. It was begun in Solomon's fourth year and was completed after seven years. It was located on the traditional Mount MORIAH, a rocky crest in the threshing floor of Ornan the Jebusite (2 Chr. 3:1; see ARAUNAH). The temple faced E and was surrounded by a spacious courtyard. Most of its brass work was cast at SUCCOTH, just E of the Jordan River, by a craftsman from Tyre named HIRAM. Lavish amounts of gold and silver decorated the interior. The temple was not for the people to worship in, but was a sanctuary for God. Some would call it a "royal chapel."

While the temple was being erected, Solomon built an elaborate palace, comprised of the Palace of the Forest of Lebanon, a colonnade (NRSV, "Hall of Pillars"), and "the throne hall, the Hall of Justice" (1 Ki. 7:1 – 12). Each was magnificent and costly. The king's private dwelling and that of his queen were part of another court in the rear (v. 8). Other major projects were the MILLO, perhaps a fortification built on an earth fill, and the wall surrounding the new buildings in Jerusalem itself. Three major fortress cities were built at Hazor, Megiddo, and Gezer, several of lesser importance elsewhere, plus a number of store-cities and cavalry forts (9:15 – 19).

Two prominent aspects of Solomon's buildings were the casemate wall and the six-chambered gates with two towers. The casemate wall had been developed several hundred years before Solomon's time and had been perfected by the HITTITE empire. It was made up of two parallel walls joined regularly by cross walls. The resulting rooms could be filled with rubble or earth. Sometimes they were reserved for storage. All cities in which archaeologists have found remains of Solomon's fortresses had this type of wall. For several decades, it was thought that Megiddo was different, but

in 1960 a casemate wall found there was related to Solomon's time. Though discontinued as an outer wall, this type remained popular for inner citadels or isolated forts for many years.

Excellent examples of the Solomonic gate have been identified at Megiddo and at Hazor. Since Gezer is also mentioned in connection with these cities, it was suspected that one also existed there. When R. A. S. Macalister dug at Gezer at the beginning of the 20th cent. (see his book, *The Excavations at Gezer* [1912]), he did not recognize such a gate, but Yadin reexamined the documents and found one drawn on one map though dated much later than Solomon's reign. Subsequent work at Gezer has laid bare this gate much more clearly (see Y. Yadin in *IEJ* 8 [1958]: 80 – 86).

In Ezek. 40:5 – 16 the prophet gives a series of measurements of six gates in the temple compound. The description matches very well the actual size and shape of the three gates at Megiddo, Hazor, and Gezer, proving that Ezekiel was recording information about Solomonic gates that he would have known as a young boy in Jerusalem. The temple gates were completely destroyed by the Babylonians in 586 B.C. and never employed afterward as a pattern. This kind of gate was a hallmark of Solomon's major building projects.

VII. The extent of Solomon's empire. Solomon inherited from David a territory that touched the banks of the EUPHRATES to the N and the Brook of Egypt to the SW (see EGYPT, BROOK (WADI) OF). The Mediterranean Sea served as the western border, the Arabian desert the eastern border, and the southern anchor was the tip of the Gulf of AQABAH.

Direct control of some of this land soon slipped from Solomon's hands. A young Edomite, HADAD, had escaped to Egypt from David's conquest of EDOM, but now returned to wrest this country from Solomon (1 Ki. 11:14 – 22). Likewise to the N, REZON was able to make DAMASCUS his capital and a center of strong opposition to Israel (11:23 – 25).

The fact that Egypt was able to capture Gezer and then give it as a dowry with a daughter of the PHARAOH strongly suggests that Egypt had taken control of PHILISTIA. Since this area is not mentioned among the twelve districts, it is possible that Egypt had gained supremacy in the SW corner of Palestine. Still, what Solomon lacked in military occupation he made up by forging a series of treaties and dominating the economic traffic of the Levant.

VIII. Solomon's international relationships.
One of Solomon's first treaties was with Egypt. It was not altogether to his advantage, for he was required to take an Egyptian princess as a queen and to lose control of Philistia. The gain of Gezer was hardly full compensation, but future trade relations with Egypt proved valuable.

A treaty of special worth was forged with HIRAM of Tyre, who had been a close friend of David. Hiram was ruler of an extensive maritime domain, possessed rich natural resources, and had highly skilled artisans. Solomon drew heavily on all three for his building operations and his own shipping enterprise (1 Ki. 5:1 – 12; 9:10 – 14). In course of time, Solomon released to Hiram twenty cities in GALILEE, some think to pay a deficit in what Solomon had purchased, though others think that it was for a loan (2 Chr. 8:1 – 2 seems to say that Solomon got the cities back again). In addition, the biblical text (1 Ki. 10:24 – 25=2 Chr. 9:23 – 24) points to a network of treaties with countries of all sizes, and many of his wives seem to have been sureties for these treaties. One of these wives, an Ammonite, was the mother of Rehoboam, the next king (1 Ki. 14:21).

Trade considerations were closely tied to the political alliances that were forged. The king of Israel held a pivotal position because he controlled the main route along the sea and the main route E of Jordan, both of which connected the nations of the S with the nations to the N. Solomon was not

only able to tax goods that passed along these routes; he was also able to act profitably as a middle man in the trade deals. Solomon particularly loved horse trading and set up an arrangement in which he procured chariots and horses from Egypt and KUE (in CILICIA) and sold them to other nations. Egypt had to get wood for the chariots from areas which Solomon controlled, so he had a virtual stranglehold on the industry (1 Ki. 10:28 – 29).

Solomon's relationship with Hiram of Tyre was not limited to buying lumber and skills for building projects; Solomon was able to exploit Hiram's maritime knowledge for his own advantage. SHIPS and sailors were obtained for a fleet that operated out of EZION GEBER (on the Gulf of AQABAH). This fleet made trade contacts with ARABIA and the eastern coast of Africa, bringing many strange and exotic goods and animals to Israel. Closely related to the shipping port was a mining and refinery project that exploited the rich copper deposits near Ezion Geber. Remains of the mining operations have been found there by archaeologists. The COPPER and BRONZE produced had ready buyers in other parts of the world. It would seem that Hiram's Mediterranean fleet could distribute widely these metals (1 Ki. 9:26, 28; 10:11 – 12, 22).

The celebrated visit of the QUEEN OF SHEBA was as much a trade mission as a trip motivated by a strong curiosity about the reputed wisest man in the world. Her elaborate gifts could serve as "samples" of what her country could offer to aggressive traders (1 Ki. 10:1 – 10, 13; 2 Chr. 9:1 – 9, 12). Thus the combination of fairly peaceful relations with other nations, dominance of the "land bridge" of the ANE, and the effective control of the major land trade routes poured wealth into Israel at a spectacular rate. Gold, silver, and cedar were no longer rarities in Jerusalem. But Solomon's extravagance strained the income to the limit; a fiscal deficit was not unknown even in the "Golden Age."

IX. Solomon's religious activities. After God's initial appearance by means of a dream to Solomon, the king plunged immediately into the task of constructing the temple. The dedication of this building was a high occasion in Solomon's life and in the life of the nation. The ceremony was elaborate and impressive. Everyone of any importance in Israel came to Jerusalem. The ark of the covenant was transferred from David's tabernacle to the temple by the priests and the Levites in an impressive procession. The time was the Feast of Tabernacles, soon after the autumnal equinox (2 Chr. 8:13).

While numerous sacrifices were being offered, the ark was placed in the Holy of Holies of the new sanctuary. God placed his blessing on the scene by symbolizing his presence by means of a cloud. The king himself gave public recognition to the divine presence and personally pronounced a blessing upon the assembled congregation. Solomon testified that he understood several important truths about the one true God. He is the Creator, who cannot be seen, but who would and did condescend to dwell among his people. God had also acted in the past by giving promises and fulfilling them by delivering the Israelites from Egypt, and by giving them David as king. To David he had granted a promise of a royal lineage which was fulfilled in Solomon. The house of God was for the ark, the symbol of divine presence and deliverance.

Solomon then offered a remarkable prayer in which a clear monotheistic doctrine is dominant. God was not limited to the temple nor to the world itself. God's name was to be honored at the temple by means of worship and through the temple and the priests. God was to make his will known to his people, answering their prayers. God was to judge, but also to forgive his people, granting both spiritual and material blessings. Even the stranger and the exile were to have the same privilege of petition before God. Indeed, 1 Ki. 8:42 suggests that one reason for building the temple was to attract other people to pray to the one true God. After the prayer of dedication, Solomon participated with

his leaders in an eight-day feast. On the last day he sent a joyful nation home. An event had occurred which was to linger long in national memory.

At the end of Solomon's building program, the Lord appeared to him again. God expressed his acceptance of the temple and the king's act of dedication. But a clear-cut condition was laid before the king that obedience to the laws of God was essential to fulfillment of the divine promise to David about the continuity of the throne. To be disobedient would mean God's abandonment of the temple, and the people to destruction and to captivity.

According to 2 Chr. 8:14 – 15, Solomon also reaffirmed the divisions of the priests in their duties, but oriented now to the temple itself. The pattern set by David was followed for both priests and Levites. Beyond this, little is said about other religious acts of Solomon in relation to the temple.

X. Solomon's cultural achievements. There was a marked acceleration of interest in literature among the Israelites during Solomon's reign. Apart from the Scripture, little remains of the productions of the time; only a small inscription called the Gezer Calendar has been found (see AGRICULTURE V).

The Scripture has left record that Solomon's wisdom issued in an accumulation of oral and written evidence of his skills and insights. The king became regarded as the most erudite scholar of his day, surpassing the great wise men of Edom (1 Ki. 4:29 – 34). Three thousand proverbs and over a thousand songs are credited to him. He was known as a learned lecturer on botany and biology. He easily answered riddles put by the queen of Sheba.

A major portion of the WISDOM Literature in the OT is attributed to Solomon (including Ps. 72 and 127). The book of PROVERBS has three notations that ascribe most of its content to him (Prov. 1:1; 10:1a; 25:1). Many have assumed that Eccl. 1:1, 12 refers to Solomon, though others doubt it (see ECCLESIASTES). The Song of Songs carries a superscription that connects the king with its composition (Cant. 1:1; see SONG OF SOLOMON).

This gate complex at Gezer may have been built by Solomon.

Various scholars have attributed to the time of Solomon the final organization of several of the

historical books, such as Joshua, Judges, Ruth, and the two books of Samuel. Some who reject Mosaic authorship of the Pentateuch have claimed that substantial parts of it were completed in Solomon's reign. These claims cannot be definitely proved. Other brief references to literary works in Solomon's time are "the book of the annals of Solomon" (1 Ki. 11:41), "the records of Nathan the prophet," "the prophecy of Ahijah the Shilonite," and "the visions of Iddo the seer" (2 Chr. 9:29). All of the literary works of Solomon's time are permeated with a consistently strong monotheistic doctrine.

XI. Summary of Solomon's contributions to Israel's national life. Under Solomon, Israel for the first time experienced a relatively consistent period of peace and prosperity. The internal factions in the nation were balanced in a delicate and, for the most part, workable relationship. The recurrent tribal feudings and court-related revolts were a thing of the past. The standard of living in the nation climbed to unprecedented heights, and the availability of luxury items and materials was open to a large portion of at least the urban population. International relationships had their tense moments but no serious crises. For the time being, a network of treaties effectively kept diplomatic and commercial lines open and functioning. No known wars scarred the landscape or played havoc with the affairs of men.

For the first time the nation had a permanent national worship center in the capital city. The presence of the temple was to dominate the religious life and thinking of the Israelites until its destruction in 586 B.C. Even then it did not fade out; the structure was rebuilt and later thoroughly remodeled until again destroyed in A.D. 70. The influence of the priests became more powerful and the festivals became regularized. The presence of the temple enhanced the city of Jerusalem itself so that it became known as the city of God. The teaching function of the priests helped to disseminate the ancient truths revealed by God more widely in Israel. The temple became a powerful unifying force.

Also for the first time in Israel, its leadership had a successful example of passing of power from father to son. The reign of Solomon served to make actual and legitimate the covenant God made to David concerning the continuity of the Davidic family as a ruling power in Israel. The establishment of this principle of succession was to be the prime stable factor in the nation during the span of over three centuries. The length of time that David's dynasty ruled had scarcely a parallel in the history of the ANE during the 10th to the 6th centuries B.C.

Costly though it was, Solomon's building projects gave Israel a sense of national pride and of security that it had never known before. Finally they had constructed something which could stand in the world of the day as both artistic and magnificent. Pomp and ceremony augmented this new sense of nationhood effectively.

Solomon's contributions to Israel's culture were profound, but the greatest of these was in the realm of literature. Art in the form of sculpture and painting did not come within the scope of Israel's skills, but the art of human expression through the oral and written word was a different matter.

In comparison with other ANE languages, the Hebrew tongue was a newcomer. Its literary history was limited, but Solomon and those whom he influenced forged the HEBREW LANGUAGE into a highly honed tool of communication. In a very real way, Hebrew became one of the important languages of the world for the propagation of both divine truth and the deepest human insights prompted by that truth. Songs, witticisms, and riddles had been known in Israel before, but wisdom of the quality that Solomon brought forth was without parallel, even in the pagan literature of the day. Solomon had sparked a concern to put the truth of God and humanity into the medium of the written word that never died out in Israel.

XII. Summary of Solomon's shortcomings in administration. Solomon's reign was not without blemish, great though he was. His wisdom was profound, but it possessed serious flaws. Solomon's powers to judge were impressive; he could tell which of two women was the true mother of a baby (1 Ki. 3:16 – 28). He was unable to see, however, that due process of law is a needed check to arbitrary power. His executions of Joab, Adonijah, and Shimei could be outwardly justified, especially to that generation. Solomon showed that he was capable of decisive action. But these men needed their day in court even though they were guilty, for others later may not be manifestly in the wrong. Solomon had too much power over the lives of his subjects.

The administrative structure of Solomon's government lacked adequate checks and balances to guard against abuses of centralized power. The officials, both in Jerusalem and in the provinces, were so strong that it was exceedingly difficult for the voice of the people to be heard. It was too easy to whitewash mistakes and to smother dissent. The ease with which Jeroboam was forced out of the country is a case in point (1 Ki. 11:26 – 40).

Too much regimentation of the populace not only destroyed individual freedom but begat rank discrimination. Israel's minority group, composed of Canaanites, was reduced to a form of slavery, condemned to the labor gangs, but the Israelites were virtually untouched, except in emergency. This provided fertile soil for discontent and future revolt.

There were no proper checks on government spending, no review of taxation policies, of trade policies, or of foreign affairs policies by an independent branch of the government. It is little wonder that in each of these areas matters got out of control. Solomon had great skill in maintaining delicately balanced agreements among the tribes and among the surrounding nations, but could not, at least did not, cope seriously with the tensions necessitating the "balances of power." Hence, when he died, chaos broke out on every hand. During his reign the tendency was toward monopoly with no firm economic base in the country, no strong merchant class, and no real international bonds forged.

The religious branch was too firmly under the control of the government. True, Solomon had priests who were close advisers, but they had no truly independent voice. Too easily they could become a tool of the throne to control the people. Significantly, the prophet, so important a person in David's life, was practically nonexistent, as far as we know, in Solomon's time. The king had been urged by his father and by God to obey the commandments of God, but human voices to remind him of this charge were largely silent.

Solomon's government had no real sense of mission to the world. The king allowed foreign gods to be worshiped in and near Jerusalem, but made no apparent effort to spread Hebrew culture and religious viewpoints to the other nations. They could come to Jerusalem and be converted, but nothing is heard of Israelites going to them with a message of "One True God" who is the Creator, Judge, and Savior of all mankind.

The nation's financial resources were strictly limited to secular pursuits or to the rich ornamentation of the temple. Neither the king nor his subjects had any compulsion to use this wealth to uplift the common people in Israel, or in foreign lands, spiritually. The nation was broad-minded. They could tolerate polygamy and idolatry in the royal household; they could also tolerate poverty, with ignorance, in society both at home and abroad. Solomon and his nation had both the opportunity and the resources to spread the message of the living God throughout the ANE but let the golden moment slip through their fingers.

XIII. Summary of Solomon's personal life.

The young king began his reign with everything going for him. He was talented, well-trained, knowledgeable, and blessed by a fresh experience with God, who had granted him more than his heart desired. Solomon's major endeavor, the construction of the temple, was spiritually oriented. Its dedication was a high hour in his life. The words that he spoke on that occasion reveal spiritual understanding of great depth and breadth. God's second appearance to Solomon indicates that he maintained some keenness of spiritual life, but it was also a reminder that his obligations under the law of God still were binding on him.

The Scripture is quite clear that in his latter years Solomon began to move away from the strong ardor of his younger years. The reason is said to be centered in his oversized harem. Solomon had accumulated a total of 700 wives and 300 concubines (1 Ki. 11:3), many through political alliances. This procedure was in accord with the common customs of the day, but it was in conflict with the law of God, as noted in 11:2. The presence of the harem highlighted a general pagan view that the king was the prime sire of the nation and had an obligation to contribute as many children as possible. Implicitly, Solomon accepted this concept, with the result that wives and concubines played too dominant a role in his life and more and more blurred his perspective.

More significantly, he allowed many of these women to worship their pagan gods, in fact built pagan temples for them. Ironically, Solomon was not diligent in giving witness to the reality of his own God, but his pagan wives were evangelistic in their zeal and turned his heart from the true God (1 Ki. 11:4, 6). So serious was this breach of loyalty that God appeared to him the third time and rebuked him, saying that in his son's day the kingdom would be torn apart (vv. 9 – 13). The pagan shrines remained a snare to Israel until destroyed by Josiah (2 Ki. 23:13 – 14). Solomon's sin remained an example of evil in the days of EZRA's reforms (Neh. 13:26), and the place where they were erected has continued to be called the Mount of Offense even to this day. See CORRUPTION, HILL (MOUNT) OF.

Granted that Ecclesiastes is the work of Solomon, it could be concluded that Solomon passed through periods of disillusionment, frustration, and despair, but that he was able to come through with a basic faith in the one true God. At least, it is true that all works of literature attributed to him contain a monotheistic stress that is unmistakable. However, his life served more as a spiritual warning to the Israelites in succeeding generations than as a witness of spiritual integrity comparable to that of his father.

Solomon, Song of. See SONG OF SOLOMON.

Solomon, Testament of. A legendary tale dealing primarily with the interaction between SOLOMON and various demons. The tale is related in the first person, and twice Solomon refers to it as a "testament" written to warn others (Sect. 15.14 and at the very end, 26.8), but otherwise the work is unlike the TESTAMENTS OF THE TWELVE PATRIARCHS and other literature in this genre. It appears to have been composed in Greek by a Christian, possibly toward the end of the 2nd cent. or somewhat later. The *Testament of Solomon* has been preserved in sixteen Greek MSS, one of them an early fragment. (Critical ed. by C. C. McGown, *The Testament of Solomon* [1922]; English trans. with full introduction in *OTP*, 1:935.)

Solomon, Wisdom of. See WISDOM OF SOLOMON.

Solomon's Colonnade (Porch). What the KJV calls "Solomon's porch" (NRSV, "the portico of Solomon"; Gk. *stoa G5119*) was a roofed colonnade in the temple built by HEROD the Great. It bordered on the E side of the outer court of the temple, resting on a massive Herodian retaining wall (still largely visible as the lower courses of the present temple-area wall) built out over the KIDRON Valley. It may have been so named because of a tradition that SOLOMON had once constructed a similar E wall and cloister (Jos. *War* 5.5.1; cf. *Ant.* 8.3.9). It was here that Christ walked and talked during the Feast of Dedication (Jn. 10:23); here also his disciples seem later regularly to have gathered (Acts 5:12; cf. 3:11). See TEMPLE, JERUSALEM VII.C.7.

<div align="right">J. B. PAYNE</div>

Solomon's servants. A class of state SLAVES in Israel instituted by King SOLOMON. Of course, all subordinates of a king might be considered his servants. For example, the feast Solomon gave for all his "servants" (1 Ki. 3:15) certainly included his officials, if not exclusively so (these officials are named in 4:1 – 19). But the specific Hebrew phrase translated "Solomon's servants" (ʿabdê šĕlōmōh, 1 Ki. 9:27; 2 Chr. 8:18; 9:10; Ezra 2:55, 58; Neh. 7:57, 50; 11:3) does not refer generally to all those who served Solomon in any capacity. Rather, it is a technical term designating a slave class.

State slaves were common in the ANE. Prisoners of war were made servants for big commercial or industrial enterprises carried out by the king. Not until the time of DAVID was Israel strong enough to have any state slaves. David began on a restricted scale with the Ammonites (2 Sam. 12:31). But the extensive building projects of Solomon called for state slavery on a vast scale. It was thus Solomon who reduced the native Canaanites to slavery (1 Ki. 9:20 – 21), and the new class of slaves was appropriately called ʿabdê šĕlōmōh (1 Ki. 9:27; 2 Chr. 8:18; 9:10; in these three passages, however, the NIV and other versions render "Solomon's men" or the like).

The class of state slaves continued throughout the monarchy, though varying in number and economic importance. The descendants of Solomon's servants after the EXILE are noted as having been merged with the NETHINIM or temple servants (Ezra 2:55 – 58; Neh. 7:57 – 60; 11:3; 1 Esd.

5:33 – 35). It is doubtful that at this time these two groups were regarded as slaves in the strict sense of the term. (See R. de Vaux, *Ancient Israel* [1965], 1:88 – 90, 141 – 42; I. Mendelsohn, *Slavery in the Ancient Near East* [1949], 92 – 106; A. F. Rainey in *IEJ* [1970]: 191 – 202; H. G. M. Williamson, *Ezra-Nehemiah*, WBC 16 [1985], 35 – 36.)

Song of Solomon. One of the poetical books of the OT and the first of the five MEGILLOTH ("scrolls") that were read at Jewish FEASTS. It is generally known as the "Song of Songs" from the superlative form used in the title (*šir haššîrîm*), which denotes the best or most excellent of songs. In Jewish religious tradition the Song was read at the feast of the PASSOVER. In the VULGATE the work was entitled *Canticum canticorum*, hence the alternative English title of *Canticles*.

13. Theology

I. Background. Those who accept the traditional attribution of the book to King SOLOMON have seen the early monarchy as the background against which the work was composed. The pastoral qualities of the poetic imagery suggest a lengthy interlude of peace in the land during which the sedentary ideals of the Israelites were being realized, and this situation would accord with the "golden age" of DAVID and Solomon very well. The Song contains numerous references to animals and exotic plants, and in view of the tradition that associated botanical lore with Solomon it has been thought that if the work is a genuine Solomonic product it would again point to the early monarchy as the period from which it emerged.

The various geographical allusions in the book seem to indicate a phase of Hebrew history in which the kingdom had not yet been divided. Canticles speaks of such northern locations as LEBANON (Cant. 3:9; 4:8, 11, 15), HERMON (4:8), TIRZAH (6:4), DAMASCUS (7:4), and Mount Carmel (7:5; see CARMEL, MOUNT), as though, with JERUSALEM, they formed one united kingdom. This, however, need mean nothing more than that the poetic flights of the author transcended purely localized considerations. In any event, the book shows clearly that the author was familiar with the geography

of the whole Syro-Palestine area from the mountains of Lebanon to EN GEDI near the DEAD SEA (1:14). Although Canticles mentions some exotic commodities of the Far East, there is no internal evidence which would indicate that the material was written against any other than a strictly Palestinian background.

II. Authorship. Most modern scholars have rejected the Solomonic authorship of the book and instead have seen in Canticles a collection of songs celebrating premarital and marital love. These have generally been understood to have arisen against a pastoral background, with at least some of the lyrics being intended for use at Hebrew wedding ceremonies. It has been stated that the only evidence which can be cited as a specific indication of Solomonic authorship of the work is the title (or editorial introduction, as some scholars have described it, on the grounds that the relative pronoun *ʾăšer H889* is used only here; elsewhere *ša- H8611*, Cant. 1:6 – 7 et al.). In addition, the particle *lĕ-H4200* in the expression *lišmōlōh* (usually translated "Solomon's," indicating direct authorship by Solomon) is ambiguous and could also mean "to," "for," "concerning," or "after the fashion of."

The name of the celebrated Hebrew monarch appears six times in the text (Cant. 1:5; 3:7, 9, 11; 8:11, 12), of which the first and the last two actually comprise figurative allusions to the immense wealth of the king. In the third chapter Solomon is mentioned on three occasions in connection with an elaborate procession, where the reference is evidently to the historical personage of Solomon. The allusions to "the king" are also generally associated with Solomon (1:4, 12; 7:5). Although the great Hebrew king is the central figure in certain of the poems (notably 3:6 – 11), he is never actually represented as the speaker, and because of this certain scholars have assumed that at least some of the poems were written about him, rather than by him.

Despite this objection, there is nothing in the title of the book that would preclude the immediate circle of the Solomonic court as the place of origin of the various poetic elements. Since a great many of the Hebrew proverbs were formulated at this period under such auspices, there is no reason why certain exotic poems should not have issued from the same source at much the same time.

Arguments in favor of a non-Solomonic authorship have also entertained a comparatively late date for the book on linguistic grounds. For example, there are forty-nine terms in the work that do not occur elsewhere, some of these being botanical in nature. There are numerous words and phrases that are akin to the kind of ARAMAIC used in certain postexilic compositions, along with what appear to be loanwords from Persian and Greek sources. In answer to these objections it must be noted that the vocabulary of the book is naturally governed by the peculiar nature of the subject matter to a large extent. The fact that no other OT book is so full of technical terms for spices, plants, and shrubs will in itself require that at least some of the species would be referred to under the designation employed in the countries of their origin. The spice known in the orient as CINNAMON (Cant. 4:14) has simply been transliterated into Hebrew *(qinnāmôn H7872,* possibly from a Malayan word), and this practice has also been adopted in English.

Trade between N India and Mesopotamia was well-established in the 3rd millennium B.C., so that by the time of Solomon there was a long tradition of commercial contacts with the Far East. Some of the exotic substances mentioned in Canticles have obvious Sanskrit parallels, as with "nard" (Cant. 1:12; 4:13, 14; Heb. *nērd H5948,* from Sanskrit *naladu;* see SPIKENARD). Even the term *ʾappiryôn H712,* "carriage, litter" (3:9), supposedly a loanword from Greek *phoreion,* probably did not enter Palestine from the AEGEAN but was instead derived directly from Sanskrit *paryanka* (cf. *English palanquin,* from Malayan via Portuguese).

As far as the Aramaic forms in Canticles are concerned, their presence can throw no light at all

upon questions of authorship. Aramaisms appear in numerous OT compositions, some of which are clearly of an early date, and this is hardly surprising in view of the fact that Aramaic is now known to have flourished in Assyria and elsewhere from at least the beginning of the 2nd millennium B.C. Already in the Tell el-Amarna period (15th to 14th centuries B.C.) the language was familiar to the Canaanites, and Aramaic elements have been demonstrated in various Ugaritic compositions. There appears to be nothing in the linguistic peculiarities of Canticles that would demand a late rather than an early date. Certainly there are no valid reasons for assigning the work to the Greek period (c. 300 B.C.), if only because of the prolonged history of cultural exchanges between the Aegean and the other nations of the ANE. Consequently there would seem to be little valid reason for objecting to the traditional attribution of authorship to Solomon or to someone associated in some way with him.

Terra-cotta cuneiform tablet inscribed with a Sumerian sacred marriage rite. From Nippur, 1st dynasty of Isin (c. 1974 – 1954 B.C.).

III. Date. Those critics who have assigned one or two of the poems in Canticles to Solomon have accordingly placed certain sections of the book within his reign (c. 970 – 930 B.C.). As far as the other sections are concerned, some have been assigned to a N Israelite origin prior to the fall of Samaria in 722, while others are thought to have originated in the 5th cent. As has been shown above, there is no single demonstrable element in Canticles which demands a date after the Solomonic period. The mention of Tirzah (Cant. 6:4) as though it was the northern counterpart of Jerusalem might point to the comparatively early date of composition of that portion of Canticles. Prior to the reign of Omri (c. 885 – 874), Tirzah had been the chief city of the northern kingdom, but when he came to the throne of Israel he established Samaria as his capital city, constructed numerous

buildings in addition to erecting a splendid royal palace, and fortified the site strongly. If Tirzah was being suggested as the chief northern city (6:4) to match Jerusalem in the S, the poetic section concerned could well have dated from the 10th cent.

In general it can be said that the cultural background of the material as a whole points to a prolonged interval of sedentary life in the kingdom, and the ethos of Canticles is much more in accord with the conditions which obtained during the early monarchy than with the rigors of exilic or postexilic life. The presence of Aramaisms in the composition, as already suggested, has no bearing at all upon its date, and it may well be that the particular expressions were the result of nothing more than the influence of regional dialects. Unless it can be shown conclusively that the work could not have emanated from the period of Solomon, it seems best to assign the compilation of Canticles to the 10th cent. B.C.

IV. Unity. The extant work seems to have formed, or to have been based upon, a collection of rustic love poems of somewhat uncertain provenance. Although this is the most probable explanation of the general origin of Canticles, the book bears recognizable indications of a unity of style and general theme. The repetitions in the work would seem to point to the activities of a single compiler, since they serve to bring about a more marked sense of unity of theme than might be expected from an anthology of lyrics issuing from diverse authors over a fairly lengthy period of time. In view of what appears to be a genuine overall unity of emphasis, namely that of the richness of human love in its variant modes, it would seem that the attempts of those scholars who have fragmentized the book into something like thirty poems are hardly consonant with the emphasis and character of the finished product.

V. Place of origin. If the work is to be assigned to the general period of Solomon, as those who support the traditional view have maintained, the book was probably compiled in Jerusalem at the royal court. The prowess of Solomon as a lyricist is made plain in 1 Ki. 4:32, and as has been noted earlier, there are no particular elements which preclude a date in the early kingdom period for the composition of Canticles.

However, those writers who have rejected the Solomonic authorship of the book have thought that at least some of the poems may have arisen in the northern kingdom. This view has been maintained partly because the presence of Aramaisms in Canticles was thought to favor a N Israelite or Syrian place of origin, and also because Tirzah was mentioned in an apparently parallel position to Jerusalem (Cant. 6:4). If Tirzah was being suggested seriously in the poem as the northern equivalent of Jerusalem, it might indicate that the passage had been written at a time when Tirzah was the chief city in the N, and may even have comprised the place of origin of that section of Canticles. If the book is to be regarded as a unity it might then appear that Solomon pursued his bride into the northern part of his kingdom, a situation which, while unlikely, is by no means impossible. If those scholars who maintain that Canticles is an anthology of poetry independent of Solomonic authorship are correct, the passage in question could well have originated in or near Samaria.

Speculation of this kind concerning the place of origin of the various elements of Canticles is hazardous at the best, if only because there is absolutely no discernible provincialism in the book as a whole. Even if Canticles was compiled as an anthology of love lyrics that originated in widely separated areas of the kingdom, the manner in which they have been arranged makes it virtually impossible for them to be assigned to particular locales. If Canticles was composed at a given point in the Solomonic era, it is still possible for certain familiar poems to have been included as part of

the larger work without, however, giving any significant hint as to where they originated. On any basis of compilation, therefore, the place of origin presents certain difficulties, though these are considerably less for those who support the traditional authorship than for those who postulate a non-Solomonic origin.

VI. Destination. Any estimate concerning the situation or persons for whom Canticles was written will depend largely on the way in which the material is to be interpreted. In overall terms the work does not seem to have been meant for any people other than the Israelites. If the poems were the work of Solomon they would certainly have been intended for a local audience, and the same would be true if the lyrics originated in connection with Israelite wedding ceremonies. If the poems are compositions that simply extol human love in its various facets, it seems unlikely that they were intended for use outside Israel.

In later Arabic times erotic poems known as *wasfs* were recited in the presence of the bride and groom just before the wedding ceremonies, and it has been supposed that at least some portions of Canticles fulfilled this function in Israel. While a local destination may have been intended in the composition of Canticles, the fact remains that many of the poems in the book do not lend themselves readily to recitation at wedding ceremonies. Although some might correspond to the type of *wasfs* used by the modern Arabs during the period of courtship, it is unwise to rely too heavily upon late Arabic practices as a means of arriving at conclusions concerning the literary genre or destination of the book.

VII. Occasion. Precisely what stimulated the composition of Canticles is unknown. If it is merely an anthology of love lyrics of general Solomonic provenance, it could well have arisen in connection with one or more of that monarch's numerous marriages. If the book represented a less purposeful collection of nuptial songs current in various parts of the kingdom, the occasion need only comprise the stimulus experienced by an unknown editor to preserve such love lyrics for posterity. The general unity of the theme and form which Canticles exhibits makes it appear probable that some specific occasion underlay the compilation of the work. Estimates as to the nature of this will naturally vary with the date assigned to the extant book, while those scholars who deny the basic unity of authorship of Canticles will be compelled increasingly to look for separate occasions for which the component parts might have been compiled. The very subjectivity of such a process will inevitably leave much to be desired in the conclusions.

VIII. Purpose. Many expositors have found some difficulty in justifying the inclusion of Canticles in the corpus of Hebrew Scripture, partly because of its general eroticism. However, the book could be described as an extended PROVERB (Heb. *māšāl H5442*) which illustrates the richness and beauty of human love, and as such it stands firmly within the gnomic tradition of the Hebrew WISDOM Literature. Although some of the language and imagery may be unacceptable to Western tastes, it must be remembered that the material originated in the Orient, where very different attitudes frequently obtain.

The theme of the book is firmly rooted in the beauties of nature, from which it passes into a symbolic representation of the object of desire. The traditions of love to which appeal is made are those of the upper classes, who alone would be able to afford the exotic, expensive substances mentioned in the poems. The outlook of author and reader alike was not inhibited by an attitude toward sexual relationships which regarded them as at best embarrassing, and at worst thoroughly

evil; thus there was no difficulty in describing the various aspects of human love in a way that would meet with a sympathetic understanding. The book steers a course between sexual perversion or excess, on the one hand, and a rigid, ascetic denial of normal bodily and emotional needs on the other. It also provides an object lesson in close personal relationships that is needed in the Western world by showing that spirituality is not inconsistent with spontaneity and a lack of self-consciousness during moments of greatest physical intimacy. Not merely does the Song of Solomon speak of the purity that can characterize human love, but by its very inclusion in the Hebrew Scriptures reminds one of a love which is purer than our own (so E. J. Young, *An Introduction to the Old Testament*, rev. ed. [1964], 337).

Considered the oldest love poem, this Sumerian inscription dates to c. 2030 B.C.

IX. Canonicity. From rabbinic sources it is evident that Canticles did not gain either an immediate or a ready acceptance into the Hebrew CANON of Scripture. The TALMUD (*b. Baba Bathra* 15a) went so far as to assign its composition to HEZEKIAH and his company of scribes, an opinion that may have been based on the activities of this group in connection with the editing of other apparently Solomonic material (cf. Prov. 25:1). The MISHNAH (*m. Yadayim* 3:5) indicates that the Song was accepted into the canon only after some dispute at or about the time of the supposed consultation at Jamnia (c. A.D. 95; but see JABNEEL #2). Following an affirmative verdict in the matter by Rabbi Judah and a negative vote by Rabbi Jose, the assembled scholars heard Rabbi AKIBA deliver his famous dictum: "In the whole world there is nothing to equal the day in which the Song of Songs was given to Israel: all the Writings are holy, but the Song of Songs is the holy of holies."

The fact that such a strongly worded statement should have been necessary at all indicates that in the days of Akiba there were some doubts about the origin and propriety of the book. Without question, the opposition to its inclusion in the Hebrew canon was prompted by the erotic nature of the contents. In the end this objection seems to have been outweighed by the traditions that associated its composition with Solomon, as well as by the allegorical interpretations current in both Christian and Jewish circles, which tended to elevate the poems above a purely erotic and physical level.

In order to preserve a modicum of propriety with respect to Canticles, Rabbi Akiba is also said to have pronounced a curse on those who sang portions of the Song of Solomon at banquets or similar festive occasions: "He who trills his voice in the chanting of the Song of Songs in the banquet halls, and treats it as a secular song, has no share in the world to come" (*t. Sanh.* 12:10). This prohibition may well have been directed at the bawdy or lewd allusions which might be expected to result from those singers who had been drinking copiously. Certainly the best means of protecting the canonical status of the Song would be to assign to the work an esoteric religious meaning, and this doubtless gave impetus to the allegorizing of Canticles in rabbinic circles.

X. Text. Although there are occasions on which the Hebrew text is obscure, this factor seems due more to the presence of an unusual number of rare words (e.g., *rāhît H8112*, Cant. 1:17; *talpiyyôt H9444*, 4:4) and other linguistic problems (e.g., the trans. of 6:12) than to transmissional errors. Since both the SEPTUAGINT and the Syriac Peshitta follow the MT fairly closely, they also are of limited help in clarifying the more difficult parts of the Hebrew. The complicated imagery of the book is an added obstacle to conjectural emendation.

XI. Content and outline. It is far from easy to present an analysis of Canticles in the conventional manner because of the closely interwoven nature of the speeches. These latter can be seen either as dialogue (e.g., Cant. 1:9 – 11) or soliloquy (e.g., 2:8—3:5), and tend to move from one participant in the conversation to another with a readiness which frequently defies precise identification. The "daughters of Jerusalem" are mentioned during the discourses (1:5; 2:7; 3:5 et al.) and have been credited with certain responses in the dialogue (1:8; 5:9; 6:1 et al.). A similar situation obtains for the inhabitants of Shulem (8:5) and Jerusalem (3:6 – 11). In broad terms the content of the Song of Solomon can be outlined as follows:

A. The bride expresses her longing for the bridegroom and sings his praises (1:1—2:7).

B. As their affection for one another deepens, the bride heaps further praise on her beloved, using exquisite figures from nature (2:8—3:5).

C. This passage contains the praises of King Solomon, the praise of the bride, and the espousal (3:6—5:1).

D. The bridegroom is absent for a time, during which the bride longs for his return and continues to praise him (5:2—6:9).

E. A series of descriptive passages narrate the beauty of the bride (6:10—8:4).

F. A concluding section deals with the durability of true love (8:5 – 14).

XII. Interpretation. It can be safely said that few if any OT books have experienced as wide a variety of INTERPRETATION as the Song of Solomon. Since there is no specifically religious theme in evidence in the book, and almost nothing in the sequence of the narratives that could be recognized as a plot, the erotic lyrics that comprise the book have provided almost limitless grounds for scholarly speculation as to their intrinsic meaning and significance. Aside from a straightforward erotic

interpretation, five other approaches have been entertained in ancient and modern scholarship in differing ways and with significant degrees of variation. These are the allegorical, cultic, dramatic, lyrical, and typical.

(1) The *allegorical* approach (see ALLEGORY) was adopted by both the rabbis and the church fathers as a means of solving the problems associated with the acceptance of a group of love lyrics into the canon of Scripture, and is still favored by certain Roman Catholic and orthodox Jewish commentators. The MISHNAH and the TALMUD reflected this method of interpretation, while the TARGUM of Canticles thought of the work as demonstrating the graciousness of God to Israel in the mighty acts evident in her history. God is therefore the great lover of the poems and Israel is the recipient of his mercies. At the hands of Christian interpreters the allegory was modified so that the bride was the Christian church, a perspective already present in certain NT passages (e.g., Jn. 3:29; Eph. 5:22 – 23; Rev. 18:23; 22:17). This approach seems to have been first suggested by Hippolytus of Rome, but the classical allegorical form was developed by ORIGEN. He was followed by JEROME and many others; his interpretation was reflected in the chapter headings that were incorporated into the KJV. Most Christian expositors, however, avoided the problems associated with explaining Canticles in terms of a history of the church, although J. Cocceius saw in the book a history of Christendom culminating in the Reformation.

As a variation of the allegorical approach, some patristic writers thought of Canticles in terms of the relationship between God and the individual soul. This approach began with Origen and was adopted by some other fathers and certain medieval writers. Ambrose and a few Roman Catholic commentators identified the bride with the Virgin Mary, while Martin Luther held that the maiden was nothing more than the Solomonic kingdom personified. Some interpreters have entertained a multiplicity of identities for the same bridal figure, representing her by turns as Israel, the Christian church, the Virgin Mary, and the individual believer. Unfortunately, as with all allegorical interpretations, the very subjectivity of the method tends to be self-defeating.

This situation has led to widely divergent interpretations of the same passage, a result that hardly inspires confidence in the particular form of interpretation. The reference to the beloved (Cant. 1:13) was seen by Rashi and Ibn Ezra as an allusion to the presence of God which rested on the sacred ARK OF THE COVENANT between the cherubim, while Cyril of Alexandria understood it to point to Christ and the two Testaments of Scripture. Bernard of Clairvaux, who preached eighty-six sermons on the first two chapters of Canticles alone, held that it indicated the crucifixion of Christ, which sustains the believer in times both of joy and sorrow. Quite aside from individual variations of interpretation, an important objection to the allegorical method, based on other OT writings, is that when the male-female relationship is described allegorically, there is always a clear indication of the method being employed (cf. Ezek. 16; 23; Hos. 1 – 3). In Canticles, however, there is not the slightest hint that allegory is being utilized anywhere in the lyrics. Be that as it may, the allegorical approach to Canticles was dominant in Protestant thought until recent times.

(2) The *cultic* interpretation has been favored by some scholars in the light of those ANE liturgies that commemorated the death and resurrection of a god. According to this view, the lover of Canticles was the dying and rising god, while the beloved was either his sister or his mother, who lamented his decease and went about searching frantically for his remains. Such mythical pairs familiar to the Israelites were the Canaanite BAAL and ANAT, the Babylonian TAMMUZ and ISHTAR, and the Egyptian Isis and OSIRIS. According to this interpretation the pagan liturgy was accommodated by the Israelites to the spring and autumn festivals as part of the New Year cultic observances. Adherents of this view adduced as external evidence the fact that Canticles was read liturgically at

the Passover festival in the medieval period, and pointed to a reference in the Mishnah (*m. Taʿanit* 4:8) which spoke of the maidens of Jerusalem dancing and singing at a festival in the vineyards on the 15th day of Ab and following the Day of Atonement. Internal evidence for the theory was seen in the male and female figures which dominated the narrative, the vanishing lover and the bride searching in anguish, the exotic imagery, and the references to rare plants and spices, all of which were held to characterize the Tammuz liturgies.

Attractive as this theory may appear, it raises great difficulties in the way of acceptance. Four other canonical compositions, none of which has the slightest claim to a purely cultic origin, were also read at festive occasions. Furthermore, Canticles contains no specifically liturgical terms, and there can be no doubt that had it constituted a modified form of pagan mythology it would never have been admitted into the Hebrew canon. In addition, while there may well have been harvest festivals in Israel, as elsewhere in the ANE, there is absolutely no evidence to support the contention that rituals connected with the death and resurrection of a god were ever a part of such celebrations. It can only be concluded that the cultic approach to the meaning of Canticles places a forced interpretation upon the narratives as a whole.

(3) The *dramatic* understanding of the Song of Solomon arose when interest in the allegorical approach began to decline at the beginning of the 19th cent. In its earliest form, however, it went back to Origen, and it also found expression in the thought of John Milton. As developed from 1800, it assumed two principal forms. One of these, expounded by Franz Delitzsch (KD, *The Song of Songs and Ecclesiastes*, 4 – 5), saw in Canticles two main characters: Solomon and a country maiden described as the SHULAMMITE (Cant. 6:13), about whom Canticles wove a story. In essence, the book narrated the way in which King Solomon found this girl in her rustic surroundings and took her from her village to Jerusalem. There as his wife he learned to love her with a depth of affection that transcended purely physical attraction.

The other form of dramatic interpretation was advanced by G. H. A. Ewald (*Das Hohelied Salomo's* [1826]), who introduced a third principal figure into the narrative. According to Ewald, the story of Canticles revolved around King Solomon, the Shulammite maiden, and the newly designated figure of her lover, a shepherd from the countryside. Ewald suggested that the king, having become enamored of the physical attractions of the Shulammite, carried her off by force to his harem in Jerusalem. When she consistently resisted his advances, however, he reluctantly allowed her to return to the locale of her rustic lover. This theory, which became known as the "shepherd hypothesis," proved quite acceptable in some critical circles, though a few scholars added to the dramatic aspect of the theory by emphasizing the presence of a chorus of maidens somewhat after the fashion of classical Greek plays. The shepherd hypothesis was an advance in certain areas over the suggestions of Delitzsch in that it explained the reason for the lover being depicted as a shepherd (Cant. 1:7 – 8), and also accounted for the termination of the poem in a northern setting rather than in Jerusalem.

However, there are certain features of the view which might be extremely difficult to sustain for various reasons. In the first instance, the shepherd hypothesis introduces into the narrative a central figure for whose existence there is no real textual evidence at all. Furthermore, it assumes without warrant that the maiden resisted the advances of her lover, whereas in point of fact the narratives make it clear that she was possessed of a very different frame of mind. Again, whereas the views of Delitz-sch propounded the joys of conjugal union as illustrated in the heroic King Solomon, those of Ewald depicted something closely approaching attempted seduction by the king. In this way Solomon became the villain of the drama, not the hero, an attitude that is foreign to other OT traditions concerning the renowned king. In addition, any dramatic interpretation of Canticles has to face the

great difficulty raised by the scarcity of evidence for dramatic literature among the Semites, and not the least in Israel.

Another admission of the weakness of the evidence adduced in support of the dramatic interpretation is that some of those who held to this view thought that Canticles was more a dramatic reading than a "staged" production. It ought to be observed that for scholars to assume that the maiden mentioned in the poems can be identified with ABISHAG the Shunammite is entirely gratuitous. Again, the association of the "daughters of Jerusalem" with either the harem of Solomon or with some sort of professional chorus is purely conjectural. The fact is that the allegedly dramatic nature of the song is so little in evidence that it is impossible to delineate any concurring development of the plot. While it is true that the intensely personal speeches of Canticles fall into the two broad categories of dialogue and soliloquy, they defy analysis into such forms as scenes, acts, mimes, and the like, which are of the essence of a dramatic work.

(4) The fourth principal approach to the understanding of Canticles, the *lyrical*, was one which tended to take the narratives at something like face value and assign the simplest form of interpretation to them. Accordingly, those who hold to this view recognize in Canticles the presence of a collection of love lyrics or songs that had no necessary connection either with wedding festivities or other specific occasions. Nor were they to be regarded either as celebrating in terms of the male-female relationship the higher values of divine love, or as having emerged from a pagan cultic background in which the death and resurrection of some deity was being commemorated. Some adherents of this school of thought have associated the love poems in a rather general manner with the Solomonic tradition (cf. Cant. 3:6 – 11), but at the same time have denied unity of authorship to them, thinking of them principally as an anthology of native Israelite material issuing from diverse periods of history.

The description of Syrian marriage customs by J. G. Wetzstein in 1873 prompted K. Budde to advance a special form of the lyrical interpretation in 1893. His view understood Canticles as a collection of nuptial songs similar to those used in the seven-day marriage feast in which the bride and groom are crowned as king and queen, and at which the *wasfs* were offered also. Aside from the hazards involved in employing modern Syrian customs to illustrate ancient Palestinian practices, this view is weak, for the Shulammite is nowhere designated in Canticles as "queen." There would hardly be sufficient material in the extant composition for a week-long celebration, and there are certain other elements of modern Syrian practice that are lacking in the Song, such as the war chants honoring the prowess of the bridegroom. The chief virtue of the general lyrical interpretation is that it avoids the difficulties inherent in the allegorical, cultic, and dramatic understanding of Canticles.

(5) There is another approach to the interpretation of the Song of Songs that is closely related to the allegorical method and that has been favored by certain conservative scholars. This is known as the *typical* interpretation (see TYPOLOGY), and possesses the undoubted advantage of preserving the obvious sense of the poems while at the same time discerning a more elevated and spiritual meaning in contrast to the purely sensuous or erotic. The typical method manages to avoid the excesses that have so often arisen in the more detailed examples of interpretation as provided by the allegorical school; and in stressing the themes of love and devotion that are so evident in Canticles, it expounds the story in terms of the relationship of love existing between Christ and his faithful followers. This approach has been justified on the ground that many of the Arabic love poems have esoteric meanings, and also by an appeal to the biblical analogies of human marriage (Hos. 1 – 3; Ezek. 16:6 – 14; Eph. 5:22 – 33 et al.). The use Christ made of the narrative of JONAH (Matt. 12:40), as well as the reference to the serpent in the wilderness (Jn. 3:14), has also been adduced as compatible with this

general method of interpretation.

The content of Canticles reveals an attitude toward nature that is seldom in evidence elsewhere in the OT. The normal estimate the Hebrews had of nature was that it comprised a contingent form of creation which revealed the splendor and majesty of God. Its essential forces were firmly under his control and could thus be employed to do his bidding, whether for good or ill. Although certain aspects of divine function were occasionally reflected in descriptions of the incidence of natural phenomena, these latter were always seen as subsidiary entities which in one way or another testified to the power and glory of God, the supreme Creator. For the Hebrews, therefore, nature was never entertained as being an end in itself, but invariably as the manifestation of a superior creative Power who alone demanded human reverence and obedience.

In Canticles, however, there is a distinct and uncharacteristic delight in nature for its own sake, an attitude that is projected with great skill by means of highly aesthetic imagery. The most obvious parallels to this situation can be found in Egyptian writings, where there are many frank appraisals of the beauties of nature and forceful descriptions of the appeal which oriental aromatic spices made to the senses. Furthermore, in comparable Egyptian sources, the lovers have been styled "my sister" and "my brother" and have also been compared with swift steeds and gazelles (cf. Cant. 1:9; 2:17 et al.). At the same time, the Egyptian parallels contain distinct traces of polytheism, of which there is no evidence at all in Canticles, and are also deficient in the voluptuous physical descriptions that are so conspicuous in the Song.

It would appear from ANE literature in general that the parallel between the cycles of nature and the mood of lovers was as well attested a part of the larger courtship and love experience as it is at the present time, if modern love lyrics can be adduced as evidence. In this event the material of Canticles could well comprise pure folk poetry that enshrined a projection of the human ideals of love into nature itself. While this attitude may be uncharacteristic of the way in which the Hebrews generally regarded the forces of nature, it is still a valid though perhaps intensely personal expression of an age-old constituent part of human nature. The very fact that the beloved one is urged to come into the fields at a time when the vital powers of the earth are once again asserting themselves (Cant. 2:8 – 17; 7:11 – 13) may be a further indication of the not uncommon direction taken by the fancy of the young and virile in the spring.

In the first instance the love poems seem to have been assigned to the genre of Wisdom Literature on the ground that the skills necessary to render them adequately to musical accompaniment called for ḥokmâ H2683 ("wisdom"). This tradition was based on the reputation Solomon gained for his ability to display his wisdom in songs (1 Ki. 4:32), as well as on the activities of native Canaanites such as ETHAN and HEMAN (4:31), who were named as heads of guilds of singers in the temple (1 Chr. 6:33, 44; 15:17 – 19). If these poems actually had some connection with wedding ceremonies, the skill of the performers at the feasts would be comparable to the professional abilities of female mourners who are described in Jer. 9:17 as "skilled women" (NRSV).

Since Canticles was associated with Solomonic authorship from its inception, the relationship between the composition and the epitome of wisdom in Israel seemed to confirm its status as Wisdom Literature still further. But with the rejection of Solomonic authorship, the collection of poems was assigned to other literary genres. Because the material is poetic in nature, it partakes of the general character of other OT poetic compositions (see HEBREW POETRY). These include such typical structural features as synonymous, synthetic, and antithetic forms of parallelism, along with a mixture of rhythmic accentuations or stresses in the lines of poetry. The forceful nature of the imagery which is entertained lends itself particularly well to poetic expression.

XIII. Theology. Canticles stands virtually alone in the Hebrew canon in that it contains no explicit theology. Those who argue for the origin of the material in terms of a number of folk lyrics see this feature as being entirely consistent with the absence of a settled situation in life. The theological position of the composition must therefore be ascertained inferentially, and on such a basis there can be no doubt that Canticles firmly enshrines the Hebrew religious tradition of MONOTHEISM. In this celebration of the joys of human love there are no traces whatever of the magical influences or the polytheistic beliefs that are to be found in parallel material from ancient Egypt. Although Canticles supplies very little actual information about Hebrew MARRIAGE institutions, it seems to be grounded in a basic ethos of monogamy, a situation that has not gone unnoticed by those who have argued against Solomonic authorship.

Although the poetic images are almost completely alien to modern tastes, the composition is never lewd or obscene, even by the standards of Western civilization. In fact, Canticles reflects the traditional canons of sexual morality contained in the Mosaic law, and never countenances anything that could be described on such a basis as immorality. It reflects the traditions of Gen. 2:24, which maintain that in marriage the male and female constitute a psychophysical unity, and its discussion of the whole range of the emotions of lovers is conducted at a high level of sensitivity and morality. The purity and beauty of human love as a divine gift is the dominant theme of the book. By contrast with the Greek lyricists and some modern authors, the work exhibits no self-consciousness regarding the natural relationship between male and female in marriage, and indicates that the richness of human love is a microcosm of the larger LOVE of God.

Song of Songs. See SONG OF SOLOMON.

Song of the Three Young Men (Children). See AZARIAH, PRAYER OF.

Son of God. One of the titles often applied to JESUS CHRIST in the NT. See also CHRISTOLOGY.

I. OT origins of the term. The plural expression SONS OF GOD (Heb. *běnê hā'ĕlōhîm*) is used loosely to describe angelic beings who form a sort of "heavenly court" for Yahweh. See ANGEL. This is a possible explanation of the debated passage in Gen. 6:2 – 4. According to Job 1:6 and 2:1, even SATAN can be included in such a gathering. Job 38:7 seems to be an OT antecedent of the angels' song of Lk. 2:14. The expression "sons of the Most High" (Ps. 82:6, parallel to "gods") may also refer to angels. Such phrases, reflecting the common idiomatic use of "son" (see BEN-), are possibly applied to heavenly beings because they are sharers in the nature of God as spirit.

Whatever the origins of the term, however, it certainly carries no polytheistic associations in the OT. Oscar Cullmann (*The Christology of the New Testament*, 2nd ed. [1963], 272 – 75) and some other modern scholars prefer to see the "father and son" relationship of such beings to God as that of mission and obedience respectively. A better sense would be "sender and sent one," in view of the Hebrew and Greek words for "angel." This has the advantage of explaining other OT instances also. For example, Hos. 1:10 describes the Israelites as "sons of the living God"; perhaps loving obedience, rather than likeness, is the thought.

For the background of NT Christology, the use of the singular noun is more important. God refers to Israel, considered collectively, as "my son" (Hos. 11:1), and Matthew applies this passage directly to Christ (Matt. 2:15). Perhaps "covenant-love" constitutes the filial bond on both sides. Alternation of the plural and the singular (as a collective) is typical of OT theology; although the term is singular, it does not necessarily mean that an individual relationship of sonship has been established. Not until NT times will believers dare to cry, "Abba, Father," in this sense (Mk. 14:36; Rom. 8:15; see ABBA). Psalm 2:7 describes an individual relationship (see BEGOTTEN) that is applied to Christ in Acts 13:33 and Heb. 1:5. This is a royal psalm, and connects sonship of God with Davidic kingship. The Scandinavian school of scholars sees the passage as a relic of non-Israelite

ideas of "divine kingship"; but of this there is no trace in the OT. Cullmann (*Christology*, 273) perhaps correctly thinks the reason is that the king represents Israel, already described as God's "Son."

In any case, this is sonship by ADOPTION and GRACE, as was that of Israel. It may be linked with the messianic nature of the king, for every king in Israel is "the anointed of the LORD" (1 Sam. 24:6); doubly so, those of DAVID's line. Naturally, when the type is fulfilled in Christ (see TYPOLOGY), the meaning goes far beyond that of the psalm to the sonship by nature and generation. (For a further example of "divine sonship," see Ps. 89:26 – 27.) Another preparatory use of the singular is the description of one of the mysterious figures of Dan. 3:25 as *dāmēh lĕbarʾĕlāhîn* ("like a son of the gods"); v. 28 explains this as an "angel" sent by God, and later theology saw it as a Christophany, like other mentions of "the angel of the LORD" in the OT.

Medieval mosaic in the church of Hagia Sophia (Istanbul) depicting Christ, the Son of God, on his throne.

Further than this the OT cannot go without endangering its own foundational doctrine of the unity of God; but, as in the case of SON OF MAN, the linguistic framework has been prepared to receive the NT content.

II. Usage in the Synoptic Gospels

A. Initial references. Mark's gospel opens with the phrase "Jesus Christ the Son of God" (the textual evidence supporting the retention of "the Son of God" is strong, though not conclusive). This is all the more remarkable in view of Mark's limited use of the title (spoken only by demons and the centurion, Mk. 3:11; 5:7; 15:39). The first chapter of Luke records that Jesus was to be called "Son of the Most High" and "Son of God" (Lk. 1:32, 35). In Matt. 1:23 the IMMANUEL prophecy of Isa. 7:14 is cited as having been fulfilled in Jesus, and in Matt. 2:15 the phrase "my son" of Hos. 11:1 is applied directly to Christ.

Thus at the beginning of all three synoptics the divine sonship of Christ is postulated. As far as

explanation goes, both Matthew and Luke attached great importance to the VIRGIN BIRTH. Matthew saw in it a fulfillment of the Immanuel prophecy and a token that in this child God would live among human beings. In Lk. 1:35 Christ's sonship is connected directly with his virgin birth through the power of the Spirit (although the fatherhood of God must not be understood in a crude sense). It cannot be said that the virgin birth is irrelevant to Christ's divine sonship; yet it was not merely because of his birth that Christ was hailed by this title in the early church. The story does not seem to have been widely told in NT days, perhaps because Jews and pagans alike would misunderstand it for totally different reasons. The material below will show what additional grounds the evangelists had for this assertion about Christ.

B. Baptismal declaration. Christ's sonship is reiterated in the account of his baptism (Mk. 1:11 with parallels). The words from heaven, "You are my Son, whom I love; with you I am well pleased," are a combination of Ps. 2:7 (messianic kingship) with Isa. 42:1 (the suffering SERVANT OF THE LORD). The context seems to associate sonship both with the possession of the HOLY SPIRIT and with the power to give the Spirit to others (Mk. 1:8). Some early Jewish-Christian groups misunderstood this event in an adoptionist sense, as though the man Jesus first received the Spirit at his baptism and was thereby transformed into a Son of God. But this is impossible in the light of such a verse as Lk. 1:35; and even Mark, who does not directly mention the virgin birth, accords Jesus the title of "Son of God" long before his baptism.

Nevertheless the connection between sonship and the Spirit is important (cf. Gal. 4:6). The baptism, whatever its other meanings, represents the public acceptance by Jesus of the path of sonship, which will, because it is the path of obedience, lead to suffering as surely as the path of messiahship ("I have a baptism to undergo," Lk. 12:50). It can be no accident that the testimony at the TRANSFIGURATION virtually repeated the wording of that at the baptism (Mk. 9:7). In view of the centrality of this baptismal declaration, it is not surprising that in the early church the baptism of the Christian was also associated with the confession of Jesus as "Lord" or as "Son of God" (Acts 8:37; 1 Cor. 12:3). In spite of some argument to the contrary, it does not seem that any distinction can be drawn between these confessions.

C. The temptation. In the accounts of the TEMPTATION OF CHRIST (Matt. 4:1 – 11; Lk. 4:1 – 13), the incident is directly related to Jesus' consciousness of divine sonship; without that, the temptations would not only lose their force as temptations, but would be meaningless. The temptation was apparently twofold: to doubt his own sonship or to misuse it by a spectacular and selfish display of divine power, which would be to fail to walk the path of obedience. To be a mere wonder-worker would qualify one to be a "son of God" in the pagan sense. Perhaps this partially explains Christ's reluctance to display his miraculous powers openly. Through Jesus' ministry (e.g., Mk. 8:31 – 33), and up to the eve of the crucifixion (Lk. 22:42), the temptation to avoid the Son's path of obedience was still present.

Since the Lord himself evidently told his disciples about the temptation, the concept of sonship must have lain at the heart of his own understanding of his person and ministry. The baptism is the witness of the Father to the Son, but the temptation is the witness of the Son's own self-knowledge.

D. Demonic confession. The testimony of DEMONS was not accepted by Christ (although he never denied its truth) probably because it was involuntary and did not spring from revelation and faith, in the Christian sense. But it was at least supernatural testimony and, as such, had importance. Mark

3:11 – 12 (taken with 1:23 – 25, where "Holy One of God" prob. has much the same meaning as "Son of God") makes plain that this kind of "rejected testimony" was commonplace during Christ's ministry (cf. Acts 19:15 and Jas. 2:19 for later days). That Christ had power to expel demons was never questioned, even by his enemies; the sole question of the scribes concerned the source of his undoubted powers (Mk. 3:22). There is therefore no valid reason for doubting the reality of such demonic testimony. Although rejected by Christ, it is recorded by the evangelists as yet another line of evidence for a truth which they already independently believed on other grounds.

E. Confession by the disciples. After the calming of the storm, the disciples "worshiped" Jesus, saying, "Truly you are the Son of God" (Matt. 14:33). Perhaps this was a momentary or shallow recognition by men awed by such a display of supernatural power; on other similar occasions, there was no such full theological confession (8:27). Whatever the force of their testimony, it is overshadowed by the declaration of PETER at CAESAREA PHILIPPI, which followed shortly afterward (16:16). This latter is not in the context of any miraculous exhibition of power; it may be Matthew's way of showing the inadequacy of the earlier confession. The saying, "You are the Christ, the Son of the living God," is the crisis point in Matthew's gospel. From this point onward Jesus would teach his followers the meaning of sonship, as well as messiahship, in terms of obedience to death (16:21). He accepted without question the title of Son and acknowledged it as proof of divine REVELATION (16:17). This revelation did not extend to the nature of messiahship (16:22), so it can hardly have extended to the nature of sonship. The same combination of sonship and messiahship probably appears in another confession by Peter (Jn. 6:69) and certainly in the high priest's question to Jesus (Mk. 14:61). The root of the combination certainly lies in the OT, where "Son" and "Messiah" are joined in the case of a Davidic king.

F. Christ's self-confession. This element already has been implied by the baptism and the temptation, but it is explicit in the so-called "Johannine thunderbolt" (Matt. 11:25 – 27; Lk. 10:21 – 22). This passage shows clearly that Jesus was conscious of a unique relationship to the Father, defined as sonship, which consisted of intimate knowledge and mediatorship between God and human beings. Such self-confession is also involved in the acceptance of the title on the lips of his followers (Matt. 14:33; 16:16). Similarly, when questioned by the high priest at his trial, Jesus admitted the title at once, although to do so was to court death for blasphemy. To deny would have been impossible, for it would have been to deny his own nature. There are also a few other synoptic passages in which Christ refers to himself, in Johannine style, as "the Son" in contrast to "the Father." Of these Mk. 13:32 is a striking example; no critic could discredit this statement as being fabricated by the church, since it poses the problem of the limitation of Jesus' OMNISCIENCE.

G. The confession of Christ's enemies. Like that of the demons, this is involuntary, in the sense that it does not spring from the perception of faith. Unlike that of the demons, it is not independent supernatural testimony to the truth of Jesus' claims; but it is the strongest possible proof of the existence of such claims. The question asked by the high priest at Christ's trial (Mk. 14:61) and the taunt of the crowd at the cross (Matt. 27:43) bear this out. Unless it were well known that Christ made or at least accepted such claims, both question and taunt would have been meaningless. That neither priest nor people believed the claims does not detract from the value of the evidence. Perhaps the testimony of the centurion at the cross (Mk. 15:39) also comes under this heading. Unless the centurion knew that such claims were made for Christ, the words would hardly have sprung unbidden

to his lips; it is, however, possible that he had merely heard the taunt on the lips of the crowd.

III. Usage in Acts. In the book of Acts there is only one certain occurrence of the title Son of God, in connection with the early ministry of PAUL (Acts 9:20). This is surprising since Acts is a sequel to Luke, a gospel that contains a number of instances. It may be that such a title in evangelistic preaching to Jews would provoke a direct collision, which in early days before the rise of STEPHEN, the church, consciously or unconsciously, sought to avoid. The first generation can hardly have been ignorant of the term if it was in fact used by Christ of himself. Perhaps Cullmann (*Christology*, 303) is right in his view that they remembered the reticence with which Jesus himself used the title (cf. Mark throughout).

It should be noted, however, that the Greek word *pais G4090* in Acts 3:13 and 26 perhaps should be translated "son" and not "servant." If the idea of "son" is inherent in the Servant Songs (as some scholars feel, with reference to "my chosen" in Isa. 42:1), then no such problem arises. Perhaps Acts is deliberately using an ambiguous word; the eye of faith will rightly see it as "Son of God" while the unbeliever will not be offended. The confession of the ETHIOPIAN EUNUCH, "I believe that Jesus Christ is the Son of God" (Acts 8:37), is not in the best MSS and therefore is not, in all probability, part of the original text.

In the second part of the book (Acts 13 – 28, focusing exclusively on Paul's missionary work), it is clear that the Jews fully understood the nature of the claim made by PAUL as meaning full divinity for Jesus. This had been indicated earlier by their plot to kill him (9:23). The apostle shows no anxiety to avoid such a collision; he was always an agitator by reputation (17:6; 21:21; 24:5). How he may have preached in the Damascus and Jerusalem synagogues is shown by his recorded preaching in the synagogue of ANTIOCH OF PISIDIA (13:16 – 41). He associated the divine sonship of Christ not primarily with his birth (as did Matthew and Luke), nor with his baptism (as did Mark), but with his resurrection, quoting the messianic statement in Ps. 2:7 as proof (Acts 13:33).

These three aspects are complementary, not mutually exclusive; and Paul did not understand Christ's resurrection in an "adoptionist" sense, as though the man Jesus became God's Son only when he was raised from the dead. The resurrection has, however, an evidential value, as God's seal to the truth of his Son's claims (cf. Rom. 1:4). The lack of further references to the title in Acts may be because Acts contains no further detailed account of Paul's "Jewish" preaching. The concept would not enter so naturally into evangelistic or apologetic preaching to Gentiles.

IV. Meaning to the pagan world. To the unbelieving Jew, the title Son of God, if it indeed conveyed equality with God, was a blasphemous title; but to the unconverted pagan, it was commonplace and thus not too meaningful. This fact may explain the apparent absence of the term in Paul's Gentile preaching as recorded in Acts, compared with its frequent occurrence in the epistles. In Hellenistic times, the title *theioi andres* ("divine men") was freely applied to various religious teachers and supposed miracle-workers (like the Neo-pythagorean Apollonius of Tyana, for instance). While in the minds of the educated the adjective may have been "faded," to the credulous multitude no doubt it had its full force.

In addition, Greco-Roman mythology was full of stories of heroes and demigods who had been born as a result of intercourse between gods and mortals. These beings were described as "sons of the gods" and were usually credited with miraculous powers. Such stories were utterly offensive to Jewish and Christian thought because of the physical understanding of divine generation, as well as the immoral behavior thereby attributed to the gods. Any borrowing from this source is thus

unthinkable, in spite of the views of Rudolf Bultmann.

Another area of attribution of divinity to men was that of divine kingship. The Hellenistic *diadochoi* (successor kings) who followed ALEXANDER THE GREAT regularly proclaimed themselves as divine, or at least descended from the gods. Alexander himself had been saluted as "son of the god" by the priests of the desert oracle of Amun (see AMON #4) like any pharaoh before him. No doubt this was more for political than religious reasons, although temples and altars were dedicated to such kings. By the time of the NT, temples were rising to "Rome and Augustus"; an emperor was *divus* ("god") and *divi filius* ("god's son"). The concept had lost all true religious meaning to the pagan, but it still outraged Jewish-Christian theology; therefore, the Christian cannot have borrowed his doctrine from paganism. Conversely, the Gentile, accustomed to the faded metaphor, could hardly appreciate all that was meant by the Christian claim.

GNOSTICISM has also been suggested by Bult-mann as a possible source; but Gnosticism was itself a parasitic growth upon Judaism and Christianity. Nevertheless, if the term had in fact already been in use among such speculative heretical sects, this is yet another reason why preachers should be slow to use it in Gentile evangelism. For Christians, when the term has been given its definition and theological content by the person and work of Christ, no such restraint is necessary; this would explain its wide use in John and the epistles. In view of the ambiguities mentioned above, it is hard to be certain of the exact force of the declaration by the centurion at the cross (Mk. 15:39); but certainly the Christian church saw in it a foreshadowing of its own beliefs.

V. Usage in Paul's epistles

A. Early uses. If the letter to the Galatians was written soon after Paul's first missionary journey (but see GALATIANS, EPISTLE TO THE, V and VI), then the earliest use of the title in his letters would be Gal. 2:20, where the apostle summarizes the Christian way as "faith in the Son of God" (cf. Acts 9:20). This is no mere description of Christ's person apart from his work; the Son of God is characterized as one "who loved me and gave himself for me." As always in the NT, sonship is linked with soteriology. Elsewhere Paul defines Christianity as the gospel "regarding his [God's] Son, who as to his earthly life was a descendant of David, and who through the Spirit of holiness was appointed the Son of God in power by his resurrection from the dead" (Rom. 1:3 – 4 TNIV). On these and other grounds, Bultmann would restrict the use of the title "Son" to the risen Christ; but this is to ignore the evidence of the Gospels; it is also to ignore Paul's own argument. Sonship entailed Christ's resurrection, and therefore resurrection by the Spirit's power is a proof of sonship.

The connection in thought between resurrection and sonship is thoroughly Pauline (cf. Acts 13:33), as is the connection between sonship and the Spirit. "Son of God" is stressed in the Romans context, for it is put alongside of "descendant of David," referring to the natural aspects of Christ's birth. It could be argued that Gal. 2:20 and Rom. 1:3 – 4 both spring from a background of controversy, in a Jewish milieu; but 2 Cor. 1:19 is certainly neutral and Gentile. The content of Christian preaching is defined as being "the Son of God." In view of the mention of "God" in the previous verse, the phrase must have its full force. The clue to its meaning for Paul lies in v. 20: "For no matter how many promises God has made, they are 'Yes' in Christ." The "Son of God," then, is a positive fulfillment and expression of all that God has promised and revealed himself to be; this is virtual equality with God.

B. Late uses. Ephesians 4:13 represents later Pauline theology. Spiritual maturity, which is the goal

of all Christian ministry, is described as "knowledge of the Son of God." It is hard to divorce this statement from the "Johannine" idea expressed in Lk. 10:22, that knowledge of the Son is also knowledge of the Father. This in turn means that sonship is defined in terms of oneness with God. Colossians 1:15 – 20 contains the most advanced Christology of the NT; and all is predicated on God's "beloved Son," as v. 13 makes plain. He is not only the preexistent agent of CREATION, but also creation's goal; and sonship is given a new dimension in terms of headship of the new "people of God," the church. His chief claim to sonship is the "image of the invisible God" (v. 15), and "God was pleased to have all his fullness dwell in him" (v. 19).

VI. Johannine evidence

A. Initial statements. The fourth gospel nowhere goes beyond the theology expressed clearly in Matt. 11:25 – 27 and hinted at in numerous other places in the synoptic tradition. That John arranges his material differently, however, and that he brings out the full meaning of latent concepts, no thoughtful reader would deny. Thus John opens his gospel with a strong statement of LOGOS theology; Jesus Christ is the preexistent Word of God, active in creation, and this is firmly linked with his divine sonship (Jn. 1:14 is an explanation of 1:1 – 3). In John, sonship is always seen against this cosmic background, as in Hebrews and in the later Pauline epistles. The task of the Son is to show the Father's glory (1:14) and to make the Father known (1:18); the essence of sonship is the revelation of the Father. The uniqueness of Christ's sonship is brought out by the use of *monogenēs G3666* ("only, unique") to describe him (1:14, 18; 3:16). See ONLY BEGOTTEN.

Another note of distinction is that Jesus alone is *huios G5626* ("Son") of God; others who enter a relation of sonship by believing in his name, are but *tekna* ("children," from *teknon G5451*) of God (e.g., Jn. 1:12 – 13). This usage in John is too consistent to be accidental and must correspond to a difference of status. Nor is Christ's position merely established by an act of generation; it is the continual enjoyment of a unique relationship (1:18, "the One and Only, who is at the Father's side"). Like Mark, John does not directly refer to the virgin birth. However, that the Son comes directly from above, John knows (6:41); also that the Jews believe him to be the son of Joseph and Mary (6:42). In typically Johannine style, he does not explain the enigma, for it is no enigma to the believer.

B. Confessional passages. The sonship of Christ was revealed to human beings during his earthly ministry, and at an early stage. The testimony of JOHN THE BAPTIST ("this is the Son of God," Jn. 1:34) is based on Christ's possession and continual enjoyment of the Spirit. NATHANAEL's confession that follows, "Rabbi, you are the Son of God; you are the King of Israel" (1:49), is based on the perfect knowledge displayed by Jesus (cf. 4:29). Some critics reject these on the grounds that in the synoptics John the Baptist bears no such full testimony, though he clearly accorded messianic status to Jesus (Matt. 3:11 – 12). They also object that, in the synoptics, personal confessions such as Nathanael's must have occurred only at a much later date (Matt. 16:16). These objections are not valid. John also knew of a Petrine confession much later, although he words it somewhat differently (Jn. 6:69). Further, Nathanael's confession is couched in very Jewish terms, unacceptable to later Gentile Christianity ("Rabbi," "King of Israel"). MARTHA's confession in 11:27 is one of the fullest in the gospel, joining the three concepts of Christ, Son of God, and Coming One; otherwise, it follows the same lines. It is interesting, as a Pauline link, that Martha's witness is in a resurrection context.

C. Personal claims. John 10:36 is a clear instance of Christ's deliberately claiming the title for

himself in the midst of controversy and close theological argument. It is also in the context of a claim to oneness with the Father (10:30), thus showing in what sense sonship is meant. Christ justifies his use of the title on the grounds that he is "the one whom the Father set apart and sent into the world." John 10:35 may be a veiled reference to Logos theology, but in any case, the words of Christ cannot be understood as less than a claim to full equality with God. There are also, as in the synoptics, numerous other passages in John where Jesus speaks of himself as "the Son" in distinction from "the Father," in a sense that leaves no doubt as to how he understood the uniqueness of the relationship.

D. Witness of Christ's enemies. John 19:7 is confirmation by the Jews that Jesus "claimed to be the Son of God"; again, they regarded it as a blasphemy worthy of death, so that they understood sonship in terms of equality with God. This occurs in a section of John rich in "King theology" (Jn. 18:33— 19:22). It is likely therefore that John has in mind the Messianic King of Ps. 2, who is hailed as the Son of God.

E. Conclusion. Lastly the whole purpose of the gospel, as stated in Jn. 20:31, is to create faith "that Jesus is the Christ, the Son of God" (the primitive baptismal confession). From first to last, John associates sonship with messiahship. Sonship thus has a soteriological goal (3:16; 5:25). The Johannine epistles reiterate these truths even more strongly, but do not demand separate treatment.

VII. Usage in Hebrews. In the epistle to the Hebrews, the divine sonship of Christ is not only stated but also vindicated by the author. Thus Hebrews, even more than the writings of John, comes very near to a full theological definition of sonship, all the more striking in that the book is a Jewish (even if Hellenistic-Jewish) production. Controversial definition is indeed demanded by the general plan of Hebrews, by which Jewish attacks are met directly. Point by point, it shows the superiority of Jesus to the "mediators" of the first covenant of Judaism. This inevitably leads to extended discussion of the nature of Christ's sonship, for it is as Son of God that he is superior to all others.

In the opening verses, Christ's superiority to the OT prophets is stressed, since he brought a full and final revelation of God, of whom he is spokesman. This is very close to the Johannine theology. Christ is also the Son because he is heir and inheritor of God's universe. So far, perhaps even Jewish "adoptionist" messianism could agree; but not when he is described as the One "through whom he made the universe" (Heb. 1:2). This is either the theology of preexistent WISDOM, familiar in ALEXANDRIA, or else straight Logos-theology of the Johannine type. In either case, the Son is identified as a "cosmic Christ," as in Col. 1:15 – 20. In Heb. 1:3, Christ is said to be "Son" because he "is the radiance of God's glory and the exact representation of his being." This is similar to the Christological definition of Phil. 2:6 (although there is no reference to sonship, obedience is stressed).

In developing the argument, the author states that Christ is superior to the angels because of his "name" (Heb. 1:4), referring clearly to his title as Son (v. 5). Moreover, his is sonship by generation (cf. 1:5, quoting Ps. 2:7). To safeguard against "adoptionist" thought, the author asserts Christ's preexistence; his birth is described as "when God brings the firstborn into the world" (Heb. 1:6). His immortality is further asserted in 1:8 – 12. Comparison with MOSES leads to the definition of 3:5 – 6. The status of Moses was only that of a servant; the position of Christ is that of a Son. True, the essence of both is seen as lying in "faithfulness." Hebrews 5:8 may be compared, where the essential nature of sonship is seen to consist in obedience (as in Phil. 2:8). The superiority of Christ to the Aaronic high priest is shown again by proclaiming him Son of God (4:14). Sonship is by generation;

Ps. 2:7 is quoted, as well as Ps. 110:4, the latter because of the reference to the priest-king MELCHIZEDEK.

One other striking occurrence is Heb. 6:6: "they are crucifying the Son of God." This has a Pauline and soteriological ring, reminiscent of Gal. 2:20. It may well be a reference to the frequent use of the title "Son of God," by friend and foe alike, in the gospel accounts of the trial and crucifixion of Christ. It is also a final reminder that suffering and death are, to the NT, the path of the Son of God as much as the path of the Messiah, since the essence of sonship is obedience. (See M. Hengel, *The Son of God: The Origin of Christology and the History of Jewish-Hellenistic Religion* [1974]; *DDD*, 788 – 94; *DJG*, 769 – 75. Note further the bibliographies under CHRISTOLOGY and NEW TESTAMENT THEOLOGY.)

R. A. COLE

Son of Man. The Greek expression *ho huios tou anthrōpou* occurs about eighty times in the Gospels (without the definite article in Jn. 5:27), always used by Jesus himself (in an apparent exception, 12:34, the crowd is quoting Jesus' statement). Elsewhere it occurs only four times: the full expression is used by STEPHEN in Acts 7:56 (the only genuine instance where someone other than Jesus refers to him by this title); without the definite article it occurs in an OT quotation (Heb. 2:6) and in the phrase "like a son of man" (Rev. 1:13; 14:14; alluding to Dan. 7:13). Traditionally the title Son of Man has been assumed to designate the lowly humanity of Christ in distinction from his divine nature. This meaning may be involved, but a much deeper significance emerges from a closer examination of its usage. See also CHRISTOLOGY.

I. OT and Jewish background. In Ezek. 2:1 – 3, the phrase "son of man" (Heb. *ben-ʾādām*) clearly designates "a child of Adam by descent" (R. B. Girdlestone, *Synonyms of the Old Testament* [1897], 46), as elsewhere in this prophecy, where it occurs fifty-seven times (the pl. *běnê ʾādām*, meaning simply "people, human beings," is common in the OT (e.g., Deut. 32:8; Ps. 11:4 et al.). The designation in Ps. 8:4 ("what is man that you are mindful of him, / the son of man that you care for him?"; cf. Ps. 144:3), from which the passage in Heb. 2:6 is quoted, appears to be applicable to both mortal man and Christ in his incarnate identification with human beings. The phrase also occurs in Ps. 80:17 ("Let your hand rest on the man at your right hand, / the son of man you have raised up for yourself "), which is an appeal, during the national decline, for a hero to appear and redeem Israel; this passage may well have influenced Jesus' messianic consciousness (J. Stalker in *ISBE* [1929], 5:2829).

This mosaic from Hagia Sophia depicts the child Jesus and the Virgin Mary. The title Son of Man may refer to Jesus' humanity, but it also signifies several other important concepts.

But the most important OT occurrence of the phrase is found in Dan. 7:13, "In my vision at night I looked, and there before me was one like a son of man [Aram. *kĕbar ʾĕnāš*], coming with the clouds of heaven" (cf. also 10:16, 18). Here the expression is not a title; it means simply "human-like." The passage may allude to a personification of the ideal Israel or the saints of the Most High, but it also appears to suggest a messianic figure: "He was given authority, glory and sovereign power; all peoples, nations and men of every language worshiped him. His dominion is an everlasting dominion that will not pass away, and his kingdom is one that will never be destroyed" (v. 14).

The passage in Daniel influenced the pseude-pigraphic literature, especially *1 Enoch* 45 – 71 (see Enoch, Books of, I.A.), and some scholars would trace Jesus' use of the title Son of Man to this material, but the connection is doubtful. There has also been much discussion about the use of the phrase as an idiom in Jewish Palestinian Aramaic (esp. in the form *bar nāš* or *bar nāšā*ʾ) meaning "a person, someone, anyone," and regularly used as some kind of vague self-designation (cf. the use of English "one" as a substitute for "I"). The precise nuance is debated, however, and even if the idiom provides part of the background for Jesus' usage (which seems likely), that hardly excludes the possibility that Dan. 7:13 played a role in his choice of this title.

II. NT use of the term Son of Man. Modern scholarship has devoted a great deal of attention to the claim of the Gospels that the Son of Man sayings go back to Jesus himself (see the influential article by C. Colpe in *TDNT*, 8:400 – 477). A few writers have argued that all of these sayings originated at a later stage of the tradition; others accept the authenticity of only one group of the sayings (e.g., those that may be classified as eschatological). Skeptical scholars, however, have failed to reach a consensus. Moreover, no persuasive evidence has been set forth to explain why the early Christians would have frequently put this title on Jesus' lips while virtually never using it themselves.

Scholars who do accept the authenticity of the sayings differ, for example, as to whether Jesus

drew upon Ezekiel's use of the term Son of Man to emphasize his humanity and his dependence upon the Father for the execution of his earthly work (cf. Num. 23:19; Job 25:6; Heb. 2:11). As already noted, the designation in Ps. 8:4, from which Heb. 2:6 is quoted, appears to be applicable to both mortal man and Christ in his identity with human beings. There seems to be no room for reasonable doubt that Jesus' divine self-consciousness developed from his first visit to the temple at the age of twelve (Lk. 2:41 – 52), through his baptism and temptation (Matt. 3:13 – 17; 4:1 – 11) and other crises, to his climactic cry from the cross, "It is finished" (Jn. 19:30). From these experiences he emerged with an ever-increasing consciousness of his divine oneness with the Father (Jn. 8:16; 10:30 – 38).

The occurrence of the title Son of Man as used by Christ of himself points up certain important characteristics of his divine-human being and nature. (1) Son of Man signifies Christ's messiahship. Jesus consistently avoided the use of the term MESSIAH because of the militaristic and political connotations which it had for the Jewish people of his time. Though some 1st-cent. Jews may have identified the term Messiah with Son of Man, this would have been exceptional. That the early Christians did so there can be no reasonable doubt (cf. E. Johnson in *IB*, 7:343 – 44).

(2) Christ's INCARNATION is linked early in his ministry with the title Son of Man. The uniqueness of Christ is suggested in his words to NICODEMUS: "No one has ever gone into heaven except the one who came from heaven—the Son of Man" (Jn. 3:13). Thus, the Son of Man is God *from heaven*, but in human form *on earth*. His incarnate divine-human nature reflects the purpose and character of his mission: God *in* and *with* human beings reconciling them *to God* (cf. Jn. 1:14; 12:13; see W. F. Howard and A. J. Gossip in *IB*, 8:507 – 8). Christ's redemptive cross makes explicit the meaning of the incarnation.

(3) Son of Man identifies Christ with dependent humanity (Matt. 8:20; Lk. 9:58). Whatever demands might be laid upon the scribe for discipleship (Matt. 8:19), he and all other followers would find a common human understanding and fellowship in the deepest deprivation and suffering with God as Son of Man.

(4) Son of Man signifies Christ's authoritative and redemptive mission (Matt. 9:6 and parallels; Lk. 19:10). However the authority of "the keys of the kingdom" (Matt. 16:19) may be understood, God retained exclusively for the Son of Man the authority to forgive sins on earth, though it may be permitted to his disciples to absolve sins in the sense of declaring forgiveness to others when they have met the divine requirements.

(5) Son of Man signifies Christ's total redemptive victory (Jn. 3:14). It is likely that the analogy Christ made between the serpent on the pole in the wilderness (Num. 21:9) and the Son of Man suggests much more than his death. In fact, Christ's death, as taught throughout the NT, is inseparable from his resurrection and ascension. Thus the lifting up of the Son of Man here would seem to prefigure the complete victory of Christ's redemptive work in his atoning death, glorious resurrection, and consummating ascension (cf. Dan. 7:13; Mk. 14:62; Acts 7:56).

(6) Son of Man signifies the universal lordship of Jesus Christ (Mk. 14:62). This lordship is asserted by Jesus in his preface to the Great Commission, where he claims "all authority in heaven and on earth" (Matt. 28:18; see COMMISSION, GREAT), and as expressed to his disciples in Acts 1:8. In fact, it is Christ's universal lordship that constitutes the burden of apostolic preaching in Acts. The word LORD in application to the risen Christ occurs 110 times in Acts—more often and more important than any other word in the book (cf. Matt. 3:3; Mk. 2:28; Lk. 6:5).

(7) Son of Man signifies preeminently the final judgment that Jesus Christ administers (Matt. 13:41 – 42; 19:28). Christ qualifies as judge of all because he, through his incarnation, became one

with all human beings and still retained his deity. PAUL , in his Mars' Hill address at Athens, makes clear this climactic and final function of Christ (Acts 17:31), as he also did in his letter to the Romans (Rom. 2:16). And John vividly depicts this function of the Son of Man in the final great assize (Rev. 20:11 – 15).

C. W. CARTER

sonship. See ADOPTION; CHILDREN OF GOD.

sons of God. The meaning of the Hebrew phrase *běnê hā)ĕlōhîm* in Gen. 6:1 – 4 is one of the difficult exegetical problems of the OT. To whom does this title refer: to pagan deities, pagan rulers, angels, descendants of the lineage of Seth, or people in general? Among pagans, mythological stories, some that go back to the HURRIANS (c. 1500 B.C.), tell of nature deities ho engage in illicit relations among themselves and in some instances with humans. Is this passage a small remnant of such a story? Most OT scholars admit that erotic mythology is not a normal feature of the OT literature, yet claim that this is such a story (cf. C. Westermann, *Genesis 1 – 11: A Commentary* [1984], 363 – 83, esp. 371 – 72; *DDD*, 794 – 800). The OT writer allegedly altered an ancient MYTH and, with embarrassment, set it forth as a basis for God's judgment in the form of a flood (see FLOOD, GENESIS). If so, this method of analysis is contrary to procedure elsewhere in the OT.

According to an old Jewish interpretation, the "sons of God" were pagan royalty or members of the nobility who, out of lust, married women from the general population. A variation of this view is that the term refers to ANE kings who were honored as divine rulers and who were characterized by tyrannical and polygamous behavior. The main difficulty with this approach is that the Hebrew phrase is not used in this particular sense elsewhere in the OT.

The term does occur in several OT passages in reference to angels or "heavenly beings" (Job 1:6; 2:1; 38:7; Aram. *bar-)ĕlāhîn* in Dan. 3:25; cf. also Pss. 29:1; 89:6). See ANGEL. Thus a common interpretation is that fallen angels married women and begat children, and that this unnatural union explains the appearance of the NEPHILIM (Gen. 6:4; for a recent defense of this old interpretation, with a helpful summary of other views, see W. van Gemeren in *WTJ* 43 [1980 – 81]: 320 – 48). Many object to this approach on the basis of Jesus' comment that a married state does not apply to angels (Matt. 22:30).

Conservative interpreters have often identified the "sons of God" with the descendants of SETH. They argue, against the first two views above, that the form *hā)ĕlōhîm* elsewhere in the OT regularly refers to "the one true God" and rules out a pagan orientation for this phrase. Moreover, the concept of a father-child relation between God and his worshipers is not alien to the OT (Deut. 32:5; Ps.

73:15; Hos. 1:10; 11:1). Earlier in the Genesis narrative, in connection with the births of Seth and of his son ENOSH, the comment is made, "At that time men began to call on the name of the LORD" (Gen. 4:24). Thus the context, by identifying the Sethites as worshipers of God, seems to provide a referent for the otherwise ambiguous phrase, "sons of God." If so, the passage views the intermarriage of such worshipers with the ungodly as the immediate cause of the flood. The primary objection to this view is that the contrasting phrase in Gen. 6:2, "daughters of men [Heb. *hāʾādām H132*]," seems to be a general human designation rather than a way of describing a specific (ungodly) part of the population.

Still another approach argues that the passage should not be understood negatively as an explanation for the flood but simply as a conclusion to Gen. 5. According to this approach, the phrases "sons of God" and "daughters of man/Adam" simply refer to men and women in general, alluding respectively to Adam's divine origin and Eve's origin from Adam (see J. H. Sailhamer in *EBC*, 1:78). (For a wide-ranging collection of essays, see C. Auffarth and L. T. Stuckenbruck, eds., *The Fall of the Angels* [2004]; recent monographs include A. T. Wright, *The Origin of Evil Spirits: The Reception of Genesis 6.1 – 4 in Early Jewish Literature* [2005]; and A. Y. Reed, *Fallen Angels and the History of Judaism and Christianity* [2006].)

G. H. LIVINGSTON

sons of the prophets. The Hebrew phrase *běnê-hannebîʾîm*, which the NIV renders as "company of the prophets," occurs almost always in connection with ELISHA (2 Ki. 2:3 et al., the only exception is 1 Ki. 20:35). The term is a technical one referring to the members of a prophetic order or guild, and has no reference to physical descent from a prophet. See PROPHETS AND PROPHECY II.D.

There were several different guilds or branches of the same guild located at various places: (1) BETHEL (2 Ki. 2:3), (2) JERICHO (2:5), (3) GILGAL (4:38), (4) the hill country of Ephraim (5:22; see EPHRAIM, HILL COUNTRY OF). Yet it appears that they were all under the authority of one prophet whom they called "master" (2:3, 5). When the master died or was taken, as Elijah was, one of the guild members took his place as the new master. The promotion had to be recognized by the guild members, and the test was whether the new master had the powers of the old master (2:8, 14) and whether the spirit of the old leader rested on the new one (2:15). The guild may have lived in a monastic community. They erected community buildings (6:1 – 2) and shared a common table (4:38 – 44). Yet some were married (4:1). Some of their work was done at the command of the master (4:38; 9:1), and often they sought his approval before doing something (2:16 – 18; 6:1 – 2). Yet they could act on their own (1 Ki. 20:35).

Though the technical term "sons of the prophets" does not occur elsewhere, there may be other indications of prophetic guilds. Such may be the case with the "band of prophets" in Saul's and Samuel's day (1 Sam. 10:5 – 12; 19:20). Likewise, where a large number of prophets is mentioned (1 Ki. 18:4, 19; 22:6) this is indicative of a guild. Groups acting in concert and designated only as "prophets'" are probably also prophetic guilds (2 Ki. 23:2; Jer. 26:7 – 8, 11). Thus prophetic guilds continued throughout the monarchy. Finally, the singular form *ben-nābiʾ* , "s on of a prophet " (Amos 7:14), should also probably be understood the same way; thus Amos affirms he is not a member of a prophetic guild. (See further R. B. Y. Scott, *The Relevance of the Prophets* [1942], 46 – 49; H. H. Rowley, *The Servant of the Lord* [1952], 97 – 34.)

J. C. MOYER

soothsayer. See DIVINATION.

sop. This English term is used by the KJV to render *psōmion G6040*, which occurs in only one passage (Jn. 13:26 – 27, 30). The Greek word is the diminutive of *psōmos*, "morsel," and refers to a small, wafer-like piece of bread dipped into the common dish as a kind of improvised spoon. Knives and forks were unknown at table; therefore the more liquid parts of a meal were secured by dipping a morsel of bread into them.

Sopater soh'puh-tuhr (Σώπατρος *G5396*, prob. short form of Σωσίπατρος *G5399*, "saving the father"). Son of Pyrrhus; a Christian from BEREA who, along with others, accompanied PAUL on his way back from GREECE (Acts 20:4). The group may have served as representatives when the apostle conveyed the offering from the Gentiles to the needy in Jerusalem (24:17). Sopater is usually thought to be the same as SOSIPATER (Rom. 16:21).

Sophereth sof'uh-rith. See HASSOPHERETH.

Sophia Jesu Christi. See EUGNOSTOS, LETTER OF.

Sophonias sof'uh-ni'uhs. KJV Apoc. form of ZEPHANIAH (2 Esd. 1:40).

sorcerer. See DIVINATION; MAGIC.

sore. Any lesion of the skin or mucous membranes. There is a specific kind of sore that probably was common in Israel. It is called "desert sore," a tropical ulcer found especially in the desert areas of N Africa and the Middle East. This sore resembles a varicose ulcer and is most commonly seen on the legs, dorsal side of hands, and on the face.

Sores must have been very common in biblical days, as they are so frequently mentioned. JOB's affliction is a typical example (Job 2:7). DAVID blames himself for his sores, "My wounds fester and are loathsome because of my sinful folly" (Ps. 38:5). There were rigid rules requiring diagnosis of sores and, in many cases, isolation of the patient. Some of these rules seem harsh, but they helped to retard the spread of contagious disease.

We do not know much about the medicines used to heal sores, except that BALM of Gilead is mentioned (Jer. 8:22; 46:11). This was a fra grant resin with the consistency of honey and was obtained from trees and shrubbery E of the Jordan. In my work with the Navajo Indians, I found that the medicine men were using a similar resin. It gave some relief from pain, was a stimulant to healthy tissue under the sore, and helped to destroy the infecting organism.

R. H. POUSMA

Sorek sor'ik (שׂרֵק *H8604*, "vine"). The valley where DELILAH, the lover of SAMSON, lived (Jdg. 16:4). This region was one of three parallel narrow E-W valleys that crossed the SHEPHELAH (rocky plateau stretching from AIJALON to GAZA).
The Sorek Valley. (View to the W.)

ESHTAOL and ZORAH were on the N of the valley, while TIMNAH, where Samson sought a wife (Jdg. 14:1), is located farther SW, near the mouth of the valley. The Valley of Sorek is known today as Wadi eṣ-Ṣarar, beginning about 13 mi. SW of JERUSALEM and running in a NW direction for about 20 mi. toward the Mediterranean. Since BETH SHEMESH was set apart in the days of JOSHUA as a Levitical city (Josh. 21:16), proximity to the SE mouth of the valley demanded that it be heavily fortified against PHILISTINE harassments. Samson's betrayal by Delilah would no doubt have threatened this important Israelite stronghold.

The Sorek Valley.

A. JOHNSON

sorrel. This English term, referring to a brownish color, is used by the NRSV and other versions to render Hebrew *šārōq H8601,* which occurs only once (Zech. 1:8; NIV, "brown"). The Hebrew word may indicate a reddish color.

sorrow. The Bible speaks of sorrow in various contexts. For example, Christ's suffering and departure brings sorrow to his disciples' hearts (Jn. 16:6; cf. Matt. 9:15—it is appropriate to mourn when the bridegroom leaves), but it was good that he go away, for then the Comforter (of the sorrowful) would come. As the woman in childbirth has sorrow but also JOY at birth, so the disciples' sorrow will be turned into joy at his return (Jn. 16:21-22); when they ask and receive, their joy will then be made full.

If Christ brings joy, so SIN should bring sorrow and MOURNING. Those who laugh now should mourn and weep (Lk. 6:25); sinners should be wretched and mourn (Jas. 4:9). Not only should there be mourning over one's own sins, but also over those of others in the church (1 Cor. 5:2—the opposite of such mourning is arrogance; cf. 2 Cor. 12:21). Paul sorrows over the unbelief of Israel to the point of wishing himself accursed so that all Israel might be saved, the answer to his sorrow (Rom. 9:2; cf. 11:26). The mourning of the exploiters in sinful BABYLON is however not over its sin,

but only over its downfall (Rev. 18:8, 11, 15, 19). Are the mourners of the BEATITUDES sorrowful for themselves alone or for the sin of the world? At any rate they shall be comforted (Matt. 5:4).

Second Corinthians is practically a treatise on the necessary sorrow that Christians must inflict on each other as they admonish and correct sin. PAUL did not desire to make another painful visit to CORINTH (2 Cor. 2:1), nor was his purpose ever just to bring sorrow (2:4). Instead his goal was godly grief, the sort that produces repentance, salvation, zeal, and finally Paul's own comfort and joy (7:8 – 13). Hebrews teaches that the Father's disciplining of his own sons indeed yields the fruit of repentance even though painful at the time (Heb. 12:11). PETER makes the similar statement that our rejoicing is in our imperishable inheritance, even though its genuineness is tested by various trials for a short time (1 Pet. 1:6). We shall be approved if we suffer unjustly (2:19 – 20). So the inheritance of comfort enables us to sorrow with hope. See also GRIEF.

D. C. DAVIS

Sosipater soh'sip'uh-tuhr (Σωσίπατρος *G5399*, "saving the father"). (1) A captain under Judas MACCABEE (2 Macc. 12:19, 24).

(2) One of two or three "relatives" of Paul (the others being JASON and possibly LUCIUS) who sent greetings to the Christians in Rome (Rom. 16:21). For many scholars, however, the Greek term *syngenēs G5150* here means "kinsman" (cf. RSV) and should be understood in the sense of "fellow-Jew" (cf. 9:3). Sosipater is usually identified with SOPATER (Acts 20:4).

Sosthenes sos'thuh-neez (Σωσθένης *G5398*). (1) Ruler of the synagogue at CORINTH during PAUL's first visit there (Acts 18:17; see RULER OF THE SYNAGOGUE). It is possible that Sosthenes succeeded CRISPUS in this office when the latter became a Christian (v. 8). For some unclear reason, Sosthenes was seized and beaten by a crowd after GALLIO, proconsul of ACHAIA, had dismissed a Jewish prosecution of Paul. Possibly Sosthenes was the victim of an anti-Semitic demonstration by Greeks (cf. KJV following many MSS) or of Jewish spite against an unsuccessful spokesman.

(2) An early Christian whom Paul refers to as "our [*lit.*, the] brother" (1 Cor. 1:1). The fact that the apostle includes the name of Sosthenes with his own in the salutation suggests that this individual was well known to the Corinthians. Thus many have thought that this Sosthenes should be identified with #1 above. If so, he probably became a Christian during Paul's ministry in the city.

Sostratus sos'truh-tuhs (Σωσθένης). The governor of the citadel at Jerusalem under ANTIOCHUS IV (Epiphanes). He tried to obtain from the high priest, MENELAUS, the sum of money which the latter had promised to pay the king to be appointed high priest, but Menelaus refused. As a result, both Menelaus and Sostratus were summoned to appear before the king. Beyond this story, Sostratus is not known (2 Macc. 4:27 – 28).

S. BARABAS

Sotai soh'ti (סוֹטַי *H6055*, derivation uncertain). Ancestor of a family of SOLOMON'S SERVANTS that returned from the Babylonian captivity with ZERUBBABEL (Ezra 2:55; Neh. 7:57; omitted in the parallel, 1 Esd. 5:33).

soul. This English term, which most often refers to the immaterial essence, or more specifically the moral and emotional nature, of human beings, is used to translate mainly Hebrew *nepeš H5883* and

Greek *psychē G6034*. Both of these words may indicate "breath," "life," and the like, but they have a wide range of connotations.

I. In the OT. The OT is not a textbook on psychology, yet its doctrine of HUMAN NATURE seems to involve a polarity: each person is a unified being but that being is profoundly creative and complex. This profoundness can be understood only by the use of a whole set of terms; hence, various dimensions of the human being are pictured by such terms as *soul, spirit, heart,* and *mind.* Of these terms, *soul* seems to be the most basic.

A. Etymology and definition. The term *nepeš* derives from *nāpaš H5882* (niphal, "to breathe [freely], be refreshed"). Although this verb occurs only a few times in the OT (Exod. 23:12; 31:17; 2 Sam. 16:14), it is common in other Semitic languages (Akk. *napāšu*; Arab. *nafasa*). The Hebrew noun, however, occurs hundreds of times in the OT with a variety of meanings, both concrete ("breath, throat, neck, person, corpse") and abstract ("life, soul, self, appetite").

B. Hebrew psychology. The English translation of *nepeš* by the term "soul" has too often been misunderstood as teaching a bipartite (soul and body—dichotomy) or tripartite (body, soul, and spirit —trichotomy) anthropology. Equally misleading is the interpretation that too radically separates soul from body as in the Greek view of human nature. See BODY; SPIRIT. N. Porteous (in *IDB,* 4:428) states it well when he says, "The Hebrew could not conceive of a disembodied *nepeš*, though he could use *nepeš* with or without the adjective 'dead,' for corpse (e.g., Lev. 19:28; Num. 6:6)." Or as R. B. Laurin has suggested, " To the Hebrew, man was not a 'body' and a 'soul,' but rather a 'body-soul,' a unit of vital power" (*BDT*, 492).

In this connection, the most significant text is Gen. 2:7, "the LORD God formed the man from the dust of the ground and breathed into his nostrils the breath of life [*nišmat ḥayyîm*], and the man became a living being [*nepeš ḥayyâ*]" (the KJV rendering "living soul" is misleading). Although the expression *nepeš hayyâ* can be applied to other forms of life (1:20 – 21, 24, 30), the intensive language of 2:7 still places human beings in a unique position from the rest of creation, even though OT terminology lacks technical precision. The point here is that Hebrew psychology recognizes the profoundness of life, which is the mysterious reality which gives being to both humans and animals, but OT thought still underlines the humans distinctiveness. As such, *nepeš* can mean simply "life" (e.g., Josh. 2:13; Jdg. 5:18; 2 Sam. 23:13 – 17; 1 Ki. 19:4). Similarly the term may refer to the "self " as an expression of personality: "my soul" (Gen. 49:6; Num. 23:10) may mean only "me"; "your soul" (Isa. 43:4; 51:23) probably means "you" (cf. Pss. 25:13; 121:7.)

The soul and its relationship to life are related to two other terms, *blood* and *spirit.* The *nepeš* resides in the BLOOD according to Gen. 9:4; Lev. 17:11, 14; Deut. 12:23. To describe the depths of a person's being as a feeling-thinking creature, the OT uses *spirit* and *heart* as synonyms for the soul in the sense of the seat of the appetites, emotions, desires, passions, and intelligence. It may be possible to conceive of the HEART (*lēb H4213* and *lēbāb H4222*) as the cognitive, emotive faculty of the *nepeš;* whereas the SPIRIT (*rûah H8120*) refers to the creative "life-principle" of the *nepeš.* Such distinctions are not consistently followed throughout the OT, and the generalized psychology of the OT should prevent the student of the Bible from identifying Hebrew thought with any particular modern school of psychology. Biblical realism is concerned to describe human life in relationship to Yahweh, not to provide esoteric speculation about the intrinsic nature of human beings and the world. (Cf. Gen. 6:5 – 6; 41:8; 42:21; 45:27; 49:6; Exod. 4:14, 21; 35:21; Lev. 19:17; 26:41; Num. 5:14, 30;

Deut. 4:9, 29; 6:5; 10:12; 11:13, 18; 13:3, 6; 26:16; 30:2, 6, 10; 2 Sam. 3:21; Job 7:11; Ps. 77:3, 6; Prov. 4:23; Lam. 2:11; 3:20.)

C. Death and the soul. The most perplexing problem of OT anthropology and psychology is the relationship of the soul to DEATH and the afterlife. This problem centers not only on the nature of the soul, but also on the meaning and significance of SHEOL. The Bible speaks of the *nepeš* as departing and/or returning (Gen. 35:18; 1 Ki. 17:21 – 22). However, the crucial series of texts are those in which the OT writers indicate a fear of death and a fear of the loss of the self or soul through the experience of death (cf. Job 33:18 – 30; Pss. 16:10; 30:3; 116:8; Isa. 38:15 – 17).

What is essential to understanding the Hebrew mind is the recognition that the human being is a unit: body-soul! The soul is not, therefore, unaffected by the experience of death. OT ESCHATOLOGY does indeed contain seminal elements of hope implying the more positive teaching of the NT, as can be seen in the OT phrase, "rested with his fathers" (1 Ki. 2:10 et al.), in DAVID's confident attitude toward the death of his child (2 Sam. 12:12 – 23), and in JOB's hope for a RESURRECTION (Job 19:20 – 29). It is this essential soul-body oneness that provides the uniqueness of the biblical concept of the resurrection of the body as distinguished from the Greek idea of the immortality of the soul.

II. In the NT. The NT concept of the soul is predicated upon this OT teaching.

A. The soul as the self. Like the OT term, so also Greek *psychē* can signify the oneness of a person's total being or the self (Lk. 12:19; Acts 2:43; 3:23; Heb. 4:12). In this sense, soul may be simply the person in his or her totality; however, *psychē* does imply a transcendental reality that is in some cases independent of the body. This seems to be the force of Jesus' statement, "Do not be afraid of those who kill the body but cannot kill the soul" (Matt. 10:28). The most foolish mistake anyone can make is "to gain the whole world, yet forfeit his soul" (Mk. 8:34 – 38). Thus the *psychē* can be referred to as the object of redemption (e.g., Heb. 10:39; Jas. 1:21; 1 Pet. 1:9). While the frequency of this term is considerably less than that of *nepeš*, the key passages indicate a significant development upon the OT view of the soul.

B. The psychology of the soul. In the NT, terms and concepts relating to human nature are equally imprecise. The general emphasis, as in the OT, is upon one's relationship to God through J ESUS CHRIST as Lord of life. A person's total being is redeemed by Christ (1 Thess. 5:23). It is "souls" as persons who respond to the apostolic KERYGMA (Acts 2:41; 14:22). It should be noted that the NT does not usually make a distinction between *psychē G6034* and *pneuma G4460* ("spirit"). The two apparent exceptions can best be understood not as affirming a trichotomous anthropology but as figures of speech pointing to the pervasive nature of SALVATION (1 Thess. 5:23) and to the penetrating power of the word of God (Heb. 4:12). To derive exact psychological descriptions from these two statements is pressing the nontechnical language of Scripture too far.

It is probably more accurate to view the terms *psychē* and *pneuma* as partial synonyms that are interchangeable in many contexts. For example, Jn. 10:15 speaks of Christ's giving up his *psychē* for the sheep, while 19:30 states that Jesus gave up his *pneuma* to the Father. Both Mk. 10:45 and Matt. 20:28 indicate that it is the *psychē* that Jesus gives as a ransom for the sinner's salvation. The emphasis in the NT turns more to the HEART (*kardia G2840*) than to the soul or spirit. If it is correct to identify the *psychē* as a person's transcendental self, the life of which is indicated by *pneuma*, then *kardia* may refer to that psychological center in which resides a person's powers of thought, volition,

and emotion. Hence, it is the heart more than the soul to which the NT writers ascribe the functions of thinking, willing, and feeling (cf. Matt. 13:15 – 19; Mk. 7:19 – 22; Lk. 6:45; Jn. 12:40; Acts 2:37; 5:3 – 4; Rom. 10:6 – 10). These impressions are further supported by the use and meaning of such terms as "mind" (*nous G3808*) and "will" (*thelēma G2525*).

C. Eschatology and the soul. It is impossible to isolate the discussion of the *psychē* from the NT understanding of the INTERMEDIATE STATE and the final state of all Christians, which demands a resurrection of the body and a reunion of body and soul. The nature of the intermediate state is implied in Jesus' statement in Matt. 10:28, but more specific is 2 Cor. 5:1 – 10, in which PAUL describes the Christian's spiritual conflict over the possibility of remaining "clothed" but separate from Christ or being spiritually "naked" but in the presence of Christ. Both Christ and Paul imply that the soul or self can and sometimes does exist independently of the body although not in a normal manner. The intermediate state is, therefore, an abnormal condition in the relationship of soul and body. Consequently, what the Christian longs for is the resurrection of the body and transformation of the body at the SECOND COMING of Christ.

In 1 Cor. 15:35 – 58 Paul provides the clearest description of this issue. In this passage, the adjective *psychikos G6035* is contrasted with *pneumatikos G4461*: the "soulish" body will be transformed into a "spiritual" body. The metaphysics of this passage is extremely difficult, but Paul's point seems to be that the essential nature of the resurrection body will be changed by the PAROUSIA (second coming). The book of Revelation refers to "souls" waiting for the final *eschaton*: resurrection and kingdom (Rev. 6:9; 20:4). According to 20:4 – 6 the righteous will experience "the first resurrection" and the unrighteous come to life subsequently. And in 1 Thess. 4:13 – 18 Paul presents an interesting insight into the nature of the intermediate state and the second coming. On the one hand, dead Christians are described as being "asleep," with their bodies in the grave and separated from Christ (v. 13); but the apostle goes on to say that "God will bring with Jesus those who have fallen asleep in him" (v. 14), that is, with Jesus in his state of exaltation. The passage implies as well the reunion of body and soul at the parousia: the body that is now in the grave will be reunited with the soul that is now with Christ.

source criticism. See BIBLICAL CRITICISM; GOSPELS III; PENTATEUCH III.

south. The problem of defining directions in a community that did not possess the compass must always have been a difficult one. *East* and *west* could be related to sunrise and sunset, but the intermediate direction of *south* produced a number of different Hebrew concepts. For example, the term *yāmîn H3545*, "right [side]," could be used in the sense "south" because by convention a person was normally thought of as facing the sunrise (Josh. 17:7 et al. [cf. the place name Yemen]; similarly with the cognate *têmān H9402*, Isa. 43:6 et al. [cf. the place name TEMAN]). Most commonly, however, the Hebrew adopts *negeb H5582*, which probably means "parched," describing the region of semidesert and desert lying in a southerly direction, when viewed from the Israelite heartland. This term NEGEV has now become firmly attached, as a regional name, to the southern extension of the modern Israeli state. The NT uses the common Greek term *notos G3803* (Lk. 13:29 et al.).

For Israel, "the south" must have had a significance not unlike that of "the Wild West" in American 19th-cent. thinking and its modern representations. This southern border of the kingdom was an uncertain and fluctuating affair, unmarked by any clear topographic feature. Beyond it lurked the warlike desert tribes, such as the Amalekites (see AMALEK), and Israel learned to anticipate from this quarter unpleasant climatic effects (see STORM) as well as military attack (cf. 1 Sam. 30:1).

J. H. PATERSON

sovereignty of God. The English term *sovereignty* connotes a situation in which persons or political entities exercise supreme power over the whole area of their jurisdiction. A *sovereign* is one who enjoys full autonomy, allowing no rival immunities. As applied to God, these terms indicate his complete power over all of CREATION so that he exercises his will absolutely, without any necessary conditioning by a finite will or wills.

In the Bible no Hebrew or Greek term corresponds precisely to the abstract word *sovereignty*, although the idea is abundantly implied. The major metaphor employed is that of "ruler and subject." The doxologies and prophetic exclamations bear much of the weight of biblical statement of the divine sovereignty. To be noted are the following: "Now to the King eternal, immortal, invisible, the

only God, be honor and glory for ever and ever" (1 Tim. 1:17); "the Most High is sovereign [Aram. šalliṭ *H10718*, 'ruler'] over the kingdoms of men and gives them to anyone he wishes" (Dan. 4:25); "But the LORD is the true God; / he is the living God, the eternal King. / When he is angry, the earth trembles; / the nations cannot endure his wrath" (Jer. 10:10).

God's sovereignty is his OMNIPOTENCE expressing itself in relation to the created world, with its inanimate structures and its empirical selves. He is declared to possess absolute authority, illustrated by the power held by the potter over the clay (Rom. 9:19 – 21). Nor is his intrinsic ability diminished by the qualities of HOLINESS and RIGHTEOUSNESS that are integral to his nature (cf. 11:22). As sovereign, he is the ETERNAL God. Within time, he commands the forces of nature (Matt. 5:45; 6:30). The exercise of sovereignty does not, of course, lead to the performance of the logically or the metaphysically absurd, nor of the morally contradictory.

The doctrine of divine sovereignty raises the problem of the relation of God's sovereign action to human activity. According to Gen. 1:28, the first man and woman received a conferred sovereignty over nature. Kings of the earth also rule by God's mandate (1 Sam. 15:11; 2 Chr. 1:9). Human sovereignties are delegated and revokable. At the same time, the capability of human beings for the exercise of choices, whether affirmative or negative, suggests that while the divine sovereignty is itself not limited, God may for wise reasons restrain its exercise.

In the history of Christian thought there has been theological perplexity at this point. In refuting the error of Pelagius, AUGUSTINE seemed at times to deny any valid human freedom. Martin Luther, in his conflict with Erasmus, seemed to do the same. John Calvin articulated a logical system of theology upon the basis of the doctrine of divine sovereignty; some Reformed writers feel that, with the best of intentions, Calvin carried the teaching to a point that seemed to do less than justice to human choice and human stewardship. In similar vein, Abraham Kuyper suggests, "This sovereignty is not a property of mankind. No mere man possesses any sovereignty; this belongs to God alone as the Almighty One" (*Dictaten dogmatiek* [1910], 1:417). Others, including Jacobus Arminius, sought to make place for the role of human choice within the context of the divine sovereignty, contending that God could foreknow genuinely contingent events, thus giving larger place to human free will than was implied by Reformed theologians. See also ELECTION; GOD, BIBLICAL DOCTRINE OF; PROVIDENCE.

sower, sowing. See AGRICULTURE.

Spain spayn (Σπανία *G5056*). The westernmost of the European peninsulas was called variously, in reference to its primitive inhabitants, Iberia, Liguria, and Celtica. In historic times the name Hispania, the origin of which is unknown, prevailed. Unlike Italy and the Greek peninsula, Spain was invaded both by the westward wandering Indo-European tribes and by intruders over the Gibraltar Straits

from Africa, a pattern of settlement that was to persist into medieval times.

Tartessus, a town and kingdom on the Baetis or Guadalquivir River, in the southern part of the peninsula, was probably visited by ships from Minoan CRETE in the middle of the 2nd millennium B.C. See TARSHISH (PLACE). But for the sake of its tin, Phoenician traders from TYRE brought the area into the orbit of their overseas commerce in 1100 B.C., founding Gades (Cádiz) as their headquarters nearby. Phoenician Carthage fell heir to this foothold, absorbed Tartessus, and penetrated the peninsula deeply. Greek colonization, in the process, was limited to the NE corner, where Massilia (Marseille) maintained two small footholds, Emporiae and Rhodae. After her first clash with ROME (264 – 241 B.C.), Carthage developed Spain as a base for her European power, a process Rome sought to check. The Second Punic War (218 – 201) broke out over Saguntum. Hannibal's disastrous invasion of Italy was staged from Spain, and Rome in her eternal quest for a stable frontier was forced first to fight and subdue Carthage in the Spanish peninsula, and then to undertake Spain's subjugation to eliminate the Carthaginian bridgehead (cf. 1 Macc. 8:1 – 4).

Such is the nature of the terrain, that Rome spent two centuries on this task. Some of her greatest soldiers fought to subdue the Spanish tribes, and on two notable occasions, the war against Sertorius (78 – 72 B.C.) and Julius CAESAR's subjugation of the legions of his rival POMPEY (49 – 45), Rome's own grim civil strife found a Spanish battleground. AUGUSTUS completed the pacification of the rugged hinterland in the course of his systematic organization of the frontiers and borderlands of the empire. From this point onward, Romanization, already established in the towns and coastal areas under a provincial organization almost two centuries old, began to penetrate. Roads, generosity over citizenship, and the other manifest advantages of the "Roman Peace" found an accelerating response, and Spain became notable for her contributions to imperial life and culture. Three emperors—TRAJAN, HADRIAN, and the first Theodosius—came from Spain. Men of letters from Spain included the two Senecas, Lucan, Pomponius Mela, Columella, Quintilian, Martial, Prudentius, and Orosius.

Spain's flair for Romanization may have been realized by PAUL, and that fact supports the contention that he worked on a strategic plan to bring the empire to Christ by planting Christian cells in the key points and areas of the great system. Whether he achieved his twice-expressed ambition of visiting Spain is not known for certain (Rom. 15:24, 28). According to Clement of Rome, writing some thirty years after Paul's death, the apostle went to "the limits of the West" (*1 Clem.* 1.5), but it would be dangerous to build too weighty an assumption on a phrase so vague.

span. See WEIGHTS AND MEASURES I.C.

sparrow. A small Old World songbird, usually brownish or grayish (family *Passeridae*; to be distinguished from similar New World species [i.e., finches such as the "tree sparrow"] of the family *Emberizidae*). It is generally agreed that Hebrew *sippôr H7606*, like various other terms, has both a general and a more specific meaning, but it is difficult to apportion the biblical uses precisely. The general sense "bird" is evident in Gen. 15:10 (where the word refers to the dove and pigeon of the previous verse), in Lev. 14:4 – 7, 49 – 53 (birds used in sacrifices), in Neh. 5:18 (edible fowls), and

in several other contexts where it is implied that the birds would be eaten. Its general meaning could therefore be any fairly small clean bird.

However, where the word is in contrast with some other named bird, it probably has a specific meaning: "Even the sparrow has found a home, / and the swallow [*děrôr H2000*] a nest for herself, / where she may have her young—/ a place near your altar" (Ps. 84:3; cf. Prov. 26:2); here the reference could well be to the house sparrow, a bird often associated with human habitations. In addition, the KJV renders Ps. 102:7, "a sparrow alone on the house top"; this is likely the blue rock thrush, a solitary bird of rocks and old buildings, and some authorities claim that this is indeed the "sparrow."

The Greek word for "sparrow" is *strouthion G5141* (diminutive of *strouthos*, already in Homer). The Lord's words, "Are not two sparrows sold for a penny?" (Matt. 10:29 – 31; cf. Lk. 12:6 – 7), may have been spoken as he pointed to something that is still common in Arab countries, where small chil dren trap and pluck small birds of all kinds, but especially larks and finches, and tie them in bundles for sale. (See G. R. Driver in *PEQ* no vol. [1955]: 130; *FFB*, 77.)

G. S. CANSDALE

Sparta spahr′tuh (Σπάρτη). Also known as Lacedaemon (see LACEDAEMONIAN), Sparta was a powerful city-state in the S central Peloponnesus and chief antagonist of ATHENS. By Hellenistic times, however, its influence had declined. A number of references to Sparta are to be found in extrabiblical Jewish literature, though some of these have been questioned.

There seems to have been a colony of Jews in Sparta in the 2nd cent. B.C., and a warm relationship between the Spartans and the Jews had developed. JASON, the high priest, found asylum there in 168 B.C. (2 Macc. 5:9). Later Jonathan MACCABEE tried to strengthen his government by foreign alliances and appealed to the Spartans to renew a friendship that had begun with King Arios I of Sparta and ONIAS I, the high priest, on the basis of their common descent from Abraham (1 Macc. 7:5 – 23). The relationship was probably the result of an ethnological error (cf. S. Schüller in *JSS* 1 [1956]: 257 – 68). The Jews regarded the Pelasgi, the ancestors of the Spartans, as descendants of PELEG, the son of EBER (Gen. 11:16 – 19).

After the death of Jonathan, the Spartans wrote to SIMON MACCABEE to renew the friendship and league (1 Macc. 14:16 – 23). Finally, Sparta was included among the cities that received the declaration of friendship between the Roman senate and the Jews, written by the consul Lucius to the king of Egypt in 139 B.C. (1 Macc. 15:16 – 22). (See further L. F. Fitzhardinge, *The Spartans* [1980]; A. Powell, *Athens and Sparta: Constructing Greek Political and Social History from 478 BC*, 2nd ed. [2001]; P. Cartledge and A. Spawforth, *Hellenistic and Roman Sparta: A Tale of Two Cities*, 2nd ed. [2002].)

A. RUPPRECHT

spear. See ARMOR, ARMS.

speckled bird. This phrase is used by the KJV and other versions to render Hebrew *sābûă< H7380*, which occurs only once (Jer. 12:9). The term literally means "colored [with stripes]," and some scholars (e.g., G. R. Driver in *PEQ* no vol. [1955]: 139) have argued that it refers to the striped HYENA, a view followed, for example, by the NRSV.

speech. See CONVERSATION; WORD.

spelt. This English term, referring to a coarse WHEAT, is used by the NIV and other versions to render Hebrew *kussemet H4081*, which occurs in three passages (Exod. 9:32; Isa. 28:25; Ezek. 4:9; the KJV has "rie" in the first two passages and "fitches" in the last [see FITCHES]). The Hebrew word may refer to the so-called one-grained wheat, *Triticum monococcum* (or *T. monoccum*, a diploid wheat also known as "einkorn" or "small spelt"), though most scholars believe it designates a hexaploid wheat that was introduced from Egypt, *T. spelta* (synonym *T. aestivum spelta*, also known as "big spelt"). This spelt is a very hard-grained wheat with loose ears. It is said to be a native of MESOPOTAMIA, but was also much grown in SYRIA and SINAI. A possible alternative is the tetraploid wheat, *T. dicoccum* ("medium spelt" or "farro," but better known as "emmer"; cf. NJPS). Less likely are the suggestions that the Hebrew word refers to the rye or the oat. (See *FFB*, 175 – 76.)

W. E. SHEWELL-COOPER

spice. This English term is used primarily to render Hebrew *bōśem H1411* (occurring almost twenty times in the pl. *běōāmîm*, Exod. 25:6 et al.; variant forms *beśem* [Exod. 30:23b] and apparently *bāśām* [Cant. 5:1]). This Hebrew word appears to refer to a type of balsam tree at least once (Cant. 8:14; possibly *Balsamodendron opobalsamum* [see FLORA under *Burseraceae*]), and elsewhere to the oil from that tree (note 4:16, where the *bōśem* of the garden is said to flow out or spread). It is possible that most of the occurrences of the term have to do with the aromatic balsam oil. Other relevant Hebrew words include *někōt H5780* (Gen. 37:25; 43:11), which may refer to the evergreen shrub *Astragalus tragacantha* (but see GUM), *sam H6160* (esp. Exod. 30:34, though this word usually occurs in connection with INCENSE), and *reqaḥ H8380* (only Cant. 8:2, but cf. cognates in Ezek. 24:10). In the NT the Greek term *arōma G808* is used in connection with Jesus' burial (Mk. 16:1; Lk. 23:56; 23:1; Jn. 19:40); another word, *amōmon G319,* occurs only once (Rev. 18:13). See PERFUME.

The perfumed spices were used originally almost entirely at worship services. Long before the time of ABRAHAM, the Egyptians used scented spices. During excavations, these have been found in special containers. The priestly right of using scented spices was confirmed by MOSES (Exod. 30). The chief spices used were MYRRH, CINNAMON, calamus (see AROMATIC CANE), and CASSIA, and these powdered spices when mixed together were stirred into pure OLIVE oil to make what the Bible calls a holy ointment. It would seem that about fifty pounds of scented, powdered spices were stirred into one and one-half gallons of pure olive oil.

The spices were to be prepared by an "apothecary" (Exod. 30:25, 35 KJV; NIV and other versions, "perfumer"). These special spice perfumes

Sticks of cinnamon.

were not to be made for any other purpose than worship. Later, the children of Israel disobeyed the instructions, for when they cried out for a king (1 Sam. 8), Samuel warned them that he would undoubtedly take their daughters to be makers of perfume, for this is what the word "confectionaries" means in that connection (see v. 13).

When King Asa died, he was laid "on a bier covered with spices and various blended perfumes, and they made a huge fire in his honor" (2 Chr. 16:14). They may have had to do this owing to the "disease in his feet" (v. 12), probably gangrene, which smelled unpleasant. This use of spices could presumably be termed religious, as it was used at a funeral. See also ALOE; BALM; DILL; FRANKINCENSE; HENNA; NARD; OINTMENT; SAFFRON; STACTE.

W. E. SHEWELL-COOPER

spider. Name given to a large and fairly well-defined class of the arthropods (joint-footed animals) differing from insects in having four pairs of legs and no wings. All spiders have special glands for producing silk; this is extruded in strands and used for making nests, egg cases, etc., as well as for web spinning by certain families, especially those known as the orb spinners, which make webs of some complexity. The Hebrew clearly refers to one of these, in figurative contexts, with the term *ʿakkābîš H6571*: "They hatch the eggs of vipers / and spin a spider's web [*qûr H7770*]" (Isa. 59:5; cf. v. 6); "What he [the godless] trusts in is fragile; / what he relies on is a spider's web" (Job 8:14). In the latter passage, the word translated "web" is *bayit H1074*, "house" (see NRSV and cf. v. 15); its use could change the metaphor somewhat, and it may refer to a different species, one that makes a more obvious nest.

Some scholars, on the basis of the SEPTUAGINT and the Syriac, emend the text of Job 27:18 (KJV, "He buildeth his house as a moth") from *kāʾāš*, "like a moth," to *kāakkābbîš*. Thus the RSV translates the whole verse, "The house which he builds is like a spider's web, like a booth which a watchman makes," a picture of the spider watching its trap from the vantage point alongside. Others suggest that the word here is not *ʿāšš H6931*, "moth," but an otherwise unattested homonym meaning "[bird's] nest" (cf. NRSV and NJPS). The KJV uses "spider" also to translate *śǝmāmît H8532*, which occurs only once (Prov. 30:28); most modern scholars believe this word refers to a LIZARD.

G. S. CANSDALE

spies. See SPYING.

spikenard. Most modern versions, *nard*. A fragrant ointment obtained from an E Indian plant, *Nardostachys jatamansi*. This member of the Valerian family has odorous fibrous roots. The Hebrew term *nērd H5948* occurs three times in Song of Solomon (Cant. 1:12 [NIV, "perfume"]; 4:13, 14). The corresponding Greek term, *nardos G3726*, is used of a PERFUME with which Jesus was anointed (Mk. 14:3; Jn. 12:3; both times with *pistikos G4410*, "genuine, pure"). This ointment is described as being very costly, probably because it had to be imported from INDIA (*Nardostachys* grows in the Himalayan mountains) in special, carefully sealed ALABASTER jars, to conserve the perfume. It was only when some wealthy house owner received special guests that he would break the seal of the jar, so as to be able to do the anointing.

W. E. SHEWELL-COOPER

spindle. See DISTAFF; SPINNING.

spinning. The art of drawing out and twisting natural fibers into a continuous thread is mentioned in both OT and NT. Its origins are lost in deep antiquity. The remains of the Paleolithic age show signs of sewing and stitching, and it is quite possible that spinning was known from the remote ages. The later bone needles are light and fine with finely drawn eyes, so they may have been used for spun fibers rather than for sinews or raw hide thongs. In the archaeological sites vegetable fibers are the earliest, particularly cotton and flax. It may well be that spinning was originated in the ancient river valley cultures where these fiber plants were domesticated and grown.

The earliest premechanical devices were the hooked stick used as a spindle and the receiving stick or DISTAFF. Such were usually made of wood and few have survived from antiquity except as illustrated on tombs. The other type of spinning device, the spindle whorl, a small torus of stone not much larger than a spool, is often found in Palestinian sites. It may be that the rare Hebrew term *kîsôr H3969*, which modern versions render "distaff" (Prov. 31:19), actually refers to the spindle whorl.

The Hebrew verb meaning "to spin" (*tāwâ H3211*) appears only in the context of the Israelite offerings of material and labor for the TABERNACLE (Exod. 35:25 – 26). In Israel it was the custom for women to do the spinning. The rabbinic tradition records the amazement of the Jews to find Babylonian men spinning. The legal literature of Judaism also records the types of threads spun, and their uses in the tabernacle and temple construction and coverings.

In the NT the Greek term *nēthō G3756* (earlier *neē*), "to spin," is used only in the illustration of the lilies of the field (Matt. 6:28; Lk. 12:27). The Greek art of spinning is depicted in a number of vase paintings, and is referred to both in prose and poetry by a large number of classical authors including Euripides and Aristophanes. As in the Jewish culture, it was a woman's responsibility. Its use in Jesus' sermon, where it is connected with the notion of "toil," was apt in any level of ANE society, where spinning was a necessary and constant task.

W. WHITE, JR.

spirit. This English term (from Latin *spiritus*, "breath") is usually the rendering of Hebrew *rûaḥ H8120* (prob. from *rîaḥ H8193*, "to smell," but attested in other Semitic languages in the sense "to breathe") and Greek *pneuma G4460* (from *pneō G4463*, "to blow, breathe"). Both of these nouns can also mean "air, blowing, breath, wind" (e.g., Job 41:16 [Heb. MS v. 8]; Ps. 18:15 [Heb. MS v. 16]; Jn. 3:8; 2 Thess. 2:8). This article deals with the use of these terms as applied to God, to other

incorporeal beings, and to the immaterial part of human beings.

I. Spirit as incorporeal, intelligent being.
E. de Witt Burton (*A Critical and Exegetical Commentary on the Epistle to the Galatians*, ICC [1921], 490) defines *pneuma* in the NT as "an incorporeal, sentient, intelligent being, or the element by virtue of which a being is sentient, intelligent, etc." Spirit involves LIFE but is not necessarily associated with material form, and thus the Bible often describes as "spirit" some incorporeal nature or being that has direction and purpose and power.

A. God as spirit. The NT makes the specific statement that "God is spirit, and his worshipers must worship in spirit and in truth" (Jn. 4:24). It is the NT which has the developed doctrine of the Holy Spirit; but the OT, in spite of its rich ANTHROPO MORPHISMS in speaking of God, implies frequently that God is spirit, and speaks of the Spirit of God as manifest in activity in nature and in the lives of human beings in a variety of ways. See discussion under HOLY SPIRIT I.

B. Other spiritual beings. The Bible also speaks of creatures that are "spirits," created by God and subject to him, but not having corporeal form. Their existence and their influence on human life is referred to in a number of places (e.g., 1 Ki. 22:21; Job 4:15; Lk. 24:39; Acts 23:8). They may be good spirits ministering to men and women (Heb. 1:14) or they may be evil (Jdg. 9:23; 1 Sam. 16:14 – 16; Matt. 10:1). Human beings may be indwelt by and subject to the Spirit of God, but they may also be subject to the one who is described as "the spirit who is now at work in those who are disobedient" (Eph. 2:2). False teachers are those who are led by "deceiving spirits" (1 Tim. 4:1), and because of the existence of such it is necessary for Christians to "test the spirits to see whether they are from God" (1 Jn. 4:1).

C. The disembodied human spirit. A few biblical passages speak of the human spirit as separate from the BODY at DEATH; for example, Heb. 12:23 refers to "the spirits of the righteous made perfect" (TNIV), and 1 Pet. 3:19 mentions "the spirits in prison." Such references are not contrary to the ultimate hope, expressed by PAUL in 2 Cor. 5:1 – 5, that beyond this life believers will not be naked spirit, but clothed with a heavenly body.

II. The life principle.
Many uses of the term *spirit* in both OT and NT indicate that it is the life principle or life energy of human beings (occasionally of beasts, e.g., Eccl. 3:21). God gives this life spirit to them (Isa. 42:5; Zech. 12:1), and he sustains it (Job 10:12). In life, and at death when the spirit departs from the body, people can only commit their spirit into God's hands (Ps. 31:5; Eccl. 12:7; Lk. 23:46).

In a less absolute way, the human spirit is also the animation and vivacity that persons possess, physically or psychically; the notion of fainting, or losing heart and courage, can be described as the failing or the departing of the spirit within a person (e.g., Josh. 5:1; 1 Ki. 10:5; Pss. 142:3; 143:4, 7; Ezek. 21:7). Correspondingly, restoration from such a state is described in terms of the spirit returning or being revived in a person (e.g., Gen. 45:27; Jdg. 15:19; 1 Sam. 30:12). The physical raising of the daughter of JAIRUS is described as the returning of her spirit (Lk. 8:55). Moreover, renewal of life in its right relationship with God is cited as the giving of a new spirit (Ezek. 11:19; 36:26; Rom. 7:6; see REGENERATION), while God's continuing work of grace is the reviving of "the spirit of the lowly" (Isa. 57:15), and in Christian fellowship believers are refreshed in spirit by one

another (1 Cor. 16:18; 2 Cor. 7:13).

These comments lead appropriately to the consideration of the contrast between FLESH (or BODY) and spirit found both in OT and NT. Flesh and spirit can be said to make up the whole person. Both body and spirit can be defiled (2 Cor. 7:1); both can be holy (1 Cor. 7:34). Spirit is the life principle, the essential person, the inner self; and the body is the outward personality. The body without the spirit is dead (Jas. 2:26). The flesh can be destroyed and the spirit saved (1 Cor. 5:5). A person can be absent in body but present in spirit (Col. 2:5). In some passages (e.g., Jn. 3:5 – 8; Rom. 8:3 – 14; Gal. 4:21—5:26) the distinction between flesh and spirit is between the will and power of a person doing what he chooses apart from God, and the life and will and power given by the Spirit of God enabling the believer to do what God chooses.

There is also the contrast in Scripture between "the letter" and "the spirit," that is, outward obedience to the written code of God's law over against its observance with understanding of its purpose and with love, from the heart (e.g., Rom. 2:27 – 28; 2 Cor. 3:6 – 11).

The distinction between SOUL (Heb. *nepeš H5883*) and spirit is more difficult. There are times in the OT when the two are mentioned in parallel (e.g., Isa. 26:9), just as there are also places where HEART (*lēb H4213* or *lēbāb H4222*) and spirit appear to be equivalent (e.g., Isa. 57:15; Dan. 5:20 [Aram. *lĕbab H10381*]). At other times, however, it can be argued that the spirit is regarded as the animating principle, while the soul is the living being produced.

In the NT there are passages where human beings seem to be regarded as bipartite, made up of body and spirit (e.g., Matt. 26:41), or where the terms "soul" (Gk. *psychē G6034*) and "spirit" are treated as synonyms (e.g., Lk. 1:46 – 47). In two passages persons seem to be spoken of as tripartite (1 Thess. 5:23; Heb. 4:12), though many argue that even these texts do not intend to make sharp or objective distinctions. Those who see a substantial difference often define it in terms of the higher and lower aspects of the human personality: the soul is said to be the manifestation of the immaterial part of a person toward the world, and the spirit its manifestation toward God. Appeal is made to 1 Cor. 2:14 – 15, which distinguishes between the person who is *psychikos G6035* ("soulish, natural") and the one who is *pneumatikos G4461* ("spiritual"), although the context indicates that the contrast has to do with whether or not someone has the Holy Spirit (cf. Jude 19, and note that the body too can be viewed as either natural or spiritual, 1 Cor. 15: 44 – 46).

III. Essential being. From being understood as the life principle, *spirit* came to denote also "the source and seat of insight, feeling, and will" (BDAG, 833, section 3b), that is, a person's essential being. This accounts for many uses of the word in OT and NT. The human spirit is "moved" (Ezra 1:1, 5) or "troubled" (Gen. 41:8); it "rejoices" (Lk. 1:47) or is "broken" (Exod. 6:9 NRSV); it is "willing" (Matt. 26:41) or "stubborn" (Deut. 2:30). A person may be patient or proud in spirit (Eccl. 7:8 NRSV), as well as poor in spirit (Matt. 5:3). The necessity of ruling one's spirit is stated (Prov. 25:28 KJV). It is the spirit (and soul) of a person that yearns and longs for God (Isa. 26:9), and it is to the believer's spirit that the indwelling Spirit of God bears witness (Rom. 8:16).

In this context mention may be made of passages that speak of a person having someone else's spirit, such as that of MOSES (Num. 11:17, 25) or of ELIJAH (2 Ki. 2:9, 15; Lk. 1:17). Similarly also the influence of the spirit of the world (1 Cor. 2:12) or of false prophets (Ezek. 13:3) can be described.

IV. Dominant disposition. As we have seen, many things can be said to describe the action of the spirit as the functioning of a person's essential being. From this kind of description it is a small step to the use of *spirit* to describe some dominant disposition or attitude. People may possess a lowly or

haughty spirit (Prov. 16:18 – 19), a spirit of jealousy (Num. 5:14), a spirit of slavery (Rom. 8:15), a spirit of stupor (Rom. 11:8), or a spirit of wisdom (Deut. 34:9).

Under the influence of Semitic usage, a phrase such as "spirit of gentleness" (Gal. 6:1 NRSV) may mean "gentle spirit" (cf. 1 Pet. 3:4). As a result, there are times when it is difficult to be sure whether what is being described is a human disposition or instead the Spirit of God that makes that disposition possible. For example, the NRSV translates *pneuma huiothesias* (Rom. 8:15) as "a spirit of adoption," where the NIV has "the Spirit of sonship" (cf. also Eph. 1:17). The Holy Spirit comes to dwell in our spirit and gives us "a spirit of power, of love and of self-discipline" (2 Tim. 1:7).

<div align="right">F. FOULKES</div>

Spirit, Holy. See HOLY SPIRIT.

spirits in prison. This phrase occurs in only one passage: "For Christ died for sins once for all, the righteous for the unrighteous, to bring you to God. He was put to death in the body but made alive by the Spirit, through whom also he went and preached to the spirits in prison who disobeyed long ago when God waited patiently in the days of Noah while the ark was being built" (1 Pet. 3:18 – 20a; it is uncertain whether the phrase *zōopoiētheis de pneumati* is a reference to the HOLY SPIRIT or to Jesus' incorporeal being; if the latter, the rendering would be, "made alive in [his] spirit, in which [state] also he went…"). These verses have proven to be among the most difficult in the whole NT, and at least three major interpretations have been proposed.

(1) The traditional understanding has been that "the spirits in prison" were people from the time of NOAH who had gone to HADES, and that Jesus, after his death but before his resurrection, went to this abode of the dead and preached to them (cf. 1 Pet. 4:6); for a fuller discussion, see DESCENT INTO HADES. Some who hold this view believe that these individuals were given another opportunity to be saved; others insist that Jesus was only proclaiming the victory of the gospel; still others suggest that Jesus was announcing the gospel to people who had already been saved.

(2) Another popular interpretation agrees that the phrase refers to people at the time of the flood, but argues that Peter has in view Noah's own witness to his contemporaries before they died. In other words, the preincarnate Jesus may be said to have preached in the spirit through Noah (for a recent and detailed defense of this view, see J. S. Feinberg in *WTJ* 48 [1986]: 303 – 36).

(3) Most modern scholars believe that Peter's words should be understood against the background of *1 Enoch* (esp. chs. 12 – 16), which speaks of fallen angels who intermarried with human beings in the period before the flood (Gen. 6:1 – 4; see discussion under SONS OF GOD) and whom God imprisoned inside the earth. While some scholars argue that Peter accepted the mythology itself, this is not a necessary inference; he may well have appealed to his reader's familiarity with the story to make a different point. According to this interpretation, Jesus (not necessarily before his resurrection, but possibly as he ascended to heaven) "delivered the final verdict of condemnation to

the spirits…a condemnation previously predicted in the Enoch story. The practical value of Christ's victory over all spirits and all evil is that the forces of evil that opposed God and brought the unjust suffering of Peter's readers were also subjected to Christ's rule" (K. H. Jobes, *1 Peter*, BECNT [2005], 246 [pp. 235 – 51 offer a clear and up-to-date discussion of the various views]; for more extensive treatments, see the monographs by B. Reicke, *The Disobedient Spirits and Christian Baptism: A Study of 1 Pet. iii. 19 and Its Context* [1946], and W. J. Dalton, *Christ's Proclamation to the Spirits: A Study of 1 Peter 3:18 – 4:6* [1965]).

spiritual body. The phrase *sōma pneumatikon* is found only in 1 Cor. 15:44, where it characterizes the resurrection body in contrast to the "natural body" (*sōma psychikon*). According to some, "spiritual" here refers to substance, that is, the immaterial part of the person (see SPIRIT), thus a nonphysical entity. This view is unacceptable for several reasons. (1) The contrast between the adjectives *psychikos G6035* and *pneumatikos G4461* occurs in only one other passage (in this very epistle, 1 Cor. 2:14 – 15), where it cannot possibly refer to a physical/nonphysical distinction. (2) Other biblical passages make clear that the resurrection body will indeed be physical; see RESURRECTION V. (3) In the NT the term *spiritual*, when used of the things of God or of believers, invariably denotes a relation to the HOLY SPIRIT, such as Spirit-given, Spirit-filled, etc. (Rom. 1:11; 7:14; 15:27; 1 Cor. 2:15; 3:1; 9:11; 10:3 – 4; 14:37; Gal. 6:1; Eph. 1:3; 5:19; Col. 1:9; 1 Pet. 2:5). Therefore the resurrection body will be spiritual because it belongs to the realm of the Holy Spirit in a distinctive way: it is his perfect instrument, Spirit-filled in the fullest sense, and endowed with Spirit-given power, holiness, and glory. (See J. A. Schep, *The Nature of the Resurrection Body: A Study of the Biblical Data* [1964], ch. 6; M. J. Harris, *From Grave to Glory: Resurrection in the New Testament* [1990].)

J. A. SCHEP

spiritual gifts. The apostle PAUL uses the noun *charisma G5922* ("favor, something graciously bestowed, gift") in combination with *pneumatikos G4461* ("spiritual") only once, when writing to the Romans: "I long to see you so that I may impart to you some spiritual gift to make you strong" (Rom. 1:11). Elsewhere he uses either of these terms by itself, almost always in the plural (*charismata*, Rom. 12:6 et al.; *pneumatika*, 1 Cor. 12:1 and 14:1), to designate the special endowments that the HOLY SPIRIT bestows on believers for the benefit of the CHURCH as a whole (cf. 1 Cor. 12:4 – 11, esp. v. 7, where the word *phanerōsis G5748*, "manifestation," is used).

In one sense, God's "indescribable gift" is Christ (2 Cor. 9:15); in another sense the greatest gift is the Spirit himself, who is the source of all such gifts (1 Cor. 12:11). A ninefold list of the "gifts of the Spirit" is found in 1 Cor. 12:8 – 10; comparable lists are found in v. 28 of the same chapter as well as in Rom. 12:6 – 8 and Eph. 4:11 – 12. See also MINISTRY.

I. Spiritual gifts in the OT. The OT does not contain comprehensive lists of spiritual gifts as the NT does. The doctrine of the Spirit was only gradually revealed by God to Israel over her long history. In view of this, it is striking that what the NT would call "spiritual gifts" are so often specifically associated in the OT with the coming or presence of the Spirit of Yahweh. This applies equally to ecstatic manifestations (Num. 11:25) and to moral qualities (Gen. 41:38); for since the OT knew of no distinction between "sacred" and "secular," all human excellences are rightly attributed to God (cf. Jas. 1:17).

BEZALEL, for example, was "filled with the Spirit of God, with skill, ability and knowledge in

all kinds of crafts" for the construction of the TABERNACLE and the glorifying of God (Exod. 31:3). Metal work, wood carving, embroidery—all were alike inspired by the Spirit and were his gifts. Similarly, we read that the Spirit of the LORD came upon OTHNIEL to "judge" Israel (Jdg. 3:10) and upon SAMSON to give him strength (14:6). JOSEPH'S prudence is proof of the presence of the Spirit of God (Gen. 41:38), and prophetic activity of whatever kind, throughout the whole of the OT, is seen as the work of the Spirit (1 Sam. 10:6).

To sum up, then, in the OT all "gifts" are thought of as spiritual gifts. It is not that "spiritual gifts" are without moral significance; rather, the doctrine of spiritual gifts is all-comprehensive. Yet it is not unfair to say that, as God's revelation moves forward to its NT climax, there is more stress on those gifts of a moral and spiritual nature, and thus a closer approximation to the NT understanding. Prophecies, such as that of Joel 2:28 – 29, in addition, contain a clear looking forward to the coming "generalization" of spiritual gifts, no longer to be restricted to a few.

II. Spiritual gifts in the Gospels. In the books there is as yet no systematic treatment, perhaps impossible before PENTECOST. Yet there is an advance on the OT position, for such spiritual gifts as are mentioned are more closely associated with a "personalized" Spirit. This is more true of John, with his developed teaching about "the Counselor," than of the Synoptic Gospels; but in both alike, the Spirit and his gifts are associated directly with the MESSIAH. This is equally true from the beginning of the ministry of Christ to the teaching of the final week (cf. Matt. 3:11 with Jn. 16:14).

While there may be no systematic lists in the Gospels, various spiritual gifts are just as evident during the ministry of Jesus as after Pentecost, not only in the person of the Messiah, but also in the life of his disciples. The messianic age has dawned, and these are the signs and wonders associated with its coming, in which the humblest member of the kingdom may participate. Contrast Matt. 11:11 with Jn. 10:41—not even mighty JOHN THE BAPTIST could compare with these humble disciples (unless, as some modern scholars think, the contrast is between John the Baptist and Christ himself).

The picture drawn rests more upon the evidence of the spectacular spiritual gifts (HEALING, MIRACLES, EXORCISM, etc.) and not on the more prosaic gifts. This is not as serious a problem as it appears at first sight. First, both types of gifts come from one and the same Spirit, as Paul makes clear

© Dr. James C. Martin. Holy Land Hotel, Jerusalem. Photographed by permission.

(1 Cor. 12:4); therefore the presence of either should be proof of his presence and activity. Second, it is far easier, in the cursory narrative of the Gospels, to detect the former than it is to detect the latter, although doubtless both were equally present. The OT makes clear that the Spirit was at work long before Pentecost. To judge from passages like Joel 2:28 – 29 and Jn. 1:33, the real change to be expected at Pentecost was that the gifts of the Spirit would be generalized and permanent, not that the Spirit would only then commence his work.

In the Gospels, as later in the N T, the Spirit himself is the greatest "spiritual gift," whether in the synoptics (Lk. 11:13) or the fourth gospel (Jn. 20:22). Within this general framework, not only does the Messiah himself exhibit the gifts of the Spirit in his own life, but he also delegates these powers to his followers. The work of the seventy (or seventy-two) disciples sent out by Christ is a good instance of healing and exorcism done by the disciples (Lk. 10:9, 17). Luke 10:19 may be a further reference to outward signs, although perhaps in the context it should be interpreted only in the spiritual sense.

That sometimes the disciples failed in their attempt to exercise these powers does not show that they did not possess them, but simply that they were lacking in faith (Matt. 17:20). The Gospels, however, make clear that the ability to do such signs does not by itself conclusively prove a right relationship to God (Matt. 7:22). Compare the fact that orthodox Jewish rabbis exorcised demons just as much as the followers of Christ did (Lk. 11:19; cf. Acts 19:13 – 14).

The Lord's promise to his disciples was not only that they would receive the Spirit (Jn. 16:7), but also that, after the Spirit's coming, they would do even "greater works" than the Messiah himself (14:12). This is sufficiently clear anticipation of the post-Pentecostal period, when taken with other scattered references (even if Mk. 16:17 – 18 be rejected as not forming part of the original text of Mark).

III. Spiritual gifts in Acts. Pentecost is primarily an age of new spiritual experience, not an age of theological reflection and analysis. Therefore Acts contains an account of manifestations of spiritual gifts, rather than carefully constructed lists. Again it is easier to trace the presence of spiritual gifts by concentrating mainly on the more spectacular manifestations. However, not all these outward manifestations may find their source in the Holy Spirit, as the book itself makes clear (Acts 8:9; 19:13).

The Day of Pentecost (Acts 2) was particularly marked by the manifestation of glossolalia (see below). It is very well possible that the new gift of "interpretation" also appeared on that day, for PETER's sermon is an "interpretation" in general terms. In addition to tongues and interpretation, 3:1 – 10 shows the exercise of the power of healing. The gift of "discernment of spirits" was exercised by Peter (5:3). PHILIP expelled demons (8:7); Peter raised the dead (9:40). In addition to these specific instances, there are several "blanket" references to "signs and wonders" done by the apostles either individually (e.g., STEPHEN, 6:8) or collectively (e.g., 5:12 – 16).

Most of these spiritual manifestations can be matched in the life of PAUL, in the second half of Acts. Although he is not actually recorded as having spoken with tongues (a gift he certainly had; cf. 1 Cor. 14:18), Paul raised the dead (20:9 – 12), cast out demons (16:18), had the power of healing (14:10), and was bitten by a snake without suffering ill effects (28:5). Paul also showed discernment of spirits (13:9 – 10).

There is another spiritual gift mentioned in Acts: that of "prophecy" (see PROPHETS AND

PROPHECY). Whatever is meant by this in the Pauline epistles, in Acts at least it certainly included a predictive element, like that in OT prophecy. It occurs in early and late chapters alike. One prophet mentioned by name is AGABUS, who predicted a famine (Acts 11:28) and Paul's imprisonment (21:11). Paul's statement to the elders of EPHESUS that the Holy Spirit had warned him about impending suffering (20:23) probably refers to many anonymous local prophets of the same type, among whom perhaps were the elders of ANTIOCH OF SYRIA (13:1) and Philip's daughters (21:9). No doubt, in the church described in the early chapters of Acts there also existed many other spiritual gifts of a less spectacular nature. Gifts of generosity are seen (4:34 – 37; cf. Rom. 12:8). Gifts of wisdom and utterance were obvious (Acts 4:13; 6:10). Gifts of ruling and administration were demonstrated in the appointment of the Seven (6:1 – 6); the gift of LOVE—to Paul, the greatest of all gifts—is seen everywhere in the Acts narrative, but perhaps 4:34 – 37 is the most clear example.

IV. Spiritual gifts in the Pauline epistles. In the epistles of Paul the reader at once feels on familiar ground; the world of Paul was like the world of today in many respects. Yet these epistles are not chronologically later than the latter half of Acts, which follows closely the Jewish-Christian world of the first twelve chapters. Even the various phenomena do not seem to have been very different in themselves: the difference is that they are now seen through the eyes of Paul rather than through the eyes of the Jerusalem church.

Luke seems here, as usual, to have consciously adopted the viewpoint of his Jerusalem sources and informants. In the Pauline epistles there is an analysis of the various phenomena by a keen, if sympathetic, theological observer. It is clear, for example, that a list of spiritual gifts—indeed a virtual classification and evaluation—like that of 1 Cor. 12:4 – 11 is not only the result of revelation, but also the fruit of long and careful reflection.

Paul began by emphasizing the essential unity of all spiritual gifts, in the will and purpose of the Triune God (1 Cor. 12:4 – 6). There is a unity of source and origin, but also a unity of goal; that is, although the gifts are individual, the purpose is collective (all are "for the common good," v. 7). Paul added a higher bond of unity, for all such gifts are to be used in love (ch. 13). This would at once remove all pride, all self-advertisement, all rivalry, and all selfishness, in the use of spiritual gifts.

Once the principle of basic unity of testimony and goal was established, Paul stressed the diversity of the gifts of the Spirit. The "message [NRSV, utterance] of wisdom," which he placed first (1 Cor. 12:8), quite clearly refers to some type of PREACHING or teaching, presumably within the church, if this gift is "for the common good." Perhaps the same charisma is mentioned in 14:19. If so, the gift would correspond to TEACHERS in the parallel list in 12:28 (cf. BARNABAS, "Son of Encouragement," Acts 4:36). The next gift is FAITH (1 Cor. 12:9), perhaps evidenced in answered PRAYER, or even by signs or wonders performed (Matt. 21:18 – 22). Next come gifts of healing and working of miracles; Paul could not have appealed to them so confidently had such miracles not been common in CORINTH. See HEALING, GIFTS OF.

Prophecy (1 Cor. 12:10) is a gift that may well have two meanings in Paul; the predictive element undoubtedly existed in the primitive church (see above, section III), but there is no explicit reference to this aspect in the extant Pauline epistles. It seems, therefore, that Paul refers to prophecy as the ability to bring the "word of the Lord" in any given situation. Perhaps this corresponds with forceful Spirit-filled preaching, as distinct from teaching, a different gift of the same Spirit. "Prophets" are clearly distinct from "teachers" (12:29), but they are frequently associated in terms which suggest that the difference is not great (at Antioch, Acts 13:1, the same group seems to combine both functions). Prophecy builds up the church (1 Cor. 14:4). Unlike the gift of tongues, it is

immediately understandable by all (14:24), even by the non-Christian. Perhaps this is why Paul gave "prophecy" such a high priority among spiritual gifts (14:1).

The ability to "distinguish between spirits" (1 Cor. 12:10) was doubtless all the more necessary in a charismatic age, when forms of worship and ministry were still fluid, and creeds or other tests of orthodoxy still embryonic. It was essential that believers should be able to tell whether the claimed "inspiration" was from God or from a Satanic source. Paul laid down the simple yardstick of the testimony born to Christ (12:1 – 3).

The final gifts mentioned in 1 Cor. 12:10 are "different kinds of tongues" and "interpretation of tongues" (see TONGUES, GIFT OF). Paul accepted these heartily as spiritual gifts; indeed he excelled in tongues himself, though he valued interpretation more highly (14:18). He placed them deliberately at the bottom of the list (12:28 – 30). Tongues are valueless if devoid of love (13:1). The gift of tongues is primarily directed to God, not to fellow believers (14:2); it edifies the individual, not the whole church (14:4). It may even be mistaken by the outsider for madness (14:23). None of these objections hold if it is exercised in love and humility, for the good of the whole, in an orderly way (14:29), to a limited extent (14:27), and with "interpretation" that gives a rational content to the message (14:5). Otherwise, Paul counsels the possessor of this gift (not a universal gift, 12:30, nor associated by Paul with any "higher level" of Christian experience) to remain silent in the church, though he may "speak to himself and to God" as much as he likes (14:28; cf. Rom. 14:22).

While there are some differences in the other lists of gifts (Rom. 12:6 – 8; Eph. 4:11 – 12), the general pattern is recognizably the same.

spiritual songs. See MUSIC, MUSICAL INSTRUMENTS III.B.

spit. In the OT the action of spitting (Heb. *yāraq H3762* and *rāqaq H8394*) usually indicates a purposeful deed with an added notion of ritual defilement or legal rejection (Lev. 15:8; Num. 12:14; Deut. 25:9). The nominal form of this term (*rōq H8371*, "spittle") has a similar nuance (Job 30:10; Isa. 50:6; in Job 7:19, however, the idiom "until I swallow my spittle" indicates a period of very short duration). The notion of defilement or rejection occurs also in the accounts of Christ's PASSION (Matt. 26:67; 27:30; Mk. 10:34; 14:65; 15:19; Lk. 18:32); in these passages the compound form *emptyō G1870* is used. The simple verb *ptyō G4772* occurs in connection with several healing accounts (Mk. 7:33; 8:23; Jn. 9:6). In addition, modern English versions usually have "spit" as the

rendering of *emeō G1840* in Rev. 3:16, but this verb properly means "to vomit."

spoil(s). This noun is used very frequently by the KJV to render as many as nine different Hebrew nominal forms, the most common of which is *šālāl H8965* (Gen. 49:27 et al.). The NIV, which uses "spoil" relatively few times (usually in the pl., e.g., Exod. 15:9), prefers the translation "plunder." Another important Hebrew word is *baz H1020*, which occurs a couple of dozen times, about half of them in Ezekiel (e.g., Ezek. 7:21; cf. *bizzâ H1023*, 2 Chr. 14:14 et al., and the verb *bāzaz H1024*, Gen. 34:27 et al.); less frequent are *malqôaḥ H4917* (Num. 31:11 – 12 et al.) and *měšissâ H5468* (2 Ki. 21:14 et al.; cf. the verbs *šāsâ H9115*, 1 Sam. 14:48 et al., and *šāsas H9116*, Jdg. 2:14 et al.). The NT uses Greek *akrothinion G215* (Heb. 7:4), *harpagē G771* (Heb. 10:34; cf. the verb *diarpazō G1395*, Matt. 12:29; Mk. 3:27), and *skylon G5036* (Lk. 11:22).

In ancient times, the victor assumed the privilege to seize anything that could be carried away (Gen. 14:11; 2 Chr. 20:25), including women and children (Deut. 20:14). Also seized were cattle (Deut. 2:35; 1 Sam. 14:32; 2 Chr. 15:11; Jer. 49:32), clothing (Josh. 7:21; Jdg. 5:30; 2 Chr. 20:25; 28:15), and precious metals (Josh. 7:21; Jdg. 8:24, 25).

When Israel returned from the victory over the Midiantites (see MIDIAN), they brought the spoils to MOSES and ELEAZAR for distribution (Num. 31). All the male children were killed, and of the women, only the virgins were kept alive. The spoil was then divided into two parts, one part to be equally distributed among the warriors and the other to the people at large. For the Lord's tribute the warriors were to give up one person or beast out of every five hundred; the people, one out of every fifty. In addition, they brought the Lord articles of gold, armlets, bracelets, signet rings, earrings, and beads.

The choice plunder was devoted to the deity; for example, GOLIATH's sword was housed at the sanctuary at NOB (1 Sam. 21:9), while the armor of defeated SAUL was placed by the PHILISTINES in their temple of ASHTAROTH (31:9 – 10). Later, some of the spoil won in battle was "dedicated for the repair of the temple of the LORD" (1 Chr. 26:27). Sometimes, prior to an assault, a city or tribe might be "devoted" to God (see BAN), which meant that everything animate was to be destroyed, all precious metals and objects given to God, and the remainder burned or rendered useless (Josh. 6:17 – 19). (See further J. Pedersen, *Israel: Its Life and Culture*, 2 vols. [1926 – 40], 2:1 – 32; R. de Vaux, *Ancient Israel* [1961], 255 – 57.)

L. L. WALKER

sponge. The only occurrences of this term (Gk. *spongos*, *G5074*) concern the drink of VINEGAR given to the Lord on the cross (Matt. 27:48; Mk. 15:36; Jn. 19:29). Sponges (phylum *Porifera*) are lowly marine animals whose horny skeletons have been used for a variety of domestic purposes since very early times.

spying. The Hebrew verb *rāgal H8078* in the piel stem has the meaning "to scout, explore, spy out"

(Num. 21:32 et al.), and the participle of this verb is commonly used with reference to spies (Gen. 42:9 et al.). Two other verbs that have a similar meaning are *tûr H9365* (e.g., Num. 13:2) and, less frequently, *hāpar H2916* (Deut. 1:22; Josh. 2:2 – 3). The NT uses two Greek nouns, *enkathetos G1588* (Lk. 20:20 – 21) and *kataskopos G2946* (Heb. 11:31), as well as the verb *kataskopeō G2945* (Gal. 2:4).

Spies and spying have always been necessary in WAR in order to discover the weakness of the enemy. In Gen. 42 JOSEPH accuses his brothers of being spies whose object was to discover the weaknesses of Egypt. MOSES sent twelve spies into the land of Canaan to determine its strengths and weaknesses and to see how productive the land was (Num. 13). When they returned with a divided report, Israel accepted the majority report and was forced to postpone conquest of the land for forty years. During this time Moses sent spies to JAZER, a fortified AMORITE city in GILEAD, and then captured the city (21:32).

Forty years later, during the conquest, whenever the capture of a town is related in detail, spies always precede the capture. In the case of JERICHO, JOSHUA sent two spies (Josh. 2 – 6). From Jericho an unspecified number of spies were sent to AI (chs. 7 – 8). Later the tribes of Joseph took BETHEL after spies had discovered from a traitor an entrance to the city (Jdg. 1:23 – 25). DAVID used spies to keep track of SAUL's movements (1 Sam. 26:4). Finally, the emissaries David sent to the Ammonites were assumed to be spies by the Ammonites and were treated accordingly (2 Sam. 10:3; 1 Chr. 19:3). (See R. de Vaux, *Ancient Israel* [1965], 213 – 40.)

In the N T, spies are alluded to twice. The scribes and chief priests sent spies to Jesus (Lk. 20:20 – 21; Gk. *enkathetos G1588*), and RAHAB is commended for welcoming the Israelite spies (Heb. 11:31; Gk. *kataskopos G2946*; cf. Jas. 2:25, which uses the word *angelos G34*, "messenger"). In addition, the apostle PAUL accuses the JUDAIZERS of spying out Christian freedom (Gal. 2:4; verb *kataskopeō G2945*).

J. C. MOYER

squad. This English term, referring to a small military group, is used in modern Bible versions to render Greek *tetradion G5482*, which occurs once with reference to the detachments assigned by Herod Agrippa to guard PETER as a prisoner (Acts 12:4; see HEROD VII). The Greek term, meaning "foursome," corresponds to Latin *quaterni* (thus KJV, "quaternions"), indicating a detachment of four soldiers; Peter was assigned four such groups, one for each watch of the night (thus NIV, "four squads of four soldiers each"). In the Acts account the disposition of the squad is given. Peter was sleeping chained to two soldiers (12:6) while the other two stood guard at the doors where Peter and the angel passed them on leaving (v. 10).

stable. See HORSE; MEGIDDO; STALL.

Stachys stay′kis (Στάχυς *G5093*, "head of grain"). A Christian in ROME to whom PAUL sent greetings, calling him "my beloved" (Rom. 16:9; NIV, "my dear friend," Gk. *agapētos G28*). Because relatively few inscriptions in the city of Rome attest the name Stachys, some have inferred that he had been a close acquaintance of the apostle in the eastern parts of the empire and that subsequently he had migrated to the capital. (For a discussion of the names in Rom. 16, see P. Lampe in *The Romans Debate*, ed. K. P. Donfried, rev. ed. [1991], 216 – 30.)

stacte stak′tee. This English term, found in the KJV and other versions at Exod. 30:34 (also in the

NRSV at Sir. 24:15), is a transliteration of Greek *staktē* ("oil of myrrh," from *stazō*, "to drip"), used by the Septuagint to render Hebrew *nātāp H5753* in that verse. The spice in question was one of the fragrant ingredients used to produce incense. The precise meaning of the Hebrew term is uncertain, but it evidently refers to "drops" (cf. the verb *nātap H5752*, "to secrete, drip") flowing from some aromatic plant, such as *Commiphora opobalsamum* or *Pistacia lentiscus* (cf. *FFB*, 147, 178; *HALOT*, 2:694 – 95). Another possibility is *Styrax officinalis*, a small tree found throughout Palestine that bears snowdrop-shaped, pendulous pure white flowers; if an incision is made in the bark, the fragrant resin is easily obtained. The NIV, appropriately, uses a generic rendering, "gum resin." See also flora (under *Burseraceae*, *Cistaceae*, and *Anacardiaceae*); gum; myrrh.

staff. See rod.

stair. In the ANE, one-story houses might have a stair outside, usually of stone and without a railing. Two-story houses had the stair frequently inside, but with an exterior stair from balcony to roof. To provide access to deep wells, steps were cut into

Staircase leading up to a defensive tower at Beersheba.

the sides, examples of which have been found in Gibeon, Gezer, Megiddo, and Beth Zur.

A common Hebrew word that can be translated "stairs" or "steps" is *ma(ălâ H5092* (more generally meaning "ascent"). It is used, for example, of the six steps that were part of the throne of King Solomon (1 Ki. 10:19 – 20), and of a stairway that went down from the City of David (Neh. 3:15; 12:37). The latter, which has been excavated, descended about 35 ft. to the end of the hill S of the temple area near the Fountain Gate (see *ABD*, 6:183 – 84). The term *lûl H4294* occurs only once (1 Ki. 6:8), where it probably refers to a winding stairway (so LXX, *heliktē anabasis*) connecting two levels of the temple; some suggest that the word indicates a "trapdoor" (see discussion in M. Cogan, *1 Kings*, AB 10 [2001], 240).

The "stairway" or "ladder" that JACOB saw in his dream (Gen. 28:12; Heb. *sullām H6150*) may have been a ramp of rising stones. (On 2 Ki. 20:11=Isa. 38:8, see DIAL.) In the NT, Greek *anabathmos G325* is used of the steps from which PAUL addressed the mob in Jerusalem (Acts 20:35, 40); the reference is to a stairway that led from the temple area to the ANTONIA fortress.
H. G. STIGERS

stall. The Hebrew term,)*urwâ H774* is used of the thousands of stalls that SOLOMON built for securing his CHARIOTS and HORSES (1 Ki. 4:26 = 2 Chr. 9:25; in the former passage the number "forty" instead of "four" is probably a textual corruption). Reference is made also to the "stalls for various kinds of cattle, and pens for the flocks" in the time of HEZEKIAH (2 Chr. 32:28). In two-story homes, CATTLE were usually housed in the ground level where there were stalls and MANGERS. The stables of MEGIDDO were arranged on either side of an aisle, each stall separated by posts and provided with a manger, paved with cobblestones. Tying holes occurred in the manger posts. The large number of stalls there (450 of them distributed in two separate buildings) indicates a large traffic in horse trading. Stables from approximately the same era are found at Tell el-Hesi (c. 16 mi. NE of GAZA), GEZER, TAANACH, and HAZOR.

Another Hebrew noun meaning "stall" is *repet H8348*, which occurs only once (Hab. 3:17). The term *marbēq H5272* is usually rendered "stall" in two passages (Amos 6:4; Mal. 4:2), but the connotation is "stall-fed," that is, "fattened" (thus 1 Sam. 28:24; Jer. 46:21). Similarly, the KJV "stalled" in Prov. 15:17 should be rendered "fattened" (pass. ptc. of,)*ābas H80*; cf. 1 Ki. 4:23 [Heb. 5:3]). In the N T, "stall" or "manger" translates Greek *phatnē G5764* (Lk. 13:15).

standard. See BANNER.

star. See ASTRONOMY.

star, day (morning). See MORNING STAR.

Star of Bethlehem. The narrative concerning the star that led the MAGI to the abode of the Christ child is found only in Matt. 2:1 – 12. The story is short and direct, the "wise men" being identified only as "from the east," and their sign as an *aster G843* (four times, vv. 2, 7, 9, 10). The immediate reaction of HEROD and his courtiers to search the OT prophets for further information about the promised child-king indicates that it was from that source that the Magi had derived their information. However, the specific passages are not mentioned or cited (Matthew quotes Mic. 5:2 because it was that text the courtiers used in answering Herod).

The only plausible texts that could have been known are those dealing with a star and the birth of Israel's king (Num. 24:17 and Isa. 60:3). In the narrative in Numbers the strange character BALAAM son of Beor is cursing Israel at the invitation and under the employment of BALAK king of MOAB. This soothsayer performs the customary offices of the type of incantation priest known in the Mesopotamian literature as a *bārû(m)* (in fact, it has been suggested by some that the phrase "son of Beor" may actually mean, "member-of-*bārû*," that is, a title of identification with that group of

soothsayers). One aspect of *bārû*-practice, called *barûtu*, was to make up poems and imprecations involving the twisting of the names and titles of the enemy. The OT prophets do this frequently with the names of the pagan gods.

The central text in the curse-blessing of Balaam is Num. 24:17, which describes a future time, "the latter days" (v. 14; NIV, "days to come"), a phrase understood in the OT to mean the time of Israel's MESSIAH. At this time a person described as a "star" was to step forth from out of the people of Jacob. The parallel in the last half of v. 17 identifies the "star" as a "scepter," and so two standard symbols of the ANE world are brought to bear on the personage to appear. In CUNEIFORM literature, a sign that is read *dingir* and represents the simple configuration of a star is the determinative put before the name of a god to properly mark divinity. Some of the very ancient Akkadian kings who were later considered divine were so introduced.

The scene of this prophecy is most important as it accords well with ANE practice. The soothsayer was standing on a hill, PEOR (Num. 23:28), and looking out over the encampment of Israel. It was understood by all ancient ASTROLOGY that the events of the macrocosmic sky were predictive of subsequent events in the same quadrant of the microcosmic earth. Therefore Balaam was looking at the sky above Israel when he made his prediction on the basis of the astrological signs. In God's providence the nonsense of astrology was turned to a true prophetic vision. The elaborate poetic statements of Balaam, which preserve some of the oldest Hebrew in the OT, were undoubtedly literary efforts. It was on the basis of such texts that later predictions were made, as can be easily seen in the Jewish mystical and astrological works such as the Kabbalah.

The Neobabylonian records of the Persian period show a great deal of mystical and futuristic interest. In addition, it is known that such astrological data as the ephemerides (location tables) of the planets and the conditions of the moon's glow were studied. Reports of the findings were recorded and passed to the royal officers in charge. The collections of these texts have been invaluable in reconstructing the chronology and planetary configurations at the time they were inscribed. Although the goals of their efforts were speculative and superstitious, the methods employed were often amazingly accurate. It was probably the use of these various written materials that brought the wise men from the east.

The actual appearance of the star that guided the magicians is a difficult problem. In the rationalistic age of the 18th cent., the negative higher critical schools of the European universities attempted to find cause and effect for such inexplicable events in Scripture in some natural process. The result was that three common theories of the star arose. In the various books on the subject and many popular planetarium displays, one of the three reconstructions is presented. The most popular is that an unidentified comet passed by and was clearly visible both night and day, which would account for its apparent movement. The older theory is that a supernova occurred, and that its spectacular brilliance was seen by the astrologers. This thesis is often supported by some possible sightings of such phenomena from antiquity. The oldest reconstruction found in 17th-cent. rationalist commentators is that several planets converged with a bright star under optimum conditions of observation. (For further discussion see ASTRONOMY III.)

A more acceptable alternative seems to be that God provided a source of light that cannot now be determined, and that the wise men saw and interpreted it on the basis of the ancient texts at their disposal. The time of the Magi's visit is not given in the gospel narratives but is inferred in the fact that King Herod ordered the deaths of all children up to two years of age. This means that the age of Jesus was not known to Herod and that some time had elapsed since his birth. The casual assumption that the visit of the wise men was made on the night of our Lord's birth and that it was at the same

time as the shepherds' adoration is unsupported by the text. There is also no support for the notion that the shepherds ever saw the star.

The classical commentators often tied in the passage in Isa. 60:3, "Nations will come to your light, / and kings to the brightness of your dawn." Although this statement could apply to Christ in a general sense, the additional reference to people coming "bearing gold and incense" (v. 6) suggests strongly that at least one aspect of the prophecy has to do with the presentation of the Magi.

The notion that the Magi were kings of oriental countries became very popular in the medieval period, and the adoration of the Magi was a popular theme in Renaissance art as far back as the Florentine school. Giotto (1267 – 1337) painted such a scene in the Arena Chapel showing the Magi in kingly garb. Many countries have made the Magi into an elaborate part of the popular mythology of Christmas by taking them out of the Bible chronicle and adding all manner of tales gathered from the folk legends of their people. The story is often glossed by unaccountable details. The common assumption in Western folklore that there were three is probably gathered from some non-Christian source, possibly the stories of the three pagan Norns of Norse Yule festivities, and/or from the fact that three gifts are mentioned by Matthew (Matt. 2:11). While the Roman churches of the W expanded the mass of the incarnation and further added the growing cult of Mary, the Eastern or Greek rite churches did little to elaborate the story of the wise men as given in the Scripture. The star plays little part in the Orthodox art and literature.

The question concerning the purpose of the star is directly answered in the text: " We saw his star in the east [NRSV, at its rising] and have come to worship him" (Matt. 2:2). The purpose of the star was to authenticate and publicize the INCARNATION, and to draw men and women to worship the celestial king. The many speculations about the aspects of the star and the frequent searches for a mechanistic explanation violate the very purpose of the gospel narrative. This is not to say that the gospel is not trustworthy in descriptions of phenomena. It does acknowledge that the evangelist sets forth the event in naive-theoretical language without intent to declare in any way a law of astronomy or erect a mathematical model. On the other hand, the tragic mistake so often made in dealing with such short and unique events in Scripture is to make them dramatic and colossal, to magnify them out of all proportion to the scale of the little agricultural populations of the ANE with their relatively humble worldviews. Although the Roman world of Palestine was so much smaller and so much simpler than later centuries, it was into that time and place that God was pleased to send his Son. In considering this momentous event it is necessary to keep the birth of the Messiah uppermost in consideration and to repress any intrusion of nonbiblical emphasis.

W. WHITE, JR.

state. See GOVERNMENT.

stature. This English term, usually referring to a person's height, occurs seventeen times in the KJV, but seldom in modern versions, which prefer "size" or other expressions (e.g., Num. 13:32, where the Heb. word is *middâ H4500*). In the NT the meaning "stature" is conveyed by Greek *hēlikia G2461*, and this meaning is clear in Lk. 19:3, where ZACCHAEUS is described as being a short person. The Greek word, however, often has the sense "age" (see esp. Jn. 9:21, 23; Heb. 11:11), which produces some ambiguity in several passages.

For example, when Luke describes the boy Jesus as having grown in wisdom and *hēlikia* (Lk. 2:52), is he referring to Jesus' physical size or to his age (cf. NRSV, "increased in wisdom and in years") or to his maturity? In the SERMON ON THE MOUNT Jesus asked the rhetorical question, "Which

of you by taking thought can add one cubit unto his stature?" (Matt. 6:27 KJV; cf. Lk. 12:25). Some interpreters, understanding the word for "cubit" (Gk. *pēchys G4388*) figuratively of a small measure of time, translate, "Who of you by worrying can add a single hour to his life?" (so NIV; similarly, NRSV). The transition between these two senses of the word may be illustrated by Eph. 4:13, where PAUL speaks of believers attaining "the measure of the full stature of Christ" (NRSV). Even this literal rendering is understandable to an English reader, who naturally interprets *stature* (physical height) in the figurative sense of "maturity."

statute. See ORDINANCE.

staves. A form used by the KJV consistently as the plural of *staff*. See ROD.

steadfast. This adjective and its cognates (which the KJV spells *stedfast, stedfastly, stedfastness*) indicate firmness, determination, loyalty; they are used variously to render several Hebrew and Greek terms. The adverb is used a number of times in the KJV to translate verbs that have an intensive meaning, such as Greek *atenizō G867* (as in Acts 1:10, "they looked stedfastly toward heaven"; NIV, "They were looking intently up into the sky"). In the NIV the adjective occurs relatively few times, especially to render Hebrew *nakôn* (niphal ptc. of *kûn H3922*, "to be firm," Ps. 51:10 et al.). The

Basalt stela from the late Hittite period (Maras, 9th cent. B.C.) depicting a banquet scene.

NRSV, however, uses the phrase "steadfast love" with great frequency as the translation of the noun ḥ*esed H2876* (Gen. 24:12 et al.); see discussion under LOVINGKINDNESS. See also FAITH, FAITHFULNESS; PATIENCE.

stealing. See CRIMES AND PUNISHMENTS.

stedfast. KJV form of STEADFAST.

steel. See METALS AND METALLURGY.

steer. See CATTLE III.

stela, stele. A stone slab (Lat. *stela*, Gk. *stēlē*), usually oblong, not forming part of a structure but set up in a vertical position, used for votive purposes or as a memorial to some person or event. Upon these slabs were carved INSCRIPTIONS often accompanied by ornamental designs or reliefs of particular significance. Such stelae have been found throughout Mesopotamia, Syria, Egypt, Asia Minor, and the Greco-Roman world. Some of them have important connections with events narrated in the Bible. The stela was essentially of a secular character even though it may have been erected at a sanctuary and have had religious images carved on it. No Israelite stela has ever been discovered, although such a MONUMENT may be indicated by *yād H3338* in 1 Sam. 15:12 (cf. 2 Sam. 18:18). See also PILLAR.

<div align="right">L. L. WALKER</div>

Stephanas stef'uh-nuhs (Στεφανᾶς *G5107*, "crown"). A Corinthian Christian who, with his household, was one of the few persons baptized personally by the apostle PAUL in CORINTH (1 Cor. 1:16). While he heartily endorsed baptism, PAUL is thankful that he did not baptize more than these lest a divisive and "superior" Pauline party develop in the church (vv. 10 – 15).

The household of Stephanas were the FIRST-FRUITS of the gospel in ACHAIA (1 Cor. 16:15 – 16; although individuals had earlier been converted in ATHENS [Acts 17:34], this family must have been the foundation for the first Christian community in the region). Paul commends them for devoted "service"—which probably included both Christian teaching and hospitality—to God's people and urges the Corinthian believers to be subject to such leaders. This instruction suggests that the Corinthians had failed to show proper esteem to Stephanas and his family.

Finally, Paul states that he rejoiced and that his spirit was lifted by the visit of Stephanas, FORTU-NATUS, and ACHAICUS while he was in EPHESUS, and asked that recognition be given them (1 Cor. 16:17 – 18). These three men are said to "have supplied what was lacking from" the Corinthians. Most interpreters understand this comment to mean that the apostle missed the company of the Corinthian church as a whole and that the visit from these representatives served to relieve his sadness.

<div align="right">A. M. ROSS</div>

Stephen stee'vuhn (Στέφανος *G5108*, "crown"). Hellenistic Christian apologist and first Christian MARTYR.

I. His background. All that is known of Stephen is recorded in Acts 6:5—8:2 (with incidental references in 11:19 and 22:20). His name and associations indicate that he was a Hellenistic (i.e., Greek-speaking) Jew. See HELLENISM. No account is given of his conversion or of his coming into the Christian fellowship. Though there is an obscure tradition that he was one of the SEVENTY DISCIPLES (Lk. 10:1; NIV, "seventy-two"), it is quite possible that he had not been a personal disciple of Jesus

at all. He may likely have been reached by the early preaching of the apostles in Jerusalem.

The significance of the Hellenists is seen first in their numbers. It is remarkable that so soon after the resurrection of Jesus there should have been need for seven leaders to be in charge of the distribution of relief to the widows of the Greek-speaking Jews alone. This probably indicates the presence of hundreds or even thousands of Christians in Jerusalem whose native tongue was Greek. See GREEK LANGUAGE. Another surprise is the early transformation of the church from a Jewish movement to a fellowship composed almost exclusively of Gentiles. It goes almost without saying that the Hellenists had a crucial part in this transition. This development required a different leadership from that provided by the twelve apostles. Jews and Gentiles were separated by the major barriers of race, geography, and language. Hellenistic Jews, many of whom had lived outside of Palestine, had overcome part of the barriers and had learned to live with Gentiles. When converted, they readily adapted the message to a Greek context and held it in readiness when the Spirit of God moved the church to broaden its witness to the Gentiles. Stephen's insights were a significant contribution in this direction.

II. His work. Stephen's qualifications and leadership were of such a nature that some commentators find it hard to believe that he ever really "served tables." He is named first in the list of the Seven in Acts 6:5 (see DEACON III). He was "full of God's grace and power" (v. 8). He worked miracles (v. 8) and spoke with wisdom and spiritual power (v. 10). The Seven were appointed to the specific task of caring for the needs of the widows of the Hellenists in the daily distributions of food (vv. 1 – 3). Though no specific mention is made of their discharging this duty, it can be assumed that they did so with efficiency. At any rate, the church grew (v. 7).

It is quite possible that a more fundamental problem than a supposed discrimination in the handling of food caused the discontent. It may have been the lack of adequate Hellenistic representation on the administrative level of the church. With numbers approaching those of the Hebrew-speaking or Aramaic-speaking Jews, and with strong feelings of loyalty to their group, they likely wanted a commensurate voice. It does not follow that Stephen and the Seven were to devote all their time to "serving tables" for the Hellenists, any more than the apostles had served the others. They were administratively responsible to see that the work was done. Then they were freely to follow the ministry of the Word as the HOLY SPIRIT motivated and enabled them. In this latter capacity, Stephen, at least, excelled.

III. His beliefs. According to the report in Acts 6:13 – 14, Stephen was understood to speak against the temple and the law. This serious charge reflects, at the least, that he held a viewpoint somewhat different from that of the thoroughly conservative Jews. The charge was brought by Hellenistic Jews who had probably moved back to Jerusalem because they considered their ancestral faith the one thing worth living for. They would be bitter in their opposition against anything that seemed to undermine their traditional faith.

It is not necessary to believe that Stephen had gone so far as PAUL in concluding that the law was no longer the final, binding code that he had formerly thought it to be. He had, no doubt, discovered the inadequacy of a mere formalism and ceremonialism in the temple worship. Perhaps Christ's own words regarding the TEMPLE (Jn. 4:20 – 24; Mk. 13:2) had shown him that true WORSHIP of God is not confined to the temple. He may also have seen in the words of Jesus the transitory nature of the law. Jesus had defended laxity in matters of tradition and had supported a freer attitude toward SABBATH observance (Mk. 2:15 – 16; 7:1 – 27; Lk. 15:1 – 2). He had granted consideration to Gentiles (Matt.

8:5 – 13; Mk. 7:24 – 30). He had even superseded the law on rare occasions (Matt. 5:33 – 37; Mk. 10:2 – 12). Jesus had recruited most of his followers from the common people who "listened to him with delight" (Mk. 12:37). It is clear that the observance of legal minutiae was not an absorbing concern with many of these people. Jesus was frequently criticized for allowing laxity.

The record of Jesus' freer tendency in these matters must have been preserved by the immediate followers of Jesus. As F. Filson suggests (*Pioneers of the Primitive Church* [1940], 66), many of the followers were so much in the grip of ancestral tradition that they gradually drew back into an attitude of 100 percent Jewishness and thus lost a basic feature of the attitude of Jesus. Stephen, with his broad background in the DIASPORA, maintained this important aspect of Jesus' message and held open the way for the future advance into Gentile evangelism. While he appears not to have evangelized Gentiles, his thought and his sources in the words of Jesus prepared the way for Paul. There is, indeed, also a remarkable parallel between the approach and method in Stephen's defense and that of certain of Paul's sermons (Acts 7:2 – 53 and 13:16 – 41).

IV. His arrest. The greater recognition of the Hellenists was followed by remarkable growth and success in the church. But progress also brought trouble. Stephen did not hesitate to preach his views in the Hellenistic synagogues. Naturally, others arose and disputed him. Stephen won the debate. They could not resist his superior understanding and convincing knowledge. Nor could they match the deep earnestness and spiritual insight with which he spoke (Acts 6:10). Worsted in debate, the synagogue Jews did not lose the upper hand. They circulated among the people between the public services, misrepresented Stephen's views, aroused suspicion and fears concerning his alleged "heresy" and "blasphemy," and set a trap for him. They seized Stephen and brought him before the assembled SANHEDRIN, introduced prearranged false witnesses, and charged him with BLASPHEMY (vv. 12 – 14).

The accusation included two charges: one against his person, a charge of blasphemous words against Moses that would make him a blasphemer against God, and another against his teaching, charging him with radical and revolutionary statements concerning the temple and the law. These charges are strikingly parallel to those leveled against Jesus (Matt. 26:65; Mk. 14:58; 13:2; 15:29). Stephen was accused of implied approval of the destruction of the temple and the change of the law. Christianity, so taught, was understood as threatening the overthrow of the Jews' religion and the very termination of their national existence.

V. His defense. The charge against Stephen's person was baseless except as one would pervert his words. But there was an element of truth in the charge against his teaching. The GOSPEL of Christ was sufficiently revolutionary to be a threat to the dead formalism and ceremonialism by which the temple worship was perpetuated. Having discovered reality, Stephen could never go back to the types and shadows. He was defending more than opinions or even convictions. He rested in a vital relationship with a Person. In the simplicity and confidence of that trust, he had no anxiety. The inner light broke out upon him until even his face was like that of an angel (Acts 6:15).

His response, then, was not primarily a self-defense but a defense of the gospel. He was more interested in effective witness to the truth than he was in living. If they accepted the truth of the gospel, he would, of course, survive. If not, his trust was still in Jesus.

The fundamental difference between Stephen and his opponents lay in that he judged the OT history from the prophetic viewpoint while they

According to tradition, Stephen was stoned to death at a rocky outcrop N of the temple (depicted in this model of Jerusalem).

represented the legalistic view. To him, Jesus was the natural historical outcome of the OT revelation. The revelation of God and the development of the nation did not coincide. Stephen was not antinomian nor anti-Mosaic, but the Jewish nation was obstinate. From the early leaders down to the present council, they disobeyed God and his revelation. The new religion was only the divinely ordered development of the old. The real blasphemers were the disobedient Jews who rejected the revelation and killed Jesus.

Stephen made the point that God had never bound himself to one sanctuary or to one person, such as MOSES. God's self-manifestation began long before Moses or the temple. And Moses himself testified that it would not conclude with him. Another was to come. The Hebrews resisted Moses, killed the prophets, and continued in a largely unregenerate state to that very hour.

VI. His martyrdom. The council answered Stephen's countercharge with rage. Stephen gazed into heaven and uttered his memorable testimony in behalf of Christ. When he declared that through the opened heavens he saw Jesus on the right hand of God (Acts 7:56), the council broke loose, forgetting the formality of pronouncing sentence. They stoned him as a blasphemer uncondemned (Deut. 17:7; Lev. 24:14 – 16). Certain legal forms were observed to give the violence the appearance of legality, however.

The effect of Stephen's death was tremendous. The persecution that followed scattered the church and threatened loss, but the vigor of the believers' witness soon turned potential defeat into victory and growth. One cannot resist the impression that Stephen's noble witness and spirit lay behind the growth of the church and the eventual conversion of Saul. As Augustine said, "Si Stephanus non orasset, ecclesia Paulum non habuisset"—If Stephen had not prayed, the church would not have had Paul.

W. T. DAYTON

Stephen, Revelation of. An apocryphal apocalypse mentioned by some of the post-Nicene apologetes as a text popular among the MANICHEAN heretics. No known text of the work is now extant; however, it has been often assumed that it was a recitation or narrative about the reappearance of STEPHEN, the first Christian martyr. A somewhat similar tale is known from several versions. The older is that related by a Christian priest, Lucian (c. A.D. 400), who lived in a town near Jerusalem. He is supposed to have had three visitations of Gamaliel that led to the discovery of the bodies of Stephen, Nicodemus, and Gamaliel. A number of translations have been made of the extant fragments of this work (*ANF*, 8:575 – 86; 9:141 – 74). A medieval romance of St. Stephen known only from an Old Church Slavonic version apparently is not related to the Manichean text. (See M. R. James, *The Apocryphal New Testament* [1924], 564 – 68.)

W. WHITE, JR.

steward. In the OT, this English term can be used to render a few individual Hebrew nouns, such as the rare word *sōkēn H6125* (Isa. 22:15), but more commonly it translates a Hebrew phrase involving a relative pronoun, a preposition, and the noun *bayit H1074*, "house." For example, "Joseph's steward" (Gen. 43:19) represents Hebrew *hā)îš) ăšer (al-bět yôsēp*, "the man who [was] upon the house of Joseph." In the NT, the KJV uses "steward" with some frequency as the rendering of two Greek nouns, *epitropos G2208*, "manager, foreman" (Matt. 20:8 et al.), and *oikonomos G3874*, "household manager, administrator" (Lk. 12:42 et al.).

stiff-necked. This expression is a literal rendering of the Hebrew phrase *qěšēh-(ōrep* (*H7997 + H6902*), "hard of neck," used especially to describe the intransigence and rebellious spirit of the Israelites in the period of their sojourn in the Sinai desert after the exodus from Egypt (Exod. 32:9 et al.). The SEPTUAGINT rendered the Hebrew literally into Greek with the compound *sklērotrachēlos G5019*, which is used only once in the NT (Acts 7:51, near the conclusion of STEPHEN's speech).

stoa. See PORCH; SOLOMON'S COLONNADE.

stocks. This English term, referring to an instrument of restraint and punishment, is used primarily to render Hebrew *mahpeket H4551*, which occurs only a few times (Jer. 20:2 – 3; 29:26; cf. also 2 Chr. 16:10, lit., "house of stocks," that is, "prison"). In Job 13:27 and 33:11 we find the term *sad H6040*, which probably refers to a restraining device like the stock (NIV, "shackles"), but the precise origin and meaning of the term is uncertain. It also occurs in the NT as the translation of Greek *xylon G3833*, which actually means "wood" (thus also the older meaning of English *stock*, cf. KJV at Jer. 2:27 et al.); in the narrative of Acts 16:24, it clearly refers to the posts to which prisoners' limbs

were held fast by iron bolts. HERODOTUS (*Hist*. 9.37) relates how a soothsayer, Hegesistratus of Elis, cut off his own instep with a concealed weapon after the Spartans had fastened his foot in "iron-bound stocks" (*xylō sidērodetō*).

W. WHITE, JR.

Stoic stoh′ik (Στοικός *G5121*, from στοά *G5119*, "portico"). In the NT the Stoics are mentioned only once, in Acts 17:18, along with the EPICUREANS. In the same passage (v. 28) PAUL is said to have quoted the words of a Greek poet, "We are his offspring," a line that comes from the Stoic philosopher ARATUS. Beyond this quotation and the fact that the Stoics rejected the idea of a bodily RESURRECTION, LUKE gives no information about their views. However, other portions of the NT, especially the epistles of Paul, use language or indirectly allude to concepts associated with Stoicism. (Because one of its tenets was that a person's essential being should not be affected by either pleasure or pain, the English word *stoic* has come to

Coin with the image of the Stoic philosopher/emperor, Marcus Aurelius (A.D. 161 – 180).

denote someone who is emotionally indifferent to suffering.)

The founder of Stoicism was a Phoenician thinker named Zeno (342 – 270 B.C.), who by a chance shipwreck arrived in ATHENS; while there, he was both attracted by the rigorous morality of the CYNICS and repelled by their crudities. His successor was CLEANTHES, a respectable old gentleman of little philosophic ability. Chrysippus assumed charge of the school from 232 to 206 B.C., reorganized it, and set it on its successful history of four centuries. Notable Stoic thinkers included SENECA (NERO's tutor), EPICTETUS (c. A.D. 50 – 130), and the emperor MARCUS AURELIUS (A.D. 121 – 180).

I. Logic. Under the subject of logic, the Stoics elaborated an empirical, sensory epistemology (a doctrine of KNOWLEDGE based on sensations). The SOUL at birth is without content, and sensations impress images upon it. Zeno insisted that the soul was a body, and Cleanthes crudely compared impressions on the soul with the elevations and depressions made by a signet in wax. When it became

evident that this made memory difficult to explain, Chrysippus dropped the idea of elevations and depressions and spoke more vaguely of some sort of qualitative change.

Empiricism with its sensory epistemology is always embarrassed in the attempt to distinguish TRUTH from error. The Epicureans had tried to maintain truth by restricting it to sensory images. In their view, a person can never be deceived as to what his or her sensory image is; deception arises when people suppose, without evidence, that the image resembles an external object. Since this scheme effectively prevents knowledge of the external world, the Stoics made a different attempt. Of course, the criterion of truth in an empirical philosophy cannot be the logical consistency of a system. Somehow truth must be perceived immediately in the sensation itself. Many sensations do not accurately reproduce their objects, but the Stoics claimed that "comprehensive representations" do. This type of sensation carries the mark of its own validity; it has been stamped and sealed by an existing object, and it so clearly resembles the object that it forces one's assent—a person is just incapable of refusing to believe it.

The next important step in producing knowledge is to construct concepts. Many are elaborated by skill and method, but others, called common notions, arise naturally in all people. Human beings are rational because they have these common notions; and any proposition of physics or ethics is to be proved true by analyzing it into these common notions. Unfortunately, the sources for the teaching of Stoicism are extremely fragmentary at this point.

Though the Stoics wished to avoid skepticism, the process of learning had perhaps not yet arrived at knowledge. Zeno illustrated the scheme by a piece of action: he stretched out his fingers and showed the palm of his hand, saying, "Perception is like this"; then, when he had closed his fingers a little, "Assent is like this"; the closed fist he compared with "comprehension"; and finally, when he grasped the fist by the other hand, he said, "This is knowledge and only the wise man has it." Reference to the "wise man" anticipates Stoic ethics.

II. Physics. Stoic physics is essentially a return to the ancient philosopher Heraclitus: all reality is corporeal, composed not of discrete, inanimate atoms, but of living fire. As it appears, the world exhibits a dualism of agent and patient: some of the original fire has become inert and formless, while the remainder is the moving, molding principle, or God, that permeates all things. Because the universal substance is fire, Stoic cosmology brings this world to an end in a great conflagration. Everything turns to fire.

The supposition has been made that 2 Pet. 3:10 – 12 borrowed this idea from Stoicism. The similarity, however, is unreal. First, the hylozoistic physics (= all matter has life) on which the Stoics based their conflagration is absent from the Bible. Stoic pantheism or immanentism is incompatible with CREATION, and the Bible proposes no analysis of things as being basically fire or any other element. In the second place, PETER predicted a sudden catastrophe that would be comparable to the flood (see FLOOD, GENESIS); but the Stoics described an ordinary, natural process that is already in progress. The completion is merely the end of the present process. Third, the destruction predicted by Peter is a judgment on sin; the Stoic conflagration is a sort of universal deification. Fourth, this biblical judgment against sin occurs just once; the Stoics, however, in conformity with the usual Greek emphasis on natural cycles, taught that the cosmic history repeats itself time and time again forever, not merely with respect to the conflagration at the end of each cycle, but also with respect to every detail in between. Against this theory of eternal recurrence, AUGUSTINE later laid the charge of deep pessimism. Clearly, therefore, Peter did not borrow from Stoicism.

To continue with other ideas Peter did not borrow, the Stoics held that every individual thing,

such as a rock (and the world as a whole), is a composite of this form and matter. Form and matter are both bodies, interpenetrating each other, occupying the same space, forming a "complete mixture." The form or agent is the particular individuating quality, whose mode of action is designated by a term borrowed from morality—tone or tension. It is a spirit or fire or air, more often called a "seminal reason," a small edition of the Reason or LOGOS that controls the universe. Thus there is but one true cause, God, and also a multiplicity of causes. Their intimate relation ties in with the theory of fate.

III. Fate. Since Reason penetrates all things, every event is dependent on a universal law of Fate, Destiny, or Providence. Cleanthes excepted evil from divine determination, but the other Stoics rejected this inconsistency. Not only physics but logic as well implies divine determinism. Every proposition is either true or false; therefore a true proposition in the future tense states something inevitable. Human beings, in their ignorance, do not know whether a statement such as "Brutus will assassinate Caesar" is true or false. An omniscient mind knows. In any case, if it is true, the assassination is unavoidable; while, if the statement is false, the assassination is impossible. Since the statement must be either true or false, the future is determined.

The objections antiquity raised against determinism are the same ones that have been repeated ever since. The most popular of these is the so-called "lazy argument": if all events are foreordained, it is useless to exert oneself, for if a person's hope is not predestined, he cannot achieve it, while if it is predestined, it will occur anyhow. The Stoics had no trouble disposing of this objection. It was fated that Caesar should be assassinated; but it was fated that Caesar should be assassinated by Brutus, and not just anyhow. Therefore Brutus could not sit idly at home and depend on Fate to commit the assassination for him. The means to every end are as much determined as the end itself; so that to modernize the example, a given college student is foreordained to get an A in Greek philosophy—by studying, and not just anyhow. (See FOREORDAIN; PROVIDENCE.)

IV. Ethics. The Stoics answered all the other objections against Fate as well, but since a most important one concerns ETHICS, the others will be skipped. Opponents of determinism, from the Epicureans to the present day, have argued that moral responsibility depends on free will. The denial of free will, by Luther and Calvin as well as by the Stoics, is supposed to cut the nerve of moral endeavor.

It is interesting to note that the SADDUCEES held to free will, while the PHARISEES, who advocated a stricter lifestyle, were determinists, and so also were the still more demanding ESSENES. The freewill Epicureans, though not so licentious as their enemies have charged, were still no moral giants; but the Stoics strove for rigorous virtue. Luther and Calvin emphasized morality; free-will Romanists were sometimes scandalous.

The Stoics based responsibility on the will. People are responsible for their voluntary actions. The Epicureans and other opponents mistakenly supposed that anyone who says the will has a cause also says that there is no will. But obviously if one's character causes a volition, the volition surely occurs. How could its being cause conflict with its occurrence? Therefore, one is responsible for his own voluntary actions—these are "in our power"; but one is not responsible for involuntary actions or states, such as digestion, breathing, reputation (dependent on other people's opinions), or wealth (dependent on many circumstances beyond one's control).

The Stoics rejected the Epicurean ideal of pleasure and stressed virtue. Instead of persistently avoiding pain, they deemed it worthwhile to run risks in order, for example, to raise a family and

discharge civic responsibilities—two activities the Epicureans condemned.

The actual achievement of virtue is difficult. Most people are vicious and foolish; only a few are wise. Just as one can drown in a foot of water as well as in an ocean, and just as a person a mile from Athens is as truly outside Athens as someone 10 mi. away, so he who violates virtue in one point is guilty of all. The change from vice to virtue, from foolishness to wisdom, like entrance into Athens, is a sudden, instantaneous conversion. Unfortunately, few people are converted, and these only late in life after a hard struggle. See further GREEK RELIGION AND PHILOSOPHY II.C.

G. H. CLARK

stomach. Although this English term refers strictly to the upper digestive tract, it can also be used more generally of the abdomen. Thus modern versions sometimes have "stomach" as the rendering of such terms as Hebrew *beṭen H1061*, "belly, womb" (Prov. 13:25 et al.), *ḥomes H2824*, "belly, abdomen" (2 Sam. 2:23 et al.), and *mēeh H5055* (in the pl. or dual), usually "entrails, bowels, inner body" (Job 20:14 – 15), as well as Greek *koilia G3120* (Matt. 15:17 et al.). The more precise term *stomachos G5126* is used only by PAUL, who advised TIMOTHY to "use a little wine because of your stomach and your frequent illnesses" (1 Tim. 5:23). As the seat of physical satisfaction or lust, the stomach or belly is mentioned in a number of passages (Prov. 13:25; Jer. 51:34; Ezek. 3:3; Lk. 15:16; Rom. 16:18; Phil. 3:19). See also BELLY. D. A. BLAIKLOCK

stomacher. This English term, referring to the front part of a bodice, is used by the KJV as the rendering of Hebrew *petîgîl H7345*, which occurs only once (Isa. 3:24). The etymology of the Hebrew word is unknown and its meaning is uncertain. Because it stands in contrast to *śaq H8566* (see SACKCLOTH), it is usually rendered "rich robe" (NRSV) or "fine clothing" (NIV).

stone. A piece of rock of any shape, usually detached from bedrock and of no great size, such as may be found in stream beds (1 Sam. 17:40). Stones have been much used for various constructional purposes (e.g., Gen. 35:14). Stones are often separated from bedrock by human activity, such as quarrying (1 Chr. 22:15; see QUARRY), but they also become detached and shaped by the action of various processes of weathering, such as frost and running water. The term *stone* is commonly used as a synonym for *rock*, particularly where humans have put it to some practical purpose. It is also used with reference to ores in mineral deposits (Deut. 8:9), in relation to ground water bearing aquifers (Num. 20:11), and to gems (see JEWELS AND PRECIOUS STONES).

The importance of stones in the life of the people of the Holy Land, both practically and symbolically, is clear and understandable for dwellers in a generally stony type of environment. See PALESTINE IV. Heaps of stones were used to commemorate memorable events (Gen. 31:46; Josh. 4:5 – 8), the Mosaic law was inscribed on stone (Exod. 31:18), and the CORNERSTONE of a building had great significance (Ps. 118:22; Eph. 2:20). Stones were used for building altars (Josh. 22:10) as well as dwelling places. The difficulties of walking in stony regions were known to hill-dwelling Israelites (Ps. 91:12). Stones were used for killing people (Acts 7:59), including those being put to death for breaking the law (Deut. 22:24). A tomb hewn out of rock with a stone across the entrance was considered to be the final resting place of Jesus of Nazareth (Matt. 27:60; see BURIAL), but the stone rolled back from the door (28:2) is a representative of the RESURRECTION.

Ancient sling-stones found in the Lachish gate complex.

Both the nature and age of the bedrock of the ANE vary greatly. Over much of the southern part of the region, Precambrian rocks of the Arabo-Nubian Massif appear. These are more than 600 million years old and granite is common. Adjacent to this crystalline massif is a zone of flat-lying sedimentary strata in which sandstones, varying in age from 570 – 100 million years, predominate. Farther NW, N, and NE the strata are gently folded, with limestones common, and vary in age from 38 to 100 million years. In the region of N Syria, E Kurdistan and W Persia, the rocks are complexly folded and form part of the Alpine mountain belt. Younger sedimentary rocks occur in the Jordan Rift Valley and under the coastal plain of Palestine, while in Syria and down to the region of Lake Tiberias, volcanic activity (see BRIMSTONE) took place spasmodically over the past 38 million years. Thick piles of basalt lava flows developed, one of the youngest flows in Syria having been dated by radiocarbon analysis of carbonized organic matter as being only some 4,000 years old. This great variation in rock type and rock structure, combined with the extremes of climatic condition from desert in the S to snowcapped mountain peaks in the N, has resulted in great contrasts in the stones found in various parts of the region.

On either side of the RED SEA, the joint pattern of the granitic and related crystalline rocks exercised a strong control on the shapes of the exposed pieces of rock. The Red Sea mountains supplied Egypt, and later Imperial Rome, with monumental stones and some metals. There, as in the mountains of the SINAI Peninsula, frost wedging is active at high altitudes. The freezing of water that has seeped down through joints splits the granitic rocks into rough thin rectangular blocks (cf. tables of stone—Exod. 24:12), many of which are easily pried off (34:4). While much of the granite is coarse-grained and even-grained, graphic granite also occurs. In this, quartz intergrowths with FELSPAR resemble hieroglyphs (some have suggested that this could be a possible explanation of Deut. 4:13 and 5:22).

In the district from the Gulf of AQABAH to the DEAD SEA, which includes EDOM, wind played an important role in erosion, particularly in carving wide valleys between mountains of sandstone that often can be seen to rest on a plinth of the Aqabah Granite Complex. Narrow gorges, following faults

or master joints, are also found in the district, including the vicinity of PETRA and the Wadi Yitan, where the KING'S HIGHWAY of biblical times ascended from Egypt to Jordan and on to Damascus and Mesopotamia (cf. Num. 20:14 – 18). However, there has been sufficient water, particularly during periodic floods, to carry off much of the products of weathering. This process has resulted in the exposure of very thick masses of sandstone with many spectacular cliffs. Deposits of both COPPER ore and IRON ore occur, the latter playing an important role in Israel's history in the times of DAVID and SOLOMON, while some of the sandstones are aquifers for ground water.

The plateau of Jordan, E of the River Jordan, is open and flat, with much of the higher ground covered by flint gravels, residuals after wind erosion of the chalk strata that once enclosed the FLINTS. Occasional flat-topped hills break the monotony of the stony plateau, with the limestones of the Belqa Series that cap the hills used as building stone. Lightly incised wadis drain eastward to inland depressions that are filled with gravels, sands, salts, and muds. Toward the N there are some volcanic cones, and in Syria thick basalt lava flows form the Hauran Plain. They break down to yield good red soil. In the S, adjacent to the Dead Sea, canyons, such as the Wadi el-Ḥesa have cut down as much as 1,750 meters, generally along fault lines. In the canyon walls are exposed the whole sequence of geological formations, from the Aqabah Granite Complex upward.

The greater part of the hill country W of the River Jordan is hewn from hard well-bedded limestones and dolomites of the Judean Limestone. This rock formation contains aquifers feeding springs and wells, and in it many CAVES have been formed by the action of ground water. These caves have provided places of refuge (1 Sam. 13:6) as well as tombs for burial. The various strata of limestone and dolomite have been readily utilized for various constructional purposes, and with their strong vertical jointing, rockfalls would take place at times of earthquake (cf. Rev. 6:16). In both northern SAMARIA and in various parts of western GALILEE, white CHALK and chalky limestone of the Belqa Series are prominent rock types. The result is generally rounded or hummocky topography with white building stone readily available as rectangular blocks, which parted along joint and bedding planes, for example, in the district around NAZARETH.

A series of depressions, many of them fault bounded, cut through the hill country. They include the BEERSHEBA plain, with Beersheba the principal oasis of the NEGEV, and the ESDRAELON plain. These depressions, and the coastal plain with which they join, are underlain mainly by recently deposited alluvium, much of which is covered by blown sand and dunes. The few small stones that do occur are pieces of soft shale. Mount Carmel (see CARMEL, MOUNT) divides the coastal plain into two, N and S of Haifa. It is made up of a faulted block of Judean limestone, with various strata of well-jointed limestone and dolomite providing flat rectangular blocks easily erected into an edifice, such as an altar (1 Ki. 18:26).

The floor of the Jordan Rift Valley is barren and arid by contrast with the bordering mountain areas. The River Jordan meanders through its flood plain, incised to about 50 meters below the main plain of the valley and flanked on either side by badlands formed by the erosion of the very soft strata making up the main valley floor. South of the Dead Sea some of the rocks are white due to the presence of rock salt. This salt is interbedded with CLAYS, and the district is prone to landslides, particularly when EARTHQUAKES occur. This together with erosion channeling resulting from thunderstorm precipitation has meant the production of odd erosional forms, including some with the appear ance of pillars of salt (cf. Gen. 19:26). Earthquake activity, which is common along the length of this rift valley, is probably also responsible for the rockfalls from limestone cliffs that have temporarily blocked the Jordan near Adam, about 24 mi. N of its entrance into the Dead Sea (Josh. 3:13 – 16); see ADAM (PLACE).

stones, precious. See JEWELS AND PRECIOUS STONES.

stoning. The act of throwing stones, usually for the purpose of killing a person. The most common form of capital punishment prescribed by biblical law was stoning. It usually took place outside the city (Lev. 24:23; Num. 15:35 – 36; 1 Ki. 21:13). The prosecution witnesses (the law required two or more, Deut. 17:6) placed their hands on the offender's head (Lev. 24:14) to transfer the guilt of the whole community to the offender. The witnesses then cast the first stones, and the rest of the people followed (Deut. 17:7). All this was done to purge out evil from the community (22:21).

The following ten offenses were punished by stoning: (1) IDOLATRY, that is, the worship of other gods or any heavenly bodies (Deut. 17:2 – 7); (2) enticement to idolatry (13:6 – 11); (3) BLASPHEMY (Lev. 24:14 – 23; 1 Ki. 21:10 – 15); (4) child sacrifice to MOLECH (Lev. 20:2 – 5); (5) spirit DIVINATION (20:27); (6) breaking the SABBATH (Num. 15:32 – 36); (7) ADULTERY (Deut. 22:21 – 24); (8) disobedience of a son (21:18 – 21); (9) violation of the BAN (Josh. 7:25, burning also occurs here); (10) homicide by an ox (Exod. 21:28 – 32). The last case is the only one concerning an animal, though 19:13 threatens both man and beast with stoning if either touches Mount SINAI. Finally, this punishment may be implied, though not expressly mentioned, when the death penalty is prescribed for the prophet who prophesies in the name of another god (Deut. 13:1 – 5). (See further R. de Vaux, *Ancient Israel* [1961], 143 – 63.)

The abundance of STONES in PALESTINE made stoning the most common death penalty. It was also a convenient way to express anger or hatred. It was often threatened (Exod. 17:4; Num. 14:10; 1 Sam. 30:6), especially against Jesus and Paul (Jn. 10:31 – 33; 11:8; Acts 14:5, 19). Actual cases of death by stoning are recorded several times: Adoram (1 Ki. 12:18; see ADONIRAM), ZECHARIAH (2 Chr. 24:21), and STEPHEN (Acts 7:58 – 59). See also CRIMES AND PUNISHMENTS.

J. C. MOYER

storax stor′aks. This English term, which can refer generally to any of the trees in the family *Styracaceae*, is used by the KJV Apoc. to render Greek *staktē* ("oil of myrrh"), referring to a PERFUME (Sir. 24:15; this Gk. word is used by the SEPTUAGINT to translate various Heb. terms, as in Gen. 37:25 et al.). The plant may be *Liquidambar orientale*, a tree (not found in the Holy Land) that yields a fragrant resin prepared from the inner bark. In addition, a few modern Bible versions (e.g., NJB) use *storax* to translate Hebrew *nātāp H5753* (Exod. 30:34; see STACTE), and some scholars think that *libneh H4242* (Gen. 30:37; Hos. 4:13; see POPLAR) refers to *Styrax officinalis* (*FFB*, 178 – 79). See further FLORA under *Styracaceae*.

store cities. Under the lashes of taskmasters the Israelites built PITHOM and RAMESES as "cities of stores [Heb. *miskĕnôt H5016*]" for PHARAOH (Exod. 1:11). SOLOMON built a number of such supply centers in HAMATH and in other unnamed places throughout his realm (1 Ki. 9:19; 2 Chr. 8:4, 6). During BAASHA's reign, BEN-HADAD concentrated upon and took the store cities of NAPHTALI along with other towns (2 Chr. 16:4). JEHOSHAPHAT, in a program of strengthening Judah, built both store cities and fortresses (17:12). HEZEKIAH too promoted the construction of storage facilities (32:28).

The "store city" apparently had its background in the practice of Egypt to provide storage for the excessive yield of a "fat" year as a reserve against the poor yield of a "lean" year, as was the case in JOSEPH's time. The storage facilities are perhaps illustrated in the long, rectangular, room-like

structures found at BETH SHEMESH, LACHISH, and other places. Beginning with Solomon and throughout the reigns of the later kings, these cities were used for storing grains and oil to be sent later to the palace personnel in JERUSALEM (1 Ki. 4:7, 22, 23) or SAMARIA, or to be collected as an important part of government revenue, as is known from the OSTRACA of Samaria and other sources. (See J. Finegan, *Light from the Ancient Past: The Archaeological Background of Judaism and Christianity,* 2nd ed. [1959], 186 – 88; G. E. Wright, *Biblical Archaeology,* rev. ed. [1962], 131, 163 – 64.)

<div align="right">H. E. FINLEY</div>

storehouse. MALACHI charged that the people of his day had robbed God because they had failed to bring their tithes into the *bēt hā,ôsār,* literally

Partial reconstruction of the storehouses at Beersheba.

"house of the treasure," but usually rendered "storehouse" (Mal. 3:10); he evidently had reference to the TEMPLE treasury. See TREASURY OF THE TEMPLE. The same phrase is used in Neh. 10:38 (Heb. MS v. 39), which speaks about the Levites' taking a tenth of the tithes "to the chambers of the storehouse" (NRSV; the NIV here reads, "the storerooms of the treasury"). The NRSV uses "storehouse" also for the term *hā,ôsār* by itself in Jer. 38:11, which states that EBED-MELECH took men with him to the palace ("the house of the king") in order to get rags and worn-out clothes with which to make a rope to lift JEREMIAH from his prison cistern; in this context the term apparently is an equivalent of "storeroom."

H. E. FINLEY

stork. Although the Hebrew word ḥasîdâ *H2884* (meaning "faithful" or "kind") is thought by some to refer to the HERON, the rendering "stork" is generally accepted. Three points in the contexts confirm this translation. (a) The bird in question is unclean (Lev. 11:19; Deut. 14:18); storks feed in muddy places and at some seasons take mainly frogs. (b) It is migratory (Jer. 8:7). (c) It is a large bird (able to lift a heavy basket, Zech. 5:9).

White storks (*Ciconia alba*) have black wings, while black storks (*C. nigra*) are entirely black. Both of them are regular birds of passage through Palestine, and the scavenging marabou stork (*Leptoptilos crumeniferus*) is a rare straggler. In spring white storks fly from their winter haunts in Africa and SW Arabia to their nesting grounds in Europe and Asia, and provide spectacular sights. Flocks of many hundreds come through from the end of February into May. (See BIRD MIGRATION.) They once nested in Palestine ("the stork has its home in the pine trees," Ps. 104:17), but those that stay for the summer now are probably yearlings.

Both on the ground, standing well over 3 ft. tall, and in the air, with neck outstretched and red legs trailing, this black-and-white bird is unmistakable. Dropping down to rest, it quickly spreads out over the fields and marshes to hunt for fish, frogs, and insects. The black stork is smaller; having wintered in S Africa, it comes through in very small groups, following a different path northward.

G. S. CANSDALE

storm. In the Palestinian environment, storms are frequent phenomena. Naturally, they figured prominently in the consciousness of some biblical writers such as the psalmists and the prophet ISAIAH, who saw them variously as a threat to security or a punishment inflicted upon wrongdoers. (Cf. Pss. 55:8; 83:15; Isa. 4:6; 25:4; 28:2.) Three kinds of storm are commonly experienced in PALESTINE. (1) Thunderstorms (see THUNDER) occur mainly at the start of the rainy season, in the autumn when the land is still hot; they are particularly frequent around the Sea of Galilee, where sea air flowing inland passes over the hot basin in which the lake lies. (2) WHIRLWINDS, such as the one by which ELIJAH was caught up (2 Ki. 2), are local vortices with more limited effects. (3) Most important are the desert storms, which occur when the wind blows out from the desert, bringing hot, parching air to the cultivated lands on the desert margins. Often referred to as *sirocco*, these winds blow from the S or E, that is, from the Arabian desert. They are experienced generally at the beginning and at the end of the summer season and frequently are accompanied by choking dust and very high tem peratures. Blowing across the land of Palestine, they raise storms as far W as the Mediterranean (cf. Ps. 48:7). Jesus referred to the characteristics of the desert wind in Lk. 12:55.

Straight Street. This street, the only one identified by name in the NT (Acts 9:11), was located in DAMASCUS, a city within the boundaries of SYRIA but belonging politically to the DECAPOLIS. The city obtained its freedom from Rome shortly after Christ's death and was under an Arabian ruler during the period covered by Acts 9 (see ARETAS). On this street was located the house of a certain JUDAS, where Saul of Tarsus was a guest (see PAUL). It was here that Saul was visited by ANANIAS, and here that he received his eyesight again, signaling his conversion and call.

By current standards, Straight Street (also referred to as *Via Recta*) would more properly be called a lane or alley, since the Greek word translated "street" (*rhyme G4860*) stands for a narrow road. Such a roadway stood in contrast to a broad, open place (*plateia G4423*) in the city. A narrow street bearing the same name exists in the modern city of Damascus. Covered with a Quonsetlike structure in places, it begins at the eastern gate of the city and runs W into the center of the city. While this is the probable site of the 1st-cent. street, it is impossible to make a positive identification. Continuous occupation of the location has made excavation impossible, but several structures from Roman times are still preserved, indicating that there have been no major changes in the city's layout since early times.

R. L. THOMAS

stranger. See FOREIGNER.

strange vine. See VINE, VINEYARD II.

strange woman. This expression is used a number of times by the KJV in the book of Proverbs, usually as the translation of Hebrew *zārâ* (fem. of *zār H2424*, "foreign, unauthorized, illegitimate"), which refers either to a prostitute (see PROSTITUTION) or to a married Israelite woman involved in an illicit relationship (Prov. 5:3 et al.; NIV, "adulteress"; NRSV, "loose woman"; NJPS, "forbidden woman").

Strato's Tower. See CAESAREA.

straw. The dry residue of stalky plants. The common Hebrew term for "straw" is *teben H9320* (Gen. 24:25 et al.; *matbēn H5495* only in Isa. 25:10). In the NT, Greek *kalamē G2811* is used only once in a figurative context (1 Cor. 3:12).

There would be more BARLEY straw available in Palestine than WHEAT straw, for barley was used for feeding horses, donkeys, and cattle, and most of the poor people ate barley BREAD. There was also undoubtedly SPELT straw available. It is uncertain, however, whether the straw mentioned in Exod. 5:7 – 18 was in fact barley or spelt straw, or whether it was merely the stalks of wild grasses, because the children of Israel were forced to gather what they needed for brick making. In instances where fodder is in view (e.g., Gen. 24:25; Isa. 11:7), perhaps *teben* refers to hay.

W. E. SHEWELL-COOPER

street. In the cities of the ANE the streets were very narrow, often only wide enough to allow for the passage of a CHARIOT. They were also winding and without any plan, although very large cities sometimes had one or more avenues. Since refuse was thrown into streets, they were usually very

dirty, and scavenger dogs ate a great deal of the garbage. Craftsmen and tradesmen who dealt with similar kinds of products carried on their business in the same streets or quarters. Streets were usually rutted and muddy, since they were not often paved. HEROD Agrippa I, however, allowed JERUSALEM to be paved with white stones (Jos. *Ant*. 20.9.7 §222). Usually houses abutted directly onto the streets. Each of the houses had a door on the street side, but the windows were on the opposite side, facing courts. At the gates of the city walls there were large open places for the transaction of business. There justice was dispensed, punishment inflicted, proclamations read, and news spread.

strong drink. See WINE AND STRONG DRINK.

stronghold. This English term, referring to a place that has been fortified or that otherwise provides security, is used to render various Hebrew nouns, especially *mesād H5171* (Jdg. 6:2 et al. and see MASADA), *mesûdâ H5181* (1 Sam. 22:4), and *miśgāb H5369*, "high point [of refuge]" (2 Sam. 22:4 et al.). It occurs primarily in figurative contexts that speak of God as the protection of his people (Ps. 18:2 et al.). In the NT, Greek *ochyrōma G4065* occurs once with reference to intellectual pretensions that oppose true knowledge and that must be demolished with spiritual weapons (2 Cor. 10:4). See also FORT; ROCK; TOWER.

structuralism. A term used variously in several academic disciplines to indicate a particular approach whereby the matter under study is regarded as a structure or system (in psychology, for example, *structuralism* refers to an older school that sought to understand the brain and its functions by analyzing the components or basic elements of the mind).

Of special significance for biblical studies was the development of *structural linguistics* in the first half of the 20th cent. Although many linguistic scholars do not refer to themselves as "structuralists" (a label that has a variety of connotations), virtually all of them recognize the basic tenet that language cannot be understood properly unless it is viewed as a system of structural relations or oppositions. For instance, a *phoneme* (a linguistically significant sound) must be defined not merely on the basis of its acoustic form, but also, and more importantly, in terms of how it contrasts to other similar phonemes. Similarly, the vocabulary of a language is best understood when each word is studied as part of a specific semantic field or domain, that is, a network of terms that sustain a meaning relationship (synonymy, antonymy, etc.) with one another. (The seminal work on this principle was a set of class lectures by Ferdinand de Saussure, published posthumously by two of his students in 1916 as *Cours de linguistique générale*. For its relevance to the study of the Bible, see M. Silva, *Biblical Words and Their Meaning: An Introduction to Lexical Semantics* , rev. ed. [1994], chs. 4 – 6.)

The success of the structural approach in modern linguistics had a strong impact on other disciplines. Particularly well known is the work of the anthropologist C. Lévi-Strauss, who sought to understand various aspects of culture (such as kinship and myth) by appropriating the terminology of structuralism. In the process, however, the relevant principles were applied with less precision, a

problem that became more evident subsequently when structural ideas were used in the study of literature and society (e.g., by R. Barthes; see the criticisms by Martin Krampen in *Classics of Semiotics*, ed. M. Krampen et al. [1987], 78 – 83). At this point, *structuralism* comes to mean a philosophical theory about the way human beings create intellectual systems. On this basis, some biblical scholars have developed an approach known as *structural exegesis*, which usually refers to the study of nonlinguistic relationships, such as those involving human self-expression and thought patterns. (See D. Jobling, *The Sense of Biblical Narrative: Structural Analyses in the Hebrew Bible*, 2 vols., 2nd ed. [1986]; D. Patte, *Structural Exegesis for New Testament Critics* [1990]; *ABD*, 6:214 – 16.)

stubble. The part of the plant stem left standing in the field after the crop has been harvested. The Hebrew term for "stubble" is *qaš H7990*, which in some instances may refer to CHAFF (e.g., Ps. 83:13), that is, the husks or fine particles that are separated from the grain during threshing and winnowing. The Israelites were forced to go to the fields to gather stubble because they were not permitted to use STRAW in their brickmaking (Exod. 5:12). God's consuming wrath is depicted in terms of a raging fire sweeping across a field of stubble (15:7). LEVIATHAN is portrayed as a monster strong and impregnable, unaffected by slingstones; his tough hide turns such stones into "stubble" (Job 41:28). Isaiah and other later prophets declared that evildoers were the object of God's judgment; they would face a demise like that of fire devouring stubble (Isa. 5:24; 47:14; Joel 2:5; Obad. 18; Nah. 1:10; Mal. 4:1).

<div align="right">H. E. FINLEY</div>

stuff. This English term is used a number of times by the KJV, mainly as the rendering of Hebrew *kelî H3998* ("vessel, equipment," etc.), which in the plural can mean "goods, possessions" (Gen. 31:37 et al.). The RSV uses the phrase "scarlet stuff" frequently in Exodus to translate *tôla⟨at šanî* (*H9106 + H9357*), which refers to the crimson-colored cloth employed for the curtains of the TABERNACLE (Exod. 26:1 et al.; cf. *senî tôla<at* [in Lev. 14:4 – 6, 49 – 52; Num. 19:6], apparently a scarlet cord used for purification).

stumbling block. This English expression is used a number of times in Bible versions to render Hebrew *miksôl H4842* ("hindrance") and Greek *skandalon G4998* ("trap"). In the OT the cause of stumbling may be literal, as an obstacle in the path of a blind man (Lev. 19:14), but most often it is used figuratively to picture the judgment of God against the rebellious (Jer. 6:21; Ezek. 3:20). Ethically, the stumbling block is that which causes iniquity, whether gold and silver (Ezek. 7:19) or idols (14:3 – 4, 7; 44:12).

In the NT the idea of "striking against" an object so as to stumble speaks figuratively of a weaker brother who stumbles in his Christian walk (Rom. 14:13; 1 Cor. 8:9). The cause of stumbling lies in the action of the stronger Christian who in taking advantage of his superior understanding of spiritual liberty fails to show consideration for one whose conscience is more easily offended. The stronger reference to a stumbling block in the NT is built on the figure of a trap that is baited for the unsuspecting prey. This term is used in connection with the failure of Israel to recognize her suffering Messiah (Rom. 11:9; 1 Cor. 1:23). In this case the CROSS is not viewed as a trap. Rather the preconceived ideas of Israel regarding the person and work of MESSIAH were the cause of their downfall, since these ideas excluded the possibility of his suffering. See OFFENCE.

<div align="right">R. L. THOMAS</div>

Sua s*oo′*uh. See Sɪᴀ.

Suah s*oo′*uh (𐤎𐤅𐤄 *H6053*, meaning uncertain). Son of Zophah and descendant of Aꜱʜᴇʀ (1 Chr. 7:36).

Suba s*oo′*buh. KJV Apoc. form of Sᴜʙᴀꜱ (1 Esd. 5:34).

Subai s*oo′*b*i* (Συβαι). Ancestor of a family of temple servants (Nᴇᴛʜɪɴɪᴍ) who returned from the Exɪʟᴇ (1 Esd. 5:30; the RSV identifies him with Sʜᴀʟᴍᴀɪ).

Subas s*oo′*buhs (Σουβας). KJV Suba. Ancestor of a family of Sᴏʟᴏᴍᴏɴ’ꜱ ꜱᴇʀᴠᴀɴᴛꜱ who returned from Exɪʟᴇ with Zᴇʀᴜʙʙᴀʙᴇʟ (1 Esd. 5:34; the name is not found in the parallel lists, Ezra 2:57 and Neh. 7:59).

suburbs. This English term—not in its modern meaning of built-up areas surrounding a city center, but in a more general sense—is used frequently by the KJV (esp. in Josh. 21 and 1 Chr. 6) to render Hebrew *migrāš H4494,* which evidently refers to demarcated open lands outside the walls of a cɪᴛʏ. These areas were built over only later as population increased or particular groups were forbidden to settle within the walls. Thus one finds a request for "suburbs…for our cattle" (Josh. 21:2 KJV) and a reference to "the fields of the suburbs" where some priests lived (2 Chr. 31:19 KJV). That such outskirts played an essential part in the life and economy of the urban community in Palestine is shown by their inclusion with each town apportioned to the tribes of Israel. The common rendering "pasturelands" (cf. NIV) seems to fit some contexts, but this meaning apparently arose as a result of a questionable etymology (as though from *gāraš H1763,* "to drive out [cattle]"; see J. Barr in *JSS* 29 [1989]: 15 – 31, esp. 21).

<div align="right">J. H. Pᴀᴛᴇʀꜱᴏɴ</div>

Sucathite s*oo′*kuh-th*i*t (שׂוּכָתִי *H8460,* gentilic of the otherwise unattested place name שׂוֹכָה, meaning unknown). KJV Suchathite. Among the descendants of Cᴀʟᴇʙ (through his son Hᴜʀ and grandson Sᴀʟᴍᴀ) are listed three "clans of scribes who lived at Jabez: the Tirathites, Shimeathites and Sucathites. These are the Kenites who came from Hammath, the father of the house of Recab" (1 Chr. 2:55). Nothing else is known about these clans, and their names cannot be traced to a particular person or place. On the relationship between Calebites and Kenites, see discussion under Jᴀʙᴇᴢ (ᴘʟᴀᴄᴇ).

Succession Narrative. See Sᴀᴍᴜᴇʟ, Bᴏᴏᴋꜱ ᴏꜰ III.B.

Succoth suhk-uhth′ (סֻכּוֹת *H6111,* "booths"). TNIV Sukkoth. (1) A city within the tribal territory of Gᴀᴅ, generally identified with modern Tell Dᴇɪʀ ⁽Aʟʟᴀ, a mound just N of the Jᴀʙʙᴏᴋ River and about 3 mi. E of the Jᴏʀᴅᴀɴ (H. J. Franken has suggested that Succoth should be identified with nearby Tell Ekhṣaṣ, but few have followed him). Succoth is first mentioned in connection with Jᴀᴄᴏʙ’s travels after he wrestled with the angel of the Lord by the Jabbok River and was reconciled to his brother Eꜱᴀᴜ the next day (Gen. 33:17). The explanation this passage gives for the name

Succoth (deriving it from Jacob's cattle booths or stalls) does not necessarily mean that Jacob founded the city. Later, in the days of JOSHUA, Succoth is mentioned along with ZAPHON as part of the inheritance of the tribe of Gad (Josh. 13:27).

GIDEON and his army, while pursuing the Midianites to victory, were ill-treated by the elders of Succoth and the neighboring city of Penuel, both of which refused to supply food (Jdg. 8:5 – 16). See PENUEL (PLACE). Gideon's punishment of the city of Succoth might well be identified with the destruction of a large sanctuary in Tell Deir ʿAlla, an event dated to the first half of the 12th cent. (Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 284 n. 224). SOLOMON found suitable clay ground to cast the large bronze vessels for the temple near Succoth (1 Ki. 7:46; 2 Chr.

Ruins of Tell el-Maskhutah, which some identify with the Egyptian to Succoth.

4:17). In the Psalms, Succoth is referred to as the symbol of the victorious occupation of the country of Canaan E of the Jordan (Pss. 60:6; 108:7).

(2) A city in EGYPT between RAMESES and ETHAM; it was the first stop of the Israelites at the time of the exodus (Exod. 12:37; 13:20; Num. 33:5 – 6). The city is tentatively identified with modern Tell el-Maskhuta, a border fortress in the eastern portion of Wadi Tumilat, W of the bitter lakes. See discussion under PITHOM.

A. JOHNSON

Succoth Benoth suhk'uhth-bee′noth (סֻכּוֹת בְּנוֹת *H6112,* "booths of daughters," but the form is prob. a corruption of an Akk. name). TNIV Sukkoth Benoth. A Babylonian deity. After defeating the northern kingdom of Israel and carrying away hostages, the Assyrians brought in peoples of various regions of Upper and Lower MESOPOTAMIA and settled them in SAMARIA. There were Babylonians among these peoples who had Succoth Benoth as their god or goddess (2 Ki. 17:30). In extrabiblical sources no such deity is attested, but many scholars hold that the name may derive from Ṣarpanitu ("shining," later Zēr-bānitu, "seed-creating"), who was MARDUK's consort; alternatively, the reference could be to ISHTAR, who was sometimes called Bānitu ("[female] creator"; see M. Cogan and H. Tadmor, *II Kings,* AB 11 [1988], 211).

Other possibilities have been considered. In its Hebrew form, Succoth Benoth may allude to the existence of booths or shrines where girls engaged in sacred PROSTITUTION. The first part of the name, however, is sometimes thought to reflect an Akkadian loanword, such as *sakkû* ("assign, dedicate") or *sakkud* (possibly referring to Saturn; see SAKKUTH); others derive it from a NW Semitic root, *skn,* "image" (E. Lipiński in *UF 5* [1973], 202 – 4; see further *DDD,* 821 – 22).

<div align="right">H. E. FINLEY</div>

Sud suhd. KJV Apoc. form of SIA (1 Esd. 5:29).

Sudias s*oo*′dee-uhs (סָסֹת בְּנוֹת). Ancestor of a family of Levites that returned from the EXILE (1 Esd. 5:26; possibly the same as HODAVIAH in the parallels, Ezra 2:40; 3:9; Neh. 7:43).

Suetonius swi-toh′nee-uhs. Gaius Suetonius Tranquillus was born in the tragic "year of the four emperors," A.D. 69, and died about 140. He was one of the few well-known Roman writers who was actually born in ROME. Suetonius was of equestrian rank, practiced law, and was for a time secretary to the Emperor HADRIAN (reigned 117 – 138). Among his many works, *Lives of the Caesars*, which survives almost intact from Julius CAESAR to DOMITIAN, had immense influence in giving a biographical turn to Roman historiography. Though no great historian, Suetonius endeavored to write objectively, and his collected material, if often biased and unfair, has immense value. Along with TACITUS, he is a primary source for the history of Imperial Rome during NT times. Of particular interest to biblical students is his apparent reference to Christ (wrongly written *Chrestus*): "Because the Jews at Rome caused continuous disturbances at the instigation of Chrestus, he [CLAUDIUS] expelled them from the city" (*Claudius* 25.4; cf. Acts 18:2). (See B. Baldwin, *Suetonius* [1983]; A. Wallace-Hadrill, *Suetonius: The Scholar and His Caesars* [1983].)

<div align="right">E. M. BLAIKLOCK</div>

suffering. Numerous Hebrew and Greek terms convey such ideas as suffering, distress, anguish, pain, torment, and so on. The biblical contexts suggest some answers to the extremely difficult question as to why there is so much suffering in the world: (1) divine judgment for sin, (2) empathy for another's misery, (3) the vicarious bearing of another's penalty, (4) authentic repentance and faith in the Lord, (5) a warning to prevent a greater evil, or (6) discipline for training in Christlikeness. The appropriate response to each kind of suffering is as different as its raison d'être. Such significant differences make generalizations about the purpose of all suffering improper and misleading. In an attempt to avoid the error of generalization as far as possible, each type of suffering is considered separately below. More than one of these purposes may be operative in any given instance of suffering. When that is the case, however, the reasons may be more readily recognized if first clearly distinguished.

I. Judgmental suffering. How did human beings become subject to suffering? As created, both they and nature were "very good" (Gen. 1:31). What made life on earth a "vale of tears"? Neither a

The sufferings of Christ are depicted in this painting of the Stations of the Cross from the Church of Emmaus.

capricious act of God nor fate. It was rather ADAM and EVE's pretentious and unbelieving violation of God's will. The pains of childbirth and of hard labor may be traced to divine JUDGMENT upon the first SIN (3:16 – 19). See FALL, THE.

In a fallen world we may bring suffering upon ourselves by failure to employ our God-given resources in accord with wisdom: "an idle person will suffer hunger" (Prov. 19:15 NRSV); "a companion of fools suffers harm" (13:20); "A prudent man sees danger and takes refuge, / but the simple keep going and suffer for it" (22:3; cf. 27:12). "Some give freely, yet grow all the richer; / others withhold what is due, and only suffer want" (11:24 NRSV). Apparently God sustains a providential order in which people are judged for laziness, lack of foresight, companionship of fools, and greed. Furthermore, distress may result from social pressures to condemn an innocent man. PILATE's wife sent word to him, "Don't have anything to do with that innocent man, for I have suffered a great deal today in a dream because of him" (Matt. 27:19).

Judgmental suffering also follows for sins against God's revelation through prophets and apostles. Israel's adults, so wonderfully delivered from Egypt, nevertheless continually murmured against MOSES and God. For their faithlessness they suffered and died in the wilderness; their children also suffered (Num. 14:31 – 33). Awareness of family and national solidarity was explicit in the culture. However, the children suffered only temporarily; they entered the Promised Land. In Dostoevsky's *The Brothers Karamazov*, Ivan cannot believe that children "share their fathers' responsibility for *all* their fathers' crimes" (emphasis added). Is it taught in the Bible that they do? As in the wilderness, judgment upon the head of a family or nation may have its temporal implications for those in the family or national unit. But EZEKIEL made it clear that a righteous father may have a

wicked son, or a wicked father a righteous son. "The soul who sins is the one who will die. The son will not share the guilt of the father, nor will the father share the guilt of the son. The righteousness of the righteous man will be credited to him, and the wickedness of the wicked will be charged against him" (Ezek. 18:20).

Repeatedly Israel faced judgmental suffering for her iniquities (Ps. 107:17) and her guilt (Isa. 24:5 – 6). JEREMIAH cried out, "Oh, my anguish, my anguish! / I writhe in pain. / Oh, the agony of my heart! / My heart pounds within me, / I cannot keep silent. / For I have heard the sound of the trumpet; / I have heard the battle cry" (Jer. 4:19). Judah was destroyed because of the greatness of her iniquity (13:22). Jerusalem lay in ruins and Zion suffered bitterly for "the multitude of her transgressions" (Lam. 1:5 NRSV). Later NEHEMIAH confessed, "they were disobedient and rebelled against you and cast your law behind their back and killed your prophets, who had warned them in order to turn them back to you, and they committed great blasphemies. Therefore you gave them into the hands of their enemies, who made them suffer" (Neh. 9:26 – 27a NRSV).

The NT portrayal of judgmental suffering is equally severe. For premeditated lying to the apostles and the HOLY SPIRIT, ANANIAS and SAPPHIRA suddenly died (Acts 5:1 – 11). Those who profaned the Lord's body and blood at the communion table faced judgment. "For anyone who eats and drinks without recognizing the body of the Lord eats and drinks judgment on himself. That is why many among you are weak and sick, and a number of you have fallen asleep" (1 Cor. 11:29 – 30). As a result of sin the creation is subjected to futility and in bondage to decay until the revealing of the sons of God (Rom. 8:18 – 21).

In the judgment the believer's works of "wood, hay or straw" will be burned up and "he will suffer loss" (1 Cor. 3:12, 15). At death Lazarus went to ABRAHAM'S BOSOM, but the rich man in HADES called out, "I am in agony in this fire" (Lk. 16:24; see LAZARUS AND DIVES). When the Lord Jesus is revealed from heaven in flaming fire, taking vengeance on those who do not know God and do not obey the gospel, "They will be punished with everlasting destruction and shut out from the presence of the Lord" (2 Thess. 1:9).

II. Empathic suffering. In the face of intense suffering the prophets were appalled. Concerned for the church at CORINTH, PAUL wrote to them "out of great distress and anguish of heart and with many tears" (2 Cor. 2:4). All of us are to weep with those who weep (Rom. 12:15). Some suffering arises not from sin but from love. We may enter fully through imagination and concern into another's feelings. Empathy with others who suffer produces suffering.

Does God experience empathic suffering? In the days of NOAH, when the Lord saw that the thoughts of the human heart were constantly evil, he "was grieved that he had made man on the earth, and his heart was filled with pain" (Gen. 6:6). In sin God takes no pleasure; he permits it or, in the older English, suffers it. As H. Wheeler Robinson has said, "The only way in which moral evil can enter into the consciousness of the morally good, is as suffering" (*Suffering: Human and Divine* [1939]). God is not an impersonal principle, but the living Lord of Abraham, Isaac, and Jacob. With loving empathy he entered fully into the sufferings of Israel. "In all their distress he too was distressed, / and the angel of his presence saved them. / In his love and mercy he redeemed them; / he lifted them up and carried them / all the days of old" (Isa. 63:9).

Some misunderstanding of God's relation to suffering arises from a failure to do justice to his immanence and transcendence. Karl Barth's earliest writings had an extreme emphasis upon divine transcendence far beyond anything even analogous to human suffering. Recognizing this, Barth later stressed the humanity of God in the incarnate Christ. Barth held that, in Christ, God suffered all that

man suffers. God in Christ suffered intensely during the PASSION week right up to the cross. At that point Barth, with the historic church, stopped. On the cross God the Father did not die. Some theologians, however, did not stop, for their God died never to rise. They stressed God's immanent involvement with humanity to the exclusion of his transcendent power over the deepest anguish of death itself.

Belief in a God who permits suffering, others think, destroys human freedom to alleviate it. One must remember, however, that permission is not pleasure. The God who suffers with the suffering encourages removal of the cause. "Why will you die, O house of Israel? For I take no pleasure in the death of anyone, says the Sovereign LORD. Repent and live!" (Ezek. 18:31b – 32). Although God permits suffering, he has acted at inestimable cost to provide a just ground on which to justify the ungodly.

III. Vicarious suffering. Jesus Christ became incarnate "so that by his death he might destroy him who holds the power of death—that is, the devil—and free those who all their lives were held in slavery by their fear of death" (Heb. 2:14 – 15). The Lord did not simply permit sin; he came into the world to fight it. His decisive defeat of SATAN inspires sacrifice to remove the deepest causes of suffering.

To accomplish his purpose, Jesus had to "suffer many things and be rejected by the elders, chief priests and teachers of the law, and he must be killed and on the third day be raised to life" (Lk. 9:22; cf. 17:25; 24:26; Matt. 16:21; Mk. 8:31). The battle with evil necessitated suffering. Furthermore, the messianic predictions called for it. The risen Lord explained, "This is what is written: The Christ will suffer and rise from the dead on the third day" (Lk. 24:46). PETER declared that God had foretold by the mouth of all the prophets that his Christ should suffer. Some of Peter's hearers had, in ignorance, contributed to the fulfillment of that prophecy (Acts 3:18). The prophets themselves had been curious about the time and the Sufferer of whom they wrote (1 Pet. 1:11). Peter goes on record as a witness to the sufferings of Christ, as well as to the glory to be revealed (5:1).

Paul explained and proved from the Jewish Scriptures that it was necessary for Christ to suffer and to rise from the dead (Acts 17:3; 26:23). The writer of Hebrews stressed the vicarious nature of Christ's agony in that Jesus suffered death for (in behalf of) everyone (Heb. 2:9). Christ's substitutionary ATONEMENT is frequently mentioned in the NT. Furthermore, Jesus, as the author of salvation, was made perfect through suffering (2:10). He suffered temptation so that he could help the tempted (2:18). He did not suffer death repeatedly, but once for all (9:26). Just as sacrifices had been burned outside the camp, Jesus "suffered outside the city gate to make the people holy through his own blood" (13:12).

Through faith in the One who suffered in their place, sinners are delivered from eternal anguish. No stoic denial of suffering will change our sinfulness. Resentment does not help. To alleviate the suffering which is bound up with judgment on our sin, we must repent and trust Christ.

IV. Testimonial suffering. Inner distress, however, may result from genuine commitment to a Christlike life. Although believers receive a new nature, their old nature is not annihilated. Daily the Christian must combat temptations to serve the FLESH. Genuine Christian living is not merely for pleasure. It is not only an aesthetic existence, Søren Kierkegaard insisted. Neither is it a life of hypocritical law-keeping. A merely ethical existence is not a Christian existence. The genuinely religious life is one of continuous repentance and continuous commitment. Believers, aware constantly that they are not living up to the perfect ideal and that they are nothing apart from the grace

of God, cast themselves upon divine grace. So, as Edward John Carnell explained in *The Burden of Søren Kierkegaard,* inner suffering is a doorway to all the blessings of the Christian life. The real satisfactions of life lie in the area of suffering, not indulgence and pleasure. So this type of suffering may testify, not to judgment on sin, but to an authentic Christian commitment.

People who choose to live for righteousness in an evil world must expect suffering also from external sources. Service for the Savior runs counter to the aspirations of this world's powers. Followers of Christ may suffer "for his sake" (Phil. 1:29 KJV), "for righteousness' sake" (1 Pet. 3:14 KJV), for the kingdom of God (2 Thess. 1:5), for the gospel (2 Tim. 2:9), "for the Name" (Acts 5:41), for the purpose of resisting SATAN (1 Pet. 2:19; 4:16; 5:9). Such PERSECUTION indicates that the believer shares or partakes of Christ's sufferings (2 Cor. 1:5; 1 Pet. 4:13).

Through intense suffering JOB gave testimony to the integrity of his trust in God. Satan charged that Job's faith depended upon temporal benefits received. Thereupon, God allowed the devil to test Job's allegiance by taking away all that he possessed (Job 1:9 – 12), and even his health (2:4 – 6). Calamity in Job's case was not judgmental for certain sins. To his "comforters" it seemed that Job must have been a hypocrite or a liar, but his plight was not penal. It was a test of his integrity as a testimony to others.

Jesus' disciples also fell into the error of thinking that all sickness was the result of some sin. Upon seeing the man born blind, they asked, "Rabbi, who sinned, this man or his parents, that he was born blind?" Jesus' response was, "Neither this man nor his parents sinned…but this happened so that the work of God might be displayed in his life" (Jn. 9:2 – 3). The healing of the man born blind ended a life of suffering that was permitted so that he might become a key witness to the messiahship of Christ.

What response is appropriate when we experience suffering as a testimony to our unhypocritical trust in the Lord? Remembering Christ's example of endurance under stress, we shall follow in his steps (1 Pet. 2:21). One should not forget the heroes of faith who suffered "jeers and flogging, while still others were chained and put in prison. They were stoned; they were sawed in two; they were put to death by the sword. They went about in sheepskins and goatskins, destitute, persecuted and mistreated" (Heb. 11:36 – 37). Like Moses, one may consider suffering abuse for Christ greater wealth than the treasures of Egypt (11:26). So believers shall complete the suffering necessary for the building of the church (Col. 1:24), knowing that it assures future glory (1 Pet. 4:13). In comparison with that eternal glory, the present momentary affliction is slight (Rom. 8:18; 2 Cor. 4:17).

V. Preventative suffering. God may allow physical suffering to keep one from more serious spiritual problems. PAUL found it so. He said, "To keep me from becoming conceited because of these surpassingly great revelations, there was given me a thorn in my flesh, a messenger of Satan, to torment me" (2 Cor. 12:7). Because of this weakness, Paul had to rely more completely upon God's GRACE. In the midst of energetic service under most difficult conditions he found that grace sufficient. When weak in himself, he was strong in the Lord (vv. 8 – 10).

Pain may also be a warning signal of physical dangers. Without pain people would be subject to many calamities. A fourteen-year old girl in London who never felt any pain was covered with the scars of cuts, burns, and abrasions. According to the British Medical Research Council she was normal in other respects. She had bitten off the tip of her tongue, crushed her fingers, and fractured her thigh—all without pain. Previously a young playmate had yanked out handfuls of her hair. An attack of appendicitis would pass unnoticed until too late to operate.

Some suffering in a fallen world is a beneficial warning of the danger of more tragic

possibilities. A medical doctor writing on psychosomatic illnesses says, "Pain is a sign that action should be taken; it implies that if action is not taken, the survival chances of the organism are going to decrease." For such signs one may indeed be thankful. Sometimes physical suffering becomes a sign of spiritual need. If a person flat on his back begins to look up to the Savior, there is also reason for gratitude.

VI. Educational suffering. The greatest good of the Christian life is not freedom from pain; it is Christlikeness. God works all things together for good by surrounding us with conditions that help us conform to the image of his Son (Rom. 8:28 – 29). Christ's life was one of total conflict with the forces of evil. As his followers, then, "We are hard pressed on every side, but not crushed; perplexed, but not in despair; persecuted, but not abandoned; struck down, but not destroyed. We always carry around in our body the death of Jesus, so that the life of Jesus may also be revealed in our body" (2 Cor. 4:8 – 10).

God is far less concerned with the comfort than with the character of his people. What produces character? Suffering produces endurance, and endurance produces character (Rom. 5:3 – 4). When we fail to endure, we may require DISCIPLINE as does any child: "God disciplines us for our good, that we may share in his holiness. No discipline seems pleasant at the time, but painful. Later on, however, it produces a harvest of righteousness and peace for those who have been trained by it" (Heb. 12:10 – 11). Anyone who does not experience the heavenly Father's discipline is an illegitimate child. "My son, do not make light of the Lord's discipline, / and do not lose heart when he rebukes you, / because the Lord disciplines those he loves, / and he punishes everyone he accepts as a son" (vv. 5 – 6, quoting Prov. 3:11 – 12).

The follower of the Lord not only passively accepts discipline, but actively disciplines himself. Like an athlete in training, Paul exercised self-control. To keep from being disqualified after preaching to others, he pommeled his body and subdued it (1 Cor. 9:25 – 27). The Bible does not support extreme ASCETICISM and self-flagellation as virtuous in themselves; neither does it underwrite self-indulgence as Christian liberty. There is freedom from the domination of sin in order to develop a Christlike character. Respecting that LIBERTY, many count all else refuse in order that they may "know Christ and the power of his resurrection and the fellowship of sharing in his sufferings, becoming like him in his death" (Phil. 3:10).

Christianity, Louis Bouyer explained, "does not encourage an unhealthy algolagnia; on the contrary, it offers us the possibility of making suffering, like death itself, fruitful." In one of his last *Letters to Malcolm*, C. S. Lewis observed that purification normally involves suffering. Looking back over his life he mused, "Most real good that has been done me in this life has involved it." To achieve the higher values in a fallen world requires disciplinary suffering. The immature may complain and cry; the mature will accept the fact and by God's grace discipline themselves.

VII. Conclusion. In summary, we need the wisdom of God to determine whether a given experience of suffering is judgmental, empathic, vicarious, testimonial, preventative, or educational. The very possibility of condemnation and eternal anguish for persistent pride, unbelief, and disobedience is a divine summons to repent. To wait until judgment begins to fall is sheer folly. Today is the day of salvation.

Whoever suffers a conviction of sin can count on divine empathy. God takes no delight in the necessity of judging the ungodly. He so desires their deliverance that he gave his Son to suffer their penalty at Calvary. For that vicarious suffering all believers give praise. Furthermore, they are

grateful to be counted worthy of suffering with him in the battle against unrighteousness. With rejoicing we testify in the midst of suffering to the integrity of our commitment. We accept the warnings of physical pain and act to avoid the dangers signaled. We discipline ourselves and readily accept that of our heavenly Father.

Some experiences may not fit in any of these categories, alone or in combination. From the present limited perspective, no one can obtain all the answers. But the unknowns do not render meaningless that which we do know. As Albertus Pieters argued, "We may know little, but the little that we do know is more valid for our interpretation of the world than the much that we do not know."

G. R. LEWIS

Suffering Servant. See SERVANT OF THE LORD.

Sukkiim suhk′ee-im. See SUKKIITES.

Sukkiites suhk′ee-ites (סֻכִּיִּים *H6113,* derivation unknown). Also Sukkiim; KJV Sukkiims (superfluous English pl. form). A people group, evidently from Africa, who along with Libyans and Cushites assisted SHISHAK, king of Egypt, when he invaded Palestine (2 Chr. 12:3). The SEPTUAGINT renders the name as *Trōglodytai* ("cave dwellers"), apparently referring to an Ethiopian tribe mentioned by HERODOTUS *(Hist.* 4.183; this group is now identified with the Tibboos). The true identity of the Sukkiites is unknown.

Sukkoth suhk-uhth′. The Hebrew name of the Feast of Booths (Tabernacles). See FEASTS I.B.3. See also SUCCOTH and SUCCOTH BENOTH.

sulfur. See BRIMSTONE.

Sumer s*oo*′muhr (from Akk. *šumeru,* although the Sumerians themselves used the term *kengir* [KI-EN-GI]). The ancient name of the land located in what is today the southern half of Iraq in the valleys of the TIGRIS and EUPHRATES Rivers. Other names used in antiquity to denote this area are Babylonia (see ASSYRIA AND BABYLONIA) and SHINAR. See also MESOPOTAMIA.

1. Geography
2. History
    1. The arrival of the Sumerians
    2. The early dynastic period

I. Geography. The northernmost limit of the ancient land of Sumer was probably in the vicinity of modern Baghdad. Among the old cultural centers that fell within the borders of the land were the cities of Kish (Tell el-Oheimir), Kid Nun (Jemdet Nasr), Nippur (Niffer), Lagash (Telloh), Uruk (Warka), Ur (Tell Muqayyir), Eridu (Abu Shahrain), Shuruppak (Fara), Larsa (Senkere), and Umma (Jocha). Of these illustrious cities, two are mentioned in the OT, Uruk (see ERECH) and UR.

Sumer.

Here also was located BABYLON, but the period of this city's first flourishing (c. 1800 B.C.) follows the end of the Sumerian periods in the history of Iraq.

II. History. The history of Sumer properly speaking is the history of her separate cities, since during the period under consideration they seldom acted in complete concert. Each city had its claims to fame: its local god, temples, monuments, or rulers. Among the more illustrious of rulers, Kish could claim Enmebaragesi, Akka, and Mesilim; Uruk could claim the famous GILGAMESH (around whose exploits the epic named after him was woven); Ur could boast Meskalamdug, Mesannepada, Urnammu, and Shulgi; Lagash could recount the deeds of Urnanshe, Urukagina, Gudea, and Eannatum. Each of the important cities had its own local deity or deities. Uruk had the goddess Inanna and the sky-god An. Ur venerated the moon-god Suen. Eridu was the cult center of the god of the sweet waters, Enki (also known as Ea). NIPPUR contained the temple of the air-god ENLIL. In Sippar was the seat of worship for the sun-god Utu.

A. The arrival of the Sumerians (c. 3300 – 3000 B.C.). The early peoples who migrated into the Tigris-Euphrates valley called themselves "the black-headed peoples." Their place of origin is unknown and has given rise to various theories. Since they employ the same ideogram for "mountain" and "land," their homeland is thought to have been in the NE (Caucasus). Their earliest settlements, however, were in the S, so another view is that they came from the E by sea, which may explain why,

like the Semites who were also in the same area, they were not reinvigorated by periodic fresh immigration.

Archaeological excavations have demonstrated that the southern half of Iraq was inhabited before the coming of the Sumerians. Until relatively recent times the prehistory proper, the Stone Age of Iraq, was virtually unknown. The most ancient traces of human presence in Iraq were found in 1949 at Barda-Balka between Kirkuk and Suleimaniyah. They consisted of Paleolithic flint tools: heart-shaped hand axes and flake side-scrapers. They have been attributed to the beginning of the Middle Paleolithic period, about 120,000 years ago.

In southern Iraq the oldest known culture is that of a people somehow connected with the contemporary Halaf people in the N (c. 4500 B.C.). Traces of their presence have been found at Qalʿat Hajj Muhammed (near Uruk) and at ERIDU. They were followed by people whose culture is called Ubaidian from the name of the site (Tell al-ʿUbaid), where its remains were first identified. Around 4000 this people established the villages that grew into the cities of Eridu, Ur, Nippur, Kish, Adab, Kullab, Larsa, and Isin. Their language has been called "Proto-Euphratean," although all that is known of it is what has survived in certain pre-Sumerian nouns and the names of some Sumerian cities which may have been retained from earlier times. This culture, first imported into the southern delta, expanded northward along the two rivers and eventually spread through Upper Mesopotamia, N SYRIA, and CILICIA.

Farmers in the S followed a simple method of "basin irrigation," which, however, sufficed to support a growing population. The Ubaidians had already developed many skills and occupations, including those of the farmer, cattle breeder, fisherman, the potter, smith, stone mason, carpenter, reed-mat weaver, and worker in leather. The temple was always the largest and best-constructed building in the Ubaid village. Furthermore, the same traditions of religious architecture were followed on the same site from the Ubaid period to early historical times (c. 4000 – 3000). The temple, it would appear, was already the center of most economic, social, and governmental activities.

To the 500-year span of 3300 to 2800 B.C. have been assigned the Uruk and the Proto-Literate periods. To it one may assign also the coming of the Sumerians. There is no such thing as a Sumerian "race." The skulls from Sumerian graves are either dolichocephalic or brachycephalic. They suggest that the populace consisted of a mixture of Armenoid and Mediterranean races. The physical traits depicted on monuments—the big nose, the bulging eyes, the thick neck, and flat occiput—are conventional and do not indicate racial type. The same features have been observed on statues depicting Semites, while other statues representing Sumerians (e.g., Gudea) show a short, straight nose and a long head.

It should be admitted at the outset that only language can serve as a criterion for identification of Sumerians. Unfortunately, scholars have been unable to find any convincing example of a known language cognate to Sumerian, although many have been suggested. Sumerian is a non-Semitic, agglutinative, inflected, and partly tonal speech written in the CUNEIFORM script, which would seem to have been their invention (see J-J. Glassner, *The Invention of Cuneiform: Writing in Sumer* [2003]). In various dialects it survives on several thousand CLAY TABLETS found during excavations in Babylonia. In the 4th millennium B.C. the writing was pictographic, the earliest examples being found at Warka (Uruk IV) and neighboring sites, but this soon gave way to a well-developed polysyllabic writing employing more than 400 different signs. A varied literature was influential, since the same script was taken over for use in the Semitic dialects of Akkadian (Assyrian and Babylonian) and for dialects in Syria and Palestine, as well as for such non-Semitic languages as Elamite, Kassite, Hittite,

Hurrian, and Old Persian. Since many bilingual texts survive, there is much evidence for the language and through it of early Sumerian history. See LANGUAGES OF THE ANE I.A.

The geographical background of their oldest myths and stories seems to have been typical of S Iraq: rivers and marshes, reeds, tamarisks, palm trees. Archaeological evidence suggests no major break in pottery style sufficient to prove a large scale immigration of "Sumerians" during the Uruk period. Indeed, many scholars wonder if it is not quite beside the point even to pose the question of when and from where the Sumerians arrived. As one writer puts it, "They may…represent a branch of the population which occupied the greater part of the Near East in early Neolithic and Chalcolithic times. In other words, they may have 'always' been in Iraq" (G. Roux, *Ancient Iraq* [1964], 85). Nevertheless, other scholars insist that the Sumerians immigrated into S Iraq no earlier than c. 3500 and most likely from a home in the N to the W of the Caspian Sea.

B. The early dynastic period (c. 2700 – 2300 B.C.). A Sumerian king list written c. 2150 B.C. ascribes kingship first to the city of Eridu and then in turn to Badtibirra, Larak, Sippar, and Shuruppak. Eight kings reigned for 241,209 years in these five cities and then "the flood swept over the earth." Another text lists ten such rulers, but two of these may have been contemporaries; so, though there are superficial similarities between these lists and the ten ANTEDELUVIAN patriarchs (Gen. 5) and the preflood monarchs of the later Berossus account, no direct correlation is possible. (See T. Jacobsen, *The Sumerian King-List* [1939]; *ANET*, 265 – 66. In all lists it is the tenth who survives the flood and all display a longevity which, in the Babylonian accounts with ages of more than 20,000 years each, make the life-span of METHUSELAH [969 years; 5:27] look insignificant.) It is unfortunately impossible to authenticate most of the kings on this list. The earliest ruler who has been attested independently by historical evidence is En-me-barage-si, who ruled c. 2700 over the city of Kish. The second earliest ruler so attested is Mesanne-padda, king of Ur (c. 2650).

The traditional history of Sumer, however, begins with a king named Etana, who may have ruled Kish c. 2800. It appears that Etana ruled over more than the city of Kish itself. Rather, he exercised control over all of Sumer and even surrounding lands. If Etana of Kish built an empire, it soon passed to the neighboring city of Uruk. For not long thereafter a king named Mes-kiagga-sher of Uruk (c. 2750) extended his rule from the Sea (Mediterranean?) to the Zagros Mountains. During the reigns of his son, En-mer-kar (c. 2730), and his successor, the warrior Lugal-banda (c. 2710), there were a series of military and political encounters with a city far to the NE named Aratta.

By the end of Lugal-banda's reign the power of the ruler of Kish began to reassert itself. En-me-barage-si of Kish (c. 2700) had defeated ELAM and founded Sumer's holiest shrine, the first temple of Enlil in Nippur, a center of pilgrimage for the Sumerians not unlike Jerusalem, Rome, or Mecca. Probably contemporary with En-me-barage-si of Kish were the kings of Ur (Mes-kalam-dug and A-kalam-dug), to whom pertained the famous royal cemetery excavated by Sir Leonard Woolley. Their successor, Mes-anne-padda (possibly also known by the name Me-silim), assumed the position of hegemony among the cities of Sumer during the reign of Agga of Kish, En-me-barage-si's son.

A third contemporary of Agga of Kish and Mes-anne-padda of Ur was the famous Gilgamesh of Uruk (c. 2650), about whose historical deeds was woven an elaborate fabric of legends. Precisely where historical truth ceases and poetic fancy begins in these tales is seldom possible to determine. That he was in fact the ruler under whom the city wall

This cuneiform tablet, discovered in Nineveh and dating to the end of the 2nd millennium B.C., contains a list of equivalent terms in Sumerian and Akkadian.

of Uruk was built, as is claimed in the Gilgamesh Epic, can be substantiated on the basis of the character of the brickwork in the walls (the so-called "plano-convex" bricks). Another legend recounts Gilgamesh's encounters with Agga of Kish, which likewise seems historical. The remainder of the epic, describing his noble quest for immortality, cannot be validated and probably is nothing more than a folk tale.

The generation of Agga, Gilgamesh, and Mes-anne-padda was followed by an interlude of foreign domination. The two foreign dynasties of Awan and Hamazi (coming from the mountains that border Iraq on the E) exercised control over a large part of Sumer. The foreigners were finally expelled by E-anna-tum, the ruler of LAGASH (c. 2550). He extended his control over the other Sumerian cities by defeating the armies of Ur and Uruk and Kish, and by settling a boundary dispute between his own city of Lagash and the neighboring city of Umma by force of arms. The last-named conflict was commemorated by a masterpiece of Sumerian sculpture, the Stela of the Vultures.

The century following E-anna-tum's death (c. 2500 – 2400) is somewhat confused. It appears that for short periods of time large portions of Sumer were controlled by Lugal-anne-mundu of Adab, En-shakush-anna of Uruk, and a group of foreign kings from the city of MARI on the Middle Euphrates. Shortly before 2400 there arose in the city of Lagash a monarch named Urukagina, who is the earliest known ruler to have left in writing a record of sweeping social reforms designed to eliminate greed, oppression, and exploitation of the poor by the ruling classes. He reigned over Lagash for eight years, until Lagash was conquered by Lugal-zagge-si, king of Umma. Lugal-zagge-si of Umma then proceeded to capture Uruk, and claimed in his inscriptions to have conquered all of Mesopotamia and Syria. If this is not sheer boasting without substance, it may only indicate that Lugal-zaggesi secured

the submission of the Semites of Mari, who in turn exercised some form of loose political control over the Syrian groups farther to the west. Lugal-zagge-si reigned for about twenty-nine years (c. 2400 – 2371).

C. The domination by the Akkadians and the Guti (c. 2300 – 2100 B.C.). Persons or groups of persons who spoke languages belonging to the Semitic family were not new to Sumer in the year 2300, but it was then that, for the first time, a ruler arose to exercise political control over all of Sumer, Mesopotamia in the N, and Syria in the W, whose name and native language were Semitic. His real name is not known. What is known is the royal name or title he employed: Sharru-kin (Sargon), which in his native language meant "legitimate king." In history books he is usually called Sargon of Agade (see Akkad) or Sargon the Great to distinguish him from the other Sargons of later periods in the history of Babylonia and Assyria. So famous did he become and so popular his legend was in later times that it is difficult to separate his actual deeds from those falsely attributed to him. The former must certainly have been impressive, if they were able to stimulate the latter. There is no reason to doubt that his effective realm included all of Sumer in the S, Assyria in the N, Syria and the Euphrates Valley in the W. More extravagant claims of his expeditions to central Asia Minor (Burušhanda), to Cyprus, Egypt, and possibly Ethiopia, are quite another matter.

It is understandable that around the career and origins of such a man of accomplishments should grow up legends. A text written in the 7th cent. B.C. describes Sargon's birth in terms similar to that of Moses: "My mother was a high priestess, my father I knew not. /…My city is Azupiranu, which is situated on the banks of the Euphrates. / My mother, the high priestess, conceived me, in secret she bore me. / She set me in a basket of rushes, with bitumen she sealed my lid. / She cast me into the river which rose not (over) me. / The river bore me up and carried me to Akki, the drawer of water. / …[Akki took me] as his son (and) reared me, /…appointed me as his gardener. / While I was a gardener, Ishtar granted me (her) love, / And for four and […] years I exercised kingship" (*ANET*, 119). The facts behind this romance are that Sargon was of humble origin and that, while serving as cup-bearer to Ur-Zababa, king of Kish, he managed to overthrow his lord and led an army against Uruk, where he met and defeated Lugal-zagge-si, whom he brought back to Kish in humiliation "in a dog collar" and exposed him at Enlil's gate. Sargon reigned for fifty-five years (c. 2371 – 2316), managing to hold together his far-flung possessions until the end.

Sargon's son, Rimush (reigned 2315 – 2307), was not so successful, and on more than one occasion had to quell rebellion in his own palace. Rimush was succeeded by Manishtusu (2306 – 2292), Naram-Sin (2291 – 2255), and Shar-kali-sharri (2254 – 2230), none of whom were able to equal the successes of their great ancestor Sargon. The later legends ignore all of these but Naram-Sin, whom they cast as the typical "bad-luck ruler." The legends portray him as impious and ill-fated and as the ruler during whose reign the empire collapsed. The truth of the matter is that Naram-Sin was far more capable than the other successors of Sargon. But toward the end of his reign he did meet a crushing defeat at the hands of the Guti, a semi-barbaric mountain folk. The kingdom of Akkad, however, survived until the end of the reign of his successor.

D. The Sumerian revival: the 3rd dynasty of Ur and the Isin-Larsa period (c. 2100 – 1800 B.C.). The deliverer of the Sumerian cities from the yoke of the Guti was an energetic warrior-ruler named Utu-hegal of Uruk (c. 2120 – 2114), who—followed by several other Sumerian princes —defeated the Guti leader Tiriqan and drove his followers out of the land. But Utu-hegal's own reign was short: in 2114 he was evicted by one of his own officials, Ur-Nammu, the governor of Ur. For the following

100 years the city of Ur maintained its hegemony over the other Sumerian cities. This is called the 3rd dynasty of Ur, or the Ur-III Period.

Contemporary with Utu-hegal of Uruk and Ur-Nammu of Ur was a prince of Lagash named Gudea. Although he was not a great conqueror, Gudea is famous for the works of literature and art that flourished at his court. Ur-Nammu of Ur has also left us several interesting pieces of literature, including the oldest known code of laws, three centuries older than the famous Code of HAMMURABI.

Equally impressive testimony to the advanced artistry and technical skill of the citizens of Ur at this time are the ZIGGURATS (stage towers, or pyramids), which appear in Sumerian cities from this time on and which may owe their inspiration to the ziggurat of Ur, constructed in the reign of Ur-Nammu. It had three stories and rose to over 100 ft. high. The impression of lightness which it conveys is due to its perfect proportions and to the fact that all its lines are slightly curved (convex), a technique employed nearly 2,000 years later by the Greek architects who built the Parthenon. The platforms were reached by flights of stairs leading up to the shrine which surmounted the entire structure. It stood on a large terrace in the midst of Ur's "sacred quarter," a walled precinct in the northern half of the city. While there is no agreement among scholars as to the precise purpose of these ziggurats, it is likely that they provided a meeting place for earth-bound man and the heavenly gods at a point halfway between the two spheres. The famous Tower of BABEL (Gen. 11:4), which apparently resembled the ziggurats, was meant to "reach unto heaven."

Ur-Nammu's son Shulgi reigned from 2095 to 2048, a total of forty-seven years. The temples and ziggurats begun by Ur-Nammu in Ur and other Sumerian cities were completed. The gods' images were installed in their shrines. The calendar was reformed. A new measure of grain, the royal *gur*, superseded the local measures formerly in use, thus facilitating intercity and international trade. No record indicates military expeditions before Shulgi's twenty-fourth year, when he embarked on a long series of annual campaigns in the NE (Kurdistan).

During the reigns of Amar-Suen, Shu-Sin, and Ibbi-Sin, groups of Semitic nomads, called Martu in Sumerian and Amurru in Akkadian (see AMORITE), began to assert themselves in the settled areas of southern Iraq, making themselves masters of the cities of Isin, Larsa, and Babylon. The rulers of Ur were well aware of this threat. During the reign of Amar-Suen a fortress named "That Which Keeps Away Tidnum [i.e., Amurru]" was built along the Euphrates between Sumer and Mari. The measure succeeded temporarily.

When Ibbi-Sin succeeded to the throne of Ur in 2029, the eastern provinces of Eshnunna and Susa declared themselves independent. In Ibbi-Sin's fifth year the Amorites (Amurru) penetrated deep into the heart of Sumer, cutting off Nippur and Isin in the N from Ur in the S. Soon thereafter (2017) Ibbin-Sin's deputy in Isin, Ishbi-Erra, proclaimed himself king in Isin. An Amorite sheikh called Nablanum had been made king in Larsa, only 25 mi. from Ur. Beset on all sides, Ibbi-Sin of Ur now succumbed to an Elamite attack on the capital city in 2006. During the 250 years following the destruction of Ur, the cities of Isin, Larsa, and Babylon struggled for control of S Iraq. In the N another Amorite named Shamshi-Adad of Assyria governed a large expanse.

In 1720 Hammurabi of Babylon defeated Rim-Sin of Larsa and emerged as the victor in this struggle for dominance in the S. The survey of the history of Sumer is concluded, because, although the Sumerian language continued to be taught in the schools and used in official documents, the common people, whatever their "racial" origins, were thoroughly semitized in language and customs.

III. Social and economic institutions. From as early as the Ubaid period the temple of the city god occupied a central and preeminent role in the life of the city. The high priest of that temple and

representative of the god was called the *ensi*. Most of the arable land surrounding the city was owned by the city god (i.e., by his temple). Peasants tilled that land and were given a portion of the produce to live on. Although the *ensi* supervised the economy of the city, the crises arising from threat of attack called for a convening of the people in two assemblies. A temporary war leader was appointed for each crisis by the assemblies. This leader was called the *lugal* ("bid man"). Like the OT judges, this *lugal* retired from his office after the threat had ceased. In time, kingship became a hereditary institution. Cities supported standing armies that were organized and well equipped. At first the "secular" *lugal* and the "cleric" *ensi* or *sanga* respected each other's separate domains, but eventually the *lugal* came to control the temple as well as the palace.

Most of the citizens were farmers, herdsmen, and fishermen, but many made their livelihood in the crafts as masons, carpenters, smiths, potters, jewelers, merchants, scribes, and physicians. Despite the large temple land holdings, many persons held private property: farms and gardens, houses and cattle. Slaves were few in number at first. Most slaves were prisoners taken in battle. But freemen might become the slaves of others as punishment for certain offenses. In time of need parents could sell their children as slaves. The slave wore the brand mark of his owner. He could be flogged as punishment. But slaves could engage in business, borrow money, and buy their freedom.

Law was formulated in writing as early as Urukagina of Lagash (c. 2420 B.C.) and Ur-Nammu of Ur (c. 2150; see *ANET*, 523 – 25). Private documents of law (contracts, deeds, wills, promissory notes, receipts) have been recovered. The supervision of the courts was in the hands of the city governor (*ensi*) or his representative (*mashkim*). Cases were heard by a panel of three or four judges (*di-kud*) who weighed evidence in the form of statements from witnesses and written documents. Conflicts in testimony were resolved by oath-taking. The decision of the judges was legally binding, but appeals could be made on the basis of new evidence.

IV. Religion. The prominence of the temple and its divine proprietor in the economy of the Sumerian city afford some indication of the nature of the pantheon so far as the ordinary layman was concerned. For him the complex and speculative cosmology and theology of the priest and scribe had little meaning. He was a member of an overgrown village family at the head of which was the *ensi*, who represented the city-god. He had little familiarity with the "functional" roles of the various gods venerated in his and other Sumerian cities. He did not choose to be born in this city, so he obviously did not choose his own god. Nor is there any evidence to show that persons transferred their residence and citizenship to a different town for religious reasons—at least not until ABRAHAM, the son of TERAH (Gen. 11 – 12). He was loyal to his city-god as he would be to his own father. Accomplishments of his city, whether in war or peace, were accomplishments of its god, and the god was thanked accordingly through dedications of statues, food offerings, or even the building of a new or larger temple.

"The Care and Feeding of the Gods" is what one scholar has called the process of the Sumerian cult. Each god was housed in a temple, clothed with finely woven garments, fed with the daily food offerings, and entertained by the singing of daily hymns by the priests and their staff. The cult image was the god. If an invading army carried off the image, they carried off the god. At regularly specified times of the year the staff of the temple threw a "party" (called a "festival" or *ezen*) for the god—a party to which his divine cronies from other cities were invited. Their statues were brought over land or in river barges to the "host" temple, and, of course, crowds of human attendants filled the city. Calendars of such regularly scheduled (*sag-ús*) festivals were drawn up.

The most glamorous of the yearly festivals was the *akiti* or New Year's Festival. The high point

The Sumerian temple at Khafajeh (reconstruction by H. D. Darby).

the activities was the sacred marriage ceremony, in which the reigning king was united in marriage to Inanna, the goddess of love and reproduction. The role of Inanna in the *connubium* was played by the high priestess (*en*, Akk. *entu*), who was the bride of the king-god and kept herself for him. To the Sumerians it appeared that all vegetation died and all animal life languished during the hot summer months. Since it was the task of the god of vegetation to foster it, it was assumed that he had either died or been kidnapped and removed to the nether world, where he remained during the summer. He returned at the time of the autumnal equinox (the Sumerian New Year) and, when he had joined with his wife, produced that remarkable revival of plant and animal life so long awaited by the land's inhabitants. There were several such "dying gods" in Sumer, but the best known was *Dumu-zi(d)* ("true son"), whose name was pronounced by the Semites as TAMMUZ. Some scholars see as further representatives of this divine type the Ugaritic HADAD or BAAL, the Phoenician Adoni (ADONIS), the Egyptian OSIRIS, and the Hittite Telepinu.

Through literature and religion, the thought and manner of the Sumerians was transmitted to both contemporary and later civilizations and is of importance as the background of much in Gen. 1 – 11. The texts detail the range of its gods, rituals, and religious practices, as well as its incipient sciences (medicine, astronomy, mathematics, technology). The Sumerian mind concerned itself with nature, for it was largely an agricultural community with industry confined to a few city centers. It pondered the problems of death and the afterlife (Gilgamesh Epic), yet was abounding with practical wisdom (collections of proverbs, essays of advice, parables) as well as court and temple ritual in the desire to know the mind of the gods (omens, hymns, prayers). Sumerian myths discussed the role of deities ("The Birth of the Moon God"), vocation and creation of the world and of man, paradise, and evil.

Most texts were in poetic form; among them are long love poems and lamentations (see the selections in *ANET*, 37 – 59, 455 – 63, 382 – 92, 573 – 91, 611 – 19, 637 – 52). The longest historiographic text is the Curse of Agade (*ANET*, 646 – 51), which city was seen to have been destroyed by the Guti as punishment for its evil by the gods using international military forces. Wisdom literature includes essays, one of which, like JOB, discusses human suffering (*ANET*, 589 – 91). In language, thought, literary genre, and in other ways the influence of Sumer can be said to have

been immense and lived on through the Babylonians to the Greeks and the W not without leaving its mark on the OT.

(See Fr. Thureau-Dangin, *Les inscriptions de Sumer et d'Akkad* [1905]; H. H. Frankfort, *The Birth of Civilisation in the Ancient Near East* [1951]; A. Falkenstein, *Das Sumerische* [1959]; A. summer. The Hebrew word for "summer," *qayiṣ H7811*, can be used both for the season (Gen. 8:22 et al.) and for its produce (Jer. 40:10 et al.). In PALESTINE, the months between May and October are essentially rainless, so that summer is a season of drought (Ps. 32:4) and often oppressive heat, but also of field work (Prov. 10:5; Jer. 8:20). The main business of the season is the HARVEST, first that of the early crops (cf. Isa. 28:4), then the main crop. If the harvest is delayed, the produce will become overripe and spoil, as in the vision of summer fruit (Amos 8:1 – 2). In the NT, the Greek word *theros G2550* occurs only in Jesus' comment about recog nizing the signs of the end times (Matt. 13:28 and parallels). See also SEASONS.

<div align="right">J. H. PATERSON</div>

sun. Under the titles of various deities, the sun was worshiped by many peoples of the ancient world. In the Bible, the sun is mentioned frequently, especially as part of the imagery of CREATION and in a number of common Semitic idiomatic expressions. The common Hebrew word for "sun" is *šemeš H9087*; rarely used are *ḥammâ H2780* (Cant. 6:10 et al.) and *ḥeres H3064* (Jdg. 14:18; Job 9:7; and some MSS at Isa. 19:18; cf. also the place names HERES and TIMNATH HERES). In the NT the Greek word is *hēlios G2463*.

I. The sun in the ANE and the OT. Simple ideographs of the sun date from the Paleolithic era onward, and every ancient language has a special term, usually with metaphysical or supranatural connotation, to describe the solar phenomenon. In SUMER, the sun was deified under the name *Utu* (accompanied by the determinative sign for deity, *dingir*). In the elaborate Sumerian pantheon, *Utu* was in charge of the moral order of things, boundaries, agreements, etc. He also was to judge the dead and determine their status in the netherworld. The Akkadian equivalent is the deity *Šamaš*, frequently mentioned in the historical and religious texts. In Sumerian and Akkadian pantheons the sun is a masculine deity, whereas in UGARIT and other W Semitic cultures it is feminine; the cult of the sun-goddess was widespread.

In EGYPT the sun-god RE was the high deity of the earliest predynastic cosmology, that of HELIOPOLIS. The deity of the Neolithic period seems to have been an ancient god, Atum, who later becomes syncretized with Re; thus Atum-Re is symbolized by the sacred post known as *ben-ben*, which stood in the center of the sacred precinct at Heliopolis. The incident of the removal of the capitol to TELL EL-AMARNA by the Pharaoh AKHENATEN (Amenhotep IV, 1370 – 1353 B.C.) marked a

transition to the cult worship of Aten, the solar disc, and a loss of power and control by the former royal city of THEBES. After the death of Akhenaten and his successors Semenkhkara and Tutankhamen, the Amarna age ended.

Throughout the OT, the sun is stated to be the creation of God, fashioned with the intent of providing LIGHT on the fourth day of creation (Gen. 1:14 – 19). However, at the command of Yahweh it can be stayed (Josh. 10:12 – 13; see DAY, JOSHUA'S LONG); and in the day of judgment at the fulfillment of the "last days" it will be extinguished (Isa. 13:10 et al.; see ESCHATOLOGY III.I).

The worship or celebration of the sun was strictly forbidden (Deut. 4:19 et al.), and this cultic practice so common in the ANE was probably involved in the Tower of BABEL (Gen. 11:1 – 9). After the exodus and the conquest of Canaan, the Israelites came in contact with the cult of the sun, and many place names of the period of the judges and the first commonwealth reflect their ancient cultic status: BETH SHEMESH, "house of the sun" (Josh. 15:10 et al.); EN SHEMESH, "spring of the sun" (15:17 et al.); Shamash Edom, mentioned in Egyptian sources (*ANET*, 243a, 245b). A ritual involved with this solar deity was that of marking the sun's course with chariots and models of chariots left at the gate where the rising sun entered the city. This and other such practices were forbidden under JOSIAH (2 Ki. 23:5, esp. v. 11). See HOST OF HEAVEN IV; IDOLATRY; SUN WORSHIP.

The sun is used in certain idiomatic expressions as a symbol of ETERNITY (Ps. 72:5 et al.), a usage attested outside the Bible, as in the Phoenician inscription from Karatepe: "[may the name of] Azitawadda endure forever, like the name of the sun and the moon" (*KAI*, 1:6, sect. V, lines 6 – 7). Another use is the expression "under the sun" (Eccl. 1:3 et al.), referring to the sun's all-pervasive character, which is similar to a reference in Phoenician inscriptions (e.g., "among the living under the sun"; see *KAI*, 1:3, #14, line 12). Nowhere in the OT is the sun itself considered to be either divine or an attribute of God.

II. The sun in the NT. Aside from a number of literal occurrences of the term (e.g., Lk. 4:40; Acts 27:20), the sun is mentioned in the NT usually either in metaphorical contexts (e.g., "the righteous will shine like the sun," Matt. 13:43), or in pas sages dealing with the cosmic catastrophe to occur at the PAROUSIA (Matt. 24:29; Rev. 1:16 et al.). This last sense is derived from the OT prophetic usage. The sun in all cases is mentioned as the source of light and completely at the command of God. The darkening of the sun at the CRUCIFIXION is seen as a special effect of iniquity upon the cosmos.

III. The sun in postbiblical times. So strong was the reverence for the sun among the ancient pagans that notions and ideas from this cultus were soon syncretized with the gospel. Because the sun was worshiped in MITHRAISM and other cults of Persian-Zoroastrian origin, this element was frequent in the various heresies. Nearly all the deities of the ancient classical world were portrayed in some sense illuminated by the sun, which became one of their divine attributes. In the earliest Christian art and literature this also occurred, so that Jesus is often shown on the sun-shield or *clipeus* and frequently in the solar chariot. The culmination of this movement was in the pantheistic hymnology of the high Middle Ages, in which Christ was ascribed all the attributions of the ancient solar disc. The Reformation discredited this vestige of paganism.

(See further W. T. Olcott, *Sun-Lore of All Ages* [1914]; F. Boll, *Die Sonne im Glauben und in der Weltanschauung der alten Völker* [1922]; J. Maier, "Die Sonne im religiösen Denken des antiken Judentum," in *ANRW* 2/19/1 [1979], 346 – 412; J. G. Taylor, *Yahweh and the Sun: Biblical and Archae ological Evidence for Sunworship in Ancient Israel* [1993]; J. <div align="right">W. WHITE, JR.</div>

sun, chariots (horses) of the. See CHARIOTS OF THE SUN.

Sun, City of the. According to Isa. 19:18, five Egyptian cities will swear allegiance to Yahweh in the end times, and one of them will bear the name City of Destruction (see DESTRUCTION, CITY OF). The Hebrew word for "Destruction" is *heres H2239*, but the Great Isaiah Scroll from QUMRAN, along with a few Masoretic MSS, has ḥ*eres H3064*, "Sun." This reading is also reflected in several ancient versions (e.g., Vulg. *civitas Solis*) and has been adopted by some modern translations (e.g., NRSV). It is possible that a pun is implied—what was then "City of the Sun" was to be called "City of Destruction." The prophecy that immediately follows speaks of God's revealing himself to the Egyptians and their serving him (v. 21), a blessing alongside Assyria and Israel (vv. 23 – 25).

Of Egyptian towns, one in particular was known as "City of the Sun," namely, HELIOPOLIS: the "destruction" could reflect the judgments expressed and the overthrow of Egyptian paganism (cf. Jer. 43:13 NRSV; Heb. *bēt-šemeš*, "house of the sun"). The scope in time of the prophecy cannot be fully delimited; Jewish settlements occurred in Egypt from before Persian through Hellenistic times, while Christianity has brought knowledge of God both in ancient and modern times.

Sunday. See LORD'S DAY.

sun worship. Evidences of sun worship are seen in many cultures, including India, Greece, the Maya of Central America, and so on. Of particular significance is this practice as seen in the ANE. In ASSYRIA AND BABYLONIA special sites such as Soppara and Larsa were set aside for sun worship. In PHOENICIA the solar BAAL was Baal-Hammon. Also, the god Shamash was a sun-god. In Egypt at On (HELIOPOLIS) in the NILE delta, the sun worship of Egyptians was centralized. From early times the Egyptians worshiped RE, the general name for

Egyptian sun worship is exemplified by this relief of the deities Harakhte (left) and Hathor, each with a solar disk.

the sun-god. More specifically, he was called Atum or Amun, and his priests dominated the religious world of Egypt. In the reign of Amenhotep IV (AKHENATEN), an attempt was made to establish the sun-disk, Aten, as the sole god of Egypt. This reform lasted only during his lifetime. He built his own city for the center of this worship.

In Scripture the practice was clearly forbidden. "And when you look up to the sky and see the sun, the moon and the stars—all the heavenly array—do not be enticed into bowing down to them and worshiping things the LORD your God has apportioned to all the nations under heaven" (Deut. 4:19). The penalty for sun worship was death by stoning if there were two or three witnesses (17:2 – 5). In the days after the divided kingdom such practices were followed by some kings of Judah and Israel. MANASSEH, the son of HEZEKIAH, built altars to the HOST OF HEAVEN and worshiped them, even in the house of the Lord (2 Ki. 21:3 – 5). Some kings of Judah dedicated horses and chariots to the worship of the sun and burned incense (23:5, 11; see CHARIOTS OF THE SUN).

The prophet JEREMIAH tells us that the kings of Judah loved and served the sun and worshiped it (Jer. 8:2). EZEKIEL provides a very graphic picture of sun worshipers facing E in the Lord's house (Ezek. 8:16). ASA (2 Chr. 14:5) and JOSIAH (34:4, 7) sought to destroy such worship by breaking down the altars to the sun in the cities in all Israel. However, it was still practiced at the time of the fall of Jerusalem (Jer. 19:13; Ezek. 6:4, 6). (For bibliography, see under SUN.)

J. B. SCOTT

supernaturalism. See MIRACLE.

superscription. See MUSIC VI; PSALMS, BOOK OF, II.A.

superstition. Superstition may be defined as belief in the supernatural that is motivated by fear, proceeds from ignorance, and reflects an irrational view of reality. It may denote also the practices consequent upon such belief. Black magic, witchcraft, spirit-rapping, and the like, may be regarded as manifestations of a superstitious frame of mind. In the OT, the prohibition against DIVINATION by consulting a necromancer (one who has a "familiar spirit," Lev. 19:31; Deut. 18:11) and the record of the practice of soothsaying, augury, and the like (2 Ki. 21:6) show that the Israelites were often infected with the superstitious practices of those around them.

In NT times the Greek word *deisidaimonia G1272* and the Latin *superstitio are* used in an imprecise way, which makes the exact meaning in a given instance sometimes difficult to determine. (See P. J. Koets, *Deisidaimonia: A Contribution to the Knowledge of the Religious Terminology In Greek* [1929]). For example, FESTUS reported to Agrippa (see HEROD VIII) that PAUL had been involved in disputes with the Jews "about their own superstition" (Acts 25:19 KJV). Considering Agrippa's Jewish connections, it seems unlikely that the newly arrived governor would have paid the king so ill a compliment as to have designated the Jewish faith a superstition in the modern sense of the term (thus the NIV and other versions here translate "religion").

Similarly, when Paul remarked before the Areopagus: "I perceive that in all things you are too superstitious" (Acts 17:22 KJV), he probably meant "most religious" *(deisidaimonesterous,* comparative form [used as superlative] of *deisidaimōn G1273).* Some believe, however, that in these passages there is the tacit implication of religion to excess, that which is subversive to true religion. Certainly Paul would have been thinking of misdirected religious feeling or action, the religious veneration of persons and objects that observe no such reverence, or the worship of God through improper rites and ceremonies. It is in this sense that Christian missionaries have opposed the practices of the heathen—and that Protestants rejected the intrusion of such ideas into the medieval church—as superstitious.

P. JEWETT

Suph s*oof* (סוּף *H6069,* "reed[s]"). A place "in the desert east of the Jordan" near which MOSES expounded the law to Israel (Deut. 1:1). The Hebrew phrase *môl sûp* ("in front of Suph") is translated by the SEPTUAGINT with *plēsion tēs erythras,* "near the Red [Sea]," an understanding followed by the VULGATE, the TARGUMS, and the KJV (BDB, 693, suggests the possible conjecture *miyyam sûp,* "from the Red Sea" or, more literally, "from the Sea of Reeds"). If this interpretation is correct, the reference would be to the Gulf of AQABAH, and there is indeed some evidence for such a use of the term *yam-sûp* (see RED SEA III). Moreover, some argue that the association of Suph in this verse with PARAN, HAZEROTH, and the ARABAH gives support to this identification. Against it is the fact that nowhere else do we find the abbreviation *sûp* for *yam-sûp*; besides, it seems odd that a place in TRANSJORDAN should be described as being "in front of " or "near" Aqabah. (See also discussion in S. R. Driver, *A Critical and Exegetical Commentary on Deuteronomy*, ICC, 3rd ed. [1901], 3 – 5.)

Others have tried to identify Suph with specific places in MOAB. One possibility is SUPHAH (Num. 21:14), which might be modern Khirbet Sufa, not far from MEDEBA, but the Hebrew text in this verse is problematic. E. G. Kraeling (in *JNES* 7 [1948]: 201) suggested that Suph may be the same as Papyron, a site of unknown location mentioned by JOSEPHUS (*Ant.* 14.1.3 §33; *War* 1.6.3 §128); the only basis for this identification, however, is that the meaning of this place-name (from *papyros,*

"papyrus," i.e., the Egyptian reed) is similar to that of Suph.

Suphah s*oo*′fuh (סוּפָה *H6071*, "reed[s]"). Apparently a place within the territory of MOAB, mentioned in parallel with the ARNON River (Num. 21:14). Although some have identified it with modern Khirbet Sufa, a few miles SE of MEDEBA (cf. J. Simons, *The Geographical and Topographical Texts of the Old Testament* [1959], 261 – 62 n. 229), its location is unknown. Moreover, the meaning of this verse—a citation from the Book of the Wars of the Lord—is debated, for the Hebrew phrase begins with the direct object marker (ʾ*et-wāhēb bĕsûpâ*) even though there is no verb. The KJV (following the TARGUM and the VULGATE) identifies *wahēb* as a verb and renders, "What he did in the Red Sea" (see SUPH). Many scholars, assuming that the first part of the citation (which would have had a verb) is missing, translate with an ellipsis: "…Waheb in Suphah" (NIV [TNIV, "Zahab"]; cf. NJPS). Others emend the text, reading the particle ʾ*et-* as a form of the verb ʾ*ātâ H910* ("to come"), taking *wāhēb* as a corruption of *yhwh*, and interpreting *sûpâ* as a common noun meaning "storm" (thus, "The LORD came in a whirlwind"; cf. D. L. Christensen in *CBQ* 36 [1974]: 359 – 60, followed by J. R. Huddleston in *ABD*, 6:241 – 42, but see B. A. Levine, *Numbers 21 – 36*, AB 4A [2000], 92 – 95). The TNIV offers an alternate rendering in the margin, "I have been given from Suphah" (cf. Aram. *yehab H10314*, "to give"). See WAHEB; WARS OF THE LORD, BOOK OF THE.

Supper, Lord's. See LORD'S SUPPER.

Sur soor (סוּר *H6075*, possibly from a verb meaning "to depart"; Sour [Jdt. 2:28]). (1) The name of a gate in the city of JERUSALEM that probably led from the palace to the environs of the TEMPLE (2 Ki. 11:6). See FOUNDATION GATE.

(2) A coastal town S of TYRE, mentioned in the account of the campaign of HOLOFERNES in Syria (Jdt. 2:28). Its site is uncertain. Some think the name is fictitious; others have suggested that Sur is a corruption of DOR.

surety. The KJV uses the expression "of a surety" several times as an emphatic expression meaning "surely, for certain" (Gen. 15:13 et al.). Elsewhere it refers to something or someone accepted as security (43:9 et al.). See PLEDGE.

surfeiting. This English term, in its archaic sense of "overindulgence," is used once by the KJV to translate Greek *kraipalē G3190*, which refers to uncontrolled drinking (Lk. 21:34). Modern versions usually employ "dissipation" as the rendering of this term. See DRUNKENNESS.

surname. This English word, as a noun or a verb, is used sixteen times by the KJV (esp. in the book of Acts) to translate various expressions, most often Greek *epikaleō G2126* (Acts 1:23 et al.). Modern versions prefer other renderings ("known as," "called," etc.) used in the sense of a name or title applied to someone, thus denoting that person's distinct and individual character. In the O T, the Hebrew verb *kanâ H4033* means "to bestow an honorable name/title" (Isa. 45:4; some scholars vocalize this verb as a pual in 44:5 and render "he will be called by the name of Israel").

Susa s*oo*′suh (שׁוּשַׁן *H8809,* prob. from Egyp. *sšn,* the name of a plant; Aram. gentilic שׁוּשַׁנְכָי *H10704* [KJV, "Susanchites"]; in Gk. sources, Σοῦσα and Σουσίς). KJV Shushan. The ancient capital of ELAM and later of PERSIA, situated on the Karkheh River, in the plain of Iranian Khuzestan, near the Zagros mountains (modern Shūsh). The site has been excavated by the French since the late 19th cent. The earliest settlements date from the Neolithic era and show a separate development called "Susi-ana" by archaeologists. Documents in an unknown hieroglyphic script inscribed on CLAY TABLETS and called "Proto-Elamite" and marking an early stage in the production of WRITING have been discovered in the remains of Susa.

When the town emerges into the light of history it is the center of the Elamite civilization. In the Sumerian king list (see SUMER), which yields glimpses of dynasties from the 3rd millennium B.C., the name of Elam and its center of culture, Susa, is included. It appears that from this remote antiquity, Susa was a cult center and perhaps the city of the archaic religious state devoted to the high Elamite deity, In-Shushinak. During the third dynasty of UR, a period of Sumerian renaissance, the King Shulgi (c. 2095 – 2048 B.C.) conquered Susa and set a Sumerian governor *(ensi)* over the people. Under Sumerian and later Semitic domination, Susa was built and expanded in the manner of Mesopotamian cult centers with an astrological temple or stage-tower called a ZIGGURAT. Traders, priests, and other peaceful travelers often passed between Sumer and Elamite Susa. However, as Sumer again began to decline the Elamites took advantage of the situation and invaded and destroyed Ur in 2006 B.C. The Elamite success was short-lived, for Gungunum of Larsa overthrew Susa in 1924 B.C.

For approximately four centuries thereafter Susa is little noted in the CUNEIFORM records, but appears again to ally with ASSYRIA and threaten BABYLON in the S. The Elamite king Shutruk-Nahhunte wiped out the Kassite dynasty of Babylon in 1174 B.C. He carried back to Susa many famous art treasures from his Mesopotamian campaigns such as the Code of HAMMURABI, the Stela of Naram-Sin, and many inscribed texts. Shortly, however, the kings of Susa lost control of the W bank of the TIGRIS River, and slowly the once formidable empire ruled from Susa vanished.

The resurgence of Babylon in the Neo-Babylonian period led to the utter destruction of Susa by ASHURBANIPAL in 639 B.C. at the culmination of long-drawn hostilities. With the demise of Elamite sovereignty the way was open for the newly settled Indo-Europeans in Iran to assert themselves. With the rise of first the Medes and then the Persians, Susa became the regional capital of the Aryans. See MEDIA; PERSIA. Its location as the eastern terminus of the royal Achaemenid road from "Sardis to Susa" made it a center of trade and commerce.

Under the Persian Achaemenids, Susa was further embellished and extended after DARIUS chose it as his royal residence in 521 B.C. A building inscription of Darius has been excavated at Susa which states, "This palace that I built at Susa, its decorations were transported from distant places. The earth was excavated down until I reached the (bed)rock in the earth. When the excavation had been completed the depth of forty measures, rubble was packed down, in another place twenty
Calcite jar fragment from Susa, inscribed with the titles of Xerxes king of Persia (5th cent. B.C.).

measures in depth. On this fill the palace was erected" (R. Kent, *Old Persian Grammar, Texts, Lexicon* [1950], 144). The text goes on to list the commodities and the foreign areas from which they were brought; cedar wood from Lebanon, hard wood from Gandara, gold from Sardis, lapis lazuli and carnelian from Sogdiana, turquoise from Chorsmia, silver and ebony from Egypt, sculpture from the Ionian Greeks, ivory from Ethiopia and Sind. The king then adds, "Says Darius the king, At Susa a most magnificent construct was ordered, a most magnificent construct was completed, may Ahuramazda protect me and my father Hystaspes and my country."

Susa is mentioned frequently in the book of Esther as the scene of the affairs of the court of Darius's son and successor, XERXES. See ESTHER, BOOK OF. The opulence and magnificence of the palace is apparent in Esther and other ancient accounts. It became one of Alexander's most prized fortunes of war and the site of a mass marriage of Greek officers with the Persian royal women in 324 B.C. Its importance then declined and it was repeatedly overthrown and sacked during the medieval period.

Susanna s*oo*-zan'uh (Σουσάννα *G5052,* from שׁוּשַׁן *H8808,* "lily"). (1) A pious Jewish woman who lived in Babylon during the EXILE. See SUSANNA, HISTORY OF.

(2) One of several women who had been healed by Jesus and who helped to support him and his disciples in their travels (Lk. 8:3). Nothing else is known about her, but she was probably among those who witnessed the CRUCIFIXION and then returned to the city to prepare spices and ointment for the anointing of the body (23:55 – 56). (For a discussion of Lk. 8:1 – 3, see B. Witherington in *ZNW* 70 [1979]: 242 – 48.)

Susanna, History of. One of the Greek additions to the text of Daniel (see DANIEL, BOOK OF). In the SEPTUAGINT this story originally was placed after Daniel as an appendix, but in some important surviving MSS it is found at the beginning of the book because of the story's reference to Daniel as a young boy (cf. Sus. 45). In the VULGATE the story of Susanna occurs at the end of Daniel as an integral part of the book (numbered as the 13th chapter); in the Protestant Bible it is found as a separate book in the APOCRYPHA.

I. Content. The narrative tells of Susanna, a pious woman of great beauty who lived with her wealthy husband Joakim in BABYLON. Adjacent to his house Joakim had a large garden in which Susanna loved to stroll at midday after the elders (judges) and litigants, who were in the practice of conducting their business in Joakim's house, had departed. Two of these elders, however, had for some time been secretly inflamed with desire for Susanna, and one sultry day they individually stole back to the garden where, having surprised each other, they were forced to confess their mutual designs on her. After she had sent away her servants in preparation to bathe, the elders confronted her with the alternative of either submitting to their desires or being exposed as having been caught with a young man. Susanna chose to be unjustly accused "rather than to sin in the sight of the Lord."

At the trial on the following day the men gave their false testimony. But as Susanna was being led away to her execution, the young Daniel was moved by the Lord (in answer to Susanna's prayer) to protest the precipitate action. At their invitation, Daniel sat with the judges in a renewed examination of the evidence. He shrewdly examined the men separately, inquiring under which tree in the garden Susanna and her alleged lover were seen. The contradictory answers to this question exposed the treachery of the two elders who in turn received the punishment that was to have been Susanna's. The innocence of Susanna had been vindicated, and the narrative concludes with a statement that from thence onward Daniel's reputation among the people was established.

II. Historicity. Although the narrative is given a *prima facie* historical setting (with references to Babylon during the youth of Daniel, and to Susanna as wife of Joakim and daughter of Hilkiah), it is doubtful that the story should be considered historical. It has been pointed out that a number of the circumstantial details of the story do not fit the situation one expects among members of a newly exiled population (e.g., Joakim's luxurious house and gardens, and his servants; synagogues; elected judges; the right of capital punishment). In addition, Susanna is of the same genre of mystery writing as BEL AND THE DRAGON, another addition to Daniel, and the story consists of motifs (the wrongly accused woman; the wise young judge) which are not unknown in ancient folk literature. It has been suggested by a number of scholars that the author infused some such ancient tale (or tales) with traditional Jewish piety and presented it in new form for his own purposes (cf. TOBIT). This explanation is, of course, conjectural but may be regarded as probably correct.

III. Author, language, and date. The author of this beautiful story remains anonymous. It is not even clear whether he wrote the original in Greek or Hebrew, although the play on words in connection with the name of the trees and the imminent punishments (Sus. 54 – 55, *schinoi* and *schisei*; vv. 58 – 59, *prinon* and *ataprisē* [*prisai* in Theodotion]) seems to suggest a Greek original (unless the Greek translator has endeavored to imitate the word play of a Semitic original). The date of the document is similarly difficult to determine, but the consensus of modern scholarship is that it dates from the 2nd cent. or the beginning of the 1st cent. B.C. Depending on whether one decides for a Hebrew or Greek original, Susanna is usually assigned a Palestinian or Alexandrian origin.

IV. Purpose. The question concerning the purpose of the author in writing the story is an interesting one. Several writers have conjectured that if the author wrote from a Palestinian milieu, he may well have written the story as a Pharisaic polemic (see PHARISEES) against the jurisprudence of the ruling SADDUCEES. An interesting piece of history could serve as the background to Susanna: the son of Simon ben Shetach, leader of the Pharisees in the time of Alexander Jannaeus (see HASMONEAN II.C), was condemned to death by testimony of a false witness who was duly exposed, but upon whom, by Sadducean interpretation of LEX TALIONIS, no punishment could be inflicted since the son of Simon had not yet been executed. (Thereupon, it is said, the son of Simon chose to die that his false accusers might also die.)

If this is the background of Susanna, the author could have intended the work as a satire on the "justice" of the Sadducean legal system as well as an apologetic for the careful cross-examination of witnesses and the punishment of perjurers. On the other hand, the story may well have originated in ALEXANDRIA, having been intended merely as an illustration of the justice of God in answering the prayer of the righteous. As an incentive to purity of life and trust in God, the story is of powerful significance.

V. Text and canonicity. The Greek text of Susanna is available in the standard editions of the LXX. As with the book of Daniel itself, there are two recensions, the Theodotionic and the Old Greek (see SEPTUAGINT IV.C). The story is substantially the same in the two versions, but there are numerous differences in detail, some of them significant; for example, Theodotion gives a much fuller account of the events leading to the elders' accusation (Sus. 14 – 27).

ORIGEN argued for the canonicity of the book; JEROME included it in the VULGATE. However, the Roman Catholic Church alone among Christian bodies has recognized the full canonicity and authority of Susanna (the decision was made at the Council of Trent, 1548). In the early Christian church Susanna was often understood as an ALLEGORY of the church.

Susi s*oo′si* (סוּסִי H6064, from a word meaning "horse"). Father of Gaddi; the latter, representing the tribe of MANASSEH, was one of the twelve spies sent out to reconnoiter the Promised Land (Num. 13:11).

suzerain. See TREATY.

swallow. A songbird (family *Hirundinidae*, suborder *Oscines*) characterized by a short bill and long pointed wings. Most English Bible versions use "swallow" as the rendering of Hebrew *dĕrôr H2000*, which occurs twice (Ps. 84:3; Prov. 26:2; both times in parallel with ṣ*ippôr H7606*, which probably refers to the SPARROW). This identification is plausible but cannot be confirmed. In addition, the KJV and other versions use "swallow" to translate <* āgûr H6315*, which also occurs twice (Isa. 38:14; Jer. 8:7). This term, however, more likely refers to the short-footed thrush (*Pycnonotus Reichenovi*; see *HALOT*, 2:784, and NIV); others think it refers to the CRANE (cf. NRSV). In the same two verses, the NRSV uses "swallow" to render *sîs H6101*, also spelled *sûs* (NIV and NJPS have "swift").

    G. R. Driver (in *PEQ* no vol. [1955]: 129 – 40) points out that Arab. *sis* is the same as Hebrew *sîs* (*sûs*) and means "swift," from its twittering call; he argues that the migratory habit of the swift confirms this identification (Jer. 8:7) rather than "swallow." This argument is not valid, for four of the six species of swallow and martins are migrants, and one of the three swifts is resident. Driver also sees a clear distinction between *dĕrôr* ("swallow") and *sîs* ("swift"), but the differentiation is not quite so simple. These birds belong to widely separated orders, yet they have developed on similar lines: they take all their food in the air, where they spend most of their daylight hours, and are almost helpless on the ground; many of them nest in man-made environments. Palestine has some six members of the swallow family: European swallows, red-rumped swallows, house martins, sand martins, and two crag martins. Two are resident and the others migratory. See BIRD MIGRATION.

    Swallows and swifts (family *Apodidae*) are very similar in appearance, and ancient writers are unlikely to have distinguished precisely between them. It has been suggested that *dĕrôr* is a more general word including all insectivorous birds that feed on the wing. Either swallow or swift would fit the contexts of Ps. 84:3 and Prov. 26:2 equally well. (See *FFB*, 80.)

swine. In modern English the word *swine* has largely been replaced by an equally old English term, *pig*. The (uncastrated) male is known as the *boar*, the female as the *sow*, and the litter is called a *farrow* of piglets. In agricultural areas a number of special words denote the sexes at various ages (e.g., a *gilt* is a young sow that has not farrowed). *Wild boar* is the general term for the wild ancestor of the domestic pig (see BOAR); most other wild species are called *hogs* (e.g., *Warthog*).

Pigs were brought into the service of human beings independently in several different parts of the world, those in Europe and W Asia from *Sus scrofa*, in its various subspecies, and those in China from the eastern species, *S. vittatus*. It is hard to determine exactly when this took place, and the position is complicated by human migrations, since people would take their livestock with them on their wanderings. It seems generally agreed that the pig first became domesticated in the Neolithic period, but after humans began living in permanent settlements. The settlements could be protected by fencing while the pigs roamed the forests finding their own food; grubbing for seeds and tubers allowed grass to replace up-rooted thickets and so prepared the land for AGRICULTURE. There is clear evidence of pigs being kept about 2500 B.C. or earlier in Greece, Hungary, Egypt, and Mesopotamia.

To the early settlements the pig was of great value once it could be kept under control, for it not only helped break up land but also turned seeds almost or completely inedible to man—beechmast, acorns, etc.—into good fat and meat. In some lands, especially Egypt, pigs were made to tread the seed into the ground in flooded fields. Their bristles have always had some use, and their skins were sometimes made into a special type of leather, but their bones were useless for making into tools. Food production remains their sole use today, for modern breeds of pigs, permanently penned, convert vegetable food into animal food more quickly and efficiently than any other animal. (See the full discussion and detailed references in F. E. Zeuner, *A History of Domesticated Animals* [1963], ch. 10.)

Surprise has often been expressed that pork was so firmly forbidden as food to the Israelites, but modern discoveries about human disease have thrown new light on this. Thoroughly prepared and cooked pork is excellent meat, but the pig is the potential carrier of several dangerous diseases shared by humans and pigs. The most important of these is trichinosis, caused by a tape-worm which enters one stage in the muscles of a pig and progresses to its second stage only after being eaten. The development of this second stage involves invasion of various tissues, causing great pain and possibly death. Effective cooking in early days was not always possible and total prohibition was the safest policy. Further, the pig is by nature omnivorous and a scavenger; living around human habitations, it is always likely to pick up infected material, even that which has been buried, and transfer the infection elsewhere.

Of the seven OT occurrences of Hebrew *hăzîr H2614*, one refers to the boar (Ps. 80:13) and one is a proverb: "Like a gold ring in a pig's snout / is a beautiful woman who shows no discretion" (Prov. 11:22, referring no doubt to the custom of wearing a jewel in the nose; cf. Isa. 3:21). The other five refer directly to the pig's unclean nature (Lev. 11:7; Deut. 14:8; Isa. 65:4; 66:3, 17); it is clear that some of the people whom Isaiah was addressing were quite deliberately keeping pigs against the law. Pig-keeping was more widespread in NT times. In the incident of the swine in GADARA (Matt. 8:30 – 32 and parallels; Gk. *choiros G5956*) the owners were either Gentiles or nonpracticing Jews, but the pigs looked after by the prodigal son were certainly owned by a Gentile in some "distant country" (Lk. 15:13 – 16). The only other mention of pigs is in Jesus' proverb, "Give not that which is holy unto the dogs, neither cast ye your pearls before swine" (in Matt. 7:6 KJV).

G. S. CANSDALE

sword. See ARMOR, ARMS.

sycamine sik′uh-meen. This term is used by the KJV to render Greek *sykaminos G5189*, which appears only once in Jesus' words, "ye might say unto this sycamine tree…" (Lk. 17:6). Modern versions properly render it as "mulberry tree." There is little doubt that the sycamine and the SYCAMORE are quite different trees, although both of them, along with the FIG, belong in the family *Moraceae* (see FLORA). Sycamine is probably the black MULBERRY (*Morus nigra*), which has been grown for its fruit in Palestine since earliest days. The tree may grow 35 ft. tall, producing a stiff-branched tree which gives dense shade. (The *Dictionary of the Royal Horticultural Society* [1951] identifies "Sycamine" as either *Morus nigra* or *Morus alba*; but the latter, a native of China grown for its leaves, which are the main food of silkworms, was introduced into Palestine only in modern times.)

W. E. SHEWELL-COOPER

sycamore. This English term is derived from Greek *sykomoros* (in the NT, *sykomorea G5191*), which in turn is apparently composed of the nouns *sykon G5192* (the fruit of the fig tree) and *moron* (mulberry tree), although some think that the word is a modification of a Semitic term. The plant in view is the sycamore-fig tree, often called the fig-mulberry (*Ficus sycomorus*), to be distinguished from both the FIG tree (*Ficus carica*) and what is today referred to as "sycamore" (either *Acer pseudo-platanus*, a Eurasian maple, or *Platanus occidentalis*, the buttonwood).

The corresponding Hebrew word is *šiqmâ H9204*, which appears seven times in the OT. DAVID had an official "in charge of the olive and sycamore-fig trees in the western foothills" (1 Chr. 27:28). SOLOMON is said to have made "cedar as plentiful as sycamore-fig trees in the foothills" (1 Ki. 10:27; cf. 2 Chr. 1:15; 9:27). AMOS described himself as a shepherd who "also took care of sycamore-fig trees" (Amos 7:14). The destruction of such trees, along with vines, could be evidence of God's punishment (Ps. 78:47). The best-known reference, however, comes from the NT, which tells us that ZACCHAEUS, a short man, "ran ahead and climbed a sycamore-fig tree to see" Jesus (Lk. 19:4). Because the branches of the sycamore-fig are strong and wide-spreading, and because it produces many lateral branches, it was an easy evergreen tree for Zacchaeus to climb, and in which he could easily be hidden.

The fruits produced by the tree are in clusters and look like small figs; they are sweet, but by no means as good as the true fig. The fruit is produced several times during the year. It is a popular tree under which to pitch a tent, because of the ample shade it gives. It is necessary with sycamore-figs to puncture each fruit with the point of a knife at a certain stage so as to help insure that the little figs ripen properly. It was thus that Amos would have tended his trees (Heb. verb *bālas H1179*, *HALOT*, 1:134; cf. also *FFB*, 179 – 81). See also FLORA (under *Moraceae*); SYCAMINE.

W. E. SHEWELL-COOPER

Sychar si′kahr (Συχάρ *G5373*, either from ‘Askar [a site at the foot of Mount Ebal] or a corruption of Συχέμ *G5374* [Shechem]). The one biblical reference to Sychar identifies it as a town in SAMARIA, near the parcel of ground that JACOB gave his son JOSEPH (Jn. 4:5; cf. Gen. 33:19). JEROME in his translation of EUSEBIUS's *Onomasticon* (165.1 – 4) distinguishes Sychar from SHECHEM (modern Tell Balaṭah, just E of Nablus), though elsewhere (e.g., *Quaestiones in Gen.* 66.6) he identifies them as

the same place, arguing that the spelling Sychar is a

Painting inside of the Greek Orthodox Church of Jacob's Well at Sychar depicting the encounter between Jesus and the Samaritan woman at the well (Jn. 4).

scribal error for Shechem. The Old Syriac version also reads Shechem (F. C. Burkitt, *Evangelion da-Mepharreshe* [1904], 436). In the *Itinerary of Jerusalem* (dated A.D. 333) a Sechar is located one mile E of Nablus.

Recent debate still leaves the identity of Sychar open to question. Many modern scholars have identified it with an ancient site named ʿAskar, on the eastern slope of Mount EBAL, about half a mile N of JACOB'S WELL and just E of Shechem. Several objections have been raised against this proposal. The narrative of Jn. 4:15 suggests the woman of Sychar was in the habit of going to Jacob's well for water. The village of el-ʿAskar, however, is not sufficiently close to Jacob's well. Moreover, at that village there is a copious spring more than adequate to supply the water needs of its inhabitants.

Others have argued that Sychar should be identified with Shechem, but the recent excavations of G. E. Wright (see his *Shechem: The Biography of a Biblical City* [1965]) have revealed that the end of Shechem as a city occurred in 107 B.C. when Jews from Jerusalem under John Hyrcanus (134 – 104 B.C.) destroyed the Samaritan temple on Mount GERIZIM in 128 and finally destroyed the city of Shechem in 107. However, at the site of these ruins, Tell Balaṭah, there is evidence of occupation from the period of the Samaritans to Roman times. Jacob's well, according to an unbroken tradition, lies about half a mile to the E of the village of Balatah. Historically, the well is one of the best-attested sites in Palestine, at least since NT times. It stands on the eastern edge of the valley, which forms the pass between Mounts Ebal and Gerizim. The water table that feeds the well rests upon an impermeable layer of basalt some 20 meters below the valley floor. With the accumulation of town debris and older sites since HYKSOS times, Shechem is 12 – 25 meters above the surrounding valley

floor. The woman of Samaria was correct in asserting "the well is deep," possibly 32 – 55 meters in depth (cf. Jn. 4:11). The sacred associations of the well, and its quality of water, in contrast to the harder water from neighboring springs on the slopes of Mount Gerizim, would form attractions for the popularity of the well throughout its history.

<div align="right">J. M. HOUSTON</div>

Sychem si′kuhm. KJV NT form of SHECHEM.

Syene si-ee′nee (סְוֵנָה H6059, from Egyp. *swn*). NIV Aswan. An Egyptian city, located on the E bank of the NILE, on the site of modern Aswan, some 550 mi. S of Cairo, at the first cataract of the river and just opposite the island of ELEPHANTINE. In modern times much publicized because of the building of the new dam just to the S, the area of this cataract marked the effective southern boundary of EGYPT during much of the ancient history of that country. As a frontier town, Elephantine was the starting point for expeditions to Nubia, and during the Old Kingdom several of its residents served in official capacities as leaders of caravans or of military missions. The cataract served as a barrier to travel and transport, so the area was strategically and commercially important.

A number of rock tombs of notables are found on the W bank, opposite Aswan, at Qubbet el-Hawa. These date from the Old Kingdom (mostly 6th dynasty, e.g., Mekhu and Sabni, Hekaib, Khunes, Harkhuf, Pepynakht), the Middle Kingdom (Sirenput I and II), and the New Kingdom. To the S are the ruined Coptic monastery of St. Simeon and the modern mausoleum of Aga Khan.

Syene itself did not gain prominence until Saite times, but it gradually replaced the island town as the outstanding city of the district. Today its successor, Aswan, is still an important city of S Egypt. Remains of temples can be seen in the city, but excavation has been largely prevented by the presence of modern buildings. The area was sacred to Khnum, the ram-headed god to whom legend attributes the forming of mankind on his potter's wheel. Khnum, Satis, and Anukis composed the divine triad of the cataract region.

Southeast of Aswan are the old quarries which provided the fine granite for buildings and objects of art. Stone for temple and tomb structures, obelisks, colossi, and sarcophagi was cut here and transported by boat to determined sites throughout the length of Egypt. Still in the quarry is the huge unfinished obelisk 137 ft. long.

Syene appears in the Bible at least twice in pro phetic utterances of EZEKIEL against Egypt that allude to the geographic extent of the country. One passage declares that God would make "the land of Egypt a ruin and a desolate waste from Migdol to Aswan, as far as the border of Cush" (Ezek. 29:10). The other one states that the allies of Egypt will be defeated: "From Migdol to Aswan / they will fall by the sword within her" (30:6). In addition, Syene is probably mentioned in Isa. 49:12; here the MT reads *sînîm* (cf. KJV), but the Great Isaiah Scroll (1QIsaᵃ) has *swnyym*, which appears to be a gentilic form of *sĕwēnēh*. Thus the NIV translates, "See, they will come from afar—/ some from the north, some from the west, / some from the region of Aswan." (See A. H. Gardiner, *Ancient Egyptian Onomastica*, 2 vols. [1947], II; H. Gauthier, *Dictionnaire de noms géographiques contenus dans les textes hiéroglyphiques*, 7 vols. [1925 – 31], 5:17 – 18, 1* – 5*; P. Montet, *Géographie de l'Égypte ancienne*, 2 vols. [1957 – 61], 2:13 – 29.)

<div align="right">C. E. DEVRIES</div>

syllabary. A system of written characters, each of which represents a syllable. See WRITING.

symbolism. The practice of using symbols (words or other signs that stand for something else) to communicate ideas or express intangible truths. The English word *symbol* derives (via Latin) from Greek *symbolon*, "token, sign" (cf. the cognate verb *symballō G5202*, lit., "to throw together," which in extrabiblical literature can mean "to compare"). Neither this Greek noun nor any term to express the abstract sense of "symbolism" occurs in the Bible, but the concept has an essential place in both the OT and NT. For a discussion of relevant Hebrew and Greek terms see SIGN.

I. The nature of symbols and symbolism

A. The problem of definition. The difficulties involved in constructing an adequate definition of a symbol stem in part from the overlapping usage of the words *sign*, *type*, and *symbol*. For example, *Webster's Third New International Dictionary* speaks of *symbol* as "something that stands for or suggests something else by reason of relationship, association, convention, or accidental but not intentional resemblance; especially a visible *sign* [italics added] of something [as a concept or institution] that is invisible." *The Concise Oxford Dictionary* (5th ed.) says under *sign*: "written mark conventionally used for word or phrase, *symbol* [italics added], thing used as representation of something." *Funk and Wagnalls New 'Standard' Dictionary* defines *type* as "something that is emblematic; that which represents or *symbolizes* [italics added] something else; *symbol* [italics added]."

Despite this overlapping, there are significant differences among the terms. In the first place, symbols are signs in the sense that they point to something else, but not all signs are symbols. A sign is a direct way of communicating, often for the practical purpose of leading to action. It is denotative and limited in the information it imparts. A symbol, however, is a connotative and often metaphorical way of communicating. It is far less limited and far more subtle in its scope than the sign (cf. F. W. Dillistone, *Christianity and Symbolism* [1955], 17). As Susanne K. Langer says, "Symbols are not proxy for their objects, but are *vehicles for the conception of objects*" (*Philosophy in a New Key* [1960], 60 – 61). Again the basic distinction between a type (a peculiarly biblical mode of communication) and a symbol is that a type always refers to an antitype that is future, whereas a symbol may have a past, present, or future reference. See TYPOLOGY.

Useful as these distinctions are, they must not be pressed rigidly. For the symbol is too flexible and subtle a mode of communication to be shut off entirely from the sign or type. A wall cannot be

erected around the symbol; the door between it and the sign and the type is an open one. Sometimes what is for some only a sign or type becomes through individual response a symbol for others.

B. The antiquity of symbols. It is necessary, therefore, to probe more deeply into the nature of symbolism, looking back to beginnings. Symbolism is as old as humanity. Before the invention of the alphabet or the development of civilization, human beings had symbols. The ability to respond to symbols is a distinctive feature of humanity. Animals can respond to signs, but not to symbols. Anthropologists, regardless of their attitude toward religion, agree upon the great antiquity of symbolism.

The biblical evidence of this antiquity is plain; before the FALL God gave ADAM and EVE the first symbols—sun and moon (Gen. 1:14 – 16); the tree of life and the tree of the knowledge of good and evil with its forbidden fruit (2:9, 17; 3:1 – 7). After the fall the flaming sword guarded the tree of life (3:22 – 24). Likewise, after the flood God gave humans the RAINBOW, symbolizing the divine COVENANT not to destroy the earth again by water (9:12 – 17). As the French psychologist T. A. Ribot pointed out in 1915, "the symbol had appeared with the origin of humanity which was its golden age" ("La pensée symbolique," *Revue philosophique*, no vol. [1915], 385ff.).

C. The clue to symbolism. Acting upon this clue, E. Cailliet concluded, after four years of field work studying symbolism among the primitive people of Madagascar, that the essential mark of symbolism is a person's participation in the reality that the symbol suggests (*Symbolisme et âmes primitives* [1936]). For example, an ocean liner passes another ship flying the flag of a foreign nation; for a traveler that flag is only a sign or emblem. But suppose that the same traveler experiences isolation amid another culture with its strange language and customs and that suddenly, upon turning a street corner, he is confronted by the flag of his own nation. Then his heart will pound in his chest, stirred as old participations crowd into his mind. At that moment the flag is no longer a sign or emblem; it is a symbol, for the person is involved with his whole being in the reality to which it points. Or, moving the analogy to a higher level, consider the case of a Roman soldier in the 2nd cent. seeing the outline of a fish crudely drawn upon a wall. For him it is simply a sign that some of the despised sect of Christians have been there. But later a Christian woman passes by and sees the fish. Immediately she breathes more quickly, her mind is filled with rich associations, her heart is turned to Christ and his love. For her this simple design is emphatically not a sign but a true symbol.

D. A symbol defined. Therefore, what makes a symbol a symbol—what animates it and at bottom differentiates it from a sign, or sometimes even a type—is the sense of participation. It may be defined as follows: *A symbol is something that points to something else as the sign of a participation experienced or suggested* (Cailliet). The symbol not only "participates in the reality which is symbolized," as Paul Tillich says (*Systematic Theology* [1957], 2:9); it also engenders personal participation in that reality.

E. The nature of symbolism and symbols illustrated. The primitive character of the symbol persists in that people continue, even in modern times, to think with their whole body (Cailliet). A person's space has three dimensions, because the body has three dimensions. We count as we do because we have ten fingers. The rhythm of our language relates to the life within us. Words, as well as nonverbal symbols, can cause our pulse to quicken, our face to flush, our body to tremble. Therefore, the recovery of wholeness implied in a genuine symbolism has its clear Christian implications. The

believer's life is rooted in a deep sense of participation in Christ. The believer's witness is one of powerful suggestion, capable of being used by the Spirit to create in others this very sense of participation in the living Lord and Savior.

Because participation is the criterion of what makes a symbol a symbol, it follows that what may be for some only a sign intellectually grasped may for others become through believing participation a living symbol. For example, there are those who have regarded the plagues of Egypt and the overthrow of Pharaoh and his army in the Red Sea as signs of natural forces and nothing more, but for the children of Israel these events were, through participation, unforgettable symbols (typological symbols) of God's power manifest in judgment and deliverance. As Jews and, later on, Christians have looked back upon them even to this day, these things have continued to symbolize the experiential participation of God's people in his power exercised in their behalf. The same principle applies to the wealth of typology in the Pentateuchal account of the TABERNACLE and the priestly sacrifices and offerings. For some this is only an ancient priestly code. For others its typology comes to its climax and fulfillment in the antitype of Christ's redeeming work, recorded in the Gospels and expounded elsewhere in the NT (particularly in the epistle to the Hebrews). This typology ascends to the level of high symbolism through believing participation in the atoning work of Christ.

Another example—and one relating to words rather than to objects or actions—is that of the CREEDS. These are sometimes called *symbols*, and rightly so. Paul records in three words, "Jesus is Lord" (1 Cor. 12:3), the earliest Christian creed. Now to say those words and really to believe them implies the deepest kind of participation through acceptance of the sovereignty of Christ over one's whole life. So also with the classic affirmations of the faith, as in the APOSTLES' CREED and the Nicene Creed and their successors, the very words that begin them, "I believe," evidence their symbolic character.

The great antiquity of symbols must not obscure their contemporary importance. The development of modern mathematics and science (esp. physics) is closely tied to mental models or constructs. This kind of "symbolism" (cf. A. N. Whitehead and B. Russell, *Principia Mathematica*, 2nd ed. [1950]) is thoroughly objectified and thus wholly depersonalized. Therefore, it is far removed from the genuine participation-symbolism not only of the Bible but also of poetry, art, and the deeper levels of human life, on which people still depend for spiritual and emotional satisfaction even as they look to mental models for mathematical and scientific advance.

The roots of symbolism reach down to the core of modern man's being just as they are embedded in the being of primitive man. How deep these roots go, Louis Beinart shows in describing the crucial role played by Christianity in the revitalization of symbolism: "By its renewal of the great figures and symbolizations of natural religion, Christianity has also renewed their vitality and power in the depths of the psyche…The adoption by Christ and the church of the great images of the sun and the moon, of wood, water, the sea, and so forth, amounts to an evangelization of the effective powers that they denote" (quoted by M. Eliade, *Images and Symbols: Studies in Religious Symbolism* [1961], 160 – 61).

II. Symbols in the Bible

A. Their place and function in the biblical revelation. Symbols, which are universal among nations and are found in all literatures, are very numerous in Scripture. Moreover, it is in the biblical REVELATION that they attain their highest level. Since no book is closer to human life than the Bible, and since no book brings God and eternal things nearer to human beings, both the profusion of

symbols in its pages and the loftiness of many of them are inevitable. Indeed, without symbols certain elements of the biblical revelation could not be communicated. When the Bible speaks about the nature of God and about eschatological subjects—e.g., the future kingdom, judgment, heaven and hell—only through symbolism can it convey to the finite mind ideas about eternal things.

B. Varieties of biblical symbols. Symbols in the Bible are much too abundant for all of them to be listed here, but representative examples will show their basic character and abundance.

Among the many symbols drawn from *nature* are the sun, moon, stars, fire, thunder and lightning, rain, snow, sea, mountains, sands, deserts, rivers, springs, and valleys. *Nonhuman creatures* (lion, wolf, lamb, goat, ox, eagle, dove, vulture, serpent, locust, bee, scorpion, and spider), as well as various forms of *inanimate life* (trees, grass, flowers, grain) and *man-made objects* (yoke, crown, lamp, girdle, shoes, helmet, shield, sword, bread, wine, cross), are used symbolically. The same is true of *colors* (particularly red, blue, purple, and white), *metals* (gold, silver, iron), *precious stones* (ruby, emerald, sapphire, amethyst, pearl), and *numbers* (notably one, three, seven, eight, twelve, and forty).

Persons are sometimes symbolic in Scripture; for example, Adam, Abel, Cain, Abraham, Moses, Jonah, Ezekiel, Solomon. Christ, however, is not a symbol. The supreme Antitype of the richest biblical symbolic types, he *is* reality and truth in his unity with the Father and the Spirit. Closely related to persons are *names*. "In the OT, far from being a mere label, just an external description, a name expresses the profound reality of the being who carries it" (H. Michaud, "Name, O.T.," in *A Companion to the Bible*, ed. J. J. Von Allmen [1958], 278). So it is preeminently with the name Yahweh (Exod. 3:14) and its many compounds (e.g., Gen. 22:14; Exod. 17:15). Likewise in the NT with the names Jesus ("Yahweh is salvation") and Christ ("Anointed"). Among many other symbolic biblical names are Abram ("exalted father") and Abraham ("father of a multitude"); Jacob ("supplanter") and Israel ("he struggles with God"); Moses ("drawn out"); Solomon ("peaceable"). Among messianic names, especially significant is Immanuel, "God with us." Christ himself used names meaningfully: to Simon he gave the name Cephas/Peter ("rock"), and to James and John, Boanerges ("sons of thunder").

Offices held by persons, such as prophets, priests, kings, and judges, have symbolic meanings that ultimately relate to Christ and his divine offices.

This relief features a menorah, with *lulav* and date palm frond on either side—all symbols of the Jewish faith.

Parts of the human organism like the eye, the hand, the heart, the kidneys (reins), and bowels had for the ancient Hebrews symbolic significance. The BLOOD is in a class by itself, for this was considered the principal component of the body; indeed, life itself was thought of as residing in the blood (Lev. 17:11). The great concentration of OT references to blood is in Leviticus, the book of sacrifices. Blood symbolizes life given up in death, and in the OT it has cleansing and expiatory meaning as it points to Christ's sacrifice. So in the N T, blood is a major symbol of the atoning death of Christ and its benefits. In instituting the EUCHARIST the Lord used the wine to point to the blood signifying his life given in vicarious sacrifice (Matt. 26:28; Mk. 14:24). Mention of the blood of Christ is frequent elsewhere in the NT (e.g., Rom. 5:9; 1 Pet. 1:18 – 19; 1 Jn. 1:7).

An important kind of biblical symbol is that relating to *actions*. Certain activities of some of the prophets come under this head. Jeremiah was ordered by the Lord to purchase a field at Anathoth in land occupied by Babylonians (Jer. 32:6 – 44); Ezekiel was told to perform a number of symbolic actions, including lying 390 days on his left side and 40 days on his right side (Ezek. 4:4 – 8), and shaving his head and beard (5:1 – 4); Hosea's experience with his wife Gomer and with her unfaithfulness is one of the great OT symbols (Hos. 1:2 – 3, 6 – 9; 3:1 – 3).

The *rite* of CIRCUMCISION was a continuing symbol for Israel. So also were her FEASTS: of primary importance were the SABBATH and the Day of Atonement (see ATONEMENT, DAY OF). In the NT, the SACRAMENTS of baptism and the Lord's Supper are profound action symbols of the believer's participation in Christ, while the Sabbath evidently becomes the Lord's Day in celebration of Christ's resurrection. That Christ's MIRACLES unquestionably have a symbolic aspect is evident from their place in the Gospel of John and John's designation of them by the word "sign" (*sēmeion G4956*).

By no means are all the multitudinous symbols in the Bible on the high level of participation that mark circumcision and the exodus in the OT and the Christological symbols in the N T. As suggested earlier, the boundaries between signs, types, and symbols are open ones. In some cases the nuances of participation are slight; in other cases the elevation of a sign or a type to the symbolic level is a subjective matter depending upon the believing insight of the person to whom the symbol communicates. Thus there are signs and types that have, as it were, symbolic potential.

III. The cross. The classic Christian symbol of the CROSS is historically, along with the empty tomb that is inextricably united to it (Heb. 13:20 – 21), an action symbol par excellence. As used by the NT writers, the cross is a terse verbal symbol of Christ's vicarious sacrifice at Calvary and of what God did through him (1 Cor. 1:18; Gal. 5:11; Col. 1:20 et al.). There is no mention in the NT of crosses being drawn or made as physical symbols of the cross on which Christ died and of his atoning work there. In the CATACOMBS, with their many symbols, the direct representation of the cross is strangely lacking except for two or three possible exceptions. (The manual sign of the cross was doubtless used in the early centuries.) In fact, there are in the catacombs few if any direct symbols of Christ's passion. This may be because of the great emphasis in apostolic Christianity on the resurrection and the future life. The faith to which the symbols in the catacombs point is that of hope in Christ.

Perhaps the meaning of the cross was so integral a part of their life in Christ that the members of the early church were restrained in representing it; or a fear of idolatry of the cross may have inhibited them. Also it took time for the object that was despised as a stumbling block (1 Cor. 1:23; Gal. 5:11) to become for all believers the triumphant symbol of glory and victory that it was for Paul (6:14). Indirectly the cross does appear in the catacombs of the first three centuries, veiled under the guise of symbols like the anchor or the trident. And at the close of this period the use of the monogram of the first two letters of the name "Christ" (Gk. X and P) suggests the cross when combined. As for the crucifix, it is not found in churches until after the 7th cent.

IV. Postbiblical symbolism. In the NT church, symbolism seems to have been centered in the sacraments (baptism and the Lord's Supper), the use of the Lord's Day (the first day of the week) for worship, and the practice of the laying on of hands. The profuse development of Christian symbolism began in subapostolic times with the use of symbols as seen in the catacombs. Christ is prominent as the Good Shepherd, as Judge of the dead, and so forth. There are also festal scenes pointing to future happiness and various symbols of the resurrection. But the cross as a directly represented symbol is, as has already been said, missing.

About the 3rd cent., when separate buildings for Christian worship began to be built, symbolism continued to flourish. As time passed, the cross (and later the crucifix) became prominent, extrabiblical tradition supplied symbols, and the extensive vocabulary of ecclesiastical symbolism manifest in church architecture and in religious art was developed. (Cf. G. Ferguson, *Signs and Symbols in Christian Art* [1961].)

The place of symbolism in Christian life and worship is assured. Biblically, it is an organic part of the written revelation; traditionally, it reflects cherished memories and customs of the church. Yet symbolism must always be interpreted and used with thoughtful discretion. For the reality is always greater than the symbol, and to confuse even the loftiest Christian symbols with the reality of the Lord, believing participation in whom they invite, may lead to the error of substituting the means for the end.

synagogue. A Jewish congregation and, by extension, the name of the building or structure where the congregation meets for worship. Like the word CHURCH, this term applies to the body of believers acting corporately and not to the physical constructs primarily. This is made clear by both the etymology and usage of the term in Jewish and non-Jewish literature The word is universally understood as describing Jewish religious bodies and is applied to no other.

1. The name
2. History of the synagogue institution
    1. Origin: The OT period
    2. The intertestamental period
    3. The NT period
    4. The Diaspora
    5. The medieval and modern periods
3. Architecture and function
    1. Location
    2. Structure
    3. Furniture and decoration
    4. Religious and educational usage
4. Organization and offices
    1. Elders and rulers
    2. Rabbis and laity
5. The service
    1. Shema
    2. Scripture and sermon
    3. Fasts and festivals
    4. Administration

I. The name. The Greek noun *synagōgē G5252* (from the verb *synagō G5251*, "to gather, bring together") can be used generally of any gathering of people for either religious or secular purposes and can also be applied to any gathering place (for the latter, cf. Gen. 1:9 LXX). It is a widely

distributed classical term and is used in inscriptions as well as literary texts. In the Septuagint it is used to render many different Hebrew words and expressions, but in a strong majority of the occurrences it is equivalent to ʿēdâ H6337, "assembly, community" (Exod. 12:3 et al.). The next most frequent equivalence is the close synonym qāhāl H7736, "company, convocation, assembly" (Gen. 28:3 et al.). The Targums commonly render ʿēdâ with Aramaic keništāʾ, which was the standard rabbinic term for "synagogue" (cf. in postbiblical and modern Hebrew, bēt-keneset, from kānas H4043, "to gather").

II. History of the synagogue institution. The history of the synagogue as an institution among the Jews is exceedingly difficult to trace to its source. Its origins seem to lie outside of Palestine and apart from that sector of Jewish life that governed the country and produced the OT. The later traditions of the Aramaic period assume the antiquity of the synagogue. There is little documentary evidence before the Hellenistic age, the Elephantine papyri, and the NT for any synagogue. However, it must have come into being in the confused state of affairs between the fall of the first commonwealth and the establishment of the second.

A. Origin: The OT period. Certain of the historical aspects that led to the formation of the synagogue can be ascertained from the society which existed under Persian and later Hellenistic rule. The removal of the Levitical and other sacerdotal officers from Jerusalem deprived the Temple of its necessary complement of attendants. The prohibition of journeys to Jerusalem and the loss of revenue must have rendered the unified cult center inoperative. The collapse of the old religious state meant a great increase in personal rather than official religious functions, a trend seen in the great prophetic voices, Isaiah and Jeremiah, even before the final collapse, and a theme renewed in Daniel. The necessity to preserve the Torah, the five books of Moses, not merely as the central religious document but also as the only communication of Yahweh to his people motivated corporate Torah study. This trend was enforced by the pressure for syncretism with the Persian and Grecian paganism and the slow deterioration of the classical Hebrew language.

The result was a move to preserve not only the Torah but also its ancient speech. The first desire brought about the textual recension that became the Masoretic Text, the second gave rise to the Masoretes themselves (see Masorah). However, both grew up not in Jerusalem but in the small Diaspora communities and in the lands later won by force of Jewish arms under Judas Maccabee and his followers. All that can be surely stated is that the synagogue arose as a corporate Torah study with all of the legal and binding relationships such a community would form among alien and displaced Jews.

The later literature always connects the origin of the synagogue with the period of Babylonian captivity and return under Ezra and Nehemiah. The terminology used for the great gathering and restatement of the Torah under Ezra is variant and uncertain, showing that new institutions were in formation. The scholarly treatment of the problem has tended to fall under the influence of two opposing schools of thought. The traditional one that Moses founded the synagogue is cited by Josephus (*Apion* 2.17 §75). It was popular at various times throughout the recent centuries. The second thesis that the synagogue was of societal origin and appeared during the Exile was proposed by the Italian humanist Carlo Sigonio (1524 – 84). His views wreaked havoc among the more conservative Jews and Christians of the time but were finally dominant in the treatment by the Dutch theologian Campegius Vitringa (1659 – 1722).

Many other theories have been proposed, some locating the synagogue among the legal-political institutions of Israel rather than the religious. On the other hand, some very modern views would tend

to see it as the focus of town life in what was really a nation of villages. This view is supported by the excavation of ancient synagogue sites. In a recent monograph, A. Runesson has proposed that the synagogue had a twofold development: in Palestine it arose from town assemblies (due to "the loosening of the control of the national authorities over torah teaching"), whereas in much of the Diaspora it derived from voluntary associations (*The Origins of the Synagogue: A Socio-Historical Study* [2002], 478 – 82).

The WORSHIP of the synagogue was very different from that of the temple in that it had no sacerdotal rituals and supported no sacrosanct priesthood. Instead a new order of religious leaders arose to serve the synagogue, the RABBI. The influence of the Persians and the Greeks over the spread of the synagogue cannot be denied, and there is every reason to assume that although it was Babylonian in origin it was to some degree Greek in spirit. The architecture of the early synagogues is similar to the Greco-Roman of the contemporary pagan constructs. Of special importance is the Jewish temple at Elephantine in upper Egypt. The papyri discovered there indicate that animal sacrifices took place and yet there is no evidence that this was true within the meeting houses in Palestine.

In fact the DEAD SEA SCROLLS indicate a strong preference for sacrifices and rituals only in the temple in Jerusalem. It may be that the synagogue was only one type of worship arrangement known at the time and that it was the one which survived the Roman destruction of the great temple. It is even highly probable that one or more synagogues existed within the temple compound in Jerusalem, and it may have been there that Jesus was found sitting among the lawyers at the age of twelve (Lk. 2:46). It is also clear from the later traditions that the basic unit of the synagogue was ten men who gathered for prayer. This would be similar to the OT congregations.

B. The intertestamental period. The vast growth of the synagogue and its appearance throughout the Diaspora is noted in many documents from the time between OT and NT. Both PHILO JUDAEUS and JOSEPHUS regularly mention the synagogue as do the earliest rabbinical sources. The dominant language of its services became ARAMAIC as the Persian empire waxed and waned and the central autonomy of Israelite kingship faded into the past. In the new religious rituals, the chanting of the prayers and the reading of the biblical text became the central function of the service. The officers of the new religious communities were given new titles, and in the Hellenistic period Greek terms for these were adopted. This was the formative period that saw the final supremacy of the synagogue. It was the customary center of the Jewish community and house of worship throughout the known world in Jesus' time. See JUDAISM.

C. The NT period. The term *synagōgē* is used in the Gospels and Acts over fifty times (elsewhere only Jas. 2:2; Rev. 2:9; 3:9). It is assumed in both the rabbinic literature and the NT that this was the valid leadership and executive of Judaism, no matter whether it was in Jerusalem or Corinth. A few inscriptions have been located from synagogues of this era, and they are distinctive in that they are in Greek uncials written in the Hellenistic style. The most extensive is the Theodotus Inscription, found on Mount Ophel not far from the ancient temple precinct. It specifically states that the purpose of the building upon which it was a marker was for "reading of the law," and that it was to serve as a hostel. Other inscriptions from the GALILEE area

Remains of the 1st-century B.C. Gamla synagogue (NE of the Sea of Galilee), one of the earliest synagogues discovered to date. (View to the SW.)

often list OT characters or indicate the donors, but again in epigraphic Greek. It is this cosmopolitanism and appeal to the common conscience which marks the synagogal success.

The gospel narratives mention a number of small towns in Galilee and the synagogues where Jesus taught (Matt. 4:23; 9:35; Lk. 4:16, 33). An additional group in this area has been excavated. They are small buildings with porches and columns (often *distyle-in-antis*, i.e., having the columns set between two antae), stone seats, and an outer portico. They must have served as law courts, schools, libraries, and market places, as well as for the Sabbath service. It is also clear that the Jewish males took part in the service. The most important legacy of the 1st-cent. synagogue was the form and organization of the apostolic church.

D. The Diaspora synagogues. The growth of popular religious organizations in Palestine was paralleled by similar establishments among the Jews of the dispersion. Large halls were built in DURA-EUROPOS and various parts of Egypt, and the worship of the Jews from the Diaspora mentioned in Acts 2:9 – 11 was presumably in synagogues in all those widely scattered places. Numerous ancient synagogues have been located within Palestine and in Syria, and some others in the neighboring lands of the E Mediterranean. There must have been hundreds of them by the end of the 2nd cent. A.D. By that time the original Greek term had come to mean exclusively a Jewish house of worship. These communities were displaced but in many cases had attained considerable wealth, and their synagogues are richly carved and well appointed with the crafts of their time. Like the church, the synagogue was becoming an institution of stature and capital and both were to produce a long and involved literary tradition.

E. The medieval and modern periods. As the Jews moved through the W Mediterranean and up into Spain and France they built and rebuilt synagogues. Where Christian states forbade public buildings, a new tradition of private and semiprivate chapels arose. Some of these have been found and many are well known from literature. The education of the young was more and more a function of the community through the synagogue, and its ancient tradition of a "Torah study" became very strong as the common speech became eroded and finally ceased to function in alien societies. From the 8th

cent. the synagogues of Spain at Toledo were the centers of European Jewry. Later the same situation held true in Austria and E Germany, from which such travelers as Petahia of Ratisbon and others set out before the year 1000 to communicate with the great synagogue centers of the Orient.

The change of the millennium found Jewish synagogues stretching from England to the borders of China. However, the uneasy peace in which the Jews had lived between the Christian Holy Roman Empire and the Islamic E finally evaporated in the crusades. The reaction to the inability of Western Christian feudalism to regain Palestine led to pogrom after pogrom against the Jews. Thus they were driven into the newer lands of the Baltic coast and along the rivers of Orthodox Russia. There the great synagogues of Breslau, Leipzig, Vilna, Moscow, and the like held sway over world Jewry. In the 18th cent. Spanish and Portuguese Jews began to migrate to North America, the earliest American synagogue being the Congregation Touro of Newport, Rhode Island, founded in 1763. However, several congregations in Philadelphia were soon functioning thereafter and the Maimonides College became their first institution of higher learning. The modern synagogue can take many forms and be found in many places, but its primary functions still continue to be as house of worship, school for study, and social center for the Jewish people.

III. Architecture and function. The architecture of the early Middle Eastern synagogues was similar to that which prevailed throughout the Hellenistic and later Roman age. The synagogue grounds were surrounded by a low wall within which the synagogue met. Documents from Turkey and other countries of the early medieval period show that often the congregation met out-of-doors although at other times in private rooms. Usually this room was divided in some fashion into a sector for men and a separate and lesser room for the women. In the magnificent Moorish and Italian synagogues this women's section took the form of a balcony running around three sides of the room and reached by outer stairs up through a sort of narthex. In the earliest Palestinian synagogues, such as those at MASADA, CAPERNAUM, KORAZIN, and Kefr Bir,im, stone seats in the form of a double tier ran the length of three walls. Such buildings had either a separate balcony for women or some separation down the center. In the Roman age many of these buildings were of a type of Corinthian Greek design with free standing columns in the front portico and arranged in rows within the sanctuary to support the vaulted ceilings.

A. Location. In accord with certain Talmudic instructions that must have been part of the oral lore of Judaism, all the synagogues were built in such a fashion that the congregations could face Jerusalem. The legal lore of the synagogue is found in the opening paragraphs of the tractate *Megillah*. The customs resolving the matter of synagogue construction are later. The common practice was to erect the building on a small hill or prominence, sometimes near water but always in such a fashion that the back wall which faced the door was toward Jerusalem. The temple in Jerusalem represented the sacerdotal element and ritual in Judaism and so the elaborate ceremonial architecture of the later synagogues was unnecessary until after the destruction of the temple in A.D. 70. Whether or not the local synagogues were built as models or miniatures of the great temple, or whether they were conceived as centers for the rituals is debated. By this time the style of construction was set and the synagogue was located in the center of the market square.

B. Structure. By the 1st Christian century the basilica type of building with its massive and ornamented façade became the standard synagogue form. However, the extent of symbolism and the expanse was limited by the economic ability of the congregation. There is no clear-cut evolution of synagogal architecture, and each community of the Diaspora seems to have built eclectic structures appropriate to their situation. The widespread use of the half square and round columns and the

elaborate shell niches, both associated with Roman buildings, demonstrates how deeply the Greco-Roman civilization altered the Jewish mind. In or about the middle of the blank wall opposite the entrance doors was the location of the niche or chamber in which the sacred rolls of the Torah were kept. Such cabinets or chests (called in Heb. ʾărôn haqqôdeš), set in the E wall, were often ornamented and decorated with hangings and embellishments of considerable value.

One of the most interesting appointments of the early synagogues was the GENIZAH, a place either in a cellar or pit or in an old attic high in the wall where the worn and frayed parchment scrolls were placed. Since they bore the divine name of God, these scrolls could not be desecrated or destroyed and so they were interred. Ancient scrolls of inestimable value have been discovered in a number of genizahs from synagogues. In the center, later the front, of the hall was an upraised platform on which the scrolls were placed for reading; this platform was also used for the sermon, a sort of explanation of the text. Special coffers, cabinets, and closets for the ritual implements were later added through time-honored tradition and specific names became applied to them.

Certain differences have also developed between the Ashkenazi and Sephardic Jews because of their different cultural backgrounds. The German-Russian synagogues were more on the order of Gothic and Romanesque style churches, while the Spanish-Portuguese synagogues, some of the most magnificent ever built, were influenced by Mediterranean styles, with Arabesque vaults and other such features. In modern times the synagogues of the Western world have shown all the innovations of contemporary architecture; prestressed concrete, stainless steel, glass, and plastics have been used in these timeless expressions of Israel's faith. The magnificence of Frank Lloyd Wright's design for Beth Shalom, N of Philadelphia, Beth Am in suburban New York, and many recent synagogues in Europe and Israel are based upon ancient traditions and symbolisms but stated in the avant garde of the 20th cent.

C. Furniture and decoration. The furniture of the ancient and early medieval synagogue was utilitarian and connected with the service. The Torah ark was frequently carved or encrusted with some type of decoration, covered with magnificent hangings and covers (called *pārôket*) and often richly ornamented with silver and gold embroideries. The lecterns were carved and inlaid. The great seven-branched candelabra (*měnôrâ*) was often richly decorated; examples of the finest in the casting and etching arts were found in their manufacture for the wooden synagogues of Poland, Lithuania, and Russia. Many smaller articles, lamp stands, and the ritual implements for the high holy days (Rosh Hashanah and Yom Kippur, but also the lesser pilgrimages) were found in the synagogue. Special vestments and scroll tabernacles, usually in the form of elaborate miniatures, as well as the communal wedding rings, were also kept in the special cabinets provided.

Of special beauty are the Torah crowns, exquisite tiaras with precious and semiprecious stones hung or held over the Torah ark, or carried about in procession. Few people in history have held any book in such esteem and reverence that finery of such value was lavished upon the ornamentation of it. It is a sight of strange and reverential beauty.

The decoration of the synagogues was a subject of much debate and alteration of tastes. The earliest ones often show a strangely exotic degree of profusion in Hellenistic and Roman motifs. The ancient congregations at Capernaum and Korazin decorated their edifice with stone lions, elaborate bands of botanomorphic design and epigraphic inscriptions in uncial Greek. They carved many similar natural motifs on the furniture, and pomegranates, grapes, and similar fruit and vegetables are seen. This type of SYMBOLISM was developed from the OT as the temple was to have such ornamentation in the same fashion as the wilderness tabernacle. However, strict prohibition against the portrayal of the human form was also in evidence.

Under times of persecution the elaboration of the synagogue became simpler, and as various mystical movements caught the popular fancy of Christian and Jew alike in the high Middle Ages, the churches and the synagogues were often devoid of very much ostentation. There is no evidence that when the flavor of the arts was renewed in the Renaissance the Jewish synagogue builders followed suit. The types of murals and decorations which later played such a basic part in the humanist movement were never popular among the Jews. The strange mixture of classical themes and Christian symbolism seen in the art of the Renaissance was not adopted in the synagogue.

Even the scrolls themselves are free of miniature paintings, initial embossing, and the other church decorations of the time. However, an Arabic Muslim custom did become widespread, namely, the decoration of the upper parts of the synagogue with inscriptions that were later inlaid or leafed with gold, silver, or bronze. Such texts from the OT with the use of the unvaried Hebrew script made a pleasing decorative device. The words of the Scriptures were often carved into the wood work and paneled walls. The glass windows were painted but stained glass came to the synagogue long after it came to the church and then its designs and motifs are carried over from the glyptic arts, and often only Hebrew letters were placed in them. The innovative notions of the buttress and span which allowed the vast areas of glass in Chartres and Notre Dame are nowhere in evidence in the construction of the synagogues.

One decorative feature which survived the ages in the synagogue was the use of mosaic tiles. Numerous elaborate natural figures including the signs of the zodiac and small animals are found. The ancient synagogue at Beth Alpha is especially noted for these fine mosaics, and much of the furniture and ritual of the religious year are shown in these illustrations. Few synagogue frescos have survived from antiquity, but those from DURA-EUROPOS and elsewhere show artistic affinities, as does contemporary Christian art of the period to the sculpting of the mosaics. Again, the scenes are of the various festivals with some few architectural constructs and what may be patriarchal stories in smaller registers. The motif of the sun, the wheel, the candle, the plant, the fruit, and the various Greek running

Partial reconstruction of the synagogue at Korazin, dating to the 2nd or 3rd cent. A.D. (View to the

figures, arrow, and egg and dart are all found in the synagogue. Reverence for the creation has been a continuing theme in such art and pure color, and its blending and disjunction has become the theme of many modern synagogue treasures by Marc Chagal and other contemporary masters.

Since the purpose of the nonsacerdotal church buildings and that of the synagogues are functionally similar, their furniture with the exception of the ritual implements is practically indistinguishable. With the present pressure toward ever wider ecumenicity growing, it is conceivable that future synagogues and churches will be nearly identical.

D. Religious and educational usage. In the O T, it is impossible to separate religion from education. No ancient society subscribed to the modern notion of "secular." The community as a whole was responsible for the education of children and youths, and this took place in the synagogue. The later instruction of young people in the Bible and the Talmud was carried on in the *yeshivot*, the special schools for prerabbinical studies. In the earlier periods such usage of the sanctuary was frowned upon, but as the Hebrew language and learning began to fade from daily life the preservation of the ancient heritage became a sacred mission and the synagogue was used for the purpose. In this regard both lower schools and libraries of Hebraic and later Yiddish books were housed in the synagogue.

To the greater number of Jews the synagogue was a teaching organization and its house a school (Yiddish still refers to it as *schul*), but to the Gentiles of the Greco-Roman world it was a school of philosophy. Since the primary responsibility of the adult Jew in the corporate synagogue service was to read, reading the unpointed Hebrew text of the Torah was the goal of synagogue education. The earliest lessons were undoubtedly in the form of simple memorization of biblical passages followed by simple readings, such as the familiar Shema (Deut. 6:4 – 9, followed by 11:13 – 21 and Num. 15:37 – 41). The advanced students read the lessons from the great synagogue scrolls, guided by the commonplace synagogue official known as the *hazan*. It was in these simple schools that the elaborate oral tradition which grew up around the Torah began to take form. Unfortunately there is hardly any evidence derived from archaeology of the shape or substance of these studies except for some Egyptian papyri that may be fragments of school texts.

The early Jewish literature of the Haskalah movement in Eastern Europe grew out of the synagogue school. The personages and episodes that are vividly portrayed by such masters as Sholem Aleichem give the non-Jew a vital picture of life in the agricultural communities of Europe where the synagogue and its services were the center and crown of life. In such literature, the teacher is a man both respected and satirized in the community. The restrictions of modern life have rendered the majority of synagogue schools operable only on Sunday. However, they have survived and flourished as instructors in Jewish culture and art as well as Hebrew language and religion. The future of the synagogue in education appears to be leading in the direction of general community social service, and many newer synagogues have the phrase "Jewish Community Center" in their names. A parallel development has begun in the church as it seeks to secularize its appeal.

IV. Organization and offices. Over the centuries the roles of the synagogue officers have altered and the needs of the Jewish community have changed. The most important alteration has been the development of the rabbinate. In the OT, the authority of the Jewish community was vested in the convention or council of ELDERS. The ritual and ceremonial administration was under the direction of the Levitical priesthood assisted by a number of groups of professional aids such as singers, musicians, and the like. These officials represented a special and privileged class in the state. After

the collapse of the monarchy and its attendant feudalism and the rise of an entrepreneurial class in the period of Hellenism, the offices of the synagogue were open to all. The increased democratization led to wider participation and a common religious interest. Without this change Judaism would never have survived the Hellenistic age and would have followed the other archaic religious states into oblivion. There were about five offices in number; however, some of them were probably simply voluntary and carried no stipend or salary.

A. Elders and rulers. The chief executive or president of the synagogue was called in Hebrew *rōš hakkĕneset* (Gk. *archisynagōgos G801*; see RULER OF THE SYNAGOGUE). This official was known also among pagan associations, but by the 1st Christian cent. was more commonly applied to the Jewish officials and by the 5th cent. exclusively so. The title has also been found on epigraphic inscriptions. He was responsible not merely for the upkeep and operation of the house but also for the order and sanctity of the service (Lk. 13:14). Three individuals in the NT are so designated: JAIRUS (Mk. 5:22; Lk. 8:41); CRISPUS (Acts 18:8); and SOSTHENES (18:17). The interesting fact that two of these are Gentile names indicates the degree of syncretism Hellenistic Judaism had permitted.

This official had the responsibility of selecting the Torah reading and may have read it himself in the congregation. The evidence indicates that at first this was an elective office only, becoming hereditary and finally perfunctory after centuries of the synagogue's existence. The plural form that appears in Acts 13:15 has been the center of some debate, but a text from Apamea in Syria contains a listing of three such officials and uses the plural term. A similar difficulty has arisen concerning the phrase *archōn tēs synagōgēs*, "ruler/leader of the synagogue," which appears only in Lk. 8:41. This term is rare but has been located in contemporary inscriptions as an alternate and less proper form of *archisynagōgos*. Since the terms were still in a state of flux and as yet not fixed in the literary language, it is to be expected that such variants would be found.

The second functionary in the synagogue was the *ḥazzān hakkĕneset*, "servant of the synagogue" (cf. Gk. *hypēretēs G5677*, "servant, attendant" [Lk. 4:20], later used of ministers of the gospel [Lk. 1:2; Acts 26:16 et al.]). The duties of the hazan undoubtedly varied, but included at various times cleaning the premises, removing and replacing the scrolls, and perhaps overseeing the teaching of the children; but this has been debated. He also carried out the corporal punishments of the council (Matt. 10:17; 23:34; Mk. 13:9). Later the hazan became the chief singer of the service and the term is now used for "cantor." In modern times the hazan is also the director of religious education, and many Jewish institutions of higher learning offer curricula in the proper administration of the synagogue schools.

As with all offices of the ancient Israelite religious state, that of the hazan was functional. No doubt the functions varied from town to rural communities and from great to humble congregations, but the importance of the office grew with time. As the festivals and ceremonies developed along separate lines in Diaspora Judaism, so did the officers of the synagogue. The result is that a bewildering array of functions and honors are assigned to the hazan in the literature of the rabbis. One can only surmise the initial purpose of the office. It appears that the best translation in regard to the evidence is "second in authority." The modern responsibility of heading the synagogue school seems to have arisen after the Renaissance.

The third officer of the ancient synagogue was the *šālîaḥ ṣibbûr*, "leader of the prayers" (lit., "messenger of the congregation"). This individual was chosen as representative of the congregation, in whose place he responded to the liturgical prayers. Some scholars have assumed that he fulfilled the role of priest in this delegated responsibility, but it is clear that he was not sacrosanct and acted

as a layman. In the NT period, the function could be assigned to any adult male in the congregation who was of good standing in the synagogue; and it may be in this capacity that Jesus read the passage from Isa. 61 in the synagogue at NAZARETH (Lk. 4:17 – 28). In later tradition this spontaneous quality was lost and the function was taken up by a regularly employed person of the congregation. There is an opinion that in the absence of any person willing to act in this capacity the chief officers might perform the function. Undoubtedly this practice led to the merging of this office with the permanent one of hazan so that the distinction between them was blurred (sometimes the two terms are interchanged). In the later synagogues of European Jewry, the liturgy became fixed with musical anthems, and both offices required cantorial training and musical talent.

A number of other officers are mentioned in records and discourses on the synagogue. Some of these must have existed in Roman times and have been absorbed into the later offices of the congregation. One of them was the *mĕtûrgĕmān* ("interpreter, translator"; cf. *targûm*, "interpretation"), a person who was apparently chosen from the congregation to render the text of the Scripture from Hebrew into Aramaic. This practice may be reflected in the phrase, *ho estin methermeneuomenon* "which being interpreted is," found seven times in the NT (Matt. 1:23; Mk. 5:41; 15:22, 34; Jn. 1:38 [with *legetai* instead of *estin*], 41; Acts 4:36). This custom may also be in view in Paul's exhortation in regard to speaking in tongues, "if there be no interpreter" (1 Cor. 14:28).

The *mĕtûrgĕmān* played a very important part in the synagogue service in areas such as Galilee where people were less familiar with Hebrew. A similar sort of personage must have functioned in lands of the Diaspora where Greek and Latin were spoken, because the inscriptions on such synagogue buildings are usually in those languages and rarely in Hebrew. It was such a custom of oral translation that led to the production of written Targums and that may lie also behind the Greek and the Latin versions of the OT. In the smaller synagogues where no yeshiva or rabbinic study was attached, the hazan undoubtedly fulfilled this function also. There is evidence that Hebrew teachers may have also interpreted orally the Scripture readings, possibly even commenting upon them.

The reading of Scripture and subsequent interpretation were preceded by the public proclamation of the Shema. This was stated by a special officer, the Herald of the Shema, after which the congregation answered "Amen." Such a public use of the prayer was always led by an officer and was referred to by a different terminology than that of private prayer. There is some evidence that the public praying of the Shema was read from a scroll and that other passages such as Exod. 20 may have been included. Some scholars have interpreted this action of the reading of the Decalogue as the promulgation of God's imperial decree, his law. This would accord well with the scriptural use of terms of royalty and the court to describe the reign of God. The literature of Judaism of all the ages makes clear that the kingly court of God was the synagogue in the Jewish mind and that the most sacred place and the utmost reverence was afforded the Torah. It was in light of this devotion that all the offices of the congregation took their place and authority. From the ruler of the synagogue to the "herald" all were servants of the Torah.

When in the medieval period the Decalogue was no longer used in the congregational worship and the scrolls were no longer read for the Shema prayers, then the character of the congregational offices changed also. Several administrative positions appear in the later history of the synagogue. The chief of these is the "collector" or "almoner," whose task it was to collect and distribute funds for the poor. The public giving of alms was a feature of the Jewish religious community. It is mentioned in the rabbinic literature and in the NT (e.g., Matt. 6:2 – 4). The Gospels and other contemporary sources indicate that while the temple in Jerusalem was supported by the royal

establishment and received its revenue from special taxes, the synagogues were voluntary and free offerings were commonplace.

The collector of the synagogue who ministered to the poor was probably the model for the DEACON in the early church (1 Tim. 3:8 et al.). In later rabbinic times, when the sacerdotal rituals were replaced by the synagogue service, this usage was retained. It is this tradition which has become the base for the many Jewish philanthropic organizations that have brought aid to both Jews and non-Jews throughout the world. In the Christian church the model of the synagogue organization was retained in the ancient church and reclaimed in the Reformation. The Catholic churches from medieval times have followed the principle of sacerdotalism basic to the temple and the Levitical priesthood.

B. Rabbis and laity. The actual origin of the rabbinical office is lost in antiquity. The term RABBI (Heb. *rab H8042* ["great"] with 1st person pronominal suffix) simply means "teacher" or "master," and was at no time a sacerdotal or ordained office. Any laymen learned in the Torah and Jewish law could be called "rabbi." After the destruction of the temple and its officialdom, some attempt appears to have been made to continue the sacerdotal offices, but as the majority of Jews moved in succeeding generations to the area of Galilee the rabbinical system arose. During the High Middle Ages it assumed the authority and primacy in the synagogue. When this time came, the rabbinate was supreme and no longer one of the laity. The ordination to the rabbinate was based on the individual's knowledge of Hebrew, Torah, Talmud, and Jewish law in general.

Although the modern rabbinate still inherits the background of Pharisaic Judaism, it is more concerned with learning than ritual. In fact, most Jewish rituals are performed in the home with the father or eldest son officiating. The synagogues in Catholic lands have tended to retain livery for the rabbis and certain laity, and rich vestments for certain services. On the other hand, those thriving in Protestant cultures have assumed many aspects of congregationalism and the dress of the bourgeoisie. This cultural syncretism has been the subject of both encouragement and scorn within Jewish circles for the whole of this century. The rise and progress of the State of Israel has tended to make the synagogues of the Diaspora emulate oriental Judaism in an ever increasing number of aspects. The contemporary rabbi is not only a Torah teacher but also a representative and instructor in Jewish custom.

V. The service

A. Shema. The recitation of the Shema and the accompanying blessings was the central portion of the simplest synagogue service, which as few as ten male members might enact. It was traditionally held that this prayer service stressing the mono theism of Yahweh was instituted by Moses himself. The eighteen short prayers that make up the general blessing are certainly earlier than the Christian era. The prayers in the service were always followed by the general "Amen" said by the congregation.

B. Scripture and sermon. The reading of the whole Torah in Hebrew was the central act of congregational worship and has been carried down in various forms to the present day. The Torah was divided into 154 or 155 sections and read through in its entirety in a three-year cycle. The selections were known as *sedarim*, and there is evidence in the writings of Philo Judaeus, Flavius Josephus, the N T, and the patristic authors that this system was in vogue in NT times. A reading from the prophets in the Jewish canon was also given in the form of the *haftarah*. Both of these were followed by Aramaic interpretation. Then followed an extempore commentary given by a learned

member of the congregation, a visiting rabbi, or possibly a visitor from another congregation. It is this custom that was apparently the means of Paul's frequent invitations to preach in the synagogues (Acts 13:14 – 41 et al.).

After the lectionary readings and on some occasions between them there were probably cantorial renditions of the Psalms, which were followed by set congregational responses. In the temple worship these passages were sung by antiphonal choirs but in the local synagogues they were congregational. There were undoubtedly some sung parts that terminated the service. Just what part a formal sermon played is uncertain. However, it is clear from the discourses of the prophets and kings of the OT that exhortations based upon the Torah were not unknown. The traditional material of the Targum and the involved rabbinic commentaries of the *Mikraoth Gedoloth* must have originated as running commentaries and organized sermons once delivered in the synagogue. Since Judaism had little evangelistic appeal during the early Diaspora the true sermonic type of presentation never developed. Later rabbis appear to have adopted the type of personal appeal in their homiletics that had already developed in Christian circles.

One important point concerning the synagogue service is that it was led by the members of the

Mosaic floor of the synagogue at Hammath Tiberias, dating to the late 3rd or early 4th cent.

congregation. The sacerdotalism so often associated with later liturgical forms in Christian tradition was unknown in the synagogue. Undoubtedly this factor was obvious to the Reformers of the 16th cent. when they came into more frequent contact with the Jews as a result of the Renaissance. The high place accorded the Psalms in the Reformed congregations of France, Switzerland, and Holland may be traced to the synagogue service.

C. Fasts and festivals. The OT festivals of the Jewish religion follow the agricultural year. Since it was impossible after the Diaspora for all the Jews of the Mediterranean world to return to the temple in Jerusalem, many of the congregational feasts were held in the synagogues. These were held on the same date and at the same time as the temple ceremonies. Most of the feasts celebrated in the Jewish calendar are of later origin and appeared during the time of the synagogue. Only the faintest remnant of the great sacrifices of the atonement are still observed and these are wholly limited to the

household observance of *Pesaḥ*, "Passover," which occurs in March-April. In the social gatherings of the synagogue it is more frequently the holidays of the State of Israel that are observed, and the celebrations are derived from the Jewish cultures of central Europe.

D. Administration. The addition of Hebrew schools has expanded the traditional role of the synagogues to seven days a week. The result has been a development of a professional corps of educators, teachers, and administrators to operate the system. Many synagogues in various parts of the world are large community centers and thus provide a wide array of social services as well as the formal religious services. The traditional oversight of the synagogue in the hands of a board of "elders" has not materially changed during the long history of the institution, although for efficiency's sake many synagogues also have a separate board of financial trustees. Unlike the variety of religious and struc tural variations in Christian church denominations, the rabbi is the executive of the synagogue in all cases.

(See further W. O. E. Oesterley and G. H. Box, *Synagogue* [1907]; M. Rosemann, *Der Ursprung der Synagoge* [1907]; M. Friedländer, *Synagoge und Kirche in ihren Anfängen* [1908]; E. L. W. WHITE, JR.

Synagogue, Great. According to rabbinic tradition, the Great Synagogue or, more accurately, the Great Assembly (*kĕneset haggĕdôlâ, m.⁾ Abot* 1:1 – 2 et al.) was an authoritative body of 120 elders established under EZRA and NEHEMIAH for the purpose of insuring greater obedience to the Mosaic laws. To this institution, which supposedly lasted about two centuries, were attributed various important accomplishments, including the composition of some biblical books, the creation of a liturgy, and the establishment of the canon. Modern scholarship in general regards this tradition as an unhistorical development of Neh. 8 – 10, which recounts Ezra's reading of the Torah before a national assembly as well as the positive response of the people. (See *HJP*, rev. ed. [1973 – 87], 2:358 – 59.) There is no reference to such an institution prior to the 2nd cent. A.D. (the expression *epi megalēs synagōgēs* in 1 Macc. 14:28 is to be taken simply as a great gathering that included priests, rulers, elders, and others).

Synagogue of the Freedmen. See FREEDMEN, SYNAGOGUE OF THE.

Synoptic Gospels, synoptic problem. See BIBLICAL CRITICISM IV.A.; GOSPELS III.B.1; JESUS CHRIST IV.A.

Syntyche sin′ti-kee (Συντύχη *G5345*, "fortunate"). A woman in the church at PHILIPPI who, with Euodia, had labored together with PAUL. There was a conflict between them, so Paul urged them to "agree with each other in the Lord" (Phil. 4:2 – 3). See discussion under EUODIA.

Syracuse sihr′uh-ky*ooz* (Συράκουσαι *G5352*). A city on the E coast of SICILY where PAUL spent three days when the ship that carried his party put in en route for PUTEOLI from MALTA (Acts 28:12).

Founded by CORINTH in 734 B.C., Syracuse emerges into the full light of history with the rule of Gelon (540 – 478). Near the end of his reign, Gelon defeated the Carthaginians at Himera (in 480, the year of Salamis); and Syracuse, made thus the most important city of the western Mediterranean after Carthage, entered upon her century of imperial splendor and success. Hieron I succeeded Gelon, reigned for ten years, and extended Syracusan influence to adjacent Italy. The catastrophic defeat of ATHENS in its wanton attack on Syracuse (415 – 413) left the Sicilian city at the height of her military power and glory.

The reign of Dionysius I (430 – 367) saw the passing of this prestige and the evolution of Syracuse into an undisguised tyranny. Dionysius fell short of his ambition to drive the Carthaginians out of the island, suffered some defeats at their hands, and postponed a direct Carthaginian assault by treaties that must have revealed to the great Phoenician power the developing weakness of Syracuse under an inevitably debilitating tyranny. In art and in other spheres of culture, as in political and international influence, Syracuse was living through a deceptive Indian summer of greatness, seemingly powerful, but decayed internally by tyranny.

Decline was obvious and precipitous under Dionysius II, whom the great Plato had sought in vain to educate for authority. It was Timoleon (whose dates are uncertain) who restored a measure of constitutional rule, thrust the aggressive Carthaginians back, and introduced new citizens to strengthen the state. One Agathocles, a democratic leader, undid Timoleon's work and had himself made king. He died in 289 B.C., and his passing marked the beginning of the city's end. The Romans had become involved in Sicily after the middle of the 3rd cent. The island was too important a base for either side to neglect when Rome and Carthage became aware of their confrontation across the narrow waist of the Mediterranean. Struggle ensued between pro-Roman and pro-Carthaginian parties in the city, and Syracuse together with the whole island became an inevitable battleground. Syracuse, closed by the Carthaginian faction, was captured by the Roman general, Marcellus, after a fearful siege in which the Syracusan physicist, Archimedes, provided the defenders with sundry pieces of sophisticated artillery. Archimedes died in the grim aftermath of the capture of the city.

From 211 B.C. onward, therefore, Syracuse was Roman. It remained the most splendid city in the province and the seat of the governor's residence. AUGUSTUS sent settlers in 21 B.C. and made the city a colony. It was looted by the invading Franks in A.D. 280. No one knows how Christianity came to Syracuse, but extensive CATACOMBS bear witness to the solidity of its presence.

E. M. BLAIKLOCK

Syria sihr′ee-uh (Συρία *G5353,* prob. a shortening and misapplication of Ἀσσυρία, ASSYRIA). In

biblical scholarship, this name is usually applied to the territory N and NE of PALESTINE, covering roughly the area now occupied by the modern state of Syria (and a small part of SE Turkey); some scholars, however, use the term more broadly to include PHOENICIA (modern Lebanon), TRANSJORDAN (modern Jordan), and even Palestine (modern Israel).

Important ancient cities of Syria not mentioned in the Bible include EBLA and UGARIT. In the OT, the KJV and some other modern versions (following the LXX and Vulg.) use the name Syria to translate Hebrew ʾărām H806, which most frequently refers to the city-state of DAMASCUS and the neighboring territory. See discussion under ARAM (COUNTRY). (For an archaeological survey of Syria from prehistoric times through the Iron Age, see *ABD*, 6:270 – 81.)

In the intertestamental period, the term is usually applied to the SELEUCID empire, which had its capital in ANTIOCH OF SYRIA (see also COELESYRIA). In 64 B.C., the area became a Roman PROVINCE usually governed by an imperial legate (see GOVERNOR; QUIRINIUS). Its boundaries varied during the following centuries. References to Roman Syria are often paired with its neighboring province to the NW, CILICIA (Acts 15:23, 41; Gal. 1:21). Territories to the S, including ARABIA and JUDEA, were at times regarded to be part of the province of Syria. Under the emperor HADRIAN (ruled A.D. 117 – 138) it became a consular province named Syria Palaestina. (See A. H. M. Jones, *Cities of the Eastern Roman Provinces*, 2nd ed. [1971], ch. 10; E. Dabrowa, *The Governors of Roman Syria from Augustus to Septimius Severus* [1998]; K. Butcher, *Roman Syria and the Near East* [2003].)

Syriac, Syrian sihrʹee-ak, -uhn. The KJV uses the form *Syriack* to render ʾărāmî H811 in Dan. 2:4 ("Then spake the Chaldeans to the king in Syriack"), but *Syrian* in the other occurrences of that Hebrew term (2 Ki. 18:26; Ezra 4:7; Isa. 36:11). In all of these passages the reference is to the ARAMAIC LANGUAGE, which served as the *lingua franca* of the ANE from about the 8th cent. B.C. until the Hellenistic period. Modern scholars apply the term *Syriac* to the particular dialect of Aramaic spoken in SYRIA beginning around the NT period. There is a very rich body of Christian literature written in the Syriac language, which is still spoken today (e.g., by a group known as Assyrian Christians).

Syriac versions. See VERSIONS OF THE BIBLE, ANCIENT III.

Syro-Hexapla sïoh-hekʹsuh-pluh. Also Syro-Hexaplar. Name given to a Syriac translation of ORIGEN's Hexaplaric recension of the Greek OT. See SEPTUAGINT VI.

Syrophoenician sïroh-fi-nishʹuhn (Συροφοινι- G5355, fem. of Συροφοίνιξ). This proper adjective describes a woman encountered by Christ when he journeyed to the region of TYRE in the territory of PHOENICIA (Mk. 7:24 – 26 KJV and most versions; NIV, "born in Syrian Phoenicia"). By means of this word her racial extraction is traced to that of the Phoenician stock which resided in the Roman province of SYRIA. Another group of Phoenicians, known as Carthaginians or Libophoenicians, resided in N Africa. The broader category of which she was a part is also given by Mark: she was a Greek or Gentile, that is, a non-Jew. Matthew refers to her as a Canaanite (Matt. 15:22), an earlier and more general term for residents of CANAAN—and one that would have had negative religious overtones for Jewish readers. Her difficulty in obtaining her request from Christ illustrates quite well the prior claim of the Jews on the ministry of Christ at his first advent.

R. L. THOMAS

Syrtis suhr′tuhs ($Σύρτις$ *G5358*). Name given to the shallow waters of the northern coast of Africa between Tunisia and Cyrenaica. Today the Gulf of Sidra forms the SE corner of this bay, which is known as the Greater Syrtis (the Gulf of Gabes, also called the Lesser Syrtis, lies more than 300 mi. to the W). Always a difficult place for navigation, legend exaggerated the dangers, perhaps to protect Phoenician trade by frightening off other ships. The sailors who were carrying PAUL to Rome, even though they were several hundred miles away from "the Syrtis" (i.e., the Greater Syrtis), did everything to avoid being driven into this dangerous shore (Acts 27:17; KJV, "the quicksands"; NIV, "the sandbars of Syrtis").

R. C. STONE

Various tools crafted by carpenters, including plow, threshing sledge, olive press, winnowing fork, and broom.

Taanach tay′uh-nak (תַּעְנָךְ *H9505*, derivation uncertain). KJV also Tanach (only Josh. 21:25). One of the royal Canaanite cities defeated by JOSHUA (Josh. 12:21 et al.). It was situated on the S flank of the Valley of JEZREEL (see ESDRAELON), where the international coastal road or VIA MARIS struck inland from SHARON. The forested ravines of the northern Ephraim hill country were the most sensitive points of the route for ambush, and Taanach, MEGIDDO, and JOKNEAM guarded three important passes. These towns are first mentioned in the Egyptian chronicle of THUTMOSE III, in the 13th cent. B.C., possibly about the time the Israelites were threatening the Egyptian lines of communication from the hinterland of the interior hills (*ANET*, 235). Tablets excavated at Taanach in the reign of Thutmose III (or Amenhotep II) make clear that it was an important fortress city having juridical links with such towns as Rehob, Gurra, and Rubute. See REHOB (PLACE) #2; GUR; RABBAH (JUDAH).

Taanach was assigned to the Levites descended from KOHATH (Josh. 21:25), but the Manassites

Pottery from Taanach.

failed to expel the Canaanite inhabitants and instead made them tributary (Jdg. 1:27). There followed a period when the Canaanite cities tried to impose their authority over the Israelite tribes in GALILEE, and the Song of DEBORAH refers to Taanach as the scene of a major battle (5:19). In Solomon's reign the town became an important center (1 Ki. 4:12). Later it was taken by Pharaoh SHISHAK, who makes allusion to it in his chronicles. In 1 Chr. 7:29 Taanach is included among the towns that were "along the borders of Manasseh."

Modern Tell Ti ͑innik, the site of the ancient city, is situated on low hills, 5 mi. SE of Megiddo, with which it has been clearly identified in its military history. The tell was first excavated in 1901 – 4 by Professor Sellin of Vienna, who discovered twelve CUNEIFORM tablets of c. 1450 B.C. (cf. *SacBr,* 75 – 76), and revealed the strong Late Bronze Age defensive system, later modified in the Iron Age as a chariot garrison. (See E. Sellin, *Tell Ta ͑annek* [1904]; P. W. Lapp in *BASOR* 173 [Feb. 1964]: 4 – 44; W. E. Rast, *Taanach I: Studies in the Iron Age Pottery* [1978]; G. Friend et al., *Tell Taannek, 1963 – 1968* [1998 – 2001]; A. E. Glock in *NEAEHL,* 4:1428 – 33.)

J. M. HOUSTON

Taanath Shiloh tay'uh-nath-sh*i*′loh (תַּאֲנַת שִׁלֹה *H9304,* meaning uncertain; the SEPTUAGINT interpreted the phrase as two places, Θηνασα καὶ ם). A village that lay between MICMETHATH and JANOAH (Josh. 16:6) on the NE border of the tribal territory of EPHRAIM. It was identified by EUSEBIUS *(Onom.* 98.13) with a village 10 Roman mi. E of Neapolis (SHECHEM) named *Thēna,* which is probably modern Khirbet Ta ͑na et-Taḥta; most scholars, however, prefer Khirbet Ta ͑na el-Foqa, some 4.5 SE of Shechem, where there is evidence of an ancient hill fort.

E. M. BLAIKLOCK

Tabaliah tab'uh-li'uh (מְבַלְיָהוּ *H3189*, possibly "Yahweh has dipped [*i.e.*, purified]"; some vocalize as טְבַלְיָהוּ, meaning "good for [*or* beloved of] Yahweh"). Also Tebaliah. Son of H OSAH and descendant of MERARI; he was a Levite gatekeeper during the time of DAVID (1 Chr. 26:11).

Tabbaoth tab'ay-oth (טַבָּעוֹת *H3191*, "signet ring[s]"). Ancestor of a family of temple servants (NETHINIM) who returned from the EXILE with ZERUBBABEL (Ezra 2:43; Neh. 7:46; 1 Esd. 5:29).

Tabbath tab'uhth (טַבָּת *H3195*, derivation unknown). A place near A BEL MEHOLAH, but probably E of the JORDAN, that was the terminal point of GIDEON's pursuit of the Midianites (Jdg. 7:22). Tabbath was probably in the vicinity of KARKOR in GILEAD (8:10), though the location of Karkor itself is uncertain and cannot serve as a real point of reference. Some have proposed identifying Tab-bath with Ras Abu Ṭabat on the slopes of Jebel ʿAjlun (approximately halfway between JABESH GILEAD and SUCCOTH), but others regard the site as unknown (see discussion in *ABD*, 6:291 – 92). The Gilead hill country would be the natural rallying point of the defeated host.

E. M. BLAIKLOCK

Tabeal tab'ee-uhl. KJV alternate form of TABEEL (Isa. 7:6).

Tabeel tab'ee-uhl (טָבְאַל *H3175*, "God is good" [cf. TOBIAH]; the form in Isa. 7:6, טָבְאַל ["no good"], is thought to be a deliberate disfiguration of the name). (1) Father of a man whom REZIN of DAMASCUS and PEKAH of ISRAEL planned to place upon the throne of Judah as a puppet king in place of King AHAZ (Isa. 7:6). Some interpret the description "son of Tabel" to mean "native of Tabel" and thus translate "the Tabelite," referring to an area N of GILEAD (cf. H. Wildberger, *Isaiah 1 – 12: A Commentary* [1991], 282, 282). Others have thought that the reference is to Tubail king of TYRE, mentioned in a stela of TIGLATH-PILESER III (cf. A. Vanel in *Studies on Prophecy: A Collection of Twelve Papers* [1974], 17 – 24).

(2) One of three Persian officials who wrote a letter of complaint against the Jews to King ARTAXERXES (Ezra 4:7; 1 Esd. 2:16 [KJV, "Tabellius"]).

S. BARABAS

taber. An obsolete English verb found only in Nah. 2:7 KJV; it means "to beat (as on a drum)" and renders Hebrew *tāpap H9528*, "to beat (the timbrel), to strike."

Taberah tab'uh-ruh (תַּבְעֵרָה *H9323*, possibly "burning [place]"). At some unspecified time during the wilderness wanderings, the Israelites "complained about their hardships" and the Lord in anger sent a fire against them. "When the people cried out to Moses, he prayed to the LORD and the fire died down. So that place was called Taberah, because fire from the LORD had burned [*bāʿar H1277*] among them" (Num. 11:1 – 3). The story itself is obscure, and it is not clear whether the burning fire is to be taken literally or as a symbol of some act of judgment. The place is mentioned again in Deut. 9:22, but not listed in the wilderness stations recorded in Num. 33. The location of Taberah is unknown.

E. M. BLAIKLOCK

tabernacle. A transliteration of the Latin word *tabernaculum*, meaning "tent." In the Bible it is used specifically of the sanctuary built under the direction of MOSES in the wilderness. The principal

passages dealing with the tabernacle are (1) Exod. 25 – 29; (2) Exod. 30 – 31; (3) Exod. 35 – 40; and (4) Num. 3:25 – 38; 4:4 – 49; 7:1 – 88. The purpose of the structure is stated in Exod. 25:8, 21 – 22. The tabernacle was made after the pattern shown to Moses on the mount (25:9; 26:30).

8. Problems relating to the Tent of Meeting and the tabernacle
9. The tabernacle in the NT
10. The significance of the tabernacle

I. Terminology. In English translations of the O T, "tabernacle" is usually the rendering of Hebrew *miškan H5438*, meaning "dwelling place" or "dwelling," the site where God disclosed himself to his people and dwelt among them. It can be used with reference to the entire shrine (Exod. 25:9), but sometimes it refers specifically to the Holy of Holies (26:1). The SEPTUAGINT translates this term with Greek *skēnē G5008* over one hundred times and with *skēnōma G5013* almost twenty times (both Gk. words are used frequently to render additional Heb. terms).

Other words and phrases, however, are also employed in connection with the tabernacle. The simple noun, *ōhel H185* (with the definite article, "the tent") occurs almost 20 times; the expression "the tent of the LORD" occurs in one passage (1 Ki. 2:28 – 30), as does "the house [*bayit H1074*] of the tent" (1 Chr. 9:23; NIV, "the house called the Tent"). The phrase "the house of the L ORD" is used more than fifty times, while "the tabernacle of the house of God" only once (1 Chr. 6:48 NRSV). Another expression, "the tabernacle of the Testimony [ʿ*ēdût H6343]*" (NRSV, "of the covenant") occurs a few times (Exod. 38:21 et al.), as does "the tent of the Testimony" (Num. 9:15). The general term *miqdāš H5219,* "holy place, sanctuary," appears very frequently (Exod. 25:8 et al.).

Especially significant is the phrase "the Tent of Meeting *[môēd H4595],*" which occurs over 140 times; it is is almost always rendered in Greek by *hē skēnē tou martyriou,* "the tent of the testimony" (cf. Acts 7:44; Rev. 15:5). The place where the Lord met with Moses and Israel (Exod. 29:42, 43; Num. 17:4) was for communication and REVELATION (Exod. 29:42; 33:11; Num. 7:89). It is practically equivalent to "tent of revelation," since here God declared his will for Israel. The KJV rendering, "the tabernacle of the congregation," is not exact.
The Tabernacle.

II. Plan of the tabernacle. ALTARS preceded sanctuaries in Israel (Gen. 12:7 – 8). MONOTHEISM underlay the tabernacle, and the later TEMPLE was modeled after it. The ground plan of the tabernacle is sufficiently clear, although there are various opinions concerning the details. It is customarily held that the shape of the structure was oblong with a flat roof and ornate coverings that hung down at each side and at the back. Another opinion is that the tabernacle had a sloping roof.

The outer court contained the altar of burnt offering and the bronze laver. The tabernacle structure consisted of two divisions: the Holy Place and the Holy of Holies or the Most Holy Place. In the former stood the table of SHOWBREAD on the N (the structure was oriented toward the E); the golden lampstand on the S (see CANDLESTICK); and the golden altar of INCENSE on the W against the veil leading to the Most Holy Place. The innermost compartment held the ARK OF THE COVENANT, in which were deposited the two tablets of the law, the pot of MANNA, and AARON'S ROD that budded. Its covering, a lid of pure gold, was the MERCY SEAT or propitiatory, overshadowed by two angelic figures called CHERUBIM. At the mercy seat God met with his people in their need on the basis of shed blood.

III. Traditional view. There is a marked division on the subject of the tabernacle between those who take the Pentateuchal record as a historical account and those who approach the matter from the standpoint of critical presuppositions based on an evolutionary concept of the religion of Israel. See PENTATEUCH III. Both biblical data and extrabiblical material compel the belief that the existence of an ancient portable tent-shrine was not only possible or extremely probable, but actual (cf. Exod. 33:7 – 11; Num. 11:24; 12:4 – 10; 14:10; Josh. 18:1; 19:51; 1 Sam. 2:22; 2 Sam. 6:17; 7:6; 1 Ki. 2:28 – 29; 8:4). Research has shown that there existed until recent times portable shrines among the nomads of the Syrian desert. Similar shrines are mentioned by writers of the classical period.

The conservative position holds that the tabernacle was made by Moses in the wilderness. It was constructed according to the pattern shown to him on the mount. It was to be the center of worship for the tribes of Israel in their wilderness travels. Centuries later, the temple of Solomon

was modeled after the tabernacle. Although primarily a provisional and temporary sanctuary for the journey from Sinai to Palestine, the tabernacle nonetheless continued in use long after the settlement in Canaan.

The higher-critical view maintains that the tabernacle had only an ideal, not a historical, existence; that it was a product of priestly imagination in exilic or postexilic times. It was a miniature built on the model of the Solomonic temple. The claim that it was constructed in the wilderness was put forth only to give sanction to the newly written Priestly Code (PC), or Levitical ritual, still preserved in the books of the Pentateuch. The details of the tabernacle in PC (Exod. 25 – 31; 36 – 40; Num. 2:2, 17; 5:1 – 4; 14:44) are said to conflict with those given in "E" (the Elohist, in Exod. 33:7 – 11) as to the character and location of the structure.

Part of this divergence of views on the tabernacle stems from the interpretation of the nature and function of the Tent of Meeting mentioned in Exod. 33. The record indicates that at SINAI a worship altar was built by Moses (24:4). After the worship of the golden calf, Moses pitched a tent and often resorted to it outside the camp at a distance (33:7 – 11). It had a definite interim function before the tabernacle was constructed. It was a place of revelation of the will of God and of meeting with him. Critics, however, equate the Tent of Meeting with that of Num. 11:16 – 17; 12:4 – 5; Deut. 31:14 – 15; and consider it the tent of the wilderness wanderings, distinguishing it from the tabernacle presented later by P, thus denying the historicity of the tabernacle. It is true that such a localization of the Lord's presence to a specific sanctuary could be misunderstood as indicating a local or tribal deity. At that stage of national growth it was a necessary step in God's self-revelation to Israel.

IV. The tabernacle in Exodus and Numbers. The account of the tabernacle begins in Exod. 25 – 31 and continues in Exod. 35 – 40 (for the significant differences in the LXX translation, see D. W. Gooding, *The Account of the Tabernacle: Translation and Textual Problems of the Greek Exodus* [1959]; M. L. Wade, *Consistency of Translation Techniques in the Tabernacle Accounts of Exodus in the Old Greek* [2003]). Other references to the tabernacle and its furnishings are found in Num. 3:25 – 38; 4:4 – 49; 7:1 – 88. The tabernacle is mentioned in the works of JOSEPHUS and PHILO JUDAEUS and in Jewish accounts of the 3rd cent. A.D. Jewish and Christian commentators all reveal difficulty in understanding the details of the plan of the structure, although the general appointments are clear. Parallels to the tabernacle are found in the record of Solomon's temple (1 Ki. 6:2) and that of Ezekiel's temple (Ezek. 40 – 46). I. Benzinger, although he does not take the traditional position, admits: "The whole description leaves at first sight such an impression of painstaking precision that the reader might be tempted forthwith to take for granted its historical truth" (*EncBib*, 4:4862). However, he prefers the position of J. Wellhausen, who held that the statements are after all just fancy. If this were so, what was the purpose of the writer(s)?

A. Materials and furniture. The tabernacle was made from the voluntary gifts of Israel. The materials listed include gold, silver, bronze; blue, purple, scarlet material, fine twined linen; goat hair, dyed ram skins, goatskins, acacia wood, oil for lamps, spices for the anointing oil and the fragrant incense, onyx stones, and stones for the ephod and the breastpiece. The three metals of ancient times—bronze, silver, and gold—are used in meaningful gradation from the outer court to the most holy place. The most artistic use of the metals is found in the cherubim and the golden lampstand. The wood used throughout the structure was shittim or ACACIA wood, known for its durability. The material employed was linen, also fine twined linen, dyed blue, purple, and scarlet (25:4). The yarn was spun by women in charge of the weaving (35:25, 35); the work included both

embroidery and tapestry.

1. Framework. The framework of the tabernacle (Exod. 26:15 – 37; 36:20 – 38) was made of 48 wooden frames, 15 ft. high by 27 in. wide with three vertical arms joined by three crosspieces. These were placed in wooden supports and over them were hung two large curtains. Over all were spread three covers. The framework was constructed of uprights of acacia wood, making three sides of the oblong structure. The front was closed by an embroidered screen (26:36 – 37). The boards, 48 in number, were overlaid with gold. The construction was divided into two

Modern scholars and artists have attempted various reconstructions of the tabernacle. The one shown here was built at the Timna Nature Reserve, with the front curtain facing due E.

compartments separated by a veil, hung from four pillars overlaid with gold, and set in sockets of silver. The veil, like the covering of the tabernacle, was woven with blue, purple, and scarlet, with figures of cherubim. The holy place was 30 ft. long by 15 ft. broad; the most holy place was 15 ft. square. It has been suggested that the tabernacle proper was tentlike in shape with a ridge pole and a sloping roof.

2. Coverings. The coverings of the tabernacle are described in Exod. 26:1 – 14 and 36:8 – 9. The wooden framework of the tabernacle had three coverings: the total covering of the tabernacle itself, the covering of goat hair, and the covering of skins spread over the entire structure. The first covering was made of ten curtains of fine twined linen woven with blue, purple, and scarlet, with figures of cherubim. The second covering was of eleven curtains of goat hair. The top covering was made of ram skins dyed red and goatskins.

3. Court of the tabernacle. The description of the court is found in Exod. 27:9 – 18 and 38:9 – 20. This area was a rectangle on an E-to-W plan, 100 cubits long and 50 cubits wide (c. 150 x 75 ft.). To the W was the tabernacle proper, and to the E, the altar. The court was screened off from the camp by five white curtains five cubits high. It was an enclosure with curtains of fine twined linen supported on bronze pillars and attached by silver hooks. In the court stood the altar of burnt offering and the laver, the latter being set between the altar and the tabernacle proper (30:17 – 21). The entrance to the court was from the eastern side through a "gate" or "screen" with its hangings.

The ALTAR of burnt offering is treated in Exod. 27:1 – 8 and 38:1 – 7. It is called "the altar of bronze" from its appearance, and "the altar of burnt offering" from its use. The fire on this altar was never to go out (Lev. 6:13). The most important of the contents of the outer court was the altar. It was a hollow chest of acacia wood covered with bronze, five cubits long and wide and three cubits high, with four horns at the corners. In the middle of the altar was a ledge (Lev. 9:22) and below it a grating. The altar was carried by bronze-covered poles in bronze rings. The horns of this altar were at times used for ASYLUM (1 Ki. 1:50 – 51, possibly a misuse of the altar). They were sprinkled with blood at the consecration of the priests (Exod. 29:12), at the presentation of the sin offering (Lev. 4:18 – 34), and on the Day of Atonement (16:18). The grating on the four sides at the foot of the altar permitted the blood of the sacrifices to be spilt at the base of the altar through the network. The people were permitted to approach the altar, for when they brought their sacrifices, they laid their hands on the victim (1:4).

The LAVER is described in Exod. 30:17 – 21 and 38:8. It was for the exclusive use of the PRIESTS as they ministered in the ritual of the tabernacle. They neglected this provision at the peril of their lives (Exod. 30:20 – 21). Made of bronze, the laver had a base, evidently for the washing of the feet of the priests. Some scholars believe that the base was a part of the laver proper, whereas others with greater probability maintain that the base was a separate vessel from the laver itself. The record indicates that the bronze was contributed by the ministering women who were engaged in work about the tabernacle (38:8).

4. Sanctuary proper. The tabernacle proper is described in Exod. 26:1 – 14 and 36:8 – 19. It appears that the curtains, rather than the boards, constituted the dwelling of the Lord (26:1). The record of the wooden framework of the dwelling is found in 26:15 – 30 and 36:20 – 34. At the inner portion of the court stood the tabernacle, an oblong

This close-up photo of the Timna tabernacle model shows the outer curtains of the tent.

structure 45 ft. long by 15 ft. broad with two divisions, the Holy Place and the Most Holy (26:33). These two divisions are found in the Solomonic temple as well (1 Ki. 6:5). The area of the Most Holy Place was 30 ft. square; the Holy Place measured 60 ft. by 30. The two were separated by a veil. On the Day of Atonement the high priest entered the veil, or curtain, at the open end into the innermost sanctuary. See ATONEMENT, DAY OF.

The emphasis in Exod. 26 and 36 is on the tabernacle itself and its curtains, of which there were ten, each 28 by 4 cubits. The ten curtains of colored fabric with woven cherubim were joined in two sets of five along the sides of the tabernacle. Fifty loops of violet thread were sewed, and the curtains were to be held together by fifty gold clasps, thus uniting the whole tabernacle (26:6). Over all this was placed a tent to make certain the tabernacle was completely covered. The covering overlapped the linen and permitted an extra fold at the front (26:9). The tent had two coverings, one of ram skins dyed red and another of skins of goats (cf. 26:14; 40:19).

The curtains were held in place by 48 acacia frames. These frames consisted of two arms connected at the top, center, and bottom by cross rungs with two silver bases for each frame. The silver bases formed an unbroken foundation around the tabernacle. The frames were also held together by five bars. The frames and bars were gold-plated. The front of the structure was enclosed by curtains. (Exod. 26:22 – 25 is difficult: it may speak of a pair of frames joined at each corner of the W or rear of the framework, sloping upward and inward from their bases to a point under the top bar.) The screen was the entrance to the Holy Place; the VEIL separated it from the Holy of Holies. The veil was made of variegated material with embroidered cherubim, draped over four pillars of acacia wood, overlaid with gold, supported by four silver bases. The screen was of the same material as the screen at the entrance to the outer court (27:16). It was suspended from golden hooks on five pillars of acacia wood, overlaid with gold, supported by bronze bases.

The outer compartment or Holy Place contained three pieces of furniture: (1) the table of showbread, (2) the golden lampstand, and (3) the golden altar of incense. The table was set on the N side (40:22); the lampstand on the S side (40:24); and the altar of incense on the W side before the veil. The table was made of acacia wood covered with fine gold and ornamented with a gold

molding. Rings and poles were made for carrying. A number of accessories were made for the table: gold plates to hold the loaves, dishes for the frankincense (Lev. 24:7), and golden vessels for wine offerings. On this table were placed two piles of twelve loaves or cakes, changed each week (24:5 – 9). The dishes, spoons, and bowls were all of pure gold.

On the S side of the Holy Place stood the golden seven-branched lampstand or CANDLESTICK. It was the most ornate of all the furniture. Of pure gold, it had a central shaft (Exod. 25:32 – 35) from which were made six golden branches, three on either side. All was adorned with almonds and flowers. All stands supported a lamp which gave continuous (others say only nightly) illumination (27:20; Lev. 24:2 – 3; 1 Sam. 3:3). Accessories of the lampstand, such as snuffers, snuff dishes, and oil vessels, were all of gold. The lampstand was made of a talent of pure gold (Exod. 25:38).

In front of the veil was placed an altar of incense (Exod. 30:1 – 5; 37:25 – 28). Because it is not mentioned in Exod. 25, it is considered by some to be a later addition. It is not mentioned in the LXX in Exod. 37. It was a small altar constructed of acacia wood and overlaid with gold, one cubit long and wide, and two cubits high. It was a replica in miniature of the bronze altar (30:1 – 10). Its fire was provided from the main altar. Horns, rings, poles, and a golden molding were made for it. Perpetual sweet-smelling incense was offered on it night and morning, and on the Day of Atonement EXPIATION was made on its horns. On the basis of Heb. 9:4, some have thought that Exod. 30:6 and 1 Ki. 6:22 suggest that the altar of incense was inside the veil in the Most Holy Place. The sacred writer of Hebrews is viewing the sanctuary and its ritual proleptically, that is, in the light of the rent veil and an accomplished redemption. Furthermore, the passages in Exodus and 1 Kings cannot be made to teach a condition contrary to the other passages that describe the Holy Place. Provision was made for replenishings of the oil for the lamps and incense for the altar (Exod. 30:22 – 38).

The smallest of all the parts of the sanctuary was the Holy of Holies, yet it was the most significant because of the ritual that was carried out there on the Day of Atonement, and because of the reiterated declaration that God himself dwelt in the tabernacle in the holiest of all, a dwelling represented by the SHEKINAH cloud over the innermost sanctuary.

The account is found in Exod. 25:10 – 40; 30:1 – 10; 37. The record of the tabernacle begins with the construction of the ARK OF THE COVENANT (25:10). Its measurements were about 3.75 x 2.25 x 2.25 ft. It was the only furniture in the Holy of Holies. It contained the Ten Commandments (2 Ki. 11:12; Ps. 132:12), the pot of manna (Exod. 16:33 – 34), and Aaron's rod that budded (Num. 17:10). It was covered within and without of pure gold, with golden moldings, rings, and staves. Resting on the ark of the covenant and held securely in place by the gold molding was a solid slab of gold called the MERCY SEAT or propitiatory (*kappōret H4114*), that is, the place where God was rendered favorable to his people.

Wrought out of the ends of the covering or lid were figures of gold, the CHERUBIM (Exod. 25:19; 37:8). Their faces were toward the mercy seat and their wings touched overhead. Between the cherubim the God of Israel dwelt visibly (25:22; 30:6; Num. 7:8, 9), and met with his people through their representatives, first Moses, then Aaron. The cherubim were soldered to the propitiatory, making it "of one piece" with it (Exod. 25:19). They represented angelic ministers of the Lord who guarded the divine throne from all pollution. The ark was carried by poles in four golden rings at the sides. The tabernacle with the ark was lost in the battle of APHEK (1 Sam. 4). In the second, or restoration, temple of ZERUBBABEL there was no ark with its propitiatory (contra Bar. 6:7).

B. Construction and consecration of the tabernacle. The account is found in Exod. 25 – 29. Moses was instructed to erect the tabernacle on the first day of the first month in the second year of the

exodus, nine months after reaching Mount SINAI (19:1). The pattern was revealed by God for his dwelling place (25:8; 29:45). The many workmen were led by men of artistic skill who were empowered and illuminated by the Spirit of God, BEZALEL the son of Uri and OHOLIAB the son of Ahisamach (31:1 – 6). When the structure was completed and the furniture installed in place, the cloud symbolizing the presence of God filled the place. The cloud henceforth signaled to Israel when they were to camp and when to journey. When Israel was encamped, the tabernacle was at the center of the camp with Levites on three sides and Moses and Aaron and his sons on the fourth (E) side: Judah at the center of the E side; Ephraim at the center of the W side; Reuben on the S side. The number of Levites who ministered at the tabernacle was 8,580 (Num. 4:48).

The tabernacle manifested what has been termed a "graduated holiness and perfection," that is, the metal in the Most Holy Place was solid gold; in the Holy Place, ordinary gold; in the court, bronze. The people were allowed into the court, the priests into the Holy Place, and only the high priest into the Most Holy Place one day a year. Only the altar is mentioned for consecration (Exod. 29:36 – 37), but later all the furniture of the sanctuary was included (chs. 30 – 31).

C. Moving the tabernacle. The book of Numbers discusses the tabernacle on the march (Num. 2:17; 3:25 – 38; and ch. 4). The camp moved when the cloud that rested on the sanctuary was taken up from over the dwelling (Exod. 40:37; Num. 9:17). While the cloud hovered over the dwelling, the camp remained stationary (Num. 9:18 – 22). When a silver trumpet blast heralded the breaking of camp (10:1 – 7), the priests took down the veil and covered the ark with it (4:5 – 6) and two other covers. Similarly, all the furniture was to be wrapped (4:7 – 14). The Kohathites carried all the pieces that were transported by poles. The Gershonites were entrusted with the curtains of the tabernacle, the tent of meeting with its covers, the screen, the hangings of the court, the altar, and its equipment. The Merarites transported the frames, bars, pillars and bases of the tabernacle proper and the pillars and bases of the court. The Levites marched in the middle of the nation with six tribes before them and six behind (2:17).

The ark went before Israel in the crossing of the JORDAN. They set up the tabernacle at SHILOH, and the land was divided among the tribes there (Josh. 18:1; 19:51). Only the ark is mentioned, although the assumption is that the Tent of Meeting was present also (1 Sam. 2:22). After the destruction of Shiloh, the ark was placed in the home of ABINADAB at KIRIATH JEARIM. The account in 1 Sam. 22:18, 19 implies the existence of a sanctuary (cf. ch. 21).

V. Historical references to the tabernacle.
When all the biblical references are collated, it is found that there are mentions of both a tabernacle and "the Tent of Meeting"; some of the problems involved will be discussed later. Early references to the Tent of Meeting are Exod. 33:7 – 11; Num. 11:16 – 17, 24, 26; 12:5, 10; and Deut. 31:14 – 15. According to the first reference, the Tent of Meeting was pitched outside the camp (Exod. 33:7; cf. Num. 11:26, 27). Here Moses and others went to commune with God and to inquire of him. This tent was guarded by Joshua, an Ephraimite, but no Levites (Exod. 33:11; Num. 11:28). The verbs used in Exod. 33:7 – 11 and Num. 10:17 – 21 indicate customary conditions. The whole picture is different from the tent made by Bezalel and his assistant. Although the account appears to indicate a temporary or occasional arrangement, it lasted throughout the wilderness journeys (cf. A. R. S. Kennedy in *HDB*, 4:653ff.). Its function was to provide the meeting place between God and Moses (Num. 12:5; Deut. 31:15). It was also the site where worshipers sought the Lord (Exod. 33:7).

The tabernacle was erected at Sinai in the second year after the exodus, two weeks before the

Passover (Exod. 40:2, 17). When the congregation journeyed, the ark was covered with the veil (Num. 4:5). The ark and the two altars were carried by the sons of Kohath, a descendant of Levi, under the supervision of the high priest (3:31 – 32; 4:15). The rest of the disassembled structure was carried in six covered wagons, given by a prince (Num. 7:7), each drawn by two oxen. Others must have been used for the heavier materials. Before Israel departed from Sinai, the tabernacle had been erected for fifty days (10:11).

The journey of Israel took them from Horeb (Sinai) to Kadesh Barnea in the Negev of Judah. Of the forty years spent marching to Canaan, almost thirty-eight were spent at Kadesh; the tabernacle remained here through those years. During all this time the customary sacrifices were not offered (Amos 5:25). Few events of those years are recorded and little is stated concerning the tabernacle except that the ark headed the march (Num. 10:33 – 36). Because history deals mainly with the unusual, the daily occurrences of the life of the people are not alluded to.

After the crossing of the Jordan River, a place was found for the sacred tent near Jericho at Gilgal (Josh. 4:19; 5:10; 9:6; 10:6, 43). This site was temporary, and in time the tabernacle was moved to Shiloh in Ephraim, a central location convenient for the men to attend the three annual pilgrimage feasts (Josh. 18:1; 19:51). At Shiloh the tabernacle appears to have had some permanent features and was even called a "temple" (Heb. *hêkāl H2121*, 1 Sam. 1:9; 3:3; cf. also the reference to doors in 3:15).

During the period of the judges, Israel repeatedly fell into apostasy, and the tabernacle services must have been performed in a formal, heartless manner, if at all. See Judges, period of. When war erupted with the Philistines in Samuel's time, the people decided to bring the ark of the covenant from Shiloh (1 Sam. 4:3 – 4). The outcome was tragic: the Philistines captured the ark and routed Israel. Doubtless, Shiloh fell at this time at the hands of the Philistines (cf. Ps. 78:60 – 61; Jer. 7:12).

After the death of Eli and his sons, it appears that Samuel presided over the religious exercises of the nation. He offered burnt and peace offerings. When the ark was restored by the Philistines, it remained at Kiriath Jearim (1 Sam. 7:1 – 2). Gilgal, Bethel, Mizpah, and Ramah were places of administration of justice and gained religious associations as well. The next allusion to the tabernacle indicates that it was at Nob, with Ahimelech as high priest (21:1 – 6). After Saul had all the priests of Nob slain except Abiathar (22:11 – 19), it was removed to Gibeon (1 Chr. 16:39; 21:29).

After David captured Jebus and built himself a palace, the ark was brought from Kiriath Jearim and delivered to the priests. Uzzah, however, was struck dead for his indiscretion, and the ark remained for three months at the home of Obededom, a Levite. Then with great solemnity it was transferred to the tent David had pitched for the ark in Jerusalem. Burnt offerings and peace offerings were presented there (2 Sam. 6).

With David's removal of the ark to Jerusalem there was a tabernacle with its altar at Gibeon and another one with the ark in Jerusalem, both soon to be replaced by the Temple. The Gibeon altar was still in use in Solomon's time. Notice also the occurrence of a reference to the "Tent of Meeting" in 1 Ki. 8:4. After Solomon's temple was built, the Tent of Meeting with all its equipment was transferred with the ark into the temple (8:4). Of all the materials of the tabernacle, it is held, only the ark remained the same in the temple. Thus the last references to the tabernacle in the history of Israel concern the time when it with its sacred vessels was transported to Jerusalem, where from all indications they were kept as sacred relics in the temple.

VI. Critical view. The critical view of the tabernacle, referred to briefly earlier in this treatment, is complex indeed compared with the accounts already discussed. One position within the critical camp

is that the tabernacle in the wilderness was always an ideal, never a real structure. It is argued that the elaborate symbolism of the tabernacle could not have been reproduced in its entirety in any of the temples that were actually constructed in Israel. It is pointed out that the earthly tabernacle was said to be built from a heavenly pattern delivered to Moses on Mount Sinai (Exod. 25:40).

Many older critics considered the tabernacle as only a projection backward of the temple into Israel's nomadic past; this was supposedly a product of the late Priestly Source (P) without a shred of historical foundation. In all fairness it must be pointed out that subsequent critical studies have admitted that this judgment was a far too sweeping and radical treatment of the biblical data. In fact, the Wellhausen school explained the tabernacle as a postexilic representation based on Solomon's temple. The claim was that the tabernacle was a copy, not the model or prototype, of that temple (cf. Wisd. 9:8). According to this theory, the chronological order would have been: the shadowy original in the tent (Exod. 33:7 – 11), then Solomon's temple, then Ezekiel's ideal representation, and finally the tabernacle of Exod. 25. It should be added that some modern scholars view Ezekiel's "ideal" reconstruction as actually prophetic, eschatological, and messianic.

The weight of modern OT scholarship is opposed to the historicity of the tabernacle treated in Exodus and Numbers (P). Some of the general arguments lodged against the historicity of the tabernacle are that an unorganized body of Hebrew slaves could never have accomplished the feat involved in constructing the tabernacle with its demands for a high degree of artistic skill, for even Solomon in his reign had to hire skilled artists from PHOENICIA for the temple. Moreover, the highly organized priestly ministry with its elaborate ritual is allegedly out of keeping with the simple appointments indicated for the Tent of Meeting. The most cogent argument advanced against the historicity of the tabernacle (in P) is the silence of the preexilic historical writers with reference to it. The claim is made that no genuine passage of history in that long period so much as hints of the existence of a tabernacle with ministering priests and Levites. When references occur in the Chronicler (1 Chr. 16:39; 21:29) and the psalmists, it is laid to the activity of editors and glossators who inserted references where they thought the tabernacle should have been (1 Ki. 3:4; 2 Chr. 1:3).

Other objections to the historicity of the tabernacle have not been lacking. The tabernacle must be the creation of the imagination, it is argued, because the author has so poorly thought out the details of the structure. Moreover, the fundamental question has been posed as to whether such a structure was capable of standing at all. As a matter of architecture, the tabernacle is pronounced an utter impossibility (Benzinger in *EncBib*, 4:4872). Furthermore, it is asserted that E knows nothing of a tabernacle of this kind. That source speaks only of a tent that excludes the possibility of the tabernacle in P (cf. Exod. 33:7 – 11). It is felt that this simple tent-sanctuary involves none of the difficulties of the tabernacle in P. The tent of E is not a place of sacrifice (as the tabernacle is in P), but a place of oracle, more like the portable sanctuaries of the heathen Semitic peoples of the time. (Note the denial of the uniqueness of the faith of Israel, which is the distinguishing feature of the OT.)

To elaborate further on the historical argument, it is said that historical tradition from the settlement in the land to the building of Solomon's temple reveals no knowledge of any tabernacle. Passages that do mention or imply the existence of the tabernacle are treated with suspicion and are rejected. The conclusion is then drawn that the tabernacle of P is just the temple of Solomon read back into earlier days by a vivid priestly fancy. Simply stated, it was not the temple that was built on the pattern of the tabernacle, but the tabernacle was constructed for the worship of Israel from the prototype of the temple. A general observation is in order: one of the characteristic features of the critical school is the tenet that development always proceeds from the simple to the complex. Why is this principle departed from at this point when the tabernacle and temple are discussed?

VII. The historicity of the tabernacle. The historicity of the tabernacle is of vital significance for the entire validity of the Scriptures. The main contentions of those who deny the historicity of the tabernacle will be presented, followed by specific refutations.

Critical opinion claims that if Solomon's temple had been patterned after the Mosaic tabernacle, the writers of Kings and Chronicles would have stated this fact. This position overlooks 1 Ki. 8:4 and 2 Chr. 5:5. It is argued that these passages refer to "the Tent of Meeting" and not to the Mosaic tabernacle of Exod. 25. However, in P the Mosaic tabernacle has the same name (Exod. 27:21). What logic requires that the authors of Kings and Chronicles state explicitly that the Solomonic temple was modeled after the Mosaic tabernacle?

Much is made of the argument from silence. Arguments from silence are notoriously precarious. The only way a silence of the historical books can be made out is to delete all such reference passages relative to the Mosaic tabernacle as the work of a late redactor who allegedly inserted them to support his view that the Mosaic tabernacle originated in the wilderness. No external evidence has been produced by any critic to sustain this position. If the evidence of the OT is heeded, it reveals a number of clear evidences.

First, there was the Mosaic tabernacle at Shiloh. According to the account in 1 Sam. 1 – 3 (cf. 1:3, 9, 19, 24; 2:11, 12; 3:3), the structure mentioned is the Mosaic tabernacle. It had the ark of the covenant, a priesthood, sacrifices, burning of incense, and the wearing of an ephod. ELKANAH's annual pilgrimage to Shiloh to worship and offer sacrifice strongly implies that Shiloh was the central sanctuary, and that the law of the annual feasts was known (Exod. 23:14; Lev. 23:1 – 18; Deut. 16:16).

Second, the sanctuary at Nob was the Mosaic tabernacle (1 Sam. 21:1 – 6). It had a high priest and eighty-five ordinary priests, a priest's ephod, and a table of showbread. The eating of the showbread was under the same ceremonial regulations as indicated for the Mosaic tabernacle (Lev. 15:18). The URIM AND THUMMIM were used by the priest to determine God's will as in the tabernacle arrangement. These are particulars that relate to the tabernacle and to no other institution in Israel.

Third, the reference to the Mosaic tabernacle at Gibeon precedes the building of Solomon's temple (1 Ki. 8:4; 2 Chr. 1:3; 5:3). It is stated that the ark of the covenant, the Tent of Meeting, and all the holy vessels of the tent were solemnly brought into the temple Solomon had built.

Critics claim the Mosaic tabernacle could not have been made as Exodus describes it, because (1) the time was too short; (2) the Israelites were not qualified or artistically capable; and (3) they did not have sufficient materials for such a splendid building as the Mosaic tabernacle. The argument as to time is amply answered by the fact that 600,000 able men for nine months could well have accomplished, with their wives and children, all that was needed for so circumscribed a structure. The objection as to their artistic ability is untenable in the light of the fact that in over 400 years they could well have learned something of the mechanical arts for which Egypt was justly famous. Furthermore, who can disprove that some of the famous works of Egypt of those days were not done by Israelite slave labor? The argument as to scantiness of material is refuted by the considerations that Israel had some preparation for their wilderness journey, that the amount of material involved is not in excess of what other ancient oriental peoples possessed, that a large part of what they needed could have come from what the Egyptians gave them to leave their land and from the spoils of the war with AMALEK, and that some of the materials required for the construction were available in the wilderness.

The biblical account is said to have certain internal marks that reveal its unhistorical character.

(1) It states the tabernacle was made on a model supernaturally shown to Moses. (2) It continually refers to geographical locations of the tabernacle when no previous instructions had indicated any such order. (3) The bronze altar was made of acacia wood overlaid with bronze where a fire would burn constantly. (4) The tabernacle is pictured not as a temporary shelter for the ark on the march but as the only authorized sanctuary for the tribes of Israel before the time of Solomon. (5) The description of the tabernacle found in P or the Priestly Code (Exod. 25 – 31; 36 – 40; Num. 2:2, 17; 5:1 – 4; 14:44) is said to conflict with E (Exod. 33:7 – 11) as to character and location.

In refutation of the first objection, it must be affirmed that there is no inherent impossibility that God should reveal the pattern of the tabernacle to Moses in the mount (Exod. 25:40; Heb. 8:5). Is the temple of Solomon unhistorical because David said that the pattern of it given to Solomon had been revealed to him (David) by God (1 Chr. 28:19)? Moreover, Ezekiel claimed that the temple he described was seen by him in a vision. Here it is a matter of one's theology and the possibility of supernatural revelation.

The second objection is indeed difficult to comprehend, because it argues against the obvious. The tabernacle had to be oriented in some way, and the most natural would be according to the four points of the compass. Moreover, there was no conscious imitation of the Solomonic temple, because the account in Kings and Chronicles makes no reference to the four quarters of the earth; 1 Ki. 7:25 does not demand that the sides of the temple were so positioned.

The third argument assumes more than is stated. The text does not claim that a large fire constantly burned on an altar of wood. A reading of Exod. 27:1 – 8 and 38:1 – 7 shows that the altar proper, where the fire burned and consumed the sacrifices, was the earth-filled or stone-filled hollow (Exod. 20:24 – 25) which the wooden and bronze frame enclosed.

The fourth contention is in exact conformity with a natural reading of Exodus, namely, the tabernacle was meant to be the authorized sanctuary for the tribes before Solomon's day. It is true that on occasion altars were built for sacrifice at locations other than the tabernacle, for example, by GIDEON at OPHRAH and by SAMUEL at RAMAH (Jdg. 6:24 – 27; 1 Sam. 7:17), but this is inadequate to prove that the tabernacle was not the central sanctuary. By the same reasoning, Jerusalem could be shown not to be the central sanctuary because of the altar on Mount EBAL (Deut. 27:5). Actually, the tabernacle was the central sanctuary, but the original legislation of Exod. 20:24 had never been rescinded. It was still permissible to offer sacrifice wherever the Lord revealed himself to his people. Because local shrines existed at the same time as the tabernacle does not warrant the conclusion that the tabernacle was never constructed.

The fifth objection is adequately answered by the observation that the description of the tabernacle in P differs from the description of the tent in E simply because two different structures are in view: one is the tabernacle proper (P) and the other is the preliminary tent built by Moses. This explanation accounts for the variations in character and location of the two.

Perhaps the strongest proof advanced for the non-historicity of the tabernacle is the alleged ignorance of the preexilic prophets concerning the Levitical system. Critics cite Amos in the 8th cent. B.C. (Amos 5:25 – 26) and Jeremiah in the 7th (Jer. 7:21 – 23) as teaching that no sacrificial tabernacle ritual was ever enunciated in the wilderness. Against this contention it can be stated as remarkable that former interpreters did not so understand the words of these prophets. Moreover, it can be easily shown that critics are far from agreement on this interpretation. Amos 5:21 – 22 would be meaningless unless God had accepted their sacrifices at one time and would do so no longer when the worship was heartless and idolatry was indulged in at the same time (Num. 16:18).

Finally, if the Lord never commanded sacrifices for Israel, how did he order Jeremiah to

pronounce a curse on the people of Jerusalem for transgressing the covenant that he had made with their fathers in the wilderness and that enjoined sacrifices to him and not to idols (Jer. 11:1 – 5)? If God had desired only obedience to moral law without sacrifice, then where was the need for the temple? God had accepted the temple as his house. All idolatrous sacrifices were proscribed, not only because they were wrong in themselves, but because they displaced the true sacrificial worship of the Lord. Jeremiah certainly knew God had commanded sacrifices in Exod. 20:24 – 25.

The NT references to the tabernacle at least imply that the sacred writers were agreed on its historicity. Such citations were PETER's words on the Mount of Transfiguration (Matt. 17:4; Mk. 9:5; Lk. 9:33), STEPHEN's statement to the council (Acts 7:44), the references in Hebrews (Heb. 8 – 9), and the voice from heaven (Rev. 21:3).

VIII. Problems related to the Tent of Meeting and the tabernacle. According to some, it would be both natural and logical to understand from the Pentateuch that the Tent of Meeting and the tabernacle were the same structure. The original instructions (Exod. 25) are said to be so vague and full of omissions that it would have been impossible on the basis of those instructions to build such a structure as the tabernacle. Details are said to be lacking for the shape of the cherubim, the feet of the ark and table, the thickness of the mercy seat, and how the weight of the curtains could have been sustained by the frames without collapsing the structure. How did the altar of burnt offering sustain such great heat needed to consume the animal sacrifices? Where did Israel get the skill and craftsmanship to erect the tabernacle? The amounts of materials used were quite large: about one and one-fourth tons of gold, about four tons of silver, and about three tons of bronze. Why is the record so silent concerning the tabernacle from the settlement in Canaan to Solomon's temple?

Upon further study the problems are not so formidable as first considered in the heat of an avid hypercriticism. Much of the difficulty stems from the fact that the critical position has tried to equate the Tent of Meeting and the tabernacle, and then has complained of the resultant discrepancies. Allow the tent to be one structure and the tabernacle another, and all will be seen to be harmonious (for a different approach, however, see R. E. Averbeck in *DPL*, 810 – 12). Regarding the vagueness of instructions, surely sufficient guidelines were given to permit the workmen to build the structure, for Exod. 35 – 40 is occupied with the manner in which the instructions of God were carried out to the letter. Where specific instructions were absent, the skill of the artisans, fortified with specific and stated endowment from the Spirit of God, was adequate for the needs of the task. The specific details of the building would have taken into account the weight of the curtains on the frame. Engineering authorities have confirmed that such a structure was eminently feasible and workable. The silence of the historical texts can be made out only if pivotal passages are denied validity and then deleted.

The situation described in Exod. 33 probably obtained for a limited time. It is likely that when the older generation, who were not to enter the land, died off, the ark and the tabernacle were moved into the midst of the camp. Differences in location of the tent and tabernacle are explicable and contradictions are more apparent than actual. Furthermore, those who claim the Tent of Meeting was Moses' personal tent cannot expect their statement to be taken seriously, when the subject under discussion involves the worship of an entire nation, numbering over two million, with a ministering priesthood in the thousands of persons.

Theologically, the tabernacle cannot be eliminated from the history of Israel in the wilderness. The presence of the Lord with them was the unifying factor in all their national traditions, repeatedly referred to in later books of the O T. They could not be without foundation in fact. They can be and are traceable to the Mosaic era, where Israel's laws and sacrificial system began also.

The order seems to have been: (1) A tent was outside the camp because of the sin of the golden calf worship (Exod. 32). (2) The tabernacle itself was built (25:9). (3) The more permanent sanctuary at Shiloh was built because the perishable materials (fabrics) of the tabernacle in the wilderness needed replacing. (4) With the destruction of the Shiloh sanctuary the ark was moved from Philistia to Kiriath Jearim to Jerusalem, apparently with remnants of the furniture. (5) Then there was the tent that David made for the ark (2 Sam. 6:17).

IX. The tabernacle in the NT. Anyone arguing the nonhistorical character of the tabernacle must find adequate explanation for the manner in which the NT repeatedly cites different features of that structure and worship, connecting them with Moses, to teach deep spiritual truth in the NT. The references cover the Gospels, Acts, Epistles, and Revelation. It has already been pointed out that the Mount of TRANSFIGURATION experience (Matt. 17:4; Mk. 9:5; Lk. 9:33) harks back to the tabernacle of Moses. John in his prologue makes much of the INCARNATION of the Lord Jesus Christ as the tabernacling among men (Jn. 1:14). The testimony of Stephen (Acts 7:44) is unmistakable. Paul directly equates the cross of Calvary as God's mercy seat, or propitiatory, in finalizing the redemption of sinners (Rom. 3:25). In speaking of REGENERATION he had in mind the laver in Tit. 3:5. The proper interpretation of Col. 1:19 and 2:9 will relate them to the dwelling presence of God in the tabernacle of old. The epistle to the Hebrews is inexplicable without the teaching of the worship of Israel and their priesthood residing in the tabernacle. Various other passages (such as Rev. 8:3 – 4; 13:6; 15:5; 21:3) are too clear to need comment.

Two extremes are discernible in discussions of the symbolism of the tabernacle. There are those who make little or nothing of its symbolic features in spite of what has been shown of the NT references to that structure. On the other hand, there are those who seek to draw some spiritual truth from every thread and piece of wood. There is a *via media* that will not deny symbolism to the colors where white, blue, and scarlet predominate with their connotations of purity, heavenly character, and shedding of blood. That Josephus (*Ant.* 3.7.7) and Philo (*De vita Mosis* 3.147ff.) erroneously interpreted the tabernacle as an image of the universe, and some of the early church fathers saw fanciful things in the appointments of the tabernacle, is not valid ground for Benzinger (*EncBib*, 4:4871) to posit that any figurative interpretations lack a solid basis in the OT.

The epistle to the Hebrews gives at length the Christian interpretation of the symbolism of the Mosaic tabernacle. The furniture symbolizes human access to God. The tabernacle is patterned after a heavenly model (Heb. 8:5); there is a divine prototype (8:2, 5; 9:11); it conveyed important spiritual truths in the 1st cent. A.D. (9:9). Christ appeared and then entered after death into the heavens (9:24). The dwelling place of God is designated as the new Jerusalem (Rev. 21:2). The truth of the tabernacle is inseparably bound up with the fact of the incarnation (Col. 1:19; 2:9). In fact, the tabernacle may rightly be considered, with its emphasis on the fact of God's dwelling with his people, as the main foreshadowing in the OT of the doctrine of the incarnation.

The tabernacle, rather than the later temples, is the basis of NT teaching. The references in Heb. 9 – 10 are to the tabernacle rather than to any temple. The tabernacle is the symbol of God's dwelling with his people (Exod. 25:8; 1 Ki. 8:27). This concept progressed until fulfilled in the incarnation of God the Son (Jn. 1:14). He is in the church (2 Cor. 6:16), in the individual believer (1 Cor. 6:19), and in the eternal state (Rev. 21:3 – 4). In Hebrews the central passages on the tabernacle in the NT represent the earthly and heavenly aspects of Christ's activity. The OT was the shadow of which Christ is the substance (Heb. 8:5; 10:1). The tabernacle of Christ's ministry was pitched by the Lord and not by man (8:2). He is the high priest of the more perfect tabernacle (9:11). He is not in an

earthly tabernacle but appears now before God "for us" (9:24). The sacred writer in Hebrews draws his imagery from the ceremonies of the tabernacle, and clothes his concepts in the priestly and sacrificial terminology of the sanctuary in the wilderness.

Paul refers to "the washing of regeneration" (Tit. 3:5), and to Christ as offering himself as a sacrifice to God (Eph. 5:2). All synoptists underscore the rending of the temple veil (Matt. 27:51; Mk. 15:38; Lk. 23:45), which the Hebrews writer indicates opened the way into the holiest of all (9:8; 10:19 – 20).

X. The significance of the tabernacle. The tabernacle with its priests and their ministry was foundational to the religious life of Israel. The basic concept was that which underlay the theocracy itself: the Lord dwelling in visible glory in his sanctuary among his people (Exod. 25:8). Even if the tabernacle had no historical validity, which it assuredly had, it still may have value for the readers because of its embodiment of important religious and spiritual concepts. It reveals: (1) The necessary conditions upon which Israel could maintain fellowship in covenant relationship with the Lord. (2) The dominant truth of the presence of God in the midst of his people (29:25), a dwelling that must conform in every detail with his divine character, that is, his unity and holiness. One God requires one sanctuary; the holy God demands a holy people (Lev. 19:2). (3) The perfection and harmony of the Lord's character seen in the aesthetics of the tabernacle's architecture, the gradations in metals and materials, the degrees of sanctity exhibited in the court, the Holy Place, the Holy of Holies, and the measurements of the tabernacle (e.g., the numbers 3, 4, 7, 10 with their fractions and multiples dominating and pervading every detail of furniture and material).

The tabernacle was the first sanctuary reared for the Lord at his command, and was rendered glorious and effective by his actual indwelling. The dwelling of God with his people is the dominant theme of the symphony of the tabernacle, all pointing to the future eternal communion with God. The ark of the covenant with the propitiatory was the symbol of God's meeting with his people on the basis of atonement (Rom. 3:25). The showbread spoke of God's sustenance of spiritual life; the lampstand represented Israel as God's channel of light (Zech. 4); the incense was a symbol of prayer (Rev. 5:8; 8:3 – 4). The tabernacle was the authorized place of worship. It was the foundation of the theocracy. The mercy seat was the earthly seat of God's glory, where he met with his people for his glory and their blessing. The tabernacle foreshadowed the time when God's kingdom would be fully realized and established on earth. Note the progress in the self-revelation of God to his people: first, his presence in the tabernacle; second, the incarnation of the Lord Jesus Christ; third, the indwelling of the Holy Spirit in believers; and fourth and last, the descent of the new Jerusalem to the glorified earth.

C. L. FEINBERG

Tabernacles, Feast of. See FEASTS.

Tabitha tab′i-thuh (Ταβιθά *G5412*, from Aram. מְבִיתָא; the more proper form טְבִיתָא is the fem. of טַבְיָא, "deer, gazelle"). The Jewish name of a Christian woman who was raised from the dead by PETER (Acts 9:36 – 43). See discussion under DORCAS.

table. The common Hebrew term for "table" is *šulhan H8947* (Exod. 25:23 and frequently); Greek uses *trapeza G5544* (Matt. 15:27 et al.). In addition, several Greek verbs mean "to recline, to sit down at a table," such as *anakeimai G367* (Matt. 9:10 et al.) and *kataklinō G2884* (Lk. 11:37 et al.). (Not included in the present discussion is the KJV's use of *table* in the sense of TABLET, Exod. 24:12 et al.)

I. Tables for ritual. The most important ritual table was that of the SHOWBREAD or bread of the Presence. Instructions for making this table are given in Exod. 25:23 – 30. It was made of ACACIA wood, two cubits in length, a cubit in width, and one and one-half cubits high, overlaid with pure gold and a molding of gold around it. Rings of gold and poles of acacia overlaid with gold were provided for carrying the table. The table was placed outside the curtain (26:35) on the N side of the TABERNACLE (40:22). It was consecrated by anointing with oil (30:27). Every SABBATH the priest placed twelve cakes of fresh bread on the table in two rows of six each (Lev. 24:5 – 8); it was to be eaten only by the priests (24:9). The Kohathites were in charge of the table and its transportation whenever the tabernacle was moved (Num. 3:27 – 31; 4:1 – 8).

SOLOMON made a new table of gold for his TEMPLE (1 Ki. 7:48). Later, King AHAZ desecrated the temple with his idolatrous practices; therefore the priests cleansed the furnishings, including the table, during the reign of HEZEKIAH (2 Chr. 29:18 – 19). It was destroyed in the burning of the temple by the Babylonians (2 Ki. 25:9). ANTIOCHUS IV Epiphanes stripped the building of its treasures, including the table for the bread of the Presence (1 Macc. 1:22). After Judas MACCABEE defeated the army of LYSIAS, he repaired the temple and made new vessels for it (1 Macc. 4:49 – 51). The table is depicted on the Arch of TITUS in Rome as one of the trophies of war taken by the Romans when Jerusalem fell, A.D. 70.

Other Hebrew ritual tables include ten that Solomon placed in the temple (2 Chr. 4:8); they were made from silver given him by DAVID for this purpose (1 Chr. 28:16). EZEKIEL described twelve tables in his vision of the restored temple, eight for slaying the sacrifices and four for the instruments of sacrifice and the pieces of flesh (Ezek. 40:39 – 43). MALACHI referred to "the LORD's table" as polluted (Mal. 1:7, 12); the reference here is to the ALTAR of burnt offering. In 1 Cor. 10:21 "the Lord's table" refers to the LORD'S SUPPER.

There seems to be a reference to an idolatrous practice of setting a table for the god of FORTUNE (Isa. 65:11; cf. also Ps. 69:22). The "table of demons" refers to pagan sacrificial meals (1 Cor. 10:21). Papyrological evidence shows that celebratory meals were often held in pagan temples, as in the following invitation: "Apollonius requests you to dine at the table of the Lord Serapis on the occasion of the coming of age of his brothers in the

Reconstruction of the table of showbread ("bread of the Presence") used in the tabernacle.

temple of Thoeris" (POxy 1484; see A. C. Thiselton, *The First Epistle to the Corinthians: A Commentary on the Greek Text*, NIGTC [2000], 619).

II. Tables for eating. The homes of common people in the ANE were furnished with a minimum of household furnishings. The people squatted even while eating, a custom still practiced. Only those who lived in palaces and better houses were accustomed to chairs, tables, and beds (2 Ki. 4:10). The eating tables must have been very low, as rugs were spread for sitting at the table (Isa. 21:5). Tables in NT times were taller, for reference is made to dogs eating crumbs under the table (Mk. 7:28).

As ruler, JOSEPH ate at a separate table from his brothers (Gen. 43:34). Defeated enemies often ate at the table of the conquering king (Jdg. 1:7; 2 Ki. 25:29). DAVID and JONATHAN both ate at SAUL's table (1 Sam. 20:29, 34), a courtesy David later extended to MEPHIBOSHETH, son of Saul (2 Sam. 9:7), as if he were one of his own sons. Provision for Solomon's table was ample (1 Ki. 4:27); the QUEEN OF SHEBA "was overwhelmed" when she saw his table (10:5). Sons of loyal friends of David ate at Solomon's table (2:7). Prophets ate at the table of JEZEBEL (18:19). Officials numbering 150 sat at the table of NEHEMIAH when he was governor (Neh. 5:17).

There are many references in the Bible to eating in the home. The prophet of Judah ate with the aged prophet of Bethel (1 Ki. 13:20). That which was set on the table of a prosperous man was said to be "full of fatness" (Job 36:16 NRSV). The NT custom, following Greek practice, was to recline around the outside of the table on couches. A woman anointed the feet of Jesus as he reclined at the table (Lk. 7:38). The meal at the Last Supper was eaten in this manner, contrary to popular art representation (Lk. 22:21; Jn. 13:23; see also Matt. 8:11; 15:35, 36; 26:20; Mk. 2:15; Lk. 7:37; 14:15; 24:30; Jn. 12:2; all the verbs used suggest reclining during meals). In the early church, a problem arose because the apostles were having to give so much time to problems of the community relating to distribution of food that they were unable to devote their full time to preaching. The result was the choosing of seven, considered the first deacons, "to wait on tables" (Acts 6:1 – 6).

The modern Jewish PASSOVER (Pesach) is highlighted by the Seder service, a family banquet in

the home where the family gathers around the table and participates in an elaborate ritual that essentially consists of telling the story of the exodus.

III. Tables of money changers. Jesus, indignant at the commercialism in the temple, overturned the stool-like tables behind which the money changers sat on the ground cross-legged (Matt. 21:12; Mk. 11:15; Jn. 2:15).

IV. Figurative usage. The statement that WISDOM "has set her table" (Prov. 9:2) symbolizes the benefits of the godly life. David's well-known words, "You prepare a table before me / in the presence of my enemies" (Ps. 23:5), indicate the protective care of God. The reprehensible behavior of certain priests and prophets is expressed with the comment, "All the tables are covered with vomit" (Isa. 28:8). Israel is pictured as the harlot who set her table to await her lovers (Ezek. 23:41). Reference to the table was often made by Jesus in his parables (Lk. 12:37; 17:7; 22:27).

V. Eschatological usage. Those faithful to the Lord are promised that they will eat and drink at his table in the kingdom (Lk. 13:29; 22:30) with Abraham, Isaac, and Jacob (Matt. 8:11). In one place, Ezekiel likens being filled at the table of God to judgment, as the birds and beasts are called together to feast on the enemies of God (Ezek. 39:20).

F. B. HUEY, JR.

Table of Nations. See NATIONS.

tablet. This English term is used primarily to translate Hebrew *lûaḥ H4283*, most often used of the two tablets of stone on which the TEN COMMANDMENTS were given at SINAI to MOSES (Exod. 24:12; Deut. 5:22; et al.). These tablets were written on both sides (Exod. 32:15) by God himself, containing the words he had spoken to Moses (Deut. 9:10). Moses broke the stones in anger when he saw the people sinning (Exod. 32:19), but God instructed him to cut out two new tablets of stone (34:1 – 4), which Moses carried again to Mount Sinai where God wrote down the law again. They were later placed in the ARK OF THE COVENANT (Deut. 10:5; cf. 1 Ki. 8:9; 2 Chr. 5:10). Based on data that it was normal procedure in establishing suzerainty covenants to prepare duplicate copies of the TREATY text, some scholars have argued that each stone was complete in itself rather than each one containing half the laws; if so, the two tablets would have been duplicate copies of the law.

The NT equivalent is *plax G4419* (2 Cor. 3:3; Heb. 9:4). Another Greek word, *pinakidion G4400*, refers to a small writing tablet, ordinarily a block of wood covered with wax (Lk. 1:63). Note also Hebrew *gillāyôn H1663* (Isa. 8:1 NRSV, where the NIV renders "scroll"). The KJV also uses "tablet" for other words that are translated differently in modern versions (Exod. 35:22; Num. 31:50; Isa. 3:20).

F. B. HUEY, JR.

Tabor tay′buhr (תָּבוֹר *H9314*, possibly "height"). (1) Mount Tabor is a hill about 10 mi. SW of the Sea of Galilee in the Valley of JEZREEL (see ESDRAELON). The border of the inheritance of ISSACHAR touched Tabor (Josh. 19:22); thus the other tribe to touch it would be ZEBULUN (this has led scholars to believe that Tabor is the mountain referred to in Deut. 33:18 – 19 and that it was a cult center; cf. Hos. 5:1). During the judgeships of DEBORAH and BARAK, Mount Tabor played a principal role.

Deborah had Barak summon his troops to that mountain (Jdg. 4:6). Later from that height Barak went down with his 10,000 men and the LORD routed SISERA, the Canaanite general (vv. 14 – 15). Other references include the confession of EBAH AND ZALMUNNA to GIDEON that they had slain Gideon's brothers at Tabor (8:18), the psalmist's matching of Tabor with HERMON in joyously praising God's name (Ps. 89:12), Jeremiah's colorful description of NEBUCHADNEZZAR (Jer. 46:18), and Hosea's use of the mountain to illustrate God's severity toward Israel (Hos. 5:1).

Atabyrium (Atabyrion), a city that ANTIOCHUS the Great took in 218 B.C., was apparently on Mount Tabor, since Polybius (*Hist*. 5.70.6) describes it as a "conical hill" near Scythopolis, that is, BETH SHAN (it is unclear what, if any, relationship the name Atabyrion may have had with ZEUS Atabyrios, for whom a cult was practiced on a mountain in RHODES that bore the same name; see J. Lewy in *HUCA* 23, pt. 1 [1950 – 51]: 357 – 86). The Jews under Alexander Jannaeus (see HASMONEAN II.C.) took Mount Tabor in 105 B.C., but lost it to the Romans under POMPEY in 70 B.C. (Jos. *Ant*. 13.15.4).

Mount Tabor is identified with Jebel eṭ-Ṭur ("mount of the height"). Although it rises only 1,843 ft. above sea level, it is a prominent feature of the landscape. The mount is rather steep, somewhat symmetrical, and has a rounded top. From the summit one has a lovely view in all directions. To the NW the higher parts of the city of NAZARETH are visible. Farther W is the promontory of Carmel (see CARMEL, MOUNT). To the E is the Sea of Galilee, and the Jordan with the highlands even farther beyond. At the foot of the mountain to the S is the Valley of Jezreel. The cities of AZNOTH TABOR and KISLOTH TABOR may have derived their name from that of the mountain.

Mount Tabor is not mentioned in the NT, but much of its fame rests in the tradition that the TRANSFIGURATION of our Lord took place on it (however, see HERMON). That tradition was well established by A.D. 326 when Helena, the mother of Constantine, built the first Christian shrine on its summit. The hill suffered the vicissitudes of war which destroyed older shrines and made way for new ones. The Crusaders maintained it after their arrival in the Holy Land until Saladin's victory at the Horns of Ḥaṭṭin in 1187. The Muslims made a fort of the mountain twenty-five years later, but that was shortly destroyed and the summit was relatively empty until the 19th cent., when the Greek Orthodox built a monastery and the Franciscans a basilica of the transfiguration on the top. That basilica has three sections—one for Jesus, one for Moses, and one for Elijah.

(2) Tabor is also the name of a Levitical city within the tribal territory of ZEBULUN (1 Chr. 6:77; the parallel passage, Josh. 21:34 – 35, has a different list that omits Tabor). Its identification is uncertain. Some have thought that it was a town associated with Mount Tabor (possibly a settlement on the mountain itself), but if so one would expect the town to have been included within the territory of ISSACHAR, not Zebulun. Others think Tabor is the same as KISLOTH TABOR (Josh. 19:12; cf. Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 304), which is c. 3 mi. W of Mount Tabor. Another suggestion is DABERATH, on the NW slope of the mountain.

(3) Finally, mention is made of a certain "great tree [*ēlôn H471]* of Tabor" that was evidently not far from BETHEL (1 Sam. 10:3; NRSV, "the oak of Tabor"; KJV, wrongly, "the plain of Tabor"; see OAK). Some have speculated that here Tabor *(tbwr)* is an alternate form or textual corruption of DEBORAH *(dbwrh),* and that the reference is to the tree under which REBEKAH's nurse was buried (Gen. 35:8). The context of the passage tells that SAUL had qualms about whether or not God wanted him to be king of Israel. In response, SAMUEL gave him some signs to confirm the divine nature of his anointing. The second sign was fulfilled on his way home; when he approached the great tree of Tabor he met three men going up to God at Bethel. The location is unknown.

R. L. ALDEN

tabret. An archaic English term, meaning "timbrel, tambourine," used by the KJV in a number of passages (Gen. 31:27 et al.). See MUSIC, MUSICAL INSTRUMENTS IV.B.

Tabrimmon tab-rim′uhn (טַבְרִמֹּן *H3193,* an Aram. name meaning "[the god] RIMMON is good"). KJV Tabrimon. Son of HEZION and father of BENADAD I, the king of ARAM (1 Ki. 15:18). It is uncertain whether Tabrimmon himself was a king.

taches taks. KJV archaism for "clasps" (Exod. 26:2 et al.).

Tachmonite tak′muh-n*i*t. KJV form for TAHKEMONITE.

Tacitus tas′uh-tuhs. Cornelius Tacitus was born in A.D. 56 or 57, was trained as a rhetorician, and served in various political offices, including CONSUL or chief magistrate (in 97) and PROCONSUL or governor of the province of ASIA (112 – 13). He probably died in 118 or shortly after. Tacitus is best known, however, as a prolific and eloquent historian. His two principal works deal with the Roman emperors: the *Histories* (from the death of NERO to the death of DOMITIAN) and the *Annals* (covering the earlier period, from the accession of TIBERIUS through the emperorship of Nero). Much of the material is lost, but the *Annals,* considered his greatest work, has largely survived (we are missing the reign of CALIGULA, about half of the reign of CLAUDIUS, and a few years of Tiberius and Nero). Though Tacitus was not without his faults and biases, his historical accounts are the earliest that have come down to us and are also of greater intrinsic value than competing works (such as those of SUETONIUS and Dio Cassius). Because Tacitus covers most of the 1st Christian cent. in considerable detail (including the interactions between Jews and Romans), his writings are of the greatest importance for reconstructing the historical background of the NT. (See R. Syme, *Tacitus,* 2 vols. [1958]; R. H. Martin, *Tacitus* [1981]; R. Mellor, *Tacitus* [1993]; C. S. Kraus, *Latin Historians* [1997]; A. J. Woodman, *Tacitus Reviewed* [1998]; J. P. Davies, *Rome's Religious History: Livy, Tacitus and Ammianus on Their Gods* [2004].)

Tadmor tad′mor (תַּדְמֹר *H9330,* meaning unknown). Also Tadmur. Known in Greek and Latin history as Palmyra, the city of palm trees, Tadmor was an ancient military outpost, trading center, and customs station located in the Syrian desert, half-way between DAMASCUS and the upper EUPHRATES River. It was a large and pleasant oasis with wonderfully fine mineral springs, fertile soils, and many gardens and palm groves—the only supply station of any consequences on the shorter trade route between Babylonia and Syria.

Tadmor's inhabitants are mentioned (Akk. *Tad-mar)* in CUNEIFORM inscriptions of the 19th and 18th centuries B.C., and early in the 11th cent. in the annals of TIGLATH-PILESER I of ASSYRIA, who attacked the Arameans living there. The biblical narratives inform us that when King SOLOMON took N Syria along the BEQAᶜ and ORONTES Valleys as far N as HAMATH, he not only built "store cities" in the Hamath area, but also "built up Tadmor in the desert" (2 Chr. 8:4; cf. 1 Ki. 9:18, where NRSV and NJPS, following the *Ketib,* read "Tamar") to protect the trade routes and serve the NE boundaries of his extended kingdom.

No more is heard of Tadmor until 64 B.C., when Mark Antony raided its merchants who had

grown rich through the Babylonian and Indian trade which had passed through there. In early Roman times Tadmor enjoyed considerable commercial prosperity, and splendid buildings were constructed under HADRIAN (A.D. 117 – 138), but its colorful period of history began in A.D. 241 when Odenathus the younger went into the desert, where he trained the bedouin cavalry and spearmen. He also married Zenobia, a powerful Sheikh's daughter in whose veins coursed the blood of the Arab, the Egyptian, and the Greek. With the forces which he and the bedouin chiefs gathered, he fought and overcame Rome's enemies, and exercised his subtle political strategy until A.D. 258, when Emperor Valerian made Odenathus a Roman consul. Thereafter, for almost twelve years he directed the affairs of Palmyra, consolidated the political and military forces, and conquered surrounding areas until he was the acknowledged master of this part of the world—and that with the approval of Rome.

Then about the year A.D. 267, Odenathus was assassinated by a nephew, whom he had punished for insubordination, and Zenobia, his gifted queen, took the reins of the government and ruled alone in Palmyra as regent of the E. She not only erected more buildings and further improved the city, but placed herself at the head of her well-trained army and extended and consolidated her domains eastward to Persia and westward to the Mediterranean. Palmyra became the acknowledged center of the ANE world, and Zenobia the woman without an equal in beauty, in governmental efficiency, and in military prowess. Yet her lack of moderation led her to assume imperial titles, inscribe them on her coins, and send a military expedition to conquer Egypt.

Soon after becoming emperor of Rome in A.D. 270, Aurelian marched in triumph through ASIA MINOR, fought and defeated Zenobia's armies at Antioch and Emisa (Homs), then trekked over the desert and laid siege to Palmyra in 272. In secrecy Zenobia fled eastward to rally her Persian forces, but was captured on the ferry boat as she was attempting to cross the Euphrates River. She was returned to Palmyra and taken to Rome in the emperor's triumphal march. Gibbon says the emperor provided her with a villa and she lived thereafter the life of a "comfortable Roman matron." Tadmor was placed in subjection, but soon revolted and was virtually destroyed. Later the city was fortified by Justinian, but during the 7th cent. it fell to the Muslims. In modern times Tadmor has been excavated and appears to travelers as one of the most impressive ruins of the ancient world.

(See M. A. R. Colledge, *The Art of Palmyra* [1976]; J. Starcky and M. Gawlikowski, *Palmyre,* rev. ed. [1985]; T. Kaizer, *The Religious Life of Palmyra: A Study of the Social Patterns of Worship in the Roman Period* [2002]; Y. Zahran, *Zenobia between Reality and Legend* [2003].)

G. F. OWEN

Tahan tay′han (𐎠𐎠 *H9380,* derivation uncertain; gentilic 𐎠𐎠 *H9385,* "Tahanite"). (1) Son of EPHRAIM and ancestor of the Tahanite clan (Num. 26:35).

(2) Son of Tela and descendant of Ephraim (1 Chr. 7:25).

Tahapanhes tuh-hap′uh-neez. KJV alternate form of TAHPANHES (only Jer. 2:16).

Tahash tay– (𐎠𐎠 *H9392,* perhaps "dolphin"). KJV Thahash. Son of NAHOR (brother of ABRAHAM) by his concubine REUMAH (Gen. 22:24). Some have thought that Tahash is a place name, corresponding to Egyptian *ta-ḫ-śi* and referring to an area near KADESH ON THE ORONTES (cf. *HALOT,* 4:1721).

Tahath (person) tay′hath (𐎠𐎠 *H9394,* possibly "instead of," i.e., "compensation"). (1) Son of

Assir, descendant of LEVI through KOHATH, and ancestor of SAMUEL and HEMAN (1 Chr. 6:24, 37).

(2) Son of BERED and great-grandson of EPHRAIM (1 Chr. 7:20a). Some argue that the genealogy is textually corrupt. See #3 below.

(3) Son of Eleadah and grandson of #2 above (1 Chr. 7:20b).

Tahath (place) tay′hath (תַּחַת *H9395*, possibly "instead of," i.e., "compensation"). A stopping place of the Israelites, between Makheloth and Terah, during their forty years of wilderness wanderings (Num. 33:26 – 27). The location is unknown.

Tahchemonite tah-kee′muh-n*i*t. See TAHKEMONITE.

Tahkemonite tah-kee′muh-n*i*t (תַּחְכְּמֹנִי *H9376*, in form, a gentilic from an unknown name, but widely considered a textual error). KJV Tachmonite. According to 2 Sam. 23:8, the chief of "the Three" (evidently a special military group within the elite force called "the Thirty") was "Josheb-Basshebeth, a Tahkemonite" (the KJV understands his name as a phrase, "The Tachmonite that sat in the seat"). The parallel passage, however, reads: "Jashobeam, a Hacmonite [*lit.*, son of Hacmoni], was chief of the officers [*or* of the Thirty]" (1 Chr. 11:11), and many scholars believe that the Samuel passage is textually corrupt. See JASHOBEAM.

Tahpanhes tah′puhn-heez (תַּחְפַּנְחֵס *H9387*, also תַּחְפְּנֵס [Jer. 2:16 *Ketib*] and תְּחַפְנְחֵס [Ezek. 30:18], possibly from an Egyp. phrase such as *t)-ḥt-np)-nḥsy*, meaning either "house of the Nubian" or "fortress of Penaḥse" [*HALOT*, 4:1719]). KJV also Tahapanes (Jer. 2:16), Tehaphnehes (Ezek. 30:18), and Taphnes (Jdt. 1:9). An Egyptian town named with MEMPHIS and MIGDOL as an opponent of Israel (Jer. 2:16; 46:14) and as a place to which Jewish exiles fled after the murder of GEDALIAH following the sack of Judah by the Babylonians in 586 B.C., when JEREMIAH was reluctantly compelled to join them (44:1; cf. 43:7 – 9). Tahpanhes also figures in EZEKIEL's judgment on EGYPT (Ezek. 30:18).

A Phoenician PAPYRUS letter of the 6th cent. B.C. from Egypt refers to "Baal Zephon and the gods of Tahpanhes," from which it is thought that the city must have earlier borne the name of BAAL ZEPHON, an Israelite staging post during the exodus (Exod. 14:2; cf. W. F. Albright in *Festschrift Alfred Bertholet* [1950], 13 – 14). If the name means "palace of the Nubian," it may have been founded during the reign of TIRHAKAH (690 – 664 B.C.; cf. 2 Ki. 19:9). The form of the name in extrabiblical Greek literature, *Daphnē*, supports identification with Daphnai, on the Pelusiac branch of the NILE River, which HERODOTUS (*Hist*. 2.30, 107) says was garrisoned by Greek mercenaries set there by Psammetichus during the 26th dynasty (664 – 610) to repel the incursions of Arabians and other Asiatics.

Tahpanhes is commonly identified as modern Tell Defneh (Defenneh), 27 mi. SSW of Port Said (9 mi. W of el-Qanṭara). In 1886 Flinders Petrie partially excavated Qasr Bint al-Yahudi (Mansion of the Jew's Daughter), finding both Greek pottery and a fortress of Psammetichus I, outside which lay a Ramesside-period brick platform that might be the "brick pavement at the entrance to Pharaoh's palace in Tahpanhes," where Jeremiah hid stones to mark the place where he predicted that the Babylonian king NEBUCHADNEZZAR II would erect his throne (Jer. 43:9).

A fragmentary Neo-Babylonian text of the thirty-seventh year of Nebuchadnezzar outlines operations against Egypt and mentions the Egyptian king Amasis and a Greek garrison (Putu-Iaman). However, the cylinders of Nebuchadnezzar said to have been found at Tell Defneh, now in the Cairo Museum, are imported copies of his standard building inscriptions from Babylon itself. A recently discovered inscription in NABATEAN, dated to the 1st cent. B.C., mentions Tahpanhes (in the form

dpnʸ) as the site of a shrine devoted to a Nabatean god; evidently the city had broad commercial ties as late as the Roman period. (See further F. Petrie, *Tanis II; Nebesheh (AM) and Defenneh (Tahpanhes)* [1888], 47 – 96; A. Dupont-Sommer in *PEQ* no vol. [1949]: 52 – 57; R. N. Jones et al. in *BASOR* 269 [Feb. 1988]: 47 – 58.)

D. J. Wiseman

Tahpenes tah′puh-neez (תַּחְפְּנֵיס *H9388,* prob. from Egyp. title *tʾ-ḥ(mt)-pʾ-nsw,* "the wife of the king"; see K. A. Kitchen, *Third Intermediate Period in Egypt,* 2nd ed. [1986], 274 n. 183). An Egyptian queen (1 Ki. 11:19 – 20). She was the wife of a Pharaoh of the 21st dynasty, perhaps Siamon (c. 979 – 959 B.C.). The pharaoh gave her sister in marriage to Hadad, the Edomite prince who fled from David to Egypt (1 Ki. 11:17). Tahpenes cared for her sister's son, Genubath, in the royal house.

J. Alexander Thompson

Tahrea tah′ree-uh. Alternate form of Tarea.

Tahtim Hodshi tah′tim-hod′shi (תַּחְתִּים חָדְשִׁי *H9398,* meaning unknown). A district between Gilead and Dan Jaan, visited by David's commanders in the course of the census (2 Sam. 24:6). Many believe that the text has been corrupted. Among various proposed emendations, one that has been widely accepted is *hahittîm qadesâ* (cf *Chettieim Kadēs* in the Lucianic recension of the LXX); thus the NRSV rendering, "they came to Gilead, and to Kadesh in the land of the Hittites" (the reference would be either to Kedesh of Naphtali or to Kadesh on the Orontes). Another suggestion is *tahat hermôn,* "beneath Hermon" (see discussion in P. K. McCarter, Jr., *II Samuel,* AB 9 [1984], 504 – 5).

tale. This noun is used by the KJV a few times in the sense "number, count, total" (Exod. 5:8, 18; 1 Sam. 18:27; 1 Chr. 9:28; cf. the English verb *tell* in the sense "to count," Gen. 15:5; Ps. 22:17 KJV). The English term is sometimes used negatively of a false report, whether slanderous (Ezek. 22:9 KJV) or regarded as incredible (Lk. 24:11 KJV, NRSV) or simply fictional (1 Tim. 4:7 NIV, NRSV). See Fable. The KJV also employs "tale" once to translate a Hebrew word that properly means "sigh, moan" (Ps. 90:9).

talent. See Weights and measures IVA.

talitha cum(i) tal′uh-thuh-koo′mi (ταλιθὰ κούμ [or κούμί] *G5420 + G3182,* from Aram. טַלְתָא, "girl" [more properly טְלִיתָא, from טְלִי, "youth"] and קוּם, "arise!" [more properly קוּמִי, 2nd person fem. imperative of קוּם, "to arise"]). Also *talitha k(o)um(i).* Mark preserves Peter's vivid memory of the exact Aramaic words of Jesus when he said to Jairus's dead daughter, "Little girl…get up" (Mk. 5:41; note other Aram. words of Jesus and of Peter in 7:34; 15:34 Acts 9:40). Such words come naturally to the Galilean; no magic formula is involved. *(See ABD,* 6:309 – 10.)

J. Grintz *(in JBL* 79 [1960]: 33 – 47) presents evidence from Josephus, the Dead Sea Scrolls, the NT, and other Jewish documents that Hebrew was the common spoken and literary language of Palestine. Aramaic, however, may have prevailed in the temple service from the Persian period, possibly because of the masses of Aramaic-speaking orientals who streamed into Jerusalem for the feasts. If so, perhaps Jesus chose the temple language, with its rich connotations, for the words of the miracle. As R. Jonathan of Beit Gubrin said, "Aramaic for elegy; Hebrew for speech" (*y. Megillah* I,

9 [71b]). Most scholars, however, believe Aramaic was the common spoken language of Palestine, especially in GALILEE.

W. T. DAYTON

Talmai tal′m*i* (תַּלְמַי *H9440,* prob. from HURRIAN *talm,* "great" *[HALOT,* 4:1740]). (1) One of three descendants of ANAK who lived in HEBRON when the Israelites spied out the land and who were defeated by the invading Israelites (Num. 13:22; Josh. 15:14; Jdg. 1:10). See AHIMAN.

(2) Son of Ammihud and king of GESHUR, a principality NE of GALILEE; his daughter MAACAH was espoused by DAVID, contrary to the law and causing David bitter sorrow, for the princess became the mother of the passionate ABSALOM (2 Sam. 3:3; 1 Chr. 3:2). It was to Geshur that Absalom fled for refuge after he had murdered his half-brother AMNON (2 Sam. 13:37).

E. M. BLAIKLOCK

Talmon tal′muhn (תַּלְמוֹן *H3236,* possibly "brightness"). A Levite listed among the gatekeepers in the postexilic temple; he was evidently the head of a clan of gatekeepers (1 Chr. 9:17; Ezra 2:42; Neh. 7:45; 11:19; 12:25; 1 Esd. 5:28).

Talmud tal′mood (postbiblical Heb. תַּלְמוּד, "study, teaching," from לָמַד *H4340,* "to learn" [in the piel stem, "to teach"]). The authoritative collection of rabbinical legal decisions and Jewish traditions. See JUDAISM.

I. The origins and development of the oral law. The message of the great PROPHETS of the 8th cent. B.C. made very clear that the fall of the northern kingdom of Israel to the heathen Gentile nations and the impending captivity of the southern kingdom of Judah were the direct result of IDOLATRY. The promised return of the children of ABRAHAM to the land of the COVENANT was upon the condition that they seek Yahweh with their whole heart and repudiate the gods of the Canaanites (Jer. 29:13). The gradual cessation of prophecy and the development of new and more complex social relationships both within and without Israel called for continuing progressive elaboration of the pentateuchal laws. The leaders and the generation that returned from BABYLON in 538 B.C. were acutely aware of the necessity of assuring the continuation of Israel's national obedience to the Mosaic LAW. EZRA himself is styled as "a teacher well versed in the Law of Moses" (Ezra 7:6), and there was a popular desire to study and learn the TORAH (Neh. 8:1 – 18).

This historic development brought forth a new social institution among the Jews, the office and

service of the "teacher of the law," the rabbinate (see RABBI). In effect, the local SYNAGOGUE was primarily a setting for Torah study. Alongside the written law, however, a great body of TRADITION, the oral law, was in the process of development. According to the MISHNAH, this oral teaching went back to MOSES himself: "Moses received the Torah at Sinai and transmitted it to Joshua, Joshua to the elders, and the elders to the prophets, and the prophets to the men of the Great Synagogue. The latter used to say three things: be patient in [the administration of] justice, rear many disciples and make a fence round the Torah" (*m.*, *Abot* 1:1; see SYNAGOGUE, GREAT). The latter injunction is of particular significance:

Remains of a synagogue in Tiberias (3th – 4th cent. A.D.), one of the primary centers in the production of the Palestinian Talmud.

it was intended to render sufficient insulation around the revealed moral and ceremonial commandments so that Israel would never again lapse into ignorance and idolatry.

II. The antecedents to the Talmud. The rise of the sect of the PHARISEES is closely associated with the writing and study of the Jewish traditions that led to the production of the Talmud. JOSEPHUS mentions that "the Pharisees had passed on to the people certain regulations handed down by former generations and not recorded in the Laws of Moses" (*Ant*. 13.10.6 §297). The process involved two distinctive literary forms.

A. Mishnah. The term *mišnâ* (derived from *sanâ H9101*, "to repeat") refers to the oral conversation of the rabbis as they discussed the proper interpretation and course of action requisite upon Jews in regard to the Mosaic law. There is no presentation of evidence but a continual appeal to authority hallowed by age or scriptural foundation. If the discussion produces legal instruction it is known as HALAKAH (in distinction from HAGGADAH, which refers to nonlegal material). The Mishnaic presentation of laws became dominant in Jewish teaching, and its teachers or Tannaim (derived from the corresponding Aram. verb *těnê* or těnā "to repeat, hand down") were greatly reverenced.

By definition, the oral law was not something to be written down, and it is unclear when the initial attempts at collecting the tradition were made, but undoubtedly some of this work was taking

place soon after the destruction of Jerusalem in A.D. 70 (see Akiba, Rabbi). The collections were codified most thoroughly by the famous exponent Rabbi Yehudah ha-Nasi (Judah the Prince), and by about the year 200 it was finally published as an official document. A distinct and parallel collection is known as the Tosefta.

B. Midrash. Some use the term *midrashic interpretation* in a derogatory fashion because it is thought to characterize a method filled with folk etymologies, mental gymnastics, and far-fetched connections made on the sheer analogies of the sounds of words. In postbiblical Hebrew, however, the term *midrāš H4535* (from *dāraš H2011*, "to search, inquire") refers simply to the exposition and application of Scripture (see Midrash). Often it also refers to a type of literature consisting of such exposition. When the method is applied to purely legal themes, the work is called Midrash Halakah; when the material consists of nonlegal matter, usually homiletic or devotional themes, it is called Midrash Haggadah. The Mishnah could be considered a topical method of pronouncement, while the Midrashim were commentaries on continuous texts of Scripture.

The midrashic form is traditionally thought to have appeared with Ezra and the "Great Synagogue," passing through two great periods of popularity, the era of the *Sopherim* (Scribes or "bibliophiles"), which closed about 270 B.C., and the era of the *Zugoth* ("pairs"); it ended with the last pair, Shammai and Hillel, just before the time of Jesus (see Hillel). The next two centuries, culminating in the publication of the Mishnah, was the period of the *Tannaim* ("repeaters, teachers"). Subsequently, the rabbis who debated or commented on the Mishnah are referred to as the *Amoraim* ("speakers, interpreters"), who were active from the 3rd to 6th centuries. The work of this latter group issued in the Gemara, and the combination of the Mishnah and the Gemara yielded the Talmud in its entirety. The Talmud was developed in two forms, the Babylonian (Talmud Babli, pronounced Bavli) and the Palestinian (Talmud Yerushalmi). See section IV below.

III. The divisions and tractates of the Mish-nah and Talmud. The Mishnah is divided into six major divisions or orders (*sĕdārîm*); these in turn are subdivided into tractates (*massektôt*), totaling sixty-three in number; and each tractate is composed of chapters (*pĕrāqîm*). The Talmud follows the same organization, but there is no Gemara to many of the tractates (see below, section IV). An outline of the orders and tractates follows (based on H. Silverstone, *A Guide to the Talmud* [1942], which excludes the details of the minor tractates and their subdivisions).

A. Order *Zeraʿim* (Seeds).

1. *Berakot* (Blessings). (1) Time of recitation of the Shema (Deut. 6:4 – 9, followed by 11:13 – 21 and Num. 15:37 – 41), position of the suppliant, and benedictions. (2) The divisions of the Shema and the praying voice. (3) Exemptions from praying the Shema. (4) Time of prayer and additional prayers. (5) Positions; specific and congregational prayers. (6) Blessings for vegetable foods and fruits. (7) Groups of people, types, and numbers saying prayers and the prayers to be said. (8) Washing of hands and blessings at meals, the differences between Shammai and Hillel. (9) Miscellaneous occasions of prayers.

2. *Peʾah* (Corner [of a field], i.e., gleanings). (1) The size of field corners, exemption from tithes. (2) Field corners and trees. (3) The size of fields necessary for field corners. (4) How the produce of field corners must be yielded. (5) Rights of the poor and forgotten produce. (6) Distinction of forgotten produce. (7) Olive trees and the rights of the poor in vineyards. (8) Determination of the poor and the length of their rights.

3. *Demai* (Uncertain [fruits], i.e., produce not certainly tithed). (1) The Demai tithe. (2) The

strict Jew and who pays the Demai. (3) Who may reserve Demai. (4) Statements by individuals about Demai and how paid. (5) Rented fields, fields under certain exceptions. (6) Separating specific cases of tithes.

4. *Kil⁾ayim* (Mixtures). (1) Kil⁾ay im defined. (2) The case of mixed grains. (3) Divisions of garden beds. (4) Vineyards. (5) Types of vines. (6) Extent of vines. (7) Animals. (8) Textiles.

5. *Šebi⁽it* (The Seventh Year). (1) Cultivation in the sixth year. (2) The seventh year and fallow fields. (3) Work about the fields. (4) Seventh-year pruning. (5) Figs, leeks, and farm equipment. (6) The seventh year in various countries. (7) Seventh-year rights. (8) Self-productive fruits. (9) Sale and storage of fruits. (10) Release of debts.

6. *Terumot* (Heave Offerings). (1) Terumot. (2) Substitution for another's Terumot. (3) Second Terumot. (4) Quantity. (5) Restitution of Terumot. (6) Intentional consumption of Terumot. (7) Preparing. (8) Sowing the Terumot. (9) Tasting. (10) Using the oil from Terumot.

7. *Ma⁽aṡerot* (Tithes). (1) Tithes of fruit, when due. (2) Exceptions. (3) Location of fruit for tithes. (4) Exemptions. (5) Untithable plants and seeds.

8. *Ma⁽aser Šeni* (Second Tithe). (1) Disposal of the tithe. (2) Proceeds. (3) Fruits in Jerusalem. (4) Proceeds and price. (5) Fourth-year vineyards.

9. Ḥ*allah* (Dough Offering). (1) Fruits. (2) Special cases. (3) Quantity. (4) Variations.

10. *⁽Orlah* (Fruit of Young Trees [lit., Uncircumcision, i.e., what should be rejected]). (1) Subject trees. (2) Mixed fruits. (3) Colors and fires.

11. *Bikkurim* (First Fruits). (1) Exceptions. (2) Differentiations. (3) Ceremonies. (4) Exceptional cases.

B. Order *Mŏed* (Set Feasts).

12. *Šabbat* (The Sabbath). (1) Work to be shunned, differences between Shammai and Hillel. (2) Lighting Sabbath evening lamp. (3) Ovens and cooking. (4) Covering of pots. (5) Leading of beasts. (6) Departure of men and women and dress. (7) Responsibility for breaking the Sabbath; thirty-nine types of work. (8) Measures of portable objects. (9) Impurity through carrying. (10) Throwing of objects. (11) Building, pruning, and writing. (12) Weaving, washing. (13) Miscellaneous labors. (14) Actions in fires. (15) Moving of containers. (16) Moving objects, people out of the way. (17) Circumcision. (18) Straining, cleaning, and pressing. (19) Miscellaneous carrying. (20) Miscellaneous necessities. (21) Business arrangements and burials. (22) Those overtaken by darkness on a journey, actions permitted on the Sabbath.

13. *⁽Erubin* (Incorporating [Sabbath Limits]). (1) Entry ways. (2) Holiday or its evening. (3) Going beyond the ⁽Erubin (incorporated or extended), Sabbath limit. (4) Expanding the ⁽Erubin. (5) Further subdivisons. (6) Still further subdivisions. (7) A yard. (8) Roofs. (9) Miscellaneous Sabbath laws.

14. *Pesaḥim* (Passovers). (1) Searching for leaven. (2) Disposal of leaven. (3) Leaven in its various forms; cake and bitter herbs. (4) Work beforehand. (5) Killing and butchering the paschal lamb. (6) Passover labors supersede Sabbath prohibitions. (7) Methods for cooking the Passover. (8) Persons permitted to partake. (9) Communities and persons unable to partake. (10) Unusual circumstances. (11) Order for eating the Passover.

15. *Šeqalim* (Shekel Dues). (1) Seating of moneychangers. (2) Exchanging money. (3) Removal of coins from the cache. (4) Spending the temple tax. (5) Ecclesiastical offices. (6) Numerology of the number thirteen. (7) Possessions of unknown owners. (8) Miscellaneous difficulties.

16. *Yoma* (Day of Atonement). (1) High priestly preparations. (2) Offerings and lot casting. (3)

Preparing for the atonement services. (4) The scapegoat. (5) Holy of Holies. (6) Expulsion of the scapegoat. (7) The high priest's duties. (8) Fasting and forgiveness.

17. *Sukkah* (Feast of Booths/Tabernacles). (1) Dimensions of the booths. (2) Exemptions. (3) Boughs to use as coverings. (4) Duration. (5) Division of offerings.

18. *Yom Ṭob* (Good Day, i.e., Festival Days; also known as *Beṣah*, Egg). (1) Partaking of eggs on holidays. (2) Sabbath meals. (3) Prohibited activities. (4) Time of the feasts. (5) Flute playing.

19. *Roš Haššanah* (New Year). (1) When four New Years occur. (2) Questioning the witnesses to the new moon. (3) Groups of witnesses. (4) New Years falling on Sabbaths.

20. *Taᶜanit* (Fasting). (1) Prayers for rain. (2) Festival prayers. (3) Miscellaneous fasting regulations. (4) The twenty-four elders, their fastings.

21. *Megillah* (Scroll [of Esther]). (1 − 4) The reading of Esther at Purim.

22. *Mŏᶜed Qaṭan* (Lesser Holidays). (1 − 3) Half-days or lesser feasts and their regulation.

23. *Ḥagigah* (Festival Offering). (1 − 3) Miscellaneous decisions about offerings.

C. Order *Našim* (Women).

24. *Yebamot* (Levirate Obligations). (1 − 16) Acceptance and refusal of levirate obligation.

25. *Ketubbot* (Marriage Contracts). (1 − 13) Marriage contracts and marriage duties.

26. *Nedarim* (Vows). (1 − 11) Vows and annulments.

27. *Nazir* (Nazirite Vow). (1 − 9) Laws of the Nazirite vows.

28. *Soṭah* (Defiled Woman). (1 − 9) Expansions of Num. 5:12 − 31.

29. *Giṭṭin* (Bills of Divorce). (1 − 9) Writing of bills of divorce.

30. *Qiddušin* (Engagements). (1 − 4) Manner of engagements.

D. Order *Neziqin* (Damages).

31. *Baba Qamma* (First Gate). (1 − 10) Damages, injuries, and indemnities.

32. *Baba Meṣiᶜa* (Middle Gate). (1 − 10) Claims from trusts, buying, and selling.

33. *Baba Batra* (Last Gate). (1 − 10) Real estate laws and regulations.

34. *Sanhedrin* (Courts).

35. *Makkot* (Lashes). (1 − 3) Corporal punishment.

36. *Šebuᶜot* (Oaths). (1 − 8) Various types of oaths.

37. *ᶜEduyyot* (Witnesses). (1 − 8) Traditional legal sayings.

38. *ᶜAbodah Zarah* (Idolatrous Worship). (1 − 5) Idols and idol worshipers.

39. *ᶜAbot* (Fathers). (1 − 6) The sayings of the elders.

40. *Horayot* (Judgments). (1 − 3) Rules for the making of judges' decisions.

E. Order *Qodašim* (Consecrated Things).

41. *Zebaḥim* (Sacrifices). (1 − 14) Sacrifices, offerings, and sprinklings.

42. *Menaḥot* (Meal Offerings). (1 − 13) Cereal, meat, and drink offerings.

43. *Ḥullin* (Unconsecrated Things). (1 − 12) Unlawful animals, slaughtering.

44. *Bekorot* (Firstborn). (1 − 9) Regulations of firstborn animals and human beings.

45. *ᶜArakin* (Estimates). (1 − 9) Estimation of objects dedicated by vow.

46. *Temurah* (Exchanges). (1 − 7) Exchanges of dedicated objects.

47. *Keritot* (Outcastings). (1 − 7) Excommunication of sinners from the congregation.

48. *Meᶜilah* (Trespasses). (1 − 6) Sacrilegious objects.

49. *Tamid* (Daily Offerings). (1 − 7) Morning and evening sacrifices.

50. *Middot* (Measurements). (1 − 5) Descriptions of the temple and its servants.

51. *Qinnim* (Nests, i.e., Bird Offerings).

F. Order Ṭohorot (Purifications).

52. *Kelim* (Vessels). (1 – 30) The containers that convey impurity.

53. *ʾOhalot* (Tents). (1 – 18) Retention of impurity in dwellings.

54. *Negaʿim* (Leprosy Signs). (1 – 14) Leprous people, garments, and dwellings.

55. *Parah* (Heifer). (1 – 12) Red heifers for sacrifice.

56. Ṭohorot (Purifications). (1 – 10) Methods of purifications.

57. *Miqwaʾot* (Ceremonial Waters). (1 – 10) The ritual purification of the water.

58. *Niddah* (Separation of Women in Menstruation). (1 – 10) Cleanliness of women before and after childbirth.

59. *Makširin* (Preparations). (1 – 6) Liquids used for purification.

60. *Zabim* (Excretions). (1 – 5) Exudates of the body and their purification.

61. Ṭ*ebul Yom* (Immersion on the Day). (1 – 4) Immersion on the day of impurity.

62. *Yadayim* (Hands). (1 – 4) Ritual washings.

63. ʿ*Uqsin* (Stalks of Fruit). (1 – 3) Stalks of fruit conveying impurity.

IV. The Palestinian and Babylonian Talmud. Although frequently referred to as the Talmud Yerushalmi (Jerusalem), the Palestinian Talmud was the product of the northern towns of Israel and their rabbinical schools and sages. It was hastily assembled and edited during the 2nd – 4th Christian centuries and is about a third of the length of the Babylonian edition. Only the Gemara of the first four orders is extant. The language is a dialect known as Western ARAMAIC and demonstrates the peculiarities of orthography and lexica clearly separating it from the Babylonian. The antiquity of its Halakah and the great age and Palestinian origin of the even more extensive haggadic material render it invaluable for the study of the rabbinate and the history of exegesis in the Judaism of this period. It is supposed to have been edited by Johanan ben Nappaha (c. A.D. 270), but material from later periods was incorporated and the closing date is set at c. 425, when the Tiberian School ended.

The Babylonian Talmud developed in the areas under relative Jewish control in Mesopotamia. Its origins were partly Palestinian, as many of its progenitors had studied in Tiberias. The initiator of the Babylonian edition was Rab Abba Arika, the founder and head of the great Sura Academy. Following him in the 3rd cent. were such eminent scholars and jurists as Mer Samuel, a member of the first group of Babylonian Amoraim. The third generation boasted such authorities as Abbaye (c. A.D. 300) and Raba (c. 340). In the time of Rabina bar Huna (c. 495) the period of Talmudic expansion came to a close. The work of the next group of scholars, the *Saboraim* ("redactors"), brought the work to its full and extant form. The dialect of the Babylonian Talmud was an Eastern Aramaic, written with its own peculiarities of orthography and lexica. There are other significant differences between it and the Palestinian Talmud. Of the sixty-three tractates, twenty-six lack the Babylonian Gemara (e.g., under *Zera,im*, the Babylonian Talmud includes a commentary only on tractate *Berakot*).

The initial mention of the whole of the written Babylonian Talmud was made in the 8th cent. It is necessary to note that the completion of this vast amount—nearly fifty volumes—of detailed and succinct legal commentary at the beginning of the Dark Ages, when the Roman empire was dissolving into the inflexible discreteness of feudalism, gave to the Jews an intellectual treasure that helped them endure the medieval period and survive to attend the coming of the Renaissance. Even under the spread and domination of Islam, the Talmud survived. In the W, however, the mystical frenzy which shook Europe after the collapse of the crusading spirit vented the wrath of Christendom upon the

Jewish writings and there were destructions of numerous copies of the Talmud and proscriptions against its study and publication. The Talmud became in the Late Middle Ages one of the few accurate sources of information about antiquity, and such scholars as Petaḥia of Ratisbon (1140 – 1200) rediscovered the lost cities of antiquity through their intimate knowledge of the Talmud.

V. The literary history of the Talmud. Soon after the compilation of a full Talmudic corpus, divergences in textual families must have appeared. Unfortunately the Talmud is not presently represented by many truly ancient MSS. The only extant document of the whole of the Babylonian Talmud is that produced in A.D. 1343, presently in Munich; it was edited in 1912 by H. L. Strack (*Talmud Bab. codicis Hep. Monacensis 95 phototypice depictus*). The first printed editions of both the Palestinian and the Babylonian Talmud were published by the Christian printer-scholar D. Bomberg in Venice (1523 and 1524 respectively). The only complete Palestinian Talmud MS is one in Leiden, which has been edited by L. Ginsberg (1909).

Numerous difficulties have beset the preparation of any complete edition as numerous censored portions were omitted during the periods of intense persecution of the Jews so as not to include anything that might be interpreted as anti-Christian. However, the most extensive editions were those produced in Vilna, beginning in 1886, and frequently reproduced with a large number of additional commentaries such as the additions of the medieval French rabbis. Commentaries, introductions, and special studies have appeared in vast numbers, particularly from the large and erudite Jewish communities of E Germany, Poland, and Russia. With the tragic destruction of these centers of Hebraic scholarship, Jewish learning moved to the New World and thence to Israel. The mastery of the language, meaning, detail, and sweep of the Talmud is a lifetime avocation. However, it is the most compact and continuous set of documents revealing the piety of a people extant in modern times.

VI. The significance of the Talmud. Among the schools of European Jewry, the Talmud represented the highest and most complete mastery and challenge to which the pious Jew could apply. The knowledge of the Talmud was held in higher esteem than that of the Scripture itself, which had become in the 19th cent. the special province largely of anti-Jewish scholars. While the reconstruction of the rise of the OT text according to the theories of Graf-Kuenen-Wellhausen were eroding away confidence in the historicity of the OT, orthodox and conservative Judaism found refuge in the Talmud. The age of romanticism found little to attract it in the bewildering rationalism and endless casuistry of the Talmud. In its place an overwhelmingly Kantian philosophy of Judaism has been developed. With the rise of the State of Israel, a new renaissance of Talmudic studies may be at hand.

For the Christian scholar the Talmud offers firsthand insights into the state of Jewish religion and life in the 1st cent. and the development of that world view in later ages. Almost every mention and allusion to Jewish custom and culture found in the gospel narratives can be discovered in detail in the Talmudic tradition or one of its manifold explanations, as shown especially in the work of H. L. Strack and P. Billerbeck (*Kommentar zum Neuen Testament aus Talmud und Midrasch*, 6 vols. in 7, with supplements by J. Jeremias and K. Adolph [1922 – 61]). The recovery of many new Talmudic fragments from excavations and the archaeological reconstruction of many previously obscure eras of Israel's history has necessitated fresh studies of both Mishnaic and Talmudic texts.

W. WHITE, JR.

Talsas tal'suhs. KJV Apoc. form of SALTHAS (1 Esd. 9:22).

Tamah ta'muh. KJV alternate form of TEMAH (Neh. 7:55).

Tamar (person) tay'mahr (תָּמָר H9470, "palm tree"). (1) Daughter-in-law of JUDAH (Gen. 38:6 – 30), included in Matthew's GENEALOGY OF JESUS CHRIST (Matt. 1:3 [KJV, "Thamar"]). Tamar was given in marriage to JUDAH's son, ER, who died because of some unspecified wickedness. Judah then instructed another son, ONAN, to marry Tamar and father children for his brother Er (see LEVIRATE MARRIAGE). Onan married Tamar but avoided having children by her and God took his life as well. Tamar then returned to her Canaanite home after Judah promised that she would marry his third son, SHELAH, when he had grown old enough. Judah, fearing for Shelah's life, did not fulfill his promise.

Subsequently, Tamar seduced Judah by hiding her identity and pretending to be a harlot of the heathen worship cult. When Judah learned of her pregnancy, he demanded her death, but Tamar, showing him the pledges he had unsuspectingly given her, proved that she had conceived by Judah himself. Judah was convicted of the wrong he had done her, and she was spared. Twins were born to Tamar by Judah: PEREZ and ZERAH. The former was in the direct line of the ancestry of DAVID, and hence of Christ (Ruth 4:12; Matt. 1:3; Lk. 3:33). The Tamar story seems to anticipate several features of the JOSEPH narrative; in particular, both figures succeed in eliciting repentance from those who had made them suffer. (See J. A. Emerton in *VT* 29 [1979]: 403 – 15; S. Niditch in *HTR* 72 [1979]: 143 – 49; S. D. Matthewson in *BSac* 146 [1989]: 373 – 92; M. E. Andrews in *ZAW* 105 [1993]: 262 – 69; *DPL*, 827 – 29.)

(2) A beautiful daughter of David, sexually assaulted by her infatuated half brother AMNON, who contrived the deed by feigning illness and arranging to have Tamar bring food to him. After this revolting act, Amnon rejected her with loathing. Her brother Absalom learned of the deed when Tamar expressed her sorrowful outrage by dress and manner. Absalom took the desolate girl into his home while he plotted to avenge her. After two years Absalom contrived to have Amnon murdered for his crime (2 Sam. 13). See discussion under ABSALOM.

(3) A beautiful daughter of Absalom, probably named for his beloved sister (2 Sam. 14:27). Some Greek MSS of the Lucianic recension here read "Maacah" instead of "Tamar" (no doubt under the influence of 1 Ki. 15:2 and 2 Chr. 11:20 – 22). It is possible that Tamar was Maacah's mother.

See discussion under MAACAH #9.

N. B. BAKER

Tamar (place) tay'mahr (תָּמָר *H9471*, "palm tree"). A settlement, town, or region mentioned in EZEKIEL's eschatological vision as marking the SE boundary of a future restored Israel (Ezek. 47:19; 48:28; in 47:18, many scholars consider the MT's verb *tāmōddû*, "you will measure" [cf. KJV and NJPS], a textual error and instead read *tāamārâ*, "to Tamar" [cf. NIV and NRSV, following LXX and Syriac]).

"Tamar in the desert" is possibly mentioned also among the towns listed as having been built up by SOLOMON (thus the *Ketib* at 1 Ki. 9:18, followed by NRSV and NJPS); in this passage, however, the KJV and NIV read TADMOR (on the basis of the *Qere*, many Heb. MSS, several ancient versions, and 2 Chr. 8:4). George Adam Smith (*Historical Geography of the Holy Land*, 25th ed. [1931], 184 n. 3) argued that "Tamar" is the correct reading here, that it should probably be identified with HAZAZON TAMAR (another name for EN GEDI, 2 Chr. 20:2), and that it was perhaps the same Tamar mentioned in Ezekiel. Most scholars, however, think Tamar was further S. Some locate it near Qasr el-Juheiniya, where the Romans built a border fort named Tamara (c. 12.5 mi. WSW of the DEAD SEA; see *ABD*, 6:315 – 16).

Others think that Tamar is the same as the City of Palms and that the latter name was originally applied to a site now known as Tell ⸢Ain ⸢Arus (some 6 mi. SSE of the Dead Sea; see *HALOT*, 2:822, s.v. ⸢*îr* B.5); however, there is no compelling reason to deny that the name City of Palms is consistently used with reference to JERICHO. More likely, Tamar should be identified with ⸢Ain Ḥuṣb (c. 23 mi. SSW of the Dead Sea in the ARABAH; see Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 70, 140 [in the latter reference, Aharoni suggests that Hazazon Tamar should be identified not with En Gedi but with Tamar]).

tamarisk. A desert tree with tiny, scale-like leaves that hardly transpire at all (thus suited for hot, dry places). The Hebrew word ⸤*ēšel H869*, which occurs three times in the OT, probably refers to the *Tamarix aphylla*, also known as the athel tree (other suggestions include *T. syriaca* [*HALOT*, 1:95] and *T. gallica* [*FFB*, 182]). ABRAHAM planted a tamarisk tree (or tamarisk grove) in the droughty land of BEERSHEBA (Gen. 21:33; perhaps it was in the shade of a tamarisk that HAGAR laid her boy ISHMAEL, vv. 14 – 16). There were well-known tamarisk trees both in GIBEAH (1 Sam. 22:6) and in JABESH (31:13; in the parallel to this passage [1 Chr. 10:12], the tree is described as an OAK or TEREBINTH [⸤*ēlâ H461*], possibly a textual corruption). The NRSV, through a minor conjecture, has "like a green tamarisk" in Isa. 44:4, where the MT reads, *bĕbên ḥāsîr*, lit., "in between the grass" (for a discussion of the textual problem, see J. de Waard, *A Handbook on Isaiah* [1997], 170 – 71).

tambourine. See MUSIC, MUSICAL INSTRUMENTS IV.B.

Tammuz tam'uhz (תַּמּוּז *H9452*, from Akk. *Du⸣uzu*, which in turn derives from Sumerian *Dumuzi*, "legal [*or* healthy] son"). A Sumerian and Babylonian deity. Tammuz was said to be the husband and brother of Inanna (ISHTAR). He is represented on seals as the protector of flocks against wild beasts. In the Babylonian saga his death and visit to the underworld represents the annual wilting of vegetation in the scorching heat of summer. His return to earth, brought about by the descent of the mourning Ishtar into the nether world, represents the renewal of nature (although some scholars argue

that Tammuz is consistently represented as dead, not as having been brought to life).

The annual mourning rites for Tammuz took place on the second day of the fourth month (June/July), giving rise to the practice of naming this month Du'uzu in Babylonia and Tammuz in the postbiblical Jewish CALENDAR. In EZEKIEL's time, a variation of this rite of mourning found women weeping at the N gate of the temple (Ezek. 8:14). The cult of ADONIS in SYRIA and that of OSIRIS in EGYPT had many affinities with the Tammuz rites. In remote parts of Kurdistan a variation of the rite is still practiced. In the opinion of some scholars, Tammuz stands for the king, who, in turn, represents all men in their potential for participating in the divine nature of Ishtar, the principle of life and fertility. (See B. Alster, *Dumuzi's Dream: Aspects of Oral Poetry in a Sumerian Myth* [1972]; Y. Sefati, *Love Songs in Sumerian Literature: Critical Edition of the Dumuzi-Inanna Songs* [1998]; *DDD*, 828 – 34.)

<div align="right">F.E. YOUNG</div>

Tanach tay'nak. KJV alternate form of TAANACH (only Josh. 21:25).

Tanakh tah'nahk, tuh-nahk'. Also Tanach, Tanak. A Hebrew name commonly used by Jews as equivalent to "Bible." The word is an acronym based on the first letter of the Hebrew names for the three divisions of the OT: *tôrâ* (Law; see TORAH), *nĕbî ,îm* (Prophets; see NEBIIM), and *kĕtûbîm* (Writings; see KETUBIM).

Tanhumeth tan-hy*oo*'mith (תַּנְחֻמֶת *H9489*, "comfort, consolation"). Father of SERAIAH; the latter was a military officer who remained in Judah with GEDALIAH after the destruction of Jerusalem (2 Ki. 25:23; Jer. 40:8). The first passage identifies Tanhumeth as a Netophathite (see NETOPHAH), but the parallel in Jeremiah attaches that description to EPHAI. It seems probable that the words "the sons of Ephai" in Jeremiah are original and that they dropped out in the text of 2 Kings at some point in its transmission.

Tanis tan'is. See ZOAN.

Tannaim (pl. of תַּנָּא or תַּנָּאִי [from Aram. תְּנָי, "to repeat, teach"], "teacher"). Title given to the rabbinic authorities that lived during the first two centuries A.D. (contrast AMORAIM). The Tannaitic scholars preserved and developed the TRADITION (the oral law) that was eventually codified in the MISHNAH c. A.D. 200.

tanner. This English term translates Greek *byrseus G1114*, which occurs only as the description of SIMON of JOPPA, a man in whose house PETER stayed for some time (Acts 9:43; 10:6, 32). In the later rabbinic literature (which prob. reflects attitudes from earlier periods), tanners were often suspected of immorality because their trade required them to deal with women; in addition, their work was considered revulsive because of the bad smell attached to it (see documentation in J. Jeremias, *Jerusalem in the Time of Jesus* [1969], 301 – 10). Many scholars think it is significant that Peter was willing to associate with a tanner; possibly this detail anticipates the account of his preaching to CORNELIUS, for it may show that the apostle was already open to change. Some commentators, however, disagree with this assessment of Peter's attitude or point out that the text itself appears to make no such connection between the two incidents.

Animal hides or skins are converted into LEATHER by tanning. It is a process of preserving in good condition the "corium" structure of the hide which is between the "epidermis" and the "flesh." In OT times this involved flaying the dead animal, beating the flayed hide in water to remove the dirt, salting and soaking the hide in a tanning agent, and finally stretching the wet leather on a frame to dry properly. The tanner was not a popular man because of the stench of the ingredients used in his trade and because he handled dead bodies. Sometimes the hides were put into dog's dung for dehairing. Little is known of ancient tanning agents but they were probably the same as in modern Syria and Egypt, where the bark of certain ACACIA trees, galls of the OAK and the TAMARISK, and rinds of the POMEGRANATE are used.

H. JAMIESON

Taphath tay'fath (טָפַת *H3264,* possibly from טֵף *H3251,* "little child" [but see *HALOT,* 2:379]). Daughter of SOLOMON and wife of BEN-ABINADAB, who was one of the twelve district governors (1 Ki. 4:11). Another daughter of Solomon is also included in this list (v. 15); see BASEMATH #3.

Taphon tay'fon. KJV Apoc. form of TEPHON (1 Macc. 9:50).

Tappuah (person) tap'y*oo*-uh (תַּפּוּחַ *H9516,* "apple, apple tree"). Son of HEBRON and descendant of JUDAH in the line of CALEB (1 Chr. 2:43). As with a number of other names in the genealogy, Tappuah is no doubt associated with a town, probably BETH TAPPUAH (Josh. 15:52), which was less than 4 mi. from Hebron; another possibility is TAPPUAH (PLACE) #2.

Tappuah (place) tap'y*oo*-uh (תַּפּוּחַ *H9517,* "apple, apple tree"). (1) A town on the N boundary of the tribal territory of EPHRAIM (Josh. 16:8). The passage that describes the borders of the tribe of MANASSEH states that its S boundary included the inhabitants of EN TAPPUAH (17:7); then it goes on to say, "Manasseh had the land of Tappuah, but Tappuah itself, on the boundary of Manasseh, belonged to the Ephraimites" (v. 8). This town was apparently the same Tappuah that is described as one of the Canaanite cities whose kings were defeated by JOSHUA (12:17), and it may also be the town referred to as TEPHON in the APOCRYPHA (1 Macc. 9:50). Its location is not certain, but it is generally identified with modern Sheikh Abu Zarad, about 13 mi. NNW of BETHEL and 8 mi. SW of SHECHEM.

(2) A town in the SHEPHELAH within the tribal territory of JUDAH (Josh. 15:34). It was evidently near such towns as ZANOAH and JARMUTH, but the precise location is uncertain.

(3) According to the Lucianic MSS of the SEPTUAGINT, Tappuah (*Taphōe*) was also the name of a city near TIRZAH that was attacked by King MENA-HEM (2 Ki. 15:16). Many scholars accept this reading (cf. RSV, NAB, NJB), but others follow the MT, which has the otherwise unknown town of Tiphsah (cf. NIV, NRSV, NJPS). See TIPHSAH #2.

tar. See BITUMEN.

Tares or darnel.

Tarah tair'uh. KJV form of TERAH (PLACE).

Taralah tair'uh-luh (תַּרְאֲלָה *H9550*, derivation unknown). A town in the tribal territory of BENJAMIN (Josh. 18:27). Since it is associated with such cities as MIZPAH and KEPHIRAH, Taralah must have been located in the W Benjamin plateau, a few miles NW of JERUSALEM, but the precise site is unknown.

Tarea tair'ee-uh (תַּאְרֵעַ *H9308* [1 Chr. 8:35] and [תַּחְרֵעַ *H9390* [9:41], meaning unknown [but see BDB, 357]). Grandson of MERIB-BAAL (i.e., MEPHIBOSHETH) and descendant of King SAUL (1 Chr. 8:35; called "Tahrea" in 9:41).

tares. This English term is used by the KJV to render the plural of Greek *zizanion G2429*, which occurs eight times in one of Jesus' PARABLES of the kingdom (Matt. 13:25 – 30, 36 – 40). The word probably refers to a WEED called *darnel*, which looks exactly like WHEAT in its young stages; in fact, only the expert can distinguish some species of this darnel from the true wheat. Later on, the differences are remarkable. The farmer, however, cannot pull up the weed when it is almost fully grown without seriously damaging the true wheat plants which are growing alongside. The darnel is an annual, *Lolium temulentum,* sometimes referred to as the bearded darnel grass. It has far smaller seeds than wheat, and it is claimed that these seeds, when ground to flour, are poisonous, due perhaps to a particular fungus that develops in the seed itself. (See *FFB,* 194 – 95.)

W. E. SHEWELL-COOPER

Targum tahr'guhm (postbiblical Heb. תַּרְגּוּם, Aram. תַּרְגּוּמָא, "interpretation, translation" [cf. the Aram. verb תִּרְגַּם *H9553,* "to proclaim, explain, translate," Ezra 4:7]). Plural *Targums* or *Targumim* tahr'guh-mim. A name applied to translations of the Hebrew Bible into the ARAMAIC LANGUAGE.

I. Definition and origin. The term *targum* is probably derived from Akkadian *targummannum* or

turgummum ("translator"), which occurs as early as the TELL EL-AMARNA tablets (c. 1400 – 1350 B.C.) and which may go back to the HITTITE verb *tarkummiya* ("to announce, explain"; cf. C. Rabin in *Orientalia* 32 [1963]: 134 – 36, but see *HALOT,* 4:1787). Although the word *targum* has occasionally been used for other translations, such as the SEPTUAGINT, it came to be used exclusively for a particular group of translations of the OT into Aramaic.

Nehemiah 8 describes a great gathering in Jerusalem at which EZRA and his associates publicly read the TORAH to the people who had recently come back from EXILE. According to v. 8, "They read from the Book of the Law of God, making it clear [ptc. *of pāraš H7300]* and giving the meaning so that the people could understand what was being read." The question needs consideration why it was necessary at this time, instead of simply reading the law, to add an explanation? Was it because in the natural course of events the HEBREW LANGUAGE had changed enough to make the language of the Torah seem a bit archaic and in need of explanation, particularly to the younger members of the population? Was it because the congregation needed to have ideas and terms that had become somewhat unfamiliar during the long period of exile explained, and their interrelations pointed out? Or was it that many of the people, while in BABYLON, had adopted the Aramaic language of those around them, and therefore needed a translation into their common speech?

Many scholars have adopted this last suggestion as the principal (though not the only) reason for the need of explanation, though some believe that the Jews did not adopt Aramaic until somewhat later. In any event, Aramaic had certainly become the common language of at least large segments of the Jewish community before NT times, and it had become customary, in each Sabbath SYNAGOGUE service, when reading a portion of the law, to read one verse of the Hebrew at a time, after which a second person would give a translation or paraphrase into Aramaic, with a certain amount of explanation of the meaning of the passage.

For several centuries it was not considered proper to read in the synagogue service anything except the actual Scripture itself, and thus the translations were given extemporaneously, usually from memory. In the course of the years, however, these renderings or interpretations naturally tended to become rather fixed, and it is likely that translations into Aramaic were written down for use by people in other settings, such as at home. (The discovery of an Aramaic translation of Job in QUMRAN [4QTgJob=4Q157] is clear evidence that written Targumim existed even prior to NT times.) By the 2nd or 3rd cent. A.D., many synagogues had adopted the custom of using written translations in the service, an innovation to which some of the rabbis strongly objected. Shortly after, however, such texts not only became generally accepted but also came to be treated as official rabbinic interpretations of Scripture. As time went on and Jews in various areas began to speak Arabic or other languages, the Targum ceased to be read in the services, but continued to be studied for help in interpretation.

II. Targums of the Pentateuch. Since the PENTATEUCH in its entirety was read consecutively in the successive weekly synagogue services, the Targums of the Pentateuch were particularly important. The best known of these is the so-called *Targum Onkelos*, which was one of the earliest to be written down. Like most of the Targums it had its origin in Palestine, but it was carried to the great centers of Jewish learning in Babylonia, where it took final form around the 5th cent. Its dialect is fundamentally Western or Palestinian, but at many points it was conformed to so-called Eastern Aramaic, the dialect used in Mesopotamia, and its text was changed at places in view of the altered situation. It tends on the whole to be more literal than other Targums, but it frequently expresses definite views (cf. the messianic interpretation of Gen. 49:10 and Num. 24:17). A considerable number of MSS of *Targum*

Onkelos have been preserved.

Other Targums of the Pentateuch—often grouped together under the rubric *Palestinian Targum*—were considerably longer. (1) One which has been well preserved is referred to either as *Targum Yerushalmi* (Jerusalem Targum) or as *Targum Pseudo-Jonathan* (at one time it was thought to have been written by the author of *Targum Jonathan*, the standard Aramaic translation of the Prophets; see below). This is a rather late work that probably took shape no earlier than the 7th cent. and that reflects a mixture of traditions. (2) The label *Fragmentary Targum* does not refer to MS fragments but to ancient collections of selected passages from the Palestinian Targum (six MSS representing various recensional families have survived). Sometimes this translation is referred to as *Targum Yerushalmi II*. (3) Some small fragments (in the usual sense of the word) were discovered in the famous Cairo GENIZAH in the 1920s. (4) Pride of place is usually given to *Targum Neofiti*, discovered in 1956 by A. Díez-Macho in the Vatican Museum. This MS, which preserves virtually the whole Pentateuch, is very late (early 16th cent.), but most scholars believe that the text it contains goes back to the 4th cent. or even earlier. As such, it is generally regarded as the best representative of the Palestinian Targum.

In addition, the *Samaritan Targum* (to be distinguished from the SAMARITAN PENTATEUCH, a Hebrew text) is the Aramaic translation of the Pentateuch used by the SAMARITAN sect. Preserved in a variety of textual forms, this version has received little attention by modern scholars (Critical ed. by A. Tal, *Ha-Targum ha-Shomroni la-Torah* [1980 – 83]; see also J.-P. Rothschild and G. Dominique, eds., *Études samaritaines: Pentateuque et targum, exégèse et philologie, chroniques* [1988].)

III. Targums of the Prophets. The standard Aramaic translation of the Prophets (*Targum Nebi,im* or *Targum Jonathan*) was attributed to Jonathan ben Uzziel, a pupil of the great rabbi HILLEL. On the whole it presents a fairly good translation of the books in the second section of our present Hebrew Bible (Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Ezekiel, and the Minor Prophets), but it contains many paraphrases or interpretative additions. It is thought that, like *Targum Onkelos*, it was carried to Babylon and there worked over to some extent.

An interesting illustration of the interpretative method of *Targum Jonathan* is found in Isa. 52:13—53:12, where the SERVANT OF THE LORD is designated as the MESSIAH, but where, except for one verse, all the statements that refer to his sufferings are either dropped out or so interpreted as to make the suffering described in them apply to the nation of Israel or to its enemies, rather than to the Servant himself.

IV. Targums of the Hagiographa. In their present form the latest Targums that have been preserved are those on the Hagiographa or Writings (see KETUBIM). However, there may well have been earlier translations of these books that have disappeared. The TALMUD refers to a Targum of Job as having been used by rabbis of the 1st cent., probably different from the one found at Qumran (see above, section I). Targums exist for all of the biblical books except Ezra-Nehemiah and Daniel. The lack in these two cases is understandable, since parts of these books (Ezra 4:8—6:18; 7:12 – 26; Dan. 2:4b—7:28) were originally written in Aramaic.

V. Uses of the Targums. The Targums are of only moderate value for restoring the Hebrew text, since they so often use paraphrase instead of direct translation. However, they are of great interest for showing certain aspects of Jewish interpretation in the centuries immediately after the time of Christ (in some instances no doubt preserving pre-Christian traditions). This value is somewhat less ened by the factthat most of them contain many additions or changes from later periods. *Targum Ps.-Jonathan*,

for example, contains a specific reference to the city of Constantinople, which was not founded until A.D. 325, and attributes to ISHMAEL a wife and daughter with the same names as a wife and daughter of his famous descendant, Muhammad, who did not become prominent until the 7th cent. Sometimes a Targum may provide evidence as to the meaning of a rare Hebrew word as used at the beginning of the Christian era, but such evidence must be used with great caution.

(A multivolume work entitled *The Aramaic Bible*, ed. by M. McNamara, includes an English trans. of the various Targums; its publication began in 1987, and most books of the Bible have been completed as of this writing. See also P. de Lagarde, *Hagiographa chaldaice* [1873]; M. Ginsburger, *Das Frag-mententhargum* [1899]; W. H. Brownlee, *The Dead Sea Habaqquq Midrash and the Targum of Jonathan* [1953]; A. Alexander in *ABD*, 6:320 – 31.)

A. A. MACRAE

Tarpelites tahr'puh-l*i*ts (Aram. תַּרְפְּלָיֵא, apparently pl. determinative of an otherwise unattested gentilic name, תַּרְפְּלָי *H10305*). The KJV transliteration of an Aramaic term whose meaning is uncertain (Ezra 4:9). Since the term is gentilic in form, it may indeed mean "people of Tarpel," alluding perhaps to a region in MESOPOTAMIA (cf. H. G. M. Williamson, *Ezra-Nehemiah*, WBC 16 [1985], 54 – 55). The SEPTUAGINT renders it *Tar-phallaioi*, referring to an inhabitant of the city of TRIPOLIS, and this interpretation is followed by the NIV. Other modern versions understand the term in the general sense of "officer" (cf. NRSV and NJPS; note also that the two preceding terms in the verse, though also gentilic in form, refer to "judges and officials"). Some have argued that it designates more specifically "an official of the Persian chancellery of Ebirnari in Tripolis" (*HALOT*, 5:1886).

Tarshish (person) tahr'shish (תַּרְשִׁישׁ *H9578*, "topaz" [or some other precious stone]). KJV also Tharshish (1 Chr. 7:10). (1) Son of JAVAN, grandson of JAPHETH, and great-grandson of NOAH (Gen. 10:4; 1 Chr. 1:7). The names of his brothers (ELISHAH, KITTIM, RODANIM) clearly refer to places or people groups, so Tarshish was presumably the progenitor of a Mediterranean people and his name

was attached to a geographical area. See TARSHISH (PLACE).

(2) Son of Bilhan and great-grandson of BENJAMIN (1 Chr. 7:10).

(3) One of the seven nobles of PERSIA and MEDIA in the time of XERXES "who had special access to the king and were highest in the kingdom" (Esth. 1:14). Queen VASHTI was banished by Ahasuerus (XERXES) on their advice.

Tarshish (place) tahr'shish (תַּרְשִׁישׁ *H9576*, "topaz" [or some other precious stone]). KJV also Tharshish (1 Ki. 10:22; 22:48). A region of uncertain location. In some passages the name is associated with ships and ports. Thus HIRAM, king of TYRE, maintained at EZION GEBER, at the head of the Gulf of AQABAH, a refinery and ship-building center from which he and SOLOMON operated "ships of Tarshish" (1 Ki. 10:22; 2 Chr. 9:21; cf. 1 Ki. 9:26 – 28). King JEHOSHAPHAT built a similar fleet also at Ezion Geber (1 Ki. 22:48; 2 Chr. 20:36 – 37). There were perhaps other similar stations maintained by Phoenicians on the Mediterranean coasts and possibly in the E, where cargoes from India could be reshipped.

The name Tarshish in such a connection does not seem to indicate destination, nor does it signify "belonging to" or "trading with" a place called Tarshish. Rather, there is suggested the nature of the ships, their size and far-voyaging capability; thus in the verses cited above the NIV translates the word as "trading ships" (in 2 Chr. 20:37 [which reads literally, "to go to Tarshish"] the NIV has "to set sail to trade"). A similar idea is shown in other passages (Ps. 48:7; Isa. 2:16 [NIV, "every trading ship"]; 23:1, 6, 10, 14; 60:9; Ezek. 27:25). Certain references (Ezek. 38:13; Ps. 72:10), although clearly referring to a place, suggest that the ships of Tarshish were symbolic of Mediterranean trade and traders, being well known in Mediterranean and Red Sea waters, and carrying merchandise of great value. Its connection with people groups listed in the Table of NATIONS (Gen. 10:4; 1 Chr. 1:7) gives an intimation that these special Tarshish ships did business with the Greek isles.

As a place name, the identification of Tarshish has been debated. The biblical writers clearly viewed it as a very distant place, and it was on a ship headed for Tarshish that JONAH sought to flee from the Lord (Jon. 1:3; 4:2). In some passages (Isa. 23:1 et al.; Ezek. 27:12 et al.), the SEPTUAGINT renders the name with Greek *Karchēdōn* (or gentilic *Karchēdonioi*), that is, Carthage, and some modern writers have adopted this understanding (Tarshish seems to be associated with LIBYA in Isa. 66:19). Another suggestion is a city on the island of Sardinia, for a Phoenician inscription of the 9th cent. B.C. mentions a Tarshish there; but it is likely that this name (which some think means "refinery") was applied to a variety of ports in the ancient world (cf. H. Wildberger, *Isaiah 1 – 12: A Commentary* [1991], 117 – 18).

Most scholars see a connection with Tartessus (Gk. *Tartēssos*; cf. Neo-Assyrian *Tarsisi*), a city or territory that HERODOTUS locates in the W Mediterranean region, evidently near Gibraltar (*Hist.* 1.163; 4.152; it seems to have been destroyed in the 6th cent. B.C.). Tartessus, which was possibly founded by Phoenicians (cf. the association with TYRE in Isa. 23), appears to have been located around the lower Guadalquivir River (e.g., Huelva) in Andalucía, SW Spain (see T. Júdice Gamito, *Social Complexity in Southwest Iberia, 800 – 300 B.C.: The Case of Tartessos* [1988]; S. Celestino Pérez, *Estelas de guerreroy estelas diademadas: la precolonialización y formación del mundo tartésico* [2001]). Although no specific identification has been confirmed, such a site is consonant with the data that Tarshish developed trade in minerals (Jer. 10:9; Ezek. 27:12; the Heb. noun *taršîš H9577*, which refers to a precious stone [chrysolite? beryl? Spanish topaz?], may be derived from the place name). (See further *HALOT*, 4:1797 – 98; *ABD*, 6:331 – 33.)

R. F. GRIBBLE

Tarsus tahr'suhs (Ταρσός *G5433*, gentilic Ταρσεύς *G5432*, "of Tarsus"). A city of CILICIA in SE ASIA MINOR; modern Tersous, situated in the Cilician plain on the River Cydnus, some 10 mi. inland. This is a common setting for centers of civilization along that coast, once plagued by pirates. A calculation based on the wide extent of its traces suggests that Tarsus once had a population of half a million. The lower reaches of the river were navigable so that Tarsus functioned as a port with a skillfully constructed haven on a lake between the city and the sea. Dion Chrysostom (Dio Cocceianus, c. A.D. 45 – 112) was critical of Tarsus and spoke of the city's regard for her river with a touch of irony. The people of Tarsus, however, made this the chief ground of their pride. They had made their own environment, taming the river to their needs, and building "no ordinary city," as PAUL said (Acts 21:39), appropriating a phrase of Euripides (*Ion* 8) applied by that great dramatist to his native ATHENS.

Land communications involved engineering just as creditable. Some 30 mi. inland from Tarsus lay the great barrier of the Taurus mountains, cut by a deep pass known as the Cilician Gates. Through this pass Tarsus had driven a major highway. The city lay, therefore, virtually upon the sea in a corner of the Mediterranean where cultures mingled; E met W while the hinterland was open to her traffic. By her own strength she had made herself a nodal point of communications.

Tarsus was founded toward the end of the 2nd millennium B.C., but the beginnings are shrouded in obscurity. One Mopsus is named among the founders, and the name appears to be Greek. It is a fair guess that Ionian Greeks, whose dynamic colonies dotted the W shoreline of Asia Minor, came also to Cilicia and joined a primitive settlement on the Cydnus. In the Table of NATIONS in Gen. 10, JAVAN is certainly the Ionians, and some have thought that TARSHISH, listed close to it, may in this context refer to Tarsus. To such guesswork are all attempts to date or to describe the beginnings of Tarsus reduced.

Nor can a connected account of the city's story be given, even when the E Mediterranean moves into the era of recorded history. The theme can be picked up only at various points, and some endeavor made to interpret isolated detail. The Assyrian conqueror SHALMANESER III, whose sanguinary reign can be dated 859 to 824 B.C., made brief reference to Tarsus in the records of his conquests and aggression.

The account must then pass over four centuries empty of significant detail. The year 401 B.C. can be pinpointed. ASSYRIA AND BABYLON had left the stage of empire. PERSIA ruled a vast array of lands from the Aegean to the Indus. Tarsus was under a puppet king named Syennesis. The fact emerges from a famous and most significant book, the *Anabasis* of the Athenian soldier, adventurer, and literary man, Xenophon. One Cyrus, a satrap of the Aegean coast, had rebelled against the Great King. He recruited the famous Ten Thousand, a Greek mercenary army, whose stubborn withdrawal from the Mesopotamian plain, through the Armenian mountains to Trebizond on the Black Sea, forms the well-told story of Xenophon's book. The author was one of the leaders of the great retreat. His first book describes the march through Asia Minor to the climax of the battle of Cynaxa. The column passed through the Cilician Gates and came to Tarsus where Syennesis ruled. It is likely that he was deposed after the crumbling of the revolt for failure to resist Cyrus's advance, a hopeless task that he can hardly be blamed for avoiding.

Xenophon's account of the Greek exploit in marching out of the heart of the Persian empire revealed to the young ALEXANDER THE GREAT, a half century later, the inherent weakness of the vast system. He applied the lesson and attacked Persia. Marching through Cilicia in 334 B.C., he found a Persian governor in charge. Coinage throws some light on this period. Greek notions and motives

flood back into Tarsian coin designs after Alexander, but before the conquest the oriental tone is dominant, suggesting that Greek influence in Tarsus was at a low ebb. The strong Greek presence, evidenced by the same art, reveals the firm integration of Tarsus and its province into the SELEUCID Syrian regime, which followed the partition of Alexander's empire. The Tarsus of Paul was visibly taking form and shape.

The region was ruled first as a province, for it was Seleucid policy to rule in provincial units after the pattern of the Persian satrapies, and in the process, to discourage the habitual Greek urge toward the autonomous city state. This policy was rudely interrupted by the inevitable clash with ROME. Under ANTIOCHUS the Great, Syria was moving westward in perennial ambition to recover the kingdoms that had broken free at the W end of the Asia Minor peninsula. Rome, simultaneously feeling for a stable eastern frontier, was moving in the opposite direction. Antiochus's large designs extended to GREECE itself, something of a vacuum of power on his westward frontiers. Rome had likewise felt the weakness of Greece as a buffer on her eastern flank. A confrontation could hardly be avoided, and it was to be expected that a victorious Rome would seek to stabilize her frontier as far as possible to the E.

Tarsus.

The peace treaty imposed on a humiliated

Excavations at Tarsus.

Antiochus fixed Syria's boundary on the Taurus mountains, and Cilicia became, in consequence, a border province. Readier agreement on the part of the Antioch government to grant Tarsus autonomy followed. How naturally it followed that a Tarsus should emerge that experienced and understood both worlds—E and W, Greek and Semitic, a Tarsus vividly aware of Rome, impregnated with Hellenic culture, but aware of the tides of thought and of religion in the lands of the E.

Paul was a natural product of this cultural environment. In writing to the sadly troubled Galatian church, the great apostle spoke of the purpose that had set him apart from birth for the difficult task of evangelizing the GENTILE world (Gal. 1:15 – 16). Tarsus was no fortuitous birthplace for a person with such a calling. The apostle to the Gentiles had to be a Jew, imbued with the OT; he needed also to be a Greek, to interpret a nascent theology in the thought forms of Hellenic culture and to express what he had to teach in the subtle, rich language of the Greeks, the second tongue of all people from Italy to the Persian Gulf. Also, he had to be a Roman citizen in the truest sense, understanding that mighty system, and conscious of the global opportunity it offered. No other man known to history from that time combined these qualities as did Paul of Tarsus. It is difficult to imagine any other place whose whole atmosphere and history could have so effectively produced them in one person. Paul was a Hebrew trained under the notable GAMALIEL. He could talk and think like a Greek and quote his native Cilician poets to the intellectuals of Athens. He could write strong Greek in closely argued documents. He was by birth a citizen of Rome.

The last sentence makes it necessary to return to the fragmented history of Tarsus. After the clash with Antiochus, which ended with the battle of Magnesia in 190 B.C., Rome was on the border of the Cilician region. In 171, Antiochus Epiphanes seems to have conceded a much wider autonomy to Tarsus. Unrest in that dynamic city, in which the Jewish minority seems to have played an important part, had forced the hand of the Antioch government (the curious story of the insurrection in Tarsus is told in 2 Macc. 4:30 – 50). A major reorganization of the constitution followed. One provision was the establishment of a "tribe" of Jews with full CITIZENSHIP. When Paul, writing to the Roman church, spoke of his kinsmen, as he did four times in that letter, it was possibly to his fellow tribesmen of Tarsus that he thus referred.

Antiochus Epiphanes, who made this major concession to Jews of the DIASPORA in Tarsus, was the notorious savage persecutor and oppressor of the Jews of Palestine. This was because Palestinian Jewry was resistant toward the monarch's passionate desire to hellenize his realms. It was a quest for unity—not without its merits had it been pursued with deeper understanding and some tincture of mercy. In Tarsus, on the other hand, the Jews were tolerant toward HELLENISM. Witness Paul's use of metaphors from the Greek games and the liberality of outlook that they suggest. The same Paul is evidence that a rigid Judaism could accompany such tolerance toward the Greeks. Such was the spirit of Tarsian Jewry, proud of their city, willingly integrated into its social system, but loyal to their ancient faith.

Rome first effectively penetrated the region in 104 B.C., and the next half century was one of lamentable strife and upheaval in Asia Minor, an era of tension ended only by the reorganization of the whole complex of nations at the eastern end of the Mediterranean by POMPEY in 65 and 64 B.C. Under Pompey's system, Cilicia became a Roman area of command. Fourteen years later the great orator and statesman Cicero became governor of the province, and it is perhaps indicative of the trouble and anarchy endured by this once ordered corner of the Mediterranean, that one of Cicero's tasks was the pacification of bandit-ridden hill country in the province. In like manner, and as significantly, Pompey had received a special command in 63 to cleanse the eastern Mediterranean of pirates, so indigenous to this particular coast that they were often referred to as "Cilician pirates."

Resurgent orientalism led by Rome's great opponent, the able PARTHIAN king Mithridates of PONTUS, had led to the anarchy and social breakdown that is evident from these events. Rome's intervention and pacification were welcomed by civilized communities, and among such groups the Jews would figure prominently. The Jews of the Dispersion were an urban people, moving into the world of finance and commerce, which was to become the medieval characteristic of their race. Above all, they needed peace, and Pompey no doubt found in the Tarsian Jews a force making for tranquility and order. Rome was empiric in her organization. She chose and promoted those elements of authority and stability she found operative in regions that she penetrated. It was probably from some situation at this time that the Roman citizenship was conferred on a group of Jews at Tarsus, a group shrewd enough to read the signs, to feel the winds of coming change and profit by them. Once conferred, the Roman privilege was transmitted by birth. Thus Paul became a Roman citizen, a status that helped to form his outlook and that determined the pattern of his evangelism.

A brilliant period in the history of Tarsus followed. It became the Athens of the eastern Mediterranean, the ancient equivalent of a university city, the resort of men of learning, the home town of Athenodorus (74 B.C. to A.D. 7), the respected teacher of AUGUSTUS himself, the seat of a school of STOIC philosophers, a place of learning and disputation, the very climate in which a brilliant mind might grow up in the midst of stimulus and challenge and learn to think and to contend.

Like all boys of his race, the young Tarsian Jew also learned a trade (Acts 18:3). He wove the native goats' hair of the province into a rough linen, often used as tent cloth, and known from its place of origin as *cilicium*. From references in Latin literature it would appear that cilicium was also used as sailcloth and leggings. Its manufacture was a prime industry of Tarsus, for it appears that the mass of its population were linen workers disenfranchised by the timocratic constitution, which demanded a charge of 500 drachmas for the privilege of citizenship. This property qualification, or "means test," seems to have been an invention of Athenodorus, who after thirty years in Rome returned to Tarsus in 15 B.C. In true Platonic tradition, he sought by persuasion and philosophy to purge local politics. Failing, as philosophers in such situations have invariably done, Athenodorus used his vast influence with Augustus to banish the more corrupt of the city's leaders. A timocratic constitution followed.

The founding of the Tarsian church was probably due to Paul. Many of the trials, perils, and adventures listed by him in the biographical passage of 2 Cor. 11:24 – 27 took place in Cilicia—its city, hinterland, and neighboring seas. (See further W. M. Ramsay, *The Cities of St. Paul: Their Influence on His Life and Thought* [1907], 85 – 244; Pauly-Wissowa, *Real-Encyclopädie der classischen Altertumswissenschaft*, IV A/2 [1932], 2413 – 39; W. C. van Unnik, *Tarsus or Jerusalem? The City of Paul's Youth* [1962]; E. M. Blaiklock, *The Cities of the New Testament* [1965], ch. 3; *ISBE*, rev. ed. [1979 – 88], 4:734 – 36; *ABD*, 6:333 – 34.)

E. M. BLAIKLOCK

Tartak tahr'tak (𐤕𐤓𐤕𐤊 H9581, meaning unknown). An idol of the Avvites (see IVVAH); along with NIB-HAZ, Tartak was introduced by them into SAMARIA when they were relocated there by SARGON II after 722 B.C. (2 Ki. 17:31). A deity with this name is not known in extrabiblical sources, unless Nibhaz and Tartak be identified with the Elamite gods Ibnahaza and Dirtak (thus M. Cogan and H. Tad-mor, *II Kings*, AB 11 [1988], 212, following an earlier suggestion of F. Hommel). Perhaps more likely is the view that the name Tartaq is a corruption of Aramaic ʿtrʿth (which in older orthography may have been spelled ʿtrqth), that is, the Syrian goddess ATARGATIS (thus J. A. Montgomery, *A

Critical and Exegetical Commentary on the Book of Kings, ICC [1951], 474, following F. Baethgen).

Tartan tahr'tan (תַּרְתָּן *H9580,* from Akk. *tartānu* or *turtannu,* itself borrowed from HURRIAN). Title of high-ranking Assyrian generals in command of a military force (2 Ki. 19:17; Isa. 20:1 [KJV and other versions]; NIV, "supreme commander"). The Tartan is listed in the Assyrian Eponym Texts as the next highest official after the king. Such officials are known from the times of Adad-nirari II, SHALMANESER III, TIGLATH-PILESER III, SARGON II, and SENNACHERIB. See also RABMAG; RABSA-RIS; RABSHAKEH.

<div align="right">L. L. WALKER</div>

Tartarus tarh'tuh-ruhs (Τάρταρος). In Greek mythology, Tartarus was originally the name of a dark abyss where the Titans were confined; later the term became equivalent to HADES. Some Bible versions use this name to translate the verb *tartaroō G5434,* "to cast into Tartarus" (2 Pet. 2:4; NIV, "sent them to hell"). See HELL.

taskmaster. This English term is used by the KJV and other versions primarily to render the participle of Hebrew *nāgaś H5601,* "to oppress, force [to do something]" (Exod. 3:7 et al.; NIV, "slave driver"). Comparable words are common in the Egyptian OSTRACA, which detail the labors of the work gangs responsible for excavating and building the tombs of the pharaohs.

<div align="right">W. WHITE, JR.</div>

tassel. The Israelites were commanded "to make tassels [*ṣîṣit H7492,* KJV 'fringes'] on the corners of your garments, with a blue cord on each tassel" (Num. 15:37 – 39; cf. Deut. 22:12, which uses a different term, *gādil H1544).* The purpose of these tassels was to remind the Israelites of the commandments of the Lord, and not to depart from his will. Unfortunately, such injunctions could be misused, and Jesus critiqued the SCRIBES and the PHARISEES: "Everything they do is done for men to see: They make their phylacteries wide and the tassels on their garments long" (Matt. 23:5; the Gk. word is *kraspe-don G3192*, "border [of a garment], hem").

Monuments from Egypt and the ANE show that many types of tassels were worn by non-Jews in ancient times, though not for the same purpose. Jews gradually ceased to wear these tassels out wardly, as prescribed in the law, chiefly to avoid exposure to heathen and Christian persecution. They therefore devised a kind of undergarment (or vest) covering the chest and back, with four corners where tassels were attached. Modern orthodox Jews still wear either such a vest or a prayer shawl that likewise has tassels attached to the corners. However, the "blue thread" is no longer regarded as necessary. See also PHYLACTERY.

<div align="right">S. BARABAS</div>

Tatian tay'shuhn. See DIATESSARON.

Tatnai tat'n*i*. KJV form of TATTENAI.

Tattenai tat'uh-n*i* (Aram. תַּתְּנַי *H10779,* meaning unknown). KJV Tatnai. A Persian governor (Aram. *peḥ â H10580*) responsible for the province W of the River EUPHRATES during the reign of DARIUS

Hystaspes (Ezra 5:3, 6; 6:6, 13; called "Sisinnes" in 1 Esd. 6:3, 7, 27; 7:1). Tattenai, along with SHETHAR-BOZENAI and others, reported to the king on the complaints made regarding the Jewish rebuilding of the temple. His name and title, in the corresponding form *Tattannu [Ta-at-tanni] paḫat Ebir-nari* ("Tattenai governor of Beyond the River"), is attested in a tablet dated 502 B.C. (cf. *SacBr*, 280b-c).

tattoo. This term is used by the NIV and some other versions to render the Hebrew *qaʿăqaʿ H7882*, a verb of uncertain meaning; it occurs only once in a passage that prohibits self-mutilation (Lev. 19:28; KJV, "print"; NJPS, "incise"). The verb is used in combination with the noun *kĕtōbet H4182*, which also occurs only here, but whose meaning is clearly "inscription, mark" (from *kātab H4180*, "mark"). In the strict sense, a tattoo is an indelible mark, figure, or writing made by pricking and inserting pigment under the skin. Perusal of MOURNING customs in the Bible indicates frequent association of head-shaving with body-cutting and painting (e.g., with clay), but never tattooing. The prohibition in Leviticus likely has to do with some kind of cutting of the skin. See also MARK.

tau tou (from 𐤕 *H9338*, "mark, sign"). Also *tav, taw*. The last (twenty-second) letter of the Hebrew ALPHABET (ת), with a numerical value of 400. It is named for the shape of the letter, which in its older form looked like an X, that is, a mark. This letter was pronounced *t*, similar to English, although in later times it became spirantized (cf. the *th* sound in English *think*) when it was preceded by a vowel sound.

Taverner's Bible. See VERSIONS OF THE BIBLE, ENGLISH, IV.

Taverns, Three. See THREE TAVERNS.

taw. See TAU.

tax. Money, goods, captives, produce, livestock, or similar possessions which a government demands for its support or for specific purposes or services, or as TRIBUTE levied upon other governments and their citizens, usually in some proportion to the assessed value or amount of money or property. In ancient times there was a special type of taxation in the form of tribute, which one government or ruler demanded of another after defeat at war or for certain privileges.

Governments and peoples of all civilizations, ancient and modern, have known taxation and the force of revenue. In general, methods, types of taxation, and attitudes toward taxes have not changed. In the Bible one of the early references to taxation is in Egypt during the seven years of plenty when JOSEPH was authorized by the PHARAOH to levy a large proportion of the grain and store it for the lean years ahead (Gen. 41:25 – 57). One fifth of the harvest was collected during the years of plenty (v. 34). As a result, "Joseph stored up huge quantities of grain, like the sand of the sea; it was so much that he stopped keeping records because it was beyond measure" (v. 49). This could be done in Egypt because the pharaoh was absolute ruler and owned the land (v. 44). King DAVID enforced another type of taxation in the form of tribute from nations and rulers he defeated in war, such as the Philistines, Moabites, Arameans, and Edomites (2 Sam. 8:1 – 15).

Forced labor (*mas H4989*) or "chain gangs" was another kind of taxation or tribute, such as SOLOMON used in building the TEMPLE, his own palace, and other construction (1 Ki. 9:15). Only

captives were conscripted: "Solomon did not make slaves of any of the Israelites" (v. 23). Solomon also must have introduced a tax system into his own country, for he set up "twelve district governors over all Israel, who supplied provisions for the king and the royal household. Each one had to provide supplies for one month in the year" (4:7). So far as can be determined, this is one of the first times the people of Israel were subject to taxes—prior to Solomon, support of the government came from the booty and captives of war (although we read about a tax [*mas⁾ēt H5368*] that MOSES had imposed on the Israelites, 2 Chr. 24:9). Solomon also obtained revenue from traders and caravans (10:14).

Israel and Judah often were forced to pay taxes or tribute to the enemy countries around them who conquered them—the Assyrians, Egyptians, Babylonians, and Persians (e.g., 2 Ki. 18:13 – 16). The pharaoh of Egypt placed Judah under heavy tribute, and thus JEHOIAKIM oppressively taxed the people to pay this demand (23:33 – 35; Heb. ⁽⁽*arak H6885* hiphil, "to assess," and noun ⁽*ērek H6886*, "estimated value, assessment"). In ancient times many governments were taxing their people to pay tribute to a foreign power. The Persians introduced a method of taxation which became widely used in later history: the provincial governor of a conquered country was forced to pay a certain amount of taxes each year to the occupying power and he, in turn, collected these taxes from the people of the province in various ways (cf. Ezra 4:13, where three Aram. terms are used: *middâ H10402, bĕlô H10107,* and *hălāk H10208*; NIV, "taxes, tribute, duty"; NRSV, "tribute, custom, toll"; NJPS, "tribute, poll-tax, land-tax").

The cuneiform inscription on this gypsum block (from Ashur, c. 1900 B.C.), which records the restoration of a temple by Erishum I, king of Assyria, makes mention of his reform of the tax system as it applied to metals and some local products.

Perhaps the beginning of tax exemption for religious purposes began after the EXILE. King ARTAX-ERXES wrote in a letter to EZRA: "You are also to know that you have no authority to impose taxes, tribute or duty on any of the priests, Levites, singers, gatekeepers, temple servants or other workers at this house of God" (Ezra 7:24). There was also heavy taxation under Persia in NEHEMIAH's day. The people complained to him, " We have had to borrow money to pay the king's

tax [Heb. *middâ H4501*] on our fields and vineyards" (Neh. 5:4). Nehemiah stated that the former governors before him "placed a heavy burden on the people and took forty shekels of silver from them in addition to food and wine" (v. 15). This taxation was commonly known as "bread of the governor" (v. 14 KJV).

In Hellenistic times the familiar system of "farming taxes out" to the highest bidder who had the power of the army behind him to collect all sorts of taxes was used. During Greek domination, it is said that wealthy and powerful business men met in ALEXANDRIA each year to bid for the franchise to collect taxes from their own people. Exorbitant profits were made from this system because the TAX COLLECTOR could pocket everything he could collect beyond the set amount demanded by the government. Sometimes the amount of taxation was unbelievable. Under the SELEUCIDS, the government demanded one-third of the grain, one-half of the fruit produced, and a portion of the temple tax itself. POMPEY of Rome levied very heavy taxes upon the Judean province; likewise did Julius CAESAR, although he granted relief in sabbatical years.

In NT times under HEROD the Great, taxes in Palestine were levied on almost everything, especially on the fields (Jos. *Ant*. 15.5.3 §133). In the days of the Roman PROCURATORS in Palestine, taxes were also farmed out to the highest bidder, the system finally adopted throughout the empire. The kinds of taxes grew in such numbers that both rich and poor felt the heavy burden. There were land or real estate taxes, a poll tax (Matt. 22:17), export and import taxes collected at seaports and the gates of cities or country, a crop tax (one-tenth of the grain crop and one-fifth of the wine, fruit, and oil), an income tax of one percent of a person's income per year, taxes to use a road, to enter certain towns, taxes on animals and vehicles, a salt tax, sales tax, tax on the sale of slaves and the transfer of property, and emergency taxes!

It is true that under the Romans, the people enjoyed law and order on land and on sea, good roads, public buildings, markets, stadiums, baths, theaters, but the PROVINCES were almost bled to death in the process. Besides all these taxes, the Jews were asked to pay the temple tax—one half-shekel annually, called the DIDRACHMA (Matt. 17:24). Every Jew twenty years old and older from all over the world paid this tax for the operation of the holy temple (cf. Exod. 30:11 – 16). After VESPASIAN, when the temple was destroyed in A.D. 70, the Jews were still required to pay this tax nevertheless.

Later Rome introduced taxation through a regular CENSUS (Lk. 2:2). There was a Roman high official called a censor. He tried to collect revenue the cheapest way possible. He sold tax franchises in various areas or districts to highest bidders. He set the quota for the government and gave the *publicanus* (TAX COLLECTOR) the right to collect at an openended commission. Contracts were let for five-year periods. They were known to cheat both the government and the taxpayer. They took bribes from the rich and permitted them to pay less taxes (cf. Jesus' parable of the dishonest steward, Lk. 16:1 – 9). There were whole armies of tax gatherers in Palestine; it was often a family profession, with fathers followed by sons forming a caste of tax collectors. Under JUDAS the Galilean the Jews rebelled against the extreme burden of taxation, but the revolt was crushed by the heavy heel of Rome (Acts 5:37).

It is not surprising the Jews hated taxes; they had many reasons. (1) Publicans made fortunes off the poor and rich alike. (2) The method of census and censor under Rome required people, such as Joseph and Mary, to go to another city at great inconvenience and be numbered as animals just to be taxed. (3) Much of the revenue from the poor went to opulent Rome to be doled out to an idle population, at a time when it was beneath the dignity of Roman citizens to work. (4) On top of this burden there was the annual temple tax. Collectors went from town to town once a year by the dozens

collecting this tax, and in foreign countries certain places were designated for payment.

Without a doubt the ancients knew all about taxes. The abuse and indignities heaped upon people, especially conquered nations, is incredible. References to taxes, toll, tribute, and publicans, in the Scriptures take on new light against this background. Some have expressed surprise that JESUS CHRIST, when confronted by the dilemma of the PHARISEES on the tax (Gk. *kēnsos G3056*) owed to the emperor (Matt. 22:17), uttered the familiar dictum, "Give to Caesar what is Caesar's, and to God what is God's" (v. 21). Others find it strange that PAUL, who also lived in the Roman world, would lay down the lasting principle, "This is also why you pay taxes [*phoros G5843*], for the authorities are God's servants, who give their full time to governing. Give everyone what you owe him: If you owe taxes, pay taxes; if revenue [*telos G5465*], then revenue; if respect, then respect; if honor, then honor" (Rom. 13:6 – 7). Jesus and Paul were not speaking against taxation, but for honesty and justice and good order under God in the world.

L. M. PETERSEN

tax booth. See CUSTOM, RECEIPT OF.

tax collector. The Greek word *telōnēs G5467* (from *telos G5465*, "end, goal," but also "tax, customs duty") is found only in the Synoptic Gospels. This noun is incorrectly translated "publican" in the KJV. The Latin term *publicani* referred to wealthy men who paid for the privilege of collecting taxes in certain localities. They were often Romans, although it would appear that the Jew ZACCHAEUS, who is called "chief tax collector" (*architelōnēs G803*, Lk. 19:2), was a *publicanus*. (JOSEPHUS [*War* 2.14.4] speaks of a certain John who was a tax collector at CAESAREA in A.D. 66 and evidently a prominent Jew.) These tax farmers employed subordinates, such as local Jews, to do the actual collecting of the taxes or tolls for them. It is the latter who are indicated by the term *telōnes*. Therefore, the rendering "tax collector" or "toll collector" is preferable to "publican." (On the noun *telōnion G5468*, "tax booth, revenue office," see CUSTOM, RECEIPT OF.)

The taxes levied by the Roman government were many and varied. There was first of all the poll tax (*tributum capitis*). This had to be paid by every male over fourteen and every female over twelve (the aged were exempt). There was the land tax (*tributum agri*), which was payable in kind. Both of these direct taxes were collected by Roman officials in Palestine. In addition, there were many forms of indirect taxation. Charges were made on all imports and exports, including the transportation of slaves. These were collected by the *telōnai* of the Gospels. They examined goods and collected tolls on roads and bridges. There was also a market toll in JERUSALEM introduced by HEROD. In senatorial PROVINCES, the Roman senate took the money. JUDEA, however, was an imperial province, and the revenue collected went into the coffers of the emperor. This is the basis of the question: "Is it right to pay taxes to Caesar or not?" (Matt. 22:17; Mk. 12:14; Lk. 20:22). See TAX.

As a class, the tax collectors were hated by their fellow Jews. This was almost inevitable. They represented the foreign domination of ROME. Their methods were necessarily inquisitorial. That they often overcharged people and pocketed the surplus is almost certain. In the rabbinical writings they are classified with robbers. In the Synoptic Gospels they are bracketed with "sinners" (Matt. 9:10; 11:19; Mk. 2:15; Lk. 5:30; 7:34). This shows the common attitude of the Jewish people toward them. They were considered to be renegades who sold their services to the foreign oppressor to make money at the expense of their own countrymen.

Jesus recognized this common attitude. He said, "If you love those who love you, what reward will you get? Are not even the tax collectors doing that?" (Matt. 5:46). On the other hand, he rebuked the self-righteousness of the PHARISEES, declaring, "I tell you the truth, the tax collectors and the prostitutes are entering the kingdom of God ahead of you" (21:31). In saying this, Christ was not condoning the sins of either group. What he was asserting was that there is FORGIVENESS for even the worst sinner who will repent. The refusal to repent of their self-righteousness was the crowning sin of the Pharisees, as Jesus vividly pictured in the parable of the Pharisee and the tax collector (Lk. 18:9 – 14).

Christ's acceptance of repentant tax collectors is shown not only by his treatment of Zacchaeus, who became one of his followers, but also by the fact that he chose a tax collector, MATTHEW (Levi), as one of his twelve disciples. When Matthew gave a farewell feast to his former associates—probably to introduce them to his new Master—the Pharisees asked the disciples: "Why does your teacher eat with tax collectors and 'sinners'?" (Matt. 9:11). Jesus' reply revealed the nature and purpose of his mission. He said: "I have not come to call the righteous, but sinners" (v. 13). Christ associated with sinners, that he might save them. (See further I. Abrahams, *Studies in Pharisaism and the Gospels*, 1st series [1917], 54 – 61; *TDNT*, 8:88 – 105; *HJP*, rev. ed. [1973 – 87], 1:372 – 76; 2:89 – 90.) R. EARLE

tax office. See CUSTOM, RECEIPT OF.

teacher. Ancient Jewish EDUCATION was entirely religious in character. In OT times there was no textbook except the Scriptures, and all education consisted of the reading and the study of them. There was no recognized office of teacher with a definite title. For the Jew, the real center of education was the home, and the responsibility of educating the child was laid on the parents (Deut. 4:9 – 10; 6:7, 20 – 25; 11:19; 32:46). The PROPHETS were recognized to be divinely inspired teachers, and by the spoken and written word they taught the Israelites God's will for them. The PRIESTS in early times also undertook the religious instruction of the people (2 Chr. 15:3). Several Hebrew words can be translated "teacher," including *mebîn* (hiphil ptc. of *bîn H1067*, "to understand," 1 Chr. 25:8), *mēlamēd* (piel ptc. of *lāmad H4340*, "to learn," Ps. 119:99), and especially *môreh H4621* (e.g., Job 36:22; this noun was originally a hiphil ptc. of *yarâ H3723*).

In the days before the exile there is no trace of schools in Israel at all. The SYNAGOGUE grew out of the conditions of the exile. When the temple was destroyed, sacrifice became impossible; therefore the Jews in exile met on the SABBATH for prayer and religious instruction. PHILO JUDAEUS calls the synagogues "houses of instruction." The SCRIBES, who dedicated themselves to the task of knowing and interpreting the law, then entered the scene.

It is not known just when, after the return from the exile, elementary education first began as an organized public service. The TALMUD says that Simon ben Shetach, the brother of Queen ALEXANDRA (reigned 78 – 60 B.C.), enacted that children should attend elementary schools; and that

Joshua ben Gamala, who was high priest about A.D. 63 – 65, universalized elementary education over the whole country. Boys (and only boys received this public education) started school between the ages of five and seven. The school was usually attached to the synagogue, and was called *bêt hassēper,* "the House of the Book." Jewish teaching was entirely oral, and education was to a very large extent memorization. The teacher was held in high esteem.

In the NT the Greek word *didaskalos G1437* is used in a general sense of any teacher (Matt. 10:24; Lk. 6:40; Rom. 2:19 – 20; Heb. 5:12), equivalent to postbiblical Hebrew *rabbî*, "my master" (Matt. 8:19; 12:38; 19:16; 22:16, 36; see RABBI). It is also used of certain officials in the early Christian church, designating those who have received a special charisma from the HOLY SPIRIT to instruct the community in Christian truth (1 Cor. 12:28; Eph. 4:11; see SPIRITUAL GIFTS).

A comparison of Acts 13:1 with Rom. 12:7; 2 Tim. 1:11; and Jas. 3:1 shows that the teachers in the Christian church—named along with apostles, prophets, and pastors—exercised their gift in congregations already established. The gift of teaching was not necessarily limited to them, but was exercised also by apostles and prophets, who, however, existed only in apostolic times.

teaching of Jesus. See JESUS CHRIST VI.

Teachings of Silvanus. See SILVANUS, TEACHINGS OF.

tears. The secretions of the lacrimal gland. The gland is about the size and shape of an almond and is located on the upper lateral aspect of each eye socket. The tears are a colorless fluid composed of sodium and calcium salts, principally sodium chloride, and albumen dissolved in a watery fluid derived from blood serum. These secretions are poured out between the globe of the eye and the eyelids to facilitate motion of the parts and to assist in floating away any irritating particles. The secretion of tears may be increased through nerve stimulation of the lacrimal glands in response to irritation in the eyes and/or certain types of emotional stress. After the tears have bathed the eyeball and the inner aspect of the eyelids, they are drained off at the nasal side of the eye through minute orifices into the two (upper and lower) lacrimal canals, which in turn empty the fluid into the lacrimal sac located on and in the bony structure of the nose, whence the fluid drains into the nasal passages through the nasal duct. It is when the tears are secreted in overabundance, beyond the immediate capacity of the lacrimal canals to carry off so much fluid, that they overflow from the eye sac and pour down over the cheeks.

In the Scriptures the emotional aspect of the formation of tears is foremost. Thus DAVID, in referring to his stressful situation before ACHISH (1 Sam. 21:10 – 15), requests God to put his tears in his bottle (Ps. 56:8), doubtless as a perpetual memorial or reminder of his zeal and suffering for God's righteous cause as he continuously refused to lay his hands on God's anointed. With some hyperbole David says that he waters his couch with his tears, making his bed to swim (Ps. 6:6). JOB also refers to his tears as being poured out unto God (Job 16:20). HEZEKIAH prayed with tears and was rewarded by the addition of fifteen years to his life (Isa. 38:5). JEREMIAH too made frequent reference to his eyes running down with tears (e.g., Jer. 13:17; 14:17). Tears were used by a repentant sinner to wash her Savior's feet (Lk. 7:38). Tears accentuated the earnest plea of the father of the child who had the dumb and deaf spirit (Mk. 9:24). Tears accompanied the prayers of Christ

(Heb. 5:7), and tears were associated with PAUL's service for God (Acts 20:19, 31) and TIMOTH's also (2 Tim. 1:4). See also CRY.
The tear-shaped dome of the church of Dominus Flevit ("The Lord Wept") alludes to Jesus' weeping over the pending destruction of Jerusalem (Lk. 19:41).

P. E. ADOLPH

Tebah (person) tee'buh (מֶבַח *H3182*, "[born at the time of] slaughter"). Son of NAHOR (brother of ABRAHAM) by his concubine REUMAH (Gen. 22:24). See also TEBAH (PLACE).

Tebah (place) tee'buh (מֶבַח *H3183* [MT 2 Sam. 8:8, בֶּטַח], variant מִבְחַת *H3187* [1 Chr. 18:8], "[place of] slaughter"). A city belonging to the Aramean king HADADEZER and from which DAVID took a great quantity of bronze (2 Sam. 8:8). The KJV and other modern versions have BETAH, following the MT. "Tebah" is the reading of the NIV, which assumes that "Tibhat" in the parallel passage (1 Chr. 18:8) is an alternate form of the name; this reading also has the support of some Gk. MSS and of the Syriac version. Many scholars believe that the town received its name from TEBAH (PERSON), who may have been its founder. Tibhath/ Tebah evidently corresponds to Egyptian *Dbḥ* (#6 in THUTMOSE III's list); and it occurs as Ḥubiḥi in the TELL EL-AMARNA letters. The town must have been somewhere in the BEQAᶜ Valley, but its precise location is unknown. (See Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 115, 159, 296.)

Tebaliah teb'uh-l*i*'uh. See TABALIAH.

Tebeth tee'bith (תֵּבֵת *H3194*, meaning uncertain). The tenth month (December – January) of the Hebrew CALENDAR (Esth. 2:16).

tefillin tee-fil'in. See PHYLACTERY.

Tehillim tuh-hil'im. See PSALMS, BOOK OF I.

Tehinnah tuh-hin'uh (תְּחִנָּה *H9383*, "supplication"). Son of Eshton, descendant of JUDAH, and "father" (i.e., founder) of IR NAHASH (1 Chr. 4:12). His place in the Judahite genealogy is not clear.

teil tree. This archaic term, meaning "lime (linden) tree," is used by the KJV once to translate a Hebrew word that refers to the TEREBINTH (Isa. 6:13).

tekel. See MENE, MENE, TEKEL, PARSIN (UPHARSIN).

Tekoa tuh-koh'uh (תְּקוֹעַ *H9541*, meaning uncertain; gentilic תְּקוֹעִי *H9542*, "from Tekoa, Tekoite"). KJV also Tekoah (2 Sam. 14:2, 4, 9) and Thecoe (1 Macc. 9:33). A town in the hill country within the tribal territory of JUDAH (cf. LXX Josh. 15:59, where many scholars believe that the MT is defective). Tekoa is identified with modern Khirbet Tequ^ʿ, some 5 mi. S of BETHLEHEM, on a prominent elevation 2,700 ft. high, from which the MOUNT OF OLIVES is visible. It looks down on a mass of desert hills. Tekoa was the hometown of the prophet AMOS (Amos 1:1). The scenes that influenced this shepherd of Tekoa are reflected graphically in his book (cf. 4:13; 5:8). The town lies between two valleys cutting deeply down to the DEAD SEA through the wilderness of Judea.

Apparently Tekoa was founded at the time of the Hebrew conquest of Canaan by the Judahite ASHHUR son of HEZRON (1 Chr. 2:24 and 4:5, where "father" undoubtedly means "founder" or "leader"). In 2 Sam. 14:1 – 22 is the record regarding the wise woman, "the Tekoite," whom JOAB, DAVID's general, employed as a ruse to bring back the fugitive ABSALOM. Tekoa was also the home of IRA son of Ikkesh, one of David's mighty warriors (2 Sam. 23:26).

King REHOBOAM thought Tekoa of sufficient importance to warrant fortification (2 Chr. 11:6; intimated by JOSEPHUS in *Ant*. 8.10.1). The place was strategically situated as a military post for the protection of Jerusalem. Its defenses were maintained even in Jeremiah's time as a station for trumpet-signaling, in connection with which the prophet gives a play on the word (Jer. 6:1, "Sound the trumpet in Tekoa!"; Heb., *ûbitqôa^ʿ tiq^ʿû sôpar*).

After the EXILE, certain Tekoites were engaged in wall-building. They were public-spirited men, in contrast to their nobles, who did not take part in the work. Whether these men were actually of Tekoa, or had adopted the name after settling in the capital, is undeterminable (Neh. 3:5, 27). Tekoa is not mentioned by EZRA as one of the repopulated towns (Ezra 2).

One passage in the OT makes explicit reference to the Desert of Tekoa, E of the town (2 Chr. 20:20; cf. also 1 Macc. 9:33). Here was a rather wild, arid, and stony district, a dozen miles S of Jerusalem. Its soil is a kind of chalk marl, and beyond is the part toward the E characterized by George Adam Smith as "fifteen miles of chaos, sinking to…the Dead Sea" (*Historical Geography of the Holy Land*, 25th ed. [1931], 212). There was scant cultivation in valley pockets where was preserved the once rich if sparse vegetable mold that overlay the hills of Judah, when anciently they

afforded a forest. The region produced olives and a peculiar fruit, the SYCAMORE fig (Amos 7:14), ancient tradition making it proverbial both for oil and honey. Shepherds and flocks must have found shelter in the many caves of the hilly land. In certain sections BEDOUIN tent dwellers produced a coarse kind of millet.

In this general district, David, the fugitive from vindictive SAUL, spent much time (1 Sam. 23:26). It was in the Desert of Tekoa that JEHOSHAPHAT, king of Judah, defeated the Ammonites and their allies who had invaded Judah (2 Chr. 20:1 – 26). When Jehoshaphat's men found the invaders already dispersed and slaughtered, they called the scene "the Valley of Beracah" (Blessing).

When BACCHIDES, the Syrian general under Demetrius, took up the campaign against the Maccabees, it was to the Wilderness of Tekoa that two of the brothers, Simon and Jonathan, escaped (1 Macc. 9:33; see MACCABEE). In this region, JOHN THE BAPTIST was equipped for his "austere mission," finding in its outlook figures of judgment: vipers fleeing from the wrath to come (Matt. 3:7). Also in this general locality, the Lord met his threefold temptation, coming through victoriously, having been with the wild beasts (Mk. 1:13).

Tekoa was a city of some prominence in early Christian centuries and in the Middle Ages. In the opening years of the 6th cent., a monastery was erected by a man named Saba; shortly after his death it became the scene of conflict between the orthodox and the Monophysites. A certain Willibald of some two centuries later made report of a church and a prophet's grave in Tekoa. In the times of the Crusades, many Christians inhabiting Tekoa aided the Franks during the first siege of Jerusalem. The place was destroyed by Turks in 1138, citizens escaping to a large cave. The site of Amos's tomb was confirmed by Isaac Chelo in 1134 (*HDB*, 4:693). A number of traditions have centered in this place. NATHANAEL was said to be one of the condemned infants of Herod's slaughter, but he escaped to Tekoa. From near the tomb of Amos, the prophet HABAKKUK was supposedly carried by angels to Babylon, and other met there to discuss divine things.

R. F. GRIBBLE

Tel, Tell. Respectively, the Hebrew and Arabic words for "mound." They are frequently found as the first element in the names of archaeological sites, so named because of the accumulated ruins and occupation debris of ancient settlements.

Tel Abib tel'uh-beeb' (תֵּל אָבִיב *H9425,* apparently "mound of ears of grain," but this Heb. form is a modification of Akk. *Til abūbi[m],* "mound [produced by] the deluge"). Also Tel-abib, Tel Aviv. A locality in Babylonia by the great irrigation canal, the KEBAR (thus not to be confused with the modern city of Tel Aviv in Israel). It was here that EZEKIEL made his first contact with the Jewish exiles in 597 B.C., and he was constrained to share their despair and desolation before being permitted to speak to them (Ezek. 3:15). The Akkadian name *Tel abūbi* suggests that the place was an ancient city reduced to a mound as a result of flooding, followed by decay and long erosion. In exilic times, Tel Abib must have been a Jewish village SE of BABYLON and not far from NIPPUR, but the precise location is unknown (cf. Y. Aharoni et al., *The Carta Bible Atlas,* 4th ed. [2002], map 163).

E. M. BLAIKLOCK

Telah tee'luh (תֶּלַח *H9436,* perhaps "split"). Son of Resheph and descendant of EPHRAIM (1 Chr. 7:25). See discussion under RESHEPH (PERSON).

Telaim tuh-lay'im (מְלָאִים H3*230,* possibly "lambs"). A site in S JUDAH near the ill-defined Amalekite border; it is mentioned only as SAUL's concentration point and base for his counterattack on the descendants of AMALEK, who had been raiding the area (1 Sam. 15:4; cf. 14:48; 15:2 – 3). The SEPTUA-GINT reads GILGAL instead of Telaim (cf. also Jos. *Ant.* 6.7.2), but this location seems unlikely. Some modern scholars suggest that "Telaim" may be a variant or corruption of "Telem" (Josh. 15:24), a town in the NEGEV that, strategically, was a possible assembly point for a desert campaign of this nature. See TELEM (PLACE).

<div align="right">E. M. BLAIKLOCK</div>

Telam tee'luhm. See TELEM.

Tel Assar tel-as'ahr (תְּלַאשָּׂר H9431 [in Isa. 37:12, "" תְּלַשָּׂר], possibly from Akk. *Til-ašuri,* "mound of ASSHUR"). Also Telassar. A town or region where "the people of Eden" (see BETH EDEN) were apparently resettled; it is mentioned by SENNACHERIB as one of the many places overrun and obliterated by the aggressive hosts of ASSYRIA (2 Ki. 19:12 [KJV, "Thelasar"]; Isa. 37:12). The first element of the name (Akk. *Til,* "mound") suggests a site of ancient habitation (perhaps "ruins of [a town destroyed by the god] Asshur"). Because no such place is known, some scholars, through emendation, have suggested the sites of Til-Bašir and Til-Barsip, both of which were within the Aramean principality of Bit-Adini, that is, Beth Eden *(HALOT,* 4:1738; for further discussion see H. Wildberger, *Isaiah 28 – 39: A Continental Commentary* [2002], 418 – 19, who doubts the value of these and other proposals).

Tel Aviv tel'uh-veev'. See TEL ABIB.

Telem (person) tee'luhm (טֶלֶם H3235, possibly "brightness"). A Levitical gatekeeper who agreed to put away his foreign wife in the time of EZRA (Ezra 10:24; 1 Esd. 9:25 [KJV, "Tolbanes"]).

Telem (place) tee'luhm (טֶלֶם H3234, possibly "brightness"). A town in the NEGEV, the extreme S of the tribal territory of JUDAH, near the border of EDOM (Josh. 15:24). It is listed between ZIPH and BEALOTH and it was possibly some distance SE of BEERSHEBA, but the precise location cannot be determined. Some scholars read "from Telem to Shur" *(miṭṭelem šûrâ)* instead of "from ancient times as you go to Shur" *(mēʿôlām bôʾak šûrâ)* in 1 Sam. 27:8 (NRSV, "Telam"). If this conjecture is valid, then Telem is the same as TELAIM (15:4; cf. P. K. McCarter, Jr., *I Samuel,* AB 8 [1980], 261, 266, 413). Others go further and also read "from Telem/Telaim as you go to Shur" instead of "from Havilah as you go to Shur" in 15:7. Neither of these proposals, however, brings us closer to locating the site.

Tel Harsha tel-hahr'shuh (תֵּל חַרְשָׁא H9426, possibly "mound of the forest"). Also Tel-harsha. One of five Babylonian places from which certain Jewish exiles returned who were unable to prove their Israelite ancestry (Ezra 2:59; Neh. 7:61; 1 Esd. 5:36 [KJV, "Thelersas"]). The location is unknown.

<div align="right">E. M. BLAIKLOCK</div>

tell. See TEL, TELL.

Tell el-Amarna tel'el-uh-mahr'nuh. A major city built by one of the Egyptian pharaohs, Amenhotep (Amenophis) IV, better known as AKHENATEN (c. 1370 – 1353 B.C.). It was located on the E bank of the NILE in Upper Egypt, some 180 mi. S of Cairo. The name *Tell el-Amarna* is a misnomer formed by combining a village name, *El-Till*, with *El-Amarna*, the latter being one of the names of an Arab tribe that had settled in the area. *El-Till* has no etymological relation with the Arabic term *tell* ("hill"), commonly used by archaeologists to designate a stratified mound. The city's ancient name was Akhet-Aten (Egyptian)ḥt-),tn, "the horizon of Aten," referring to the deified sun disk).

I. Introduction. The site of Tell el-Amarna has given its own name to the Amarna Age, the historical period described in the diplomatic correspondence found there. In addition, the name Amarna has become synonymous with bold experiment as a result of the cultural creativity of its founder. It is not an exaggeration to designate this radical cultural experiment as the Amarna Revolution.

Biblical scholarship has several points of contact with Tell el-Amarna. For example, the worship of the god Aten (Aton) may be important for the backgrounds of Hebrew MONOTHEISM. In addition, the Amarna letters are indispensable for understanding Canaan just prior to the Hebrew conquest. Finally, the possibility, usually rejected by contemporary scholars, that Akhenaten was the pharaoh of the exodus increases interest in the period.

Travelers had long known of the ruins at Tell el-Amarna; some of these ruins were discussed in scholarly literature as early as 1842. However, interest in the site greatly increased with the accidental discovery of the first Amarna letters in 1887. The peasant woman who first found them sold her rights in the discovery for ten piastres. First attempts to sell the tablets to European scholars resulted in silence or accusations of forgery, so the tablets were taken to Luxor to be sold to tourists. A large part of the original find was destroyed in transit. By this time some scholars were convinced that the tablets were genuine, and attempts to acquire them began. Agents of the British Museum and of the Berlin Museum purchased most of the tablets, but smaller lots are found in museums and private collections throughout the world. With interest aroused by this discovery, excavations began in 1891 and were continued intermittently and by different agencies until 1937. The usable tablets of the original find amounted to about 350 tablets. Later discoveries have added about another 50.

The general antecedents of the Amarna Revolution are Egyptian. Whereas the total combination

of features in the Amarna Revolution was radically new, almost all of the constituent details were anticipated in earlier Egyptian life. The individual religious motifs have their Egyptian antecedents; the luxury of the reign of Amenhotep III looked forward to the ease of Akhenaten's court; and even the artistic motifs can be regarded as the extension of trends already present in earlier Egyptian art. On the other hand, it is probable that exposure to foreign influences had a great role in defining the direction of the evolution of these native Egyptian trends.

Practical politics played a part in the Amarna Revolution. Akhenaten's policies had the practical effect of suppressing the usual priesthoods, especially that of Amun (see AMON #4). On occasion, scholars have belittled the need to curb the power of Amon by noting that the king was the absolute ruler of the priestly establishments as well as the absolute ruler of the state. However, later Egyptian history witnessed the usurpation of royal authority by the priests of Amon despite their nominal submission to the crown. Thus Akhenaten was dealing with a real threat to royal power.

II. Cultural significance

A. The city. Akhet-Aten was one of three cities sacred to the god Aten. Gem Aten in Nubia (CUSH) survived for a thousand years, although both the name and location of the Aten city in SYRIA are lost. Akhet-Aten was located roughly halfway between THEBES (present Luxor) and MEMPHIS (near Cairo). The sacred precincts included a half circle of land, mostly desert, about 3 by 8 mi. on the E bank of the Nile, with a large area of agricultural land on the W bank. This area was marked off by the boundary stelae that contained Akhenaten's oath not to pass beyond these borders. It is not certain that this oath was intended to keep Ahkenaten from ever leaving the city; rather, it may have indicated that he would not pass the boundaries for the purpose of adding to the sacred precincts of Aten (cf. J. Baikie, *The Amarna Age* [1926], 268–69). It is significant for the spirit of Egyptian religion that the new site was relatively free of the claims of other gods.

The city itself was built on a long, narrow strip of desert parallel to the river, but just beyond the cultivable land on the E bank of the Nile. Thus, cultivable land was spared while keeping the city reasonably near its water supply. There were three long streets running the length of the city, with a larger number of shorter streets crossing its width. Land within the city seems first to have been allotted for important royal and public needs such as temple sites, royal gardens, and villas of officials. Then lesser needs and people crowded into the intervening spaces, thus giving the city a somewhat disorganized character.

Tell el-Amarna.

Akhet-Aten was hurriedly built mostly of mud brick that was frequently covered with luxurious decoration. Among the more important structures of the new city were the temples to Akhenaten's ancestors, the great temple to the Aten, the royal pleasure garden named Maru-Aten, and the palace and royal house. In addition, there were nobles' villas, homes of commoners, and factories, notably those producing glaze.

The architectural emphasis of the great temple of the Aten was upon open courts. In the inner part of the building—the usual site of the holy of holies where the image of the god dwelt in awesome seclusion—this temple had still another open court. Several altars for sacrifices were found in some of the courts of the temple. The emphasis on sun courts, of course, was not new. Earlier sun temples from the fifth dynasty (c. 2400 B.C.) were built around a single open court in which stood the *benben,* a huge sacred obelisk, which may have represented the deity. These earlier temples also lacked the holy of holies.

The palace was outstanding, both for its huge size and its rich decoration. Largest estimates of its size are 1,400 by 500 ft. It seems to have contained a huge columned hall with 542 pillars. Available remains give only a limited picture of its lavish decoration, but the glaze and gold ornamentation of the capitals of the columns and of the naturalistic pavements that decorated many of the floors are known. The overall impression must have been one of extravagant wealth. Maru-Aten, perhaps the official summer residence, featured an artificial pool and enclosed gardens as well as other structures. The decoration was more restrained; colored paste and yellow paint served instead of the glaze and gold of the palace.

After a brief period of glory during the life of its founder, the city slowly faded until Horemhab,

in his zeal to eradicate the memory of the heretic king, completely razed the buildings that remained. See ARCHITECTURE.

Statuette of Akhenaten, founder and builder of Amarna.

B. Amarna art. The ART of Tell el-Amarna was revolutionary; but, as noted above, most of the innovation built on trends present in earlier Egyptian art. For example, certain aspects of nature had always been presented in a naturalistic manner by the Egyptian artist. Animals, fish, birds, and even untypical human beings such as dwarfs had long been the subjects of accurate, naturalistic representation. The innovation lay in the extension of naturalism to new levels of execution and to new subjects such as the person of the king. A freedom and softening of the human form under Akhenaten's predecessors foreshadowed the treatment of the human form in Amarna art.

Some typical artistic representations are the following: nature scenes with abundant wildlife and vegetation, scenes of the king done in a new realism and freedom, and conventional scenes with unconventional naturalism in details, as in a temple scene in which each of the sacrificial animals is given individualistic treatment. Plastered-over sunken relief represents an innovation in technique. It replaced the earlier high relief, perhaps to adapt to the quality of stone available to Amarna artists. In this technique, the scene was done in high relief, but the scene itself was recessed until the highest portions of the scene were about level with the contiguous unworked stone surface. Then the whole scene was plastered and painted.

The treatment of the king in Amarna art is distinctive. Earlier artistic representations of the king depicted the remoteness, dignity, and majesty of the divine king. Amarna art invaded the king's

private life and showed him in very human activities. The king was seen at work, at play, caressing his wife or daughters, and in other human activities. One scene showed the royal family eating a meal with an amusing, perhaps even crude, enthusiasm. Expression of the king's humanity went so far as to portray his grief.

Amarna art, however, is best known for its grotesque exaggeration of the human physique. This exaggeration is best seen in its representation of the king. Several factors may have influenced this approach: (1) the tendencies toward softening of form and realism already referred to; (2) an excessive movement toward artistic freedom as a reaction to the very strict canons formerly binding the Egyptian artist; and (3) a limited degree of physical abnormality in the king's person. Artistic representations of the king show an extended neck, a protruding V-shaped chin, bulbous hips and limbs, and spindly ankles. The effect of these characteristics is something normally expected only in brutal political caricature. Not only the king, but other human figures were likewise distorted.

In interpreting these characteristics, however, it is necessary to note that Amarna art displays two distinct artistic phases in its representation of the human figure. In the earlier period, the distortion is extreme, and it is this period that is represented by the well-known artistic works referred to above. In the artistic representations of the later phase, mostly portrait busts and other statuary, these same characteristics were softened until they were merely "weak" or "effeminate" rather than grotesque. Some of the physical characteristics so grossly distorted in earlier Amarna art can be discerned even in the famous statue of Nefertiti, but there in a softened, more pleasant form. One may conclude that some, if not all, of the royal abnormalities were considerably exaggerated by the artists of Tell el-Amarna.

C. Language. Even language and writing did not escape the revolution. Like Egyptian life in general, written Egyptian was rigidly conservative, preserving elements in writing that were obsolete in the spoken language. The Amarna desire for realism produced a modernization of written Egyptian to bring it in line with the spoken language. The stage of Egyptian language referred to by scholars as "Late-Egyptian" originated in this way.

III. Atenism

A. Formative influences. Clear Egyptian antecedents are found for most of the features of Atenism (or Atonism). The prominence of the sun disk, the Aten, was foreshadowed by the general prominence of the SUN in earlier Egyptian religion; even Amon, the hidden one of Thebes, had to become identified with RE, the Sun, before he could become the national god of Egypt. See SUN WORSHIP. The monotheistic trend of Atenism was anticipated both by the normal syncretism of Egyptian religion—that is, the tendency to unite originally distinct deities into one figure—and by the tendency to explain other deities as specific manifestations of one chief deity. The name Aten had been previously used as a divine title.

Political factors probably influenced theological thought. An international age like that of Amarna usually produces a movement of international syncretism, though specific examples are not available for this period. Furthermore, just as national unity had produced the need for a national god of Egypt, internationalism opened human eyes to the need for a universal deity. Finally, exposure to foreign ideas may have had some influence upon Egypt.

In addition, there are evidences, including Atenism itself, that the Egyptian mind of that age had reached such a level of rational development that it sought to avoid some of the worst crudities and

superstitions of traditional Egyptian religion.

B. Theology. Akhenaten's monotheism has been overstated; philosophical monotheism, in fact, is not the point at issue. The major premise of Atenism was not that there was only one god, or one divine principle, but rather that the other gods were usurpers who had seized prerogatives belonging only to the Aten. Usurpers were normally dealt with by effacing their names. Although the spirit of Atenism was such that it probably would have developed into monotheism had it continued to develop, there is no conclusive evidence that pure monotheism was reached.

The evidence for Amarna theology is the following: (1) literary evidence consisting of the long hymn to the Aten and a number of shorter hymns; (2) scenes of life in Akhet-Aten in tombs and monumental scenes; and (3) such ideas as can be surmised from tombs, temples, and governmental policies.

The famous long hymn to the Aten (trans. in C. F. Pfeiffer, *Tell el Amarna and the Bible* [1963], 38 – 42) gives the fullest exposition of Atenist theology. This hymn was inscribed on the walls of the tomb of AI. Some believe it was a ritual recitation spoken by the king himself. In it is found the Aten, the sun disk, eloquently described as the universal, almost omnipotent, providential power sustaining the ordered universe. The opening lines contrast the universal beauty and sway of the rising Aten with the chaos and fear that dominate the earth during the Aten's nightly absence. This passage is in contrast to the Hebrew poet, who saw Yahweh as sovereign over both day and night (cf. Ps. 104:20 – 23). The Egyptian hymn sees night as a break in the sovereignty and power of the Aten.

The poet then described the various phases of the Aten's sovereignty: mankind's joyful work and praise began with the appearance of the Aten. Other beings, animals, plants, sea and river life, also lived in the light of the Aten. The broader view of the Aten as creator and regulator of the universe was developed. Man was conceived and grew through the activity of the Aten. The chick in the egg was the Aten's work. Aten's control of the universe was so full and gracious that he provided a "Nile-in-the-sky" (i.e., rain) for those lands that did not have the river Nile. The seasons and "beauty of forms" were also his work.

The closing lines define the role of the king in Atenism. Only Akhenaten knows the Aten; the Aten has revealed knowledge to the king. Thus, the king, theoretically, is the sole mediator between the Aten and humanity (Akhenaten did, nevertheless, appoint a high priest to aid in this function). Here also appears the only remnant of older physical superstition in the hymn. The king is the Aten's son who came forth from the Aten's limbs. This, of course, could have been "spiritualized" to remove the incongruity. The clear teaching of the hymn is of a beneficent, providential deity whose sovereignty extends over the entire universe—except during his nightly absence.

The shorter hymns, inscribed in various tombs, largely repeat the motifs of the longer hymn. Many of them are interspersed with references praising the king since they were written in behalf of nobles who desired to express their personal appreciation to the king as well as to the Aten.

Pictorial scenes from Akhet-Aten, especially from the tombs, amplify the theology of the poems. The Aten is pictured with his rays extending like outstretched arms to the earth. Akhenaten is usually the leading human figure in such scenes. The frequent presence of the "life key" (the hieroglyphic sign meaning "life") in the hands makes more explicit the concept of the Aten as the giver of all life.

Tomb decoration and structure in general is striking for the absence of the customary magical apparatus designed to guarantee the future well-being of the deceased. MAGIC spells carved on walls and furniture, magical scenes of benefits thus conferred upon the deceased, and all other such are absent. One may suppose that in Atenism the power of such magic was replaced by the effectiveness

of the king's personal good will. Thus, the purpose of the magic apparatus is served by hymns honoring the Aten and the king.

The prominence of open courts in the temples and the absence of the equipment for idolatrous ritual are in harmony with the high spiritual level of the hymns. The existence of other sacred cities, not only in Nubia, which was almost "Egyptianized," but even in Syria, which was quite clearly foreign, reflects Aten's international character and points toward monotheism. The violence of Akhenaten's proscriptions of other deities would lead to the theological doctrine of the jealous god who demands exclusive worship from his people.

The limitations of evidence should be kept in mind in evaluating Atenism. For example, the lack of ethical concepts indicates that the evidence is incomplete rather than that Atenism had no ethical sensibility. Looked at from the perspective of its individual motifs, there is little that is new in the above materials. The innovation lay in the purging of baser religious elements so that the old ideas suddenly constituted a new, more spiritual religious concept. Overt polytheism and superstition were purged. The result was a landmark in the history of thought.

C. Impact of Atenism. Neither Atenism nor the official cult of Amon had any great impact among the masses. The popular form of the cult of OSIRIS, Isis, and Horus held this distinction, as is shown by the funerary stelae set up by commoners in honor of this cult. Atenism owed its existence only to the energy of Akhenaten, and after his death its component ideas were reabsorbed into the common stream of Egyptian superstition.

D. Atenism and Hebrew religion. Some of the resemblances between Atenism and Hebrew religion are the following: common tendency toward philosophical monotheism (philosophical monotheism, strictly understood, came fairly late in the development of biblical Hebrew thought), the attribute of jealousy on the part of the chief deity in his demand for exclusive worship and loyalty, the minimizing of funerary cult in both religions, the rejection of idolatry, and the intellectual advancement of both cults in contrast with the general superstition and idolatry of their historical settings. Furthermore, one should note the similarities in motifs between the longer hymn to the Aten and Ps. 104.

On the basis of these similarities, some have concluded that the "makers" of Hebrew religion borrowed from Atenism at some point. Looking at the evidence more closely, direct borrowing seems unlikely. The strongest evidence for direct borrowing is provided by the similarities between the hymn to Aten and Ps. 104, but this evidence has been grossly exaggerated. Barely seven verses of the psalm show clear resemblances, and in these verses there is one striking contrast: Yahweh's sovereignty over night as well as day. It is safer to see both the Egyptian psalmist and his later Hebrew counterpart as utilizing similar bodies of international, interreligious, nature motifs that were available for the use of all religious poets, whatever deity may have been worshiped. Biblical WISDOM Literature also shows evidence that the inspired writer made use of such an international, interreligious body of wisdom motifs.

Other resemblances between the two religions also are better accounted for through general similarity in backgrounds and in intellectual climate than through direct contact. For example, the movement toward international syncretism, with attestation during the intervening period, had gathered several hundred years of additional momentum by the time of the Hebrew prophets. Hebrew imperialism, like Egyptian imperialism, encouraged an international, universal concept of deity. However, through its contribution to the general intellectual development of the ANE, Atenism, in this indirect fashion, almost certainly influenced Hebrew religious attitudes.

One last difference should be noted. Only Hebrew religion combined the kind of historical factors noted above with an act of special revelation to produce inspired Scriptures. There is no reason to believe that Akhenaten's spiritual insights went beyond those made possible by common grace and natural revelation.

This small cuneiform tablet from Tell el-Amarna describes diplomatic correspondence between the Egyptian court and the rulers of neighboring states.

IV. The Amarna letters. The Amarna letters show that Akkadian was the language of international diplomacy even for proud, prestigious Egypt, although the kings of MITANNI sometimes wrote in HURRIAN (see LANGUAGES OF THE ANE II.A and IV). Occasional AMORITE glosses in letters from Palestine give the Semitic philologist insight into pre-Mosaic Canaanite. More relevant to present purposes, however, are three other matters: (1) the Amarna letters are the most important primary evidence for the history of the Amarna Age; (2) they refer to the Hapiru, a subject relevant for the study of Hebrew origins; and (3) they show the internal sociopolitical situation of Canaan just prior to the Hebrew conquest.

A. Historical setting. Among the more important developments of the age were the rise of the HITTITE empire and the destruction of the Mitanni empire. In the reign of Amenhotep III, a Hittite attack on Mitanni was turned back only by means of Egyptian military assistance. Subsequent Hittite policy had two goals: the undermining of Egyptian influence in Asia and the destruction of the Mitanni empire. Largely due to Akhenaten's inactivity, the Hittites succeeded in both goals. The Hittites and Assyrians divided up the Mitanni empire, and Egyptian forces were driven back to southern

Palestine.

The undermining of Egyptian authority in Syria and Palestine was facilitated by the internal state of affairs. Local princes desired to rebel against Egypt and gain their independence. Hittite encouragement made them all the more eager to rebel. The Amarna letters give several cases of conflicts between such rebels and loyal vassals, both of whom were sending letters to Egypt in which they proclaimed their loyalty and complained of the disloyalty of others. The Egyptian court appears to have been unable to distinguish honest letters from false. This difficulty was increased by the fact that the rebels often had friends high in the court who looked after their interests, to the detriment of Egyptian interests. Among the loyalists was Ribaddi of Byblos (see GEBAL), whose vain struggle against the rebel Abdishirta and his sons is well known through the letters. Further S, Abdikhepa of JERUSALEM stood loyally for Egypt as the surrounding princes allied themselves with the Hapiru and rebelled.

B. The Hapiru. In the Amarna letters the HAPIRU appear as intruders and troublemakers from the outside. They were outside the normal social structure of the region. Their numbers were being augmented by dwellers in the cities who deserted their leaders to join themselves with the Hapiru. Members of the Hapiru were available for military service as mercenaries for anyone who wished to hire them. In general they were seen as a threat both to Egyptian power and to the existing social structure of Palestine

C. Sociopolitical conditions of Canaan. Except for the presence of Egyptian authority in Palestine of the Amarna Age, the sociopolitical state of Canaan was quite similar to that of the time of the Hebrew invasion of Canaan. The land was divided into many small city-states, each with its own "king." Both the Amarna letters and archaeological remains indicate that there was a measure of social stratification, with the letters giving evidence of social unrest in their references to citizens who were joining the Hapiru. The two different aspects of the Hebrew conquest as seen in Joshua and Judges may be related to the prevailing social stratification. The initial campaign, with its relatively quick victory as described in Joshua, may have dealt with the somewhat small but militaristic ruling classes. The less successful process alluded to in Judges may have dealt with the longer process of reaching an accommodation with the subject peoples even after the ruling classes had been eliminated. Thus the cities destroyed but not held in the original campaign had to be reconquered and reabsorbed at a later date.

<div align="right">A. BOWLING</div>

Tel Melah tel-mee'luh (תֵּל מֶלַח *H9427*, "mound of salt"). Also Tel-melah. One of five Babylonian places from which certain Jewish exiles returned who were unable to prove their Israelite ancestry (Ezra 2:59; Neh. 7:61; 1 Esd. 5:36 [KJV, "Ther-meleth"]). The meaning of the name may suggest that at one time a settlement there had been destroyed and that its ruins had been "sown with salt" (cf. Jdg. 9:45 NRSV), a symbol of permanent infertility (Deut. 29:23; see SALT). The location is unknown. It could be the Thelma mentioned by Ptolemy, situated near a salty tract of terrain in the Persian Gulf, but this is no more than conjecture.

<div align="right">E. M. BLAIKLOCK</div>

Tema tee'muh (תֵּימָא *H9401* [in Job 6:19, תֵּמָא], meaning uncertain [cf. *ABD*, 6:346 – 47]; possible gentilic תֵּימָנִי *H9404*, "Temanite"). Son of ISHMAEL and grandson of ABRAHAM (Gen. 25:15; 1 Chr. 1:31). Tema is also the name of a place that was apparently founded by him or his descendants (Job 6:19; Isa. 21:14; Jer. 25:23), identified with modern Teima (Tayma,) in N ARABIA, a large oasis about halfway between DAMASCUS and Mecca. Tema/Teima is on the ancient caravan road connecting the Persian Gulf with the Gulf of AQABAH. It is one of the most attractive oases in Arabia and is still one of the most important trade centers in the land.

The biblical references tell of the metropolitan position of Tema in the transdesert trade. In Isa. 21:13 – 15, its inhabitants are asked to offer refuge and hospitality to Dedanite caravans (see DEDAN) fleeing from a pursuing army, possibly of either NEBUCHADNEZZAR or NABONIDUS. Job 6:19, in a description of the desert, mentions "the caravans of Tema" (some think that Job's friend ELIPHAZ the Temanite [2:11 et al.] was a native of Tema, but see TEMAN). Jeremiah 25:23 prophesied that great trouble would come upon Tema and nearby tribes; this may refer to Nebuchadnezzar's campaign against that region.

An Akkadian inscription published under the title, "A Persian Verse Account of Nabonidus" (English trans. in *ANET*, 312 – 15), relates that Nabonidus, the last king of the Neo-Babylonian, or Chaldean, empire (556 – 539 B.C.), divided his power with his eldest son BELSHAZZAR and entrusted the kingship to him. He did this that he might proceed with an army against Tema. He conquered the city, slaughtered its inhabitants, rebuilt it so that it recalled the glory of BABYLON, and made it the capital of the western part of his empire. Another inscription, the Nabonidus Chronicle (*ANET*, 305 – 7), gives an annual diary of the reign of this king and records that for years he lived at Tema and therefore did not attend the New Year festival in Babylonia. An inscribed early Aramaic monument, the Teima Stela, possibly dated in the 6th cent. B.C., records the grant of specified palm lands and perpetual right in the priesthood of the local god, Salm, to a certain priest called Salm-shezeb. All surviving monuments and inscriptions of Tema show that for some years it enjoyed the rank of ancient PETRA and PALMYRA.

About 540 B.C., CYRUS king of Persia conquered all that region of Arabia, and Babylon itself fell a year later. Nabonidus was kindly treated by Cyrus, who gave him Carmania (in S Persia) to rule, or more probably as a place of abode in a new land (Jos. *Apion* 1.20); and there he died. (See

S. BARABAS

Temah tee'muh (תֶּמַח *H9457,* meaning unknown). Ancestor of a family of temple servants (NETHINIM) who returned from the captivity with ZERUBBABEL (Ezra 2:53 [KJV, "Thamah"]; Neh. 7:55 [KJV, "Tamah"]; 1 Esd. 5:32 [KJV, "Thomoi"]).

Teman tee'muhn (תֵּימָן *H9403,* "south, southern region"; gentilic תֵּימָנִי *H9404,* "Temanite"). Firstborn son of ELIPHAZ and grandson of ESAU; he was head of an Edomite clan (Gen. 36:11, 15; 42; 1 Chr. 1:36, 53). Teman is also the name of a place in EDOM that was apparently founded by him or his descendants (Jer. 49:7 et al.). According to Gen. 36:34, HUSHAM the Temanite ruled as king in Edom before there were kings in Israel. The inhabitants of Teman were noted for their WISDOM (Jer. 49:7; Obad. 8 – 9). The nature and content of this wisdom are unknown. One of JOB's comforters, Eliphaz, was a Temanite (Job 2:11 et al.). Some scholars argue that either Husham or Job's friend—or both— may have been from a different place, TEMA *(cf. ABD,* 6:347 – 48; *HALOT,* 4:1726).

Many of the prophets included Teman in their oracles against Edom (Jer. 49:20; Ezek. 25:13; Amos 1:12; Obad. 9), and all declared that Teman would be destroyed. HABAKKUK refers to a vision in which he saw God coming from the region of Sinai and marching toward Edom as he did in the exodus (Hab. 3:3; cf. Deut. 33:2). In some of these passages, Teman is virtually a synonym for Edom (this may account for the name, which means something like "southern territory"; Edom was to the S of Israel). However, the association with BOZRAH (Amos 1:12) suggests that Teman designated more specifically the northern parts of Edom. Teman (near the N border) and DEDAN (near the S border) are mentioned together in some the oracles.

One suggestion for the location of Teman is modern Tawilan, about 3 mi. E of PETRA. Excavations at Tawilan indicate a large Edomite fortification. The abundance of pottery from the Early Iron Age I-II (1200 – 600 B.C.) suggests that the site was quite important, possibly the largest city in the central area of Edom. The area around Tawilan is well-watered and fertile, and it served as the meeting place of significant trade routes in ancient as well as in modern times.

F. E. YOUNG

Temanite tee'muh-n*i*t. See TEMA; TEMAN; TEMENI.

Temeni tem'uh-n*i* (תֵּימְנִי *H9405,* gentilic of יָמִן *H3554,* "right[-hand], south," or תֵּימָן *H9403* [see TEMAN], or some otherwise unknown person or place; it is perhaps a variant of תֵּימָנִי *H9404,* "Temanite"). Son of ASHHUR and descendant of JUDAH (1 Chr. 4:6). E. A. Knauf (*ABD,* s.v. "Temanite," 6:348) suggests that Temeni was an Edomite clan that had been incorporated into the Judahite genealogy.

temperance. See SELF-CONTROL.

temple, Jerusalem. A building constructed by SOLOMON for the WORSHIP of God. The temple was destroyed by the Babylonians in 586 B.C. but rebuilt after the EXILE under ZERUBBABEL (this structure is often referred to as the second temple). HEROD the Great began a major renovation in 20 B.C., and the completed building with its courts became one of the most greatly admired structures of the ancient world. As a result of the Jewish war, the Romans entered JERUSALEM in A.D. 70 and destroyed the city and the temple.

The Hebrew term for "temple," *hêkāl H2121* (from Sumerian *é-gal,* "great house," through Akkadian *ekallu)* can be used of the TABERNACLE shrine (1 Sam. 1:9; 3:3) and even of royal palaces (2 Ki. 20:18 et al.), but it most frequently refers to the main hall or nave of the Jerusalem temple (1 Ki. 6:3 et al.) or to the whole building (2 Ki. 18:16 et al.; figuratively, it can designate HEAVEN, Ps. 11:4 et al.). The temple is more often referred to as *bêt yhwh,* "the house of the LORD" (1 Ki. 6:1 et al.); in Chronicles, Ezra, and Nehemiah, it is regularly called also *bêt hā⁾ĕlōhîm,* "the house of God" (1 Chr. 9:11 et al.). In the NT, Greek *hieron G2639* (lit., "holy [place]") is the usual term (Matt. 4:5 et al.), but *naos G3724* is also frequent (23:16 et al.).

I. Historical background

A. Sacred places. Evidence of the religious outlook of human beings can be found wherever they have been able to establish some continuity of habitation. The FERTILE CRESCENT furnishes examples of some of the oldest sacred sites and TEMPLES, with JERICHO providing one of the oldest, dating from Mesolithic times (c. 6800 B.C.). A characteristic feature is the presence of an enclosing wall, setting the area off from its surroundings, thus emphasizing the implied superiority and sanctity of the place and its deity.

In EGYPT, the earliest discernible temple form was a small house similar to that of the worshiper. In front of it was placed the symbol of the god, the whole enclosed by a fence or low wall (cf. *BA* 7 [1944]: 44). In later times, this house was replaced by a large and complex series of courts and halls (viz., Karnak and Luxor temples of the 15th cent. B.C.) inside an enclosing wall, within which were not only the principal deity but also other related and subsidiary deities. Ceremonially, there developed a need to express theological concepts, demonstrated by the "pilgrimages" of the god Amun (see AMON #4) in Karnak through various "stations" in the temple complex (ibid., 45).

B. Mesopotamian examples. Southern Mesopotamia (SUMER) in the earlier periods erected simple temple structures built mostly of reeds. Expansion came with the advent of building with sun-dried brick. Plan variations occurred until toward the end of the 3rd millennium, when temples were formalized in a large hall with the idol placed at the narrow end, usually in a shallow room opposite a doorway. The worshipers assembled in an outer court and looked into the main hall where, at the far end, they saw the gorgeously arrayed god framed by a monumental portal. The design was to impress the worshipers and inspire them with fear and awe. This was not, however, the purpose of the temple of Yahweh in Jerusalem.

In Assyrian times in the N Mesopotamian area (ASSYRIA), the outer court familiar from Babylonian temples was lacking; the worshiper entered by a door in the side wall into the sanctuary where the idol was present and then turned to face the image. Pilasters or short walls on the side walls at that end framed the deity, which stood on a low dais. In Babylonian times, the entrance was frequently given flanking towers.

The S Mesopotamian temples show derivation from houses, whereas the Assyrian ones stressed the more private relationship of deity and worshiper. These temples were usually found at the base of the ZIGGURAT, on which the deity alighted when he descended to earth. It is recorded that small

shrines were erected on the top for the convenience of the deity at his arrival, but no example has survived.

C. Worship and theology. The proof of the presence of the divinity in both Egypt and Mesopotamia was the presence of the image, thus explaining how it could be said that the people went into captivity when the images were carried off by a conqueror. Both in Egypt and S Mesopotamia, the gods were taken out in procession among the people. In Assyria, however, at least down to ASHURNASIRPAL II (883 – 859 B.C.), they remained in their sanctuaries. In such processions they were objects of rejoicing and singing of the common people, but in no case in the Early or Middle Kingdom periods in Egypt did they have entry to worship the deity. Other than the royal family and priests, only the nobility and upper class achieved this status in later times.

In Egypt the complexity of later forms provided an easy vehicle or stimulus to the concept that it was a microcosm of the world: the god was in the sanctuary, and the temple complex represented the universe around him. This concept was absent in both the Mesopotamian and Canaanite forms. The Assyrians adopted the ziggurat at a later time, indicating Babylonian influence. The Palestinian, or Canaanite temples, witness to a simpler outlook.

Aerial view of the remains of an Israelite sanctuary or temple at Arad dating as early as the Solomonic period (10th cent. B.C.). Its building plan bears some striking resemblances to that of Solomon's temple.

D. Subsidiary quarters. The Mesopotamian temple had additional quarters for the priests, and storehouses for offerings and receipts from temple lands, to which frequent references are made in the clay CUNEIFORM business documents. There were also school buildings for training scribes in writing the cuneiform to provide recorders for the temple receipts and the administration of its holdings. For the temple in Jerusalem there were the chambers built around the sides and rear, and in the Herodian structure a small section provided for the use of the priests immediately attending the temple, but not on the grand scale of the Babylonian temples. The need for such quarters to that extent did not exist in

Jerusalem.

E. Canaanite prototypes. One of the earlier forms of Canaanite temples is found at MEGIDDO (c. 3000 B.C.), which consists of a simple, rectangular large room containing the idol. Three others at Megiddo date from c. 1900 having the same plan; all place the door on the long side. A particularly notable example of this type occurs at AI (c. 2500). About 1500 B.C., the plan is square, with an added porch. A further refinement occurs at BETH SHAN in the addition of a small room or cubicle at the rear raised above the room floor, containing the idol; this constitutes one of the earliest examples of an inner sanctuary or holy of holies (Heb. *děbîr H1808*), as in Solomon's temple.

A strictly Phoenician style for the period post-1000 B.C. was found in Tel Tainat (ancient Hattina) in SYRIA. This consists of a porch, a holy place, and a holy of holies, remarkably like the description in 1 Ki. 6 (cf. *BA* 4 [1941]: 21, fig. 3; *Oriental Institute Bulletin* 1 [1937]: 13.) The same plan form is seen in the Greek temples without surrounding colonnades, indicating Syrian influence.

II. Significance of the Solomonic temple

A. Distinctive purpose. The outstanding feature of the Solomonic temple is that there was no idol in it, having only the MERCY SEAT over the ARK OF THE COVENANT, with the CHERUBIM overshadowing the former. This arrangement declared to the world that idols are unnecessary to define the presence of God or his sanctity. Because the light-less room could be reached only through a specific ritual at a specified annual time for the purpose of making reconciliation for the people, the "house of Yahweh" in Jerusalem was not considered a cosmic house of God, but emphasized the way of salvation to the penitent and assured to them the grace of God for their joy and blessing (1 Ki. 8:27 – 30). God was not localized in any sense conveyed by an image, either Egyptian, Babylonian, or Canaanite, nor bound to any other form such as the ark. The temple, therefore, was not necessary because of God's nature; he had no need of it (Acts 7:48 – 49). It was an accommodation to the limitations and needs of his people (1 Ki. 8:27 – 30).

B. Cause of existence. That contemporary peoples had temples is not sufficient grounds to justify the building of a temple for Yahweh in Jerusalem. Though DAVID saw this lack as invidious (2 Sam. 7:2), it was not the cause by which David sought to build God's house. A sufficient cause, among others, is that found in Deut. 12, which indicates that the temple was to be a protective memorial for believing Israel, designed to turn their hearts away from the idols of their Palestinian contemporaries and provide them with an incentive (thus protective) not to practice the iniquities of the Canaanites (M. G. Kline, *Treaty of the Great King* [1963], 80), and with a memorial to the person of their God who had delivered them from slavery in Egypt to freedom in the land of Canaan.

In addition to the practical good of centralized worship, a central cultic house was important to the COVENANT structure of Yahweh's relationship with Israel. The loyalty of Israel to Yahweh was expressed in the sacrifices and offerings that were presented at the temple. The HIGH PLACES of the various tribes divided the people and were disruptive of their loyalty to God; they diverted from him his rightful due as their Creator and Lord, and in this sense the high places were roundly condemned. The temple thus became an affirmation of the covenant by Israel. This view makes it unnecessary to hold that the law of the central sanctuary was a late development; it was delayed until Israel should

be a stable people, dwelling in peace in her land, when Yahweh would take up his abode in her midst in a more obvious manner (cf. Kline, *Treaty*, 80ff.; Deut. 12:10). The establishment of the altar in one place is the distinctive element in Deuteronomy, in contrast to the removal of the SHEKINAH glory from one place to another during the period from Moses to David. The temple was needed to express clearly Israel's attachment to the covenant. That David was not allowed to build the temple does not mean that Yahweh would not dwell in one, but rather that the time was not propitious (cf. 2 Sam. 7:5 – 7, 11, with Deut. 12:11).

C. A unifying force. The temple was the place where, in three annual festivals particularly, the Israelites were to rejoice before their God and remember his great blessings to them (Deut. 12:12). David was the recipient of the centuries of this outlook in a particular way and came to realize the need for this central sanctuary for unity among the people. Thus, from the first, Israel's temple in Jerusalem was to differ from those of their contemporaries. That there was cause for division because of the attraction of adverse temples set up elsewhere (cf. Josh. 22:11 – 31) is evident in the policies of JEROBOAM I when he erected the idols at DAN (PLACE) and BETHEL to tie the ten tribes to himself (cf. 1 Ki. 12:25 – 33), and after the OT period in the conduct of a certain Sanballat who sought to tie to himself the priest Manasseh and his cohorts by the promise of a temple (Jos. *Ant.* 11.8.1 – 4). Neither in Samaria nor in Dan or Bethel was to be the site of the house of Yahweh; only the place that he would choose was to be the center of their worship, where God's judgments were to be sought, and where they were to remember particularly their deliverances (Deut. 26:1 – 3).

D. Designation of the site. The selection of the place of the dwelling for the name of Yahweh came in the peculiar happenings of David's numbering the people (2 Sam. 24:1). In the threshing floor of ARAUNAH the Jebusite, David was commanded to set up an altar of propitiation to God to stay the plague. This was declared to be the house of God and the place of the altar, that is, the sole altar, of the people Israel (1 Chr. 22:1). It became the place of obedience and propitiation for Israel.

E. Temporary character. This place symbolized the hearing ear of God (1 Ki. 8:27 – 29), the resort of the stranger (vv. 41 – 43), and the house of prayer for all people (Isa. 56:7), to the end that all nations of the earth should fear God (1 Ki. 8:43). In the NT, it symbolized the body of Christ (Jn. 2:18 – 21) as the obedient servant of God for propitiating God's wrath on the sinner. Further, the temple as God's dwelling place symbolizes the Christian as the dwelling place of God (1 Cor. 3:16).

In the early days of the church, STEPHEN, about to be slain for his faith, declared that the people were putting the temple above God, forgetting that he did not really need a temple building in the sense of rooms of stone and wood (Acts 7:44 – 50; cf. 17:24 – 25), but that he desired the believing heart of flesh (Ezek. 36:26 – 27) on which he could impress his law, that is, his nature, which would result in obedience and holiness of life.

There is a prior step to the achievement of this result. The future MILLENNIUM will see a temple raised to God, the refuge of all nations; but it will be primarily a memorial. When the millennium runs its course and the new age of perfection is established, there will be no temple, for the Lamb will be there in the midst of his people (Rev. 21:22). Thus the temple is mediatorial in all ages, justifying Stephen's position.

III. Location

A. Araunah's threshing floor. The location of Solomon's temple is identified with the threshing floor of ARAUNAH (alternately Ornan, 2 Chr. 3:1), known as Mount MORIAH, the locale of the sacrifice of ISAAC (Gen. 22:2), where DAVID founded the altar of the temple (2 Sam. 24:24 – 25; 1 Chr. 22:1; cf. 1 Chr. 21:18 – 26). The location of the altar was to be determined as follows: Araunah and his sons hid themselves at the presence of the angel (1 Chr. 21:20); the place of concealment must have been the area of the threshing floor, for Araunah *went out* of it to meet David (v. 21). The reference is to the cave where they would have stored their grain after it was separated from the chaff. Since the rock under the Qubbet es-Sakhra (Dome of the Rock), where the cave is, shows the effects of quarrying *above* the level of the cave, it is logical to hold that this rock stood higher originally and that the threshing floor surrounded the rock and the cave.

The altar, therefore, would not be placed on top of the rise forming the cave. David demanded the threshing floor at a price to erect there the altar of God. It would appear that David referred to the flatter area around this rise, for it was there that the actual threshing was done. Hence, one must consider that the altar was located to the E of the rise, or even to the NE or SE, since there was in any of these areas ample space for the location of the altar and its ritual. Moreover, more room was required for the altar ritual, for the laver was to be in the immediate neighborhood of the altar, and there was insufficient room on the rock over the cave. Let it also be recalled that there was a foundation of great stones for the temple (1 Ki. 5:17), forming the great platform on which the temple and adjacent store rooms were built (cf. *BA* 14 [1951]: 6). Such a platform of the approximate height of four to five cubits would raise the interior temple floor level above the top, or nearly to the top, of the present rock in the Qubbet es-Sakhra, the present domed structure covering the rise at the cave in Araunah's threshing floor. Any further elevation of the rock above this floor would be covered by the higher floor of the Holy of Holies. (Cf. J. Simons, *Jerusalem in the Old Testament* [1952], 381ff.) On the site of the threshing floor David made it a practice to sacrifice to Yahweh (cf. 1 Chr. 1:28) and determined the location of the altar of Israel (22:1).

B. Character of the site. The researches and excavations of Warren, Wilson, Conder, Schick, and others in Jerusalem have established the topography of the city quite conclusively (cf. C. Wilson and C. Warren, *The Recovery of Jerusalem* [1879], 50ff.). The area of the city divides principally into an eastern and western ridge, separated by a wide valley known by the name Tyropoeon. The eastern ridge is bounded on the E side by the deep, narrow valley of the KIDRON. At the S end of the western hill is the Valley of HINNOM into which ran the Tyropoeon (now mostly filled), and then the Hinnom continues eastward past the S end of the E ridge to the Kidron. (See topographic sketch.)

The E ridge was further divided toward the N by a small offshoot of the Kidron to the W and then quickly turned generally northward, a stretch known as St. Anne's Valley. The valley is now covered by the northern end of the Ḥaram esh-Sharif ("the noble sanctuary") on the temple mound. The S end of the E ridge was the site of David's city, with OPHEL about midway toward St. Anne's Valley. The ridge continued to rise toward the N quite rapidly to a high elevation at the threshing floor of Araunah and an even higher peak at the location of ANTONIA; the site was more level to the E of the Sakhra before dropping off sharply away to the Kidron, and on the W side dropping sooner to the Tyropoeon, thus limiting the extent of the original Solomonic construction more considerably on the W side than on the E. The Tyropoeon Valley is now mostly filled in with debris from over the centuries.

The site of the temple was influenced by the location of David's city and by the attraction of the upper rocky platform. The mound was near the city but outside it, free from interferences offered by

existing city structures, and on an eminence appropriate to its character—not even today overpowered by the city on the western ridge.

IV. Solomon's temple

A. David's preparations

1. The inspiration for the temple. The idea for the temple plan and structure came to David from Yahweh when he had given the king rest from all his enemies (2 Sam. 7:1 – 3; cf. Deut. 12:10 – 14), so that the house would be built in peace. David assembled all the officials of Israel (1 Chr. 28:1) and commissioned them and his son SOLOMON to build the temple. After giving this charge, he delivered to Solomon the "pattern" (28:11) that he had received by God's Spirit (v. 12); and the instructions were in writing (v. 19). God thus determined the pattern of the approach of the worshiper as well as the elements of his worship, so that the right way to him was known. God determined the character of the temple as he did for the tabernacle. (Thus one should not infer that the similar pattern of sanctuaries such as the one at Tel Tainat, dated shortly after the time of Solomon [see above, I.E], was a source of the plan for the Jerusalem temple, much less that pagan forms of religion were being introduced in Israel.)

The provision for entry to the high priest once a year with blood was sufficient to provide the ATONEMENT necessary for the people to maintain their sanctity for fellowship with God. The outer chamber was sufficient for the daily intercession and communion with their God made necessary by his nature. Beyond these rooms was no need for an elaborate system of courts as in the Egyptian temples.

2. The collection of materials. The amassing of materials was begun early by David when Solomon was young (1 Chr. 29:1 – 5). The materials included 100,000 talents of gold and a million talents of silver (22:14; a talent was equivalent to about 70 – 75 lbs.). From his own private fortune David had set aside for gilding and plating ornamentation 3,000 talents of the prized gold of OPHIR and 7,000 talents of high grade (refined) silver (29:3 – 5). The officers of the people gave 5,000 talents and 10,000 DARICS of gold, 10,000 talents of silver, bronze amounting to 18,000 talents, and of iron 100,000 talents. Others gave precious jewels of which there was no reckoning. In addition, weights were specified and established for many articles of furniture by David (28:13 – 19), indicating that size and pattern of the articles had been fixed by this time by Yahweh.

David also prepared stones in the quarry, iron nails without number, and cedar for framing and paneling (1 Chr. 22:1 – 4), to which Solomon was free to add (v. 14). Craftsmen also were readied by David to contribute their skills to building the house of Yahweh (v. 15).

3. The people obligated to build. The people from the highest prince under David down to the lowliest were put under obligation to Solomon (1 Chr. 28:21), but also to Yahweh, that they should walk with him and build the temple in affirmation of their allegiance to the covenant and therefore to Yahweh (vv. 10 – 21). Their willingness to build the temple was at once their affirmation of the covenant given by Yahweh and their precondition of continued occupation of the land (cf. Kline, *Treaty*, 76ff.).

4. The temple service given by God. The temple service was also set out by David by the command of God's Spirit (1 Chr. 28:13): the priests to officiate at the altar and the Levites to care for the subsidiary functions (cf. 24:1, 3, with v. 19).

Thus the pattern of the temple, the size of furniture, and the worship were ordained by Yahweh. It is to be understood that no thing of worship, implements, ritual, or buildings was left to human invention lest a single element formed solely according to human thinking or ingenuity be present to cast suspicion on the entire worship center and justify in any way the idea of human cooperation in establishing the way of RECONCILIATION with God.

B. Data. The principal sources of information relating to Solomon's temple are several passages in Kings and Chronicles (1 Ki. 5 – 8; 1 Chr. 17; 21 – 22; 28 – 29; 2 Chr. 2 – 7), though there are other references scattered through the rest of the Scriptures. Any reconstruction of Solomon's temple is limited primarily to these, though other architectural and archaeological data shed light on some features, such as plan and furniture.

1. Date of beginning. Both 1 Ki. 6:1 and 2 Chr. 3:2 establish the start of construction of the temple in Solomon's fourth year. His reign ended 931/30 B.C., which would require 971/970 B.C. for the first year of his forty-year reign (1 Ki. 11:42), placing the beginning of the temple in 967/966 B.C. See CHRONOLOGY (OT).

2. Workmen. The foundryman was a Phoenician, HIRAM of TYRE (1 Ki. 7:13). Other workmen were

Sidonians under the king of Tyre, also named Hiram (5:6), whose workmen felled the Lebanese cedars for the temple. They were called into service because there were no Israelites proficient in this work. In addition, Solomon conscripted 30,000 Israelites (5:13) to labor in courses in Lebanon with the lumbering operation (v. 14). In addition there were 153,600 aliens in Israel (2 Chr. 2:17) over whom were 3,600 overseers to direct their labors (v. 18). These laborers were divided into 70,000 bearers of burdens and 80,000 hewers. On the basis that fifty men form a company with a captain over them (2 Ki. 1:9), about 3,600 overseers would have been required.

3. Construction. Timber and stone were made ready beforehand (1 Ki. 5:18) so as to eliminate the noise on the site (6:7). The total interior length of the house was 60 cubits, with an interior breadth of 20 cubits and an interior height of 30 cubits (6:2; a cubit is thought to have been about 1.5 ft.; see WEIGHTS AND MEASURES I.A). In addition, there was an open porch 10 cubits deep that extended the whole breadth of the Holy Place, that is, 20 cubits (v. 3). The stones were precut at the quarry, squared, dressed, and transported to the site to be set in position. Both at Megiddo of this period and at Samaria in the next century are examples of finely shaped cut stones for building, with carefully cut edges for alignment and joining (5:18). This work, however, appears to be exceptional, for most other construction in the nation was rubblework. Israelite workmen did not know how to do this specialized building, hence the importation of Phoenician craftsmen.

Then follows a description of the side chambers and of a platform against all sides of the house (1 Ki. 6:5–6; summary, v. 10). According to EZEKIEL, the temple he envisioned included a platform (Ezek. 41:9 RSV; NIV, "open area") on which were built the side chambers. Since the two buildings were much alike, one concludes that Ezekiel's temple was basically the same as Solomon's with modifications. (The KJV translates Heb. *yāsîaʿ H3666* [*Ketib yāsûaʿ*] in 1 Ki. 6:5a as "chambers," while modern versions more accurately render it as "structure." Verse 10 is so abrupt that one suspects accidental omission in the copying process of part of the original, which should probably read: "And he built…[here follows the Heb. sign of the accusative] the platform against the whole house, five cubits was its height; and he made [plus the sign of the accusative] the side chambers." The part dropped out was that between the two occurrences of the sign of the accusative, thus giving the translation of the KJV and causing a seeming change in the meaning of *yāsûaʿ*.)

The construction of the side chambers is given as a series of rooms one above another (1 Ki. 6:6; Ezek. 41:6), with each successive upper story one cubit wider than the next lower. This increase was obtained by the fact that the upper portions of the wall on the Holy Place side were set back by one cubit (i.e., the wall became one cubit thinner in each of the second and third stories). The lowest chamber was 5 cubits wide, the middle was 6, and the upper was 7, with the story height being 5 cubits (although when the thickness of beams and flooring is deducted the clear height would be rather low); these dimensions may then be clear heights as in the Holy Place. The inner wall was 6 cubits (Ezek. 41:5) and the outside chamber wall 5 cubits (v. 9), with the width of the open space between walls as noted above. Floors consisted of wood on beams and planks, with the inner ends of the beams resting on the setbacks of the temple walls. It is probable also that at the roof level the wall of the Holy Place set back another cubit so that the roof beams would not be built into the wall of the house (1 Ki. 6:6).

Access to the upper stories of the side chambers was by stairways (1 Ki. 6:8) built against the walls of the Holy Place, accessible from that room. Ezekiel describes some sort of access to the chambers (Eze. 41:7), and it is possible to construe the text so as to locate stairs on the S side and the N side of Solomon's temple. Windows are referred to as having "recessed frames" (1 Ki. 6:4 NRSV;

NIV, "narrow clerestory windows"); the Hebrew may mean that the windows were covered with lattice work (cf. NJPS and see Ezek. 41:16). The framework may have consisted of successive rebates around the opening.

The roof structure in Solomon's temple was of beams and cedar boards (1 Ki. 6:9; cf. 2 Chr. 3:7). The wood beams were overlaid with smaller, close-laid wood members forming a bed on which clay was packed and covered with a pulverized limestone marl, rolled flat, smooth, and hard, providing a cement-like surface that was practically impervious to water. The rolling stones for consolidating the marl have been found in ancient sites.

The temple porch was reached by a series of steps at the front from the level of the court (cf. Ezek. 40:6), probably not less than ten. Interior walls and ceilings were finished with cedar (1 Ki. 6:9), and the floor was finished with pine over cedar planks (v. 15). The clause "walls of the ceiling" (v. 15) may have been introduced through a mispronunciation of the word actually meaning "beams," indicating that finished woodwork was laid over the rougher beams, perhaps achieving something in the nature of coffers.

The Holy of Holies or Most Holy Place was a cube (1 Ki. 6:20) and also lined with paneling (v. 16), separated from the Holy Place by a partition of cedar paneling with double doors of olive wood. The lintel and jamb posts were also made of olive wood. The expression "fifth part" (v. 31 KJV), which may be translated "fivefold" (NIV, "five-sided"), offers a problem. If, however, one considers that the wall between the posts and the side walls of the room was nearly equal in thickness to the posts, and that the corners of the posts on the door side were chamfered, then the jamb face at the door (one), the chamfered faces (two), and the face of the posts by the walls (three) provide the five-sided appearance of the posts. A wood lintel lay over them to provide the top pivot for the door leaves. Against this partition on the ark side, a VEIL was hung (2 Chr. 3:14), woven or sewn in colored patterns with blue, purple, and crimson thread, and onto the whole were applied patterns of cherubim.

A door was provided for the Holy Place (1 Ki. 6:33), from the porch with square-cut posts of olive wood, against the ends of the stone walls (jambs) forming the rear wall of the porch, with bifolding door leaves to fold against each other and then to swing open against the jamb. Usual construction had a wood pintle as the pivot at the edge of the leaves that were attached with metal straps, and the pintles let into sockets at the lintel and set into stone base sockets or into pockets in the stone sills. Bars within held the doors closed, passing through cleats on the inside of the doors. A stone threshold completed the opening at the floor line. The temple doors were made of pine because of the greater strength of this wood.

Around the temple building a court was formed by the erection of a stone wall three courses high with a row of three timbers holding it together (1 Ki. 6:36). The area thus enclosed was called the priest's courtyard (2 Chr. 4:9) and had doors in the wall covered with brass plates.

4. Decoration. The wall surfaces in the Holy Place and Holy of Holies were carved (1 Ki. 6:18) with scroll-like flower patterns and cherubim (v. 29). The doors to these rooms were also carved with palm trees and cherubim on both sides, and the carvings in turn were overlaid with gold. The woodwork elsewhere (vv. 18 – 20) was plated or gilded or inlaid, presenting a brilliant sight to the viewer. The combination of palm leaves (signifying victory) and cherubim (signifying the holiness of God) declared that spiritual triumph came only by and through the holy God.

5. Temple furniture. The ark with its mercy seat from the tabernacle was placed at the back of the

Holy of Holies under the cherubim, which were made of olive wood and were gold plated (1 Ki. 6:23 – 28). These were 10 cubits high and their wings extended to 10 cubits, half the width of the room. They functioned symbolically as guardians of the way to God, solemnizing the heart of the worshipers in their approach to God. Their faces were turned toward the dividing partition. They were composite figures well enough known to the people of that day, requiring no description of their form. They may have been similar to the four-faced cherubim of Ezekiel and were usually represented with hands and feet, therefore having basically a human-like body.

In the Holy Place before the entrance to the Holy of Holies was placed the altar of INCENSE (1 Ki. 6:20; 7:48; cf. Exod. 30:1 – 10), probably new and made of cedar, since it was overlaid with gold. Presumably (cf. Exod. 40:22) the table for the SHOWBREAD was also new, overlaid with gold and placed on the right side of the room as in the tabernacle. In this room were the ten lampstands (see CANDLESTICK, GOLDEN), five on the right side and five on the left, all of gold, with their oil cups and ornamentation, to give light in the Holy Place (1 Ki. 7:49).

On the platform surrounding the temple stood the two brass pillars, named Jakin and Boaz (1 Ki. 7:21). The form of the first term (*yākîn H3521*) is an old participle causative meaning "sustainer" or "one who establishes" (cf. *JBL* 68 [1949]: 317 – 18), stressing the positive side of God's character. See JAKIN (PILLAR). The second name (*bōʿaz H1245*) may be the participle form of a root attested in Arabic that yields the meaning "smiter"; if so, it gives the negative aspect of the character of Yahweh as Keeper of Israel (ibid.; however, see *HALOT*, 1:142).

It is questionable that these pillars were for incense burning, since their height would make it difficult to reach their tops to replenish the incense. They were 18 cubits high and approximately 4 cubits in diameter; on each rested a shaft with its capital 5 cubits high (1 Ki. 7:15 – 16). The chronicler gives the total height of both pillars as 35 cubits, apparently just the shaft length (2 Chr. 3:15). The additional cubit of length most likely was a separate cast base similar to some that have been found. The capitals are described as being in the shape of lilies (1 Ki. 7:19) and having a bowl-shaped section (v. 20; cf. v. 41); the lily petals, 4 cubits broad, were probably below and set downward, as examples from this period show. In another passage (2 Ki. 25:17) they are described as 3 cubits high, but this refers to the chain network; it would appear that this measurement refers to the upper portion of the capital, leaving 2 cubits for the height of the lily work.

The bowls had a network of interwoven chains supporting two rows of pomegranates (1 Ki. 7:17, 41). These chains, seven in number, were divided, meaning probably that four chains draped down from the center point at the top and three strands were set around the bowl, with the pomegranates attached to the bottom strand, fastened one below the other.

Artistic illustration of the altar inside the temple built by Solomon. (From the Tyndale Pentateuch, 1530 ed.)

6. Court furniture. The prominent feature of the court was the molten sea, 10 cubits in diameter, 30 cubits in circumference, and 5 cubits high (1 Ki. 6:23)—thus bowl-shaped, about as thick as the hand and containing 2,000 "baths" (vv. 24 – 26; 2 Chr. 4:5 gives the number as 3,000 "baths"). The figures are reasonable if one assumes (from Ezek. 41:8) the use of the great cubit (royal cubit). On this basis the capacity would have been about 10,000 gallons using the usual formula for spherical volume. In Chronicles, another method of computation seems to have been used, the volume of a cylinder, which in this case turns out to be 3,000 baths. Thus the problem is one of method by which the writers viewed the shape of the sea, not an essential contradiction in the text (cf. *BA* 12 [1949]: 86 – 90). The sea was located in the altar court to the SE (2 Chr. 4:10). See also SEA, MOLTEN.

The rim was finished off with the petal (lily) work familiar from the pillar capitals. It also had GOURDS under the brim in two rows of ten per cubit (1 Ki. 7:24), referring to some distinctive type of decoration. The sea stood on a base composed of twelve oxen in sets of three, one set toward each of the compass points (v. 25). These corresponded to the twelve tribes of Israel, bearing the sanctifying witness of God.

The wheeled stands for movable lavers (1 Ki. 7:27 – 37) were ten in number, formed of boxes 4 cubits square and 3 cubits high, the sides made up of divided panels and having ornamental work. The boxes were worked onto short columns ("supports," v. 30) to which axles were attached for wheels 1.5 cubits in diameter. The wheels were like chariot wheels, probably six-spoked, as archaeological remains show. As indicated in v. 34, the supports extended upward to form the corners of the boxes.

Into the stands at the top were fitted the lavers or basins containing the water for washing the

sacrificial animals (2 Chr. 4:6; the molten sea was for the ablutions of the priests). Each of these lavers held "forty baths" (1 Ki. 7:38), that is, about 200 – 230 gallons of water. They could be moved about as the washings required. Normally they were distributed five on the N side and five on the S side of the court before the temple. In addition there were ten tables (4:8) for the flaying of the sacrifices brought by the people. These were placed in the same court as the lavers, probably five on each side.

The focal point in the court was the great bronze altar (2 Chr. 4:1). It was 20 cubits square and 10 cubits high. Its transportation from the Jordan required its sides to be of panel construction with corner pieces and a grate through which the ashes could fall; some method for removing these also was provided, either by the removal of the grating or through the side panels. The description in Ezek. 43:13 – 17 does not shed much light on the Solomonic altar because too many events came between.

Other implements are listed (1 Ki. 7:38 – 50; and 2 Chr. 4:6, 19 – 22). There were basins for water and to catch the blood of the sacrifices, tongs, picks, snuffers (to quench candle lights?), spoons of one sort or another with which to ladle and handle the meat offerings, as well as flat implements such as cake turners for cooking the cake offerings. Likewise the incense containers for the priests are listed.

7. The courts. Little is said concerning the courts surrounding the temple building. The "inner courtyard" (1 Ki. 6:36), due to the slope of the site, was the same as the "upper courtyard" (Jer. 36:10). It was formed by an enclosing wall of three courses of cut stone and a row of cedar beams to tie it together (cf. 2 Chr. 4:9, court of the priests). The whole presented a terraced scene exposing the temple building for an easy view of its imposing character. The great courtyard (1 Ki. 7:9, 12) enclosed both the temple and the palace works of Solomon.

Access to the outer court was through gates; though they are not specifically listed, the door leaves for them are enumerated (2 Chr. 4:9; see below). From the outer court, access to the inner court was also by gates, to which the ordinary person (laity) had access (Jer. 36:10). Ezekiel 44:1 mentions the gate, and because of the departure and return of the Shekinah of God from this gate, it was the principal gate to the outer court of the temple, probably the gate of 2 Chr. 4:9. Between the temple court (inner) and Solomon's palace, there was access from the palace court to the inner court by a gate, presumably in the S wall of the inner court, the gate of the guard (2 Ki. 11:19). A N gate also existed, known as Sur (11:6; cf. *VT* 14 [1964]: 335 – 37 and see FOUNDATION GATE).

8. Dedication. The work of building the temple occupied seven years and six months (1 Ki. 6:1, 38). The dedication occurred in the month ETHANIM, the seventh month, in later times called TISHRI. The intervening months between BUL (6:38), the eighth month, and Ethanim (8:2) of the following year (to Tishri) would be occupied with bringing up the furniture, the most difficult of which would have been the transportation of the bronze sea and its pedestals from the Jordan to Jerusalem. On the first day of the month occurred the Feast of Trumpets, when the ark was brought into the Holy of Holies from its tent in Jerusalem (8:6) and was placed under the wings of the cherubim. When the carrying staves were drawn out, it symbolized that the journey of Israel to her land was complete. When the priests withdrew from the Holy Place, the Shekinah of God filled the temple, thus signifying Yahweh's approval and acceptance of the temple. Henceforth the house was to be representative of his presence (v. 29), the place to which the heart in repentance may turn to find God's mercy (vv. 30 – 53).

C. Supplementary data. The palace of Solomon (1 Ki. 7:1) was evidently built near the temple, and

from this some infer that the temple amounted to no more than a royal chapel. Other passages, however, clearly speak of worship in the courts of Yahweh's house in Jerusalem, in whose temple are the people of God (Ps. 96:8; 116:18 – 19).

At a later period after the completion of the temple, among the inventory of goods carried in Solomon's ships was ALMUG wood, possibly the red sandalwood of India and Ceylon, probably the latter because the ships went for gold nearer to Ophir. The wood was finished and formed part of the woodwork of the walls of the Holy Place (1 Ki. 10:11 – 12).

Concerning the monies of the temple, the book of Joshua makes mention of a treasury belonging to Yahweh, an institution well known by that time, consisting of the repository of the booty of various battles of Israel against her adversaries (Josh. 6:19). In it was deposited the spoil of JERICHO (v. 24). Later, officers were appointed over the house of the treasures of Yahweh (1 Chr. 26:20 – 28). From his victories over surrounding peoples, David dedicated numerous objects to Yahweh (v. 26). These were used to maintain the temple (v. 27). SAMUEL and SAUL also had dedicated spoils to Yahweh (v. 28). Solomon brought out the things dedicated by his father and put them among the treasures of Yahweh's house (1 Ki. 7:15), probably including all the other treasures, for the references above indicated they had been delivered to the Levites, the keepers of the temple. It is likely that the treasury rooms were the three-storied rooms around the temple, for 1 Chr. 28:11 includes the treasuries with the rest of the rooms of the temple. As such they were accessible only from the Holy Place.

D. History of Solomon's temple. When REHO-BOAM, Solomon's son, became king, his repressive policy became the immediate cause of the division of the kingdom. Shrines were set up by JEROBOAM at DAN (PLACE) and BETHEL, thus splitting the allegiance of Israel to God (1 Ki. 12:25 – 33). In Judah, a widespread apostasy of the people quickly grew by Rehoboam's fifth year (926/25 B.C.), characterized by the erection of high places and idol pillars "on every high hill" (14:23 – 24). Then, in divine judgment, SHISHAK (Sheshonk), king of Egypt, came up against them (2 Chr. 12:2, 5) and took the treasures of both the temple and the king, including the 300 gold shields Solomon had made.

ASA placed in the temple the spoils of his father (1 Ki. 15:15). When BAASHA, king of Israel, made war against Judah, quite obviously by fortifying RAMAH (v. 17), Asa collected all the treasures in the temple and in his treasury and sent them to BEN HADAD of DAMASCUS to seal an alliance with him against Israel (vv. 18 – 19). In his earlier years (2 Chr. 15:10), Asa turned to the ways of Yahweh and renewed the altar in the inner court (before the porch, v. 8), probably replacing some of its parts now evidently badly decomposed because of the heat of the fires. However, his consecration and trust of Yahweh was lacking when in his thirty-sixth year he made the alliance with Ben Hadad (2 Chr. 15:18—16:4). In the days of JEHOSHAPHAT, a new court of the house of God is noted (2 Chr. 20:5). He may have reconstructed the gate.

When AHAZIAH was slain by JEHU, ATHALIAH, his mother, usurped the kingdom of Judah from JOASH (Jehoash, 2 Ki. 11) until her seventh year. During this period, Joash was hidden in the temple until he was old enough to be proclaimed king (2 Chr. 22:1—23:15). Athaliah was taken out of the inner court (cf. 23:13) through the "ranges" (2 Ki. 11:15 NIV), possibly referring to the porticoes along the E wall of the inner court (Ezek. 40:6 – 7; cf. *VT* 14 [1964]: 331 – 43). Previous to his reign, the temple precincts had fallen into disrepair because of Athaliah (2 Chr. 24:7) and as a result of priestly carelessness, and this condition continued until the twenty-third year, when Jehoash summoned JEHOIADA the high priest for an accounting (2 Ki. 12:6; cf. 2 Chr. 24:4 – 7).

Since there was no money available from the temple treasuries nor from the king's funds, the priest set up a chest to collect "the tax that Moses the servant of God had required of Israel in the

desert" (2 Chr. 24:8 – 9). At periodical intervals the money was removed, from which materials for the repairs were bought and workers were paid (v. 10 – 12). So far had Athaliah gone in her depredations that even vessels, etc., needed replacing (v. 13). After the death of Jehoiada, the people, still infected with the idolatry of Athaliah, conspired with Joash to apostatize from Yahweh (vv. 17 – 18). When Zechariah the prophet rebuked Joash and the princess, they stoned him to death in the temple court (vv. 19 – 21). For this sin, a small Aramean force inflicted great damage on Jerusalem and on the military of Judea (vv. 23 – 24), and Joash had to deliver up the treasures of the temple and the palace to HAZAEL king of Aram (2 Ki. 12:18).

During the reign of AMAZIAH son of Joash in Judah, King Joash/Jehoash of Israel invaded Jerusalem (2 Ki. 14:13) and carried off the treasures of the temple and palace because Amaziah had exalted himself in pride against Israel (v. 7 – 8; cf. 2 Chr. 25:23 – 24). Later UZZIAH, an energetic, able king, rebuilt the city, but he fell into the error of pride and sought to usurp priestly functions in the temple (2 Chr. 26:16 – 21). JOTHAM succeeded his father Uzziah and rebuilt the Upper Gate (2 Ki. 15:35).

AHAZ, who succeeded his father Jotham, desecrated the house of Yahweh. He robbed the temple of its treasures, added his own, and sent them to the Assyrian monarch TIGLATH-PILESER III (745 – 727 B.C.) to secure his aid against the Israelite-Syrian alliance against him (2 Ki. 16:7 – 8). To pay homage to Tiglath-Pileser, Ahaz went to Damascus and there saw an altar of which he had a copy made (v. 10). He set it before the Solomonic altar, which was removed to the N (v. 14), and made an offering on the altar, probably as a condition of the alliance. Further depredations included closing the temple (2 Chr. 28:24) and breaking up its vessels. Furthermore, he cut off the bases of the laver and set it on a stone pedestal (2 Ki. 16:17), and as a sign of his subservience, made a place in the temple for Tiglath-Pileser (v. 18). This parallels alliances forbidden in the HITTITE suzerainty treaties (Kline, *Treaty*, 32) and indicates treason against the sovereign God of Israel.

HEZEKIAH reversed the policies of Ahaz. He opened the closed doors of the temple and demanded that the Levites restore it to its former sanctity (2 Chr. 29:5); this they did in eight days (v. 17) and restored the vessels, such as were whole, which Ahaz had cast away (v. 19). He restored the Levites to their places in the temple and commanded the people to present offerings (31:4). When they brought munificently, he built storehouses on the temple grounds to preserve the offerings (v. 11). Hezekiah, however, became proud and made alliances with foreign nations; he forgot the power of God, and for this was struck with illness. His example assured the future downfall of Jerusalem (cf. 2 Chr. 32:24 – 26; 2 Ki. 20:14 – 19).

MANASSEH reversed the good things his father Hezekiah had done, raised up idolatrous altars in the temple courts, and placed a graven image in the temple (2 Ki. 21:1 – 9; 2 Chr. 33:1 – 9). For his sins he was taken captive to Babylon (2 Chr. 33:11). Manasseh repented, and God allowed him to return to Jerusalem. In confirmation of his repentance, he destroyed what he had done (v. 15) and repaired the altar of burnt sacrifice. His idolatrous example to his son and others after him, however, brought closer the ultimate destruction of the temple (2 Ki. 21:11 – 16).

AMON worshiped the image set up by his father Manasseh, and after a reign of two years his servants assassinated him (2 Ki. 21:19 – 23). The "people of the land" slew the conspirators and made JOSIAH king (v. 24). Josiah directed the repair of the temple in his days (22:3 – 7; 2 Chr. 34:8 – 11). The stone work was restored and certain timbers replaced (34:11). He removed from the temple the articles made for BAAL and ASHERAH (2 Ki. 23:4), the horses in honor of the sun placed by kings before him (v. 11), the altars on top of the rooms Ahaz had added, and the altars Manasseh had made, which Amon had restored in the two courts of the temple. In spite of all this, the people did not truly

turn to Yahweh, and sins tracing back to Manasseh continued (cf. vv. 26 – 27). Destruction was not far away.

In the reign of JEHOIAKIM, NEBUCHADNEZZAR took all the west land and Jehoiakim became his tributary, but he rebelled after three years and the city was besieged. The vessels of the temple (2 Chr. 36:7) were taken to Babylon, and so was Jehoia-kim (v. 6), both for his sins and the fruit of the sins of Manasseh (2 Ki. 24:3 – 4). JEHOIACHIN followed as king, but at the end of three months was besieged by Nebuchadnezzar who took him captive to Babylon along with the palace treasures, additional vessels of the temple made by Solomon (v. 13) which he cut in pieces to take to Babylon, and other treasures from the temple.

In the reign of ZEDEKIAH, the end of Solomon's temple came. He rebelled against Nebuchadnezzar and the city fell in 586 B.C. Zedekiah tried to flee by night but was captured by the Chaldean troops. The city and temple were burned to the ground. The remaining vessels of bronze and gold were assembled to be taken to Babylon. The pillars before the temple, their bases, and the brazen sea were broken up and carried away to Babylon. The ark and the cherubim, probably now only wooden forms, perished in the flames. The 380 years of the temple were ended, fulfilling Jeremiah's words of the destruction of the city, temple, and people for their sins (Jer. 25:1 – 11).

E. Problems. Certain problematic aspects of the structure of the temple, not mentioned above to avoid disruption of the general description, must be considered at this point.

1. The height of the Holy of Holies. Was the floor of the Most Holy Place on the same level as that of the Holy Place, or was it raised? Examples of raised altar rooms occur in the Middle E (see DAGON IV.D). A lower ceiling height than in the Holy Place would require a stone clerestory wall dividing the two, but evidence is lacking in documenting a supporting beam. Other evidence shows the two to be on the same level. In the Herodian temple, a double curtain separated the two, eliminating the necessity of steps (see below, VII.C.1). Second, coins of the 1st cent. A.D., depicting the temple on the day of the sacrifice of the red heifer (A. Muehsam, *Coin and Temple* [1966], 26 – 27; plates Vff.), show the ark within the temple but no steps leading up to its level, indicating the Holy of Holies to be on the same level as the Holy Place. It may be assumed that this arrangement goes back at least to the temple of Zerubbabel, who in turn may have followed the earlier form of Solomon's temple. It is very possible that the floor levels of the two rooms were always on the same level and that an attic existed over the Holy of Holies.

2. The height of the porch. The porch is given a height of 120 cubits in the MT of 2 Chr. 3:3 – 4 (the NIV, following some versional evidence, has 20 cubits). On the other hand, no height is given in 1 Ki. 6:3, implying that it was the same as the house (v. 2). If, for the moment, one can relate the date of the composition of both Kings and Chronicles to either of these records, it will be recalled that Kings ends with the release of Jehoiachin from prison (2 Ki. 25:27 – 30) and Chronicles with the decree of restoration of CYRUS (2 Chr. 36:22 – 23), thus bringing the author of either book past the date of the destruction of the temple and having knowledge of the exact condition and shape of the temple at its terminus. In this case, if Chronicles is right in giving 120 cubits, the fact that Kings did not record the height is of little consequence; it was not important to that writer.

Is such a tower of 120 cubits feasible? Foundations for it would be most important. However, indications of structural formations to support such massive tower works are found in temples from MEGIDDO (strata V [age of RAMSES III] and VIII-VII A), SHECHEM, and possibly BETH SHAN (stratum

V). In connection with this great height, JOSEPHUS wrote that Jotham added porticos and gateways in the temple area (*Ant*. 9.11.2). The temple building was erected to a height of 60 cubits (Ezra 6:3), whereas the breadth given (60 cubits) is quite similar to that of the former structure, including the side chambers. These facts would justify believing that upper additions to the temple were made at a later time and that Jotham made some of them. Both Zerubbabel's temple and Herod's reconstruction of this second temple were quite like these for size. The justification of the increase and embellishment of the temple resulted from Jotham's victory over the Ammonites (2 Chr. 27:5), with the booty and tribute used for the celebration of the triumph; upper rooms were added over the Holy Place and Holy of Holies, and the porch was altered and heightened with a larger portal constructed in it, the "Upper Gate of the temple of the LORD" (v. 3).

3. The enclosing walls of the temple. These are not described in Kings or Chronicles in enough detail to discern their location or height. None of the original structure of King Solomon's temple has survived to give the wall height of the three courses (1 Ki. 6:36). If further information were available, one might define more precisely the area enclosed; yet certain considerations serve to locate the Holy of Holies more accurately, and then help to suggest possible locations of court walls.

Watson (in *PEQ* no vol. [1896]: 56) stated the problem well: if the altar of sacrifice was on the Sakhra (the exposed rock under the Dome of the Rock), this forced the western wall of the temple so far to the W that there instantly occurred a high foundation of nearly fifty feet. In addition, to place the altar on the Rock prevented the step-down arrangement from the priest's court (inner court) down to the outer court of Herod's temple, as described by Josephus and the MISHNAH (Watson, 55), since Herod obviously built on the old foundations of the second temple, which in turn had been erected on those of the first. Assuming that the Holy of Holies was placed over the Sakhra, the rock surfaces defined by the explorations of Wilson, Warren, Schick, and others are still high enough W of the rear wall of the temple to allow for building the inner court wall up to 10 cubits away, with the outer wall up to another 20 cubits without having to build high retaining walls to provide for earthfill back of them to level up the courts within.

It was not until Herod appeared that the incentive and funds became available to push the outer western wall further W and raise it to something of its present height. In Solomon's time, the outer wall was obviously an extension of the city wall, but it would not have been built too far down the western slope from the crown of the hill (i.e., not on the slope), to provide the maximum defense. To place the temple farther W would have violated this practice observable elsewhere. These considerations would indicate that the area enclosed by the outer wall was rather the crown of the hill for defensive purposes, and that the area tended to be narrower E to W and longer N to S. The ancient foundations of the enclosing walls of Solomon's temple might be discovered, if any part of them exist, within the limits of the existing Ḥaram. In some places the location would be indicated by large beds cut into the bed rock, stepped up and down as slope and coursing of stone required. The same practice of cutting out stepped beds was employed in Herod's time, as the excavations of Warren have shown. It will be shown below that the existing E wall of the Ḥaram was a former city wall used by Herod as his eastern wall. Solomon's E wall was located W of this wall.

4. The columns Jakin and Boaz. A further problem relates to these pillars (see above, IV.B.5). Were they structural columns within the porch, and did they support the roof structure above? Or were they free standing? A first consideration of the plan of the small temple of Tel Tainat, where the columns are located within the roof line, might indicate that the columns of Solomon's temple were

similarly placed. However, would they have been given memorial names of such diverse meaning (as shown above) if they were merely structural?

Likewise, the arrangements of the networks of chains and pomegranates on top of the capitals suggest quite strongly the free-standing character of these columns. The place where they stood is stated to be "in the front of the temple" (2 Chr. 3:15 – 17). However, there is additional evidence from archaeology for the relationship of the pillars to the temple. There is in the Louvre a model of a small cultic shrine that has unattached free-standing columns, with four-petaled flower-bud capitals, forming no structural function but obviously having something to do with the religious character of the shrine.

Though this is a Canaanite form, it was employed by Solomon not because of any synergistic religious fervor, but because Yahweh ordered it so, and because the form is approximate to the meaning given. Solomon's pillars differed further from the Canaanite examples by the chain network draped over them, and performed a different function than the Canaanite, that is, the memorializing of God's character; the pomegranates symbolized the totality of God's word through separate commandments, symbolized by the seeds.

V. Ezekiel's temple. In the fourteenth year after the destruction of Jerusalem (572 B.C.), Ezekiel was taken back to the city in a vision, and an angel in his presence measured the temple.

A. Meaning of the temple. What is the significance of Ezekiel's temple? We find an answer in "the law of the temple," which states, "All the surrounding area on top of the mountain will be most holy" (Ezek. 43:12). Clearly, the temple was an expression of the HOLINESS of Yahweh through the complexity that is revealed in the measuring process, and from it the people are to "measure the pattern" so that they may be "ashamed of their iniquities" (v. 10 NRSV; see *BSac* 106 [1949]: 58).

Since this vision occurs at the end of the prophecy of Ezekiel, one must look at it as the culmination of the work of the prophet. See EZEKIEL, BOOK OF. God's holiness was the focal point of his ministry. God's holiness had been outraged by the persistent iniquity of Israel. There was to be (a) the process of exposure, arraignment, and judgment of Israel (Ezek. 1 – 26); (b) the judgment of surrounding nations so that Yahweh's name might be vindicated in all the earth (chs. 25 – 32); (c) the rebirth and restoration of the prodigal people (chs. 33 – 39), which would include the last great attack on his people; and (d) the revelation of God dwelling among the people (chs. 40 – 48; *BSac* 106 [1949]: 57). The temple (cf. Mal. 3:1) is to become the dwelling place of the divine glory (cf. Ezek. 43:1 – 6): "Son of man, this is the place of my throne and the place for the soles of my feet. This is where I will live among the Israelites forever" (43:7).

B. Identity of the temple. What temple is this? Is it completely separated from the previous temple in Jerusalem? Is it a completely new complex of buildings? A study of the sequence of events helps to answer this question. The whole of Israel had gone into captivity; the destruction of her temple symbolized God's judgment upon the people for their sin. Israel had also been promised restoration upon repentance (Deut. 30:1 – 10). The departure of the SHEKINAH ("glory," Ezek. 11:22 – 23) signified the fall of Jerusalem. The return of this glory (43:1 – 5) signified the restoration of Israel to God's favor and blessing.

But if such a building vastly differed from the temple that Nebuchadnezzar destroyed, how could it carry any assurance to the people? Since the Holy Place and Holy of Holies are the same size as in Solomon's temple, and in the light of other similarities, the conclusion is that Ezekiel's temple is

basically Solomon's temple, but with modifications in the court structure and arrangement. It is not merely an "ideal" temple, for when dealing with the use of the altar, Yahweh describes its sanctification (Ezek. 43:18 – 27) and the offerings made by the priests (44:15 – 31) concerning what should be done by a people restored to their God. Yet the question remains whether Ezekiel's temple is actually to be created. The emphasis on ritual and the elimination of ritual in the NT indicates that his temple serves another purpose.

Let it be remembered that Israel was to undergo deportation for IDOLATRY and rejection of Yahweh's COVENANT (Deut. 4:27 – 28; 28:64 – 68), but if in their affliction they should seek Yahweh with all their heart, he would hear and restore them to their land (Deut. 4:29 – 31; Jer. 29:10 – 14). The purpose was to refine a recalcitrant, backsliding people and create a holy nation (Ezek. 37:21 – 23, 26 – 28) so that they would indeed return to their land. Eze-kiel 40 – 48 presents in word pictures the consequent intimate union of Yahweh and his people, and conveys to the remnant of Israel the assurance of the return to her inheritance. The arrangement of the courts impressed the people with the need for personal holiness; but also, Yahweh's presence there (43:1 – 12) demonstrated his accessibility to the people. The ritual, having been restored, conveyed to Israel that she was truly accepted and therefore could hope to become a cleansed and restored people.

Therefore, Ezekiel's temple was a "visual aid" to faith. Since the returning exiles adhered to the form of the previous temple and not to that of Ezekiel's temple, it would appear that the latter should be understood symbolically. The true restoration of Israel is yet to come, when God a second time (Isa. 11:11) will recover Israel from captivity, when they would be given a new heart (Ezek. 36:26) and their nation would be born in a day (Isa. 66:8 – 10). This refers to the MILLENNIUM and the rebirth of Israel, for all the Gentiles must wait so that they also may be renewed and share in the blessings of God's house (Isa. 56:7). (Ezekiel's vision of the temple should be compared and contrasted with the details in the TEMPLE SCROLL from Qumran.)

C. The construction

1. The outer court. The description begins with the wall encircling the outer court. The whole could be measured with a reed equal to 6 cubits in length, the cubit being the royal, or great, cubit (Ezek. 40:5; 41:8; 43:13). The wall is one reed high and one reed broad. The angel proceeded first to the E gate and the measurement revealed that the threshold is the same width as the wall, that is, the threshold continues through the width of the wall, with the opening 10 cubits long (40:11). The outer portal of the gateway is reached by a flight of steps terminating at the threshold. Inside the portal is a series of guard chambers ending in a porch at the W (or opposite) end. The guard chambers are a reed square, three on each side (v. 10), with a masonry post between 5 cubits long. These rooms (cf. 1 Ki. 14:28; 2 Chr. 12:11) are for the use of guards who are charged with preventing the entrance of the "uncircumcised" (Ezek. 44:9, 14), indicating the holy character of those who are to be permitted to enter.

Over the E end is a roof (Ezek. 40:13) and the total measurement is 25 cubits side to side outside: ten for the passageway and six for each chamber, thus leaving 1.5 cubits for wall thickness at the rear or outside walls of each chamber. At the inner end of the complex is the porch and inside is a threshold or paving 6 cubits wide, the width of a post between the guard rooms but one cubit wider, and probably also roofed.

The porch at the inner end is said to be "inward," that is, its space opens into the gateway passage (Ezek. 40:9), thus indicating an enclosed area. What are the dimensions of this porch? If one assumes that the 8 cubits (v. 8) is an overall dimension in line of travel, and the total length of 50 cubits is measured from the outside face of the encircling wall (v. 25) to the outside face of the inner porch, and also that the first guard chamber is next to the outside wall, a total length thus indicated is not 50 cubits (v. 15), but forty-eight. The sixty-cubit-high posts (v. 14) are not included in the total, according to the terms of v. 15, and one therefore should revise the consideration of the dimensions of the porch.

The above dimension of 48 cubits assumes that between the third guard chamber and the porch area is a pier 6 cubits long, the same dimension as the threshold (Ezek. 40:7). It has been customary for some interpreters to consider the posts of the inner porch (v. 9) to be the posts of v. 14. This is not necessary, for, comparing v. 8 with 41:1, the reference to 8 cubits of width (40:8) can be construed as the clear width inside wall faces, with the 2 cubits of posts being the thickness of the end walls. This gives a total of 50 cubits, face to face, and the posts of v. 14 are outside this dimension, but against the wall face. The 6 cubits (v. 8) are then the length of the end walls of the inner porch beyond the 10 cubits of doorway opening, making a total of 22 cubits, leaving 1.5 cubits for wall thickness on the N and S sides, the same as the rear walls of the guard chambers (see above).

Ezekiel 40:10 is a summary of the uniformity of dimensions of guard rooms; the "jambs" were also of uniform dimension (v. 9; KJV, "posts"; NRSV, "pilasters"). The same word (in the sing.) is used in v. 48, where the walls on either side of the opening are denoted, thus justifying the interpretation of v. 9 above. The columns of v. 14 are not yet observed nor mentioned at v. 9, for they play no structural part in the gateway.

The portal through the outer wall and the first guard chamber plus one cubit more make a total of 13 cubits (Ezek. 40:11). Nowhere is it possible to obtain this number by just adding wall lengths and guard room dimensions, particularly at the portal ends. The gate must be more than floor space; the extra cubit would derive from a structural member set across above the passageway at the W side of the first guard room as a roof member. This arrangement would have made a roofed gateway 13

cubits long, where one could find shelter in inclement weather while securing permission from the guard to pass on into the court beyond.

Before each side chamber was "a barrier…one cubit on either side" (Ezek. 40:12 NRSV), probably a space separated by a low stone wall to form a precinct line, the wall perhaps being rather thin stone and set on edge (NIV, "a wall one cubit high"). Doors at the side chambers are mentioned as "door against door" (v. 13 KJV); logically these would be in the back or side walls of the gate structure, allowing the guards to come and go freely from the court surrounding the gateway building.

The heights of the posts at the walls of the inner porch are given as 60 cubits, and the use of the verb "made" indicates a quotation from annals recording the construction, since it is manifestly impossible to measure them within the limits of human capability, which again presupposes their previous existence. Though they have a small plan area relative to height, when attached to the wall behind there would be no problem of vertical stability.

The gateway building intrudes 44 cubits into the court (Ezek. 40:6) enclosed by the outer wall and is accessible from both sides (vv. 14 – 15). Windows are placed in the guard rooms in the walls beside the doors (v. 13) as well as in the piers between the guard rooms (v. 16). There was an indentation in the outer wall face at these piers, allowing for windows in the side walls of the guard rooms adjacent to these piers. The thickness of the piers between the passageway and the side wall face of the structure is determinable from v. 30, which gives a summary of rooms and dimensions; the 25 cubits were the total overall, side-to-side dimension, and the 5 cubits were the fractional dimension of the thickness of the piers.

Windows occur also in the side walls of the inside porch (Ezek. 40:16). They are described as facing inward, that is, the outer face of the wall at the window is formed in a series of concentric rebates with each ring recessed farther than the outer one. The piers between guard rooms have representations of palm trees carved on them.

Emerging from the gateway, Ezekiel was led into the outer court (Ezek. 40:17) surrounding the wall enclosing the temple building. This outer court is for the people, while the inner court is for the priests. A pavement runs along the outer wall and extends from it to the end of the gateway buildings, thus rimming the outer court. On the pavement are built thirty chambers (v. 17). The use of these chambers is not mentioned; they may be for the use of the people, serving as storehouses or living quarters for the priests while they are on duty in their course of temple service. Chambers are mentioned (Jer. 35:4; 1 Chr. 9:26; Neh. 10:38 – 39) as stores or living quarters.

The court size is determined by the space between walls that faces the gateways. The space between the W face of the E gate and the E face of the gate opposite to the inner court is recorded as 100 cubits; the same is true for the gates to the N and S sides of the outer court (cf. Ezek. 40:19, 23, 27). Since the N and S gates are identical and are the corresponding gates to the inner court, but of reversed plan, the total outside N-to-S dimension is 500 cubits; the same is found to be the E-to-W dimension.

Ezekiel was then led to the N gate, which is measured (Ezek. 40:20 – 23), and the S gate in the S wall (vv. 24 – 27), which are found to be identical. An additional specification is given regarding access steps to the N and S gates, seven in number. Presumably the same number occurs at the E gate. The conditions of holiness for entrance are the same in every case. God has only one way into his presence.

2. The inner court. Ezekiel was then brought into the inner court (Ezek. 40:28) by way of the S gate and observed the measurements taken. The gateway is the same in plan and construction as the

gateways of the outer wall, yet reversed, the porch fronting on the outer court. Before each of these gateways are eight steps. The E gate (vv. 32 – 34) and the N gate (vv. 35 – 37) to the inner court are exactly the same as the S gate, except that at the N gate in the inner court are additional facilities for washing the sacrificial offerings (v. 38). In the sides of the porch are four tables, two on each side, for slaying the offerings (v. 39) and two on each side in front of the porch, also for slaying the sacrifices (v. 41), making eight in all (see "a" in the diagram).

Reproduction of the menorah (seven-branched lampstand) that stood in the temple.

In addition there are four other tables of stone (v. 42) whereon are laid the implements used for slaughtering the offerings. In the porch itself are arranged hooks for receiving the sacrifices until they are offered. Immediately outside the N gate in the inner court (v. 44) are rooms for the singers, opening toward the S, and one at the E side of the gate for priests on duty (v. 46).

The altar is described in Ezek. 43:13 – 17. The cubit here is the royal cubit, described as the usual cubit plus the width of the palm (v. 13). The base (NIV, "gutter") was a cubit high up to a ledge one cubit wide, to the edge of which is a vertical border a span wide (the distance from tip of thumb to tip of little finger when fully extended). Above this base is a second element 2 cubits high with a ledge one cubit wide. Surmounting this is another element 4 cubits high. The altar hearth is 12 cubits square (v. 16). The width of one cubit for each of the ledges makes the base 16 cubits square. Stairs are listed (v. 17), probably one-half cubit in height and width, requiring fourteen risers, thus extending 4.5 cubits minimum from the base.

3. The porch of the temple. The inner court is measured as 100 cubits N to S and the same from the

E wall to the W wall of the temple (Ezek. 40:47). The porch is then measured as 20 cubits long and 11 cubits wide (40:49 KJV and NJPS, following the MT; NIV and NRSV have "twelve," following the LXX). If the width of the porch signifies a N-to-S direction of 11 cubits, then the length E-to-W is 20 cubits. If the entry door is 6 cubits wide and flanking walls 5 cubits wide on each side of the door for a total of 16 cubits, this leaves a total of 4 cubits, less than the 20 cubits of inside length, which is too great a difference. However, if one considers that the 20-cubit dimension be taken N to S, and as an inside dimension, and the 5-cubit dimension of v. 48 as the width of flanking walls at the entrance, then the inside faces of the side walls of the porch line up with the faces of the side walls of the Holy Place. This arrangement results in a width E-to-W of 11 cubits inside (v. 49), and the 3 cubits (v. 48) is the thickness of the flanking walls. When a summation of the E-to-W dimensions of the house is made and a 5-cubit platform for the pillars is included (v. 49; cf. 42:11), a total length to the rear wall of the house of 100 cubits is obtained (41:13).

Surrounding the house is a platform (Ezek. 41:8), 6 cubits high, that projected 5 cubits beyond the chamber walls (v. 11; see below). Around this platform is a clear area of 20 cubits (v. 10). At the W end, and set 20 cubits away, is another building (v. 13) forming the western boundary of this area (see below). Verse 14 summarizes the dimensions of the house. An analysis of the measurements leads to a conflict that can be resolved only on the considerations noted below. The "house" is said to be 100 cubits long E-to-W (v. 13). A tabulation of the separate E-W dimensions of the house, however, does not yield 100 cubits' length, but only 95 cubits with the short dimension of the porch E-to-W, and 104 cubits if its E-to-W dimension is 20 cubits. Therefore, another system of measurements must be sought.

Since the E-to-W dimension includes the clear space of 20 cubits, this dimension, when begun at the face of the building W of the house, yields a dimension of 100 cubits to the inner E wall face of the Holy Place, thus arriving at the W face of the W wall of the porch, which is also the E wall of the Holy Place. But this arrangement requires that the E wall of the Holy Place be considered part of the porch, and not of the former. What could be the cause of this consideration? Let it be recalled that the side walls of the Holy Place step back one cubit for each of the stories of the side chambers. Where it emerges above the roof, it recedes 2 cubits inside the side walls of the porch, thus providing the appearance of the Holy Place attached to the back of the porch wall. It may be that the side walls of the porch are more than 6 cubits thick, projecting even more than the 2 cubits. Thus it appears that there is a tower on Ezekiel's temple, patterned after Josiah's high tower. This is another of the characteristics of the temple leading one to consider that it is not greatly different from the one Nebuchadnezzar destroyed.

4. The house. The door from the porch to the "nave" (NRSV) or "outer sanctuary" (NIV), that is, the Holy Place, is 10 cubits wide (Ezek. 41:1 – 2), leaving 5 cubits of side wall on each side, since the Holy Place is 20 cubits wide. The 6 cubits of v. 1 refers to the thickness of the wall as jamb width in terms of posts, their common name. The Holy Place is 20 cubits wide and 40 cubits long, as in Solomon's temple. The angel went into the "inner sanctuary" or Holy of Holies alone (v. 3). The door is measured to be 6 cubits, the jamb posts 2 cubits, and the door breadth 7 cubits. Although an apparent contradiction occurs, it is clear that the opening into the Holy of Holies is 7 cubits wide (last part, v. 3). Since the other dimension refers to the door also, it is probably the height. The doorway possibly has two leaves, each 3.5 cubits wide, hung from pintle posts at the jambs. The two cubits of jambs refer to the width in the plane of the wall of the jamb posts at each side of the opening. The Holy of Holies is then measured at 20 cubits each way, presumably the same in height

and the same in all directions as Solomon's temple, continuing the basic agreement with it.

The wall surrounding the Holy Place and the Holy of Holies was measured as one reed (Ezek. 41:5). The higher the stories forming the side chambers, the broader they are (v. 7), resulting from the stepping back of the "house" walls on the chamber side where the story beams meet, yet do not enter (v. 6) the walls, that is, resting on these setbacks. There are thirty rooms (v. 6) in each of three stories, making ninety chambers in all. The chambers are 4 cubits wide between the outer and inner walls on the lower floor, this being less than the width of the chambers of Solomon's temple. It is probable that in the increase of height of the walls of the Holy Place and Holy of Holies, it is necessary to increase the wall thickness by one cubit, to render it stable, and this is the reason that the chambers are 4 cubits wide. The wall thicknesses are not given for Solomon's temple, being inferred from Ezekiel's temple. The outer wall is 5 cubits thick (v. 9). Access to the chambers is by stairways opening on to the surrounding platform (v. 11).

5. The west building. The "separate place" (Ezek. 41:12) at the W end of the house fronts on another building that measures 80 cubits broad and 100 cubits long. Its breadth is explicitly stated to be a "west side" (lit., "the side of the way of the sea") and is 70 cubits inside plus 5 cubits for walls, making the total 80 cubits, leaving 10 cubits between its N and S walls and the N and S walls of the inner court. Its length E-to-W is 90 cubits inside plus 5 cubits for walls, giving a total of 100 cubits. These are the overall measurements of the house (v. 13), whose overall N-to-S dimension is the same as the westerly building between inner court walls (v. 14).

6. Recapitulation. Ezekiel 41:15 lists additional features of this westerly house having something like galleries at the N and S sides in three stories (cf. 42:3 – 4). The measurement of 100 cubits (42:8) refers to the length of these galleries. (See below for construction and meaning of the term *galleries*.) The specifications of this building (the length of the galleries is parenthetical, given to designate the particular side of the building on which they are located), the temple, and the porches of the court are listed without measurements, which indicates that this is a mere résumé, not a separate new set of measurements.

The recapitulation continues through Ezek. 41:16a, with an enumeration of the thresholds, and latticed (covered) windows found here and there among the three buildings. Before the recapitulation is finished, a feature suggested by the word *threshold* is introduced: "over against" (KJV) anticipates the lintel that would later be used in Herod's temple as formed with five oak beams that alternated with a course of stone. G. E. Wright (*Biblical Archaeology* [1956], 140) supports the definite possibility that this was the method in Herod's temple; it was used in older periods, as he observes and is most likely the procedure employed in Ezekiel's temple. At the jambs also are post formations set under the lintels. The measurements as a résumé continue in v. 17 for the interior and exterior wall areas, the measurement of each particular area having been carefully determined.

The decoration of the house walls is described as alternating representations of palm trees and double-faced cherubim (Ezek. 41:18 – 20; cf. 1 Ki. 6:29; 7:36), only two faces shown because on a flat surface in straight bas-relief it is impossible to show more than two faces. They probably should be considered to have four faces, as in the vision (ch. 1). The posts of the door to the Holy Place were square in section (41:21); the "face" (KJV) of the door posts was similar to that of the door posts of the Holy Place.

7. Additional features. The altar of incense is described as made of wood (Ezek. 41:22) and lacking

the gold covering of the altar of Solomon's temple. It is three cubits high and probably square (as in the tabernacle and presumably in Solomon's temple), since only one dimension is given. It has horns, for corner pieces apart from horns have no meaning. The term "length" (KJV) should be rendered "base" (NIV, NRSV), for this is the nearest equivalent in spelling and form of letters that could be miswritten for "length." The doors themselves are formed in pairs of leaves folding back on themselves so that when opened against the jambs they occupy smaller areas of the floor (vv. 23 – 24). The same cherubs and palm trees are also carved upon the doors and the walls (v. 25).

A further note is added describing the façade of the porch (Ezek. 41:25b); it has thick planks, a retrospective note on the construction of the lintel above the doorway. Light is admitted into the porch by the same latticed windows noted elsewhere, in the N and S walls. They also are located in the side chamber walls (v. 26). The thick beams (v. 25) may be the large beams supporting the plank floors of the side chambers. The walls of the porch, the side chambers, and their floor beams are decorated only with carvings of palm trees, denoting the lesser sanctity of these areas.

8. Supporting buildings. Ezekiel's attention was next directed to another set of buildings in the outer court (Ezek. 42:1). He was led out of the inner court through the N gate to a building that backed up to the wall forming the enclosure of the "separate place" (KJV; NIV, "temple courtyard"). The reference here to a building on the N requires two separate structures; the number of chambers are approximately the same, with an access passage between of 10 cubits width. The S building is 100 cubits long E to W and 20 cubits wide N to S (v. 2); the N building is 50 cubits long and 20 cubits N to S likewise. At the W end of these buildings is a clear area (46:20) for cooking the offerings. The doors of the S building are on the N side (42:2), that is, they open off the common passage between them. They likewise open to the "separate place," for the priests are to lay their garments in the cells to avoid defiling them by contact with the common people (42:14); to avoid this, they cannot go out into the outer court, but they are able to enter the cells directly from the inner court.

The cell building is three-storied, as seen in the term *šĕlîšî H8958* (Ezek. 42:3), which means third, not three (cf. Gen. 6:16), for only the third story has galleries (*ʾattîq H916*). The text of Ezek. 42:1 – 3 should now be understood as in the following free translation: "Then he brought me out into the outer court by the direction of the N way and brought me to the cell-building that was opposite the separate place, and that was opposite the building on the N, along the front by length one hundred cubits, with a door in the N, and by width fifty cubits [v. 8], opposite the twenty cubits of the inner court and opposite the paving that was in the outer court; having gallery facing gallery in the third story."

The last phrase may be understood as referring to galleries that face one another across the passage between the buildings. This passage provides access to the chambers (Ezek. 42:4) and is 10 cubits wide. The length of the passage is not stated, but a way of one cubit is expressed that bears no logical relation to the building or passage. If this is considered to be a cubit-wide platform running along the face of the building there is no grammatical connection expressing the relationship. Hence, it is best to understand that it refers to a wall of one cubit width to serve as a screen wall extending eastward from the outer building (cf. v. 7, discussed below). In vv. 5 – 6 the construction of chambers and third-story galleries is described. Since pillars are not employed to support the outer wall of the gallery, the method of a supporting wall is used at the outer gallery wall and in the first and second stories at the line of the wall common to the gallery and chambers in the third floor. The existence of the columns (not actually mentioned) is suggested by the columns in the outer court, possibly between or along the chambers against its outer wall.

There is a wall opposite the chambers, 50 cubits long (Ezek. 42:7), erected parallel to the chamber building and extending in the direction of the gates. If this is a proper understanding, there must be another interpretation of the one cubit dimension of v. 4, but it is not possible to determine the meaning with the limited architectural terminology available. The phrase, "before the temple…an hundred cubits" (v. 8 KJV), describes again the length of the chamber building, indicating to which building the wall was related.

This chamber building is repeated on the S side of the inner court. The word "east" in Ezek. 42:10 (KJV, following MT) results from a copyist's error; the NIV and NRSV, following the SEPTUAGINT, read "south." This change of text is supported by v. 12, and the change makes sense in the total context. Thus there are only two sets of chamber buildings, not three, as suggested by some commentators; vv. 10 – 11 should read, "In the width of the court wall to the south, before the separate place and before the building, there were cells with a way before them, like the cells that stood toward the north."

The following verses (Ezek. 42:13 – 14) give the function of these buildings. Since they are referred to as being N and S chambers fronting the separate place, there can be only these two buildings, one N and one S. Here in quiet seclusion and contemplation, the priests can eat their sacramental portions of the offerings. The offerings are stored in this place until cooked or baked (meat of the sacrifices was boiled; meal was baked). The chambers provide privacy because the act of eating shared in the holy character of the service. The purpose of sacrifice was communion with Yahweh, and it had to be carried out by those who were ritually pure.

9. The temple precincts. The temple is surrounded by a sacred area and the angel proceeds to measure it: 500 reeds (3,000 cubits) on each side. The measuring process was done to emphasize its sacred character (v. 20)—that it is holy, in contrast to all other areas that are called profane. The "it" measured in v. 15 (KJV) is this area, not the E wall or gate. The relation of the temple complex within this area is that of a city within a wall, the whole being set upon a mountain that rises up to provide the high eminence on which to erect the temple (40:1 – 2).

It is at this point that one must look to the future for Ezekiel's temple. The terrain of Jerusalem in his time could not accommodate this development. After the events of Zech. 14:1 – 4, 10, this temple could be set in the place of the height of the present Ḥaram. The peace of the millennium may offer opportunity for construction, and if this temple proclaims holiness, it most certainly agrees with the theme HOLINESS TO THE LORD (Zech. 14:20). The similarity of the house to Solomon's temple assures the people that this is indeed their house, and God's presence in it gives assurance of his favor. The other structures are "teaching" elements, to instruct them in the "way of holiness" (cf. Isa. 35:8).

VI. Zerubbabel's temple

A. The repatriation. Very little data is provided concerning Zerubbabel's temple from which a description may be formulated. The treatment of the temple is done in a context of its significance for the future. HAGGAI gave messianic significance to the temple, as did ZECHARIAH. This was necessary in an age that was approaching the advent of the Son of God. In this era the importance of a visible shrine was reduced, but emphasis was laid upon its significance. This, of course, became the emphasis of STEPHEN in the justification of his message among the people (Acts 7), and to which, through misconception, violent opposition occurred. But the message had a beginning in the days of

Zerubbabel.

Not until the conquest of Babylon by Cyrus in 539 B.C. was there any hope that Israel would return to their homeland and their temple be rebuilt (cf. Isa. 44:28; 45:1; 2 Chr. 36:22 – 23). Cyrus adopted an enlightened policy of repatriation of peoples earlier transported by the Assyrian and Babylonian kings from their homelands (*ANET*, 316). The decree of Cyrus is recorded twice (Ezra 1:1 – 4 and 6:3 – 5, quoted from the source [cf. vv. 1 – 2]), and some have asserted that one of these is not authentic. It is now known, however, that memoranda recording administrative decisions of the royal council were made also, but each in its own format. The latter passage is cast into memorandum form. The oral proclamation has exactly the form of the prophetic "thus saith…" and had equally the force of law with the original memorandum. In content and purpose they are to the same effect (see *JBL* 70 [1940]: 249ff.).

Under the Persian kings, Judah was organized in the satrapy of Trans-Euphrates (Ezra 4:11; NRSV, "Beyond the River"), and in the days of Darius I was under the control of a governor at Samaria (cf. 6:6). When the Jews appealed to Darius because of the repressive measures of the governor, the control of Jerusalem was diverted from Samaria (v. 7) and another governor was appointed.
Zerubbabel's temple was built in the same area as the earlier Solomonic and later Herodian structures. (View of the temple mount to the NW.)

Certain vessels taken from the temple of Solomon by Nebuchadnezzar were delivered to Sheshbazzar (Ezra 1:8 – 11), prince of Judah, who led a contingent up to Jerusalem (Ezra 1:11) along with Zerubbabel (2:2). Sheshbazzar had been made governor of Judea by Cyrus (Ezra 1:8, 11), who allowed a measure of local autonomy to the separate peoples. Sheshbazzar came to Jerusalem and laid the foundation of the temple (5:16). When Zerubbabel is said to set forward the work (3:8 et al.), it would appear that he functioned as the deputy of Sheshbazzar. As deputy he was on the site and had the initial contact with the Samaritans who later attempted to frustrate the work (4:5). In the second year of Darius, the prophets Haggai and Zechariah stirred him up to renewed activity (5:1). It is possible that at this time Sheshbazzar was deceased, for Zerubbabel was the governor (Hag. 1:1 – 14).

B. Reconstruction. Sheshbazzar, at Jerusalem in the second year after the return (Ezra 3:2) in the seventh month, laid the foundation of the temple (5:16); this was effected through Zerubbabel (3:8) and the builders (v. 10). In the previous year in the seventh month (3:1 – 3), the great altar of burnt offering had been set up on its foundation (3:2), the sacrifices had been restored that there might be a place of entreaty (3:3), and the Feast of Tabernacles was promptly observed. The start of the reconstruction of the temple was delayed (v. 6b) because materials from Syria had not yet arrived (v. 7).

According to the decree of Cyrus (Ezra 6:3 – 4), the temple was to be built 60 cubits wide and 60 cubits high. In the light of the dimensions of the temples of Solomon and Ezekiel, chambers on the sides and rear were included (see below, VI.C). According to the width of Ezekiel's temple and the rebuilding activities of Josiah, these dimensions appear to be authentic and support the essential identity of the later character of the Solomonic temple and Ezekiel's temple. The temple was completed in the sixth year of Darius in the month Adar (twelfth month, 516 – 515 B.C., Ezra 6:15) Upon its completion, the Shekinah (glory) of Yahweh did not fill the house. It waits for the return of Christ (cf. Ezek. 43:1 – 5). The temple of Zerubbabel is known as the second temple, which continued until the year c. 20 B.C., lasting more than one hundred years longer than Solomon's temple.

1. Construction. Included in the decree of Cyrus was authorization to secure building materials at the expense of the Persian royal treasury (Ezra 6:4). The method of construction followed the previous system. The reference in v. 4 to three rows of stones and a row of timber beams quite possibly refers to the construction of the wall surrounding the inner court of Solomon's temple (1 Ki. 6:36). There was at once an obvious difference discernible between this temple and the temple of Solomon. Many elderly people (Ezra 3:12) had seen Solomon's temple, and when they saw the results of the foundation work they wept, for it seemed inferior by comparison. This was no doubt because of size, the working of stone, and the quality and size of the finished foundation.

Shortly after rebuilding began, obstructionist attempts to frustrate it arose from the people of Samaria because their offer to help was rejected since they were not of the Jewish folk (Ezra 4:1 – 5). Their opposition persisted to force of arms (v. 23), and they shut down the work until the second year of Darius the Great (520 B.C.), when appeal was made to him on the grounds that the restoration had been ordered by Cyrus (cf. 5:17 with 6:3 – 7).

The original adversaries were the Samaritans, who were descended from those whom the Assyrian king brought in to replace the deported northern Israelites. In the days of Haggai and Zechariah the chief adversaries were named: TATTENAI the governor and SHETHAR-BOZENAI and his cohorts (Ezra 5:3). In their report to Darius in an attempt to curtail rebuilding they demanded a search to see if Cyrus did indeed make a decree, which finally was found in ECBATANA (6:2), confirming all the claims of the Jews.

It would appear that the early delay in building progress prevented the raising of the walls of the temple. When, therefore, a foundation is said to have been laid on the twenty-fourth day of the ninth month of the second year of Darius, a question arises as to just what the laying of the foundation was (Hag. 2:18). The year was 520 B.C.—sixteen years after the original laying, a time when little was done (Ezra 5:16). When Haggai and Zechariah stirred up Zerubbabel by their preaching, work began again with the ceremony of laying the foundation, that is, a ceremony in which the foundation was prepared to receive the wall above.

The construction of the temple was delayed because of the physical and legal opposition by the adversaries (Ezra 4:6). The physical opposition prevented the transportation of building materials

from the land round about (Hag. 1:8), and the molestation of the builders as they traveled back and forth from their houses outside Jerusalem's walls to the temple. This would have effectively cut off the work. In the second year of Darius, however, they had been able to build comfortable, even prosperous, homes, for paneled houses are noted (Hag. 1:4).

So Haggai addressed them on this invidious relationship, that God's house should no longer lay waste. The affirmations of the covenant of God with Israel included the erection of a house of worship to be a source of strength for observing the covenant. The efforts of Haggai and Zechariah were directed to stirring up in the people a consciousness of their covenant obligations. To enforce his prophecies, Haggai demanded that the people consider their ways (Hag. 1:5), that they should understand that the drought existed because they had neglected covenant obligations (cf. Deut. 28:32 et al.), suggesting that the obligation in this case was the erection of the temple (Hag. 1:9). Until they put their heart into the task, they could not expect the blessing of God; hence, God had called forth the drought (v. 11). It was at the urging of the prophet Zechariah that the governor, Jeshua the high priest, and all the people obeyed God and began reconstruction in the twenty-fourth day of the sixth month of the second year of Darius (Ezra 3:2, 8).

2. Significance of the temple. As the work progressed, inevitable reference was made to its inferior state in relation to the grand state of the temple destroyed by NEBUZARADAN (2 Ki. 25:8 – 10). Yet this would not deter the advance, since it was God's house; it was an assurance of his redemptive work (Ezra 3:5 – 9; cf. Dan. 9:24). Yet the attitude persisted, for in the ninth month again Haggai mentioned the drought and that the reluctance of the people made them unclean before God (Hag. 1:10 – 11). But God's purposes must be fulfilled, and out of his grace he assured them that the completion of the building was no impossible task for the few people, and would be accomplished under the leadership of Zerubbabel (Zech. 4:9); because of its redemptive symbolism, it must not be despised as a small thing (v. 10). Zerubbabel had been concerned about the attitude of surrounding peoples, but Yah-weh assured him (Hag. 2:21 – 22) of the ultimate triumph of the ways of God over men. Zerubba-bel would see that victory and would realize that his labor would be a seal of triumph in the face of obstacles. The spirit of God would oversee the work to take it forward to completion (Zech. 4:9).

Zechariah likewise directed words of assurance to the people on the twenty-fourth day of the eleventh month in the second year of Darius (Zech 1:7), symbolized by the measuring line (1:16). It was further certified by the promise of Yahweh to come and dwell in their midst (2:10 – 13; cf. Ezek. 43:1 – 5). The eschatological significance of the temple is given (Zech. 6:12 – 13). Jeshua as priest signified the priestly character of the "Branch," the offspring of David who would build the temple of Yahweh, who is Christ (Jn. 2:21; Matt. 16:18) and who will dwell in his people. There is also the eschatological hope of Israel's dwelling in their own land, symbolized by their occupation of Jerusalem (Zech. 2:4 – 5).

3. Materials for the temple. Materials for the temple adornment came from the people through freewill offerings (Ezra 2:68 – 69). Included in the decree of Cyrus was the ordinance that the Jews who remained in Babylon were to make their freewill offerings for the temple as part of their obligations to their brethren who returned.

C. History of the temple

1. In the era of Ezra and Nehemiah. The work of reconstruction was finished in the sixth year of Darius, 515 B.C. (Ezra 6:15), and was dedicated with much rejoicing. The courses of the priests were instituted (v. 18), and the first PASSOVER at the new building was celebrated by the people (v. 19). This is the last mention of the temple and Jerusalem in the OT. Ezra came to Jerusalem in the seventh year of ARTAXERXES I, 458 B.C. He carried up silver and gold for the temple for either adornment or offering (7:16 – 20). If additional funds were necessary for restorative purposes, they were to be secured from the royal treasury (v. 20). The officials of the satrapy that included Jerusalem were also assigned the duty of assisting in this matter and were obligated to keep within a limit (vv. 21 – 22). The restorative work was subject to the commands of the "God of heaven" (v. 23), as a petition to him for his favor upon the empire. It would appear that the efforts of "force and power" (4:23 NRSV) may have been extensive, and although complaint had been directed by Bishlam, Mithredath, and Tabeel to Artaxerxes, information based on the decrees of Cyrus and Darius finally overcame local opposition. The royal largess committed to Ezra (ch. 7) provided rectification of the efforts of the adversary to curtail the work. The record of the return of Ezra and the execution of his commission is given in ch. 8.

Ezra's ministry in Jerusalem involved the separation of the Israelites from "defilement" because of intermarriage with the surrounding peoples (Ezra 9 – 10). Ezra prayed and carried out the necessary judicial activities. This was done to prevent the collapse of the Jewish state through absorption into other peoples.

Nehemiah's record carries forward in brief glimpses the function of the temple among the people and their various attitudes toward it. Nehemiah came to Jerusalem in the twentieth year of Artaxerxes (445 B.C.), thirteen years after Ezra (cf. Ezra 7:8). The report of the condition of disrepair of the city (Neh. 1:3) moved him to the realization of the need of leadership; hence his prayer involving a request that the king release him from his royal service so he could return to Jerusalem (vv. 5 – 11). He asked specifically for wood beams to repair the fortress at the gate of the temple (2:8). The singers and the Levites were again appointed to their place in the temple, providing a functioning temple worship service to encourage the people (7:1).

In the covenant renewal ceremony (Neh. 9 – 10), reference is made to the ordinance of the one-third shekel to support the temple ritual as an implementation of the vow of loyalty to God (10:32; cf. v. 29). Also enumerated are other offerings of first-fruits of various kinds from the field and garden, and even the housewives' bread dough (vv. 34 – 38). These were to be brought to the house of God (v. 38) and stored in its chambers (v. 37). These chambers were built in the reconstruction of Zerubbabel. Tithes, also, were stored in the treasure chambers (vv. 38 – 39). Officials were later appointed over the separate chambers as treasurers to oversee the ingatherings (12:44).

When Nehemiah left to return to King Artaxerxes in Babylon, ecclesiastical affairs fell into disarray. ELIASHIB, the high priest, set apart a chamber in the court of the temple for TOBIAH (Neh. 13:7), who was an Ammonite (2:10) and a former adversary of the work of restoring the city. This was the result of the spiritual indifference that set in soon after Nehemiah left and quickly brought about what could not have been done by direct frontal attack (cf. 13:10 – 12). Nehemiah, on his return, saw it as contamination of the Lord's house, drove Tobiah out, and had the temple areas sanctified (vv. 8 – 9).

2. From Nehemiah to the Maccabees. There are a few references to this period in the APOCRYPHA. The book of 1 Esdras is primarily a parallel compilation of 2 Chr. 35 – 36, Ezra 1 – 10, and Neh. 7:13—8:13 (see ESDRAS, FIRST). No constructional information is provided. The completion date of

Zerubbabel's temple is given in the Greek as the twenty-third day (1 Esd. 7:5) instead of the third day (cf. Ezra 6:15). It may be that the part translated "twenty" fell out in transmission.

JOSEPHUS (*Apion* 1.22 §19) quoted Hecataeus of Abdera on the general arrangement of the temple complex in the era of Alexander. The enclosing stone wall is described as 500 ft. (Gk. *pentaplethros*) long and 100 cubits broad with double cloisters within. The altar was erected of unfinished white stones to 20 cubits each way and 10 cubits high. The house contained the altar (of incense) made of gold and the lampstand (also of gold) having a flame that was never allowed to go out. Hecataeus distinguished this temple in its character from other temples by the fact that there were no idols or gifts of such things by eminent personages, where also no growing things were planted, as was done in pagan temples of other peoples.

In the book of ECCLESIASTICUS, the high priest SIMON II (end of 3rd cent. B.C.) is described as repairing the temple (Sir. 50:1 – 3) for which he built great fortifying walls with turrets to protect it. Simon also provided a cistern for water storage, the size indicated by a hyperbolic reference to Solomon's molten sea. Then followed a panegyric description of Simon, his person, and the conduct of his service in the temple. This is the only description of the temple service of this period.

ANTIOCHUS III rewarded the Jews for their support in his early campaign against Egypt (Jos. *Ant*. 12.3.3) to the extent of providing sacrifices and ordering repairs, including the completion of the erection of cloisters, as well as other repairs that in the estimation of local authorities needed to be done. Necessary materials were to be provided, free of taxation, from the forests of Judea and other countries. Taxes on the Jews for three years were remitted to facilitate this work. In addition Antiochus decreed that no unpurified person be allowed in the temple precincts. Included in the general ban of the impure were unclean animals.

Next in order of time are the records preserved in the books of MACCABEES. The account of the plundering of the temple by Antiochus IV Epiphanes in 170 B.C. is given in 1 Macc. 1:20 – 24. There was in the temple the golden altar of incense; the table of showbread; the lightstand and its attendant equipment; many implements of cups and bowls and incense holders; the crowns; the veil and gold plating at the wall where formerly had been the cherubim. In addition, he rifled the treasuries and departed with gold, silver, and other precious vessels as well as many other items. Some of these were the vessels Sheshbazzar had brought back from Babylon. One learns at this time that the furniture was in the second temple and also that a new veil had been hung. Shortly thereafter, it was decreed by Antiochus that the sacrifices should cease (1:45).

In December of 168 B.C. (25th Kislev, Dec. – Jan.), Antiochus invaded Jerusalem, penetrated into the temple precincts, and by sacrificing a sow he desecrated the altar of God. The priest MATTATHIAS and his sons raised the standard of revolt at the village of MODEIN where began the Maccabean revolt. Three years later, in Kislev of 165, Judas MACCABEE came to Jerusalem after defeating the forces of Antiochus, and when the people saw the courts overgrown and in disrepair, they broke into weeping. Promptly they raised a new altar of unhewn stones (1 Macc 4:47) after dismantling the polluted one, proceeded to repair the Holy of Holies and the Holy Place, and then hallowed the courts for use. Vessels newly made were brought in, including the lampstand, the altar of incense, and the table of showbread. Incense was then lighted as was the lampstand, new bread was placed on the table, and a new veil was hung (vv. 49 – 51). On the next day, the twenty-fifth, the altar was sanctified and sacrifices were resumed amid great rejoicing. In addition, the doors of the gates that had been torn off were replaced and the gates were rededicated. The celebration of the altar became the basis for the Jewish festival of Hanukkah (see DEDICATION, FEAST OF). It signified particularly the relighting of the lampstand in the Holy Place. While Antigonus was away

campaigning in Persia to replenish his coffers, walls earlier destroyed in his attack on Jerusalem were rebuilt, probably the walls of Simon II.

In the year 161 B.C., ALCIMUS, friend of Demetrius I king of Syria, tore down the wall forming the inner court of the temple (1 Macc. 9:54), intending to allow Gentiles free access into the inner precincts. In the year 154, the warlike motions of Demetrius evoked alarm in Judea, causing Jonathan, the new Maccabean leader, to strengthen the outer walls of the temple (10:11) with stone walls four feet thick. Forces of conflict thus required the Jews to transform their temple into a fortress for protection. Simon, Jonathan's brother, became high priest after the death of the former and he further strengthened the temple defenses (13:52).

ARISTEAS, in his account of the origin of the SEPTUAGINT, related in glowing language the presentation of furniture to the temple by PTOLEMY Philadelphus (283 – 245 B.C.), king of Egypt. This furniture consisted of an outsize solid gold table of showbread handsomely decorated with wreathed work, fruits, and precious stones held in settings. Mixing bowls, a meander of scale-like appearance, and gold vials with wreathed work decoration were also included. Aristeas claims to have accompanied the embassy bearing the gifts to Jerusalem. There he was impressed by the fortress walls of the temple standing more than seventy cubits (*Letter of Aristeas* 84). The portal was covered with a costly curtain waving in the breeze. The stone-paved court floor was necessary because of the frequent washings to remove the blood of the sacrifices (§88). Cisterns underground provided ample water supplies.

Aristeas continued with an overstressed description of the labor of the priests in the sacrifices (§92), and mentioned being taken to the fortress adjacent to the temple that had walls higher than those of the temple (§§100ff.). Aristeas described the presence of an inexhaustible spring within the temple precincts. No trace of such a spring has ever been found in the area, and for the tradition no reasonable ground can be adduced (however, cf. Ezek. 47). Since nothing is written in 1 Maccabees relating to these gifts of Ptolemy, it might appear that this record in *Aristeas* is imaginary, used as supporting material for his story of the production of the LXX. He agreed, however, that the temple was oriented to the E on its height in the city.

3. From the Maccabees to Herod. Josephus is the source of much of the information regarding the temple in this period (on his reliability as a historian see JOSEPHUS, FLAVIUS III; on the history of this period see HASMONEAN). He reports that Alexander Jannaeus (104 – 78 B.C.) was involved in an incident in the temple (*Ant*. 13.13.5), and this account sheds light on the arrangement of the temple courts. The Jews resented Alexander's officiating as high priest and pelted him with citrons. There was easy access to the high priest at the altar (cf. 1 Macc. 4:38 – 48), for the wall of the court marking off the area of the altar was not so high as to prevent it. Alexander had a wooden palisade erected about the priests' court to prevent future repetitions of their displeasure.

Aristobulus II (69 – 63 B.C.) fled to the temple and used it as a fortress when ARETAS III of Nabatea moved against him on behalf of his brother Hyrcanus II, the rightful high priest and king. When both Hyrcanus and Aristobulus appealed to POMPEY for adjudication, he took so long to make up his mind that Aristobulus took precipitate action and was taken into custody and detained. His cohorts, however, seized the temple and withstood a siege by Pompey for three months. Pompey finally breached the walls with battering rams, then slaughtered the officiating priests and 12,000 other Jews. During the siege, defending Jews cut the bridge across the Tyro-poeon Valley by which access was made to the city on the western ridge (Jos. *War* 1.7.2). Pompey profaned the Holy of Holies by entering it to satisfy his curiosity but took no plunder. Afterward he ordered it rehallowed

(*Ant*. 14.3.1 – 4; cf. *War* 1.7.6).

Later Crassus took a side trip from his campaign against the PARTHIANS to Jerusalem and carried off the treasure Pompey had refused to take (*Ant*. 14.4.2). In skirmishes with Herod, the Jews frequently fled to the temple because of its defensive character (*Ant*. 14.13.4). When Herod had been declared king of the Jews by the Roman Senate, he proceeded to move against Antigonus, last of the Hasmoneans. In the attack on the city and temple, certain of the cloisters were destroyed by fire (14.16.3), but when the city was taken, he prevented the soldiery and foreigners from entering the temple and desecrating it, taking thought for his future domains. To deliver the city and temple from further plundering, Herod bought off the soldiers and their officers. Not until the eighteenth year of Herod's reign did further development of the temple take place.

VII. Herod's temple

A. Purpose. Zerubbabel's temple had assumed the proportions of a fortress. Though the building was highly regarded by the Jews, this fortress character rendered it subject to criticism in Herod's opinion and therefore rebuilding was necessary. His principal and ostensible reason was presented in a speech to the people, saying that the temple did not measure up to its former glory, specifically noting that it lacked some 60 cubits of height from that of preexilic times (Jos. *Ant*. 15.11.1); this comment obviously referred to the height of the preexilic porch as 120 cubits (2 Chr. 3:4 MT; see above, IV.E.2), for Zerubbabel's temple was only 60 cubits high by order of Darius (Ezra 6:3). The actual reason, given before Josephus recorded Herod's speech, is that the rebuilding was to provide among the Jews an eternal remembrance of his name. Yet the Jews were fearful that, once started, it would not be completed through lack of adequate funds. To allay their fears, Herod assured the people that all materials required for completion would be made ready beforehand. By way of further assurance that no unacceptable persons would enter upon the premises, for the building would be in use meantime, he trained some priests as masons, others as carpenters, and the work commenced (*Ant*. 15.11.2).
Artistic reconstruction of the Herodian temple. (View to the W.)

B. Data. Sources for the description of Herod's temple are not many. Josephus in his *Antiquities*

(15.11) and *War* (5.5), the MISHNAH tractate *Mid-dot*, and the few references in the NT comprise the principal source material. A few references are found in parts of the TALMUD. Since Josephus wrote nearer to the time of the temple than when *Middot* was composed, his record is preferable in some cases, yet *Middot* does indeed provide dimensions where Josephus does not. Actually only a small portion of the NT references to the temple bear on its structure, for most refer to attitudes of the Jews toward it. That the temple was an imposing structure is evident from them.

C. Construction

1. The temple proper. The work of rebuilding the sanctuary (Holy Place and Holy of Holies) was begun in the eighteenth year of Herod's reign, 20 – 19 B.C. (Jos. *Ant*. 15.11.6). The white stone used was probably the so-called *mezzeh* stone native to the area, finely cut and polished. The dimensions of the stones given by Josephus (25 x 8 x 12 cubits) have often been thought to be an instance of hyperbole, but recent excavations have uncovered massive stones, one of them about 40 ft. long. The former structure was removed down to bedrock and new foundation stones were laid, 100 cubits long but 100 cubits wide at the porch, and 60 back of the porch for the Holy Place (Jos. *War* 5.5.4).

There were side chambers at the sides and rear sixty cubits high, and above this was a narrower structure extending an additional forty cubits upward, making a total of 100 cubits (*War* 5.5.5). The façade, or porch, was 100 cubits high and 100 cubits wide, producing an extension of 20 cubits beyond the walls of the Holy Place. The portal in the E face of the porch was 75 cubits high by 25 broad, without doors, exposing to view the Holy Place entrance wall within. Interior measurements of the porch are given as 90 cubits to the ceiling, 50 cubits N to S (length), and 20 broad. The Mishnah (*m. Mid.* 4:7) gives the thickness of the front wall of the porch as 5 cubits, the E-to-W width as 11 cubits (inside), and the Holy Place wall as 6 cubits, a total of 22, near enough to the 20 of Josephus (cf. above on the dimensions of the porch of Ezekiel's temple for the same dimensions). The front wall of the porch was stabilized against outward bulging by the insertion of cedar beams from the Holy Place wall (*m. Mid.* 3:8).

The portal opening was framed by a lintel formed of five oak beams, each separated from the one below by a course of stones, the first beam being one cubit longer on each end than the opening below, and each upper beam one cubit longer on each end than the beam below. Draped on the face of the porch wall were vines of gold-work with gold grape clusters as tall as a man (Jos. *War* 5.5.4). Josephus next described doors to the Holy Place of 55 cubits in height and 16 in breadth. F. J. Hol-lis (*The Archaeology of Herod's Temple* [1934], 202) rejects this door size as too large for the practical reason that it would be impossible to operate them. The Mishnah (*m. Mid.* 4:1) gives the dimensions as 20 cubits high and 10 wide, more in order of operability.

These doors were doubled, a set on the E side and one on the W side of the doorway. They were formed on a pivot member of half a cubit, an attached leaf member 2.5 cubits wide, with a folding member 2 cubits wide, for a total of 5 cubits, half the opening width. This arrangement provided that the doors cover only half of the wall thickness, 3 cubits, as they laid back against the jambs when open, the fold point abutting. Josephus adds that a great veil was hung over this door, excluding from view the inside of the Holy Place. This is not enumerated in *Middot*; instead at the ceremony of the red heifer, the priest on the Mount of Olives was to look directly into the Holy Place at the propitious moment (*m. Mid.* 2:4). The curtain of which Josephus wrote may have been added at a later time when fears of defilement of the temple by even a look by a foreigner were felt. The area left at the ends of the porch area was occupied by rooms for sacrificial equipment used at the altar (*m. Mid.*

The Holy Place itself was 40 cubits long by 20 wide and 60 high (Jos. *War* 5.5.5) and contained a lampstand, the table of showbread, and the altar of incense. The Holy of Holies was separated from the Holy Place by a veil and measured 20 by 20 cubits in plan and 60 cubits high. No furniture was placed in it, but it was considered unapproachable and inviolable. According to the Mishnah tractate *Yoma* (5:1), the partition was two veils, hung one cubit apart, one attached at its N side, the second at its S side, requiring the high priest to pass between the two from S to N to enter the Holy of Holies. It was this curtain that was rent in two when Christ died (Matt. 27:51), showing that the way into the presence of God was open (Heb. 6:19).

Chambers in three stories were built against the side and rear walls of the Holy of Holies, approached from small doors in either side of the porch (Jos. *War* 5.5.5), five on each story on the N and S sides, three in the first and second story, and two on the third story on the W side (*m. Mid.* 4:3). The width of the first-story rooms was 5 cubits, the second was 6, and the third 7 (cf. 1 Ki. 6:6). The difference was effected by cutting back the wall of the Holy Place and Holy of Holies in each upper story by one cubit and resting the floor beams on the shelf thus formed. The side walls of the Holy Place and Holy of Holies were 6 cubits and the outside walls of the chambers were 5 cubits thick; then occurred a space of 3 cubits for water drainage for the suspended ceiling, and an outside wall of 5 cubits, the drainage space occurring only on the N and S sides (*m. Mid.* 4:7). The whole was roofed over all around, forming the wide area for the last stand of the priests who would later resist Titus (Jos. *War* 6.5.1).

Access to the roof was made by progressing through the upper story from the NE corner westward, then southward and eastward to a pole ladder at the SE corner. On the roof surface was a line of stones set flush, which marked the division between the Holy Place and the Holy of Holies. Above the Holy of Holies below the upper roof was a chamber with access openings to enter the Holy of Holies to make repairs. Around the roof was a parapet to guard against persons falling off. The porch face of the Holy Place wall was decorated with gold (leaf?), and the E face of the porch was covered with gold plates, presenting a most brilliant spectacle from the Mount of Olives (Lk. 19:37 – 44; cf. Matt. 24:1 – 2).

2. Inner courts. From the porch a descent of twelve steps led to the priests' court. These steps were divided into flights of three treads each, of 1 cubit width and 0.5 cubit height, with a landing of 3 cubits between. Against a top landing of 4 cubits (*m. Mid.* 3:6) a more logical tradition is the 5 cubits of area in the thickness of the front wall of the porch at the portal; the edge of this area would form the top riser of the uppermost flight of steps. The total of 15 cubits in the plan of the steps provide 7 cubits from the bottom riser to the altar. Other calculations bring the bottom riser too near the altar to provide proper area for circulation around it. The total distance from porch wall to altar was 22 cubits (*m. Mid.* 3:6). The height of the steps was 6 cubits, agreeing with the height of Ezekiel's platform (Ezek. 41:8). The temple appears to have been set on a platform the same height as the temples of Solomon and Ezekiel.

The altar was 32 cubits square at the ground, formed with a great plinth course, or foundation, one cubit high, with the next upper face set back one cubit (*m. Mid.* 3:1). The surrounding was filled solid and then timber was laid across the foundation for a height of 5 cubits, the outside face being 30 cubits in length. A structure was placed on top of the surrounding and its face was set back one cubit, thus being 28 cubits square. This second structure was 3 cubits high and there was again a setback of one cubit at the top. At the corners of the surrounding were stone formations, designated horns, 3

cubits high by a cubit square. On top of this was a final level, set back one cubit and one cubit high and giving a square 24 cubits on a side. The total height of the altar reached 10 cubits. The priests walked on the upper space of one cubit and on the next lower one-cubit space. On the top level the sacrificial fires were laid. The 50 cubits square of the base of the altar as given by Josephus (*War* 5.5.6) appears to be much too large for the area available. In relation to previous altars, a rabbinic tradition indicates that the altar of the Herodian temple was more like the postexilic altar, which was enlarged over the preexilic altar (*m. Mid.* 3:1).

Tractate *Middot* presents the tradition of a drainage channel to drain off to the Kidron the blood sprinkled on the base of the altar. There has been found no physical evidence of such a drain channel from the cave under the Sakhra, so this cannot be used as a main point for locating the altar on the Rock. Moreover, the drain channel was said to start at the SE corner of an altar, whether on the Rock or elsewhere. Access to the altar was by an incline on the S side of 32 cubits long by 16 wide. The stones for the altar and ascent were secured at Beth Hakkerem (Jer. 6:1; Neh. 3:14).

The sacrifices were slaughtered N of the altar, then hung up on a skinning rack near the slaughterer's shed and skinned before being placed on the wood on the altar (*m. Mid.* 3:5). The laver was placed S of the altar but aligned between the altar and porch (3:6).

The Court of the Priests, the area within the inner court immediately surrounding the temple, was 187 cubits long by 135 wide, N to S (*m. Mid.* 5:1). Surrounding this inner court was the Court of Israel, also 135 cubits N to S and 11 cubits E to W. The length of 135 cubits gives the length of the line separating these two courts at the E of the altar; from the N and S ends of this line, boundaries marked the separation of the two westward to the W limit of the Court of the Priests. The Tosefta states that the Court of Israel surrounded the Court of the Priests (*t. Zeb.* 30.6.1). The Court of Israel was at least 11 cubits wide beyond the Court of the Priests on all sides, giving a length of 198 cubits E to W and 157 cubits N to S, and was surrounded by a colonnade. Josephus (*War* 5.6) described a separator between these two courts "about a cubit in height." The Mishnah indicates that the division was a marker set flush on the court surface (*m. Mid.* 2:7).

In the inner court were two other buildings, the building on the N containing a chamber named Parva, and that on the S containing the room of the draw well. Each building had three rooms, which were possibly located partly within the Court of the Priests and partly within the Court of Israel.

The colonnade around the Court of Israel is described as single but otherwise not inferior in any way to the colonnades of the outer court; since the latter were doubled and 30 cubits wide, these were 15 cubits wide on at least three sides and possibly on the W side, although Josephus (*War* 5.5.2 – 3) seems to indicate otherwise. The outer side of the colonnade was a wall 25 cubits high (ibid.). In this wall and projecting outward at least 30 cubits were gates, three in the N wall, one in the E wall called the Great Gate (Muehsam, *Coin and Temple*, 26), and three in the S wall (cf. *m. Mid.* 1:4). On either side of the Great Gate was a chamber; the S chamber was called Phinehas, where vestments were stored, and the N chamber was that of the maker of the flat cakes of the daily baked offering.

3. Women's Court. Eastward through the Great Gate at the E side of the Court of Israel (Jos. *War* 5.5.3), which was fashioned of brass, led to a fifteen-step stairway down from the level of the Court of Israel to the level of the Court of Women. These steps were curved (*m. Mid.* 2:6) and located at the middle of the W side and on line with the portal of the porch. Josephus (*War* 5.5.2) described a terrace against the enclosing wall of the colonnade at the S side of the inner court, being 10 cubits wide, called the Ḥel (*m. Mid.* 2:3). One reached this terrace by a flight of five steps, each 5 cubits wide down from the gates in the S wall. Beyond the terrace were fourteen steps according to

Josephus, but twelve according to *Middot*. Since the terrain slopes up from E to W, the steps would have to be more in number on the E than the W, two being sliced off by the rising ground. These steps did not continue around on the W because the ground rose rapidly. Since fifteen steps led up from the Women's Court to the Court of Israel, the former must have been only slightly higher than the level outside at the foot of the fourteen steps up to the Ḥel.
Limestone inscription from the 1st-cent. Jerusalem temple, warning that any foreigner entering the wall surrounding the sanctuary forfeits his life.

The Women's Court was 135 cubits square between bounding lines (*m. Mid.* 2:5). Outside this area at the four corners were courts 40 cubits square. The SE court was named Nazirite; the NE, Woodshed; the NW, Leper's Chamber; and the SW, Shemanyah, possibly meaning "oil of Yahweh" (Hollis, *Archaeology*, 287). At a time later than the construction of the Women's Court with the courts at its corners, balconies were added for use by the women so they could see the ceremonies inside the inner court (cf. *m. Mid.* 2:6). At the W side of the Women's Court, approximately on the same level and under the Court of Israel, were a series of chambers where musical instruments were stored (*m. Mid.* 2:7).

4. The Soreg. Below the Ḥel and beyond the steps down from it was an area bounded by a low wall called the Soreg (*m. Mid.* 2:3), 3 handbreadths high, but 3 cubits high according to Josephus (*War* 5.5.2), and a finely wrought trellis work with ornamental columns on top. The Mishnah probably describes the wall in its earlier form, whereas Josephus describes it at a time after it had been embellished. On this wall on the outward side was placed a warning: "No Gentile may enter within the railing around the sanctuary and within the enclosure. Whosoever should be caught will render himself liable to the death penalty which will inevitably follow." This probably was located N of the stairs up from the Huldah Gate.

5. The outer walls. The present area of the Ḥaram esh-Sharif (Noble Sanctuary), where the Qubbet es Sakhra (Dome of the Rock) is located, is considerably larger than the area of the court of Herod's temple. The present court is trapezoidal in shape, 929 ft. on the S side, 1,596 ft. on the W, 1,041 ft. on the N, and 1,556 ft. on the E. Only the SW corner and the NE corner are right angles. The E and W walls coincide so markedly in appearance and location with the description of Herod's works (Jos. *Ant.* 15.11.3; *War* 5.5.1) that these in general must be considered Herodian (cf. Simons, *Jerusalem*, 391 – 92). That the W wall and the southernmost part of the E wall are of the same age as the S wall is seen in the sameness of the older (lower) stonework in these walls. Neither the E nor W walls of Herod's work extended as far N as the present northern limits of the Ḥaram, for the fortress ANTONIA was connected to the outer court by cloisters (Jos. *War* 2.15.6), and there was a moat (*Ant.* 14.4.2) between the N wall of Herod's enclosure and Antonia (C. Warren, *Plans, Elevations, Etc., Showing the Results of the Excavations at Jerusalem* [1884]).

An indication of the N end of the E wall in Herod's time was found in the slight outward bulge in it just N of the "Golden Gate" (Gate to Mt. Olive) at a place called "Solomon's Throne." This point was about 1,158 ft. N of the SE corner. In the southerly end of this E wall was another slight bend in the wall, about 240 ft. N of the corner. At about 105 ft. N of the corner was a construction joint the full height of the wall, indicative of later construction (for the significance of this joint, see below, "royal portico"). From this joint northward to the "Throne of Solomon" the masonry originally below ground has marginal drafts but projecting fields, whereas the stones S of the joint have smooth faces full height. Josephus (*Ant.* 20.9.7) relates that in the general repairing of the temple complex, Herod Agrippa was petitioned to rebuild the porticoes atop this E wall. It would seem that this colonnade was not built by Herod the Great since the repairing would have come too soon after its completion. It would appear, then, that this wall was pre-Herodian and that the wall S of the joint and the S wall was built by Herod the Great. Simons (*Jerusalem*, 422) shows that the E wall was actually a former city wall that Herod incorporated into his enlarged temple enclosure, thus providing more space E of the Sakhra for the temple area, later occupied in part by the Women's Court.

The W wall above and below ground presents a single homogenous character in its entire length. South of Barclay's Gate (gate at the Valley Stairs) the lower courses down to bedrock have drafted edges but rough fields, indicative that they were below original finished grades. Stones above these and to the N have drafted edges and smoothed fields, pointing out that they were above the original finished grade, thus showing the general lay of the terrain at the time the wall was built. The present ground surface, however, is above the top of the stones with rough fields, showing the extent of fill to modern times.

The S wall is made up of two types of stones. To the E of the Double Gate to the SE corner the stones from bedrock to the later renovations are smoothed face with drafted edges, whereas to the W of Double Gate below original grade they are rough face fields with drafted edges, the same as the southern end of the W wall. The area thus enclosed by these walls is said to have been double the area of the previous sanctuary (Jos. *War* 1.21.1). It would appear that a large part of this occurred at the S end, partly on the E side and the rest on the W side.

6. The gates. In the S wall are indications of three gates. A single gate was located 105 ft. from the SE corner, the triple gate at 295 ft., and the double gate at about 558 ft. Their sills occurred presumably at or near the original ground level. The double and triple gates opened into tunnels leading northward and terminating in a staircase leading up to the outer court. The Soreg would have been situated N of this because foreigners would have used this approach from the lower city. Their

floors were approximately at bedrock and provided access from the city to the S. The gates are walled up, and the double gate is partially hidden by a disfiguring mass of broken buildings covering the western half.

Josephus (*Ant.* 15.11.5) recorded four gates in the W wall. Since at ROBINSON'S ARCH the excavations reveal no bridge piers across the Tyropoeon Valley at this location, the omission indicated that there was no gate, but rather a balcony overlooking the valley (Simons, *Jerusalem*, 424). Josephus (*War* 2.16.3) indicates a bridge connection between the temple and city that was near the first wall, and this bridge served the main gate, or first gate. This was the location of Wilson's Arch (causeway gate), which is also the area of the Gate of the Chain (Bab es-Silsileh). At Barclay's Gate (gate at the Valley Stairs), a stepped way led down into the Tyropoeon Valley and up on the other side to the SW hill. The other two gates were situated to the N of the Gate of the Chain and led to the suburbs, that is, that part of the city N of the first wall (Jos. *Ant.* 15.11.5).

In the N wall was one gate called Tadi (*m. Mid.* 1:3). Josephus's narrative (*War* 2.19.5) suggests that it was below the level of the outer court, thus in the deep ditch at the N. There was only one gate in the E wall (*m. Mid.* I, 4), replaced by the present Golden Gate of Byzantine construction (Simons, *Jerusalem*, 428), and built over an earlier gate.

The area within the enclosing walls was filled in to provide the necessary required court space. At the SE corner are Solomon's Stables, formed of stone paving over arches supported by columns down to bedrock. This structure appears to be of later date than the Herodian work, and was used by the Crusaders. The tops of the present outer walls date from even later times. The level of the royal portico may have been somewhat lower than the level of the Ḥaram at its S end.

7. The colonnades. Josephus (*Ant.* 15.11.3) records that Herod enclosed the outer court with "very large cloisters…and he laid out larger sums of money on them than had been done before him," so that by comparison his were the most imposing. It has also been pointed out that on the E side the porch known as SOLOMON'S COLONNADE (Acts 3:11) existed previous to the work of Herod (cf. Muehsam's revealing study, *Coin and Temple*, 33 – 34). Muehsam (ibid., 35) states that the ark was framed inside the gate pictured on the coin of year two and that a colonnade was shown in the foreground (i.e., lower down, for at the ceremony of the red heifer Solomon's Colonnade would have been quite below the line of sight of the priest from the Mount of Olives into the sanctuary). The evidence from the coin indicates that Solomon's Colonnade was open on the E face, not closed by a stone wall.

Herod built a new double-aisle colonnade on the W side and probably rebuilt a colonnade on the N (cf. Jos. *Ant.* 14.16.2, which points out that colonnades were destroyed in Herod's attack on Jerusalem). These were built of white marble carved from single stones, 25 cubits high and spaced at 30 between rows (Jos. *War* 5.5.2). At the S wall he erected a three-aisle colonnade with the center aisle higher than the side aisle (*Ant.* 15.11.5). This was called the royal portico, so designated perhaps in remembrance of the location of Solomon's royal quarters that once occupied this area (cf. Simon, *Jerusalem*, 401 n. 1).

At the S side of the portico was a wall to which the S row of columns were attached, but in which presumably windows were made. The rows of columns were spaced 30 ft. apart at the side aisles and 45 ft. at the center aisle, which was twice as high as the side aisles. Columns were said to be 27 ft. high, with bases of doubled *tori* and capitals in the Corinthian order. The diameter of the columns was such that three men were necessary to surround a column by joining arms, about 4.5 ft. in diameter. The overall height to the top of the façade of the side aisles was 50 ft.; with the center aisle rising above the side aisles, a clerestory resulted. The "front" face of which Josephus wrote

(*Ant.* 15.11.5) can be construed as the S face above the high S wall: "the fourth front of this court facing south."

The colonnade was formed of fine polished stonework, having rectangular pillars to which the columns were attached, thus providing windows through which the country to the S could be observed. The roof beams were carefully framed onto (interwoven with) the stonework. The ceilings of the cloisters were decorated with carved cedar paneling. Since the roof was constructed of wood, the high center clerestory probably was also constructed of wood walls of posts and wood paneling, with the roof framed of wood beams as were the lower roofs. Windows would have been necessary in the clerestory walls to let light in to permit observation of the carved ceilings. The clerestory structure would have towered 100 ft. or more into the air.

In this royal portico were 162 columns and their length was a stadion (or 630 ft., Olympic measure). If there were four rows of columns, each row would have had forty or forty-one columns, depending on how this portico was joined to adjacent structures. The maximum spaces would be forty, which works out to 15.75 ft. for column spacing. Not knowing the aisle spacing of Solomon's Porch, it would be impossible to conclude whether the royal portico connected or not. Hollis (*Archaeology*, 106 – 7) considers the portico to extend the full length of the S wall, but this was longer than the stadion of Josephus for the length of the portico (cf. also Simons, *Jerusalem*, 410ff.).

The approximate width of the portico was 105 ft., agreeing remarkably with the vertical joint in the E wall, located about 105 ft. N of the SE corner. It appears that this portion of the Ḥaram was specifically added by Herod to provide the needed space for the royal portico (cf. Jos. *Ant.* 15.11.3). Josephus seems to indicate that the portico did not extend the full length of the S wall. If so, something occurred that caused the portico to be terminated (cf. Simon, *Jerusalem*, 410 n. 1). It is possible that approximately where the stadion of length of the portico would end (near the location of the double gate) there was a change in masonry from smoothed field stones to rough faces for the full height, which would represent a later stage in Herod's expansion of the temple platform. The presence of a balcony at the W wall overlooking the Tyropoeon Valley and the Xistus suggests a building of some size at the SE corner, near which the portico terminated, and which therefore prevented its extension to the W end of the S wall.

8. The outer court. This was the open area extending from the inner side of the porticoes to the Soreg. It was here that both Jews and Gentiles were free to mingle, but beyond the Soreg only Jews were permitted to go. This outer court was paved with variegated stones (Jos. *War* 5.5.2).

9. The cisterns. There are some thirty-two caves, pits, and cisterns for water storage within the present Ḥaram; all but six are within the area of Herod's enclosure. Not all came from the same period; some were ancient passages closed up to form cisterns; others were completely in natural stone; and still others had built roofs. Exploration of these cisterns and caves has furnished some accurate information concerning the contours of the bedrock beneath the present enclosure. In all, Warren estimated that their storage capacity exceeded ten million gallons (Simons, *Jerusalem*, 350). They were supplied not only by collecting the rainwater falling in the enclosure, but also by a conduit from the vicinity of Bethlehem.

D. The Tower of Antonia. This structure was built by the HASMONEANS and Herod strengthened it as a fort (Jos. *Ant.* 15.11.4). It was located N of the northern wall of the temple enclosure, approximately on the line of the western wall (*War* 5.5.8) on a rocky eminence near what is now known as the Convent of Notre Dame de Sion. The base of the fort was a glacis of flagstone topped by a wall 3 cubits high, surrounding the tower that rose behind the wall to a height of 40 cubits. The interior rooms were fitted out like a palace—having cloisters, apartments, baths, and courtyards. Its more exact arrangement was a foursided structure with a tower at each of the four corners, filled with rooms enclosing a central courtyard. It was on the pavement of this courtyard that Christ was arraigned by the Jews before PILATE. The SE tower was 70 cubits high, to command an adequate view of the temple complex, whereas the other three were 50 cubits high.
Model reconstruction of the Antonia fortress, located on the NW corner of the temple mount. (View to the SSW.)

From Antonia, stairs led down to the temple area (cf. Acts 21:34, 35, 40)—one at the E side leading to the N cloister and one at the W leading to the N end of the W cloister. There was a wide

ditch, or moat, between the N colonnade and the fortress. At some later time it was filled in, and part of the rocky eminence on which Antonia once stood has since been cut away, although parts of it may still be seen (cf. Simons, *Jerusalem*, 374ff., 416ff.). See also ANTONIA, TOWER OF .

E. History of Herod's temple

1. NT period. The earliest reference to the temple with its special architectural features is in Matt. 4:5 (cf. Lk. 4:9), where a pinnacle is mentioned. This is possibly a corner of the clerestory roof of the royal portico overlooking the Kidron at the SE corner. The decorations of the temple (Lk. 21:5) agree with Josephus's description (*War* 5.5.6). The gold was an item of pride, and by it oaths were taken (Matt. 23:16). Solomon's Porch, the E colonnade (Jn. 10:23), was one of the places where Christ taught. When he died, the veil between the Holy Place and the Holy of Holies was rent in two (Matt. 27:51; Mk. 15:38; Lk. 23:45). By the BEAUTIFUL GATE (Acts 3:2) the lame man was healed, most likely the gate between the Women's Court and the Court of Israel. The temple complex other than the temple itself was still under construction in the first year of Christ's ministry (prob. A.D. 27), which was the forty-sixth year of its building (Jn. 2:20).

According to John's narrative, in that first year of ministry Christ cleared out the clamorous trade in sacrificial animals at the outer court because this interfered with access to worship in the temple (Jn. 2:14 – 15). This action of Christ was repeated in his last year (Matt. 21:12; Lk. 19:45; Mk. 11:15 – 18). Because the traffic crowded out the Gentiles as well as his own people, Christ strongly objected (Matt. 21:13). (Many scholars hold that there was only one cleansing of the temple and that John placed it near the beginning of his gospel for literary and thematic reasons.)

It was Jesus' custom to teach in the courts of the temple daily (Matt. 26:55; Mk. 12:35; Lk. 20:1; 21:37; Jn. 7:14; 18:20), as well as to heal there (Matt. 21:14). Children freely played in the outer court (21:15). After the ascension, the disciples frequented the temple daily for worship (Lk. 24:53; Acts 2:46). It was there that Peter and John went to pray (3:1), probably as part of their daily resort to the temple. The area was under the control of the Roman guard quartered in Antonia; the captain was close enough to dash down the stairs to rescue Paul from the enraged Jews (Acts 21:30 – 35). Paul in his own defense addressed the Jews from the stairs (v. 40).

Contrary to popular expectations about the endurance of the temple, Christ predicted its destruction (Matt. 24:1 – 2).

2. The destruction of the temple. Josephus (*War* 2.14) indicates that the Roman governor G. Florus (A.D. 64 – 66), by his greed for gain and his rapacity in taking it, incited the Jews to rebellion against Rome's occupation, leading to the destruction of the temple. He deliberately provoked the Jews and turned his soldiers loose on them; Agrippa II quieted them, yet they rebelled against his suggestion of submission to Florus until a successor should arrive. In the turmoil that followed, the ZEALOTS persuaded the priests to discontinue the daily offerings for the emperor and empire, which amounted to a subtle declaration of war.

VESPASIAN, who began the campaign to subdue the revolt, was later summoned to Rome to assume the throne, and he commissioned his son TITUS to reduce the Jews to obedience. This eventuated in an attack on Jerusalem and the temple in particular. In the spring of A.D. 70, Titus mounted the final siege. When initial efforts to persuade the Jews to surrender and thus preserve the city failed, Titus erected his encircling wall about the city to prevent help from reaching them, and began the final attack on Antonia. The outer cloisters were burned, and finally the inner court of the

temple was encircled, Aug. 29, A.D. 70.

Against the desire of Titus, in the attack in the inner court the next day, a soldier tossed a firebrand through a window into one of the side chambers. Though Titus rushed up shouting commands to extinguish the flames, he was unable to effect his will. Instead another soldier tossed a burning brand into the Holy Place that set ablaze the sanctuary itself (Jos. *War* 6.4.5). On the roof of the side chambers, the priests in defense of the temple pulled up the bird-preventer spikes and hurled them unavailingly at the Roman soldiers (6.5.2). The rest of the temple complex was in flames, last of all the royal portico, and about 6,000 persons seeking refuge in it perished.

VIII. Modern reconstructions

A. Solomon's temple. One of the earliest attempts at reconstruction of this temple was by the Jesuits Pradus and Villalpandus (1596 – 1604), but in a grandiose Greco-Roman style that largely nullified its value. Others followed, but contributed relatively little. More famous was Schick's also grandiose but inaccurate attempt in 1796. Paine in 1861 produced a restoration that is suggestive but no more accurate. Elements in it suggest that the temple of Ezekiel's vision influenced him strongly. The efforts of Perrot and Chipiez (1887 – 89) are noted more for artistry than authenticity. Ferguson's attempt (*Temples of the Jews* [1887]) suffers from lack of correspondence to the biblical text, as well as in architectural style, for it is more classical than Canaanite.

More recent efforts include the E. G. How-land – P. L. Graber model (*BA* 14 [1951]: 2 – 4) and the C. F. Stevens drawing sponsored by W. F. Albright and G. E. Wright (*BA* 18 [1955]: 41 – 44). These are quite similar, differing only on less essential points; both illustrate basic elements. The Stevens drawing suffers from its peculiar saw-toothed coping, whereas the Howland model completed the wall top with a coved cornice similar to Egyptian temples. This would have been a distinct innovation, but not well enough attested in Canaan to justify. The more usual coping is a straight, clean parapet wall. The altar must remain for either proposal a conjectural example, for little is known of its actual construction. An immense amount of time and money was spent on the Howland model; apart from this detail, it represents the more faithful proposal to date.

A further defect concerns the tops of the pillars Jakin and Boaz, for both restorations picture them as having at their heads bowls for burning incense. The biblical text does not present this view of their function (see above IV.G.4), nor do the meanings of their names require that incense be burned. The attempts of W. Corswant (*Dictionnaire d'archéologie biblique* [1956]) present a line drawing of a proposed reconstruction that in many respects is quite like the Howland model, except that the entrance to the side chambers is from the outside, not from inside, the Holy Place.

L. H. Vincent, through the drawings of A. M. Steve, has presented a well researched restoration, not markedly different in plan from the Howland model, but differing in significant details. The Holy of Holies is not elevated and its roof is lower than the Holy Place roof, causing the erection of a heavy stone wall between the two. The roof of the side chambers is dropped below the level of the roof of the Holy of Holies. In addition, access to the side chambers is from side rooms on the porch, which cannot be justified from the biblical text. As to character of architecture, a crenelated cornice is applied that has little justification in the text or in Palestinian architecture. Each chamber is provided with a window, which is also not based on the biblical text. The appearance of the whole is rather on the side of modern contemporary architecture.

B. Ezekiel's temple. As suggested above, Paine's attempt at reconstruction of Solomon's temple

appears to be influenced more by Ezekiel's temple than any other, and is here mentioned for what help it can give in illustrating the latter. I. Benzinger (*Hebräische Archäologie*, 3rd ed. [1927]) has presented a convincing plan of the temple complex though it suffers from incompleteness. The plan of C. F. Keil (KD, *Ezekiel* [1876], 2:272) is a more faithful reproduction. It is significant that this plan bears more relation to Herod's complex than to Solomon's structures. The primary feature of Ezekiel's structure is its symmetry, which is intended to add to the emphasis of sanctity. Not many attempts have been made to produce models or illustrative sketches, partly because it has been considered an "ideal" expression of what the ritual ought to be.

C. Zerubbabel's temple. Since this has been swallowed up by Herod's rebuilding, and since it has had a continuous history to the latter temple, a reconstruction of Herod's temple would serve better the purpose of reproducing the main features of the sacred structure.

D. Herod's temple. Many and varied are the proposed reconstructions advanced for it. Warren in his researches (*Plans, Elevations*) has given a restoration that conforms to the terrain. Yet faint indications from Josephus indicate that it underwent significant enlargement, namely, the addition of the Women's Court on the E side. C. Schick's plan and model (*Die Stiftshütte, der Tempel in Jerusalem und der Tempelplatz der Jetztzeit* [1896]) is too grandiose to be accepted, and its architecture is entirely foreign to Jewish style and the records of Josephus and of the Mishnah. The Vincent-Steve restoration suffers from the fact that it embraces too much of the present Ḥaram, also contrary to the sources. It does not conform to certain internal arrangements as given in the sources. C. Watzinger's proposal (*Denkmäler Palästinas: Eine Einfürung in die Archäologie des Heiligen Landes* [1933]) suffers from presentation in terms of classic European architectural styles not used in the temple according to the sources. The plan in *HDB* rev. (pp. 712 – 13) shows a significant departure from the text of Josephus and the Mishnah, although the general relationship of the inner and outer courts is probably correct.

Addendum. About the time the present article was being completed, a group led by Benjamin Mazar undertook extensive archaeological work (made possible subsequent to the Six Day War in 1967) around the temple mount, especially on the S and W sides. Because of religious sensitivities, it has not been possible to excavate the site where the temple itself was located (presumably under the Muslim Dome of the Rock), but abundant remains from the Herodian period have been recovered. As a result, current reconstructions of Herod's temple, especially those produced by the Ritmeyers (see bibliography), are considerably more reliable and reveal in a new way the monumental character of the raised platform (c. 172,000 sq. yds.) and its supporting structures. No sacred site in antiquity was larger than Jerusalem's temple mount, and the evidence confirms that the structure as a whole was one of the great wonders of the ancient world.

temples. Buildings used for religious WORSHIP and usually regarded as the residence of a deity. I. Meaning and function of temples.

1. Shrines
    1. Local and civic sanctuaries
    2. Monumental and state temples
    3. Funerary temples
    4. Temple ritual
2. Ancient temple architecture
    1. History of architectural developments
    2. Elements of temple architecture

I. Meaning and function of temples. The concept of the temple in the ANE grew out of a very simple idea. It was that the deity was attached to a place, a sacred *locus* which was either the domicile or the favorite haunt of the god, or which formed the chosen locale for the manifestation of the divine presence. Since this was so, the notion developed by logical extension that human beings could properly construct a residence for the god in the vicinity of that place and that the deity would find it acceptable.

Essentially, the temple was a house for the god. Its site was chosen, not always because of the prior existence of a theophany on that very spot, but often because of its central or strategic location in the district sacred to the god. In some cases the site was indeed sanctified by a supernatural manifestation, as in the case of DAVID at the threshing floor of Ornan (ARAUNAH) the Jebusite, where the temple of SOLOMON later stood (1 Chr. 21:15—22:5). In other cases, temples seem to have been built in localities convenient to the people, with the assumption that the deity would inhabit them, because the god was a local god and both the region and the people were his. But localization of the divine presence was the fundamental idea. This is true whether the deity is a spirit inhabiting a spring, rock, or tree, or a local god living in the town sanctuary, or a national god dwelling in the magnificent state temple of the capital city. In all of these places, a tradition once established seldom became dislodged, with the effect that the permanence of sacred sites is axiomatic in the study of ancient religion.

The purpose of constructing a house for the god is equally elementary, despite the elaborate mythic and cultic developments that grew up around the temples. It was to provide a systematic, and therefore controlled, method of relating to the deity. If the place where the god would manifest himself could be predicted or known in advance, then the task of approaching him would be made easier. And if the god received the amenities of domestic life there—food, drink, and clothing—then

the temple would become his abode. Performance of the temple duties would demonstrate the servile status of the worshipers who had placed themselves under his patronage. It was hoped that it would also cause the deity to become favorably disposed toward "his people."

It is not, however, correct to think that people in the ancient world actually believed that the god was confined to the temple. It was the place where he might be addressed, where he consistently appeared, and where he "dwelt," but it was not the only place where these things could be thought true. The many temples of Amun (see AMON #4), for example, bearing a variety of local names, were nevertheless thought to be residences of the one solar deity, Amon-Re‛ (see RE). An 18th-dynasty hymn to OSIRIS illustrates this principle: "Praise to thee, Osiris! Thou lord of eternity, king of gods! Thou with many names and lordly being! With mysterious ceremonies in the temples. He it is that hath the noble *ka* in Busiris and the abundant sustenance in Letopolis; to whom men shout for joy in the *nome* of Busiris, and that hath many victuals in Heliopolis…Lord of the great hall in Hermopolis, and very terrible in Shashotop; lord of eternity in Abydos, that hath his seat in Ta-zoser" (A. Erman, *The Ancient Egyptians: A Sourcebook of Their Writings* [1966], 141).

Worshipers could pray to the same god in all of these places. They could also pray anywhere at any time, because the deity transcended the physical limitations of the sacred precinct. But they were more likely to be heard if they prayed in the temple, and particularly if they stood before the image of the god. Perceptive suppliants recognized that the deity was not the cult statue itself but *in* the statue, just as they recognized that the deity was not bounded by the temple but was present in the temple. The less thoughtful, however, probably erred in the direction of a literal and superstitious belief, which tended to enhance the status of the temple as an institution in society and the power of the priestly establishment.

The biblical experience, although shaped to some extent by the same factors that influenced contemporary civilizations, was nevertheless unique in that it called foremost attention to the transcendental aspect of God, with a secondary emphasis on the functional localism inherent in the temple idea. In Israel, the "tent-dwelling" or "house" of God, far from being "an attempt to localize God," was a visible extension of the COVENANT relationship which was central to Israel's religion. God descended to the TABERNACLE (Exod. 33:9), but, inasmuch as it was movable, he could not be thought of as resident there. Solomon's prayer of dedication succinctly expressed the biblical perspective: "But will God really dwell on earth? The heavens, even the highest heaven, cannot contain you. How much less this temple I have built!" (1 Ki. 8:27).

Temple shrine of the sun-god Shamash on the throne with the sun disk before him. The cuneiform inscription at upper left reads, "The figure of Shamash, the great master, the one who lives in the Ebabbar, within Sippar." (Copy of a 9th-cent. B.C. monument known as a *kudurru*, a stone sculpture used as evidence of royal land-grant.)

This exalted sentiment expresses the profound truth of God's transcendent nature. The Solomonic temple's significance lies in the fact that the divine self-disclosure set Yahweh's name there in a special way for the achievement of his redemptive purpose. See TEMPLE, JERUSALEM. Both STEPHEN and PAUL expand on this: "the Most High does not live in houses made by men" (Acts 7:48; cf. 17:24). The need for a physical temple is repudiated in Christianity, but the theme of the presence of his name is extended in SYNAGOGUE and CHURCH. Ultimately, believers themselves become the temple of God (1 Cor. 3:16).

In the wider sphere of the ANE and classical words, the temple as an institution in society often came to overshadow its primary function as the house of the god. The uses of temples were as varied as the life of the community itself. The temple came to be involved in the economy through the management of lands and through the functions of manufacturing, storage, and banking. The stimulus to trade offered by such a viable economic community was considerable. The political activities included taxation and administration, while social contributions included entertainment and service as a kind of community center. Education received great impetus from the scribal schools attached to the temple. In surveying temples and their uses in the ancient world, it should be noted that all are variations on the basic idea of localization of the god, but the functions are as diverse as the geographical and historical distribution of architectural types.

A. Shrines. Not all places of worship can be properly called temples. Some are mere shrines. These range from house shrines to imposing monuments, and sometimes they have an unusual function.

1. Natural shrines. These occur frequently in ancient religion. The Canaanites, in particular, had an affinity for places that displayed some imposing aspect of nature, whether a high hill, solitary tree, or unusually shaped rock. "She [Israel] has gone up on every high hill and under every spreading tree

and has committed adultery there" (Jer. 3:6). Such a place might serve as a national sanctuary or cultic center, as in the case of the famous rock sanctuary at Yazilikaya near Hattusas, an open area enclosed by natural rock cliffs which the HITTITES carved into processional scenes containing the entire pantheon. The high place at PETRA was another open-air sanctuary that has been preserved; it was sacred to the NABATEAN deity Dushares. The most famous Israelite cultic shrines were the open-air altars at DAN (PLACE) and BETHEL, although BEERSHEBA and GILGAL are also denounced (Amos 5:5). A monumental horned altar was found at Beersheba in 1973.

2. Domestic shrines. Places of worship in private homes were numerous at every period and had the advantage of allowing a more intimate relationship between the devotee and the deity. The TERAPHIM of LABAN were apparently kept in his house (Gen. 31:19), and MICAH of Mount Ephraim developed an important house-shrine that included a silver image among the teraphim and even boasted a Levitical priest. Micah's gods and the Levite were forcibly transported to Dan, accounting for the origin of that famous shrine (Jdg. 17:1 – 18, 31).

3. Commemorative shrines. Some shrines were built for special purposes connected with mythical events in the life of the god. Osiris, for example, had a shrine (later a temple) in each of the places where the dismembered parts of his body were found by Isis. Holy men were also sometimes so honored and pilgrimages made to their shrines. The temple of Ptah in MEMPHIS, one of the most important Egyptian sanctuaries, is thought to have been originally a shrine in honor of an early predynastic ruler of that city.

The patriarchal shrines commemorated places of REVELATION. JACOB, JOSHUA, and later SAMUEL and SAUL erected mounds and stones of witness. Judaism, Christianity, and Islam have greatly developed the tendency toward commemorative shrines. Jesus said to some Jewish leaders, "You build the tombs for the prophets and decorate the graves of the righteous" (Matt. 23:29). The proliferation of Byzantine church building was an enlargement of this spirit, and many structures were erected in isolated spots for purely commemorative reasons; examples are the church at Ras es-Siyaga (Mt. Nebo) in honor of Moses, the Propheteum of Amos at Tekoa, and the famous church of St. Simon Stylites at Qal‚at Seman in Syria. Modern Christians and Muslims have continued this tradition, as the numerous tombs of Muslim holy men in the Near E and frequent roadside shrines in rural Greece demonstrate.

4. Chthonic shrines. The need to communicate more directly with the forces of nature, particularly the great earth mother, led people to utilize caves as one of the earliest types of sanctuary. The Dictean, Idaean, and Kamaras caves on CRETE, sacred to ZEUS, are examples from historic times. The Minoans also worshiped in "pillar crypts," dark underground grottos beneath the palaces, as at Knossos. The MSTERY RELIGIONS, in part at least, utilized this type of shrine to inspire dread at the initiatory rites, much as the later *kivas* of the southwestern American Indians were designed to do. The Aes-culapium at PERGAMUM is an example of the role of chthonic shrines in classical times. Healing was effected by means of snakes (totems of the god) released among the worshipers in a *hypogeum*, or dark underground chamber.

5. Portable shrines. Egyptian religion incorporated portable shrines into its rites at an early period; Old Kingdom reliefs frequently show chests carried on poles as a part of the funerary equipment. The portable shrines of Tutankhamen are better known and bear a strong affinity of design to the

wilderness tabernacle of the Israelites. An archaic Semitic tradition of carrying tent-shrines into battle has also been adduced as comparative material for understanding the tabernacle. In any case, it is clear that the biblical Tent of Meeting was the central shrine of the Israelite tribes linked together by a covenant.

B. Local and civic sanctuaries. Genuine temples, as distinguished from mere shrines, were structures designed and built for the purpose of providing a house for the god. A secondary and important purpose was to offer a locality for the regulated service of worship. Their auxiliary functions varied considerably, depending on the needs of the people, the attributes of the god, and the requirements of the cult.

1. Mesopotamia. The typical functional pattern for Mesopotamian temples reveals that the majority were community oriented. (See ASSYRIA AND BABYLONIA IV; SUMER IV.) They existed to meet a variety of social needs as well as to allow the people to efficiently serve the god. The city and temple grew together, and most temples were located in the population centers, frequently in the very heart of the cities. Two significant roles of the temple related to the oath-taking ceremonies and the certification of weights and measures. The unique economic status of the Mesopotamian temples developed out of this advantageous symbiotic relationship between the commercial and religious life of the community. Possessing vast numbers of slaves and extensive lands, the average Mesopotamian temple grew rich. Its full granaries gave it power in the "storage economy" basic to the ANE way of life. The temple was further enriched by votive offerings and bequests, and by royal tribute and spoil.

The delicately balanced relationship between the king and the priests in Mesopotamian society worked harmoniously for two and a half millennia, a model in church-state relations. The social position and power of the temple was greatest in the early period, but eventually the palace became the more important of the two. Apparently the temple granted the nominal suzerainty of the king, and in return, the king submitted to humiliation by the priests (which included being ceremonially slapped in the face) on one day in the year. There is evidence that Sargon and Naram-Sin, as well as Nabonidus, had difficulties with the priesthood, but these are exceptions which underscore the general harmony which existed between temple and palace. The Assyrian temple, basically different in origin and form, nevertheless served the same function as its Babylonian counterpart and held the same position in society despite the sacerdotal character of the Assyrian kingship.

2. Egypt. The fundamentally opposite concept of kingship in EGYPT caused the civic sanctuaries to follow a different course of development than in Mesopotamia. Local temples existed within each community, but the absence of city-state rivalries deadened local particularism, and the centrality of the god-king and solar cult made the development of great national temples inevitable. The consolidation of power by the priests in the great temples also made conflict with the crown unavoidable, the prime example of which is the Aten revolution and its aftermath (see AKHENATEN). The Theban temples in particular grew in wealth during the empire, and their economic effect began to be felt more and more strongly as time went on. In addition to owning landed estates and holding multitudes of peasants in economic thralldom to landlords who owed their position to the temples, the priests themselves gained so much power that the high priest of Amon-Re⸤ at Karnak arrogated to himself the kingship at the end of the 20th dynasty.

On the whole, the Egyptian was perhaps more likely than his Mesopotamian counterpart to find the temple precincts a place of exclusively religious devotion. Each town had its own temples, which

were served by courses of lay priests. The nome capitals, especially, had strongly localized rites going back to the prehistoric period. But it was difficult for the common citizen to feel close attachment to the great temples except at the time of festivals. Then the great temple of Karnak was surrounded by pavilions of lesser deities, and processions and a carnival-like atmosphere prevailed.
This reconstructed complex at Deir el-Bahri, Egypt, contains the remnants of the temple of Hatshepsut.

Such feasts as the Memphite Khoiak and the feast of Min of Coptos were likewise the occasion for general rejoicing.

3. Syria-Palestine. The name for "temple" in W Semitic, such as Hebrew *hêkāl H2121*, is derived from the Sumerian *E.GAL*, "great house, palace," via the Akkadian *ekallu*. This term reflects the function of the building as a palace for the divine being, comparable to that of the residence of earthly rulers. One notable difference between the temples of Syria-Palestine and those of Egypt and Mesopotamia is their size. Their smallness perhaps reflects the intense isolation and regionalism resulting from the natural geographical barriers. Neither a unitary political system nor a religious pattern was easily developed in the face of such diverse topography. The main Canaanite deity, BAAL, suffered a degree of fractionalization that scarcely allowed the assertion of his unity. This was also true of his consort ASHERAH and accounts for the plural names "Baalim and Asherim" used in the OT (Exod. 34:13; 1 Ki. 18:18).

The tendency toward localism was so pronounced that the story of the Israelites was one of a constant temptation to heterodoxy. The average size of the excavated Palestinian temples is so tiny that the picture which emerges certainly indicates that they existed for priestly, cultic, and oracular purposes and not for the general use of the populace at large. It is likely that the outdoor shrines and cultic centers drew crowds of worshipers, but that the temples were basically the domain of the priests. The purge of JEHU seems to have been directed toward the professional adherents of Baal. Their numbers could not have been large since they were all confined within the "house of Baal" before being slaughtered.

C. Monumental and state temples

1. Kingship and the temple. The magnificent state edifices were primarily influenced in their function by the varying ideas of kingship in the ancient world. Egyptian state temples, such as the great temple of Amon-Re⟨ at Karnak, were dominated by reliefs and statuary of the PHARAOH, depicting his campaigns and listing his accomplishments. This was considered fitting, since the king was the living embodiment of the deity. But the same circumstance detracted from the more truly religious aspects of temple observance and allowed the ostentation of power to predominate.

The situation in Mesopotamia was different by virtue of the opposite position of the king in relation to the temple. Since the king was a mere mortal (although sometimes having priestly functions), the temple was more independent of the crown than in Egypt. But the fact that the donations for the constant repairs needed came from the king, and that new temples were built by royal munificence, equalized the differences to some extent. In both areas of the ancient world the monumental temples reflect the essentially political glorification of the dynasty in boastful dedicatory inscriptions.

2. The temple and the state. The temple expressed, by its location and design, not only theological ideas, but the social and political order as well. Foremost among these concepts was the COSMOGONY which found frequent and prominent architectural expression in the Egyptian and Mesopotamian state temples.

From at least the third dynasty of UR onward, the monumental ZIGGURATS are believed to have portrayed the "cosmic mountain" theme of the mythology, representing the primeval hill or mound which formed the basic stuff of which the heavens and earth were made. The idea is fundamental to ANE cosmogonies. The names of the various Mesopotamian staged temple-towers support this belief. BABYLON's famous ziggurat, *E-temen-an-ki*, "house of the foundation of heaven and earth," is frequently referred to in this connection.

The Egyptian temples are particularly rich in allusions to the cosmic order in their interior embellishments. Thus, symbolically, the floor becomes the earth, the wall reliefs and paintings depict nature, wildlife, and human activities, the columns represent papyrus stalks or palm trees stretching upward to the heavens, and the roof was painted with stars or astrological signs. The theological meaning corresponds to the artistic message—the temple is transformed into a little universe, and just as the god dominates the temple in religious symbolism, so in reality he dominates the world of nature.

Beyond this, the idea of cosmic stability under the patronage of the god is extended to the state. Several Egyptian temples claimed to rest on the primordial hill (Memphis, Thebes, Heliopolis, Hermopolis, and Philae, for example), and were supposed to represent the center of the universe. When MARDUK rose to the head of the pantheon in Mesopotamia, Babylon came to assume the same position as the "navel of the world." The unified cosmological order and its parallel in the state can be understood also from the exalted titles claimed by numerous kings, as for example the Mesopotamian title, "King of the four quarters (of the universe)." Since stability and order emanated from the gods, and the king administered the state under the auspices of the gods, the political and social order was but a reflection of the divine cosmic order. The state temples are the architectural expression of this concept. Some later temples contained essentially the same notion, and the *omphalos* ("navel") monument was common in many classical cities. A stone at Delphi in Greece was supposed to mark the center of the universe, and even the Roman Forum boasted such a stone.

The question of the cosmology implicit in the Solomonic temple has been debated, but there is nothing inherently improbable in such expression. Yahweh has heaven as his throne and earth as his

footstool; his chariot is the clouds. Numerous allusions are found in the OT that show God's lordship over nature (e.g., Job 28:23 – 26; 36:26—41:6; Ps. 24:1 – 3; 33:6 – 9; 95:4 – 5; 104; Isa. 41:20 – 26). Nevertheless, the cosmological implications of the Solomonic temple, whatever they may have been, are not architecturally pronounced and, in any case, contain nothing inconsistent with monotheism. The main importance of the temple was that God chose to set his name there (1 Chr. 22:7, 19; 2 Chr. 6:6; 7:16). Some commentators have observed that by falling into the contemporaneous mode of architectural and artistic expression, the Solomonic edifice did nothing to inhibit the syncretism and heterodoxy which became the main snare of the divided monarchy period.

On the other hand, there is no doubt that the imagery of the temple included both cosmological and dynastic ramifications. The Songs of Ascent frequently juxtaposed the temple and the Davidic dynasty as established permanently by the faithfulness of God (e.g., Ps. 122 and 132), and the vision of Isaiah reflects the universality of the eschatological house of God: "In the last days the mountain of the Lord's temple will be established as chief among the mountains; it will be raised above the hills, and all nations will stream to it" (Isa. 2:2). Similar sentiments are expressed by the psalmist: "The earth is the Lord's, and everything in it, the world, and all who live in it; for he founded it upon the seas and established it upon the waters. Who may ascend the hill of the Lord? Who may stand in his holy place?" (Ps. 24:1 – 3).

In Israel, as well as elsewhere in the ANE, the state temple was regarded as a fixture in the divine cosmic order. God's rule of the universe included the establishment, protection, and stability of both nation and king.

3. Dynastic chapels. Because of the proximity of certain small temples to the royal palaces, it is thought that they served as private state chapels dedicated to the patron deity of the king, with services directed toward the maintenance of dynastic rule. Such is believed to be the case with the small chapel at Tel Tainat, which frequently is cited as an architectural parallel of the Solomonic temple. For this reason, and because the temple in Jerusalem was adjacent to the palace, it has been claimed that the Solomonic temple was a mere dynastic chapel. Support for this opinion is furnished by the names of the pillars flanking the doorway of the sanctuary, Jakin and Boaz (2 Chr. 3:17), meaning, it is argued by some, "[May God] establish and strengthen [the Davidic dynasty]" (cf. Ps. 89:20 – 21). See Boaz (pillar); Jak (pillar); temple, Jerusalem IV.B.5.

One must distinguish, however, between the purpose of the temple and its functions. There is indeed a close connection between the divine selection of the temple as the place of God's presence and the promises to the Davidic line: "I have chosen and consecrated this temple so that my Name may be there forever. My eyes and my heart will always be there. As for you, if you walk before me as David your father did, and do all I command, and observe my decrees and laws, I will establish your royal throne, as I covenanted with David your father when I said, 'You shall never fail to have a man to rule over Israel'" (2 Chr. 7:16 – 18). Nevertheless, the function which the temple performed in enhancing the glory of the Davidic dynasty and celebrating the promises made to him was subordinate to the main purpose of God's provision of a locale for historical revelation and perpetual witness.

4. Border sanctuaries. Protection of the frontiers was a basic necessity in the security of the state. It is clear that the deity bore the responsibility for warding off evil and averting dangers from those under his protection. The shrines and temples located at the important border towns carried a double significance for the preservation of the state. Their existence would guarantee the presence of the god

and be valuable as a morale booster for friends and as a superstitious deterrent for foes. Whether or not the Israelite and Judean shrines of the late monarchy fulfill this functional pattern is as yet unclear.

At any rate, this element has been used to explain the placement of the shrines of JEROBOAM's kingdom at Dan and Bethel, as well as to account for the modern discovery of the so-called "temple" at ARAD (perhaps "shrine" would be a more appropriate name), and the monumental altar at BEERSHEBA. According to this theory, there should be sanctuaries at LACHISH and APHEK, as well as other places. It does appear that the function of guarding or protecting a frontier was the meaning of the covenant and heap of witness made by JACOB and LABAN at MIZPAH (Gen. 31:36 – 55). The same practice may be reflected in the problematical "altar" erected by the Transjordanian tribes (Josh. 22:10 – 34). It was not for burnt offerings or sacrifice, they explained to the offended tribes gathered at SHILOH, but served rather as a "witness" on the border; whereupon civil war was averted. At any event, the importance of such border sanctuaries was minor in comparison to the great state temples and their significance.

D. Funerary temples. Rites for the DEAD form one of the oldest types of religious observance. Wherever people were buried, it was inevitable that varieties of cultic observances would grow up over the years and become sanctioned by tradition. Only in Egypt, however, did the tendency to honor the dead and perform potent incantations over them result in the creation of grandiose temples. The pronounced funerary character of Egyptian religion is apparent; the tombs and funerary temples survive because they were designed to survive, and because the environment of the western desert plateau (where the necropolis was usually located) was favorable to archaeological preservation. It must be acknowledged, however, that there was a real preoccupation with the continuity of life from this world to the next. Although this was also true elsewhere in the ANE, only in Egypt did the doctrine of the necessity of preserving the corpse intact become so deeply embedded in the public consciousness that mummification became imperative.

Of perhaps greater importance was the solar cult of pharaonic deification as the living Horus. Its gradual development from predynastic times to the zenith of kingly power in the fourth dynasty accounts in large part for the unsurpassed funerary monuments of the Old Kingdom. The most famous examples are the Step Pyramid and its enclosure at Saqqara, and the Giza group on the plateau SW of Memphis. The pyramids of the 3rd through 6th dynasties required two funerary temples each, one at the base of the temple on the eastern side, and the other in the valley accessible to the inundation and connected to the first by a causeway. In the later Old Kingdom, the temples and causeways were decorated with carved reliefs and statuary. The royal family, nobles, and administrative officials were buried in benchlike *mastaba* tombs surrounding the pyramids, and each had a provision for funerary offerings before the principal false door. Eventually small shrines or mortuary chapels were constructed on the exterior of the tomb, and then in the 5th and 6th dynasties these chapels became internalized, so that one could enter the tomb from the SE corner and make offerings before the false door on the interior.

The New Kingdom saw the removal of the principal royal necropolis to western Thebes, and tomb robbers forced a change in burial patterns. The pharaohs were now buried in rock-cut tombs in the desert for greater security, and they built separate funerary temples near the cultivated areas. The function of these temples remained the same as those of the Old Kingdom. The outstanding example from the 18th dynasty is the mortuary temple of Hatshepsut at Deir el-Bahri (see p. 756). It was built in terraces against the base of a soaring rock cliff, and its horizontal lines contrasted effectively with the backdrop, on the other side of which was the Valley of the Kings.

The nearby Ramesseum was the immense funerary temple of RAMSES II of the 19th dynasty. It was surrounded by a precinct wall, within which were numerous magazines, slaughter courts, priests' houses, apartments, colonnades, porticoes, and a small palace and audience hall. At the center of the enclosure was the temple itself, within an imposing front pylon and two open courts before the hypostyle hall. On the pylon was a scene from the famous battle of KADESH ON THE ORONTES. The funerary temple of Ramses III at Madinet Habu forms a closely parallel 20th-dynasty example. The structure contains famous reliefs depicting Ramses repelling the SEA PEOPLES. It is also remarkable for its size (688 by 1038 ft.).

E. Temple ritual. Inasmuch as construction of the monumental temples required vast and lavish expenditure of time, effort, and treasure, it should not be thought strange that the ancients viewed the rituals conducted in the temples to be of supreme significance. Despite this, scant attention has been paid to the subject of temple ritual by modern scholars. A great part of the cause is the paucity of sources for such an investigation. Clues can be pieced together, however, from archaeological artifacts, from indications of the architecture, and from hymns, epics, and prayers. Historical writings are also helpful, but suffer from the distortions of naïveté, prejudice, and polemic. The descriptions of Babylonian religion by HERODOTUS (*Hist*. 1.181 – 99), for example, provide some insights but are not strictly accurate. The task is nevertheless a rewarding one, because only by reconstructing the ritual and its meaning can a modern person come close to understanding what functions the ancient temple performed and how the service of the temples affected the participants.

Central to the ritual was the cult image. It was made of wood, clay, or stone, and frequently overlaid with gold on the visible parts. The statue was dressed in an elaborate regalia, which helped to create the effect that the image was properly an object of veneration. Such apparel was fixed by rigid tradition. On one occasion, NABONIDUS offended the priests of the sun-god by attempting to change his tiara.

Hittite relief (8th cent. B.C.) depicting a temple ritual: Warpalas, king of Tyana land, prays in front of the storm-god, Tarhunza.

The setting of the cult statue was enhanced by placing the god in a niche in a darkened room, where it was visible from a courtyard. The monumental doorways of Babylonian temples provided a further splendid frame for the impressive image, designed to stimulate awe on the part of the beholder. There is little evidence that the temple itself was a place where the ordinary person might come into the presence of the deity, but he was seen by everyone when carried through the streets in the great processions.

The problem of the human manufacture of the gods was a serious one to paganism and was the subject of heavy sarcasm by the Hebrew prophets (Isa. 44:9 – 20; Jer. 10:1 – 15). To circumvent this, the Babylonians devised a procedure of consecration or investiture in order that the statue might be inhabited by the god. This elaborate ceremony was performed mainly at night and consisted of the symbolic "opening of the mouth" of the statue by a series of fourteen ritual washings. The image was taken to the river bank in a nocturnal journey that included various sacrifices and incantations toward the cardinal points of the compass. The eyes were symbolically opened by a priest, and the god was decked out and taken to the temple with prescribed processional chants and a final sacrifice at the gate. Similar practices are known to have been utilized in Egypt, with the effect of making the transition from the workshop to the temple. A sophisticated Babylonian or Egyptian might have answered Jeremiah or Isaiah: "No, you are wrong. The god magically inhabited the statue at a specific point of time."

The activities of the god consisted mainly of repasts, oracles, and processions. Two meals were usually served to the image daily, each made up of two courses with a variety of foodstuffs and

delicacies. Often these were served in gold vessels, and one source tells that even the horses pulling the god's ritual chariot ate grass, which was harvested with gold sickles, from golden buckets. Curtains were pulled while the god was "eating," a finger bowl was brought for washing the god's fingers, and the cella (the enclosed portion of the temple) was fumigated afterward to remove the smell of food. The "leftovers" were, on certain occasions at least, the prerogative of the king, who took pride in consuming them. The god was apparently thought to partake of the food by merely having it placed before him, or alternatively, having it waved before his eyes. Another method was the burnt offering, which transformed the food into another dimension and could be smelled by the god. Sacrifice and the pouring of blood before the god did not figure as largely in Mesopotamian religion as in W Semitic practice.

The oracle was a typical function of the cult image. By means of questions and a supposed pattern of indication from the god, a "yes" or "no" answer could be obtained. One such means was the casting of lots, a practice that appears throughout the pages of the OT. The clearest indication is found in 1 Sam. 28:6, but the theological dimension is added in Prov. 16:33, "The lot is cast into the lap, but its every decision is from the LORD." Sometimes the pagan priests sought ways of making the image answer in a more dramatic fashion. The Egyptian priests of the Ptolemaic era were particularly skilled at this, and the classical world is filled with stories of various extraordinary oracular techniques.

Processions were another colorful cultic activity of the images. The enactment of the sacred marriage ritual was one such procession in Mesopotamia. The usual city festivals brought the god out of the temple and into contact with the people in an atmosphere of jubilation. The god Nabu (NEBO) normally made the journey from Borsippa to Babylon to honor his father MARDUK. In Egypt the gods being conducted on journeys or in processions had various pavilions or way stations provided, to which they were welcomed with great ceremony. One of the most unusual texts tells of a Babylonian deity being taken out to hunt in the royal game preserve. Gods were sometimes, but infrequently, taken into battle. In this spirit the ARK OF THE COVENANT was taken out to fight the PHILISTINES, with disastrous results (1 Sam. 4:3-7:2). The god ASSHUR is always depicted as a winged disc hovering over the Assyrian armies in the reliefs, but it is doubtful if the image normally accompanied the troops.

A host of priests attended to the other religious functions of the temple. In Egypt, the funerary temples required numerous levels of purification and offering priests. In Mesopotamia the emphasis on conjuration, incantation, exorcism, and divination likewise necessitated special classes of priests. The word *enchanter* in Dan. 2:10 is a technical term for a kind of incantation priest. Omen priests were concerned with the application of the exhaustive omen-texts to daily events of unusual significance. EUNUCHS were players at the cultic performances. Among the priestesses were the *Entu, Naditu,* and *Qadishtu* (for the latter, cf. *qādēš H7728* in Deut. 23:17 et al., and fem. *qĕdēšâ* in 2 Ki. 23:7 et al.).

Special rituals were observed whenever the king entered the temple precincts. A Hittite text describes the observance at one religious festival, which becomes understandable if set in the largest of the five temples found at Boğazköy, temple I. The temple is surrounded by a precinct wall and magazines, but is located in an open space and has a central court. The king, leading a procession, went into the propylaeum, performed ritual ablutions at a well before the gate, entered the sanctuary, and partook of a ceremonial meal, during which time he uncovered the sacrificial loaves and divided them with his spear.

Another important aspect of the temple ritual concerns the construction of the temple itself. Great

care was taken in invoking the deity for permission to build. Naram-Sin, like David, was not permitted to build a temple. But, unlike David, he presumed to build one anyway, an impiety which had dire consequences. In laying the foundations, elaborate precautions were made, which included tracing the precincts, offering sacrifices connected with laying the cornerstone, and the sanctification by various rituals of the entire area. A certain procedure was prescribed for cleansing a desecrated temple, and the complex and lengthy formula for rebuilding a ruined temple would almost try the patience of a god. All of these factors demonstrate the involvement of the ancients in their religion and their heartfelt participation in the life of the god, whether in daily activities or in the dramatic activity of the festivals.

II. Ancient temple architecture

A. History of architectural developments. The earliest temples developed out of the architectural forms of houses and are clustered in the crowded villages of the Neolithic period. Small, roomlike shrines were found at JERICHO as far back as the Pre-Pottery Neolithic B levels (c. 7000 B.C.). The fullest plan bears a resemblance to the later rectangular *megaron*, which eventually became the preferred shape for classical sanctuaries as well.

In the late Neolithic period, about 5000 B.C., squarish house-shrines occur at Hajilar and Catal Huyuk in ANATOLIA. The remarkable series of forty shrines at Catal Huyuk scattered throughout the domestic quarter on nine levels provides the best glimpse of religious ARCHITECTURE at this early stage of history. The rooms were windowless and doorless, with access from the roof by ladders, and light from openings near the eaves. The walls were plastered and frequently painted with bulls, leopards, vultures, and anthropomorphic figures, sometimes executed in relief. Low benchlike "altars" were arranged around the walls. These often contained *bucrania* (the horns of aurochs or wild bulls) and are linked to the common FERTILITY worship of the period. The presence of skulls testifies to the life-and-death symbolism of the shrines, just as the catalog of small objects suggests a similar theme.

The Ubaid culture of the Chalcolithic period in Mesopotamia saw significant developments in temple architecture shortly after 4500 B.C. These are particularly noticeable in two places, one in the S and one in the N. At ERIDU, near UR at the head of the Persian Gulf, a series of seventeen temples was uncovered that revealed not only the continuity of the sacred area but also the character of the earliest temple-platforms, which later became a standard feature of Mesopotamian temple architecture. The genesis of the ziggurat idea was in this type of foundation, and its evolution is traceable elsewhere in the Tigris-Euphrates basin. The temple at Eridu is thought to have been dedicated to the god Enki (Ea), the lord of the Apsu, by virtue of the presence of layers of fish bones covering the floor of parts of the shrine. The earliest temple measured only 12 x 15 ft. and contained two elements that became basic to the architecture of the cella: a small niche for the god, and a low mud-brick offering table before the niche.

Tepe Gawra near NINEVEH boasted a cluster of three temples grouped around a court in the same period, all standing on a mud-brick mound forming a kind of acropolis about 30 meters square. The temples were distinguished by monumental façades of recessed brick plastered in white. Small rooms led to the rectangular cella, which was the center of the cult. It is assumed that a triad was worshiped here, although many subsidiary deities could have been venerated as well. The court becomes an important feature in later Mesopotamian temples. The recesses and buttresses employed in stratum XIII served both utilitarian and esthetic functions, supporting beams for the roof and relieving the

plain façade. Such stepped recesses were characteristic of Mesopotamian temple architecture thereafter.

The "white temple" at Erech (Warka) in the succeeding Uruk and Protoliterate periods following 4000 B.C. was built upon a much higher 40-ft. elevated platform and displayed a regular shape, approximately 17 x 22 meters in size. The façade consisted of stepped brick recesses all around the structure. The interior was divided into three parts, with two rows of small rooms flanking a cella which ran completely through the long axis of the temple. An altar with traces of burning occupied the center of the cella, with a pedestal in the NW corner that was presumably the focal point of the cult. The excavators named the complex the "Anu ziggurat," but it is not a true ziggurat, inasmuch as it is not stepped, and the association with Anu is based on evidence from a much later period. Subsequent temples, however, tended to follow the pattern of regularity in shape and decoration.

The temples at Khafajeh show further developments in the Early Dynastic period (c. 2900 – 2350 B.C.). At first an original temple stood on a mound as an isolated building within the city. It was a simple community shrine separated from the domestic structures and containing a fireplace, offering table, and altar. The standard shape for a Mesopotamian temple was achieved, as at Eridu, by placing an entrance on one of the long walls and the altar on one of the short walls. The temple is called the Sin temple, but the attribution to that deity is quite tenuous. Rooms were added around the temple beginning as early as the Protoliterate period. Eventually a courtyard became the dominant feature in the Early Dynastic period (Sin temple VIII). A monumental entrance flanked by two towers with an impressive stairway was added. A much more complex function is indicated, with ovens, living quarters, and a major antecella being added, as well as a *kisu*, a low wall that surrounded the structure near its base.

In the second Early Dynastic phase, another larger sacred area was built at Khafajeh. In preparation, the site was filled with clean sand. Next, massive surrounding walls were erected, as much for defense, perhaps, as for isolation. In any case, the *temenos* wall (from Sumerian *temen*) surrounding the sacred area became a feature of the more important temples throughout the ancient world.

The most pronounced feature of Mesopotamian temple architecture was the ziggurat. The lavish expenditure of labor required for the erection of these artificial mountains and their centrality to the cult has caused a general scholarly agreement that the structures represent the mythological cosmic mountain. They did not achieve monumental size, however, until the imperial centralization of the Akkadian and Ur III periods. There are some obscure references to temples built by Sargon and Naram Sin, which, in the latter case, was an impiety punished devastatingly by the gods. The most noteworthy and lasting effort in the early period was that of Ur-Nammu, who built the famous ziggurat to the moon god at Ur. It measured 130 x 190 ft. and stood in a courtyard, but the temple that surmounted the tower in ancient times has not survived.

The Erechtheum, an Ionic temple on the Acropolis of Athens built c. 420 B.C., was dedicated to Athena and Poseidon.

The much later Neo-Babylonian period ziggurat at Babylon, built by NEBUCHADNEZZAR II (605 – 562 B.C.), was 295 ft. square and 295 ft. high. The infinite variety of Mesopotamian temples in the later periods nevertheless continued to exhibit the basic features of the early temples, and some of these architectural traditions continued to influence the development of sacred architecture into the classical era.

In Egypt there were a number of architectural developments that contributed to the general pattern of later temple construction. The abundant use of stone in sacred buildings was apparent quite early. It is probable that the earliest Egyptian temples were small shrines constructed of mud bricks much like their Mesopotamian counterparts. But the development of funerary architecture influenced temples in the direction of the use of more permanent materials.

Most Egyptian buildings in the Old Kingdom (including even the royal palaces) were flimsy structures of wood, reeds, and fabric. The tombs, by contrast, were made of stone for greater permanence, because they were built as "houses of eternity" designed to endure forever. Mesopotamian temples were seldom built of stone, except for stone foundations, which were sometimes employed. The great accessibility of stone in Egypt made the development of a genuine monumental architecture possible. Pharaoh Zoser's massive funerary complex at Saqqara (c. 2800 B.C.) is the earliest example of a grandiose stone structure in history. The step pyramid is an outgrowth of earlier tomb construction, and is totally unrelated to the Mesopotamian temple-towers, which originated in temple architecture.

The importance of the Saqqara enclosure for sacred architecture resides in several elements. Essentially, it was a reduplication in stone of the palace; the walls were a mile long and thirty-three feet high, with fourteen gates. Wooden doors were copies in stone, and glazed tiles imitated the actual reed mats of the interior. The columns of the Zoser entrance hall were not free-standing, but engaged and fluted, with pendant leaf capitals. This marks the earliest usage of these components which later became so prominent in temple construction.

The Egyptians also experimented with natural-istically derived forms, making columns in stone which imitated the papyrus stalk bundles used in ordinary building. A particularly early variation of

this idea was the use of columns imitating date palms. The pyramid and valley temples of Sahure (Dynasty V) exhibited this style. It is an extremely simple and aesthetically pleasing form, rendered in rose granite, with smooth round monoliths topped by carved fillets and gently arching palm branches forming the capital. The fact that they are all in one piece emphasizes the Egyptian stonecutting ability.

Egyptian temples, like the Mesopotamian, utilized the *temenos* wall to separate the sacred precinct from the profane world. One feature that was peculiarly Egyptian, however, was the pylon façade. It served as an impressive archway which confronted one with the magnitude of the structure even before entering; as a supporting role, it displayed iconography that frequently glorified the reigning monarch. The hypostyle hall at Karnak was the epitome of Egyptian temple architecture, with a vast forest of massive columns giving a lofty and unworldly atmosphere to the interior. In Ptolemaic Egypt, Hellenistic and native Egyptian architecture existed side by side as attested by coin evidence. But the most important contributions to be made by Egypt had already been bequeathed to the Mediterranean world prior to the end of the Bronze Age.

North Syrian temple architecture is illustrated by two phases of a mud-brick structure on stone foundations from the 13th cent. B.C. at ALALAKH (Tell Atchana). Each of the phases has both the antecella and the cella arranged transversely to the entrance and parallel to the façade. The basic shape again bears a resemblance to the *megaron*, in this case an oblong structure with one or two columns *in antis*.

The Aramean rulers of the Neo-Hittite period in N Syria developed a type of palace called *bīt hilāni* in the Assyrian inscriptions. The contrast between the palaces and temples of the period shows that, while there was latitude for experimentation and development of new forms in the royal residence, temples were more conservative. At Tel Tainat, for example, the shape of the chapel was again that of the *megaron*. A similar preference exhibits itself in the early Anatolian structures, and as early as 2300 B.C. Troy level II-G had a fine megaron as its largest public building, with a roof span of thirty feet.

The similarity of these geographically and chronologically diverse buildings has been attributed to a unilinear pattern of derivation. But the links in the line have been difficult if not impossible to document. It is perhaps better to say that the *megaron* form was preferred because of its functional and religious value. It is true, of course, that religion is conservative, and that the antiquity of an element was regarded as enhancing its sacredness. The history and evolution of the Greek and Roman temple are equally involved. Some of the basic features had their roots far back in antiquity, but the vigorous Hellenic genius allowed the flowering of beautiful classical forms that became standard for temple architecture in the ancient world. The *megaron* form, used for palaces and public buildings in the Bronze Age—as the finds at Mycenae, Tiryns, Troy, and elsewhere show—was adapted to sacred architecture when the AEGEAN world emerged from the dark ages, and it became the preferred form thereafter.

The archaic temple of Apollo at CORINTH is an example of the early Greek edifice type in Doric style. One of the most noteworthy buildings in the ancient world was the temple of Diana (ARTEMIS) at EPHESUS. The Artemision or Artemisium, as it was called, was the first monumental structure ever to be made of marble, and it was the largest building of the Greek world. The archaic Artemision (c. 550 B.C.) had a deep pronaos and a long unroofed cella. It had, according to PLINY the Elder (*Nat. Hist.* 36.21[14]), 127 columns, each 19 meters in height. The later Artemision (334 – 250 B.C.) was one of the seven wonders of the ancient world. It was the same size as the earlier temple, but it had a higher platform.

The Greeks experimented with other architectural forms. The altar of Zeus at PERGAMUM, built by EUMENES II (197 – 159 B.C.), was a large and impressive example of an entire structure designed as an altar and covered with mythological reliefs. It served as the model for the Augustan *Ara Pacis* in Rome. Of the multitude of temples constructed in the Greco-Roman world, most were of the rectangular variety, with columns arranged in prostyle, amphistyle, or peripteral patterns. A few temples, such as the treasury at Delphi, the temple of Vesta in Rome, or the Venus temple at Baalbek, were round. Perhaps the most famous of the round temples was the Pantheon in Rome. Designed by the Emperor HADRIAN, the temple used massive concrete walls to support the circular dome. A propylon retained at least the semblance of the ordinary temple style. The greatest influence in subsequent church architecture, however, came from the Roman civic building, the basilica. Nevertheless, Christian sacred architecture owed much to the ancient traditions, and was built on a long heritage of religious devotion expressed in bricks, mortar, stone, and marble.

B. Elements of temple architecture. By the time the ancient temple reached the height of its development in the classical era, each element in its architecture had become established through adherence to a rigid convention. The canonical pattern remained essentially the same from the time of Pericles to the end of the Roman empire in the W, although stylistic innovations occurred throughout.

In terms of the typical ground plan, the basic *megaron* form was elaborated beyond the *naos* (the cella itself) by extending the side walls forward to form the *pronaos* (porch). Some temples had a similar addition in the rear but without an entrance, called the *opisthodomos*. The use of columns made possible the esthetically pleasing effect of balance, lightness and harmony and broke up the sense of great mass normally present in a monumental structure. The play of sunlight and shadow on the intercolumnation, together with a restrained use of delicate sculpture on the friezes and pediments, created an architectural form of unsurpassed beauty.

The three types of columns associated with classical temple architecture—Doric, Ionic, and Corinthian—each expressed a different style. The Doric is massive, simple, and plain. It is exemplified in the archaic temple of Apollo at Corinth, and is elsewhere frequently made the lower member of a two- or three-tiered façade. The Ionic is lighter and is characterized by a tasteful restraint. The voluted capital was widely employed throughout the classical world, and has a history which reaches back through the Aeolic order into the earlier developments of the ANE. The Corinthian style is the lightest of all, consisting of a capital of acanthus leaves, which gives an elegant and highly refined, somewhat ornate effect.

Many of the Hellenistic and Roman temples merely had a row of columns in front of the cella, forming the so-called *prostyle* temple. The *amphiprostyle* had columns in front and rear, whereas the *peristyle* or *peripteral* temple was surrounded with a row of columns. All were popular. For example, no less than five temples of the prostyle type were built at Pergamum alone during the 2nd cent. B.C. The largest temple to Dionysus in the ancient world was that of Teos in Asia Minor. It was a *peripteros* of the Ionic order, built, according to Vitruvius, by the architect Hermogenes. This famous architect wrote a treatise on the proportion of temples, in which he expressed a preference for the *eustyle* principle (whereby the columns should be spaced 2.25 times the column diameter for the most pleasing effect, based on the interaxial span and lower columnar dimension).

The *dipteral* type of temple had a double row of columns surrounding the structure. The archaic Didymaion at Didyma (550 B.C.) exhibits this type of columnation. The later Hellenistic temple at Didyma (300 B.C.), the third largest building of the Hellenic world, had another feature characteristic of certain temples. It was *hypaethral*, that is, the *adyton* (cella) was unroofed and open to the sky. A

small *naiskos* or temple-like shrine stood where an altar might in a smaller temple. The Didymaion was sacred to Apollo, and had a *chresmographeion* or oracle room to serve the ancient cult.

The *pseudodipteral* temple type duplicates the *dipteral*, except that the inner row of columns is omitted, producing a particularly spacious and pleasing aesthetic effect. The temple of Artemis at Magnesia on the Maeander was constructed in this style by Hermogenes. It is one of the most important creations of Greek art by virtue of its structural innovations, as well as because of its monumental size and 200-meter sculptured frieze.

Standard elements of classical temple architecture include a three-stepped foundation called the stereobate or *crepidoma*. The topmost step of the platform is termed the *stylobate*. On the platform, the first row of masonry forming the walls of the cella is the *orthostate*. The columns stand on square blocks (in the Ionic order) called *plinths*. The column base is made up of several elements depending on the order, but grooves (*trochilos*) and ridges (*astragalos*) are frequently employed, surmounted by a large rounded molding (*torus*). Columns were fluted and separated by ridges called *arris* (Doric order) or *fillets* (Ionic order). The capital crowned the column in the Ionic and Corinthian orders.

Spanning the columns was the *architrave* (also called *epistyle* or *lintel*). Sometimes the architrave was separated into three *fasciae* or bands, above which was usually a band containing the familiar egg-and-dart motif. The middle member of the entablature in the Ionic order was a sculptured frieze. The Doric frieze alternated *triglyphs* (stones with three vertical bands) and *metopes* (sculptured stones). Above the frieze was a row of *dentils* or alternating indentations. The pediment was actually the horizontal cornice, and formed the topmost member of the entablature. It was so called because the sculptured figures of the gods stood on it, as in the famous Parthenon friezes. The raking cornice was the angular member which framed the roof. The roof was flanked by a gutter called the *sima* along its lower edges on the long sides of the temple. Often carved figures or antefixes were attached to these gutters. The ridge of the roof was sometimes crowned with an *acroterium*, consisting of sculptured figures.

The results of the long history of architectural development of temples in the ancient world, and particularly the contribution of the Greeks, is still apparent in many of our modern buildings. (For bibliography see Architecture and Temple, Jerusalem; see also *ABD*, 6:369 – 82.)

<div align="right">J. E. Jennings</div>

Temple Scroll. Identified with the siglum 11QT(emple) or 11Q19 (supplemented by 11Q20, which consists of overlapping fragments), the Temple Scroll measures more than 28 ft. when unrolled and is thus the longest document found among the Dead Sea Scrolls. The work, which was probably composed c. 100 B.C., can be viewed as a rewriting of the laws in the Pentateuch, but with emphasis on the instructions for the building of the temple (cf. Exod. 35 – 40). The structure contemplated is immense—several times larger than even the Herodian temple mount—and the architectural description does not conform with the biblical accounts of the tabernacle or the temple. See Temple, Jerusalem. The scroll also deals with the sacrificial system, issues of ritual purity, and other laws; in doing so, it seeks to exegete the Torah by clarifying ambiguities and apparent inconsistencies, but it also introduces extensive material that diverges from biblical and rabbinic teaching. (See Y. Yadin, *The Temple Scroll*, 3 vols. in 4 [1982]; id., *The Temple Scroll: The Hidden Law of the Dead Sea Sect* [1985]; J. Maier, *The Temple Scroll: An Introduction, Translation and Commentary* [1985]; M. O Wise, *A Critical Study of the Temple Scroll from Qumran Cave 11* [1990]; D. D. Swanson, *The Temple Scroll and the Bible: The Methodology of 11QT* [1995]; E. Qimron, *The Temple Scroll: A Critical Edition with Extensive Reconstructions* [1996]; M. Riska,

temptation. This noun and the verb "to tempt" are used by the KJV in the OT a number of times (e.g., to render the Heb. verb *nāsâ H5814* in Gen. 22:1 et al.; cognate noun *massâ H4999* in Deut. 4:34 et al.; cf. the place name MASSAH). Modern versions of the OT normally use "test" and "testing" in these cases. In the NT, however, the Greek noun *peirasmos G4280* (cognate verb *peirazō G4279*) can indicate both (1) a test or trial, irrespective of whether the intention is good or bad, and (2) temptation, that is, an enticement to sin.

I. The nature of temptation. Human beings were created to worship and serve the Lord. Temptation is an enticement to worship and serve the creature rather than the Creator (Rom. 1:25). Temptation strikes at the heart of our relationship to God and his purposes. A temporal advantage may seduce the tempted away from an eternal good. Furthermore, as M. G. Kyle has suggested (in *ISBE* [1929], 4:2944), temptation is an incitement of natural, God-given desires to go beyond God-given bounds (e.g., gluttony). The end served by temptation is spiritual alienation from God and enslavement to moral evil.

Clearly the ultimate source of temptation is SATAN. No one lives in a vacuum; to some extent we are all under the influences of "the tempter" (Matt. 4:3; 1 Thess. 3:5). One of Satan's cleverest stratagems is to convince moderns that he passed away with the Middle Ages. The egregious evils of recent history have revived belief in the demonic. Satan sometimes masquerades as a messenger of religious truth (2 Cor. 11:14).

Temptation may arise not only from Satan, but also from love of the world. As John explained, this includes "the lust of the flesh, and the lust of the eyes, and the pride of life" (1 Jn. 2:16 KJV). Sensuality, covetousness, and egotism bewitch the best of us. "Therefore let any one who thinks that he stands take heed lest he fall" (1 Cor. 10:12 RSV). Much temptation, however, springs not from the devil or the world, but from each individual person. As James explained, "each one is tempted when, by his own evil desire, he is dragged away and enticed. Then, after desire has conceived, it gives birth to sin; and sin, when it is full-grown, gives birth to death" (Jas. 1 :14 – 15).

Temptation, then, is an incitement from the world, the flesh, or the devil to worship and serve them rather than the Creator.

II. The nature of testing. God may employ trying circumstances to woo a person back to himself or to prove our fidelity. God tested ABRAHAM by commanding him to sacrifice ISAAC (Gen. 22:1 – 2). God led the Israelites in the wilderness to MARAH, the place of bitter waters, and the thirsty people murmured. When MOSES cried to the Lord he was shown a tree; he threw it into the waters and the water became sweet. "There the LORD...tested them" (Exod. 15:25b). In the wilderness they also needed bread, which the Lord supplied one day at a time to prove whether they would walk in his law (16:4). God's purpose in the thunders at SINAI, Moses explained, was "to test you, so that the fear of God will be with you to keep you from sinning" (20:20). God, then, orders difficult circumstances "to humble and to test you so that in the end it might go well with you" (Deut. 8:16). JOB confessed, "when he has tested me, I will come forth as gold" (Job 23:10).

Before Jesus fed the five thousand, he said to PHILIP, "Where shall we buy bread for these people to eat?" John explained, "He asked this only to test him, for he already had in mind what he was going to do" (Jn. 6:5 – 6). The Lord's testings are not for his knowledge but rather for our benefit. For a little while God's people suffer various trials "so that your faith—of greater worth than

gold, which perishes even though refined by fire—may be proved genuine and may result in praise, glory and honor when Jesus Christ is revealed" (1 Pet. 1:7). Testing, then, is an ordering of circumstances by God to reveal his people's supreme love for him, fortify them against sin, and do them good.

III. The relationship between temptation and testing. Any situation in life may be an occasion of temptation or testing. God designed a test for ADAM and EVE by forbidding them to eat fruit from the tree of the knowledge of good and evil (see TREE OF KNOWLEDGE), but Satan subtly lured them into disbelief and disobedience (Gen. 3:1 – 6). God liberated the Israelites from Egypt and led them into the wilderness; there they often yielded to temptation and sinned. God allowed Satan to tempt Job to prove his integrity (Job 1:6 – 12).

Jesus himself "was led up by the Spirit into the desert to be tempted by the devil" (Matt. 4:1). The occasion of proving Christ's authenticity was ordered by the Lord; the enticement to use his supernatural powers simply to satisfy his intense hunger after forty days of fasting came from Satan. The inducement to worship Satan was permitted by God, but it was introduced by the tempter. The intrigue of gaining a following by falling from the temple without harm did not come from God. God is the author of every good and perfect gift. "When tempted, no one should say, 'God is tempting me.' For God cannot be tempted by evil, nor does he tempt anyone" (Jas. 1:13). See TEMPTATION OF CHRIST.

Why, then, should one pray, "lead us not into temptation, but deliver us from the evil one" (Matt. 6:13)? Believers pray that God will not order circumstances in which Satan would find them easy prey. They ask also God's enablement to resist temptation when it comes. God permits Satan to tempt, but he also promised: "No temptation has seized you except what is common to man. And God is faithful; he will not let you be tempted beyond what you can bear. But when you are tempted, he will also provide a way out so that you can stand up under it" (1 Cor. 10:13). As R. Girdlestone says, "He allows the way *in*, and He makes the way *out*" (*Synonyms of the Old Testament: Their Bearing on Christian Doctrine*, 2nd ed. [1897], 295).

IV. What to do about temptation. Surely no one should tempt others. "Things that cause people to sin are bound to come, but woe to that person through whom they come. It would be better for him to be thrown into the sea with a millstone tied around his neck than for him to cause one of these little ones to sin" (Lk. 17:1 – 2). A Christian ought to take action to correct sources of temptation in himself or herself. "If your hand or your foot causes you to sin cut it off and throw it away. It is better for you to enter life maimed or crippled than to have two hands or two feet and be thrown into eternal fire. And if your eye causes you to sin, gouge it out and throw it away. It is better for you to enter life with one eye than to have two eyes and be thrown into the fire of hell" (Matt. 18:8 – 9). These hyperboles show how urgent is the task of dealing with temptation.

Very explicit suggestions appear for reckoning with sexual temptations: "…since there is so much immorality, each man should have his own wife, and each woman her own husband" (1 Cor. 7:2). Paul adds, "Do not deprive each other…so that Satan will not tempt you because of your lack of self-control" (v. 5). The apostle instructs TIMOTHY to treat "younger women as sisters, with purity" (1 Tim. 5:2). The HOLY SPIRIT'S fruit of SELF-CONTROL is equally necessary to overcome covetousness (see COVET). People in this world will be content with food and clothing, for those "who want to get rich fall into temptation and a trap and into many foolish and harmful desires that plunge men into ruin and destruction. For the love of money is a root of all kinds of evil. Some people, eager for money,

have wandered from the faith and pierced themselves with many griefs" (1 Tim. 6:9 – 10).

Apparently we may experience greater temptation than usual at certain times. In GETHSEMANE Jesus said, "Watch and pray so that you will not fall into temptation. The spirit is willing, but the body is weak" (Matt. 26:41). John Owen analyzed times when temptations' solicitations are more urgent, their reasonings more plausible, pretenses more glorious, hopes of recovery more evident, opportunities more open, and doors of evil more beautiful than ever before (see *The Works of John Owen*, ed. W. H. Hoold [1850 – 53], 6:87 – 151). To correct the factors leading to such a state, Christians should not lessen their indignation at their own sins, nor fail to abhor sin in others. They should not associate attractions to evil with good things, or willingly go to places contributing to temptation. No one should allow weak faith or idleness to occasion evil. Alertness is called for especially in situations like DAVID's, which combine fear and passion. Afraid of URIAH's revenge and consumed by his lust for BATHSHEBA, David entered into temptation to kill Uriah.

In the presence of the tempter a Christian may, like Christ, quote Scripture as illumined by the Holy Spirit. A Christian can count on the understanding of Christ, the sympathetic High Priest, "who has been tempted in every way, just as we are—yet was without sin" (Heb. 4:15). (See C. S. Lewis, *The Screwtape Letters* [1944]; D. Bonhoef-fer, *Temptation* [1953]; W. E. Oates, *Temptation: A Biblical and Psychological Approach* [1992].)

G. R. LEWIS

temptation of Christ. This critical event in the life of Jesus is recounted in the Synoptic Gospels (Matt. 4:1 – 11; Mk. 1:12 – 13; Lk. 4:1 – 13) and alluded to in Hebrews (Heb. 2:18; 4:15 – 16; there is also strong evidence, however, that on other occasions, especially during his later ministry, Jesus encountered similar temptations). The Gospels report that at the time of Jesus' baptism a voice from heaven said, "You are my Son, whom I love; with you I am well pleased" (Lk. 3:22). For JOHN THE BAPTIST it was a time of recognition of the long-anticipated MESSIAH; for Jesus it was the momentous event marking his introduction to public life after three decades of relative obscurity. The traditional site of the temptation is Mount QUARANTANIA. It is not far from the probable site of Jesus' baptism and is in accordance with the scriptural statement that immediately thereafter the Spirit drove him into the wilderness (Mk. 1:12). It is the highest hill in the vicinity and commands a spectacular view of the JORDAN Valley. In addition it fulfills the condition of being "in the desert," an area uninhabited because of its extreme dryness. (For a brief discussion of the differences among the Gospels in their accounts of the temptation, see ABD, 6:382 – 83.)

I. The nature of the temptation. It is likely that JOHN THE APOSTLE had in mind Jesus' temptation, together with that of ADAM and EVE, when he said, "For all that is in the world, the lust of the flesh, and the lust of the eyes, and the pride of life, is not of the Father, but is of the world" (1 Jn. 2:16 KJV). This statement would seem to be a summarization of the temptation of Eve (Gen. 3:6), who saw that the tree was good for food ("lust of the flesh"), that it was a delight to the eyes ("lust of the eyes"), and that the tree was to be desired to make one wise ("pride of life"). Jesus' temptation also bears some similarity to this analysis.

A. Lust of the flesh. It is stated that Jesus fasted forty days and forty nights, the maximum time a person can do without food without endangering his health. During this time he was no doubt engaged in prayer and concentrated thought as he faced the issues resulting from his awareness of being the Messiah. During this time of emotional stress it is not strange that appetite was lacking. When the

stress was over, however, normal hunger pangs asserted themselves imperiously. To Jesus, conscious of his God-given powers, the urge to satisfy the hunger craving in this manner must have seemed plausible. Surely that which is natural cannot be sinful. Why would it not be right to produce bread by the available supernatural power? Jesus instantly rejected it on the basis of Deut. 8:3, the gist of which is that spiritual nourishment is more than the gratification of physical appetite. Jesus rejected cheap bread as quickly as he would have rejected cheap grace. He refrained from using the miracles for selfish gratification. This would have been an unlawful gratification of lawful desire.

B. Lust of the eyes. The second temptation was in the opposite extreme. He stood the test of faith; now he had to withstand the temptation to fanaticism. Again he resorted to Deuteronomy: "Do not test the the LORD your God" (Deut. 6:16). The temptation to cast himself from "the highest point of the temple" (Matt. 4:5), possibly an allusion to the portico of SOLOMON'S COLONNADE, which rose over 300 ft. above the KIDRON Valley, was a temptation to do something spectacular in order to win quick public approbation. It was also tempting the Father; it was daring God to rescue him. Later Jesus was to encounter a similar temptation, to be acclaimed king by an enthusiastic multitude (Jn. 6:15). A similar temptation was presented to Jesus when PETER tried to dissuade him from the way of humiliation and suffering, to which the Master replied, "Get behind me, Satan" (Matt. 16:23). Jesus rejected it on the basis that it would be a challenge to the providence of God; it would be daring God to intervene in a dramatic manner. It would represent a refusal to wait upon the Lord. This was a temptation to which King SAUL succumbed when he took it in hand to offer the sacrifice himself without waiting longer for SAMUEL (1 Sam. 13:8 – 14).

C. Pride of life. The third and last temptation was that of gaining a legitimate end by unworthy means. The devil, to whom Jesus once referred as the ruler of this world (Jn. 14:30), is quoted as saying that he would give to Jesus the allegiance of the world in return for an act of worship. This is a temptation implying that "the end justifies the means." It means that one can accept the services of the devil or of evil people if they will further what seems to be a worthy cause. This was the devil's last and final bid and apparently he himself thought that Jesus would not accept it. Jesus again replied by alluding to Deuteronomy, "Worship the Lord your God, and serve him only" (Matt. 4:10; cf. Deut. 6:13). In so doing Jesus chose the hard, slow way of persuasion rather than the use of force. In this respect, Christianity differs radically from the methodology of Islam, a fighting faith. With his answer Jesus repudiated the means that promised quick and spectacular gains at the sacrifice of principle. Following this audacious challenge, the devil left and angels came. Probably the devil came then as he has since, not in visible form, but in the area of thought and motive.

Traditional site of the Mount of Temptation. (View to the W.)

II. Could Jesus have sinned? The writer of Hebrews stated that Jesus was tempted in all points as we are (Heb. 2:18; 4:15), implying that the temptation was real and that he could have yielded, just as anyone could yield to temptation. In the opinion of many theologians, to deny that Jesus could have sinned is to deny his humanity and to fall into the error of DOCETISM, which maintains that his humanity was only an appearance and not actually real. Because Jesus was truly human, he could have yielded to these temptations and others like them and forfeited his messiahship and son-ship. He refrained from using his divine status to minimize the temptations, but permitted them to be felt in their full force. Thus he was truly man as he was truly God.

Other scholars have argued that if Jesus had sinned, it would have necessarily involved both his human and his divine nature, implying that God himself would have sinned, which is of course impossible (cf. W. Grudem, *Systematic Theology: An Introduction to Christian Doctrine* [1994], 537 – 39). How to assert the reality of Jesus' temptation without compromising his deity is one of the challenges presented by the doctrine of the INCARNATION.

(See further G. C. Morgan, *The Crises of the Christ* [1903], 150 – 210; A. Edersheim, *Life and Times of Jesus the Messiah*, 2 vols. [1889], 1:291 – 307; W. Barclay, *The Mind of Jesus* [1961], 31 – 39; B. Gerhardsson, *The Testing of God's Son (Matt. 4:1 – 11 & par.): An Analysis of an Early Christian Midrash* [1966]; E. Robbins, *The Testing of Jesus in Q* [2007].)

G. A. TURNER

Ten Commandments. Traditional title given to the commandments that God wrote on two stone tablets and that are recorded in Exod. 20:1 – 17 and Deut. 5:6 – 21. The phrase itself occurs elsewhere as the rendering of Hebrew *ʿăśeret haddĕbarîm*, literally, "the ten words" (Exod. 34:28; Deut. 4:13; 10:4). In two of these passages the SEPTUAGINT translates with *tous deka logous* (in Deut. 4:13 it uses *rēmata*), hence the alternative English title, *Decalogue*.

I. Historical context

A. The biblical account. Exodus 19:1 and 16 indicate that the Ten Commandments, found in ch. 20, were proclaimed about three days after Israel's arrival at Mount Sɪɴᴀɪ in the third month (or "third new moon," NRSV) after their departure from Egypt. See Eхᴏᴅᴜѕ, ᴛʜᴇ. Jewish tradition conjectures that this date was that of Pᴇɴᴛᴇᴄᴏѕᴛ. The voice of God announced these words in the hearing of the whole assembly (Deut. 5:22), and the finger of God inscribed them on both sides of two stone tablets (Exod. 31:18; 32:15 – 16) which Mᴏѕᴇѕ received on the mountain, forty days after the making of the ᴄᴏᴠᴇɴᴀɴᴛ. Moses however shattered the tablets on discovering his people's lapse into idolatry (32:19); but God reaffirmed the covenant, giving Moses further subsidiary laws to record (34:10 – 27), and inscribing again the Ten Commandments himself on two fresh tablets prepared by Moses (34:1, 28; Deut. 10:4). The tablets were placed in due course in the ᴀʀᴋ ᴏF ᴛʜᴇ ᴄᴏᴠᴇɴᴀɴᴛ (Exod. 40:20; Deut. 10:5), which took its name from the covenant whose requirements they summarized.

Replica of the ark of the covenant, which held the Ten Commandments, Aaron's staff that budded, and manna.

B. The critical debate. Critical scholars chiefly look to the contents and form of the Decalogue, rather than its accompanying narrative, to establish its origin. The following are some of the main landmarks in the debate.

J. Wellhausen, in the late 19th cent., argued that the Decalogue could not have preceded the chief preexilic prophets, whose teachings it seemed to him to embody, and whom he reckoned to have been the pioneers in condemning idolatry. Israel's initial unconcern on this point suggested to him the absence of any early law against it. This reasoning, together with the trend of Pentateuchal criticism,

carried such weight that only a minority of critics in the generation after Wellhausen were prepared to ascribe the Decalogue substantially to Moses.

In 1927 S. Mowinckel (*Le Décalogue*) gave a new direction to the argument by locating the origin of the Decalogue in Israel's long-standing cultic practice. While he attributed the Decalogue of Exod. 20 and Deut. 5 to the disciples of Isaiah, he visualized its ancient prototype in the "entry liturgy," which challenged the would-be worshiper at a sanctuary gate (cf., according to H. Gunkel, Ps. 15; 24:3 – 6). Mowinckel saw its more direct ancestor in an opening proclamation at the Enthronement Festival which he had postulated in his *Psalmenstudien* (1921 – 24). Subsequent critical debate has mostly accepted the link between the Decalogue and the cult, while differing over its precise nature.

In 1934 A. Alt (*Die Ursprünge des Israelitischen Rechts*; English trans. in *Essays on Old Testament History and Religion* [1966], 81 – 132) classified the Pentateuchal laws by their forms of expression, distinguishing *casuistic* from *apodictic* laws. The former (mostly introduced by an "if " clause) were secular, and, in Alt's view, drawn from Canaanite custom; the latter (often introduced by an imperative or a prohibition, exactly after the manner of the Ten Commandments), proclaimed Yahweh's unconditional will and were a uniquely Israelite phenomenon, stemming from the desert and the covenant. They tended to be grouped together, sometimes in tens or twelves, and their cultic use is illustrated by the ceremony at Mount EBAL (Deut. 27:13 – 26). This analysis pointed to the pre-Canaanite stage that is the biblical setting of the Decalogue; but Alt, like Mowinckel, considered our actual Decalogue a late specimen compared with other groups of commands in the Pentateuch.

G. E. Mendenhall (in *BA* 17 [1954]: 26 – 46, 50 – 76) drew attention to HITTITE suzerainty treaties, whose structure and language seemed closely parallel to those of the Decalogue and other covenant passages (see TREATY). In structure they consisted of (1) the preamble introducing the king and his titles (cf. Exod. 20:1 – 2a), (2) the historical prologue emphasizing benefits conferred (cf. 20:2b), (3) the stipulations (cf. 20:3 – 17), (4) provision for the treaty's deposit in the temple and its periodic public reading (cf. 25:16; Deut. 31:9 – 13), (5) a list of gods as witnesses (the OT naturally lacks this), (6) curses and blessings (cf. Deut. 27 – 28). In language the Hittite stipulations were a combination of case law and apodictic law very similar to what is found in Exod. 21 – 23. Mendenhall pointed out that this form of treaty was widely known in the ANE in the time of Moses (the Hittite empire collapsed in 1200), and argued that the strong cohesion of the Israelite tribes could be due to a covenant bond of this sort between Yahweh as overlord and the various tribes as his vassals, established through Moses on the basis of the Decalogue.

Covenants and cult have continued to be the main areas of subsequent discussion. D. J. McCarthy (*Treaty and Covenant* [1963]), for example, has argued at considerable length against the validity of using Hittite treaties to date the Sinai material, reckoning that the earliest Sinai tradition told of a ritual blood-bond rather than a contractual treaty, and that the Hittite treaty pattern probably survived the Hittite empire to serve as a model for later Israelite thought on the covenant. E. Gerstenberger (in *JBL* 84 [1965]: 38 – 51) maintains that "treaty stipulation and commandment have little in common" and derives the commands of the Decalogue not from covenant or cult but from the necessities of communal life: they were brought into the cult, but originated in the teaching given by fathers to sons, or by elders to the clan. A. S. Kapelrud (in *ST* 18 [1964]: 81 – 90) also emphasizes their social character, but puts them into the historical context of the exodus, arguing, first, that something like the Decalogue would be a necessary common basis if several tribes were to unite; and secondly, that their sense of deliverance and call by Yahweh made a covenant of allegiance, written in the form of a suzerainty treaty, a natural expression of their new status. It was the fruit, in his view,

of reflection, and was concluded not at Sinai but in the course of a prolonged sojourn at Kadesh. H. H. Rowley (in *BJRL* 34 [1951 – 52]: 81 – 118 = *Men of God* [1963], 1 – 36) puts a similar emphasis on the exodus experience of the tribes delivered from Egypt, but argues unequivocally for the indispensable role of Moses as the mediator of such a covenant. (For a more recent discussion see C. M. Carmichael, *The Origins of Biblical Law: The Decalogues and the Book of the Covenant* [1992].)

This sample of divided opinions suggests that the contents of the Decalogue, taken alone, are inconclusive for its provenance. Nothing in it precludes (as some early critics considered) its transmission to Israel through Moses; but all our specific information is contained not in the commandments but in the surrounding narrative. As long as the two are studied apart, the debate is likely to continue indefinitely.

II. Structure and general characteristics. The two groups of commands, numbers 1 – 4 and 5 – 10, oriented respectively Godward and manward, correspond to the two great commandments of love toward God and one's neighbor, in which Jesus summed up the Law and the Prophets (Matt. 22:37 – 40). Their inscription on two tablets seems to answer to this division, although it is not stated to do so. (M. G. Kline, *Treaty of the Great King: The Covenant Structure of Deuteronomy* [1963], ch. 1, regards the two as duplicates, analogous to those of human treaties; but duplicates that are stored together serve little purpose.) The unity underlying the duality is made explicit in the fourth commandment as given in Deut. 5:14 – 15, where it is shown that God's due is also one's neighbor's blessing.

The longer commands (1 – 5 and 10) should probably be analyzed as commands-plus-expositions. This is suggested not merely by the uneven pattern, but also by the alternative endings to the Sabbath command (Exod. 20:11; Deut. 5:14c – 15), which draw out different lessons from the basic injunction, and the smaller variations in the tenth commandment (see III.B.10, below).

The commands are expressed in the negative, except for numbers 4 and 5 (the last of the Godward and first of the manward clauses). Two are reinforced by warnings (nos. 2 and 3) and one by a promise (no. 5). All are spoken to the individual. As to their demands, three (nos. 1, 5, 10) concern the person's inner commitment and attitudes, and the remainder safeguard the practical expression of them in the spheres of worship and society. There is no tension between the cultic and the ethical, for the demands of the latter follow hard on those of the former; nor between law and love, for both are specified together in the phrase, "those who love me and keep my commandments" (Exod. 20:6; cf. Jn. 14:15).

III. Content

A. Love of God (commandments 1 – 4)

1. No other gods (Exod. 20:2 – 3; Deut. 5:6 – 7). The first command—indeed the whole Decalogue—rests on a statement about God: who he is ("I am the LORD" [Yahweh]), whose he is ("your God"), and what he has done ("who brought you out of Egypt, out of the land of slavery"). These facts precede and underlie the imperatives; all is for his sake (cf. "You shall be holy to me because I, the LORD, am holy," Lev. 20:26).

Literally, the prohibition runs, "There shall not be to you other gods"; it possibly implies the reminder that these gods exist only in their worshipers' minds. The phrase "before me" means "in my

presence," as against "taking precedence over me." It means, not that this allegiance could ever be concealed, but that its very existence is an affront to the Lord. The alternate rendering "besides me" (NIV mg.) conveys the substance of the command (cf. "with me," Exod. 20:23 KJV).

This is the fundamental commandment of the ten, the central issue between God and Israel in the OT. The devil tempted even the Lord at this point (Matt. 4:8 – 10).

2. No idols (Exod. 20:4 – 6; Deut. 5:8 – 10). The concern of this command is that the people should WORSHIP God not as they might imagine but as he has revealed (cf. Jn. 4:24, "in spirit and in truth"), that is, not by the aesthetic or intellectual appeal of what is human, but in response to the Spirit and Word of God. One should note Deut. 4 (esp. vv. 12 and 15 – 19), which stresses the invisibility of God, as well as passages that expose the farcical side of IDOLATRY (e.g., Isa. 40:18 – 20; 44:9 – 20). The command against making any likenesses belongs inseparably to the command not to bow down to them; it is not a general prohibition of represen tational art for ornament or instruction (as Exod. 25:18 – 20 and other passages make clear).

God's JEALOUSY in this context means his burning zeal for his people's fidelity; it has the exclusiveness of marital love (cf. Num. 5:29 – 31). The word can have a bad sense (cf. Gen. 37:11), but more often a good one (e.g., Ps. 69:9; Isa. 9:7; Zech. 8:2). Used of the Lord, it reveals him as the God who cares. His "punishing the children for the sin of the fathers" (Exod. 20:5) means, not that he holds the children guilty for something they have not done (cf. Ezek. 18:19 – 20), but that he has bound all lives together, for good and ill (and more good than ill; cf. the numbers implied in "the third and fourth generation" [Exod. 34:7], as against the "thousand generations" included in his blessing [Deut. 7:9]). The process is shown more circumstantially in other passages (e.g., Prov. 14:34; 29:18; Isa. 48:18; Hos. 4:1 – 9).

3. God's name (Exod. 20:7; Deut. 5:11). To "take the name…in vain" (KJV; lit., "for worthlessness," i.e., for no good purpose, thus NIV, "You shall not misuse the name") is to use it irresponsibly, whether in worship (cf. Ps. 50:16; Isa. 29:13), in common speech (cf. Matt. 5:34), or in an attempt to wield power (cf. Acts 19:13 – 16).

JACOB (Gen. 32:30) and MANOAH (Jdg. 13:18) had the sanctity of this name sharply impressed on them, and Moses' vision of God was crowned with its proclamation together with a catalogue of the divine attributes (Exod. 33:18 – 19; 34:5 – 8). It is part of God's self-giving; not to be exploited, but to enable his people to call on him in truth, and "to enter a worshipful and uplifting fellowship" with him (R. S. Wallace, *The Ten Commandments* [1965], 53). Hence the godly are "those who love your name" (Ps. 5:11), and who are dedicated to seeing it hallowed and glorified (Matt. 6:9; Jn. 12:27 – 28).

The warning, "the LORD will not hold anyone guiltless" (Exod. 20:7), may suggest a primary context of perjury (i.e., a false oath may gain you earthly acquittal, but not heavenly; cf. NJPS). The ninth commandment, however, partly covers this element, while the first four are chiefly concerned with the wider issue of the relationship of God and his people.

4. God's day (Exod. 20:8 – 11; Deut. 5:12 – 15). The term SABBATH means "ceasing" or "rest" (cf. Gen. 2:2; Exod. 16:23, 30). Moses had explained it to Israel as both God's day (16:23) and God's gift (16:29). The Decalogue underlines both aspects. It is "holy" and belongs "to the LORD," who "made it holy" (cf. Exod. 31:14, which indicates that people must not profane or secularize it with their own affairs; note further Isa. 58:13); at the same time it refreshes man and beast, "that your

manservant and maidservant may rest, as you do" (Deut. 5:14). It is a day, in fact, that God "blessed" as well as "made holy."

Exodus and Deuteronomy diverge in their wording of this command (hardly at all in the case of the other commandments). Deuteronomy opens with "Observe," as against "Remember" (but the two words are virtually synonymous; both assume some prior knowledge of the day: cf. Exod. 16:22 – 30); it adds the phrase "as the LORD your God has commanded you"; and it ends on the theme of slavery (Deut. 5:15) as against that of the creation (Exod. 20:11). See also above, section II.

For the Sabbath as a sign of the covenant see Exod. 31:12 – 17; Ezek. 20:12. For further details of Sabbath laws see Exod. 34:21; 35:2 – 3; Lev. 23:3; 24:8; Num. 15:32 – 36; 28:9 – 10. For Sabbath observance in the OT see Exod. 16:22 – 30; Neh. 10:31; 13:15 – 22; Ps. 92; Jer. 17:21 – 27; Ezek. 20:12 – 24; Amos 8:5. On the relevance of this command to the Christian see below, section V. (For a summary of critical speculation on the origin of the Sabbath [e.g., as variously derived from the Babylonians, the Kenites, the Canaanites, the moon, or the market] see J. J. Stamm and M. E. Andrew, *The Ten Commandments in Recent Research* [1967], 90 – 95.)

B. Love of one's neighbor (commandments 5 – 10)

1. Respect for parents (Exod. 20:12; Deut. 5:16). The authority of a father and mother is seen in the OT as part of the divine order, inherent in their position rather than their personal qualities (cf. Gen. 9:20 – 27, where HAM's unfilial behavior is not excused by NOAH's lapse). Cursing and defying father or mother were capital offenses (Exod. 21:17; Deut. 21:18 – 21; cf. Prov. 30:11, 17). The promise attached to this fifth command (cf. Eph. 6:2) emphasizes the character of the Decalogue as the expression of God's covenant with his pilgrim people, not an anthology of maxims for the good life. The corresponding duty of the parents was to train up their children in God's law (Deut. 6:6 – 9, 20 – 25; cf. Prov. 1:8; 6:20; 22:6).

Deuteronomy 5:16 adds two corroborative phrases and the NT quotes the command in several contexts (cf. Matt. 19:19; Eph. 6:2 – 3). Our Lord could override its customary expression (cf. Lk. 9:59 – 62), but he countenanced no pretext for evading it (Matt. 15:4 – 9; cf. 1 Tim. 5:4, 8).

2. No murder (Exod. 20:13; Deut. 5:17). The Hebrew verb here (*rāṣlaḥ H8357*) makes "murder" (NIV and other modern versions) a more accurate rendering than "kill" (KJV), a fact corroborated by the context of Exodus and Deuteronomy, which commands the killing of animals and at times (judicially or in war) of human beings. The penalty for murder as against manslaughter (Num. 35:22 – 25) was death; it was not reducible to any lesser sentence (Num. 35:31). This penalty was already in force before the Sinaitic law in the decrees to Noah (Gen. 9:6).

Our Lord applied the commandment to those who indulge in anger, insults, and quarrels (Matt. 5:21 – 26), and pointed out the spiritual kinship of the murderer to the devil, "a murderer from the beginning" (Jn. 8:44). John brands as a murderer "anyone who hates his brother" (1 Jn. 3:15).

3. No adultery (Exod. 20:14; Deut. 5:18). In the OT, adultery refers typically to sexual intercourse between a man and a married woman (cf. Ezek. 16:32). The description and the penalty (death) applied to both parties (Lev. 20:10; cf. Deut. 22:22); a betrothed woman was counted in this context as a wife (Deut. 22:23 – 24).

While adultery, with the wrong it directly inflicts on a third party, is reckoned a graver offense than FORNICATION (for which some restitution could be made: cf. Deut. 22:28 – 29 with vv. 22 – 27),

the OT strongly denounces all extramarital sexual intercourse, condemning the male offender even more strongly than the female (cf. Hos. 4:14). The foundation ordinance of MARRIAGE authorizes intercourse only after the break with the parental home (Gen. 2:24), which distinguishes marriage from betrothal. Jesus showed that the commandment could be violated by thought as well as act (Matt. 5:27 – 28), and even under cover of legality through the DIVORCE of a faithful partner (Matt. 5:31 – 32; Mk. 10:11 – 12). See SEX.

4. No stealing (Exod. 20:15; Deut. 5:19). While enforcing the plain sense of this prohibition (requiring as much as fivefold restitution of stolen property, Exod. 22:1 – 4) and making kidnapping a capital offense (Deut. 24:7), the OT also condemns various forms of indirect theft, such as exploitation (Exod. 22:25 – 27; 23:6 – 8), fraud (Amos 8:5b), dispossession (Mic. 2:2), and the withholding of dues from man and God (Prov. 3:27 – 28; Mal. 3:8 – 9).

The NT endorses the command and, characteristically, goes further: the former thief is urged to honesty and hard work, but also to charitable giving (Eph. 4:28). It is a classic example of love filling the law to overflowing.

5. No false witness (Exod. 20:16; Deut. 5:20). The context of this commandment is the law court. Deuteronomy 19:15 – 21 adds the safeguards of requiring a minimum of two witnesses for a criminal charge, and of making a false witness liable to the penalty to which he exposed the accused.

The trial of NABOTH (cf. 1 Ki. 21:13 – 14) and that of Christ (cf. Matt. 26:59 – 61) demonstrate how much can hang on this commandment and how little a legal safeguard will avail where conscience fails. PAUL expounds truthfulness in its only effective setting: the mutual love of which all the manward commandments are partial expositions (Eph. 4 :15 – 16, 25).

6. No coveting (Exod. 20:17; Deut. 5:21). Other commands (the first and fifth) have concerned inner attitudes, but none as explicitly as this one. Paul cites it in Rom. 7:7 – 12 as opening his eyes to a sinfulness which he would not else have recognized. He quotes only the commandment proper (7:7 and 13:9); the list of objects included in the OT passages gives its application. The list varies in order and content between Exod. 20:17 and Deut. 5:21, the latter opening with "your neighbor's wife" and including later the term "land."

The Hebrew verb used in this commandment is ḥāmad H2773, which the LXX renders with the Greek *epithymeō G2121*, common also in the NT (noun *epithymia G2123*; see DESIRE and LUST). It denotes any selfish longing of fallen human beings (cf. Gal. 5:16 – 17). In Jas. 1:14, it is the precondition of sin; in 1 Jn. 2:16, the craving for worldly satisfactions. In Matt. 5:28 adultery is located in this attitude. Here is the chief root of manward sins, the chief negation of love. By ending on this note the Decalogue dispels the complacency of the externalist. Our Lord's exposition of the inward aspect of the commands, far from being imposed on the material, is already here in germ.

IV. Decalogue and covenant. (See also above, I.B) The law was given in a setting of grace, in that Israel's very presence at Sinai was due to God's intervention (Exod. 19:4; 20:2), based on the patriarchal covenant (2:24) and directed toward making her uniquely his possession, a priestly and holy people (19:5 – 6). Fulfillment of such a calling presupposes conformity to his will (19:5), and this divine will was summarized in the Decalogue and expounded in the accompanying law. To Yahweh, so revealed, Israel pledged her obedience in the covenant described in Exod. 24:3 – 11.

This law, as Gal. 3:17 states, was not given to annul the covenant with Abraham, but to nurture

its recipients in the knowledge of God, and of themselves as transgressors, escorting them toward Christ, who is the fulfillment of the promise to Abraham (3:19) and the ground of our justification (3:24).

V. Relevance to the Christian. The NT frequently draws on the Decalogue for its moral teaching, whether by quotation or as a framework, and treats it as fulfilled, not abrogated, by love. By contrast, the Mosaic ritual laws are shown to be superseded (cf. Mk. 7:19b; Gal. 5:2; Heb. 10:18), and the administrative details of the OT are not carried over into the new covenant.

The Ten Commandments retain their force, then, but stand clear of their supporting regulations. For example, murder no longer calls for the next-of-kin's intervention, nor does adultery call for stoning. The Sabbath, similarly, is set free from the rules which belonged to the ceremonial law (cf. Col. 2:16 – 17), to find its full stature as a creation ordinance designed to be a blessing and hallowed for God (Gen. 2:3). Our Lord's use of it for worship and service set the NT pattern, and the transition from Jewish Sabbath to Lord's Day began on the first Easter and developed in the age of the apostles (Jn. 20:1, 19, 26; Acts 2:1; 20:7; 1 Cor. 16:2; Rev. 1:10).

The position is summed up in the new covenant promise, "I will put my law in their minds / and write it on their hearts" (Jer. 31:33), together with the words of Paul in Rom. 8:4, "in order that the righteous requirements of the law might be fully met in us, who do not live according to the sinful nature but according to the Spirit." (Cf. Rom. 13:8 – 10.) See also ETHICS.

Van Harn, *The Ten Commandments for Jews, Christians, and Others* [2007].)

D. KIDNER

tenon. This English term is used by the KJV and other versions to render the common Hebrew word *yād H3338* ("hand") in several verses (Exod. 26:17, 19; 36:22, 24). The reference is to some kind of wooden peg or projection on the end of a piece of wood for insertion into a corresponding hole in another piece to form a secure joint. The three sides of the tabernacle were made of forty-eight "frames," or boards, each one held in place at the bottom by tenons fitted into sockets of silver to give the boards stability.

S. BARABAS

tent. A temporary dwelling generally made of strong black cloth woven from goats' hair. From remote antiquity it has been the typical abode of the BEDOUIN, the nomadic Arab of the Arabian, Syrian, and N African deserts. Tents are of various types: conical, oval, oblong. They are pitched by women stretching goats' haircloth over poles with cords of goats' hair or hemp fastened to stakes. The stakes are hardwood pegs driven into the ground with wooden mallets (Jdg. 4:21). Reinforcements with narrow strips of cloth are used under the poles and where cords are fastened. Side curtains are of goats' haircloth or mats woven from reeds or rushes. These are also used for

dividing walls when needed to separate families or animals from people (2 Chr. 14:15). The back of the tent is closed; the front often open. A corner of the curtain where two ends meet is turned back to form the door (Gen. 18:1). Tents are a protection from heat and cold, but hardly rain proof.

Normally, one pack animal, such as a donkey or camel, can carry all the belongings of a nomadic family. Dining utensils consist of two tinned copper cooking vessels, a shallow tray of the same metal, a coffee set consisting of roasting pan, mortar and pestle, and boiling pot and cups. Food is usually kept in bags of goats' hair, while liquids—i.e., milk, oil, and wine—are stored in skins. Poor people have little or no rugs on their dirt floors, but the wealthier cover their floors with mats of goats' hair or straw, or woolen rugs (Jdg. 4:18).

A sheikh, or chief, has several tents, one for himself and guests, others for his wives and female servants, and still others for his animals (Gen. 31:33; Heb.)ōhel H185). The patriarchs, ABRAHAM, ISAAC, JACOB (cf. also ESAU), were all wealthy tent dwellers. "Abram had become very wealthy in livestock and in silver and gold. From the Negev he went from place to place until he came to Bethel, to the place between Bethel and Ai where his tent had been earlier" (Gen. 13:2 – 3). Later, "Abram moved his tents and went to live near the great trees of Mamre at Hebron" (13:18). Isaac, a farmer and herdsman, lived in tents (24:67; 26:12 – 25). Jacob spent his life in tents, mostly as a rich nomad in Canaan (31:33; 33:19; 35:21).

The TABERNACLE built by MOSES was called the "Tent of Meeting" ( )ōhel mô(ed), a phrase that occurs numerous times in Exodus, Leviticus, and Numbers. In time the tent became a symbol for home and a general term for dwelling or habitation (Lk. 16:9; Gk. *skēnē G5008*). The term was used symbolically, with nostalgic recall, long after Israel was settled in Canaan. DAVID inquired, "O LORD, who may abide in your tent?" (Ps. 15:1 NRSV), and expressed his own wish, "I long to dwell in your tent forever" (61:4; cf. 78:60). The prophets often used the term figuratively. ISAIAH, in predicting Babylon's desolation, declared that "no Arab will pitch his tent there" (Isa. 13:20), and by contrast spoke of Jerusalem as "a tent that will not be moved" (33:20; cf. 54:2). JEREMIAH, lamenting the fall of Judah, said, "My tent is destroyed; all its ropes are snapped. My sons are gone from me and are no more; no one is left now to pitch my tent or to set up my shelter" (Jer. 10:20). The apostle PAUL called the flesh "the earthly tent we live in" (2 Cor. 5:1), and the author of HEBREWS spoke of the "true tabernacle [*skēnē*] set up by the Lord, not by man" (Heb. 8:2; cf. Rev. 15:5).

G. B. FUNDERBURK

tentmaker. This term (Gk. *skēnopoios G5010*) occurs only once in the Bible, and that reference introduces three tentmakers. PAUL had just come from ATHENS to CORINTH, and to find suitable lodging he sought one of his own race and his own trade. He found both in "a Jew named Aquila… with his wife Priscilla…and because he was a tentmaker as they were, he stayed and worked with them" (Acts 18:2 – 3). Jewish parents taught their children trades, usually one that was pursued in successive generations by the family. Hence, Jesus was taught the carpenter's trade and Paul that of tentmaker. Paul's native province of CILICIA was so noted for its good grade of goats' haircloth, used largely for tents, that it was exported by the designation of Cilician cloth. Paul's skill in this craft probably consisted of the sewing together of the proper lengths of cloth and the attaching of ropes and loops.

G. B. FUNDERBURK

Tent of Meeting. See TABERNACLE.

Tephon tee'fon (T$^{\text{Τεφων}}$). KJV Taphon. A Judean city fortified by BACCHIDES (1 Macc. 9:50). Tephon may be a variant of TAPPUAH; if so, the reference here is probably to a town that had been in Ephraimite territory in OT times (Josh. 17:7; see J. A. Goldstein, *I Maccabees,* AB 41 [1976], 386).

Terah (person) ter'uh (תֶּרַח *H9561,* perhaps "ibex" [see discussion in *HALOT,* 4:1792, and *ABD,* 6:387 – 88]; Θάρα *G2508*). Son of NAHOR and father of ABRAHAM (Gen. 11:24 – 32; Josh. 24:2; 1 Chr. 1:26); included in Luke's GENEALOGY OF JESUS CHRIST (Lk. 3:34 [KJV, "Thara"]). STEPHEN made reference to Abraham's father without mentioning his name (Acts 7:2).

Terah lived in UR of the Chaldees, identified by most scholars as Tell Muqayyar, on the lower EUPHRATES near the Persian Gulf. From Ur, Terah migrated northward some 500 mi. along the Euphrates to the city of Haran, located about 275 mi. NE of DAMASCUS. See HARAN (PLACE). Terah had two other sons, NAHOR and Haran. See HARAN (PERSON). Although Abram is listed first, it does not necessarily follow that he was the oldest son. Haran, who died before the family moved northward, may have been the oldest. It was Haran's son LOT who eventually went with Abram to Palestine. According to Josh. 24:2 and 15, Terah was an idolater. Nannar (Semitic Sin) was the principal deity worshiped at Ur, as well as at Haran, during the time of Terah.

S. J. SCHULTZ

Terah (place) ter'uh (תֶּרַח *H9562*). KJV Tarah. A stopping place of the Israelites, between Tahath and Mithcah (Num. 33:25 – 26). The location is unknown.

teraphim ter'uh-fim (תְּרָפִים *H9572,* perhaps "weak [*i.e.,* vile] things" or "demons" [cf. *HALOT,* 4:17 – 94 – 96]). This transliteration is used by the KJV in Jdg. 17:5; 18:14 – 20; and Hos. 3:4. The NRSV uses it also in 2 Ki. 23:24; Ezek. 21:26; and Zech. 10:2. In addition to these passages, the Hebrew word occurs in Gen. 31:19, 34 – 35; 1 Sam. 15:23; 19:13, 16. The NIV avoids the transliteration altogether and renders the word as "household gods" (Gen. 31:19, 34 – 35; Jdg. 18:14 – 20; 2 Ki. 23:24) or "idol(s)" (Jdg. 17:5; 1 Sam. 19:13, 16; Ezek. 21:21; Hos. 3:4; Zech. 10:2); in one passage it uses "idolatry" (1 Sam. 15:23, as do also KJV and NRSV). See IDOLATRY.

The images referred to by this term ranged from rather small (Gen. 31:34 – 35), to nearly life-sized (1 Sam. 19:13, 16). Archaeological discoveries at NUZI in Iraq have illuminated the function and significance of these idols. (Cf. C. H. Gordon, *The Ancient Near East,* 3rd ed. [1965], 128 – 30.) Their possession constituted the headship of the household with all of the rights attendant thereto. RACHEL's theft of the teraphim (Gen. 31:19) was an attempt to procure such headship for her husband, although it was rightfully her brother's. LABAN's extreme displeasure is explicable in this light. (Cf. M. Greenberg in *JBL* 81 [1962]: 239 – 48.)

It appears that throughout much of their history the Israelites did not find possession of teraphim inconsistent with Yahwism (cf. Jdg. 17; 18; and esp. 1 Sam. 19:13 and 16, which indicate that they were even found in the household of DAVID). They are spoken of with disapproval from the time of SAMUEL (1 Sam. 15:23) to that of ZECHARIAH (Zech. 10:2). The function of teraphim of which the prophets most disapproved was DIVINATION. As divinatory objects they often are mentioned with EPHODS, which were also used for divination (Jdg. 17:5 and 18:14 – 20, where they seem to be separate from the idol, and Hos. 3:4). Among the things purged during JOSIAH's reform, teraphim seem to be grouped with mediums and wizards (2 Ki. 23:24). The king of Babylon is said to consult them (Ezek. 21:21) and Zechariah says they utter nonsense (Zech. 10:2). HOSEA speaks longingly of

the day when Israel, in total dependence on God, will be able to live without the aid of teraphim. (See further *DDD*, 844 – 50.)

<div align="right">J. OSWALT</div>

terebinth. Also known as the turpentine tree, the terebinth (*Pistacia terebinthus*, including the subspecies *P. terebinthus palaestina*) is a deciduous and long-lived tree native to the Mediterranean region. The NIV and the NRSV use "terebinth" to render ⁾*ēlâ H461* in two passages where this Hebrew term is distinguished from ⁾*allôn H473*, "oak" (Isa. 6:13 [KJV, "teil tree"]; Hos. 4:13 [KJV, "elms"]; the NRSV uses "terebinth" also in the title of Ps. 56, and the NJPS uses it some twenty times to render more than one term). For discussion see FLORA (under *Anacardiaceae*) and OAK.

Teresh tihr'esh (תֶּרֶשׁ *H9575*, meaning uncertain). One of two EUNUCHS or officers in the court of XERXES (Ahasuerus) who plotted his assassination. MORDECAI found out about it, thus saving the king's life, and the two men were hanged (Esth. 2:21 – 23; 6:2; in Add. Esth. 1:10 and 12:1 he is called "Tharra").

Terror on Every Side. See MAGOR-MISSABIB.

terrorists. See ASSASSINS.

Tertius tuhr'shee-uhs (Τέρτιος *G5470*, from Latin *Tertius*, "third"). The SCRIBE or AMANUENSIS to whom PAUL dictated his epistle to the ROMANS. Among Paul's greetings to the Christians in ROME, Tertius inserts his own, "I Tertius, who wrote down this letter, greet you in the Lord" (Rom. 16:22; the Gk. can also be understood to mean, "I Tertius, who wrote down this letter in the Lord, greet you"). Some identify him with SILAS on the improbable assumption that the latter's name derived from Hebrew *šĕlîšî H8958*, "third" (the meaning of *tertius* in Latin). Others conjecture that he was a Roman Christian living in CORINTH, from where the letter was written. Paul seems to have customarily dictated his letters to an amanuensis, adding a greeting in his own hand as "the distinguishing mark in all my letters" (2 Thess. 3:17).

<div align="right">A. M. ROSS</div>

Tertullian tuhr-tuhl'yuhn. One of the great Latin apologetes in the ancient church, Septimius Tertullianus was born in the middle of the 2nd cent. in N Africa, probably in Carthage, where he was trained in literature and rhetoric. He was converted to Christianity as an adult and some years later joined the Montanist sect, which emphasized eschatological expectations and the supernatural work of the Spirit (including esp. prophecy). Most details about his life are uncertain, but he became a prolific and powerful theological writer who greatly influenced the articulation of Christian doctrine in the Latin-speaking church. Without rejecting allegorical INTERPRETATION, Tertullian preferred a historical approach to Scripture. A rigorist in his understanding of the Christian life, he could be ruthless in controversy, but many scholars credit him with thoughtfulness and a discriminating mind. He is thought to have died shortly after the year 220. (See J. Morgan, *The Importance of Tertullian in the Development of Christian Dogma* [1928]; T. P. O'Malley, *Tertullian and the Bible: Language, Imagery, Exegesis* [1967]; G. L. Bray, *Holiness and the Will of God: Perspectives on the Theology of Tertullian* [1979]; T. D. Barnes, *Tertullian: A Historical and Literary Study* [1985,

reissue of 1971 ed. with corrections and a postscript]; D. Rankin, *Tertullian and the Church* [1995]; E. F. Osborn, *Tertullian: First Theologian of the West* [1997]; G. D. Dunn, *Tertullian* [2004].)

Tertullus tuhr-tuhl'uhs (Τ Τέρτυλλος *G5472*, from Latin *Tertullus*, diminutive of *tertius*, "third"). The professional orator hired by the Jews to state their case against PAUL before FELIX, Roman governor of JUDEA (Acts 24:1 – 9). He may have been a Roman, judging from his Latin name (although such names were common among Jews and Greeks); or he may have been a Jew, since he identifies himself with his clients (however, it is a lawyer's custom to do so).

With traditional courtesy Tertullus began his clever rhetoric by flattering the governorship of Felix beyond the facts. He attributed the riot in Jerusalem to the agitation of Paul, ringleader of an illegal sect who was detained in custody by the Jews for trying to "desecrate the temple" (Acts 24:6). Paul was thus made out to be an enemy of the public peace and of Jewish religion, both of which Felix was charged to uphold. The speech of Tertul-lus should be compared with the factual account of the incident (21:27 – 40), with the letter of CLAU-DIUS LYSIAS the tribune (23:26 – 30), and with the reserve of Paul's reply (24:10 – 21).

The coastal city of Caesarea, where Tertullus made a case against the apostle Paul.

test. See TEMPTATION.

testament. This English term (Latin *testamen-tum*, "last will," from *testari*, "to be a witness") is used by the KJV over a dozen times in the NT as the rendering of Greek *diathēkē G1347* (Matt. 26:28 et al.). In extrabiblical literature this Greek word usually meant "last will," but in the NT (and LXX) it appears to mean "covenant," and it is so rendered usually in modern versions. See COVENANT (NT) I. In two passages, however, the meaning of the word is disputed. The author of Hebrews links *diathēkē* with the death of the person who has made the disposition (Heb. 9:16 – 17), and therefore most scholars prefer the translation "will" here. Similarly, it is argued by some that when PAUL uses the illustration of a human *diathēkē* as something that cannot be altered (Gal. 3:15), he has in mind a last will or testament (cf. NRSV).

Testament of Abraham. For this and similar pseudepigraphic works, see under the name of the person (e.g., ABRAHAM, TESTAMENT OF; ADAM, TESTAMENT OF).

Testaments of the Twelve Patriarchs. An early pseudepigraph in which each of JACOB's twelve sons gives instructions to his descendants. It is the most important example of a large body of "testaments" of a Judeo-Christian character usually attributed to outstanding OT saints but also to Orpheus and to Jesus Christ. Each testament contains narrative as well as eschatological, demonological, and homiletical material, and much of the teaching is of a very noble character. The structure of the twelve sections is quite uniform: the patriarch calls his sons together, tells them of some events in his own life, warns them against a particular vice or admonishes to a particular virtue often connected with his own life, and prophesies their future in terms of their sins, punishments, salvation, and so forth. The sections close with the death of the patriarch and his burial at HEBRON. The inspiration for such a collection of testaments undoubtedly came from Gen. 49 (cf. also Deut. 33), where Jacob prophesied concerning each of his sons. The form of each section is also similar to that of the charges given by JOSHUA to Israel (Josh. 23 – 24) and by DAVID to his son SOLOMON (1 Ki. 2).

I. Contents. In his testament, REUBEN chiefly mourns over the sin he committed with BILHAH (Gen. 35:22). He gives details not found in the biblical account but similar to those included in the book of JUBILEES. Reuben attributes temptation to various spirits of deceit and spirits of error. He gives very strong warnings against the sin of fornication and scathes womankind for the wicked way in which they ensnare their male counterparts. The apologetic trend of the testament as a whole is to clear the name of Reuben as far as possible.

The next testament is that assigned to SIMEON, who dwells mainly upon his hatred and mistreatment of Joseph. He recognizes Joseph's goodness and repents of his evil attitude, all the while warning his sons against deceit and envy and admonishing them to live pure and upright lives. A brief warning against fornication is given in much the same spirit as is found in Reuben's testament, and the book of *1 Enoch* is referred to in this connection (see *T. Sim.* 5.3 – 4).

The testament of LEVI, which follows, is mainly apocalyptic in character. Levi falls into a deep sleep, and the heavens are opened to him and explanations concerning them are given. An angel gives the command to execute vengeance upon the Shechemites, and Levi's action against them is justified in spite of the sorrow it brought upon his father. Thereafter, Levi sees another vision in which seven men in white clothe him in priestly apparel. A promise is given to Levi to the effect that his descendants would participate in the three offices of prophet, priest, and king, a sign of the coming of the MESSIAH. There follows a short biographical section together with general admonitions. Levi then prophesies the corruption of his descendants, especially in the end of the ages, and this will bring a curse upon Israel. Sexual sins were to play an especially large part in this corruption. The destruction of the temple is predicted, most probably a reference to A.D. 70. In the end, a glorious "new priest" will appear and all the saints will be clothed with joy.

The testament of JUDAH is next and begins with a declaration of Judah's own prowess in killing wild animals (a lion, a bear, a boar, a leopard, and a wild bull) and in his battles with Canaanite kings and others. The assault upon the sons of Jacob by ESAU and Jacob's victory is given. There is a considerable degree of similarity between the accounts of *Jubilees* and some of those given here. Judah relates the sinful incident involving TAMAR with explanatory and excusatory remarks. He admonishes his children to upright living and in particular he denounces covetousness, drunkenness,

and fornication. Judah expresses sorrow over the lewdness and wickedness of his children and looks forward to the day when they shall all repent, after which time the messianic "star of Jacob" will arise.

The testament of ISSACHAR is much shorter than the previous two. It dwells chiefly on the matter of the MANDRAKES familiar to us from the biblical account. There is little sorrow or repentance in this testament and, in fact, there is considerable exultation on the part of Issachar in the good life he has lived. He exhorts his sons to a similar life.

ZEBULUN's testament is also short and deals mostly with the sale of Joseph. Zebulun is justified by declaring that he took only the smallest part in the incident and received none of the money. He exhorts his sons to show compassion toward others even as he himself did.

In the short testament named after him, DAN confesses that he had hated Joseph enough to be joyful over his fate and he therefore admonishes his children to avoid anger. There is a significant messianic passage stating that salvation would arise from "the tribe of Judah and of Levi" (*T. Dan* 5.10). R. H. Charles edited out the words "Judah and of," arguing that the singular "tribe" admitted only Levi. The argument could hardly be sustained in the light of a similar construction in the SEPTUAGINT of 1 Ki. 12:23. And, in any case, the expectation of two Messiahs and perhaps even three is known now from the DEAD SEA SCROLLS.

The testament of NAPHTALI begins with the genealogy of Bilhah, his mother, whose father is called Rotheus, and there are some general exhortations with a reference to the writing of Enoch. There follows an account of Naphtali's vision in which Levi seizes the sun and Judah seizes the moon. Joseph seizes a bull and rides on it, and there is a storm at sea where the brothers are separated. There is another reference to future salvation which is to arise from Levi and Judah.

In the testament ascribed to him, GAD admits his hatred of Joseph and the whole work is taken up with the subject of hatred. Gad exhorts his sons to show love and concern and teaching of the noblest character is found here.

In the testament of ASHER there is a general and strong exhortation to obedience to righteousness in a tone similar to that of the WISDOM Literature or that of the epistle of James. Some of the instruction is developed along the lines of the doctrine of the Two Ways.

The testament of JOSEPH is mainly concerned with a lengthy description of the temptation of Joseph by the wife of POTIPHAR. It was God who guarded him from her vices and the whole incident is made the occasion for moral instruction to be given to Joseph's sons. There are quite a number of resemblances to the language of the Gospels (e.g., *T. Jos.* 1.6). There is a significant reference to the birth of a virgin who in turn gives birth to a conquering lamb (19.8).

The last of the testaments is that of BENJAMIN. This work opens with the account Joseph gave to Benjamin of his being sold into Egypt. Benjamin exhorts his children against deceit and sexual immorality. In this testament especially there is a considerable difference in the material included in the various texts, and Christian interpolation seems plain. The first two verses of ch. 11 often are taken to refer to PAUL the apostle.

II. Text. Both *T. Naphtali* and *T. Levi* circulated independently at one time, to judge by certain known fragments (see *APOT*, 2:361 – 67). The Dead Sea discoveries have confirmed this judgment and have, at the same time, added new light to the discussion of the text. A number of MSS of *T. Levi* were turned up. Cave 1 yielded sixty small fragments of one MS and Cave 4 produced slightly larger fragments of three MSS. One of these is dated paleo-graphically to late 2nd cent. or early 1st cent. B.C. The text of these fragments is similar enough to the standard text to suggest that it may be the original.

It has also been suggested that the two fragments of *T. Levi* from the 11th cent. A.D. found in the Cairo Genizah were copied from a Qumranic MS. A 10th-cent. Greek MS has interpolations possibly based on such a Qumranic MS, and a fragment of a 9th-cent. Syriac MS may also be based upon it.

A few small fragments of a work closely related to *T. Naphtali* have also been found in the caves. A number of later Hebrew documents give evidence of extremely variant forms of text and of several amplified versions of parts of this testament. No evidence of any of the other testaments has been found at Qumran. It is possible that only *T. Levi* and *T. Naphtali* were known there. The other testaments are certainly replete with terms and concepts characteristic of Qumranic literature, but it is going too far to suggest that the work as a whole must have originated at Qumran. A common source for Qumranic literature and for the *Testaments* may be responsible for the similarity.

Apart from the evidence cited above, the first indication of the existence of this work is a reference by ORIGEN to "a certain book which is called 'The Testament of the Twelve Patriarchs,' although it is not accepted in the canon" (*Homily on Joshua* 15.6). Origen attributes to this book the teaching that a different demon acts in each sinner. It is true that *T. Reuben* 2 – 3 lists over a dozen spirits which act in mankind, but it is not entirely beyond dispute that Origen is referring to the *Testaments* as we know them. JEROME likewise speaks of the "book of Patriarchs" which he considers to be apocryphal. The material he refers to in this book is known to us from *T. Naphtali* 2.8 (see *Homily on Psalms* 14).

Over a dozen Greek MSS of the *Testaments* (some fragmentary) have been preserved, the earliest of which dates to the 10th cent. In addition, an important Armenian version survives in numerous MSS. Other versions (such as the Latin and the Slavonic) are of little textual value. All available witnesses possibly derive from a single uncial archetype, now lost, produced some time prior to the 9th cent.

III. Language. Because of a large number of Semitisms in the *Testaments*, R. H. Charles argued strongly for a Hebrew original, and his views were widely accepted at one time. Not all of his arguments are of equal value, however, and it must be remembered that Greek-speaking Jews may well have produced works in Greek having built-in Semitisms. Some of the Semitic features may have been imitations of the language of the SEPTUAGINT. Numerous other features, moreover, are distinctively Hellenistic. Although some portions of the *Testaments* may have had a Hebrew or Aramaic origin, present scholarship regards the work as a whole as having been written originally in Greek.

IV. Date. The date of composition of the *Testaments* was placed within very narrow limits by Charles. He cites *T. Reuben* 6.10 – 12 (cf. *T. Simeon* 5.5) as a reference to a high priest who is also king and warrior, which suggests the HASMONEAN priest-kings of the 2nd. cent. B.C. The fact that *T. Levi* 8.14 indicates that the priesthood is to be called by "a new name" is taken as a reference to the designation "priests of the Most High God," a title applied to the Hasmonean high priests in *Jubilees*, the *Assumption of Moses*, JOSEPHUS, and the TALMUD. Charles then argues that since, according to his reasoning, the author of the work was a PHARISEE, it must have been composed before the break between the Pharisees and John Hyrcanus took place, that is, near the end of the 2nd cent. B.C. Further, *T. Levi* 8.15 assigns the prophetic gift to a member of the Hasmonean dynasty together with the functions of kingship and priesthood. This could only be John Hyrcanus himself, which limits the date of composition to the period between 137 and 107 B.C. Furthermore, *T. Levi* 6.11 most probably refers to the destruction of SAMARIA, and this means that the book is to be dated to the period 109 – 107 B.C.

It is to be noted, however, that Charles's dating is based heavily upon the assumption of Pharisaic authorship. This presents some difficulties in view of the fact that the *Testaments* were preserved almost entirely in Christian circles and appear to have been ignored by, or unknown to, Jewish communities. If the *Testaments* were actually the work of an ESSENE community, for example, Charles's argument would be somewhat weakened. It should also be noted that his dating is based heavily upon the assumption of the essential unity of the book. Interestingly, *T. Levi*, from which he draws most of the evidence for his dating, is now known to have existed as a separate work.

It seems best to suggest, in the light of all the circumstances, that certain parts of the book were probably written in the 2nd cent. B.C. but that the work, as we now know it with all of its Christian and other additions, did not come into existence till perhaps sometime in the 2nd cent. A.D. According to a few scholars, the *Testaments* should in fact be regarded as a Christian composition that made use of some earlier Jewish document(s).

V. Integrity and authorship. There is little doubt that, on the whole, the *Testaments* show an essential unity of concepts and even of language. The form, too, of each of the twelve separate sections is essentially the same. But there seems to be enough evidence, especially since the discovery of the DSS, for stating that some parts of the work, most notably *T. Levi* and *T. Naphtali*, circulated as independent works. It may be, therefore, that we must speak of several authors and a final editor. While the attribution of the work to Pharisaic hands, especially to those of the early type with their emphasis upon the law and the messianic kingdom, has much to commend it, there are other factors which suggest that authors belonging to one or other of the Essene groups may have been responsible for most of the work. From what is now known of at least one Essene group, the Qumran community, the emphasis upon the law and the messianic kingdom in the *Testaments* would make Essene authorship as likely as Pharisaic. Further, the constant emphasis on sexual sins in the *Testaments* would admirably suit an Essenic origin for the work. Essenic authorship of the work would also make its preservation in Christian circles easier of explanation. It is certain, at least, that part of the work was read at Qumran, and this is more probable if the work originated in Essenic circles.

In view of the undoubtedly Christian passages and references in the work, however, it is most probable that the final editor or compiler was Christian or Jewish-Christian. In view of the references to the destruction of Jerusalem and the temple (*T. Levi* 15.1), a date of compilation near the end of the 1st cent. A.D. or early in the 2nd cent. A.D. seems most probable.

VI. Concepts and influence on the NT. As already remarked, the *Testaments* reflect some of the highest and noblest ethical teaching outside the NT. When a contrast between the teaching of the OT and of the NT can be seen, the teaching of the *Testaments* usually falls between the two. Thus, for example, on the question of FORGIVENESS, the understanding of the concept as expressed in *T. Gad* 6.3 – 7 is considerably different from that expressed in the OT, but strikingly similar to that expressed in Lk. 17:3 – 4 and Matt. 18:15 – 35. Forgiveness in *T. Gad* is seen as the restoration of the offending party to full communion and fellowship with the offended party. It is the offended party who is responsible for taking the initiative, and his mind must be rid of any feelings of resentment. Similarly, the supreme duty is summed up in terms almost, though not exactly, identical to those of the NT: "Love the Lord and your neighbor" (*T. Issachar* 5.2; cf. 7.6 and *T. Dan* 5.3). Further, the treatment of such questions as hatred, lying, envy, lust, covetousness, and the virtues of long-suffering, truthfulness, love, purity, generosity, and temperance in the *Testaments* is similar to that in the NT.

Concerning the more highly theological issues, we note that there is to be a RESURRECTION, first of the OT heroes, and next of the righteous on the right hand and of the wicked on the left (*T. Benjamin* 10.6 – 8). This is to take place on the earth, which is to last forever. The *Testaments* also show an advanced stage of demonology and of angelology. Interestingly, *T. Dan* 5.6 links the tribe of Dan with SATAN, and this is of assistance in explaining the omission of the tribe in the NT Apocalyptic list (Rev. 7:5 – 8).

Regarding eschatological expectation, two Messiahs are referred to in the *Testaments*, one to be descended from Levi, the other from Judah. Charles explained this problem by suggesting that, in the original work, a Messiah from Levi was expected and the expectation of a Messiah from Judah was supplied to the work by 1st-cent. additions. In the light of Qumranic messianic expectation, however, it is no longer necessary to appeal to source criticism to explain this apparent two-Messiah concept. The original itself may well have expected two Messiahs. The Messiah from Levi is a priestly Messiah and overshadows the Messiah from Judah. It is thought, by some, that this reflects the Hasmonean era when Israel was ruled by Maccabean priest-kings. This priestly Messiah was to be free from sin, to walk in meekness and righteousness, to establish a new priesthood under a new name, to mediate for the Gentiles, to be a prophet of the Most High and a king over all the nations. He was to wage battle against Israel's enemies and the powers of wickedness, to deliver the souls of the saints, to open paradise to the righteous, to feed the saints from the tree of life, to give the faithful power over evil spirits, and to bring sin to an end.

There is a fairly strong note of universalism in the book, the Gentiles being given opportunity for salvation. Indeed, all the Gentiles are to be saved through the example and teaching of Israel. The influence of concepts of the *Testaments* upon the NT seems unmistakable. In addition to this, there are many parallels where the NT appears to reflect the very phrasing of the *Testaments*.

<div align="right">H. G. ANDERSEN</div>

testimonia. This Latin term (sg. *testimonium*) is often used in biblical scholarship to designate collections of OT proof texts, especially those that support Jesus' messiahship (cf. the parallel passages Matt. 21:42; Rom. 9:33; 1 Pet. 2:6 – 8). Some have even argued that the NT writers had recourse to a "Testimony Book" that brought together such texts (see QUOTATIONS IN THE NT II). When a one-column fragment was discovered in Cave 4 of QUMRAN that linked several biblical texts, the name 4QTest(imonia) was given to it (the formal siglum is 4Q175) because it was thought to support the existence of "testimony" documents in Judaism (cf. *ABD*, 6:391 – 92). See also FLORILEGIUM.

testimony. This English term is used variously in Bible translations to render several terms (e.g., Hebrew ʿ*ed H6332* and ʿ*edût H6343*; Gk. *martyria G3456* and *martyrion G3457*). The word can bear a number of meanings. (1) It may simply be equivalent to "witness," as in 2 Tim. 1:8 (KJV, NRSV), where PAUL exhorts TIMOTHY not to be ashamed of his *martyrion* to Christ. (2) A second sense is that of "evidence" which witnesses to something, as in Acts 14:3, where the KJV reads, "the Lord…gave testimony [verb *martyreō G3455*] to the word of his grace." (3) Frequently in the OT "the Testimony" refers to the Decalogue as a pristine statement of God's will, from which comes the expressions "ark of the Testimony" (Exod. 25:16 et al., or simply "the Testimony," 16:34; see ARK OF THE COVENANT) and "tablets of the Testimony" (31:18; 32:15; 34:29). (4) The expression "testimony" was then extended to cover the whole book of the law of God (Ps. 78:5 KJV et al.) or to specific commandments (119:22 KJV et al.). (5) In some instances testimony signifies the word of God given to a prophet (Isa. 8:16, 20). (6) In the book of Revelation, the term *martyria* refers to the GOSPEL (Rev. 1:2 et al.).

A 9th-cent. Greek manuscript of the Gospel according to Mark, written to provide testimony or witness to the person and work of Christ.

M. E. OSTERHAVEN

Testimony of Truth. A Gnostic tractate included in the NAG HAMMADI LIBRARY (NHC IX, 3). The work was probably composed in Greek around A.D. 200, but it survives only in this fragmentary Coptic translation. It consists of a homily (plus additional material) in which the author polemicizes against such topics as the law, marriage (procreation), and the resurrection. (English trans. in *NHL*, 448 – 59.)

tet tet (טֵית, meaning uncertain). Also *teth*. The ninth letter of the Hebrew ALPHABET (ט), with a numerical value of nine. Its sound in Modern Hebrew corresponds to that of English *t*, but in biblical times it was a so-called "emphatic" consonant, possibly characterized by an additional velar articulation (i.e., with the back of the tongue touching or approaching the soft palate) or by a

compression of the pharynx.

Teta tay'tuh. KJV Apoc. form of HATITA (1 Esd. 5:28).

Tetragrammaton tet'ruh-gram'uh-ton. Derived from the Greek words for "four" and "letter," this term refers to the four-consonant name of God, YHWH (prob. pronounced *Yahweh*). See GOD, NAMES OF.

tetrarch tet'rahrk (τετράρχης *G5490* [also τετραάρχης]; verb τετραρχέω *G5489*). The title given to Herod Antipas, ruler of GALILEE and PEREA (see HEROD V), to his brother Philip, ruler of ITUREA and TRACONITIS (see HEROD VI), and to LYSANIAS, ruler of ABILENE (Matt. 14:1; Lk. 3:1, 19; 9:7; Acts 13:1). Originally the term was used for a ruler of the fourth of a region (Gk. *tetras*, "four"). Eventually, the literal sense faded out, and the word came to be used as the title of a petty dependent prince, lower in rank and authority than a king. This designation is given to Herod Antipas not only in the NT but also several times in inscriptions and in JOSEPHUS.

When Herod the Great died in 4 B.C. (see HEROD II), his domain was divided into three parts. Archelaus received JUDEA (with IDUMEA and SAMARIA) and the title of ETHNARCH (see HEROD IV). Antipas and Philip were both given the title of tetrarch. The latter ruled over various territories in NE Palestine. Later Lysanias, about whom little is known, was made tetrarch of the tiny district of Abilene, NE of Mount HERMON.

In Mk. 6:14 and 26 Antipas is spoken of as "king" instead of tetrarch. Of this H. B. Swete says: "A tetrarch was in fact a petty king, and may have been called *basileus* [king] as an act of courtesy: he possessed a jurisdiction with which the Imperial authorities were ordinarily reluctant to interfere (Lc. xxiii. 7)" (*The Gospel according to St. Mark*, 2nd ed. [1902], 113). Two other factors should also be considered. It was the custom of the Romans to call all eastern rulers by the popular title of "king," and Mark was writing in Rome. Then, too, the people of Galilee would likely refer to their ruler as king.

R. EARLE

Tetrateuch tet'ruh-ty*ook*. This term, derived from the Greek words for "four" and "book," is applied to the first four books of the Bible viewed as a group (cf. PENTATEUCH, "five books"; HEXATEUCH, "six books"). While many scholars use this name as a convenient designation, for others it reflects the view that these books should be distinguished from the book of DEUTERONOMY, the latter being considered part of the so-called DEUTERONOMISTIC HISTORY.

tetter. Any of several skin DISEASES. The term is used by the RSV and the NJPS to render Hebrew *bōhaq H993*, which occurs only once (Lev. 13:39). The NIV has "harmless rash" (cf. also NRSV). The context makes clear that it referred to *white* patches of skin; diagnosis was necessary because a white patch is occasionally an early symptom of leprosy. If the priest determined that the color was a dull white, it was declared noncontagious. Thus the reference is probably to vitiligo (leukoderma)— irregular areas of depigmented skin. The bleached out areas spread centrifugally, sometimes involving the hair and producing white streaks. It is disfiguring, but not dangerous. Egyptian women were acquainted with vitiligo. They are said to have restored some of the normal color by chewing plants found along the banks of the Nile. Staining the white patches was also resorted to, as it is in

our own generation.

<div align="right">R. H. POUSMA</div>

text and manuscripts (OT). Less than a century ago, research into the history of the OT text seemed to have reached a dead end in two important directions. On the one hand, the collations that Kennicott and de Rossi had published in the latter part of the 18th cent., with their comparison of the readings of hundreds of medieval MSS, had shown extremely few variations of any importance in the consonantal text of the OT. It was therefore felt that one could be quite certain as to the precise text of the OT *as it existed a thousand years ago*. On the other hand, there seemed to be no sure way of tracing it back to an earlier period: nearly all of the extant MSS were written after A.D. 1100, and none could be dated prior to c. 900. The history of the Hebrew text previous to that time seemed to be largely a matter of conjecture, with little reason to hope that further light would ever be thrown upon it.

This situation has now greatly changed. The discovery of the DEAD SEA SCROLLS in 1947 made available a great corpus of ancient material that gives us direct knowledge of the history of the OT text a millennium earlier. Equally important is the availability of other new material, some of which had been discovered prior to that time, but had as yet been comparatively little studied. A great number of OT MSS had been collected in the 19th cent. through the efforts of Abraham Firkovitch and were available in the Leningrad library, but results from their study were little known to the Western world. Moreover, nearly 200,000 fragments of Hebrew and Aramaic MSS of many kinds had been taken from a GENIZAH in Cairo to museums and libraries in the W, but the study of these materials had been little more than begun.

Still another source of new information, not previously available, was an OT codex long treasured by the Sephardic synagogue in ALEPPO. Produced by a famous Masorete, Aaron Ben Asher, this document was regarded as very important evidence for the true MT. Yet it was not available for study, since its keepers steadily refused to allow it to be photographed or carefully researched; and after the burning of the Aleppo synagogue in the riots of 1948, it was feared that this irreplaceable codex had been destroyed. Later on it was learned that about three-fourths of it had been rescued and taken to Jerusalem, where it has been intensively studied.

I. A brief survey of the history of the Hebrew text

A. The period between the writing of the books and the destruction of Jerusalem in A.D. 70.
Until the discovery of the DSS in 1947 the only direct evidence about this period was the little that might be gleaned from a comparison of the Hebrew text with the SAMARITAN PENTATEUCH or with the SEPTUAGINT. This topic will be discussed below (section XII). At this place it will be sufficient to point out that we are here dealing, not with the history of ordinary books, but with a very special situation. It is the belief of Christians that the books of the Bible were considered sacred, divinely inspired books from the very time of their writing. This is indeed the view that is contained in the PENTATEUCH, which says that MOSES ordered that a copy of its contents should be preserved in the very Holy of Holies (Deut. 31:26), and that another copy should be constantly before the king in order that he might study it carefully and direct his activities in accordance with it (17:18 – 19).

Since the books were regarded as possessing such a transcendent importance, they would have been preserved with great care. This does not mean that no errors could possibly enter their text. The Bible contains no promise of absolute accuracy in text preservation, as the books would be copied and recopied through the centuries. It is impossible for a human being to copy a whole book without making at least some errors, and even the best of proof readers may overlook some of these mistakes. Yet there can be no doubt that in the case of official copies, prepared and checked with extreme diligence, errors would be kept to a minimum.

It would be somewhat different in the case of the many copies made for individuals and distributed widely throughout the land. While there is no direct contemporary evidence about this, the discovery at Khirbet QUMRAN (excavated 1951 – 56) in the neighborhood of the Dead Sea, where a room was apparently laid out as a scriptorium in which copies were constantly being made for the use of the members of this ascetic colony, suggests how widely the copies of the sacred Scriptures must have been disseminated during the centuries immediately before the time of Christ. Most likely the Scriptures were similarly distributed during the preceding centuries. It would often be expensive to make copies, and the people in a distant part of the land, instead of going to Jerusalem and paying to have a copy made directly from the official text, might sometimes have to content themselves with a copy made from the one possessed by the local leaders. Thus errors would inevitably creep into these copies in the course of time and eventually it would be natural that schools of MSS would develop, as occurred later in the case of the NT as well.

B. The period from the destruction of Jerusalem to about A.D. 900. During this period renewed emphasis was placed upon the Scriptures. With the loss of the temple and the capital city, the Jews might have entirely lost their identity, had it not been for the great stress laid upon their religious unity, and upon the OT as the source from which it flowed. Groups of rabbis gathered in various sections of Palestine to discuss problems connected with the OT and to arrive at conclusions that they could defend in their relations both with other Jews and with outsiders. One of their primary aims was to preserve the integrity of the sacred books. During the previous centuries and during a substantial part of this period, the men who were particularly concerned with this task were generally referred to as *sôpĕrîm* "scribes." Eventually the specialists in this work came to be designated by another name, *ba⟨alê masōret*, "masters of tradition," or simply Masoretes.

In order to protect the integrity of the biblical text, the SCRIBES undertook the task of counting the number of letters, the number of words, and the number of verses in each section, marking the middle letter and the middle word of each, and noting peculiar forms or other facts related to this purpose. There is very little contemporary evidence about their precise activities, although some of the discussions of the rabbis have been reported in the TALMUD. Many of the marks that the scribes

inserted at various places in the Scripture, and some of their marginal notes, were included in the later works of the Masoretes, even though the meaning and purpose of some of them had been forgotten by that time. These activities will be discussed more fully below.

It is not known when the term *Masorete* began to be used, but by A.D. 800 the men who were particularly devoting themselves to the care of the Scriptures were regularly called by this name, instead of *scribes*. They had many problems with which to deal, one of the principal ones being that of indicating the exact pronunciation of the words and the way they should be read in the services (originally only the consonants had been written). Especially between 800 and 900, a great deal of effort was expended on this task, and the result attained received such general acceptance that most of the previous MSS were quickly superseded. Thus the text preserved in MSS after c. 900 has come to be known as the Masoretic Text (MT).

In later years the scholars who gave very particular attention to studying the work of the Masoretes, and to endeavoring to continue preservation of the integrity of the text, were called "grammarians" or, more generally, *nakdanim* (sometimes spelled *noq-danim*), "punctuators, annotators" (Heb. *naqdān* or *nôqdān* means "punctilious person"; for details regarding their work, see C. D. Ginsburg, *Introduction to the Masoretico-Critical Edition of the Hebrew Bible* [1897], 462 – 68). Many new MSS of the MT were prepared in the following centuries, but in their essential feature, that of the consonantal text, they were remarkably uniform, even though written in widely separated geographical areas. Students of the OT text and MSS have held various theories as to the relation of the MT to the original form of the Scriptures. Various facets of this problem will be discussed below.

II. Consonantal writing and indication of vowels. All writing is a rather imperfect means of representing human words and statements. Oral expression contains many features that are not conveyed in writing. Modern languages have introduced punctuation marks, which convey some further idea of the expression that the voice gives. Such marks were unknown in Hebrew antiquity. Moreover, in the ancient HEBREW LANGUAGE, as in most ancient Semitic WRITING generally, only consonants were written and there was little or no indication of the vowels.

As time goes on, all languages develop and change. Certain consonants may cease to be pronounced at all, though still written as silent letters. In Hebrew this occurred in the case of the *waw* in such words as *sws* ("horse"), probably originally pronounced *sawas* but eventually contracted to *sūs*. Similar developments occurred with other letters, and in such cases these came to be thought of not as indicating a consonant but as representing a long vowel of one type or another. Eventually the practice began of inserting these "vowel letters" to indicate a long vowel wherever it seemed that the word might not be correctly understood without it, even when no contraction was involved. In later Hebrew writing considerable flexibility developed as to the insertion of vowel letters, with the result that there are great numbers of variations in this feature in the various MSS. However, most of these variations have no more effect on the meaning than the question whether one writes "honor" as is common in America, or "honour" in accordance with British usage.

After the EXILE Hebrew was gradually displaced by ARAMAIC, and eventually came to be used only for religious and literary purposes. It was still used extensively in the synagogue services, and the OT books were also read at home in Hebrew. Children frequently heard the text read, and there was a tendency to retain orally a tradition as to which vowels would be used at certain places. Over the centuries the pronunciation of vowels and consonants naturally changed, often being affected by the particular language used in common speech, whether Aramaic, Greek, or Arabic. Eventually the

custodians of the sacred writings began to realize the necessity of finding some better way to indicate precise vowel pronunciation than merely the presence or absence of vowel letters. At the centers of Jewish learning in Babylonia, a system was invented of placing dots or other marks over certain letters to indicate the following vowel. A somewhat similar system was developed in Palestine. Eventually a third system was developed at Tiberias in Palestine which largely substituted marks under the consonants for the previous system of designating vowels by marks above them. This system soon became dominant, and was used exclusively in later MSS and in printed Hebrew.

III. Types of manuscripts. Hebrew MSS are of two types: those for synagogue use, and those for the use of private persons. Synagogue MSS are sometimes so made as to contain simply the portions of the OT selected for public use in the regular worship of the synagogue. The Law (the five books of Moses) may be included in one MS, since it is read consecutively Sabbath after Sabbath. In connection with the weekly readings from the Law, it became customary to read certain appropriate passages from the second division of the Hebrew Bible (the NEBIIM or Prophets). These passages, called the Haphtaroth, were selected at a very early time; the selections are sometimes copied together in one scroll. The book of Esther, which is read at the feast of PURIM, and the four other books that are read at special fast or feast days, are placed on separate scrolls and are called MEGILLOTH (scrolls).

The Talmud includes very detailed rules for the making of synagogue MSS. They are always in the form of a SCROLL rather than that of a CODEX (like our modern books). PARCHMENT, prepared from the skin of a clean animal, must be used. The text must be written in black erasable ink, without vowels or accents, and must be copied with great care. Even a single letter may not be written without the scribe looking first at the MS being copied. Extraordinary points and any letters of unusual size, position, or form must be carefully copied. The MS must be corrected within thirty days after it is written. If four errors are found on any page it must be condemned. Very few of these synagogue scrolls have become available for scholarly study, since, to avoid the risk of desecration, it was required that they be buried as soon as they had become too worn for regular use.

Private MSS were generally made for study by individuals or for use in the home. Being made by hand, they tended to be rather expensive. Well-to-do people could afford to hire excellent scribes and to have the MS checked with great care. Other MSS may have been copied somewhat more hurriedly. Since according to Jewish law every Jew was expected to have at least one copy of the Torah in his home, the number of private MSS prepared was far greater than the number of synagogue scrolls.

The private MSS sometimes contained the whole OT but more commonly only a part, and sometimes only a single book. Although occasionally in the form of scrolls, they were usually codices of various sizes. Sometimes they were written on parchment or prepared skins, but more frequently on cotton or linen paper, and generally with black ink. Vowel marks and accents were included. The upper and lower margins and also the side margins often contained Masoretic notes and various readings. Sometimes a commentary by a noted rabbi was placed beside the text. Often a translation was included, whether Aramaic (see TARGUM), Arabic, or some other language.

Facsimile of a Qumran scroll (*Community Rule*).

Usually the consonantal letters were all written first, the vowels and accents being added subsequently, sometimes by a different person, and generally with a different pen and different ink. Frequently a MS would pass through several hands in the course of preparation. One person might write the consonants, another might append the vowels, a third might go through to correct it, a fourth would add the MASORA, a fifth might retouch it after it had become defaced by age or use. Often the initial words or letters were ornamented, and the margin was decorated with pictures of flowers, trees, or animals. The MS generally contained a colophon at the end, telling who performed these functions and giving other information about the MS.

It is often difficult to determine the age of a Hebrew MS. Since the MSS were produced in many different areas, and the type of writing often varied from place to place, determination of age by paleography (changes in styles of writing) is generally difficult. Sometimes the colophon contains a statement of the time when the MS was made, but this is often missing, and when it is included it is not always easy to understand. The years may be reckoned from the creation, from the destruction of the second temple, from the hegira of Muhammad or from the era of the SELEUCIDS (312 B.C.), this last being particularly common. Often the number of thousands of years is omitted, and sometimes even the number of hundreds. In some cases the colophon may have been simply copied from an earlier MS. Fortunately, some MSS give the date according to two or three different eras, and this makes possible a helpful check as to the time that is meant.

For example, the colophon of the Leningrad Codex B 19a says that this MS was prepared (a) in the year 4770 from the creation of the world, (b) in the year 1444 from the exile of King JEHOIACHIN, (c) in the year 319 "of the empire of the Greeks," (d) in the year 940 from the destruction of the second temple, and (e) in the year 399 "of the rule of the little horn." According to a common Jewish reckoning of the time of creation the first of these dates would indicate A.D. 1010. The third date, if considered as omitting the figure for 1000, would come to A.D. 1008 (1319 years after 312 B.C.). The fourth statement would indicate 1009. The fifth date, considering the rule of the little horn as referring to the beginning of Islam, would be 1008, according to the Muslim system of dating. The second date, reckoning from the exile of King Jehoiachin, does not reach a year comparable to the others. This probably results from the mistaken statements in the Targum that the whole period of Persian rule (539 – 331 B.C.) was really only a single generation. The coincidence of four of the statements seems to make the date of A.D. 1008 quite reasonable for this important MS, particularly since it was written in a Muslim land. This MS is the basis for the most widely used edition, *Biblia Hebraica* (beginning with the 3rd ed.).

IV. Divisions of the text. The convenient arrangement of modern Bibles, with chapters and verses

numbered consecutively, was not introduced until the 16th cent. Originally the books of the OT were written without subdivisions and usually without titles. In ancient times it was often the custom simply to name a book by its first words.

The first division made in the Hebrew text was probably into unnumbered verses. This may have been done very early. Verse divisions in recently discovered MSS written shortly before the time of Christ are almost identical with those in our present Hebrew Bible. However, no numbering is indicated and there were no chapter divisions. While in general the verse division was well made, this was not always the case. Some verses contain two separate sentences while others include only a small part of one sentence. The division is rarely as bad as in Ps. 19:4, which includes the last few words of one sentence and the first few words of another.

The next step was the division of all the OT books except the Psalms into 452 sections called *parashahs* or *sedarim*. There were 154 of these in the Pentateuch. It is said that the Jews in Palestine used to read each of these consecutively in the weekly synagogue services, taking about three years to go through the entire Pentateuch, until the coming of the exiles from Spain at the end of the 15th cent. resulted in changing the custom so as to read the Pentateuch through in one year.

Some of these parashahs were felt to mark a more important division in the text than others. Therefore in some cases the last part of the line was left blank, while in the others a short space on the line was considered a sufficient indication. Those parashahs that were thought to be important enough to leave the rest of the line unused were called open parashahs, while those where only a short space was made were called closed parashahs. Eventually the parashahs came to be indicated in the MSS simply by inserting the letter פ (for *pethuchah*) for open parashahs or the letter ס (for *sethumah*) for closed parashahs. Later the Pentateuch was divided into fifty-four sections, so that it could be read through in the Sabbath services in approximately one year. The close of each of these larger sections coincided with the end of one of the already marked parashahs, and was indicated in the MSS by writing the appropriate letter (פ or ס) three times. This indication is still continued in Hebrew Bibles.

Division into chapters was not made until the 13th cent. It was probably worked out by an English archbishop and originally placed in his Latin Bible. Very soon the Jews recognized the convenience of these divisions and inserted them in their Hebrew Bibles, usually following the exact division made by the archbishop, but occasionally changing it.

V. The work of the scribes. The men who busied themselves with the care and transmission of the Scriptures from the time of Ezra to that of the Masoretes are designated in Hebrew MSS as the *sôpĕrim*. This is usually translated "scribes," which might suggest that they were merely copyists. However, the normal Hebrew word for "to write" is *kāatab*, whereas *sāpar* properly means "to count." It is stated in the Talmud that the keepers of the Scripture came to be called *sôperîm* because they counted the letters and words in each section of the Scripture. Actually a *sôper* is not simply a someone who writes things down, but one who also makes lists, keeps track of details, and oversees various aspects of affairs. Eventually the designation came to be applied to anyone who devoted himself to legal or literary pursuits.

During the long period before the time of the Masoretes, little information regarding the activities of the scribes in relation to the Scripture was preserved, but a great deal of information about their activities can be inferred from the results that were passed on in the form of marks or marginal notes inserted in the Bible. It is evident that in their endeavor to preserve the text from

alteration or addition, they counted the number of words in each section, and also the number of verses and paragraphs. They sometimes placed marginal notes in their MSS, wrote certain letters in unusual ways, or inserted dots or other marks at various places. These peculiarities were copied in later MSS and preserved by the Masoretes, even though in some cases their purpose may have been entirely forgotten. Various aspects of the work of the scribes may be designated under the following heads:

(1) *Letters written large or small.* At thirty-seven places in the OT it became customary to write a letter larger than normal, and in twenty-three places to write one smaller. In many cases the reason for the large letter is quite obvious. In three instances, for example, it is the first letter of a book; in one, it is the middle letter of the Pentateuch; and in the oft-repeated Shema (Deut. 6:4) the last letter of the first word (ע, *ʿayin*) and the last letter of the last word (ד, *dalet*) are written large (it has been conjectured that these particular letters were selected because they form the Hebrew word for "witness"). In the case of the letters written small it is often difficult to make a reasonable conjecture as to why this was done. It would seem that the Masoretes found it to be customary in the MSS that had come down to them and simply continued the practice without change.

(2) *Suspended letters.* There are a few cases where letters are written somewhat above the line. One of these is the ʿ*ayin* (ע) in *miyyāʿar*, "from the forest" (Ps. 80:13 [Heb. v. 14]), which probably indicates the middle of the Psalter. Another is the *nun* (נ) in "Manasseh" in Jdg. 18:30. An early tradition says that this *nun* was suspended above the line to indicate that it had been inserted in order to change the word from "Manasseh" to "Moses," so that people would not think that this apostate priest had been descended from Moses (the letter was kept, though suspended, in order to indicate that it was, after all, a change in the text). One cannot say that this early tradition is false, but there is no proof that it is true. In some cases the reason for the suspended letter is quite unknown.

(3) *Paseq* ("divider"). This is a perpendicular stroke placed between two words in about forty-eight places in the OT. It seems sometimes to have been placed before or after the divine name to avoid the possibility of its being incorrectly united with a word which, in the opinion of the scribes, should not be too closely tied to it, or to separate two words when there seemed to be a danger of their becoming merged because the final consonant of one and the first consonant of the other were identical.

(4) *Extraordinary points.* There are fifteen places where dots are placed over single letters or over a whole word. Ten of these are in the Pentateuch, the others elsewhere in the Bible. They probably represent questions that the scribes raised about these places in the texts. The marks have been preserved, but the reason for them has been completely forgotten.

(5) *Inverted nun's.* Nine times there is a mark in the MSS that looks like an inverted *nun* (n). There is evidence that discussion occurred as early as the 2nd cent. A.D. as to what it means. It has been suggested that the scribes thought that a group of words might have been misplaced, but did not feel justified in making a change. Some authorities question whether the mark is really a *nun*.

(6) *Tiqqune sopherim.* This term, which means "corrections of the scribes," has been used in early Jewish writings to indicate eighteen passages where it was asserted that EZRA (or some later scribe) had made a change in what was written in order to avoid a statement that impressed him as objectionable or unsuitable. The passages are: Gen. 18:22; Num. 11:15; 12:12; 1 Sam. 3:13; 2 Sam. 16:12; 20:1; Job 7:20; 32:3; Ps. 106:20; Jer. 2:11; Lam. 3:20; Ezek. 8:17; Hos. 4:7; Hab. 1:12; Zech. 2:12; Mal. 1:12. Most of these consist of a change of suffix to avoid a direct reference to God. In one case (Gen. 18:22) it has been said that the text must have originally read: "the LORD remained

standing before Abraham," and that this had been thought to be demeaning to God and that therefore the text was changed to "Abraham remained standing before the LORD." A number of recent writers assert that it is perfectly obvious that such a change was made, but the passage states that the men left Abraham and then says: "However, Abraham remained standing before the LORD." Surely this means that the men acted as if they were about to go, but that Abraham continued to request the LORD's attention.

(7) *Itture sopherim.* This phrase means "omissions of the scribes." The Talmud contains a list of seven places where it says that a word not written in the text is to be read, and five places where it says that a word written in the text should not be read. It also mentions five places where it asserts that "and" was omitted by the scribes.

(8) *Sebirin.* There are about 350 places, not usually marked in the MSS, but contained in Masoretic lists, where a biblical word is quoted and then followed by another term which is introduced by the Aramaic word *sĕbîr* ("supposed, suggested"). This does not indicate that the scribes thought something was wrong, but simply that they desired to explain the meaning of an unexpected form or word.

VI. The work of the Masoretes. The term *Masorete* (also spelled *Massorete* and *Masorite*) evidently derives from the noun *māsōret H5037* (also *massôret*), which in postbiblical Hebrew meant "tradition" (cf. the verb *māsar H5034*, "to hand over, transmit"). Rabbi AKIBA is reported to have said, "Tradition [*mswrt*] is a fence around the Law" (m. ⁽Abot 3:14 [13]). The cognate term MASORAH (*māasôrâ* or *massôrâ*) refers to a special collection of readings and notes compiled by the Masoretes (regarding the etymology and spelling of these terms, see B. J. Roberts, *The Old Testament Text and Versions* [1951], 40 – 42). No one knows when the scholars who were guarding the textual tradition began to be called Masoretes; after c. 920 they were considered to have completed their work, and the name was no longer applied.

For a time there were active groups of Masoretes in both Babylonia and Palestine. Although the TALMUD and the TARGUMS edited in Babylonia seem largely to have won precedence over those produced in Palestine, it was the work of the group of Masoretes in Tiberias in Palestine that came to be accepted as authoritative throughout the Jewish world. The names of several of the Tiberian Masoretes have been preserved. The most prominent were members of the families of Ben Asher and Ben Naphtali. Five generations of the Ben Asher family were active from c. 780 to c. 920.

The tasks performed by the Masoretes may be arranged under four heads. First and most important was the continuation of the work to which the scribes had already devoted much attention, namely, maintaining the integrity of the text of the Scripture. For this purpose they counted the number of letters, words, verses, and parashahs in each book and indicated its middle word. They noted all peculiar and unusual forms, indicating how frequently each occurred. There is no way of knowing how much of this material they figured out themselves, and how much had already been determined by the previous scribes. Many notations and special marks put in by the scribes were scrupulously copied by the Masoretes even though sometimes they seem not to have known what meaning the earlier scholars had intended to convey.

A great amount of material of this type was assembled by the Masoretes and came to be known as the Masorah. Notes placed on the side margins of the columns were called the Small Masorah (*Masorah parva*). Notes at the top and bottom of the page were called the Large Masorah (*Masorah magna*), a name sometimes also applied to the notes placed at the end of each book, which are more usually called the Final Masorah (*Masorah finalis*). Much of this material is written in very

condensed language, about half of it using Hebrew words and forms, and the remainder using Aramaic.

A second part of the task of the Masoretes was the standardization of the pronunciation of the words in the OT. As time went on, there was a tendency to forget in some instances what vowels should be pronounced with the written consonants, and the pronunciation of the words began to vary with the speech habits of the various localities. Ideas of Hebrew grammar tended to become confused as habits of pronunciation changed. The Masoretes set themselves industriously at this highly complicated task. Three systems of vocalization were attempted, but eventually the Tiberian system established itself as supreme.

Careful study of the grammar and investigation of the traditions as to pronunciation led in some points to a conscious return to forms and practices that had existed centuries earlier, but had then largely disappeared. (It was the contention of Paul Kahle that in other features, such as the double pronunciation of the *begadkephat* letters, the Masoretes introduced into Hebrew pronunciation practices known in Syriac but new to Hebrew; see his book, *The Cairo Geniza*, 2nd ed. [1959], 179 – 84.) Performing an immense labor of standardizing the grammar, maintaining the ascertained tradition, and working out a method of indicating precisely how they thought each word would rightly be pronounced, they placed indications of vowel pronunciation on every word of the Hebrew Bible.

A third part of the work of the Masoretes involved providing an indication to the reader of the cases in which established tradition favored reading a word in a way that did not seem to fit the accepted consonantal text. It would seem that the Masoretes were determined on no account to alter the consonantal text that had been handed down to them. Yet, there was a considerable number of cases where it was customary to read it in a different way. Thus it had been customary for many centuries not to pronounce the divine name indicated by the Tetragrammaton (*YHWH*). For a time it was customary to substitute the phrase "the name." Well before the time of Christ it had become usual to substitute the word ⁽ădōnāy H151, "Lord" (if the latter was already used in conjunction with it, they would substitute ⁽ĕlōhîm, "God"). In these cases the Masoretes simply put the vowels of ⁽ădōnāy (or ⁽ĕlōhîm) on the consonants already in the text; this came to be called a "permanent *Qere*" (see Qere).

Another permanent *Qere*, much less frequent than the one just mentioned, resulted from the fact that in the early part of the Bible there are a number of cases where the third feminine singular pronoun (*hy⁽,*) was written with the vowel letter that properly belonged with the corresponding masculine pronoun (*hw⁽*). The Masoretes had no way of knowing whether at that early time the masculine pronoun was sometimes used in a generic sense, to apply to either gender, as was regularly done with the third plural perfect of the verb. Knowing that the uniform practice of the rest of the OT required the feminine pronoun in these places, they put before the vowel letter *waw* the vowel sign that would be there if the vowel letter *yod* had been written (thus instead of vocalizing it *hû,*, they wrote *hiw⁽,*, indicating that it should be pronounced *hî,*. Two other words that had a permanent *Qere* are Issachar and Jerusalem.

There are about 1300 instances in which the Masoretes have placed on a word a group of vowels that do not exactly fit the consonants as written. Usually this was to indicate a change of tense or something similar. Except for the four words with permanent *Qere*, the Masoretes put in the margin the letter ᵖ (for *Qere*, "read"), followed by the consonants that would normally go with the vowels that had been placed in the text. The consonants that remained in the text were called the Kethib (Aram. "that which is written"). It is possible that in many cases there was ms evidence for the *Qere*;

in such a case the Masoretes may have felt that the preponderance of MS evidence favored the *Kethib* and therefore retained it in the text, even though indicating that the *Qere* was what should be read. In some cases there is reason to believe that the *Kethib* gives the better reading, but in most cases the *Qere* seems preferable.

The fourth aspect of the work of the Masoretes may have been even more time-consuming than the other three: the use of marks to indicate cantillation. For many centuries it had been established practice to chant at least a portion of the synagogue reading of the Scripture. To provide a measure of standardization, the Masoretes invented an extremely complicated system of so-called accents. Most common is the *metheg*, which ordinarily indicates the secondary accent, but may also indicate any one of a score of other features. Other accents indicate the relation to the preceding or following words, and show the various features of the cantillation.

It is easy to see that with the addition of all these varied vowel marks and accents to the consonantal text, the difficulty of maintaining an exact text was greatly increased. Although all the Masoretic MSS agree remarkably closely in their consonantal text, it is only natural that considerable variety in preservation of these other features should develop.

The Large Masora includes references to a number of MSS which the Masoretes considered as having great authority. As far as known all of these famous pre-Masoretic MSS have perished. One of the most famous of these was the Codex Hilleli, attributed to a famous rabbi named Hillel who lived at about A.D. 600. Other frequently cited MSS were named after their place of origin, such as Jericho, Jerusalem, Sinai, and Babylon.

With the establishment of their new system of vowels and accents, the Tiberian Masoretes had originated a type of MS that soon became standard throughout the Jewish world. Yet not all the Masoretes of Tiberias were united regarding every detail of the task. At the beginning of the 10th cent. their differences found expression in two main traditions, one of which bore the authority of the Ben Asher family, the other that of Ben Naphtali. In MSS prepared during the next two centuries marginal notes frequently refer to the distinctive readings of each of these authorities. Soon writers began to make lists of these differences. Most such lists have disappeared, but portions of several copies of a book on the subject have been found (Mishael ben Uzziel, *Kitāb al-Khilaf*). Piecing these fragments together, it has been possible to reconstruct the entire list, which consists of 875 differences between the two traditions. Practically all of these concern matters of vocalization or accentuation, nine tenths of them in fact being concerned with the use of *metheg*. As to the consonantal text, there was no important difference between the two traditions.

For a time the two traditions continued side by side, but gradually the majority of Hebrew grammarians and scholars may have tended to give preference to the Ben Asher readings, though accepting some of those of Ben Naphtali. Then the famous Jewish philosopher Moses Maimonides (1135 – 1204), writing on a biblical subject unrelated to the difference between these two traditions, declared that he accepted as authoritative an OT codex in Egypt that had been vocalized, collated, and provided with Masora by Ben Asher (prob. the Aleppo Codex). So great was the prestige of Maimonides throughout the Jewish world that this statement is generally considered as having been the cause of the sharp decline in the standing of the Ben Naphtali tradition that occurred soon afterward.

VII. Important Masoretic manuscripts and printed editions. During the centuries from the Renaissance to 1800 a considerable number of Hebrew MSS were collected by various universities and libraries. Yet the amount of such material available today is probably three times as great as in

1800. This great increase is due partly to the intensive searches of Abraham Firkovitch, who collected more than 2000 MSS of parts of the OT and placed them in the Leningrad library, and partly to the many biblical MSS recovered from the Cairo Genizah. It is difficult to compare the number of MSS in various museums and libraries, because sometimes a MS may include the whole OT, while at other times a very few pages may be listed as a separate document. Much work remains to be done in the study of this material, but the intensive researches of Paul Kahle and others during the first half of the 20th cent. have already produced remarkable results.

The following MSS, arranged in order of probable date of origin, are now generally considered to be the best sources for knowledge of the Ben Asher text.

(1) The Cairo Codex of the Prophets (sometimes designated C). This MS, dated in 895, contains the entire second division of the Hebrew Bible. It was written and pointed by Moshe ben Asher, the next to the last of the famous Ben Asher family. The codex was presented to the Qaraite community in Jerusalem, but was seized by the Crusaders in 1099. Later it was returned to the Jews and came into possession of the Qaraite community in Cairo. It is written in three columns, with Tiberian vowels and accents.

(2) The Petersburg (or Babylonian) Codex of the Prophets (P, also known as Leningrad B-3). Dated to the year 916, this document contains only the Latter Prophets. For a long time it was considered to be the oldest dated MS. It uses the Babylonian supralinear system of vocalization, but follows the Tiberian tradition in its vowels and Masora. On a few leaves the Tiberian signs have been substituted for the Babylonian ones.

(3) The Aleppo Codex (sometimes designated A). The colophon of this MS states that Aaron ben Asher (the son of Moshe ben Asher), who died c. 940, added the vowels and Masora to this MS. It is written on parchment in three columns. At first it was in Jerusalem, then for a time in Cairo, and later it was taken to Aleppo (for its later fate see section X below). It is generally considered to be the MS designated by Maimonides as the codex that he regarded as most reliable. Originally it contained the entire Bible, but about one fourth of it was destroyed.

(4) British Museum Or. 4445. This MS, probably written in the middle of the 10th cent., contains only Gen. 39:20—Deut. 1:33. The name of Ben Asher occurs several times in the margin.

(5) Leningrad Codex B-19A (designated L). The dating of this MS of the entire OT, which was brought from the Crimea by Firkovitch, has been discussed above (section III). It claims to have been carefully copied in the year 1008 from a MS prepared by Aaron ben Moshe ben Asher. Written in three columns, with the usual Tiberian vocalization, it is the MS reproduced in *Biblia Hebraica*.

In addition Kahle states (*Cairo Geniza*, 6) that in the autumn of 1926 he found in Leningrad, chiefly among MSS of the Second Firkovitch collection, fourteen Hebrew biblical MSS that can be dated between 929 and 1121, all containing the text of Ben Asher.

Despite the new evidence about details of the Ben Naphtali text, there is as yet no agreement as to the discovery of particular MSS that present that text in a pure form. Among those suggested are Codex Reuchlinianus, which is preserved in Karlsruhe, Germany, and three MSS formerly at Erfurt (E1, E2, and E3). Some scholars, however, maintain that the Codex Reuchlinianus represents a cross between the work of the Babylonian Masoretes and those at Tiberias.

After the year 1100 great numbers of MSS were prepared. The text soon became rather composite, fundamentally based on Ben Asher, but including a considerable number of divergences, many of which were from the Ben Naphtali tradition. In these centuries the importance of the Masora ceased to be fully understood, and the marginal notes were frequently written in such a form as merely to form figures of animals and other decorative elements.

Soon after printing was invented, the Jews began to issue books in Hebrew. A number of parts of the Bible were printed before 1500. Daniel Bomberg of Antwerp emigrated to Venice and there established a printing press from which he issued many important Hebrew books between 1516 and 1549. His first edition of a Rabbinic Bible, issued in 1516 – 17, was edited by Felix Pratensis. It contained the Hebrew text with Targum and important commentaries in parallel columns. In 1525 this edition was superseded by the second Bomberg Bible, edited by Jacob ben Chayim of Tunis. Ben Chayim included a large selection of Masora. Unfortunately the editor seems to have had at his disposal only comparatively late MSS and to have been occupied with a number of other tasks during the fifteen months that he devoted to its preparation. Nevertheless the text of this edition was standard in the Western world until 1937. Later editions of the Rabbinic Bible, and other early publications of the OT in whole or in part, were of less importance.

This terra-cotta stamp seal (1st – 3rd cent.) contains a Hebrew reference to Jer. 48:11.

In the 18th cent. attention was directed to the variations (most of which concerned vowel letters) in the consonantal text of the available MSS. In 1776 – 80 Benjamin Kennicott published an edition of the Hebrew Bible at Oxford (*Vetus Testamentum Hebraicum cum variis lectionibus*), listing variants from more than 600 Hebrew MSS. In 1784 – 88 G. B. de Rossi issued at Parma, Italy, an enlarged list of variants with a selection of the more important readings from 1417 MSS and editions (*Variae lectiones Veteris Testamenti*). Most of the sources used by Kennicott and de Rossi were comparatively late.

In 1869 S. Baer undertook a new publication of sections of the Hebrew OT in the hope of providing a more scientific text. This work was never completed, and the methods used have received severe criticism. In 1908 – 26 Christian D. Gins-burg produced an edition of the Hebrew Bible with an elaborate presentation of variants, but followed substantially the standard text as established by Jacob ben Chayim. In 1906 Rudolph Kittel issued a *Biblia Hebraica*, followed by a

second edition in 1912; for this work the Ben Chayim text was used, with numerous footnotes inserted, including many conjectural emendations (C. C. Torrey declared that the apparatus contained "many readings erroneously supposed to be attested by the Greek version, readings gathered blindly from the commentaries"; see *The Second Isaiah: A New Interpretation* [1928], 214 – 15).

When plans were being made to issue a third edition of the *Biblia Hebraica*, Paul Kahle suggested that the Ben Chayim text be replaced by the text of a Ben Asher MS. Attempts were made to get permission to use the MS in the Sephardic synagogue of Aleppo, but its keepers refused to allow it to be photographed or even intensively studied. Therefore Kahle suggested printing the text of Leningrad Codex B-19A. The authorities at Leningrad lent the MS to the University of Bonn, and Kahle photographed it and prepared its text and Masora. When issued in 1937, the third edition of *Biblia Hebraica* rapidly became standard among Western scholars. Unfortunately the footnotes of the second edition were retained, and these instead of the actual text have often been treated as authoritative. A number of English translations have followed many of the suggestions in these footnotes, even though outstanding scholars have severely criticized them as being largely conjectural and containing a very arbitrary selection of readings from ancient versions without any really scientific examination of the alleged validity of the suggested readings.

A fourth edition, which came to be known as *Biblia Hebraica Stuttgartensia*, began to appear in fascicles in 1968, and the whole OT was published in 1977 (corrected ed., 1984). The apparatus was completely reworked by numerous scholars (each responsible for specific books or groups of books), taking account of earlier complaints and making use of new evidence, especially that provided by the DSS (see next section). The use of the ancient versions to propose emendations was more moderate, although this part of the work continued to provoke criticism.

The fifth edition, *Biblia Hebraica Quinta*, was introduced in 2004 with the publication of a fascicle that includes the Megilloth (Ruth, Canticles, Ecclesiastes, Lamentations, Esther). Among many new features—such as presenting the full Masorah with editorial notes—this important edition adds evaluative comments on variants attested in the ancient versions, an innovation earlier introduced by the Hebrew University Bible Project (see next paragraph). These comments consist of abbreviations in the apparatus, but at the end a rather full textual commentary is included; such new material will be invaluable in assessing the proposals of the individual editors.

The acquisition of the Aleppo Codex by Israel made it possible for scholars at the Hebrew University in Jerusalem, initially under the direction of M. H. Goshen-Gottstein, to plan a new edition of the Hebrew Bible based on this MS. Known as the Hebrew University Bible Project, this massive venture has included the publication, beginning in 1960, of an annual periodical entitled *Textus*, which consists of important scientific studies. A sample edition of the Hebrew text was published in 1965, and the volume on Isaiah appeared in three fascicles from 1975 to 1993; since then, volumes on Jeremiah and Ezekiel have been published (1997 and 2004 respectively). In addition to presenting the full text and Masorah of the Aleppo Codex, this edition boasts a fourfold apparatus that presents: (a) variants from the ancient versions; (b) variants from the DSS and from biblical quotations in the rabbinic literature; (c) variants from medieval Bible manuscripts; and (d) orthographic variants, including vowels and accents. The first apparatus includes substantial footnotes where the editors express their judgments as to whether the versional readings reflect true variants (often the differences are due to other factors, such as translation technique). These magnificent volumes represent the most ambitious attempt at providing the full evidence necessary to reconstruct the text of the Hebrew Bible.

Several editions have appeared that do not provide a critical apparatus. Umberto (Mosheh

David) Cassuto published a corrected version of Ginsburg's edition that came to be known as "the Jerusalem Bible" (1953). In 1958 the British and Foreign Bible Society issued a Hebrew Bible prepared by Norman H. Snaith, largely based upon the critical notes made from Spanish MSS in 1626 by Rabbi Solomon Norzi (this text is evidently very similar to that of the Leningrad Codex). In 1973 Aron Dotan produced a careful edition of the Leningrad Codex (the latest revision is entitled *Biblia Hebraica Leningradensia* [2001]). The Aleppo Codex, where extant, has been used as the basis for an edition by M. Breuer (1977 – 82, rev. 1997) and for two Rabbinic Bibles: *Keter Yerushalayim*, ed. N. Ben Zevi (Tsvi) et al., 2 vols. (2002); and *Mikra, ot Gedolot ha-Keter* (1992 –).

These modern editions of the Hebrew Bible (with the partial exception of Breuer's, which took account of several Palestinian MSS) may be described as *diplomatic* in the sense that they attempt to reproduce as closely as possible the text of a particular MS in the MT tradition (the latter is comparable to the Textus Receptus in NT studies). Editions that have a critical apparatus routinely suggest emendations, but the text itself is not altered. Many scholars have argued that a *critical* or *eclectic* edition, such as is common for other works of antiquity (including modern editions of the NT), is needed for the OT as well. Others have argued that the peculiar transmission of the biblical text makes such an undertaking too difficult if not impossible. A group of scholars have taken up the challenge, however, and a new project called the Oxford Hebrew Bible, under the general editorship of R. S. Hendel, aims to produce an edition that examines variants from all available sources and chooses those readings that are most likely to be original.

VIII. The Dead Sea Scrolls. Students of the Bible were thrilled in 1948 when they learned that in the previous year a cache of scrolls had been discovered that apparently dated from the time of Christ and before. Many of these scrolls were copies of the Hebrew Bible, and some scholars naturally expected that such old documents would differ radically from the text as found in the Masoretic MSS written nearly a thousand years later.

To the biblical student the most important of these scrolls was the one that is now designated as 1QIsa[a], a beautifully written copy of the book of Isaiah. The scroll had evidently been used a great deal, as could be seen from the evidence of wear and the fact that in many places where the writing had become obscure, it had been inked over. Immediately on checking into it, it was apparent that though it agreed generally with the MT there were many differences. The scroll had been copied carelessly. At many points words written by mistake had been erased or crossed out and corrections had been inserted. Changes of a single letter or word were written in the same hand as the MS as a whole; longer corrections were added in a different hand. Letters and words omitted by the copyist were frequently inserted above the line. Sometimes the inserted material runs down the left-hand margin. Close examination shows that at many points the copyist left a space for something that must have been missing or was not clear in the MS he was copying. In most cases such an omitted portion was evidently inserted later from another MS.

Aside from the obvious scribal errors, there were places where the text seemed to go with the SEPTUAGINT rather than with the MT, and some scholars took this as proof that the Greek version preserves a more accurate text than the MT does. On further careful investigation, however, it became clear that in the overwhelming majority of passages where the MT and the Greek give different readings, the Qumran scroll agrees with the MT.

An interesting peculiarity of 1QIsa[a] is that it uses vowel letters far more frequently than the MT. It would seem that the scribe himself, or the scribe of a previous MS from which this was copied, inserted these extra vowel letters in order to give interpretative aid to the reader. Sometimes the

pronunciation that these suggest is different from that contained in the Masoretic vocalization. The MT contains the word TARTAN as the title of an Assyrian officer (Isa. 20:1, Heb. תַּרְתָּן *H9580)*. In the scroll a *waw* is inserted in the first syllable of the word (תורתן), indicating that it should be pronounced *tūurtān*. Discovery of ancient records has shown that the Assyrian form could be spelled *turtannu*. The tradition of the first vowel in this unfamiliar foreign word became altered in the course of the centuries, but its consonants were correctly preserved.

Another Isaiah scroll, now designated 1QIsa[b], was found in Cave 1. It was very difficult to unroll. Eventually, however, this was safely done and it was found to be in bad shape, with many sections missing. Scholars quickly determined that its text was almost identical to the MT and so devoted most of their attention to 1QIsa[a].

In 1952 a number of MSS were found in caves in Wadi Murabbaʿat, some 11 mi. S of Qumran. Many of these were letters that could be precisely dated in the 2nd cent. A.D. There were also copies of a number of sections of the OT which agreed closely with the MT.

In the Qumran area about a dozen of the more than 300 caves that have been excavated have been found to contain scrolls or fragments of scrolls. The greatest number were found in Caves 1, 4, and 11, but no scroll comparable to 1QIsa[a] in size or completeness has yet turned up. Some fairly extensive biblical scrolls came from Cave 11, while Cave 4 produced thousands of fragments representing hundreds of MSS. It was difficult to interpret these scraps of material. First, they had to be carefully humidified so as not to disintegrate when touched. Then they had to be flattened out, and the few words on each of them carefully studied to see whether it was a section of the Bible and if so what part. Eventually portions of over 200 copies of Bible books were identified, representing every OT book except Esther (and possibly Nehemiah; see J. C. VanderKam, *The Dead Sea Scrolls Today* [1994], 31). Some of them date to the 2nd or even 3rd cent. B.C.

Although the great bulk of the material from the Qumran caves fits very closely with the MT, a few sections have been found to have closer affinity with the LXX or with the Samaritan Pentateuch. This is particularly true of the book of Samuel, which is probably the least well preserved book in the whole MT. One scroll in Cave 4 seems to have contained a text of Samuel very close to the LXX, and another is thought to have readings superior to both the LXX and the MT. Also significant is the fact that two fragments of Jeremiah discovered in the same cave (4QJer[b] = 4Q71 and 4QJer[d] = 4Q72a) apparently attest to the shorter version of the book preserved by the LXX.

The scrolls from Murabbaʿat, representing as they do the group of Jews who were active in the BAR KOKHBA revolt in A.D. 132 – 135, followed closely the official text from which the MT has descended. At Qumran the great bulk of MSS also follow this text. Some few differ, as is only natural, since the sectarians at Qumran doubtless included people from many parts of the land, some of whom brought with them scrolls made in their local areas, sometimes carelessly copied, in which scribal errors and changes of text would have become perpetuated through a series of copyings.

IX. The Cairo Genizah. In view of the number of extant copies of the NT and of the LXX from comparatively early centuries, it might seem strange that, apart from the DSS, no Hebrew text of the OT written before A.D. 895 has been preserved. During the Middle Ages the Jews were often subjected to fierce persecution and obliged to move from place to place, while some Christian monasteries in the E have been practically unmolested for nearly 1500 years. Even so, the lack of MSS before the time of the Masoretes would be hard to explain apart from the long-established Jewish custom that writings containing the name of God must be protected from desecration; if worn out, or found to contain errors, they are to be entirely removed from circulation. Every synagogue had its GENIZAH (from *gānaz*, "to hide, hoard up"; cf. bib. Heb. *genez H1709*, "treasury"), which was a room in its cellar or attic where MSS and documents that were no longer of value could be deposited until a convenient time would be found for burying them in consecrated ground. Worn-out scrolls were generally buried with a scholar.

Solomon Schechter looking through the fragments from the Cairo Genizah (Cambridge, 1898).

Abraham Firkovitch was an expert at ransacking old synagogues and their genizahs. He was extremely secretive about the source of his material, but Paul Kahle was strongly convinced that much of it came from what later became famous as the Cairo Genizah. This was the genizah of a synagogue established in A.D. 882 in a building that had formerly been a Christian church and that had thereafter been used as a synagogue for over a thousand years. For many centuries discarded documents were deposited in this genizah. Then through some chance its very existence was forgotten, and the room was even walled up for a time. When it was rediscovered in the 19th cent., some of the material was buried, but this was discontinued when it was learned that antiquarians were willing to pay a substantial price for old documents.

Many MSS and fragments of documents were taken from the Cairo Genizah to various museums and libraries in Europe and America. Finally, in 1896 the Cambridge University Library sent Solomon Schechter to Cairo with authorization to obtain as much of the material as possible, and a great many boxes of dirty fragments of MSS were shipped to Cambridge. Altogether more than 200,000 fragments of written material were taken. This includes documents of many sorts, since even

ordinary business contracts, when no longer of value, would be placed in the genizah, if they contained a date or a salutation in which the name of God might have been used. A study of this material has greatly increased our knowledge of the history of the life and culture of the areas that centered in medieval Cairo.

Hundreds of biblical MSS from this source became available. Paul Kahle made an extensive study of many of these, and from them worked out his theories of the two different groups of Masoretes, one in Babylonia and one in Israel (see his books, *Masoreten des Ostens* [1913]; *Masoreten des Westens*, 2 vols. [1927 – 30]; and *The Cairo Geniza*, 2nd ed. [1959]). His work has originated many thought-provoking suggestions regarding the history of the Hebrew text.

X. The Aleppo Codex. As mentioned above, it was the feeling of many scholars that the Aleppo Codex was the earliest complete MS of the OT extant, and that its vocalization and Masorah had been placed on it by Aaron ben Asher himself. It was therefore a great disappointment to Paul Kahle when he was unable to use this MS for the third edition of *Biblia Hebraica*. In 1948 the Sephardic synagogue in Aleppo was raided by a local mob and burned, and for a number of years it was feared that the MS had also been destroyed. However, Izhak Ben-Zvi, president of the state of Israel, refused to give up hope that it might have been saved. For a long time he kept trying to find the place where it might be hidden, and often discussed with Sephardic leaders ways and means by which the "discovery" of the venerable MS might be brought about, and its transfer to safety in Jerusalem assured. At last his efforts succeeded, and in 1960 he was able to announce to the world that the codex had been found and brought to the Hebrew University at Jerusalem. Unfortunately it had suffered much at the hands of the rioters; before 1948 it had been complete, but now about a fourth of it was missing, including nine-tenths of the Pentateuch.

Although the authorities at the Sephardic synagogue in Aleppo had never permitted a Jewish scholar to photograph any part of the MS, they had once allowed an English scholar, William Wickes, to photograph a page of it (Gen. 26:17—27:30), which he had published in 1887 as the frontispiece of his book on Hebrew accents. In 1966 M. H. Goshen-Gottstein of the Hebrew University announced the discovery that once another Christian had also secured permission to photograph a few pages of the MS. The Rev. J. Segall, a missionary in Damascus for many years, published in 1910 a book entitled *Travels through Northern Syria*, in which he included a picture of the pages of the Aleppo MS that contained Deut. 4:38—6:3. Since both of these are portions that were destroyed, the existence of the pictures is a cause for rejoicing. Unfortunately, the photograph by Segall is not clear enough to make it possible to decipher all the details of vocalization, accentuation, and Masorah, though the consonantal letters are clearly discernible throughout. Wickes explicitly denied the claims about the MS, and there is no indication in the original publication that Segall had any realization of the special importance of this particular codex. However, there can be little doubt of the genuineness of the MS or of its direct relation to Ben Asher. (Cf. M. H. Goshen-Gottstein, "The Authenticity of the Aleppo Codex," *Textus* 1 [1960]: 17 – 58.)

XI. Types of error. In copying Hebrew MSS the same types of mistakes are apt to occur as in copying any types of documents. These may be classified as errors of sight, errors of hearing, and errors of memory.

It is well known that MSS were often copied through dictation. Sometimes one person would dictate and many scribes would make copies, as was often done in the case of the Greek and Roman classics. This method may sometimes have been used at Qumran or elsewhere in the preparing of

popular copies of biblical books. However, it was strictly against regulations that official copies of the Scripture should be made in this way. The scribe was required to look repeatedly at the material he was copying. Consequently errors of hearing must have been almost nonexistent in the official text. Errors of memory would be few, and yet could occur, since one who is copying by sight may sometimes be confused by his recollection and mistakenly put down something different from what he sees.

Errors of sight are apt to be related to similarities of letters. A letter that is written somewhat poorly can easily be mistaken for another letter. Such errors occur occasionally in biblical MSS. By far the most common error of this type is confusion of the consonants *dalet* ( ) and *resh* ( ). In Hebrew MSS these two letters are sometimes written so similarly that it is difficult to distinguish them. Clear evidence that this occurred can be found by comparison of proper names in Kings and Chronicles where there are many cases in which the same name is written with a *d* in one and with an *r* in the other. There are cases where a Greek word in the LXX seems to have no relation to the Hebrew text as it stands, and yet, on assuming that the MS used by this Greek translation had one consonant instead of the other, a word may sometimes be substituted which exactly corresponds to that found in the LXX.

Other common errors of sight result from haplography (writing a letter or a group of letters only once where it occurs twice), dittography (accidentally repeating a letter or a group of letters), and omission due to homoeoteleuton (where the eye skips from one word to another that ends similarly). Any writer knows how frequently this last type of error occurs in the copying of personal MSS.

XII. Evidence of the versions. The present section will be limited mainly to general matters concerning the relation of the ancient versions to the establishment of the OT text. (For broader discussion see SEPTUAGINT; TARGUM; VERSIONS OF THE BIBLE, ANCIENT.)

In determining the value of a version the first consideration that naturally occurs is that of age: the more ancient a translation, the more likely it is to provide reliable information concerning the Hebrew text. A second consideration is that of "immediacy." When a document is translated from one language into another, some information is inevitably lost or obscured. Words do not exactly correspond in the two languages, and often there is great overlapping between different words that might be used. Types of expression, verb forms, and principles of syntax differ radically in various languages. Therefore a translation will at best give a close approximation of the meaning of the original. When a translation is made from a text that is itself a translation, the divergence from the original is necessarily compounded. The VULGATE translation made by JEROME at about A.D. 400 was directly from the Hebrew and therefore may be of great value in helping to fix the exact Hebrew text at that time. The Old Latin text, however, though translated some centuries earlier, was not made from the Hebrew but from the Greek. It is thus of value in fixing the text of the LXX at the time when it was made, but its importance for determining the original Hebrew text is greatly diluted.

There are four ancient and immediate versions: (1) the LXX, most of which was produced between the middle of the 3rd cent. B.C. and the end of the 2nd cent. B.C.; (2) the Syriac Peshitta, probably late 2nd cent. A.D.; (3) the Vulgate, c. A.D. 400; (4) the Aramaic Targums, produced at various times.

Another consideration that should not be overlooked is the difference in the amount of effort devoted to maintaining purity of text. In this regard the care devoted to preservation of the MT is unparalleled in relation to any other book, including the Greek NT and the versions of the OT. In particular, the various Greek MSS of the OT have diverged in many different directions. Sometimes it

is found that a Greek MS includes sections that follow radically different textual traditions, suggesting the possibility that it may have been copied from a MS from which a considerable number of pages were missing, and that these particular pages were filled in from a different and perhaps inferior MS. When different textual traditions become combined in the same MS, the problem of identifying them and tracing them to an original translation is extremely difficult. In addition, some of the best MSS of the LXX, such as CODEX VATICANUS, contain great numbers of scribal errors.

The LXX is of greatest help in a section such as Samuel, where it is clear that the Hebrew text has been corrupted far more than in other sections. But both in this section and in other books the Greek text is of special significance whenever its reading can be easily explained by considering that a word in its Hebrew prototype was either vocalized differently (i.e., the translator mentally filled in different vowels than those found in the MT) or spelled with different consonants. An interesting instance is Amos 9:12, where the MT reads, "so that they may possess [*yîršû*] the remnant of Edom [*ʿĕdôm*]." The LXX translates, "so that the remnant of mankind [reading ,*ʾādām*] may seek [*yidrĕšû*]." In Acts 15:17 James quoted this passage as the clinching argument in a decision by the COUNCIL OF JERUSALEM, and since there were present many learned men who would gladly have refuted him if he had not been true to the text, we can feel quite positive that in his day the original Hebrew at this point was like the LXX rather than like the MT (yet most modern commentators interpret this divergence in other ways; cf. the discussion in K. H. Jobes and M. Silva, *Invitation to the Septuagint* [2000], 194 – 95).

It should be remembered that the other ancient and immediate versions were greatly influenced by the LXX and therefore are often not as strong an argument for the original Hebrew as might otherwise be the case. Study of the versions is of great value in learning what interpretation of a passage was common at the time when the these translations were made, and sometimes in determining a possible alternative text, which in certain cases may be original. In most instances, however, the MT is far more dependable than the text of the versions.

XIII. Conclusion. It should be noted that the amount of material available for the establishment of the OT text is many times as great as that for establishing the text of any other ancient document, except the NT. The agreement in the consonantal text of the various MSS is most remarkable, and the great bulk of the very extensive material that has now been found from before the time of Christ agrees very closely with the consonantal text of the MT. A few fragments give evidence of varying documents in some parts of Israel at that early period, and some of these may represent the text upon which the Samaritan Pentateuch was based or from which the LXX was translated. The feat of copying and recopying the text from the time of Qumran to that of Ben Asher with so little variation is unique in history. The Masoretes did a valuable task in writing down the tradition about the vowels and standardizing it. The fragments from the Cairo Genizah will enable us to reconstruct to a far greater degree than has yet been done the progress of the development of this system, and to see at what places arrangements of vowels or of accents represent the maintenance of an old tradition and at what points they represent the conclusions of the Masoretes. The MS from Aleppo will enable us to know the results of the Masoretic activities more accurately than ever before.

The Qumran MSS and comparisons with the LXX suggest that in the books of Samuel, and possibly in a few other sections of the Hebrew Bible, a greater amount of distortion than usual may have occurred, and in such cases the LXX may occasionally provide a more correct text. Where the LXX variation can be easily explained on the basis of a natural confusion between Hebrew letters, the corruption may be due to the translators themselves or it may have been already there in the Hebrew

MSS they were using, but it is also possible that the error should be attributed to the MT tradition.

The text has been preserved with a remarkable accuracy but not absolutely so. This fact is a useful guard against building important conclusions upon one verse alone, for any one verse may involve an error. Where there is no textual evidence of a variation in two different verses, the probability that each of them conceals an unknown error is so small as to be negligible. It is the divine warning to compare Scripture with Scripture and to study its teachings as a whole, rather than to endeavor to squeeze meanings out of individual words and phrases beyond what is possible in view of the nature of human words.

text and manuscripts (NT). The science of textual criticism is a basic literary discipline, for a text cannot be interpreted before one has determined what is the text to be studied. In making a copy of a book by hand, an ancient scribe—and a modern scribe as well—would almost certainly introduce errors and changes of various sorts by accident, and at times intentionally. When the resulting MS was subsequently copied, most of the variations would be carried over into the next MS, along with any additional errors and changes that the next scribe might make. Thus the more copies that intervene between a given MS and the original, the more differences there will generally be between the two. The goal of the textual critic is to remove the scribal mistakes that have accumulated so as to approximate the original form of the text.

I. Introduction. No ancient literature has affected the Western world so profoundly as has the Bible, and in particular the NT. Nor has any ancient writing or body of literature been preserved in quantity even comparable to the number of extant MSS of the NT. The writings of some ancient authors (e.g., part of the *Annals* of TACITUS) are represented by only one MS from ancient times. Most other writings have survived in only a few copies or not at all, though in the case of some popular authors, such as Euripides and Cicero, a few hundred MSS are known. Of the NT, on the other hand, more than 5,700 handwritten copies in Greek are preserved (many of these contain only portions of the NT and some are fragments of a few verses; in over 2,000 of them the text is arranged in lectionary form for daily readings). In addition, there are some 8,000 MSS in Latin, and 2,000 or more in other ancient languages, to say nothing of innumerable biblical quotations by Christian authors.

In another important respect, too, the MS tradition of the NT is distinctly superior to that of other ancient literature The oldest known MSS of the works of some ancient authors date from a thousand years or more after the death of the author. A time interval of several hundred years is not uncommon, ranging downward to a mere three hundred years, as in the case of Virgil. In contrast, two of the most important surviving codices of the NT were written less than three hundred years after the NT was completed; more remarkably, an appreciable amount of the NT is extant on papyrus MSS written from one to two centuries after the biblical authors wrote. Since classical scholars assume the general reliability of secular works even where the time interval is great and where only a few MSS are available, we have far greater assurance that the presently available NT text reliably represents what the authors originally wrote.

One needs to recognize, however, that the multiplication of any piece of literature in ancient times was a very different matter from that of the period since the invention of the printing press. It is now possible to print any number of *identical* copies of a work, whereas in antiquity, when each individual copy had to be made separately by hand, the only certainty was that no two copies of a book of any length would be identical. This period of handcopying of MSS encompasses three-fourths of the time from the completion of the NT to the present; and the vast number of copies made of parts or all of the NT during these early centuries means that multiplied thousands of textual variants were introduced into these MSS. The originals (autographs) of the NT books were doubtless lost at a very early date.

All of this means, technically speaking, that it is not possible to determine the exact original wording of the NT on the basis of any given MS. Rather, a comparison of MSS must be made and principles established for determining as nearly as possible the exact form of the original text. Thus the need for textual criticism, that is, the process of studying copies of a work whose autograph is unavailable, for the purpose of determining the form of the original text. Textual criticism is

necessary for virtually every piece of ancient literature, since in only the rarest instances (e.g., inscriptions in stone) has the autograph of an ancient writing been preserved to modern times. (The discipline of textual criticism has other important functions as well, such as understanding the nature of literary transmission for its own sake, and some recent scholars have emphasized these other goals even at the expense of minimizing the task of restoring the original. Cf. D. C. Parker, *The Living Text of the Gospels* [1997], and the review of this book by M. Silva in *WTJ* 62 [2000]: 295 – 302.)

In the case of the NT, even the relatively large number of MSS now known doubtless represents only a small percentage of the total number that were produced during the early centuries. In virtually no instance is it possible to show that any extant MS is the direct ancestor of another MS, and it is impossible to determine how many copies lie between any given MS and the original. Scholars reasonably assume that a later MS is likely to be further removed from the original in the number of copies intervening than is an earlier MS, but they recognize that there are significant exceptions to the rule.

It must not be supposed, however, that the text of the NT rests upon precarious grounds because of the multitude of copies through which it has passed or because of the great number of variants found in the MSS. There is in fact virtually no question concerning by far the greater part of the words of the NT. Indeed, the same is true of ancient literature in general. It is only a relatively small portion of the words of the text that requires the attention of the textual critic. Virtually all MSS of any given part of the NT say essentially the same thing. It has been stated that (1) there is no question at all concerning seven-eighths of the words of the NT; (2) if insignificant differences (such as common spellings variations) be disregarded, only about one-sixtieth of the words can be regarded as in doubt; and (3) only about one word in a thousand involves both a substantial question of meaning and serious doubt of the correct text (B. F. Westcott and F. J. A. Hort, *The New Testament in the Original Greek: Introduction, Appendix* [1881], 2).

Although some scholars would express the proportions differently, the truth remains that no Christian doctrine—indeed, no significant element of biblical teaching generally—rests upon insecure textual evidence. To be sure, it has been argued that the doctrine of the ASCENSION OF CHRIST has weak textual support (cf. E. J. Epp in *New Testament Textual Criticism: Its Significance for Exegesis. Essays in Honour of Bruce M. Metzger*, ed. E. J. Epp and G. D. Fee [1981], 131 – 45); but even if one were to accept the "Western" readings at Lk. 24:51 and Acts 1:11, there would be no grounds for doubting that, according to the NT writers, Jesus was raised from the dead, was "taken up" (the word *analēmphtheis* in the second passage is textually secure), and then sat down at the right hand of the Father (Acts 2:34; Heb. 1:3; et al.). And while a valuable and thorough study by B. D. Ehrman (*The Orthodox Corruption of Scripture: The Effect of Early Christological Controversies on the Text of the New Testament* [1993]) has demonstrated that scribes occasionally altered the text for theological reasons, this very monograph, by virtue of what it is does *not* prove, indirectly attests to the reliability of the NT text (see the review by M. Silva in *WTJ* 57 [1995]: 262 – 64; particularly unfortunate and misleading is the title, as well as the intent, of Ehrman's more recent popularization, *Misquoting Jesus: The Story behind Who Changed the Bible and Why* [2005]).

II. Paleography

A. Book forms

1. Papyrus roll. In the 1st Christian cent., when the books of the NT were written, the accepted form

for a literary work was a PAPYRUS roll or SCROLL. The papyrus plant was a tall reed that grew along the banks of the NILE River but almost nowhere else. The stalk of this plant was peeled, and its pithy center was cut into thin strips, which were laid side by side with another layer over them at right angles. After being pounded to aid adhesion of the layers and left to dry in the sun, the resulting thin sheet served fairly well when written upon lengthwise of the papyrus strips with a pen made from a reed. These sheets, measuring from 6 x 9 in. to 12 x 15 in., were slightly overlapped and glued together to make a roll of twenty sheets, the form in which papyrus was generally sold. If a work was too long for one roll, several rolls could be fastened together. There were practical limits for the length of a scroll, but a long work could be extended to more than one scroll. The scroll was generally simply rolled on itself; there is little evidence of the use of rollers.

The columns of text of a scroll were usually narrow, so that the scroll need not be unrolled widely to read it. Writing was done on the inside surface of the roll. On this side the papyrus strips were laid horizontally. The text of a work was not generally written on the outside surface of the roll, both because of the inconvenience to the reader and because the papyrus strips on this surface would be vertical (writing across the grain of the papyrus is more difficult). Exceptions occur, however, as attested by Rev. 5:1, "a scroll written on the inside and on the back" (NRSV).

The regular Greek word for a papyrus scroll is *biblion G1046*, "having to do with *biblos*" (the pith of the papyrus plant). This word occurs in various NT passages (e.g., Lk. 4:17, 20; Jn. 20:30). In Rev. 6:14 the sky is described as having "receded like a scroll, rolling up." In 2 Tim. 4:13, Paul asked Timothy to bring him his "scrolls, especially the parchments" (so most translations, but some think that here the latter word, *membrana G3521*, refers to parchment codices [see below, sections 2 – 3] rather than scrolls; cf. C. H. Roberts in *Proceedings of the British Academy* 40 [1954], 174).

The scroll form had certain disadvantages, including some with which the modern user of microfilms is familiar. The scroll needed to be completely rerolled after being used, although a careless reader might leave this task for the next reader. Moreover, consultation of various passages of a scroll was much more difficult than with the modern book form. This latter factor was one of the principal influences that led, not long after the beginning of the Christian era, to the replacement of the scroll by another book form.

2. Papyrus codex. From antiquity, waxed tablets had been used for school exercises and other temporary writings. These tablets were somewhat like a child's slate, with a surface of wax instead of slate, and with a stylus as the writing instrument. As time went on, the practice developed of fastening two or more of these tablets together by thongs tied through holes at the edge of the tablets. Even before the Christian era this type of document, called a CODEX, led in turn to the development of notebooks composed of folded sheets. These notebooks were used for informal and nonliterary purposes. They also came to be used at times for the first draft of an author's literary works, which would then be copied onto a papyrus scroll for their final form. At first the number of sheets folded together into a quire varied; each sheet might be folded separately, or several sheets—sometimes even an entire book—might be folded together into one quire. Later, however, a quire of four sheets, which made sixteen pages, became standard.
A 1st-cent. papyrus scroll.

3. Parchment codex. From antiquity, skins of animals were used in writing. About 200 years before the Christian era, however, a new process was developed whereby the skins were scraped, soaked in quicklime, and rubbed with chalk and pumice stone, which produced a thin, firm, and very durable writing surface. Writing could be done on this surface with a quill pen as well as with the softer reed pen. This material, known as PARCHMENT or vellum (although *vellum* originally referred to the finer grades of calfskin), likewise came to be used for notebooks in codex form.

When the NT books were written, therefore, the codex book form—made of papyrus or parchment—was known, but the recognized book form for literary publications was still the papyrus scroll and continued to be so for some centuries for secular classics. Early in the Christian era, however, the codex form was developed into full book size and began to be used for published works, particularly for the Bible; even the very oldest MSS of the NT are in codex form, not scrolls. The NT likewise led in the transition from papyrus to parchment for literary purposes: whereas the NT was copied on papyrus codices in the earliest period, parchment became more common in the 4th cent. and soon almost completely displaced papyrus as the writing material for NT MSS.

It is possible, therefore, that even the originals of the various NT books (esp. the quasi-personal letters of Paul) were written in the modern book or codex form. On the other hand, the books of the NT that were more nearly "literature" as they were published, such as the Gospels and Acts, may have been written on scrolls in accordance with the current literary tradition. All of the NT books were probably originally written on papyrus. In any event, whether the autographs were in scroll or codex form, it was not long before the codex was the one form in which NT MSS were copied. Indeed, the habit of the early Christians of consulting their Scriptures may have been a factor in popularizing the codex form and in causing it to replace the scroll as the accepted form for literature

Not until shortly before the invention of printing from movable type was parchment displaced by paper in the Western world. To summarize, then, NT book forms and materials in the earliest centuries were approximately as follows: (1) the autographs would have been written on papyrus codices and scrolls; (2) during the 2nd and 3rd centuries, papyrus codices were used; (3) beginning with the 4th cent., parchment codices were preferred, but occasional papyrus codices are known from as late as the 7th cent.

4. Other forms. Small portions of the NT were occasionally written in two additional forms, although neither their purpose nor their extent entitles them to be classified on the same level as MSS. More than twenty portions of the NT, representing six books, are preserved on broken pieces of pottery, which were used by the poorest people as writing material. These broken pieces, or "potsherds," are called OSTRACA when they contain a written text. In addition, brief NT passages were sometimes inscribed on talismans, or good-luck charms, although they were condemned by church authorities (see B. M. Metzger and B. D. Ehrman, *The Text of the New Testament: Its Transmission, Corruption, and Restoration*, 4th ed. [2005], 49). A few of these talismans are extant.

B. Handwriting

1. Uncial. From before the beginning of the Christian era, two forms of Greek handwriting were current. For letters, business documents, and other nonliterary purposes, a connected "cursive" style of handwriting was used, somewhat analogous to English longhand writing. For literary purposes, a style known as "uncial" was used. Uncial letters, corresponding approximately to English printed capital letters, were written separately. Taking into account the respective uses of these two styles of writing, the autographs of the books of the NT that were written for publication, such as the Gospels, were presumably written in uncial letters. If one regards the letters of Paul as personal communications, they may have been written in the cursive hand, but they had an official character and were no doubt read out loud in the church assemblies, so the uncial form would have been appropriate. Moreover, these letters were very soon being copied for distribution and were being thought of as literature; indeed, the very earliest extant copies of the Pauline letters, as of all of the NT, are written in uncials. For practical purposes, therefore, it may be said that the transmission of the NT was in uncial MSS from the beginning.

Coptic manuscript (c. A.D. 350).

2. Minuscule. The two styles of handwriting existed side by side for several hundred years. About the 9th cent., a major change occurred by the development of a refined and more formal style of handwriting out of the nonliterary cursive. This "minuscule" hand, as it is called, produced very attractive MSS and could be written much more rapidly than the uncial hand. The oldest known minuscule MS of the NT (no. 46l) is dated A.D. 835, which is also the oldest NT MS known that contains a date. The minuscule hand was readily accepted, and by the end of the 10th cent. it had completely displaced the uncial hand. Thus a rather clear division of the history of NT MSS can be drawn: (1) uncial MSS in the early centuries; (2) uncials and minuscules from the latter part of the 9th cent. to near the end of the 10th; (3) minuscules thereafter.

Within both the uncial and the minuscule periods, certain other characteristics help to establish approximate dates of MSS. The earliest uncials on papyrus are almost entirely devoid of ornamentation. Even a new section is indicated, if at all, by nothing more than a point and a small space within the line. The early uncials on parchment have no ornamentation and very few diacritical marks or marks of punctuation. A new section may be indicated by beginning a new line or by a slightly larger initial letter extending into the left margin. With the passage of time, accents, breathings, and punctuation marks were added. Initial letters of sections were enlarged and ornamented, and illustrations and other adornments were added, although the handwriting itself tended to deteriorate, the letters becoming heavier and less neat.

The minuscule MSS passed through somewhat the same stages. Although diacritical marks and punctuation occur in the minuscules from the beginning, the early ones were neatly written and had relatively little adornment, and developed toward more adornment and less neatness in the later centuries (see W. H. P. Hatch, *The Principal Uncial Manuscripts of the New Testament* [1931], and

Facsimiles and Descriptions of Minuscule Manuscripts of the New Testament [1951]). One characteristic of Greek MSS that remained constant was the absence of spacing between words, both in uncial and minuscule handwriting. This was simply a convention of style, not from any attempt to save space. Word division at the end of a line, however, followed definite rules of syllable division.

C. Palimpsests. Although papyrus was a very satisfactory material for writing, it did not lend itself to extensive erasing. Parchment, on the other hand, was so durable that it could be erased and reused. Thus, if the text of a parchment MS was no longer needed, or if the sheets had become worn or torn, the MS would sometimes be taken apart, sheets that were too badly damaged would be discarded, the leaves might be cut in half along the center fold, and the original text would be scraped off. The sheets would then be rearranged into new quires and used to receive a new text. Even MSS of the NT were not exempt from being thus erased, so much so that church authorities were forced to condemn the practice. Such an erased and rewritten MS is called a *palimpsest* (from Gk. *palin,* "again," and *psaō,* "to scrape"). Fortunately, standards of erasure were not too effective for these palimpsests, and it is possible to read much of the erased text under the later writing. One very important NT palimpsest is Codex C, known as CODEX EPHRAEMI SYRI RESCRIPTUS because the NT text is written over with writings of the Syriac church father EPHRAEM. In all, more than fifty palimpsest MSS are known in which the erased text was an uncial NT text.

D. Abbreviations. In the oldest NT MSS, abbreviations were almost entirely limited to fifteen words, such as "God," "Lord," "heaven," and certain words with sacred associations. Abbreviations for these words were *contractions*—that is, they consisted of the first and last letter or letters, with a horizontal line above to indicate the contraction. In addition, the letter *nu* at the end of a line was sometimes indicated by a raised horizontal line instead of the letter. In the minuscule period, various other words came to be abbreviated by *suspension,* which consisted in writing the first part only of the word. In addition, *ligatures,* in which two or more letters were combined into one unit, were introduced, as well as *symbols,* which were a sort of shorthand of forms representing certain endings or words.

E. Divisions of the text. Many Greek MSS of the NT contain numbers (indicated by Greek letters) in the margin that indicate the Ammonian Sections and the Eusebian Canons. At a very early date, the four Gospels were divided into sections of greatly varying extent. These sections are attributed to a certain Ammonius. In the 4th cent., the church father EUSEBIUS constructed a gospel harmony based on the Ammonian sections. Using the Ammonian numbers, he made tables listing the passages in which parallels occurred in all four Gospels in various combinations, and of the passages that occurred in only one. He then added the table number to each Ammonian section number throughout the Gospels. This system made it easy to find parallels. These numbers are also used in some printed editions of the Greek NT.

F. Catenae. In addition to NT MSS with a continuous text, two other MS formats are of interest. One of these is the MS with a catena, in which the biblical text is accompanied by a series of selections from the writings of church fathers to form a commentary on the NT text. These MSS took various forms: the patristic commentary might be written in the outer margins, with the biblical text occupying a smaller part of the page; the biblical text and the commentary might be written in alternate sections; or the text and commentary might be written in parallel columns. In the oldest MSS with catenae, the authors of

the passages of the catena were usually indicated. In later MSS, the names were often abbreviated or indicated by symbols or omitted altogether. A symbol or number was often placed at the beginning of a passage in the catena and in the body of the NT text to indicate the NT passage to which the commentary referred.

G. Lectionaries. A second variation from a straight-text MS is the lectionary, in which NT passages are arranged in the order in which they are to be read in church services during the year. A reflection of lectionary usage is likewise found in many regular NT MSS, in which the word *archē*, "beginning," and *telos*, "end," or their abbreviations, are found.

III. Witnesses to the text. The text of the NT is known from three basic sources: Greek MSS, ancient translations, and quotations from ancient writers.

A. Greek manuscripts. When early editors began to refer to Greek MSS, they were cited in various ways, such as by name or by other designation, associating the MS with its owner or the library in which it was located. With the increase in numbers of MSS, it became necessary to use a less cumbersome system. Various attempts were made in this direction before the system now in use was perfected. Under the present system, papyrus MSS (referred to as "papyri," all of which have an uncial text) are indicated by a capital "P" or its Gothic equivalent, followed by a superscript number to designate each MS. More than 115 papyri are currently listed. Uncial MSS on parchment (called simply "uncials") were initially designated by capital letters of the Roman alphabet, and when these were used up, additional MSS were assigned letters from the Greek alphabet; but as the quantity of uncials continued to grow it became necessary to employ numbers preceded by a zero (01, 02, etc.; thus the first forty-five uncials listed are known both by a number and by a letter). Minuscule MSS are designated by number (e.g., 33, 565, 2065). Lectionaries are designated by a number preceded by either the abbreviation "Lect." or the letter el in italics (e.g., Lect. 299, *l* 1301).

1. Papyri. All of the very earliest extant MSS of the Greek NT are papyri. They date mostly from the middle of the 2nd cent. through the 4th cent., although a few are as late as the 7th/8th cent. Although nearly all are fragmentary, together they include a considerable portion of the NT. In spite of their early date, the reliability of the papyri is reduced by the fact that many of them were copied by nonprofessional scribes and show a consequent lack of attention to small details.

Two collections of NT papyri are especially significant. The CHESTER BEATTY collection, acquired in 1930 – 31, includes several that date from the 3rd cent.: P^{45}, containing approximately one-seventh of the text of the Gospels and Acts; P^{46}, which includes a large portion of the Pauline epistles (except the Pastorals) plus Hebrews; and P^{47}, comprising roughly one-third of the text of Revelation. Most of the leaves of these papyri are in the Chester Beatty collection in Dublin, although thirty of the eighty-six leaves of P^{46} are in the University of Michigan collection, and some fragments of one leaf of P^{45} are in Vienna. These three papyri were published by Sir Frederic Kenyon, in fascicles containing the printed text as well as photographs.

The second and perhaps even more significant collection of NT papyri is that of the BODMER Library in Geneva, Switzerland. Little is known of the actual source of these MSS. The collection includes the following MSS of the Greek NT: P^{66} contains a large part of the Gospel of John and is dated by some authorities as early as the middle of the 2nd cent., which makes it the oldest extensive

MS of any part of the NT; P^{72}, dating from the 3rd cent., includes the epistle of Jude and the two epistles of Peter together with numerous other writings; P^{75} contains much of Luke and John and dates from near the end of the 2nd cent. or slightly later.

The oldest known MS of the Greek NT, even older than P^{66}, is a small fragment in the John Rylands Library in Manchester, England, designated P^{52}, containing only a few lines from Jn. 18. Dated in the first half of the 2nd cent. by its editor and by other paleographers, it furnishes evidence that prior to the date when the Tübingen critics claimed the fourth gospel was written (c. 160), it had actually been in circulation long enough to reach into the interior of Egypt.

2. Uncials. Extant uncial MSS (i.e., written with uncial script on parchment rather than on papyrus) number about 310, varying from small fragments of a few verses to the complete NT. Dating from the 4th through the 10th centuries, and thus later than most of the papyri, their significance is greater than that of the papyri because they are so much more extensive in content. In addition, by the uncial period, the Christian religion had gained official recognition, and consequently most uncial MSS give evidence of having been professionally copied. The following are some of the more significant or representative uncials (for a fuller descriptive list see Metzger and Ehrman, *Text of the New Testament*, 62 – 86).

CODEX SINAITICUS (א or Aleph or 01; in LXX studies, S), from the 4th cent., containing both OT and NT (though parts of the OT have not survived), now in the British Museum in London. Its discovery by Tischendorf in the Monastery of St. Catherine on Mount SINAI (hence its name) is a fascinating story (see C. Tischendorf, *Codex Sinaiticus*, 8th ed. [1934]). It is one of the most important MSS of the NT in existence. Its text is arranged in four columns to the page, in a neat hand with little adornment. The pages are about 15 x 13 in. Brought from Mount Sinai to Russia in 1859 by Tischendorf, who considered it so important that he was unwilling to have it assigned to an obscure place in the then-current alphabetical listing of MSS, he assigned to it instead the first letter of the Hebrew alphabet. In 1933, it was purchased by the British government from the Soviet government for £ 100,000.

CODEX ALEXANDRINUS (A or 02), 5th cent. MS, containing both Testaments (lacking, in the NT, almost all of Matthew, part of John, and most of 2 Corinthians); now in the British Museum. It was presented in 1627 to King Charles I of England by the Patriarch of Constantinople, who had obtained it in Alexandria. Its pages are approximately 10 x 13 in. The text, two columns to the page, has somewhat more ornamentation than Codex Sinaiticus.

CODEX VATICANUS (B or 03), 4th cent., located in the Vatican Library since the 15th cent. or longer. Regarded by many as the single most important extant MS of the NT, it originally contained both Testaments and part of the APOCRYPHA; the MS now lacks most of Genesis and part of the Psalms in the OT, and part of Hebrews and all of Titus, Timothy, Philemon, and Revelation in the NT. The pages are approximately 11 x 11 in. The text, very neat and without adornment, is printed in three columns to the page.

CODEX EPHRAEMI SYRI RESCRIPTUS (E or 04), the most important palimpsest MS of the Greek NT. It is located in the Bibliothèque Nationale of Paris. Written in the 5th cent., it evidently originally contained both Testaments. In the 12th cent. its biblical text was scraped off, most of the leaves were discarded, and the remaining ones were written over with some of the writings of St. Ephraem. Tischendorf read and published the biblical text, but the use of chemicals in an attempt to restore the erased text have further defaced the MS. The extant portions of the MS include parts of almost all of the

NT books.

CODEX BEZAE CANTABRIGIENSIS (D or 05), a 6th-cent. MS of the Gospels and Acts, has been in the Cambridge University library since it was presented to the university by Théodore Beza in 1581. The text is written in one column to the page, but in lines of greatly varying length. It is a bilingual MS, with Greek and Latin on facing pages. The Gospels are in the order Matthew, John, Luke, and Mark. As the chief representative of the so-called "Western text" (see discussion of text-types below), it has many textual peculiarities, and its text of Acts is about one-tenth longer than the common form of the text.

CODEX CLAROMONTANUS (D^p or 06), Bibliothèque Nationale in Paris, a 6th-cent. MS containing the Pauline epistles and Hebrews. By remarkable coincidence, both MSS designated "D" are bilingual, both have Greek and Latin on facing pages (Greek on the left), both have the text in "sense lines" of irregular length, and both are representatives of the peculiar "Western text."

Codex Purpureus Petropolitanus (N or 022), is written in silver letters on purple vellum, as are also Codex O (023), Σ (042), and Φ (043). All four of these MSS are from the 6th cent. Most of Codex N is in Leningrad, but parts of it are in several other locations.

Codex Freerianus or Washingtonensis (W or 032), 4th or 5th cent., in the Freer Art Gallery of the Smithsonian Institution in Washington, D.C. Like Codex D, it contains the Gospels in the Western order.

3. Minuscules. Minuscule MSS outnumber uncials almost ten to one (about 2880 have survived). Although a larger percentage of uncials than minuscules may have perished because of the greater antiquity of the former, the disparity in numbers of the surviving MSS doubtless points to the fact that the minuscule handwriting made the copying of MSS a much more rapid and less expensive process. The following minuscule MSS should be mentioned.

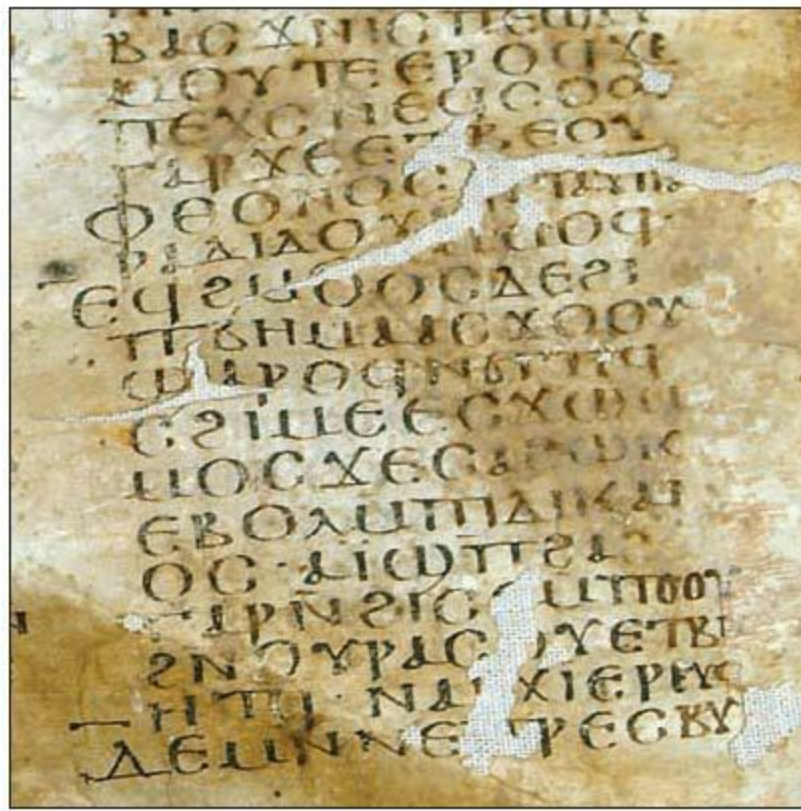
1: a 12th-cent. MS containing the NT except Revelation; in Basel, Switzerland. It was one of the MSS used by Erasmus in the preparation of the first published edition of the Greek NT. "Family 1" is the term given to a group of minuscules—1, 118, 131, 209, and 1582—all dating from the 12th to the 14th centuries, whose text is very closely related and is significantly different from the type of text current in the minuscules in general.

2: a 12th-cent. MS of the Gospels located in Basel; also used by Erasmus.

13: a 13th-cent. MS of the Gospels now located in Paris. "Family 13" is a closely related group of minuscules, including 13, 69, 124, 346, 543, 788, 826, 828, and a few others. One unique feature of this group is that the story of the woman taken in adultery follows Lk. 21:38 instead of Jn. 7:52. Family 13 is in turn textually related to family 1.

33: called "the queen of the cursives [i.e., minuscules]" because of its excellent text, dates from the 9th or 10th cent. and contains the NT except Revelation. It is located in Paris.

81: one of the few MSS stating the date of its composition (1044), this minuscule contains Acts in an excellent text; it is located in London.

565: a 9th – 10th cent. MS of the Gospels, located in Leningrad, written in gold letters on purple vellum, is one of the most beautiful of the MSS of the NT. Its text frequently differs from the common minuscule text and is related to the text of families 1 and 13.


Coptic text of Matthew (5th cent.).

700: dating from the 11th or 12th cent., this MS also differs frequently from the common text of the minuscules and has affinities to 565 and families 1 and 13. It shares with one other (162) the reading, "May thy Holy Spirit come upon us and cleanse us," instead of "Thy kingdom come," in the Lord's Prayer in Lk. 11:2.

1424: owned by the Lutheran Theological Seminary in Maywood, Illinois, this minuscule dates from the 9th or 10th cent. and contains the entire NT, with an accompanying catena for all except Revelation. Together with Codex M and more than twenty-five other minuscules, it comprises family 1424.

4. Lectionaries. Although lectionaries originated in the uncial period, most of the extant copies are minuscules. In very early times, certain Scripture passages were designated for reading on each day of the year, and for special services and days; and numerous NT MSS contain indications of the beginning and ending of lections within their text. As early as the 4th cent., however, special MSS were prepared in which the NT text was written in the order in which it was to be used for the daily readings, or for the readings for Saturdays and Sundays, beginning with Easter. This type of lectionary is called a *synaxarion*. Another type giving readings for such special occasions as feasts and saints' days is called a *menologion*. Lessons in the lectionaries include all parts of the NT except Revelation. A lectionary that contains lessons from the Gospels is called an *evangelistarion*; one containing lessons from other parts of the NT is called an *apostolicon*.

In addition to presenting the text in a different order, the first words of the Scripture lesson in lectionaries are sometimes modified to avoid undue abruptness or to clarify a reference (e.g., the substitution of "Jesus" for "he"). In addition, many lections are introduced by one of a number of set formulae preceding the first words of the Scripture text, such as "The Lord said to his own disciples," "At that time," "The Lord said this parable," and others. Of approximately 2,300 extant lectionaries,

varying from small fragments to complete MSS, about two-thirds are *evangelistaria,* somewhat less than one-third are *apostolica*, and the remainder are combinations of both types.

B. Ancient versions. The translation of a literary work from one language into another was not common in ancient times. In those instances in which it was done, the resulting translation was generally too free a rendering to be useful in determining the wording of the original (the Greek version of the OT is a rare example of a generally reliable translation of ancient literature prior to NT times). With the spread of the message of the Christian faith, missionaries began to translate the Bible into the language of the people to whom they ministered. Since these translations were generally faithful to the original language, they also provide additional attestation to the NT text.

There are certain cautions that must be observed in using a version as evidence for the Greek text from which it was translated. The translator's command both of Greek and of the receptor language would affect the work, and allowance must be made for possible errors in translation. Allowance must also be made for features in one language that are not normally reflected in another language. For example, Latin has no definite article; therefore the word for "boat" in Latin could be the rendering of either "a boat" or "the boat" in Greek. Again, if the NT is translated into a language in which meaning is largely dependent upon word order, as in English, many variations in word order that are possible in Greek could not be attested. Further, in no instance is the original MS of an ancient version extant, and we must base our study on copies that may include both copyists' errors and changes introduced into the version at a later date. The translation itself must therefore be subjected to textual criticism to establish as nearly as possible the original form of the version before it can be used in the determination of the Greek text. If the approximate date of the translation is known, it can help to indicate the form of the Greek text that was known at the time and in the geographical area in which the translation was made. The following are the significant ancient versions of the NT (for further discussion see VERSIONS OF THE BIBLE, ANCIENT).

1. Syriac. Although Syriac is a dialect of ARAMAIC (thus related to the Jewish Aramaic spoken in Palestine at the time of Jesus), the extant Syriac MSS of the NT are all translations from Greek originals and thus farther removed from the original accounts than is the Greek text.

(a) The DIATESSARON ("through the Four"), composed by a Christian apologist named Tatian, was a continuous gospel harmony that combined material from all four Gospels. Although the original language of its composition has been debated, it was of particular influence in the Syriac-speaking church and it has survived in several other languages.

(b) The Old Syriac was a translation of the Gospels made probably at the beginning of the 3rd cent. or slightly earlier; it survives in a 5th-cent. MS edited by William Cureton in 1858 and known as the Curetonian Syriac (Syr^c) and in a 4th-cent. palimpsest MS discovered in the Monastery of St. Catherine on Mount Sinai in 1892 and known as the Sinaitic Syriac (Syr^s).

(c) The Peshitta (Syr^p), which became the standard Syriac version of the NT (originally it did not include 2 Peter, 2 and 3 John, Jude, and Revelation), was produced near the end of the 4th cent. It is known in more than 300 MSS, some of which date from the 5th and 6th centuries.

Less significant Syriac versions are the following: (d) The Philoxenian (Syr^{ph}) was completed in 508 by a certain Polycarp for Philoxenus, Bishop of Mabug in Syria; this work may have disappeared, but some scholars believe that it was preserved in the Harklean version.

(e) The Harklean or Harkleian or Harklensis (Syr^h) was the work of Thomas of Harkel, Bishop

of Mabug after Philoxenus, and was published in 616. It is unclear whether Thomas merely reissued the Philoxenian version and added some marginal notes from a few Greek MSS, or whether his work was a thorough revision entitled to be called a new version (to which he added marginal readings that he believed were significant but not warranting a place in the text itself). It is the marginal readings of the Harklean version that have been of particular significance in textual criticism, especially in Acts.

(f) The Palestinian Syriac (Syr^pal), dating probably from the 5th cent., is not closely related to any of the other Syriac versions. It is unique in that, except for a few fragments of continuous text, it has survived only in lectionary form, which is preserved in three MSS of the 11th and 12th centuries; it may have been translated originally from a Greek lectionary.

2. Latin. Although Greek was commonly known and spoken throughout most of the Roman empire during the first two or three centuries of the Christian era, the need for a Latin translation of the Scriptures soon arose. The Latin NT survives in two forms.

(a) The Old Latin (OL) or Itala (it). By the end of the 2nd cent., the Gospels and perhaps all of the NT were probably current in Latin in N Africa, and soon afterward in other parts of the empire. The MSS of the OL differ so much among themselves that they probably reflect not just one Latin translation but several. Of the fifty or so OL MSS that are known (dating from the 4th through the 13th centuries), none contains the NT in its entirety, although together they include most of the books. OL MSS are cited by single lower-case letters plus abbreviations such as *aur, ff²*, *gig*, and *ph*.

(b) The VULGATE. With the passage of time, the great variations within the OL became more evident and more unacceptable. In 382, Pope Damasus appointed JEROME, the outstanding biblical scholar of that day, to undertake a revision to bring the Latin version into conformity with the Greek. Jerome's revision, known as the Vulgate ("common") and revised numerous times through the centuries, formed the basis of what is still the official version of the Roman Catholic Church. Some 8,000 MSS are extant, twice as many as the number of Greek MSS, which suggests that the Vulgate Bible was the most frequently copied work of ancient literature. Manuscripts of the Vulgate are commonly designated by abbreviations of their names (*am, cav, fu, harl*), or by their capital initial letters.

3. Coptic. Early in the Christian era an alphabet was developed for the Egyptian language using Greek letters with some additional forms taken from the older demotic script of Egypt (with the hieratic, these forms were derivatives of the hieroglyphic writing of more ancient times). From the NILE delta to the southern part of the country, some six dialects of the language existed. The most significant for NT study are from each end of this geographical area.

(a) Sahidic was the dialect in use from THEBES and S; a translation of the NT into this language was produced during the 3rd and 4th centuries.

(b) Bohairic was the dialect of ALEXANDRIA and Lower (N) Egypt; the Bohairic NT was apparently made some time later than the Sahidic, and about one hundred MSS are extant (though almost all are very late).

(c) Between the regions of the Sahidic and the Bohairic dialects, at least part of the NT was translated into other dialects of Coptic. In Fayumic and Sub-Achmimic most of John is extant; MSS in Achmimic include parts of the Gospels and Catholic Epistles dating from the 4th or 5th cent.

4. Other versions. (a) The NT was translated into Gothic at the middle of the 4th cent. by Ulfilas; it

survives in a few fragmentary MSS, one of which, Codex Argenteus, in the University Library of Uppsala, Sweden, containing portions of the Gospels, is written in silver ink on purple vellum (hence its name).

(b) The Armenian version dates from the first half of the 5th cent.; a revision appeared later, which became the dominant form of the version by the 8th cent. and is the basis of the Armenian text still in use. Not only is the Armenian version regarded as a very beautiful and accurate translation, but there are also more extant MSS—more than 1,500—of it than of any other NT version except the Vulgate.

(c) Christianity was introduced into Georgia, situated between the Black and Caspian Seas, in the 4th cent. The origin of the Georgian version of the NT is uncertain, but it is usually placed in the early 5th cent.; it was evidently either translated from or influenced by the Armenian version. The last of several revisions, which was made by about the 11th cent., is the basis of the Georgian versions still in use; extant MSS are numerous, although three that date from the late 9th and 10th centuries are believed to retain more elements of the Old Georgian.

(d) Although some one hundred MSS of the Ethiopic version are known, the fact that none of them is earlier than the 13th cent. has added to the difficulties of establishing a date for the origin of this translation, with extreme views of the 2nd cent. and the 14th cent. having been suggested. It likely originated near the 6th cent. and translated either from Syriac or directly from Greek.

(e) The NT in Old Slavonic is credited to two brothers, St. Cyril and St. Methodius, who seem to have originated the two forms of the Slavonic alphabet, the Cyrillic and the Glagolitic. These brothers, who became missionaries to the Slavs, translated the NT in the second half of the 9th cent. The version may originally have been in lectionary form, which is the form of the text in most of the extant MSS.

Less significant versions are the following: (f) After the rise of Islam, numerous translations of the NT into Arabic were made, including one in the rhymed prose style of the Koran, and made or corrected from several different language versions. (g) The Persian version is known from a few MSS from the 14th cent. and later. (h) A translation into Frankish (a language of west-central Europe) is known from one 8th-cent. MS of part of Matthew. (i) Fragments are extant of a Sogdian version, a trade language of south-central Asia prior to the 10th cent. (j) A fragment of a 10th-cent. lectionary attests to the existence of a version in Nubian, spoken in a region between Egypt and Ethiopia. (k) A version in Anglo-Saxon is known from nine MSS of the 11th to the 13th centuries.

C. Patristic quotations. In addition to actual MSS of the NT in Greek and other ancient versions, Scripture quotations in the works of the early ecclesiastical writers form an important source of information concerning the text of the NT. Most of the works of these church fathers are in Greek and Latin, with a smaller number in Syriac and some other languages. These quotations are so extensive that most of the NT could be reconstructed from this source alone.

As in the case of the versions, there are limitations in the use of the patristic literature for the purpose of determining the text of the NT. The original copies of these works are not extant, so the textual critic must first study the known MSS to determine as nearly as possible its original wording, in particular the NT quotations in the work. The NT quotations within the writings of a church father are the very parts that a scribe would most likely change intentionally—if, for example, the quotation did not agree with the form of the NT text with which the scribe was familiar. Even when the original form of the NT quotation in the patristic work has been determined as nearly as possible, if the author is merely giving the general sense of the passage instead of a verbatim reference, or if he (or his

AMANUENSIS) is quoting from memory instead of copying the quotation from a NT MS, the value of the passage for textual criticism will be limited. For example, the 4th-cent. St. Cyril of Jerusalem bases an argument concerning the Lord's Supper on what he himself says is the precise statement of St. Paul; yet his quotation concerning the institution of the Holy Communion is neither 1 Cor. 11:23 – 25 nor any one of the parallel accounts in the Gospels, but is rather a conflation from the various accounts, evidently quoted from memory (see J. H. Green-lee, *Introduction to New Testament Textual Criticism*, rev. ed. [1995], 47 n. 6). In general, however, longer quotations are more likely to have been copied from a MS than are shorter quotations.

As with the versions, the significance of the patristic quotation is the information it gives concerning the NT text. To the extent to which the NT text that a church father used can be determined, that particular form of the text can be assumed to have been known and used at the time and in the general location in which that church father lived (the date and location of the church fathers can usually be determined with greater certainty than in the case of the versions). In other words, the NT quotations of a writer's works form, so to speak, a fragmentary MS of the NT from his date and region. In addition, ancient writers at times refer to alternative readings of which they are aware in MSS of the NT, and may even give their opinion of these readings.

The earliest Christian writers are especially significant for this purpose. They include IRENAEUS (c. 130 – 200), Bishop of Lyons; TERTULLIAN of Carthage (c. 150 – 225), one of the most prolific of the Latin fathers; CLEMENT OF ALEXANDRIA (c. 150 – 215); ORIGEN of Alexandria and later of Caesarea, author of significant exegetical writings and other works (c. 185 – 254); EUSEBIUS Pamphili (c. 260 – 340), Bishop of Caesarea and author of an ecclesiastical history, commentaries, and other works. Although the potential value of the patristic quotations for NT textual criticism is very great, much work remains to be done both in preparing critical editions of the works of the church fathers and in making analyses of their NT quotations.

IV. Transmission of the NT text

A. Before the invention of printing

1. The rise of textual variants. When the books of the NT were first written, they were largely "private" works rather than "literature" in the ordinary sense. This was especially true of most of the NT Epistles, which were simply correspondence between individuals and groups. Even the Gospels were written for a purpose that was different from that of ordinary literature. When a book of the NT was copied in this very earliest period, therefore, it was generally copied privately for personal use rather than by a professional scribe. Furthermore, since the message of the book or letter was the important thing, a person making such a copy of a NT book might not necessarily feel obligated to strictly duplicate the word order or details that did not affect the sense; and in the case of the narrative books, the earliest copyists apparently sometimes felt free to add small details of information. Moreover, in the earliest period of the NT, the status of the Christian religion in the political situation would not encourage widespread comparison of NT MSS. In addition, variants and errors are almost inevitable, even with a scribe's best intentions of verbal exactness.

All these factors, therefore, combined to produce divergence of MSS during the earliest period after the NT was written. This situation continued until Christianity gained official recognition in the early 4th cent., although almost all of the variants that are significant in textual criticism may well have arisen during the first half of this period. At the same time, the significance of this divergence

between the MSS must not be exaggerated. The books of the NT doubtless came to be considered as "literature" soon after they began to be circulated, and those who copied the MSS would then have a double reason for copying with care: the preservation of the exact words of the sacred message as well as the common requirements for copying a literary work.

The differences between MSS that arose by repeated copying led to the development of "families" of MSS, or what are sometimes referred to as "local texts." Copies of the NT, each with its own peculiarities and variants, were carried by Christians to various lands and localities. As each MS was copied and further copies multiplied, the documents to a large extent shared a common group of variants that were descended from their common ancestor and in varying degrees differed from the variants of the MSS that had been carried to other localities. In this way, the common peculiarities of a group of MSS serve to indicate their common ancestry as distinct from other groups of MSS. In some instances, a certain group of such MSS can be traced back to a specific region and a definite period of time by the fact that they contain a group of variants characteristic of writings of a certain church father or which are found in a version that originated at a certain time and place.

When Christianity gained official recognition under the emperor Constantine, MSS of the NT no longer needed to be concealed for safety. Soon the emperor himself ordered new copies of the Scriptures for the churches of Constantinople. It was evidently not long before comparison was being made between MSS, and it became obvious that there were many differences, especially between MSS of different localities. During the next three centuries or so, then, whether deliberately and officially, or unintentionally and informally, there occurred a period of convergence of MSS. During this period the MSS that were produced tended more and more to conform to the same standard. This standard could now be better maintained, since the copying of MSS was to a larger extent the work of trained scribes. In addition, there was evidently some degree of editing, in the course of which the wording of parallel accounts in the Gospels were harmonized to some extent, grammatical irregularities were corrected, and a text was produced that was in general smooth and easy to read.

More than nine-tenths of all extant MSS of the NT are from this period of convergence of the MSS or later. Thus only a small percentage of the MSS preserve a form of the text that antedates the late standardized text. Although copying of MSS by hand continued to mean that virtually no two MSS were completely identical, nevertheless from the 8th cent. on almost all MSS represented in a general way the standardized form of text, and this form of the text was still current when the printing press revolutionized the world of literature. It was this form that would eventually become known as the Textus Receptus (see below, IV.B.1).

2. Types of variants. The changes that scribes introduced into the NT MSS are of several types, which may be classified as either unintentional or, much less frequently, intentional (see Metzger and Ehrman, *Text of the New Testament*, ch. 7, for a fuller discussion).

(a) Unintentional or accidental variants include errors of seeing, hearing, writing, memory, and judgment. Errors of seeing include especially the confusion of letters or pairs of letters that look much alike in uncial writing, such as Θ and O, A and L, GI and P, etc. Occasionally, an abbreviation might be mistaken for a full word of similar appearance or vice versa (e.g., $\Theta\Sigma$ and $O\Sigma$, "God" and "who," in 1 Tim. 3:16); a scribe's eye might skip from the first to the second occurrence of the same word, causing omission of the intervening material; he might read the same word or phrase twice; or he might confuse two words of similar appearance (e.g., *elabon* and *ebalon*—"they took" and "they cast").

Errors of hearing might arise when a group of scribes copied MSS by dictation or when an individual scribe pronounced the text (out loud or mentally) in the process of copying. Since very early in the Christian era several Greek vowels and diphthongs came to be pronounced alike—e.g., *i, ĕ, y, ei, oi*, and *ui*; *e* and *ai*; *o* and *ō*—numerous confusions of spelling from dictation were possible. Some of these confusions resulted in obvious misspellings, but others produced a different word; for example, the confusion of *ē* and *y* would change any form of the plural pronoun "you" to the corresponding form of "us."

Errors of memory might result in a mere change of word order in a series, substitution of one synonym for another, or the accidental inclusion of a word or phrase from a parallel passage.

Errors of writing might include the addition or omission of a letter or letters (e.g., *egenēthēmen nēpioi*, "we became infants," and *egenēthēmen ēpioi*, "we became gentle"; cf. 1 Thess. 2:7), or the omission of an indication of abbreviation.

Errors of judgment, in addition to some of the preceding errors, might cause a scribe to include a marginal note, thinking that it was a part of the text itself. This may be the origin of the explanation of the troubling of the water in Jn. 5:3 – 4.

(b) Intentional variants are the result of scribes' attempts to correct what they thought were errors, to make the text less ambiguous, or to strengthen the theology. Probably the most common type of intentional variant is the harmonization of parallel accounts in the Gospels. To mention only two such instances, the much shorter version of the LORD's PRAYER in Lk. 11:2 – 4 has been amplified by scribes in accordance with the longer form of Matt. 6:9 – 13; and the form of the conversation between the rich young ruler and Jesus in Matt. 19:16 – 17 has been modified to agree with the form of the parallels in Mark and Luke.

Scribes also attempted to resolve apparent difficulties in the text. In Mk. 1:2, the original reference to "Isaiah the prophet" was modified to "the prophets," since the first part of the following reference was from Malachi (Mal. 3:1). Again, the prodigal son decides in Lk. 15:19 that he will say to his father, "make me like one of your hired men," so the scribes of several good MSS have added these words in v. 21.

Scribal changes in the interests of a strengthened theology or piety sometimes occurred. The most notable of these is the reference to the three heavenly witnesses of 1 Jn. 5:7 – 8, which is included in the KJV but is found in no Greek MS earlier than the 14th cent.; this variant however may have originated as a marginal comment in a Latin MS rather than as an intentional addition to the biblical text. Other instances include the addition of "and fasting" to "prayer" (Mk. 9:29), and the word "openly" following "shall reward you" in Matt. 6:4 to provide a happy contrast with the earlier words "in secret."

Although all sorts of variants may be found among the thousands in the extant MSS, these are minutiae in the total text of the MSS. The scribes generally copied the text with great care, even when the text may not have seemed to make sense (cf. Metzger and Ehrman, *Text of the New Testament*, 271; G. D. Kilpatrick in *The Bible Translator* 9/3 [July 1958]: 127 – 36).

Johannes Gutenberg.

B. The Greek NT in print

1. The establishment of the "Received Text" (1516 – 1633). Johannes Gutenberg's invention of printing from movable type, in the middle of the 15th cent., had the most far-reaching consequences for the entire world of literature and culture. For the first time it became possible not only to produce books more cheaply than ever before but also to produce any number of identical copies of a work. Paper had come into common use in the Western world by this time, having displaced parchment by the beginning of the 15th cent. Although some handwritten MSS continued to be produced for another century or so, with the invention of printing the age of hand copies was at an end.

The first major publication of Gutenberg's press was a beautiful edition of the Latin Vulgate in folio size, produced in 1456 and appropriately known as the Gutenberg Bible. Not until half a century later, however, was the first Greek NT printed. One reason for the delay was that the Bible of the scholars was the Vulgate, with comparatively little concern being given to the Greek text. A second reason may have been the problem and expense involved in preparing Greek type in imitation of the current minuscule style, which involved several forms of a given letter as well as numerous ligatures.

Eventually, in 1502, the preparation of a Greek Bible was begun, edited by several scholars under the direction of Cardinal Ximenes of Spain. The NT was printed in Latin and Greek, while the OT included the Hebrew, the Vulgate, and the Greek LXX in parallel columns. The project was undertaken in the town of Alcalá, known as Complutum in Latin; hence, the Bible is known as the Complutensian Polyglot. The NT was completed in 1514 and the OT volumes in 1517, but the approval of the pope was not given until 1520, and for some reason the work was not actually "published" until 1522.

In the meantime, the Swiss printer Froben, doubtless having heard of the Spanish cardinal's project, urged the scholar Erasmus to undertake the editing of a Greek NT. In July of 1515, Erasmus hastily obtained a few Greek NT MSS that happened to be available in Basel, none of which contained

the entire NT; and the only MS that was not essentially the late standardized form of text he used sparingly because of its differences from the others. His one MS of Revelation lacked the final six verses, and at some other points the biblical text was confused with the accompanying catena. In these passages he therefore inserted his own Greek translation from the Latin, resulting in a Greek text that in some passages agrees with no known Greek MS. This edition, accompanied by Erasmus's own Latin translation (which differed at numerous points from the current Vulgate), was published in March, 1516, the haste of the work being reflected in its many typographical errors. Thus, whereas the Complutensian was the first Greek NT to be printed, Erasmus's edition was the first to be published, that is, actually placed on the market.

Altogether Erasmus published five editions of his NT, but each new edition included little additional consultation of MSS and few changes. One modification, however, was significant. When one of the editors of the Complutensian Polyglot protested to Erasmus the omission of the reference to the three heavenly witnesses in 1 Jn. 5:7 − 8, which was included in the Vulgate, Erasmus under pressure rashly agreed to include it in his next edition if it could be found in any Greek MS. When such a MS (Codex 61) was shown to him (prob. prepared for the purpose), he dutifully included the passage in his third edition (1522). He again omitted it from his subsequent editions, yet somehow it was his third edition that most largely influenced the textual tradition, and thus this passage found its way into the works of other editors and into the accepted tradition of the text for more than three centuries, including the KJV.

Desiderius Erasmus.

In this way, the subsequent tradition of the printed Greek NT was based on the somewhat uncritical use of a very few MSS, which for the most part represented a late stage in the development of the text rather than adequately representing the original. Four editions of the Greek NT were published by Robert Estienne (Stephanus) between 1546 and 1551. His third edition, which indicated the variant readings of a number of MSS and of the Complutensian, was the first Greek NT to contain something like a critical apparatus. This third edition became the generally accepted form of the text for Great Britain and the United States. In the fourth edition, Stephanus introduced the verse numeration, which is still in use. Théodore Beza (de Bèze), Protestant scholar and successor to John Calvin at Geneva, published nine editions of the Greek NT between 1565 and 1604, five of which are merely small reprints. Beza's reputation helped to popularize the form of the text of the Erasmus and Stephanus tradition.

Two brothers of the Elzevir family, publishers of many editions of the classics, brought out seven editions of the Greek NT between 1624 and 1678, primarily as a commercial enterprise. The Latin preface to their second edition (1633) assured the reader, "You have therefore the text now received by all [*Textum ergo habes, nunc ab omnibus receptum*], in which we give nothing altered or corrupt." The language of this advertisement passed into common use, and the label *Textus Receptus*, "Received Text," became descriptive of the printed form of the Greek text in the Erasmian tradition. It was specifically the Elzevir edition of 1633 that became the Textus Receptus for continental Europe, as the third edition of Stephanus was for Great Britain and the United States.

2. The accumulation of textual evidence (1633 − 1830). With Elzevir's publications, a total of some one hundred editions of the Greek NT had been printed, and thus the NT had become generally available in the original language. Next, scholars turned their attention to the examination of ancient MSS to see whether the text could be improved. During this period of two centuries, the dominance of the Textus Receptus was not broken, but evidence was gradually collected that was to lead to a better text. Some of the more significant scholars are the following.

(a) John Mill published an edition of the NT in 1707 that cited the evidence of nearly a hundred MSS as well as numerous patristic writers and several versions. Even this mere presentation of variant readings, however, was attacked as undermining the Scriptures.

(b) Richard Bentley published no NT, but was an influential scholar who defended the study of the MSS against those who opposed Mill's work.

(c) Johann Albrecht Bengel published a Greek NT in 1734; it included a critical apparatus with variant readings classified as to the degree of their superiority or inferiority to the Textus Receptus. Most importantly, Bengel recognized that the witnesses to the text must be classified into groups, not merely counted individually, and he also formulated the principle, now recognized as being fundamental, that a more difficult reading is generally more likely to be original than is an easier reading. For these advances, Bengel came to be called the father of modern textual criticism of the NT.

(d) Johann Jakob Wetstein published a two-volume edition of the Greek NT in 1751 − 52, using the Textus Receptus but indicating in his apparatus the readings that he believed were correct. His unique contribution was a system of citing uncial MSS by capital letters and minuscules by Arabic numerals, a system followed until the present.

(e) Johann Salomo Semler's contribution to textual criticism was his development of Bengel's classification of MSS into three main groups: Alexandrian, Western, and Eastern.

(f) Johann Jakob Griesbach, a student of Semler, carried forward and popularized this

professor's work. He identified three families of witnesses in the Gospels, which he designated Alexandrian, Western, and Byzantine; and two families in the Pauline Epistles, Alexandrian and Western. He also elaborated fifteen "canons" of textual criticism; using these principles in his three editions of the NT, Griesbach abandoned the Textus Receptus in numerous instances. His work and method made him one of the most important textual scholars.

3. The struggle to overthrow the Textus Recep-tus (1830 – 82). Until well into the 19th cent., the printed NT continued to be basically that of Erasmus-Stephanus-Elzevir. There were sporadic and minor departures from this received text, but no substantial changes. The first scholar to set aside the Textus Receptus and edit a text on the basis of ancient witnesses and careful text-critical principles was Karl Lachmann, whose first edition appeared in 1831. At best such an edition would have been violently attacked by those who regarded the Textus Receptus as sacrosanct; but because Lachmann failed to make clear his principles—merely referring readers to an article that he had published in an obscure periodical—even scholars of a more liberal point of view took issue with him. In his second edition (1842 – 50), however, he included a full statement of his principles, which won appreciable support for his text.

A copy of the Erasmus NT, *Novum Instrumentum* (1516), with Greek and Latin in parallel columns.

In England, the edition of Samuel Prideaux Tregelles, which appeared in 1857 – 79 (subsequent to the publication of a careful statement of his principles and methods) did much to influence British opinion toward the acceptance of a "critical text"—that is, a text based upon the principles of textual criticism. His principles, arrived at independently, closely paralleled those of Lachmann. He also examined most of the then known uncial MSS and a number of important minuscules.

The greatest single name in NT textual criticism is doubtless that of Constantin Tischendorf. His publications of texts and collations of MSS and of critical editions of the Greek NT exceed those of any other scholar. He published the text of twenty-one uncial MSS, including the famous Codex Sinaiticus, and either collated or in some cases copied the text of more than twenty others. The first of

his editions of the NT was published in 1841. His eighth and final edition (1869 – 72), published in two volumes, includes a critical apparatus that is so comprehensive in its citation of MSS, versions, and patristic writings that it is still, more than a century later, indispensable for serious study of the NT text (a third volume, consisting of prolegomena, was edited by Caspar René Gregory and published in 1894).

The triumph for a NT text based upon critical principles was climaxed in the publication in 1881 – 82 of an edition that was the joint labor of two scholars of Cambridge University—Brooke Foss Westcott and Fenton John Anthony Hort. Their edition contained no critical apparatus as such. On the other hand, their text was accompanied by an entire volume in which they carefully set forth their principles (*The New Testament in the Original Greek: Introduction and Appendix* ; this volume is believed to have been written by Hort). The thoroughness of their work, the handy form of their NT edition, and the extensive use of their text in the English Revised Version of the NT, contributed to the success of their labors. Virtually all subsequent work on the NT text looks back to the work of Westcott and Hort. With their publication, the reign of the Textus Receptus was ended.

There was, of course, a reaction against the critical text, notably by J. W. Burgon and Edward Miller. They argued that God would not have permitted the church to follow a corrupt text for fifteen centuries. The answer was that the TR is not a corrupt or misleading text; and, moreover, that before the invention of printing there was no rigidly fixed text at all. Burgon and Miller also argued that the critical text amounted to rejecting the testimony of the vast majority of the (later) MSS. The reply was that any number of MSS that can be traced to a common ancestor indicates only one witness, not many; and that this procedure is commonly followed in textual criticism of the secular writings of antiquity. Their argument that the readings of the late MSS are intrinsically superior is subjective; the consensus of scholarly opinion is to the contrary.

V. The modern period of textual criticism

A. The theory of Westcott and Hort. The principles that Westcott and Hort (WH) set forth are treated in detail elsewhere (e.g., their own volume mentioned above, or the excellent summary in Metzger and Ehrman, *Text of the New Testament* , 174 – 81). Only some of the basic points will be mentioned here. In addition to using valid principles of criticism to decide the correct reading in a given variant, they pointed out that the degree of reliability that a given MS exhibits in a large number of instances should also be taken into account in deciding other instances. Further assurance of conclusions may be gained if, instead of considering the characteristics of individual MSS, the witnesses are grouped with others whose text is similar. Then, if individual peculiarities are eliminated and the consensus of the group is determined, the variants may be studied in terms of these groups of documents instead of individual MSS.

WH recognized four principal groups or text-types: (1) The *Syrian* text is the latest and is found in most of the later witnesses. It represents a revision, produced in Syria (hence its name) about the 4th cent., which characteristically smoothed out rough grammar and harsh transitions, clarified obscurities, harmonized parallels, and is generally smooth, clear, and theologically safe.

(2) The *Western* text, which was in existence in the 2nd cent., is most notable for its extensive paraphrases and additions (esp. in Acts), substitution of synonyms, and occasional significant shorter readings, although it has many less spectacular variants as well. Among its chief witnesses are Codices D and D^p (05 and 06) and the OL.

(3) The *Alexandrian* text originated in Alexandria, the seat of scholarly criticism of the Greek

classics. Its witnesses include Codices C, L, 33, the Coptic versions, and certain Alexandrian fathers. This text-type WH believed to be characterized not by variants of content and substance but by corrections of grammar, syntax, and similar matters of the sometimes unsophisticated style of NT Greek, as might be expected in the scholarly environment of Alexandria.

(4) The *Neutral* text, generally represented by the consensus of codices ℵ and B, was believed by WH to contain a textual tradition that preserved the original text with a minimum of change. They maintained that readings in which these two MSS agreed could rarely be set aside, and that frequently B alone preserved the original text. On the other hand, they did not automatically accept the "Neutral" text in every instance, but rather rejected it when they felt that textual principles so dictated.

WH theorized that from the original text (substantially preserved in the "Neutral" text) the "Western" text was developed by extensive alteration. From the "Neutral" text, modified by philological alterations and slight admixture from the "Western," the Alexandrian text was produced. When the Christian church became recognized and MSS could be openly produced and compared, a revision incorporating these three texts—but significantly less in the case of "Western" elements— plus editorial and theological refinements, produced the Syrian text, which in turn became the general form of the text of MSS and then of the printed TR.

B. The work of von Soden. The most notable attempt to reach the original NT text on a basis radically different from that of WH was the work of Hermann von Soden, a professor in Berlin. Between 1902 and 1913, von Soden published a critical text with a very extensive critical apparatus, together with a large volume detailing his textual theory. His apparatus utilized a completely new system of MS designation, which was intended to indicate something of the date and contents of each document. As a result of its complicated nature and the fact that his theories have not generally been accepted, his system of classification has not been adopted.

Von Soden theorized the existence of three ancient text-types, designated by Greek letters: K (from Koɤ̆, "common"), which approximated WH's Syrian; H (Ἡσύχιος, an Egyptian scholar who may have been responsible for it), which compares to WH's Neutral plus Alexandrian; and I (Ἱερουσόλυμα, on the assumption that it originated in Palestine), which includes WH's Western plus other elements. Von Soden felt that the agreement of two of these three groups, qualified by certain other principles, could lead to their common ancestor (I-H-K), which was current in the 3rd cent. By then eliminating the corrupting influence of Tatian, the text of the mid-2nd cent. could be determined, which von Soden believed was essentially the original text.

Van Soden's work made significant contributions to certain aspects of textual study. His basic textual theory, however, has largely been rejected on the grounds that his evaluation of text-types is faulty, that his estimation of the corrupting influence of Tatian on the text is unwarranted, and that even the NT text of the mid-2nd cent. probably already contained the great majority of the variants that are significant in textual study. It is noteworthy, however, that von Soden's text, based upon principles so different from those of WH, agrees largely with that of WH.

C. Current view of text-types. It is now generally agreed that WH were too optimistic in their evaluation of a "Neutral" text, and that its witnesses are in fact representatives of the same basic text-type as their Alexandrian text. These two are now commonly combined under the designation *Alexandrian*. The Alexandrian is usually regarded as the best of the individual text-types, but its readings must nevertheless be submitted to the canons of criticism and compared with the other text-

types. The main representatives of the Alexandrian text are P[4,5,34,75] ℵ, A (outside the Gospels), B, C, L, 33, Bohairic, Cyril of Alexandria, and Origen (in part).

The "Western" text has been subject to much study since WH, and its actual origin is perhaps even more of an enigma now than it was earlier (the name "Western" itself is quite misleading, though it continues to be used for lack of a better term). A few specialists have maintained that it best represents the original, but most scholars are still reluctant to accept distinctive "Western" readings. This text-type is represented by P[25, 38, 41, 48] D (05), D[p] (06), a few minuscules, Old Latin, Old Syriac, Tertullian, and Irenaeus.

The Syrian text of WH is now called the *Byzantine* or *Traditional* or *Majority* text; it is found in A (Gospels), most later uncials, most minuscules, Gothic and later versions, and later church fathers. Much more is now known of this text-type, its subdivisions, and its stages of development, thanks to the work of von Soden and others. This late text may occasionally preserve an ancient reading lost from the other texts (cf. H. A. Sturz, *The Byzantine Text-Type and New Testament Textual Criticism* [1984]), and some writers go so far as to argue for the originality of the Majority text (cf. W. N. Pickering, *The Identity of the New Testament Text*, 3rd ed. [2003]). Generally speaking, however, distinctive Byzantine readings do not commend themselves as being original (see D. B. Wallace in *BSac* 148 [1991]: 151 – 69, a response to an earlier edition of Pickering's book). In a very detailed study of the CATHOLIC EPISTLES, Klaus Wachtel has concluded that the Byzantine text-type is the result of a long process that began in very early times and reached its final stage in the 9th cent. (*Der Byzantinische Text der Katholischen Briefe: Eine Untersuchung zur Entstehung der Koine des Neuen Testaments* [1995], 199).

Since the time of WH, a number of MSS have come to light that, in the view of some, agree sufficiently to warrant grouping them as an additional text-type (at least in the Gospels); it is usually known as the *Caesarean* because Origen seems to have used it during his residence in Caesarea. It is thought to be represented also in P[37, 45?] Q, W (in most of Mark), family 1, family 13, 565, 700, Old Georgian, Old Armenian, Palestinian Syriac, Cyril of Jerusalem, and Eusebius. The characteristics of the Caesarean text are difficult to describe, however, and more recent scholarship has cast serious doubts on its homogeneity.

Because the classification of text-types presented above is not totally satisfactory, some scholars have proposed alternate systems. For example, Kurt and Barbara Aland (*The Text of the New Testament*, 2nd ed. [1989], 159) suggest five categories of MSS: I = very special quality (papyri and uncials up to the 3rd/4th cent.); II = special quality (important MSS that however are affected by the Byzantine text); III = MSS with independent text (such as families 1 and 13); IV = the D text ("Western" witnesses); V = Byzantine MSS. This proposal, like others, has not been widely accepted.

D. Principles of textual criticism

1. Internal evidence. In deciding between variants, one basic principle is that the reading that at first sight seems more difficult in the context is likely to be original, unless it is an accidental error that makes no sense. The point is that an ancient scribe, faced with two or more readings, would generally choose the one easiest to understand at first glance. Thus in Jn. 1:18, "the only God" is preferred over "the only Son" because the Greek word for "only," *monogenēs G3666*, could be understood to mean "only begotten," and the scribes would have considered it inappropriate to apply such a descriptive to "God" (see ONLY BEGOTTEN).

A second principle, which is in part a corollary of the above, is that a shorter reading is more

likely to be original than a longer reading, if the difference is the result of an intentional alteration. In other words, a scribe was more likely to add an explanatory comment than to omit a phrase intentionally. On the other hand, if an accidental alteration is involved, the longer reading may be original and the short reading can be considered an inadvertent omission—for example, if the same word or syllable occurs twice in a passage, and the scribe's eye skipped from the first occurrence to the second (as in Matt. 5:19, where some MSS omit the second part of the verse by skipping from the first occurrence of "will be called…in the kingdom of heaven" to the second).

A third principle, likewise in part related to the first, is that the reading from which the other readings could most easily have developed is likely to be original (some scholars consider this criterion the most fundamental principle). In Mk. 9:49, for example, the original text was doubtless the rather enigmatic, "For everyone will be salted with fire," which a prosaic scribe altered to the innocuous "For every sacrifice will be salted with salt" (as in D and OL; the Byzantine text then characteristically combined both readings [cf. KJV]). It is very unlikely that an original "salt" would have been altered to "fire," but the latter more easily explains why the former would have arisen. By the same token, a reading that has a definitely heightened theological or devotional emphasis is likely to be a scribal alteration rather than the original; for example, St. Paul's exhortation, "Therefore honor God in your body" (1 Cor. 6:20), led a scribe to make the pious addition, "and in your spirit, which are God's" (cf. KJV). Here again, it seems unlikely that the longer reading would have given rise to the shorter text.

An important application of the above principle relates to parallel passages. Since scribes would be tempted to harmonize parallels, a reading that is not thus harmonized is generally to be preferred. For example, after the words, "give it your greeting," in Matt. 10:12, some MSS add, "saying, 'Peace be to this house,'" from the parallel in Lk. 10:5. Harmonizations such as this one are common in the Synoptic Gospels.

2. External evidence. The application of the above principles of internal evidence to a large number of variants will make it possible to evaluate the degree of reliability of individual witnesses and, more importantly, of groups of witnesses or text-types. It then becomes possible to decide between variants by considering the general reliability of the text-types that support each reading as well as by the principles of internal evidence (the latter by themselves can be very subjective). The combination of internal and external evidence produces a more balanced judgment than reliance on either one alone.

The Alexandrian is the best individual text-type, while the "Western" and the Byzantine, when standing alone, are generally unreliable. On the other hand, since evidence of a wide geographical distribution of a reading suggests its originality, support by good witnesses of more than one text-type is preferable to support by one text-type exclusively.

VI. Conclusion. The evangelical view of INSPIRATION relates to the Scriptures in the form in which they were originally given. No addition or modification of the original, therefore, no matter how long enshrined in MSS or translations, partakes of this inspiration. The determination of the original form of the text as nearly as possible is, therefore, a solemn responsibility. At the same time, the precise original wording of the NT cannot be determined with finality in every instance. Consequently, the best form of the text that can be reached will be, from a technical point of view, only an approximation to the original. From a practical point of view, however, the difference involved in most variants is so slight that little or no difference of meaning is involved.

One may safely conclude, then, that when sound principles of textual criticism are judiciously followed, a NT text may be reconstructed of which it may be said, in the words of Sir Frederic G. Kenyon, that "we have in our hands, in substantial integrity, the veritable word of God" (*The Story of the Bible*, 2nd ed., rev. by B. M. G. Reardon [1964], 113).

Textus Receptus teks'tuhs-ri-sep'tuhs. See TEXT AND MANUSCRIPTS (NT) IV.B.

Thaddaeus thad'ee-uhs, tha-dee'uhs (Θαδδαῖος *G2497*, perhaps from Aram. תַּדַּי, "breast" [the name תַּדַּי occurs in the TALMUD], but more likely a short form of Θεοδόσιος or some other name compounded with Θεός *G2536*, "God" [cf. THEU-DAS]). One of the twelve apostles (Matt. 10:3; Mk. 3:18). In Matt. 10:3 the KJV follows the Textus Receptus in reading "Lebbaeus, whose surname was Thaddaeus" (both here and in Mk. 3:18 some MSS have LEBBAEUS only instead of Thaddaeus). The parallel lists in Luke-Acts have, instead of Thaddaeus, "Judas son of James" (Lk. 6:16; Acts 1:13; the KJV interprets the text to mean "Judas *the brother* of James"]). See JUDAS #6. Presumably, the names Thaddaeus and Judas refer to the same person. If so, it seems likely that Luke provides the true name, but it is uncertain whether Thaddaeus was a secondary name borne by this apostle or whether it (like Lebbaeus?) was a descriptive designation introduced in the Gospels to avoid confusion with JUDAS ISCARIOT. (See discussion by G. Dalman, *Die Worte Jesu*, 2nd ed. [1930], 40.)

<div align="right">A. M. ROSS</div>

Thaddaeus, Acts of. A 6th-cent. Greek version and development of the Syriac legend regarding Abgar V, king of EDESSA (A.D. 9 – 46), who is said to have exchanged correspondence with Jesus, as a result of which Addai (THADDAEUS) was sent to Edessa and performed numerous miracles,

including the healing of Abgar. In this later elaboration of the original story (similar in many respects to the 5th-cent. *Doctrine of Addai*), Abgar is healed upon the return of his messenger Ananias, prior to the coming of Thaddaeus to Edessa, and much more attention is given to the work of Thaddaeus in establishing the church of that city. EUSEBIUS (*Eccl. Hist.* 1.13; cf. 2.1.6 – 8) provides the earliest record of the alleged correspondence and its outcome, in which he says that he extracted it from the archives in Edessa and translated it from the Syriac. See ABGAR (ABGARUS), EPISTLES OF CHRIST AND. (Gk. text in R. A. Lipsius, *Acta apostolorum apocrypha* [1891 – 1903], 1/1:273 – 78; English trans. of Eusebius's account in *NTAp*, 1:497 – 99.)

theater. In the ancient world, the theater was a structure usually open-air and semicircular, with stone seats. Greek theaters, found as early as the 5th cent. B.C., were on hillsides to take advantage of natural land formations. Early Roman theaters were erected as free-standing buildings supported by arch construction. They were used for presentation of dramatic productions, pageants, religious rites, choral singing, games, gladiatorial contests, and public assemblies and forums of citizens.

It would be impossible to determine when humans began to develop histrionic interests. The religious dance, the earliest outlet for the emotions, has been considered the origin of the arts. A religious ceremony and drama involving OSIRIS was performed yearly by the Egyptians as early as 2000 B.C. There is no evidence that Israel ever produced a drama or had theaters. Religious DANCING, however, is found in the OT (Exod. 15:20; 2 Sam. 6:16), and the books of JOB and SONG OF SOLOMON are cast in dramatic dialogue form. Nonetheless, the true flowering of the theater must be credited to the Greeks in the 6th and 5th centuries B.C. Tragedies and comedies were presented

before large audiences. No later civilizations have surpassed the Greek genius for drama. The Greek drama was inextricably bound up with religion, particularly the festival to DIONYSUS, the wine god, often degenerating into orgies. Menander (342 – 291 B.C.) was the outstanding figure in the later Greek theater. The Romans introduced the Greek drama as they conquered and assimilated the Greek nation and culture. The growth and proliferation of the Roman theater paralleled the fortunes of the empire. HEROD the Great built theaters in Jerusalem, Caesarea, Damascus, Gadara, Philadelphia, and other cities. The theater was probably encouraged by the Jews of the DIASPORA.

The earliest Greek theaters were nothing more than marked-out dancing circles in the center of which was an altar, located at the foot of a hillside on which spectators stood or sat. The best preserved example of the later Greek theater is the magnificent structure at Epidaurus, while the most famous is the theater of Dionysus at Athens. Of the Roman theaters the one at Aspendus in ASIA MINOR, built during the reign of MARCUS AURELIUS, is the best preserved. The Romans erected magnificent theaters with rich and showy adornment, even in the smaller cities. AUGUSTUS Caesar was a great patron of the theater. Remains of Greek and Roman theaters may be seen today in cities visited by PAUL (PHILIPPI, ATHENS, CORINTH, EPHESUS; cf. Acts 19:29, 31).

F. B. HUEY, JR.

Thebaic. A Coptic dialect better known as Sahidic. See VERSIONS OF THE BIBLE, ANCIENT II.C.

Thebes theebz (Θῆβαι). Greek name given to the ancient capital of Upper EGYPT, corresponding to modern Luxor and Karnak, some 450 mi. S of Cairo. The Egyptians themselves referred to it in several ways, including Weset and City of Amun/Amon (Egyp. *nwtmn,* thus Heb. *nōʾ ʾāmôn H5531*

[Nah. 3:8] or simply *nō‘* H5530 [e.g., Ezek. 30:14, where the LXX has *Diospolis,* "City of Zeus/God"]). See AMON #4. It is uncertain why the Greeks gave to it the name Thebes (also the name of several others sites, including an important city in the region of Boeotia, NNW of ATHENS).

On the E bank of the NILE, the town focused on the two vast temples of the god Amon at Karnak and Luxor, less than 2 mi. apart. On the W bank, Thebes boasted a row of funerary temples of the kings along the desert edge (see K. R. Weeks, ed., *The Treasures of the Valley of the Kings: Tombs and Temples of the Theban West Bank in Luxor* [2001]; N. Strudwick and J. H. Taylor, eds., *The Theban Necropolis: Past, Present and Future* [2003]). Behind these, the tomb chapels of their officials were carved in the rocky hills, whereas the tunnel tombs of the pharaohs and their wives were hidden away in the Valleys of the Kings and Queens behind the western cliffs. The temples and tombs on both banks contain a wealth of inscriptions, reliefs, and paintings of the utmost value as background to OT life and times.

Unimportant and little known in the 3rd millennium B.C., the city rose into prominence when the Theban 11th and 12th dynasties respectively restored the unity and prosperity of Egypt. Later Theban princes expelled the HYKSOS; the 18th dynasty founded Egypt's empire (18th – 20th dynasties, c. 1550 – 1085 B.C.), to which epoch belong most of the greatest and finest Theban monuments. Amon of Thebes was virtually god of the empire, and in his temples were amassed vast riches. In the time of decline in the 1st millennium B.C., when royal (and real) power lay in the N, Thebes was still a proud religious center until sacked by the Assyrians in 663 B.C.—an event stirring enough for Nahum to use as image for Assyria's impending doom (Nah. 3:8). The "rampart" (NRSV) is probably a reference to the delta moats and canals, Egypt's and Thebes' first line of defense. Jeremiah in 605 and Ezekiel in 571 threatened judgment on Thebes, Amon, and Egypt generally (Jer. 46:25; Ezek. 30:14 – 16). Thereafter, Thebes gradually sank into insignificance. (See further C. F. Nims, *Thebes of the Pharaohs* [1965]; J. Kamil, *Luxor: A Guide to Ancient Thebes,* 3rd ed. [1983].)
Entrance at the temple of Thebes (Luxor, Egypt).

K. A. KITCHEN

Thebez thee'biz (תֵבֵץ *H9324,* derivation unknown). A fortified town within the tribal territory of MANASSEH, not far from SHECHEM. ABIMELECH son of GIDEON met his death here when a woman fatally wounded him by throwing an upper millstone from a tower on the wall of the city (Jdg. 9:50). The ignominious death of Abimelech became proverbial in Israel. JOAB referred to the incident in his report to DAVID regarding the death of URIAH (2 Sam. 11:21). The precise location of Thebez is uncertain, but some scholars identify it with modern Tubas, about 10 mi. NE Shechem (modern Nablus), on the main highway to BETH SHAN. This geographical area afforded military significance while the fertile valley provided commercial value.

theft. See CRIMES AND PUNISHMENTS I.B.

theism. Belief in the existence of GOD. The terms *atheism*, the dogmatic denial of God, and *agnosticism*, a profession of ignorance, indicate a material distinction from theism. The term *deism*, a Latin derivative, is the linguistic equivalent of *theism* (derived from Greek), but these two words designate two different positions.

In the 18th cent., John Toland, Anthony Collins, the Earl of Shaftesbury (A. A. Cooper), and others launched an attack on supernatural Christianity. Although they believed in God, they denied the occurrence of MIRACLES and special REVELATION, and defended a purely natural religion. Their God is sometimes called an absentee God, one who started the universe going, but thereafter never interfered. If the term *absentee* is technically inaccurate, at least they insist that divine action is uniform and is not to be distinguished from the laws of nature. This philosophy was called *deism.*

Theism, its opposite, asserts that God has spoken and has acted at particular times and places.

Although theism and deism are thus distinguished, the former term is often used to refer simply to the arguments for the existence of God, and some of these also are found in deism. The term *theology* no doubt covers a discussion of the divine attributes as given in Scripture, and in a wider sense includes also anthropology, soteriology, and other subjects; but usually theism designates a philosophical defense of the existence of God. No doubt it ought to and sometimes does defend miracles, but philosophically the theistic proofs are its main contents.

Thelasar thel'uh-sahr. KJV alternate form of TEL ASSAR.

Thelersas thuh-luhr'suhs. KJV Apoc. form of TEL HARSHA (1 Esd. 5:36).

theocracy. Government by divine rule (from Gk. *theos G2536*, "God," and *krateō G3195*, "to control, rule"). The term is distinguished from *democracy*, which places the ultimate power of the government in the hands of all the people; from *hierocracy*, the rule of the priests, which relegates to a religious class unique insight into the will of God; and from *monarchy*, which has a human king or queen to rule over a nation. The word does not appear in the Bible and seems to have been invented by JOSE-PHUS, who used *theokratia* to describe the unique character of the Hebrew government as revealed to MOSES and as compared to other forms of government. He says, "Our legislator… ordained to be what, by a strained expression, may be termed a theocracy, by ascribing the authority and the power to God" (*Against Apion* 2.165).

However, the idea is much older than the origin of the word, as Josephus suggests in his statement. It goes back to the OT and to the time of Moses (Exod. 19:4 – 9; Deut. 33:4 – 5). At the heart of the idea is Israel's unique relation to God as his peculiar people. It is the COVENANT which binds Israel to God in this relationship (Exod. 19 – 20) and constitutes Israel "a kingdom of priests and a holy nation" (19:6). God claimed Israel for himself by redeeming the nation from Egyptian bondage. The great redemptive acts at the time of the exodus and in the course of the wilderness wanderings declare God as the eternal Ruler (Exod. 15:18). Moses was merely the man of God communicating God's will to the people.

GIDEON refused to accept the crown because he believed that God alone should rule over Israel (Jdg. 8:22 – 23). In the period preceding the coming of the monarchy, it fell on prophets, priests, and judges to express the theocracy. In Israel's war against SISERA, the prophetess DEBORAH and the judge BARAK were said to be the agents of God's deliverance (4:4 – 7). The priests frequently appear as the messengers of God's will (20:28; 1 Sam. 14:41). An institutionalized theocracy, however, appears with the coming of the kingship in Israel.

When the children of Israel demanded a king like the other nations, it was regarded as tantamount to the rejection of God (1 Sam. 8:7). But after the kingship was established through SAMUEL, the king was the symbol of God's theocratic reign. He was not a king in the usual sense of the term, but in the proper theological context he was the Lord's anointed (Ps. 2:2; 20:6) and the prince of the Lord (1 Sam. 10:1; 2 Sam. 5:2). During the period of the monarchy God is conceived as going before the king (2 Sam. 5:24). The king is seated on God's throne (1 Chr. 29:23; cf. 28:5). The real Ruler is God and the authority of the throne of DAVID is derived from him. The theocratic nature of the kingship in Israel is indicated sometimes by the prerogative of the prophet to dethrone the king (1 Sam. 15:26; 16:1 – 2; cf. 1 Ki. 11:29 – 31; 14:10; 16:1 – 2; 21:21). It is significant that there are

no stereotyped criteria by which a prophet may be usually recognized or confirmed. Only the presence of the indefinable Spirit of God reveals the difference between a true or false prophet.

A view of both Mount Ebal (right) and Mount Gerizim, where Joshua renewed the theocratic covenant between the people of Israel and Yahweh once they entered the Holy Land. (View to the E.)

The coming of the kingship in Israel is the organization of the theocratic kingdom under a human ruler. In prophetism theocracy finds perhaps its clearest expression (Jer. 1:1 – 2; cf. Isa. 7:7). The messianic visions of the prophets are organically interwoven into the course of the history of the kings of Judah and the ultimate restoration of the kingdom in the dynasty of David. The kingdom is in its essence and intent an instrument of redemption to which Israel's messianic expectations are inseparably related. In its messianic significance the throne of David stands at the center of biblical theology with its acknowledgment of God as the eventual Ruler over the whole earth. In the progressive revelation of biblical ESCHATOLOGY, the theocratic conception of the Davidic kingdom supplied the pattern of the ideas concerning the coming of the KINGDOM OF GOD. Through the restoration of the throne of David, God was to accomplish Israel's final redemption. But this event in history was to introduce the age of eternal peace and righteousness under the universal reign of the Son of David.

In the theocracy of Israel there is no room for secularism. Down to their minutest details, all political, legal, and social regulations are essentially theological. They were the direct and supreme expression of the will of God. Even the detection of criminals and their punishment are the immediate concern of God (Lev. 20:3, 5 – 6, 20; 24:12; Num. 5:12 – 13; Josh. 6:16).

A. C. SCHULTZ

theodicy. This term (from Gk. *theos G2536*, "God," and *dikēe G1472*, "judgment") means "the act of justifying God" and refers to defending both his goodness and omnipotence in the face of EVIL. (See APOLOGETICS.) The Bible confronts the problem of evil on nearly all of its pages. While it ultimately gives no rational explanation for the origins of evil, it places it utterly within God's plan and his control. And it presents the most fundamental answer to it—in Jesus Christ.

The biblical authors often raise the problem of evil in the most poignant and painful fashion. "O

LORD, are you not from everlasting?" asks HABAK-KUK (Hab. 1:12). "Your eyes are too pure to look on evil; / you cannot tolerate wrong. / Why then do you tolerate the treacherous? / Why are you silent when the wicked / swallow up those more righteous than themselves?" (v. 13). JOB likewise complains that, as an upright man, there is no reason why he should suffer so. He has a case against God, but cannot find him nor reason with him: "I have treasured the words of his mouth more than my daily bread. / But he stands alone, and who can oppose him? / He does whatever he pleases…/ That is why I am terrified before him" (Job 23:12 – 15). The Psalms are particularly honest in their confessions. When confronting the liberty of the wicked, ASAPH admits a tempting conclusion: "Surely in vain have I kept my heart pure; / in vain have I washed my hands in innocence" (Ps. 73:13). (For a summary of the role of theodicy in the ANE and Israel, see *ABD*, 6:644 – 47.)

These questions about the presence of evil are the more pointed because of the uniformly held view in the Scriptures that evil is neither an illusion nor an opposite dualistic pole from the good. Evil is real, all too real. It is always a scandal, an outrage. By definition, it is all that opposes God. We are told to "hate what is evil" (Rom. 12:9) because God himself cannot tolerate it (Ps. 5:4 – 6). Indeed, he will judge the world because of evil (Acts 17: 31; Eph. 5:6; Rev. 20:11 – 15).

While asserting that God ordains everything that comes to pass in the strongest terms, the Bible never gives us a plausible philosophical reason for the presence of evil in a universe in which God is both good and omnipotent. But it does set forth a number of affirmations that ought to dispel any anxiety we may have that evil will somehow contradict God's purposes or triumph over his good plan. It tells us, first, that there is nothing in God's being, nor in his purposes for creation, which suggest he is accountable for evil. Rather, the culpability for introducing it into the world belongs to human beings. The story of CREATION and the FALL in Gen. 1 – 3 eloquently affirms that in God's infallible judgment, all was "good" and even "very good" (1:31) when the world was made. Evil came into the visible world as a reality when the first couple disobeyed God's command and sought the knowledge of good and evil in an illicit manner (3:6 – 7). SIN is thus lawlessness and results in evil, misery, and the curse of God (1 Jn. 3:4). The whole argument of the book of Romans depends on assigning the blame for evil not on God but on mankind (Rom. 1:18 – 32).

Second, the Scriptures teach that God remains both good and omnipotent in his intentions, even in the face of evil. While his ultimate reasons for allowing evil remain closed to us, we can infer that, at the least, it brings honor to him (Ps. 76:10). It surely is connected with his designs for the human race, which include imparting special knowledge of good and evil to his image-bearers (though not illicitly). Most of all, as God governs the present fallen world he remains in complete control over evil and will use it for his good purposes. "You intended to harm me, but God intended it for good," says JOSEPH to his brothers (Gen. 50:20). Even the wicked have a function within his plan (Prov. 16:4). God hardens the hearts of evil doers (Exod. 7:14; 9:34). He sends "deceiving spirits" on various persons to accomplish his purposes (Jdg. 9:23; 1 Sam. 16:15 – 16). In the most decisive case, Jesus Christ himself was crucified by lawless men, yet also by God's "set purpose and foreknowledge" (Acts 2:23).

Furthermore, evil is "God's megaphone" (C. S. Lewis's term) to tell us that all is not well, and that we need to open our eyes (Eph. 5:13). There is mystery here. Habakkuk was content to "stand and watch" from his rampart, because "the righteous will live by his faith" (Hab. 2:1, 4). Job was never told why he had to suffer, but though he was far more just than his friends, he had seriously misrepresented God's wise purposes (Job 38 – 42). Asaph may never have received a clear answer for the present injustices, but he gained perspective on the end of evil when he walked into the sanctuary (Ps. 73:17; cf. 37:1).

Third, God has accomplished a great reversal. He has turned evil on itself and produced REDEMPTION. The CROSS means the death of death and the end of all evil. "God made him who had no sin to be sin for us, so that in him we might become the righteousness of God" (2 Cor. 5:21). The RESURRECTION OF JESUS CHRIST means the vindication of sinners (Rom. 4:25; 1 Cor. 15:17). All debts were canceled at the cross (Col. 2:14). This way, God can remain just and yet be the justifier of the ungodly (Rom. 3:26; see JUSTIFICATION). He did this because of his great love for sinners (Jn. 3:16; Eph. 2:4). And this produces the only way of hope: "In this world you will have trouble. But take heart! I have overcome the world" (Jn. 16:33; cf. Rom. 1:16; Gal. 1:4). There is no hope if evil is not real, since this would render Christ's work vain. Jesus was both sad and angry against evil and death (Jn. 11:33 – 38). When he cried out from the cross, "My God, my God, why have you forsaken me?" (Matt. 27:46), Jesus Christ was abandoned by his own Father, receiving the full measure of his wrath against the sins of the world. Anything less momentous is incapable of dealing with sin.

Fourth, the SUFFERING of believers has a special purpose. Though redemption is accomplished, and Christ will never have to pay any additional price in the purchase of redemption (Heb. 9:25 – 28), there yet remains suffering in the life of his people (Rom. 5:1 – 4; Col. 1:24; 1 Pet. 4:12). While some suffering is chastisement for sin (Acts 5:1 – 11; Heb. 12:4 – 11), often no discernible reason for suffering is at hand for the church of Jesus Christ. Believers suffer so that their faith may be refined (1 Pet. 1:6 – 7), and so that they may know Christ and the power of his resurrection (Phil. 3:10). There is always a way out of trials sent to Christians (1 Cor. 10:13), and the present sufferings "are not worth comparing" with the glory to come (Rom. 8:18). But when they are perplexed by the remaining injustices of this world, they are told to "wait a little longer" until the full roll of the martyrs has been called (Rev. 6:10 – 11). And because he suffered, Christ is able to understand and to lead his people out of every difficulty (Heb. 2:17 – 18; 4:15).

W. EDGAR

Theodotion thee'uh-doh'shuhn. See SEPTUAGINT IV.C.

Theodotus thee-od'uh-tuhs (Θεόδοτος, "gift of God"). (1) One of the three ambassadors sent by NICANOR to Judas MACCABEE to make peace (2 Macc. 14:19).

(2) A man who plotted, but failed, to assassinate PTOLEMY Philopator (3 Macc. 1:2).

theology. See BIBLICAL THEOLOGY; OLD TESTAMENT THEOLOGY; NEW TESTAMENT THEOLOGY.

theophany. This theological term (from Gk. *theos G2536*, "God," and *phainō G5743*, pass. "appear") refers to any temporary, normally visible, manifestation of God. It is to be distinguished from that permanent manifestation of God in Jesus Christ called the INCARNATION. Most of its examples must be sought in the OT, though some would include cases mentioned in the NT, such as the heavenly voice and "dove" at Jesus' baptism (Matt. 3:16 – 17), the voice at the TRANSFIGURATION (17:5) and in the PASSION week (Jn. 12:28), the visible coming of the HOLY SPIRIT (Acts 2:2 – 3), STEPHEN's vision (7:55 – 56), and PAUL's Damascus experience (9:3 – 5). Theophanies are relatively common in Genesis. This is easily explicable by the lack of written Scriptures and by the isolated position of the few faithful individuals whose lives are recorded. They are found again in the decisive events of the exodus, the conquest of Canaan, and in some of the narratives of the judges. After this they are rare except in the accounts of the prophets, especially in the visions accompanying their call.

I. The angel of the Lord. This phrase is found over fifty times in the OT (see ANGEL III). In the majority of cases "an angel of the Lord" would be the more idiomatic English, and in a few cases KJV renders thus. The apparent definiteness is often due to the nature of Hebrew grammar. There are, however, a number of cases where the term is best understood as "Jehovah present in definite time and particular place" (A. B. Davidson, *Theology of the Old Testament* [1904], 297 – 98). Sometimes, when the angel seems to be identified with God, no more may be intended than that he is speaking and acting as God's representative. In other cases this is clearly inadequate.

The most important passages are Exod. 23:20 – 23; 32:34; 33:14 – 15; Isa. 63:9. It is clear that God is promising to lead Israel; the angel of Exod. 32:34 is called in 33:14 – 15 God's "Presence" (lit., his "face"). The two terms are combined in Isa. 63:9 as "the angel of his presence," that is, the angel who not only stands in God's presence but in whom God is seen. This text can also be translated, "It was no messenger or angel but his presence that saved them" (NRSV, following the *Ketib* [lō,, "not"; cf. also LXX and Syriac], rather than the *Qere* [lô, "his"]). The same usage is followed by JACOB in Gen. 48:15 – 16, where "the Angel" is obviously in parallelism with God. Into the same category one must place a story like the coming of the three men to ABRAHAM (Gen. 18), where their leader is clearly identified with the Lord, whereas the other two are merely angels. There are no grounds for questioning the very early and traditional Christian interpretation that in these cases there is a preincarnate manifestation of the second person of the TRINITY, whether he is called "the Lord" or "the angel of the Lord."

II. The forms of theophany. In the Bible no stress is laid on the manner of the theophany; what is important is what God does and says. Normally the theophany is for the ear, the visible merely attracting and riveting the attention. This perhaps is most clearly seen in the story of the BURNING BUSH (Exod. 3:2 – 6) and of the giving of the law with all its physical manifestations (19:18 – 19; 20:18); the physical is merely secondary, and in the latter case it is stressed that no form was seen (Deut. 4:12, 15). When Moses received the supreme revelation of the character of God (Exod. 34:6 – 7), he had been promised that he would see God's "back" (33:23), but in the fulfillment, whatever physical vision may have been given him, it was of such insignificance compared with the spoken words that it remains unmentioned.

Consistent with this, no description is given of the physical aspect of the theophanies to the patriarchs. In the covenant making described in Gen. 15:17, the presence of God is purely symbolic. When the promise of Isaac was given (18:10), clearly there was nothing about the physical appearance of the three to demand attention; at the most it was calculated to cause respect. Neither in Jacob's dream at BETHEL (28:12 – 17) nor in his wrestling with God (32:22 – 30) is any description given of the one seen.

In most later theophanies the one seen appears to be purely human until his words, and sometimes acts, proclaim him to be more than man (e.g., Josh. 5:13 – 15; Jdg. 6:11 – 24; 13:6 – 7, 11 – 14, 20). Where the theophany is in the prophetic experience, there is either no vision, as with ELIJAH at Horeb (1 Ki. 19:11 – 18), or the figure of God is sensed rather than seen, as with AMOS and JEREMIAH (Amos 7:1, 4, 7; 8:1; 9:1; Jer. 1:9), or it is to a greater or lesser extent symbolic, as with ISAIAH and EZEKIEL (Isa. 6:1 – 5; Ezek. 1:26 – 28). In the visions of ZECHARIAH, the angel of the Lord seems to be a completely symbolic figure. It is striking that the vision of the risen and glorified Christ in Rev. 1:12 – 20 conforms to this symbolic pattern.

III. The importance of the theophany. The above means that the main importance of a theophany always lies in its REVELATION of God, especially in the verbal message. The physical aspects are there to magnify and authenticate the revelation, but essentially that is all. That is why even the OT has no real room for holy places. Even SINAI is never mentioned as a holy place or a site to which pilgrimages should be made. A legitimate sanctuary was to have been marked out by some form of theophany (Deut. 12:5, 11, 14, 21—passages limiting the number of legitimate sanctuaries, but not demanding only one), but in practice this was so unimportant that one is not told how SHILOH came to be chosen, and the site of the TEMPLE (Solomon's) was marked out purely by the angel's hand of destruction being stopped (2 Sam. 24:16 – 17). NATHAN's message to DAVID (2 Sam. 7:6 – 7) clearly indicated that God was not concerned with special spots for worship. Israel's maintenance of traditional holy sites showed its misunderstanding of God's revelation.

IV. The theophany today. The theophany, whether essentially visionary, partially subjective, or entirely external and objective, is always distinguishable from the normal prophetic vision or reception of the divine message. Its recipient could always affirm, "God acted and spoke in this place." Each was essentially a peak in a long range of God's acting and speaking that runs throughout Scripture, reaches its towering summit in Jesus Christ, and continues in his church to this day. Therefore, although wisely the term *theophany* is confined largely to events recorded in Scripture, there is no doubt that in the history of the church there have been outstanding events where all concerned bore testimony that God had been there and had spoken and acted. Similarly many, though not all, believers can look to an experience when they cannot deny that God was with them and had acted in and through them. Such testimonies must be received with great care, for it is in this sphere, as nowhere else, that subjective self-deception can be most active. Even so, one must be prepared to recognize that theophanies of God the Holy Spirit still occur. The difference is that they cannot be used for doctrinal and authoritative purposes. They arise from the supreme revelation in Jesus Christ and look back to it.

<div align="right">H. L. ELLISON</div>

Theophilus thee-of'uh-luhs (Θεόφιλος *G2541*, "lover [*or* friend] of God"). A man to whom the Gospel of Luke and the Acts of the Apostles were addressed (Lk. 1:3; Acts 1:1). His identity is uncertain and may only be conjectured from the literary conventions of the time and the purposes for which Luke-Acts was written. It has been suggested that LUKE wrote to a Christian audience and that a name with this meaning is a generic term for all of Luke's Christian readers. Appropriately, the book would then be addressed to any "friend of God" who wanted more detailed and accurate information concerning the origin and meaning of his faith.

On the other hand, books intended for the general public were sometimes dedicated to a friend and patron who might be able to contribute to the cost of disseminating an otherwise unknown work, or who had suggested its composition. Furthermore, in the gospel Theophilus is described as *kratiste* (vocative of *kratistos G3196*, "most excellent"), a title of conspicuous rank or office, used also of FELIX the governor of Judea (Acts 23:26; 24:3) and of FESTUS his successor (Acts 26:25). This detail points to the view that Luke had a definite person in mind, probably a respected Roman official who had been informed of Christianity and the life of Christ or possibly catechized as a convert. If Theophilus was a questioning catechumen in preparation for Christian baptism, it is understandable why Luke says that he has written his gospel "so that you may have certainty of the things you have been taught" (Lk. 1:4).

However, *kratiste* also can be used in a friendly way as a form of polite or flattering address

with no official connotation. If the use here is official, it is unlikely that Theophilus was a Christian at this time, "since there is no instance in the Christian literature of the first two centuries where a Christian uses a secular title in addressing another Christian, to say nothing of a title of this character, which may be said to correspond in a general way to 'Your Excellency'" (T. Zahn, *Introduction to the New Testament*, 3 vols. [1909], 3:42; however, see *ABD*, 6:511 – 12). In Acts this title is omitted, and one can only speculate that friendship had deepened by the time the second book was dedicated, or that Theophilus had become a Christian in the interim and the title was too honorific for a brother Christian, or that Theophilus had either given up his office or been dismissed under persecution for his Christian profession.

Theophilus is found as a proper name as early as the 3rd cent. B.C. in both the papyri and the inscriptions (MM, 288), including its early use among Jews (*The Flinders Petrie Papyri*, ed. J. P. Mahaffy and J. G. Smyly, 3 vols. [1891 – 1905], 2:28 ii 9). It may well have been a baptismal name used among Christians, since a Roman official in the 1st cent. probably would not have been known in public by such a name. If this is the case, it is the only instance of such in the Acts and may be the same as a pseudonym to conceal his real identity, due to the need for secrecy under tense conditions between church and state (W. M. Ramsay, *Saint Paul the Traveller and Roman Citizen*, 14th ed. [1920], 388). According to Eusebius and Jerome, Luke was a native of Antioch of Syria, and a Theophilus who held some high distinction at Antioch is mentioned in the Clementine Literature (*Recognitions* 10.71). This may be the person for whom Luke wrote, but the reliability of such traditions is difficult to prove.

There remains the possibility that Theophilus was a pagan and not a Christian at all. The answer to this question depends partly on the significance of *katēchēthēs* (from *katēcheō G2994*) in Lk. 1:4, which could be translated either "you have been informed" (cf. RSV) or "you have been taught" (NIV). Luke may have wanted to set forth in a general sense the reliability of the stories that had been reported to Theophilus, or it may be that Theophilus had received vague or hostile reports of Christianity as a subversive and troublesome movement, which reports Luke sets out to correct. Luke-Acts, therefore, would be an apologetic for the peaceableness of Christianity and the loyalty of its adherents to the imperial government (but see D. L. Bock, *Luke*, BECNT, 2 vols. [1994 – 96], 1:64 – 66; cf. more generally R. Garrison, *The Significance of Theophilus as Luke's Reader* [2004]). These themes occur repeatedly, especially in the Acts. See further Luke, Gospel of, VIII.

Thermeleth thuhr-mee'lith. KJV Apoc. form of Tel Melah (1 Esd. 5:36).

Thessalonians, First Epistle to the thes'uh-loh'nee-uhnz. An early letter written by the apostle Paul to the church in Thessalonica.

1. Background
2. Authorship
3. Date and place of writing
4. Destination
5. Occasion

I. Background. On his second missionary journey (c. A.D. 49) Paul and his companions, SILAS and TIMOTHY, came from PHILIPPI to Thessalonica and founded the Christian church there (cf. 1 Thess. 1:1, 5 – 8; 2:1 – 14; 3:1 – 6; Phil. 4:16; Acts 17:1 – 10; 18:5). The congregation was largely Gentile-Christian (1 Thess. 1:9; 2:14; Acts 17:4), although ARISTARCHUS, a Jewish Christian, is specifically mentioned in Acts 20:4; Col. 4:10 – 11. Luke's narrative may indicate that Paul worked in Thessalonica three to four weeks (Acts 17:2), although some scholars maintain that this period of "three Sabbath days" was a reference only to his ministry in the synagogue, and thus they predicate a longer overall ministry in the city, perhaps as much as six months.

The church grew swiftly both numerically and spiritually. In fact, so gratifying had been their progress that Paul describes them as exemplary for the saints in MACEDONIA and ACHAIA (1 Thess. 1:7 – 8). But the work of Paul and his companions had not been easy in Thessalonica. The Jews had stirred up the rabble of the city against Paul and Silas, so that they had to flee by night to BEREA (Acts 17:5 – 10). The Bereans welcomed the message and made diligent study of the Scriptures to see whether what Paul proclaimed was true. But even as the apostle was enjoying success, the Jews at Thessalonica came to Berea in order to stir up a riot against God's servants. The result was that, while Silas and Timothy were left behind in Berea to give support to the infant church, Paul himself was sent away to the coast (v. 14). Those who escorted him brought him as far as ATHENS, and Paul requested Silas and Timothy to come to him as soon as possible (v. 15).

While awaiting their arrival, Paul continued to proclaim the message of the gospel in Athens (Acts 17:16 – 34). From 1 Thess. 3:1 – 2 we learn that Timothy had left Berea and had joined Paul; and it is probable (though not certain) that Silas too had come to Athens. One thing is clear: the apostle was deeply concerned about the state of the recently founded church in Thessalonica. Twice he had made plans to revisit them, but twice Satan prevented him from realizing this desire (1 Thess. 2:17). Thus, with his concern ever intensifying, he decided to be left at Athens alone, sending Timothy (and Silas?) back to strengthen and encourage the saints at Thessalonica (3:1 – 3). When Timothy returned to Paul and reported to him concerning the Thessalonians, the apostle proceeded to write to them (3:6). It appears that by that time Paul had traveled from Athens to CORINTH, where he had begun to preach in the synagogue as he waited for Timothy (and Silas) to meet him again (Acts 18:1 – 5).

II. Authorship. Pauline authorship of 1 Thessalonians is no longer seriously contested. In the past, however, certain of the Tübingen and Dutch schools regarded the epistle as unauthentic for several reasons. (1) The letter is supposedly too untheological in content. But, it may be asked, why must all the apostle's writings have been equally doctrinal in character? Varying circumstances require varying epistolary emphasis. Actually 1 Thessalonians is far from being doctrinally insignificant; it provides much needed information on the doctrine of the last things. (2) The letter fails to attack the teaching of justification by the works of the law. But, it may be asked, was Paul a man of only one idea? It should be remembered that the situation in Thessalonica was not the same as that in GALATIA. (3) The letter is claimed by some to be too dependent upon 1 and 2 Corinthians and therefore the work of a forger. However, this argument (the letter is too Pauline) cancels out the first one (the letter

is not Pauline enough). (4) The letter is supposedly contradictory to certain information in Acts (cf. 1 Thess. 2:7 – 10 with Acts 17:2; 1 Thess. 1:9 and 2:14 with Acts 17:4; 1 Thess. 3:1 – 2 with Acts 18:5). Careful attention to these variations prove only that Luke and Paul wrote independently of each other; we need both to give the complete story.

The positive evidence for Pauline authorship may be noted. (1) The epistle presents itself as being from Paul (1 Thess. 1:1). (2) The companions mentioned were known to have accompanied Paul on his second missionary journey (1:1; 3:2; 3:6; cf. Acts 15:40; 16:1 – 3, 19; 17:4, 10, 14; 18:5). (3) The typical Pauline form is evident. Its epistolary structure is identical with Romans, 1 – 2 Corinthians, and Galatians—epistles that are ascribed to Paul even by most of those who reject the authenticity of 1 Thessalonians. (4) The vocabulary style and theological thought is clearly Pauline. (5) Finally, evidence from extrabiblical sources may be noted. ORIGEN, CLEMENT OF ALEXANDRIA, TERTULLIAN, MARCION, and IRENAEUS, all testify in one way or another to the authenticity of 1 Thessalonians.

Excavations of the *cardo* (main street) at Thessalonica.

III. Date and place of writing. It is generally agreed by scholars that 1 Thessalonians was written in the early fifties (c. 50 – 51). If this is correct, 1 Thessalonians would be the oldest preserved Pauline epistle—indeed, the oldest document in the NT—although some date Galatians earlier (see GALATIANS, EPISTLE TO THE, VI). It was written shortly after Timothy came to Athens, or in Corinth; the latter is more commonly held.

IV. Destination. Thessalonica was founded about 315 B.C. by Cassander, who named it in honor of his wife, the half-sister of ALEXANDER THE GREAT. It was the largest and most important city in Macedonia and was also the capital of the province. It was situated on the most famous of Roman military roads, the VIA EGNATIA, which connected ROME with the eastern parts of the empire. It was a seaport and a center of trade and commerce; a city ideally suited to Paul's missionary strategy.

V. Occasion. Paul received his inducement to write 1 Thessalonians from the reports which Timothy brought him from Thessalonica (Acts 18:5; 1 Thess. 3:6). Some have suggested that this first epistle was in part a reply to a letter which the church had sent to Paul. It is argued that 4:9 and 5:1 might

indicate this as a possibility, since the expression *peri de* ("now about…") is used by Paul in 1 Corinthians to denote written replies made concerning specific inquiries (cf. 1 Cor. 7:1, 25; 8:1; et al.). It must not be overlooked, however, that whereas 1 Corinthians mentions a letter, 1 Thessalonians does not. See CORINTHIANS, FIRST EPISTLE TO THE. It would seem that Paul would have clearly mentioned a previous communication if, indeed, he had received one.

VI. Purpose. Timothy's report on the Thessalonians led Paul to counsel them in respect to several matters. (1) He commended them for their steadfastness under trial and encouraged them regarding future conflicts they might experience (1 Thess. 2:14; 3:1 – 4). (2) He defended his conduct and motives against those who had been seeking to malign him (2:1 – 12). (3) He reiterated the Christian standard of holiness for those new converts who were still tempted by the prevailing immorality of the time (4:1 – 8). (4) He clarified certain features of the doctrine of Christ's return for the sake of those members of the congregation who had become concerned over the welfare of departed loved ones; Paul sought to comfort such through further instruction (4:13 – 18). (5) He rebuked those of the congregation who had become lax in tending to their daily tasks in light of what they considered to be the immediately impending return of Christ (4:11). (6) He urged his readers to respect their leaders (5:12). (7) He attempted to correct erroneous attitudes toward spiritual gifts which some apparently were endeavoring to repress (5:19 – 20). The entire epistle is essentially practical, containing a message patterned to meet the problems of that early Christian community.

VII. Special problems. The first of these problems involves the idea put forth by Adolf Harnack that the church at Thessalonica was divided into two sections meeting separately, a Jewish and Gentile church (see K. Lake and S. Lake, *An Introduction to the New Testament* [1937], 134). It is then argued that 1 Thessalonians was written to the Gentile church and 2 Thessalonians to the Jewish church.

The arguments employed to establish this view are as follows: (1) Christian Gentiles were evidently the recipients of the first epistle (cf. 1 Thess. 1:9; 2:14), whereas the second has a much stronger Jewish flavor, with language couched in OT terms. (2) It is argued that the original reading at 2 Thess. 2:13 is not *ap' archēs*, "from the beginning," but *aparchén*, "firstfruit" (cf. NRSV), and that Gentiles in Thessalonica were certainly not Paul's first converts, nor even the first converts in Macedonia; Paul's language might better be seen to apply to the Thessalonian Jews as the first converts in that city. (3) It is held that the emphasis on "all" in 1 Thess. 5:26 – 27 implies a different group in addition to the recipients of the first letter.

This evidence is far from convincing. Taking the arguments in order, it may be stated: (1) The supposed Jewish coloring is not at all impressive. There are no quotations from the OT in the second epistle, and even if there were this would in no way demand a Jewish destination. Paul cited the OT most frequently in his epistle to the Romans, but this letter was most certainly addressed to a predominantly Gentile congregation. (2) As for the argument based on a variant reading of the text, one should note that this variant is rejected by many editors; and even if it is accepted as genuine, an exclusive reference to Jewish Christians in Thessalonica hardly seems to be the most natural interpretation. (3) Finally, Paul's use of "all" in 5:26 – 27 is perfectly capable of being explained otherwise: the apostle simply desired that his greetings might embrace everyone—the loafers, the weak, and any others with whom he might have had some reason to be disappointed. Two additional and rather decisive factors militate against this theory of a divided church: (a) such a view is in strong contradiction to the Pauline doctrine of the unity of the church (cf. 1 Cor. 1:11 – 17); (b) we

have no clear historical evidence of such a divided church.

A second problem is that of coauthorship. Both epistles indicate that the senders are Paul, Silas (Silvanus), and Timothy (1 Thess. 1:1; 2 Thess. 1:1). Further, throughout the letters "we" rather than "I" is used, with only a few exceptions. Some have suggested that either Silas or Timothy was largely responsible for one or both of the epistles, with Silas usually being preferred. It would seem best however, simply to take the inclusion of the names of Silas and Timothy as a sign of courtesy toward his associates in the work of the ministry. They certainly would have endorsed what he wrote.

A third problem concerns the order of these two epistles. Some would maintain that they should be reversed. In this way many difficult problems supposedly receive a solution. The following arguments are urged in support of this thesis: (1) In 2 Thessalonians Paul speaks of the church as experiencing severe trials and difficulties whereas in 1 Thessalonians he speaks of these as past. (2) While certain difficulties within the church are mentioned in 2 Thessalonians as though the writer had just been informed of them, in 1 Thessalonians they are mentioned as though familiar to everyone, suggesting therefore a later stage. (3) The statement in 1 Thessalonians that they have no need to be instructed regarding "the times and the seasons" makes good sense if they had already received 2 Thessalonians. (4) The fact that Paul emphasizes his signature in 2 Thess. 3:17 but not at the end of the first epistle would tend to argue for a reversal of the letters. (5) Certain members of the Thessalonian church had died when the first epistle was penned; this would be more likely if we can account for a longer period. (6) It is reasonable to suppose that the shorter epistle would have been written first with the longer following as a later elaboration.

In response to these arguments, it may be noted that far from the trials of the first epistle being over, it would be better to view them as yet in the future. Paul would then be seen in this first epistle as encouraging these believers with respect to those persecutions that yet lay ahead. The expression "We hear that some among you are idle" (2 Thess. 3:11) could be easily understood as following what is stated in 1 Thessalonians. It certainly is not necessary to see 2 Thess. 2 as providing the background for the statement concerning "the times and the seasons" in the first epistle. His prior oral communications to the Thessalonians concerning the PAROUSIA would have been sufficient explanation for this statement regarding "the times and the seasons." A perfectly good explanation is given in 2 Thess. 2:2 for his autograph in that epistle. As for the argument based on the shortness of the second epistle, all that one can assert is that such reasoning is extremely unconvincing. There is no good reason why a first epistle should necessarily be shorter than a second.

Decorative stone depicting an agricultural scene from Thessalonica. Some of the Thessalonian Christians stopped working

because they believed that the second coming of Jesus was about to occur.

From a more positive perspective, there are good reasons for holding the traditional order as correct. (1) In those areas in which both epistles speak to the same issue or problem, we have an intensification as we pass from the first to the second, not the reverse. (2) In 2 Thessalonians Paul clearly indicates that another letter had preceded it (2 Thess. 2:2, 15; 3:17). If 1 Thessalonians followed 2 Thessalonians then we still need another one, now lost. It would seem most reasonable, then, in the absence of any conclusive proof to the contrary, to take 2 Thessalonians as following 1 Thessalonians. It should be noted that the first epistle does not mention any previous letter. (3) The traditional order alone fits with the manifest moods of the author. (4) The traditional order would seem to best fit the indications of spiritual development or growth in the Thessalonians (cf. 1 Thess. 1:6 and 2:13 with 2 Thess. 1:3; 1 Thess. 3:12 and 4:10 with 2 Thess. 1:3). (5) The statement "our being gathered to him" (2 Thess. 2:1) would seem to presuppose Paul's teaching on the rapture in 1 Thessalonians (1 Thess. 4:17).

VIII. Content. Having received information from Timothy concerning the state of the Thessalonian congregation, Paul writes expressing his thanks for their spiritual health as seen in their steadfastness under persecution. He vindicates his ministry among them as against the charges of his enemies. He instructs them concerning the status of their departed loved ones at the time of the rapture. He exhorts them concerning their responsibilities in light of the future day of the Lord, warning them to avoid immorality and encouraging them to pursue righteousness. This epistle centers on the doctrine of the SECOND COMING of Christ. It may be outlined as follows.

1. Introduction (1 Thess. 1:1)
2. Thanksgiving (1:2 – 10)
    1. Paul's remembrance (1:2 – 3)
    2. Evidence of election (1:4 – 10)
3. Personal defense (2:1—3:13)
    1. Message and opposition (2:1 – 2)
    2. Pure m otives (2:3 – 4)
    3. Gentle a pproach (2:5 – 9)
    4. Unblameable behavior (2:10 – 12)
    5. Results (2:13 – 16)
    6. Relationships (2:17—3:13)
4. Practical exhortation and instruction (4:1—5:22)
    1. General exhortations (4:1 – 2)
    2. Sexual purity, brotherly love, industry (4:3 – 12).
    3. Eschatological in struction (4:13—5:11)
    4. Concluding exhortations (5:12 – 22)
5. Conclusion (5:23 – 28)

IX. Theology. The Thessalonian epistles are the least dogmatic of all the Pauline letters. That which makes PAULINE THEOLOGY distinctive is largely absent from these two epistles. There is no mention of the matter of the contrasts between LAW and GRACE; the term JUSTIFICATION is not used at all; grace, a

favorite watchword of Paul, occurs only twice (2 Thess. 1:12; 12:16). This lack of extensive Pauline theological argumentation is most reasonably accounted for by the nature of the circumstances in which these epistles arose.

Certain doctrines are, however, presented. First, as respects the doctrine of God, Paul indicates that there is one true God in contrast to all pagan deities (1 Thess. 1:9). It is from this one true and living God that the gospel which they declared derived (2:2). It was to this same God they ultimately were to submit themselves for approval of their labor (2:4, 10). This God is the One who providentially directed their lives (3:11). He was the One who would perfect the Thessalonians at the coming of Christ (5:23), for he is the One who had chosen them (1:4) and was even now calling them unto his own kingdom and glory (2:12). This God is faithful to accomplish the work he had begun (5:24).

Second, as respects the doctrine of Christ, the apostle so unites the Son with the Father as to indicate clearly their essential equality (1 Thess. 1:1).

Third, the apostle teaches that it is the HOLY SPIRIT who makes the message effective in the hearts of hearers (1 Thess. 1:5). It is the Spirit who gives joy in affliction (v. 6). It is the Spirit who gives those charismatic gifts which the Thessalonians were tending to despise (5:19 – 20). God gives the Holy Spirit to all believers (1 Thess. 4:7 – 8), therefore they must be careful not to fall into uncleanness.

Fourth, the apostle mentions the great doctrine of REDEMPTION through the death of Christ only once and that in a very general way (1 Thess. 5:10), but it should be remembered that this central truth had already been fully proclaimed and accepted by the Thessalonians (2:13). Paul takes for granted their knowledge of this elsewhere in his epistle (1:10; 4:14). The great doctrine of UNION WITH CHRIST is clearly implied when he describes the Thessalonian church as being "in…the Lord Jesus Christ" (1 Thess. 1:1).

Fifth, as respects the doctrine of ESCHATOLOGY, the apostle has considerable to set forth. It is from the futuristic perspective that the "obtaining of salvation" is principally conceived in the Thessalonian epistles (1 Thess. 5:9; 2 Thess. 2:14). The definite announcement of the second coming rounds off each step in the apostolic argument. In 1 Thessalonians there is mention of the parousia in each chapter, with extensive discussion in chs. 4 and 5 (cf. 1:10; 2:19; 3:13; 4:13 – 18; 5:1 – 11, 23).

Thessalonians, Second Epistle to the. For the background to this letter see THESSALONIANS, FIRST EPISTLE TO THE.

1. Authorship
2. Date and place of writing
3. Occasion and purpose
4. Content
5. Theology

I. Authorship. An attack upon the Pauline authorship of 2 Thessalonians arose early in the 19th cent. This attack was based upon supposed internal evidence and focused in general on two lines of thought. First, it was argued that the reference to the eschatological figure of the "man of lawlessness" (2 Thess. 2:3) was derived from the *Nero redivivus* myth and thus shows the epistle to be post-Pauline, since NERO had not yet died. Further, it is claimed that the ESCHATOLOGY of 2 Thessalonians is in disagreement with that of 1 Thessalonians. In the first epistle the SECOND COMING is viewed as imminent; in the second it is preceded by certain signs. These and other arguments—such as lexical and literary differences between the two letters—have persuaded many modern scholars that 2 Thessalonians is not an authentic Pauline writing. (For a fuller summary of the debate, see *ABD*, 6:518 – 22, which also includes a brief discussion of rhetorical criticism of the letter.)

Both of the arguments mentioned above may be satisfactorily answered. As regards the figure of the man of lawlessness, it should be noted that this concept was firmly rooted in the soil of OT prophecy. As regards the supposed eschatological conflict between the two epistles, it should be noted that it is a common feature of APOCALYPTIC LITERATURE to find the ideas of suddenness and signs stated alongside each other. The second line of attack is based upon the idea that the two epistles are too much alike to have been written by the same author to the same church. A careful study of the content of each will reveal however that the similarity must not be overstated. It is reasonable to suppose that Paul would tie in that which he states in his second letter with that which he had written previously. It may be estimated that the resemblances do not extend to more than a third of the entire contents.

II. Date and place of writing. The date assigned to 2 Thessalonians is obviously dependent upon one's view of the time lapse between the first and second epistles. Some hold to only a few days, others to as much as a year, but it would seem preferable to predicate, as is generally held, that it was two or three months. This would require a date in the fall or early winter of either A.D. 50 or 51. If so, then this second epistle was also written from CORINTH. In further support of this chronology is the fact that Paul, Silas (Silvanus), and Timothy (2 Thess. 1:1) do not appear together again in the NT

narrative following Paul's departure from Corinth.

III. Occasion and purpose. Paul evidently received new information concerning the Thessalonians, perhaps from those who had delivered his first epistle. The report had both encouraging and discouraging elements in it. On the positive side he was thankful for the evidence of their spiritual growth (2 Thess. 1:3 – 4). On the negative side he was discouraged by their failure to understand properly certain eschatological matters. Specifically, it seems that some of the Thessalonian believers had fallen into the error of thinking that the DAY OF THE LORD had actually begun and that therefore the Messiah would appear very soon. In the light of this expectation some had given up their work and were living in meddlesome idleness. For this reason Paul found it necessary to write a second letter to the Thessalonians.

IV. Content. After the typical epistolary opening Paul expresses his thankfulness to God for the Thessalonians and the progress they had made in respect to faith and love. Indeed he was boastful before others over the way in which they were bearing persecutions and afflictions. Paul then reminds his readers that although they were suffering now, the wicked would yet suffer the punishment of eternal destruction and exclusion from the presence of the Lord. In sharp contrast to the wicked in that day Christ will come to be glorified in his saints and they in him.

Paul then moves into a consideration of the parousia, the day of the Lord. Because some had been misled either through oral or written communication into believing that the day of the Lord had already dawned, the apostle finds it necessary to correct their teaching. He indicates that certain things must occur before that day. First there will be an all-out organized rebellion of the powers of evil against God. Second, there will be the revealing of the man of lawlessness. His career will end in the eternal destruction both of himself and his followers, those "who have not believed the truth but have delighted in wickedness" (2:12).

The apostle then contrasts with this dreadful picture the hope of believers. Christians are to be thankful that God has appointed them unto SALVATION through the SANCTIFICATION of the Spirit and belief of the truth. This glorious prospect is to bring comfort and encouragement to the Thessalonians' continuance in every good work and deed. The letter may be outlined as follows:

1. Introduction (2 Thess. 1:1 – 2)
2. Personal (1:3 – 12)
      1. Thanksgiving (1:3 – 4)
      2. Glorification (1:4 – 10)
      3. Prayer (1:11 – 12)
3. Doctrinal (2:1 – 17)
      1. An entreaty relative to the parousia (2:1 – 2)
      2. Events preceding the parousia (2:3 – 12)
      3. Thanksgiving and exhortation (2:13 – 17)
4. Practical (3:1 – 15)
      1. Request for prayer (3:1 – 2)
      2. Prayer for the Thessalonians (3:3 – 5)
      3. Commands to the Thessalonians (3:6 – 15)
5. Conclusion (3:16 – 18)

V. Theology. God is viewed as the true Author of all grace and peace (2 Thess. 1:2; 2:16; 3:16). He is the One who chose the Thessalonian Christians unto salvation (2:13). Thus, it is of him that they must walk worthily (1:5). God is the One who strengthens the saints unto perseverance (3:3 – 4). It is before him that the highest human hopes will be consummated (2:19).

Christ is so united with the Father as to leave no doubt concerning their essential equality in true deity. It is in the Lord Jesus Christ, as well as "in God the Father," that the church's life consists (2 Thess. 1:1 – 2; cf. 2:16 – 17). The Spirit's distinctive work is that of sanctification (2:13).

The major emphasis of this epistle is eschatological, as with the first. There is a future time of judgment coming when God will settle his accounts (2 Thess. 1:5 – 10). The second chapter was written to correct the Thessalonians as regards the day of the Lord, that day on which Christ would return and his saints would be assembled to meet him (2:1). Some had fallen into the error of thinking that the day had already arrived, but Paul instructs them that certain things must occur first. Before that day commences there will be an all-out rebellion against God (2:3). As in the days of Noah many will revolt on a world-wide scale against their Creator. Then there will be the revealing of the man of lawlessness. As Christ shall be revealed in his "time," even so shall antichrist. He too is a mystery to be unfolded and made manifest. The terrible judgment that is to come upon him and all those who follow him is sharply contrasted by the glory of Christ in which all the elect shall share.

C. M. HORNE

Thessalonica thes'uh-luh-n*i*'kuh (Θεσσαλονίκη *G2553*; gentilic Θεσσαλονικεύς *G2552*, "Thessalonian"). The capital city of the Roman province of MACEDONIA. Thessalonica, modern Thessaloniki (sometimes referred to as Salonica), was strategically located on the Thermaic Gulf to the W of the three-pronged peninsula known as Chalcidice. The VIA EGNATIA passed through Thessalonica and linked it with all the important cities of Macedonia. Cicero (*Pro Plancio* 41) described it as *posita in gremio imperii nostri,* "situated in the bosom of our domain."

I. History. There are three accounts of the naming of the city. The most probable is that it was founded by Cassander c. 315 B.C. and named for his wife, the daughter of Philip II (Strabo, *Geogr.* 7 fragm. 21). Others state that the city was founded by Philip himself and that it was named either for his daughter or in honor of his victory over the Thessalians. The new city incorporated the population of a number of neighboring towns, principally Therma, Anea, Cissus, and Chalastra.

Livy (*Hist.* 44.10.45; 45.29) indicates that the city was a great Macedonian naval base, displacing Pella as the chief port of Macedonia when its harbor silted up. It surrendered to the Romans after the battle of Pydna and became the capital of the second of the four districts of Macedonia in 167 B.C. Later, Macedonia was made a single province and Thessalonica became its capital. During the civil war, it was the headquarters for POMPEY's army. In the campaign against Cassius and Brutus, it sided with Antony and Octavian and was declared a free city because of its loyalty (Plutarch, *Brutus* 46). The city enjoyed local autonomy during the period of the Roman empire and became the most prosperous of the Macedonian cities. Luke (Acts 17:6) appropriately uses the term *politarchēs G4485* for the magistrates of the city, who were either five or six in number.

Inscriptions found in the city, one on the Vardar Gate, verify this title, a unique one in the Roman empire.

Thessalonica

II. Archaeology. Remains of extensive Byzantine walls, built on earlier foundations, are still visible. The Via Egnatia ran from the SE to the NW. The two entrances to the city were spanned by the Vardar Gate to the W (destroyed in 1876) and the Arch of Galerius on the E. In the 19th cent., travelers left sketches and descriptions of many of the monuments in the city, notably the early Byzantine churches, but most of these were destroyed by a fire that swept the city in 1917.

III. Biblical importance. PAUL first visited Thessalonica after PHILIPPI on the second missionary journey. Because of its location, it was an invaluable center for the spread of the gospel. Paul was later to say, "The Lord's message rang out from you not only in Macedonia and Achaia—your faith in God has become known everywhere" (1 Thess. 1:8). He first appeared at the synagogue, and as a result some Jews and proselytes believed, including a number of prominent women (Acts 17:2–4). This prompted the Jews to stir up the Gentile population to persecute Paul and SILAS. A flourishing church was founded there during three weeks of ministry, which ended when the mob attacked the house of JASON where Paul was staying. Paul and Silas were thus forced to flee to BEREA (17:5–10). The apostle no doubt returned to the city on the third journey, though only a general ministry in Macedonia is specifically mentioned (20:1–3).

Later, while in prison at Rome, Paul entertained a hope of visiting Macedonia again (Phil. 1:25–26; 2:24). After his release, he ministered in the vicinity of Thessalonica and may well have revisited the city (1 Tim. 1:3; 2 Tim. 4:13; Tit. 3:12). A few of the converts of his ministry are mentioned by name: Jason (Acts 17:5 – 9; cf. Rom. 16:21); possibly Demas (2 Tim. 4:10); Gaius (Acts 19:29; cf.

20:4); Secundus and Aristarchus (20:4). (See further O. Tafrali, *Thessalonique des origines au XIVe siècle* [1919]; C. vom Brocke, *Thessaloniki, Stadt des Kassander und Gemeinde des Paulus: Eine frühe christliche Gemeinde in ihrer heidnischen Umwelt* [2001]; C. Breytenbach and I. Behrmann, eds., *Frühchristliches Thessaloniki* [2007].)

<div align="right">A. RUPPRECHT</div>

Theudas th*oo*'duhs (Θευδᾶς *G2554*, possibly short form of *Theodōros*, "gift of God," or a similar compound; for other possibilities, see G. H. R. Horsley's discussion of the inscriptional evidence in *NewDocs*, 4:183 – 85). Leader of a rebellion that failed, mentioned by GAMALIEL in a speech before the SANHEDRIN (Acts 5:35 – 36). Gamaliel cautions the Jewish leadership to be tolerant of the Christian apostles: he reasons that if the apostolic activity were of human origin only, it would fail of itself; but if it were of divine origin, nothing they did could stop it. The death of Theudas and the dispersion of his four hundred followers is cited as a basis for Gamaliel's thesis.

JOSEPHUS (*Ant.* 20.5.1) writes of a certain Theudas, a magician who around A.D. 44 led a great band of adherents to the Jordan, promising to divide it for an easy passage of the river, but was caught and beheaded by the soldiers of the procurator Fadus. This cannot have been the same Theudas as the insurgent mentioned in Acts, since Gamaliel's speech would have taken place in the early 30s; moreover, Gamaliel says that Theudas arose before the insurrection led by Judas the Galilean in the days of the taxing under QUIRINIUS about A.D. 6 (see JUDAS #4). This and other differences separate Luke's account from that of Josephus (full discussion in T. Zahn, *Introduction to the New Testament*, 3 vols. [1909], 3:132 – 33).

It is not necessary to impugn the historical accuracy of Acts here by assuming that Luke transposed Theudas and Judas, or that he misplaced Gamaliel's speech by moving it from a later section (Acts 12), where an angel assisted PETER's escape from prison under HEROD Agrippa (ruled A.D. 41 – 44), to the present passage, where the same thing happens at an earlier date (J. W. Swain in *ETR* 37 [1944]: 341 – 49). Nor did Luke misread Josephus, who did not publish his *Antiquities* until A.D. 93. In view of the "ten thousand other disorders" mentioned by Josephus (*Ant.* 17.10.4), there could well have been more than one insurrectionist named Theudas. (See F. F. Bruce, *The Acts of the Apostles: The Greek Text with Introduction and Commentary*, 3rd ed. [1990], 175 – 76; C. K. Barrett, *A Critical and Exegetical Commentary on the Acts of the Apostles*, ICC, 2 vols. [1994 – 98], 1:294 – 95.)

thief. See CRIMES AND PUNISHMENTS I.B.

thigh. The upper portion of either of the two lower extremities of the human body between the hip and the knee. It is supported by the largest, longest, and strongest bone of the body—the femur. It is in the form of an inverted and truncated cone. Above, the thigh is bounded by the groin in front, the perineal region medially, the fold of the buttocks behind, and the hip laterally. Below, it is delimited by the prominence of the knee in front, and by the so-called popliteal space, or ham, in back. Besides the femur, it consists of strong muscles in addition to blood vessels, lymphatics, and nerves, all of which structures are surrounded with a strong fibrous sheath like the firm bark of a tree. (Cf. H. Gray, *Anatomy of the Human Body*, 27th ed. [1959], 528 – 43; A. H. Crenshaw, *Campbell's Operative Orthopaedics*, 4th ed. [1963], 1:319 – 27.)

Dislocation of the hip joint occurs at the upper end of the femur, most commonly forward,

although backward dislocation is also recognized. Evidently the fold of the buttock (i.e., hollow of the thigh) on one side of JACOB's body was struck from behind to produce the more usual forward dislocation, if one accepts the KJV interpretation that the hip went out of joint (Gen. 32:25). This causes one to limp in a toe-out position on the affected side. Instead of the KJV's phrase, "the hollow of Jacob's thigh," the NIV reads "the socket of Jacob's hip" (Heb. *běkap-yerek ya(Āqōb*; similarly NRSV and NJPS). In this connection it should be noted that the head of the femur rides upward on the bony pelvis so that the muscles in that area become shortened. These shortened muscles could well constitute the "sinew that shrank" (v. 32 KJV for Heb. *běgîd hannāašeh*; NIV, "near the tendon"; NRSV and NJPS, "at the thigh muscle").

Another interpretation of Jacob's injury is given by A. R. Short (*The Bible and Modern Medicine* [1953], 60), who thinks that Jacob had "the modern, very fashionable, diagnosis of ruptured and prolapsed intervertebral disc producing severe and intractable sciatica from pressure on the nerve roots." From this standpoint the "sinew of the hip" (RSV) is considered to be the sciatic nerve. However, this interpretation presents the difficulty of explaining how touching the hollow of the thigh can produce disc injury to the vertebrae. Moreover, in the opinion of this writer, Short belittles unnecessarily the strength of the wrestler and the effect of his surprise move in producing a dislocation. Neither the dislocation of the hip nor the ruptured intervertebral disc exactly fits the picture of the ASV that the "thigh was strained," although the former more nearly does.

It is noteworthy that the PATRIARCHS put a hand under a thigh in connection with taking an oath (Gen. 24:2; 47:29). It was also customary to gird the sword on the thigh (Ps. 45:3), evidently because there, where the hand naturally falls, the sword is especially accessible for use in an unforeseen encounter with an enemy (Cant. 3:8). In contrast, striking one's hand against the thigh is evidently a manifestation of shame and bewilderment (Jer. 31:19; Ezek. 21:12), as though one is feeling for a sword that is not there, and suddenly realizes that he is defenseless. Finally, the thigh at the moment of the Lord's triumph will bear his glorious name, "King of kings and Lord of lords" (Rev. 19:16).

P. E. ADOLPH

Thimnathah thim'nuh-thuh. KJV alternate form of TIMNAH (only Josh. 19:43).

third day. On five different occasions when Jesus spoke of his coming death, he added that his resurrection would take place on "the third day." According to the Gospel of John, this theme was introduced at the beginning of Jesus' ministry, in Jerusalem, after driving out the money changers and the traffickers from the temple (the same or a similar event is placed in Jesus' last week by the synoptics). In answer to the angry question of what sign he would show them to justify this act, he answered, "Destroy this temple, and I will raise it again in three days" (Jn. 2:19), regarding which the apostle adds, "But the temple he had spoken of was his body" (v. 21). Later in his ministry, Jesus made the famous statement, "For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth" (Matt. 12:40; the parallel in Lk. 11:29 does not include the time reference). On three subsequent successive occasions he repeated the specific time limit (Matt. 16:21 = Mk. 8:31 = Lk. 9:22; Matt. 17:23 = Mk. 9:31; Matt. 20:19 = Mk. 10:34 = Lk. 18:33).

Jesus' statement at the cleansing of the temple must have left a deep impression upon his enemies, for two false witnesses at his trial before CAIAPHAS referred to it, although they misquoted it (Matt. 26:61=Mk. 14:58). When Jesus was on the cross, those that passed by reviled him and reminded him of the words he had spoken at that time (Matt. 27:40=Mk. 15:29). Even on Saturday,

when the chief priests and PHARISEES asked PILATE for a military guard to protect the tomb, they repeated this statement with an added insult, "we remember that while he was still alive that deceiver said, 'After three days I will rise again'" (Matt. 27:63).

The Jews were not the last ones to refer to this time period. Three times it reappears in Luke's final chapter (and not in any of the other gospel parallels). The angel reminded the women of what Jesus himself had said, that on the third day he would rise again (Lk. 24:7);the two disciples on the EMMAUS road must have had this in mind when they said to the unrecognized Jesus, "it is the third day since all this took place" (v. 21). In one of his very last appearances Jesus directed the attention of his disciples to this theme when, opening their understanding, he said to them, "This is what is written: The Christ will suffer and rise from the dead on the third day" (v. 46). Twice again does this appear in the early records of the apostolic church. PETER, in preaching in the house of CORNELIUS, affirmed that it was this Jesus whom "God raised…from the dead on the third day" (Acts 10:40). And in the great chapter on the resurrection PAUL asserts that Christ "was raised on the third day according to the Scriptures" (1 Cor. 15:4).

Paul's statement clearly declares that the OT Scriptures somehow predicted not simply that Christ would rise again, but that this resurrection would take place "on the third day." Possibly the most specific reference that Paul had in mind was the confidence of the remnant in Israel, "After two days he will revive us; / on the third day he will restore us, / that we may live in his presence" (Hos. 6:2). The great Oxford scholar, E. B. Pusey, does not exaggerate when he says, "The Resurrection of Christ and our resurrection in Him and in His Resurrection could not be more plainly foretold…The *two days* and *the third day* have nothing in history to correspond with them, except that in which they are fulfilled, when Christ, 'rising on the third day from the grave, raised with him the whole human race'" (*The Minor Prophets*, 2 vols. [1885], 1:63 – 64).

There are other passages of Scripture, however, that bear upon this subject, and in looking at them, one should remember the words of the great church historian Philip Schaff: "The biblical symbolism of numbers…is worthy of more serious attention than it has received in English theology" (editorial note in J. P. Lange, *A Commentary on the Holy Scriptures: Matthew* [1846], 183). The very first occurrence of the word in the Bible—and generally first occurrences of basic words in the Bible have great meaning—may be relevant to the subject, for it was on "the third day" that biological life first appeared (Gen. 1:9 – 13). Also in Genesis, in the story of JOSEPH, there is a release from prison on the third day (40:12 – 13); and when Joseph's brothers were released from prison after "three days," we read: "On the third day Joseph said to them, 'Do this and you will live'" (42:17 – 18). Notice how this matter of life is vital in these three-day passages. The reference to Jonah's experience in the belly of the great fish for a period of three days is well known to all Bible students, because of our Lord's reference to it (Jon. 1:17).

"Three" also is used in passages indicating separation, as when people are severed from the visible, material world about them, and from one another, by darkness. The plague of darkness in the judgments on Egypt lasted just three days (Exod. 10:22 – 23); and darkness surrounding the cross was for a period of three hours (Matt. 27:45); Paul was in the darkness of blindness for three days after his experience on the way to DAMASCUS (Acts 9:9). "Three" is also used in important passages relating to divine punishment: God punished Israel with a three-year famine (2 Sam. 21:1); the drought predicted by ELIJAH continued for three years (1 Ki. 17:1; 18:1). Separation from loved ones is often for periods involving a series of three, as Christ, when twelve years of age, was separated from Joseph and Mary for three days (Lk. 2:46). (For an early treatment of this subject, see a book published anonymously in Lynchburg, Virginia, *Triads of Scripture* [1866]; the most detailed study is

a series by W. M. Smith in the *Sunday School Times* [March 24 and 31, April 7, and July 14, 1928].)

Finally, a three-day period is closely related to the matter of the disposal of the remnants of a sacrificial animal before corruption should set in (Lev. 7:17 – 18; 19:6 – 7). This is, of course, what Peter had in mind when, in quoting the OT, he referred to God's promise that he would not let his Holy One "see decay" (Ps. 16:10). It is a strong witness to the importance of this time element as it relates to Christ's resurrection that the agnostic David Strauss should have felt compelled to devote two sections of his famous *Leben Jesu* (orig. 1835 – 36) to a desperate attempt to break down this solid evidence of Christ's foreknowledge (see *The Life of Jesus, Critically Examined*, ed. P. C. Hodgson, trans. G. Elliot [1972], 574 – 82). See also RESURRECTION OF JESUS CHRIST.

<div align="right">W. M. SMITH</div>

thirty. See NUMBER. For the group of warriors known as "the Thirty," see CHAMPION.

Thisbe this'bee (Θισβη). The place from which the Assyrians took TOBIT captive; it is said to be S of Kedesh-Naphtali in GALILEE above ASHER (Tob. 1:2; see KEDESH #1). The site has not been identified.

thistle. This English term, commonly applied to a variety of prickly plants, is used to render Hebrew *dardar H1998* (Gen. 3:18; Hos. 10:8) and ḥôah H2560 (e.g., 2 Ki. 4:19 = 2 Chr. 25:18, where however the NRSV reasonably translates "thornbush"), as well as Greek *tribolos G5560* (Matt. 7:16; Heb. 6:8). See BRAMBLE; FLORA (under *Compositae*); THORN.

The *Notobasis syriaca,* the true Syrian thistle, is one that grows 3 ft. high and is erect and branched; the leaves are smooth above, but hairy and prickly below. Thistles are, however, very common in Palestine, and Israeli agricultural experts claim that there are over 120 species found in Israel today. Some kinds grow to a height of 6 ft., like the *Onopordon arabicum* of Great Britain. The reference in Isa. 34:13 could be to another very common Palestinian thistle, *Scolymus maculatus*, the spotted golden species, which would be suitable for decorating the rundown palaces and fortresses; the leaves of this 3-ft. plant are margined white and the flowers are gold. The most common thistle of all is claimed to be *Centaurea iberica*, often called the Iberian thistle. It is probable that the Hebrew terms are used generically to cover a number of different kinds of thistles, and if so, one should undoubtedly include *Centaurea calcitrapa*, the red star thistle; *Silybum marianum,* Mary's thistle; and *Centaurea verutum*, the dwarf thistle. All of these are common weeds in Palestine.

A field of thistles.

Thomas tom'uhs (Θωμᾶς *G2605*, from Aram. תְּאוֹמָא, "twin"). One of the twelve apostles (Matt. 10:3; Mk. 3:18; Lk. 6:15; Acts 1:13). In the fourth gospel, wherever Thomas appears he is also called Didymus, which is the Greek word for "twin" (Jn. 11:16; 20:24; 21:2). It is possible that Thomas was not a personal name but an epithet. In Syriac-speaking churches he was known as Judas Thomas ("Judas the twin"), as is evidenced in several apocryphal works and in the Old Syriac version; the latter at Jn. 14:22, instead of "Judas not Iscariot," has "Thomas" (Syr^s; "Judas Thomas" in Syr^c). In fact, in the *Acts of Thomas* and in the *Book of Thomas the Contender,* "Judas Thomas" is regarded as the twin of Christ himself, a view that has been taken seriously by some scholars and is still held as fact by the Mesopotamian (E Syrian) churches. See Thomas, Acts of; Thomas, Gospel of; Thomas the Contender, Book of.

The character of Thomas exudes through the text of John's gospel. When the Lord resolved to go to Judea to heal Lazarus against the warning by the other disciples that the Jews wanted to stone him, Thomas exhibited both pessimism and intense loyalty when he said, "Let us also go, that we may die with him" (Jn. 11:16). When Jesus assumed that the disciples knew the way to the Father's house, Thomas was honest and forthright enough to confess openly his ignorance, "Lord, we don't know where you are going, so how can we know the way?" (14:5). The dull and imperfect understanding of Thomas provided Jesus an opportunity to disclose more truth about himself (14:6 – 7). For some reason, perhaps melancholic and disillusioned, Thomas was not with the other disciples when Jesus appeared to them on the evening of the resurrection (20:24 – 25a). When told that they had seen the Lord, he refused to be convinced of the reality of Jesus' resurrection unless he could see and touch the tangible evidence (20:25b). For this, "doubting Thomas" has become a byword. When such evidence was presented eight days later, he uttered the grandest expression of faith in the fourth gospel, "My Lord and my God!" (20:28).

Subsequently, Thomas had been fishing on the Sea of Galilee with six other disciples and caught nothing when Jesus appeared to them the third time after his resurrection (Jn. 21:1 – 14). Directed by the Lord to cast their net on the right side of the boat, they brought in a net full of fish, after which they had breakfast together. The last NT mention of Thomas is as a loyal follower of Jesus after the ascension, gathered in a prayer meeting with the eleven, some women, Mary the mother of Jesus, and his brethren (Acts 1:12 – 14).

There are questionable traditions concerning the postresurrection missionary activities of Thomas. According to Origen, cited by Eusebius (*Eccl. Hist.* 3.1), Thomas worked in Parthia. The *Acts of Thomas* (2nd cent.) tells how the world was partitioned by lot as a mission field by the disciples. According to this apocryphal and conflicting account, Thomas's lot was India, where he experienced many trials and martyrdom, and was buried by his converts. According to Clement of Alexandria (*Stromateis* 4), however, Thomas died a natural death, not as a martyr. His supposed remains were exhibited there as late as the 16th cent. Other adventures are narrated in the apocryphal *Preaching of St. Thomas* and the *Martyrdom of St. Thomas in India*. Present-day Christians of St. Thomas of India base their claims to spiritual descent from this missionary father largely on these documents. Another tradition states that his remains were brought to Edessa in Mesopotamia, and from there to Ortona in Italy during the Crusades. (For a history of interpretation, see G. W. Most, *Doubting Thomas* [2005].)

A. M. Ross

Thomas, Acts of. The latest of the five major apocryphal Acts, and the only one that has survived complete; it is extant in Greek and Syriac, with portions also in other languages. It is generally agreed that the Greek text is a translation from an original Syriac, but some scholars have held that it was composed in Greek, translated into Syriac, and subsequently, when the Greek original was lost, retranslated into Greek. At any rate, the extant Greek is generally recognized to be closer to the original than the present Syriac text, which has been subjected to catholicizing revision. The Greek version is accordingly given the preference, except in the case of the famous "Hymn of the Pearl," where the Syriac is believed to be closer to the original.

I. Character. A further subject of debate is the problem of the character of the work. G. Bornkamm, for example, calls it "a Christian-Gnostic variety of the Hellenistic-Oriental romance," and claims that it represents "the Gnostic Christianity of Syria in the third century" (*NTAp* [1963 – 65], 2:428, 440). Findlay, on the other hand, writes, "Gnostic tones are so little discernible that it is a misuse of words to describe the Acts as a Gnostic writing, or indeed as anything else than a product of Eastern piety of the type characteristic of the Syrian church" (A. F. Findlay, *Byways in Early Christian Literature: Studies in the Uncanonical Gospels and Acts* [1923], 278 – 79).

This conflict of opinion is partly due to differences in definition of the term *Gnostic* (see GNOSTICISM), but two other points should also be noted. (a) Findlay later (pp. 288 – 89) admits the presence of "unmistakable Gnostic expressions" in the Greek version that are "less prominent" in the Syriac. (b) On the other hand Bornkamm's case rests upon a synthesis of motifs; that a Gnostic view of redemption underlies the *Acts* "becomes immediately clear when we assemble together into a uniform picture the most important traits of the Gnostic Redeemer-myth, which are scattered over the *Acts* as a whole" (p. 429). The presence of such scattered motifs is, however, no guarantee that the book *presupposes* a full-scale developed Redeemer-myth. The motifs may be "known from Gnosticism," but some of them are shared also by "orthodox" writers and even in the *Acts* may not originally have been intended to carry a Gnostic meaning; at some points, the text allows a non-Gnostic interpretation as well as the Gnostic.

The book was popular in Gnostic circles, particularly among the MANICHEANS, but as in other cases there is a danger of imposing upon the text a later interpretation—of reading back the interpretation that the Manicheans placed upon it; for the work also enjoyed considerable favor in orthodox circles. An ascetic, world-renouncing attitude was common in early Eastern Christianity, and such traits should not always be ascribed to Gnostic influence. Therefore it is probably better to leave the Gnostic origin and character of the book an open question. It is generally agreed to have been written in SYRIA, probably in EDESSA, early in the 3rd cent., and this would locate its place of origin at least in close proximity to a Gnostic milieu.

II. Contents. In its present form, the book falls into thirteen "Acts" followed by the "Martyrdom". When the apostles divide the world into spheres for mission, Judas Thomas is appointed to India, but does not relish the prospect. Jesus forces his hand by selling him to the merchant Abban, sent by King Gundaphorus (a historical figure of the 1st cent. A.D.). On the way they attend a royal wedding in Andrapolis, where Thomas betrays his miraculous powers and is summoned to pray for the bridal pair. Jesus appears in his likeness, and wins them to the life of chastity.

Having arrived in India, Thomas was commissioned by Gundaphorus to build a palace, but he diverts the funds to poor relief. The king's wrath is averted by the sudden death and return to life of his brother, who reveals that Thomas has built a palace for him in heaven. Thomas then sets out on a journey, on which he meets and overcomes a serpent that has killed a youth; rides upon a talking colt, which later dies; expels a demon from a woman; cleanses a murderer and restores his victim to life. These first six Acts are loosely strung together, but from the seventh on, the story is more closely knit together.

A captain of King Misdaeus seeks Thomas's help, and on the road, the beasts drawing their wagon grow weary with the heat; at Thomas's bidding, wild asses tamely take their place. He heals the captain's wife and daughter, and then Mygdonia, wife of the king's kinsman Charisius, comes to see the new phenomenon and is converted. Her refusal to have further dealings with him enrages Charisius, who has Thomas imprisoned. Misdaeus sends his wife Tertia to plead with Mygdonia, but she too is converted, along with her son Vazan and his wife. Thomas is executed at the king's command, but his converts persevere in the faith despite pressure, and are eventually left in peace. Finally a demon-possessed son of Misdaeus is healed by dust from the apostle's tomb (his bones had already been carried away to the West) and Misdaeus himself is converted.

III. Special features. This brief outline shows the ascetic ideal characteristic of the book. Thomas is the typical ascetic saint: "continually he fasts and prays, and eats only bread with salt, and his drink is

water, and he wears one garment in fair weather or in foul, and takes nothing from anyone, and what he has he gives to the poor" (*Acts of Thomas* 20). This ideal is emphasized also in the numerous sermons, prayers, and hymns that are scattered throughout the book. The Christian life here presented is one of self-denial, of renunciation of the world and its pleasures. "The married state is a state of sin. Home and the love of children are excluded from the province of religion" (Findlay notices that this is a strange aberration from the teaching of Jesus). The emphasis, however, is not on asceticism alone, for stress is also laid on compassion—concern for the poor and the afflicted. This is brought out in the story of Gundaphorus's palace: good deeds insure a heavenly dwelling place. The supreme aim is the blessed life beyond; the path to it is by self-denial and almsgiving.

Another feature is the prominence given to the SACRAMENTS, chs. 156 – 58 being of special interest for their detailed description of the ritual: sealing with oil, baptism, and the Eucharist. The absence in some passages of any reference to water baptism leads Bornkamm to postulate a Gnostic sect that knew only unction as the sacrament of initiation, the references to baptism elsewhere being due to Catholic interpretations. Similarly, the Eucharist is a communion in the bread alone, with at most a cup of water; references in certain prayers to the body and blood of Christ are also later interpolations, such as are more clearly visible in the Syriac. This may, however, press the evidence too far in the Gnostic direction; the argument from silence is notoriously dangerous, and there may be other explanations for the author's failure to mention baptism where one might expect it. It is noteworthy that the Gnostic expressions recognized by Findlay occur in consecration prayers.

IV. The Hymn of the Pearl. Special mention must be made of two great hymns contained in this document, the "Wedding Hymn" (chs. 6 – 7), which at least lends itself to interpretation in terms of the Valentinian imagery of the bridal chamber, and the "Hymn of the Pearl" (chs. 108 – 13), often described as one of the most beautiful pieces of literature produced by the early church, but also presenting highly complex problems of interpretation. It tells of a prince, sent to Egypt to bring back a pearl. Fed by guile on the unclean food of Egypt, he forgets his mission and remains sunk in a sleep of lethargy until he is aroused by a letter from home that stirs him to fulfill his task. A notable feature is the description of the splendid robe that he left behind at home, and with which he is clothed on his return.

That the story is an allegory is beyond question, but who is the prince? The obvious interpretation is to take him as the symbol of the soul, and the story as an allegory of man's redemption. What then is the pearl for which he was sent? On the other hand, the pearl is often a symbol for the soul, and some scholars have found here an allegory of the Redeemer; but this view also has its problems. The hymn is not specially appropriate to its context, and may be an adaptation of a very much older poem; whether it was an original Gnostic composition remains in doubt.

V. Other links. Thomas is associated in tradition with the planting of Christianity in Edessa, where his bones were preserved. There are links between the *Acts* and the Coptic *Gospel of Thomas* (see THOMAS, GOSPEL OF), also perhaps of Syriac origin. Attempts have been made to connect the Hymn of the Pearl with Bardesanes, or at least with his school, but again there is debate. In short, the book gives rise to many problems for which no final solution is possible. Its significance lies in its presentation of the ideals of an early branch of Eastern Christianity akin to, though not necessarily influenced by, the doctrines of certain Gnostic groups. (English trans. in *NTAp*, rev. ed. [1991 – 92], 2:322 – 411; see also P.-H. Poirier, *L'Hymne de la Perle des Acts de Thomas: Introduction, text-traduction, commentaire* [1981], and A. F. J. Klijn, *The Acts of Thomas: Introduction, Text, and*

Commentary, 2nd ed. [2003].)

<div align="right">R. McL. WILSON</div>

Thomas, Apocalypse of. Long known only from its condemnation in the 6th-cent. *Decretum Gelasianum,* this *Apocalypse* is a comparatively recent discovery, first identified in 1908 and now extant in two versions. The longer one, contained in a Munich MS and in fragments in Rome and Verona, falls into two distinct parts: (1) An account of the events and signs preceding the last judgment, presenting a survey of history in the guise of prophecy as in Daniel and other apocalyptic books. Some historical references, and in particular a cryptic allusion to Arcadius and Honorius (if not an interpolation), date this section to the 5th cent. at the earliest. (2) A description of the seven signs at the end of the world, distributing the events of the end over seven days (the only apocryphal apocalypse that does so). This section is more akin to the canonical Revelation of John. There is an Old English form of this version in the 9th-cent. Anglo-Saxon MS of Vercelli.

The shorter version corresponds to the second section above and probably represents more nearly the original apocalypse, later expanded by various revisions. It is contained in another Munich MS and in a 5th-cent. Vienna MS, which is the oldest witness. If the allusion to Arcadius and Honorius is authentic (it is missing from the Anglo-Saxon), Latin was the original language of the longer version, but there are grounds for suspecting a Greek original behind the Latin texts. (English trans. of both versions in J. K. Elliott, *The Apocryphal New Testament* [1993], 645 – 51; of the shorter version in *NTAp*, 2:749 – 52.)

<div align="right">R. McL. WILSON</div>

Thomas, Gospel of. Two distinct documents are extant under this title.

I. The Infancy Gospel of Thomas. This work is important for the influence that it exerted on the later infancy gospels, many of which combine parts of it with material drawn from the *Protevangelium of James* (see APOCRYPHAL NEW TESTAMENT I.C; JAMES, PROTEVANGELIUM OF). Its popularity is attested also by its translation into several languages; it is extant in Greek, Syriac, Latin, Georgian, and other versions, and has influenced the Arabic and Armenian infancy gospels and the *Gospel of Pseudo-Matthew* (see PSEUDO-MATTHEW, GOSPEL OF). Since IRENAEUS (*Haer.* 1.20.1) alludes to the story found in ch. 6 of the *Infancy Gospel*, this work probably goes back to the 2nd cent.

The *Infancy Gospel* contains stories about the miracles wrought by the boy Jesus between the ages of five and twelve, and ends with the story of Jesus in the temple, taken from Luke. He is presented as an infant prodigy, already possessed in childhood of miraculous powers, but his use of them is not always compatible with the character depicted in the canonical Gospels. Those who thwart him incur the penalty of his displeasure, although later all are healed. As O. Cullmann notes (*NTAp*, 1:442), "All the miracles [Jesus] was later to perform are here anticipated in a particularly blatant fashion. There is, however, a great difference between these miracles and those reported in the canonical Gospels."

Numerous parallels can be cited from nonbiblical legend and from fable. A beam cut too short is miraculously lengthened to the proper size; when he breaks a pitcher, Jesus brings home water in a fold of his garment; caught breaking the Sabbath by modeling birds from clay, he claps his hands and the birds come to life and fly away, conveniently removing the evidence. Three times over he is taken in hand by a teacher, but each time he baffles his instructor. This child has no need of human wisdom, for he already possesses divine wisdom to the full. In short, the historical Jesus has disappeared; this Jesus is no longer human, but a divine being disguised in human semblance. This docetic tendency

represents a stage in Christological development with which the church could not remain content, although it is still prevalent among those who think to glorify Jesus by exalting his deity at the expense of his humanity. (English trans. in *NTAp*, 1:439 – 53.)

II. The Coptic Gospel of Thomas. This document, part of the NAG HAMMADI LIBRARY (NHC II, 2), is not a gospel in the ordinary sense of the term, but rather a collection of LOGIA, that is, sayings and parables attributed to Jesus, usually without a narrative setting. It was first made available in 1956 in a photographic edition by P. Labib; shortly after, the Coptic text was edited and published with English translation (A. Guillaumont et al., *The Gospel according to Thomas* [1959], now superseded by vol. 1 of B. Layton, *Nag Hammadi Codex* II,2 – 7 together with XIII,2*, Brit. Lib. Or. 4926(1), and P. Oxy. 1, 654, 655 [1989]).

This work has aroused considerable interest and given rise to an extensive literature. Many of the sayings it preserves have a parallel in the canonical Gospels, but in practically every case there is some modification; frequently, sayings from different Gospels, or different parts of one, are combined. This leads to one of the primary questions for research: the relation between the *Gospel of Thomas* and the Synoptics (resemblance to John is rare, although there is often a "Johannine atmosphere"). Other sayings were already known from patristic quotations, and these raise the question of the relation between Thomas and the works quoted by the church fathers. Finally, other sayings are entirely new, most of them of a more or less Gnostic character. See GNOSTICISM.

One thing is certain: all the sayings in the famous OXYRHYNCHUS SAYINGS OF JESUS (POxy 1, 654, and 655) are included in the Coptic gospel, although here again there are problems. The texts agree so closely that in many cases the Coptic can be used to restore the fragmentary Greek, but one saying in POx 1 has a parallel to its first part in Logion 30 of Thomas, whereas the parallel to the second part is in Logion 77. The Greek fragments therefore cannot be taken simply as the Greek original of the Coptic gospel. The possibility exists that they were originally separate (they belong to three different papyrus books) and only subsequently combined into the present *Gospel of Thomas*. The Coptic text again clearly has a history behind it.

The earliest studies tended to regard Thomas as independent of the synoptics, but many scholars have maintained its dependence on the NT Gospels, the variations being explained as tendentious Gnostic modification or adaptation. Not all specialists are convinced of the Gnostic character of the document, and it may be that its history is more complex than has so far been assumed. A Jewish-Christian nucleus, drawing upon oral tradition, later expanded by the inclusion of sayings from the NT Gospels, and finally enlarged and adapted by a Gnostic editor, might well present much the same phenomena; but such a hypothesis would admittedly be difficult to prove. Some sayings that might be independent seem to have tapped the tradition at a later stage than that represented by the NT Gospels.

Parallels with quotations in CLEMENT OF ALEXANDRIA from the *Gospel of the Hebrews* and the *Gospel of the Egyptians* (see separate articles) have led G. Quispel to develop the theory that these, not the canonical Gospels, were the sources of Thomas. Further research has produced parallels with such works as Tatian's DIATESSARON and the CLEMENTINE LITERATURE, and on the basis of this evidence, Quispel has developed a far-reaching hypothesis of the survival of Jewish-Christian influence in Syrian Christianity, and its effects on later theology and on the transmission of the NT text. This would make the *Gospel of Thomas* a very significant document indeed, but, attractive though the theory is, there are too many weak links for it to be considered finally established.

This document has been called "a fifth gospel," which it is not (there are many gospels beside

the canonical four); or, a possible source of the Synoptic Gospels, which again it is not; nor can one identify it in any way with the Q source that lies behind Matthew and Luke. On the other hand, although it can be understood as a Gnostic document, to stop there may be to lose valuable insights into the history of the early church.

R. McL. WILSON

Thomas, Infancy Gospel of. See THOMAS, GOSPEL OF.

Thomas the Contender, Book of. A Gnostic treatise preserved in Coptic in the NAG HAMMADI LIBRARY (NHC II, 7). This document purports to give "the secret words that the Savior spoke to Judas Thomas which I, Mathaias [Matthew?], wrote down." It begins with a dialogue between the risen Jesus and THOMAS (regarded as Jesus' twin brother); the second part, a short discourse by the Savior, consists of woes and blessings. The contents give expression to typical Gnostic emphases, such as ASCETICISM and the contrast between light and darkness. This work must have originated in Syriac-speaking Christianity (prob. some time after A.D. 200), but the Coptic translation appears to have been made from a Greek copy. (For a brief discussion of competing theories regarding its composition, see *ABD*, 6:529 – 30; English trans. in *NHL*, 199 – 207.)

Thomoi thom'oi. KJV Apoc. form of TEMAH (1 Esd. 5:32).

thorn. A woody plant that bears sharp prickles; the term is commonly applied to the prickles themselves. The English terms *thorn* and *thornbush* are used to translate a number of Hebrew words, such as *qôs H7764* (Gen. 3:18 et al.) and *šayit H8885* (Isa. 5:6 et al.). In the NT it usually renders *akantha G180* (Matt. 7:16 et al.). In some passages the reference may be to a BRAMBLE, NETTLE, THISTLE, or some unspecified WEED. (See *FFB*, 184 – 86.)

The first mention of thorns in the Bible is in Gen. 3:18, where they (along with "thistles," Heb. *dardar H1998*) were a part of the curse of the soil owing to ADAM's sin. In Isa. 34:13 we find three different terms: "thorns" (*sîrâ H6106*, possibly referring to the hooked thorn), "nettles" (*qimmôs H7853*, rendered "thorns" in Prov. 24:31), and "brambles" (□*ôa*□ *H2560*; NRSV, "thistles"; NJPS, "briers"). Distinguishing among the various Hebrew terms is difficult.

It seems that in Palestine, owing to the hot weather, there must have been numerous types of brambles and seedling briers together with thorny bushes. These would have made it extremely

difficult for travelers on foot, moving from one area to another where there were no known roads or paths. On the other hand, these spiny thickets, which must have grown extremely thick, were used by the farmers as hedges (Prov. 15:19 [*hēdeq H2537*]; cf. Job 1:10; Isa. 5:5).

There is a fair amount of conjecture in respect of Jdg. 9:14 – 15, where Hebrew *,ātād H353*, usually rendered "thornbush" or "bramble," may refer specifically to the *Lycium europaeum* (cf. *HALOT*, 1:37, which gives the rendering "buckthorn," a name applied to various species). This shrub, which grows about 8 – 9 ft. tall, bears small violet-blue flowers that are followed by little crimson berries. Well known in Palestine, it is very thorny or spiny, like the bramble. In v. 15 we read, "let fire come out of the thornbush," and some have noted that the Greek word *batos G1003*, translated "bush" in Lk. 20:37, when referring to MOSES and the BURNING BUSH, is exactly the same term translated "briers" or "bramble bush" in Lk. 6:44 (where our Lord says that people would not gather grapes from brambles). What the connection may be, if any, is unclear.

Did the lilies really grow "among thorns" (Cant. 2:16; Heb. □ôa□ H2560)? Or in this case were the lilies among the nettles, or even among some species of the perennial acanthus? The idea of the text is to give the tremendous contrast between his beautiful "love" and the other less pretty daughters. Lilies among nettles would surely be the contrast required. See also CROWN OF THORNS; FLORA (under *Rosaceae* and *Compositae*); THORN IN THE FLESH.

<div align="right">W. E. SHEWELL-COOPER</div>

thorn in the flesh. The Greek word translated "thorn" in 2 Cor. 12:7 is *skolops G5022*, which originally referred in general to a pointed object, especially a stake (cf. the derived verb *skolopizō*, "to impale"). Subsequently it came to be used of splinters and other sharp objects that might injure the body, and figuratively of anything that might cause vexation. PAUL uses the figure with reference to some irritation that troubled him. Described also as "a messenger from Satan," it was apparently a humiliating condition, for the apostle says it "was given" to him so that he might not become "conceited because of these surpassingly great revelations." Though the people of CORINTH, no doubt, knew the nature of his problem, that knowledge has been lost for nearly two millennia. Many views have been suggested, largely reflecting the trials that beset the interpreters.

Early conjectures related this passage to some unknown physical ailment that Paul refers to elsewhere (Gal. 4:13). Severe headaches, epilepsy, and ophthalmia are among the more persistent suggestions. Some ancient writers thought the reference was to times of severe persecution, while the rendering of the VULGATE, *stimulus carnis meae*, gave support to the ascetic idea of fleshly longings (Latin *stimulus*, "goad," could refer to vexation, but also to incitement). The Reformers thought of temptations to spiritual ineffectiveness. Nearly all modern commentators support the theory of physical malady. William M. Ramsay (*St. Paul the Traveller and the Roman Citizen*, 14th ed. [1920], 94 – 97) adds malaria to the leading options, while T. Y. Mullins (in *JBL* 76 [1957]: 299 – 303) presents a convincing argument from the context and from Jewish literature for the view that the "thorn" was a person, an enemy. (For an extensive discussion of the options, see M. E. Thrall, *A Critical and Exegetical Commentary on the Second Epistle to the Corinthians*, ICC, 2 vols. [1994 – 2000], 2: 806 – 18.)

<div align="right">W. T. DAYTON</div>

Thoth tot. Greek name for Djehuty (Tehuty), a lunar Egyptian deity, considered the god of knowledge, writing, and magic. Described as the one who interrogates the dead regarding their conduct in life, Thoth was worshiped throughout Egypt, but the center of his cult was in Hermopolis (cf. *DDD*, 861 –

64). See EGYPT VII.A.

thousand. See NUMBER.

Thought of Norea. See NOREA, THOUGHT OF.

Thracia thray'shee-uh (Θράκη; gentilic Θρᾷξ or Θρᾴκιος, "Thracian"). Ancient Thrace, to use the more common term, was the eastern half of the Balkan peninsula. This at least was the case in historic times, though there is evidence that the Thracian tribes were pushed back before 1300 B.C. from the Adriatic to the Axius. After 480 B.C. they lost all territory W of the Strymon to the intruding Macedonians (see MACEDONIA). Thrace was a rugged land, including the wooded mountain region of Haemus, the fertile territory of the Hebrus Valley, and the steppe country of the Dobrudja. The language was Indo-European, the social structure a conglomerate of monarchical tribes, each with a feudal aristocracy and a serf-like peasantry. The Thracians had the elements of culture—some poetry and music. They worshiped DIONYSUS, the vegetation god. For the rest, they bore a somber reputation in the civilized Hellenic world for sheer savagery, human sacrifice, barbaric tattooing, and heavy drinking.

There were Greek colonies on the southern and eastern coasts of Thrace from 700 B.C. onward, and Greeks worked the Thracian gold and silver mines of Pangaeus. Thracians fought in Greek armies as light-armed mercenaries. They found brief unity against PERSIA, which controlled them briefly at the end of the 5th cent., fell again into tribal disunity after 400, and in 342 lost their southern territories to Philip II of Macedon. The tribesmen of this area provided ALEXANDER THE GREAT with some valuable light infantry. Lysimachus controlled Thrace from 323 to 281, and the period saw some Greek penetration, succeeded by a return to dissension.

ROME did not subdue the region systematically, until M. Crassus undertook the task in 28 B.C. and L. Piso in 12 B.C. CLAUDIUS, however, half a century later, was still finding the tribes troublesome, and he divided the area to make southern and central Thrace one province, attaching the N to Moesia. Rough terrain and surviving barbarism under a hostile northern frontier combined to keep Thrace a military province. The only biblical reference is in the APOCRYPHA, which mentions in passing an unnamed Thracian soldier (2 Macc. 12:35). (See further S. Casson, *Macedonia, Thrace and Illyria* [1926]; A. H. M. Jones, *The Cities of the Eastern Roman Provinces*, 2nd ed. [1971], ch. 1; N. Theodossiev, *North-Western Thrace from the Fifth to the First Centuries BC* [2000].)

E. M. BLAIKLOCK

Thraseas thray-see'uhs (Θρασαῖος). Father of Apollonius; the latter was governor of COELOSYRIA and PHOENICIA (2 Macc. 3:5 KJV). However, the NRSV emends the text to read "Apollonius of Tarsus" (an interpretation rejected by J. A. Goldstein, *II Maccabees*, AB 41A [1983], 204).

three. See NUMBER; THIRD DAY.

Three Steles of Seth. SETH, THREE STELES OF.

Three Taverns (Τρεῖς Ταβέρναι *G5553*, from Latin *Tres Tabernae*). The name is a misleading rendering of the Latin designation of a staging post on the APPIAN WAY, 33 mi. from ROME (the Latin term *taberna* means "booth, inn, shop"). It stands at the junction of the Via Appia and the side road to Antium, near the modern town of Cisterna. It owed its importance to the fact that it was one day's journey from Rome for fast travelers proceeding S from the city to Brundisium, the port for Greece and intermediate places (Cicero, *Ad Att.* 2.12). Representatives of the Roman Christian community met Paul's party here (Acts 28:15).

E. M. BLAIKLOCK

Three Young Men (Children), Song of the. See AZARIAH, PRAYER OF.

threshing. The process of separating seed from the harvested plant (Heb. *dûš H1889*, "to tread" [cf. noun *dayiš H1912*]; *hābat H2468*, "to beat"; Gk. *aloaō G262*, "to thresh"). Threshing by treading or trampling is distinguished from beating with a rod as applied to garden plants, such as dill, cummin, and flax (Isa. 28:27 – 28). For concealment from the Midianites, GIDEON resorted to beating out wheat (Jdg. 6:11) in the winepress rather than on the THRESHING FLOOR. Implements used in threshing were sledges, forks, and shovels. Sledges (Isa. 41:15; Amos 1:3) were built of heavy wood, studded underneath with sharp stones, potsherds, or iron spikes. The cart was built with studded rollers (Isa. 28:27 – 28). Benches with backrests were built on top for drivers. Sledges were drawn by teams of oxen, donkeys, or horses, and encircled the pile of grain heaped in the center of the threshing floor. Women and men drove the teams while others with forks raked loose sheaves into the sledge path and raked away the threshed straw. The "winnowing fork" (Gk. *ptyon G4768*, Matt. 3:12; Lk. 3:17) and the shovel were also used for tossing to allow the wind to blow the chaff away. It was customary for the whole family to camp near the threshing floor at harvest and share in the work. Prophets made figurative use of threshing, at times with judicial implications (Jer. 51:33; Dan. 2:35, Mic. 4:12; Matt. 3:12). A full threshing floor was indicative of God's blessings (Joel 2:24). See AGRICULTURE V.C.

G. B. FUNDERBURK

threshing floor. A level, circular area 25 – 40 ft. in diameter, the threshing floor (Heb. *gōren H1755*; Gk. *halōn G272*) was constructed in or near the grain field, preferably on an elevated spot exposed to the wind. It was prepared by removing the loose stones (by which a grain-containing border is made),

then wetting and tamping the ground, and finally sweeping it. JOSEPH camped at a threshing floor (Gen. 50:10). DAVID built an altar on a former threshing floor, later the site of the temple (2 Sam. 24:18 – 25; 2 Chr. 3:1). RUTH visited BOAZ at his threshing floor (Ruth 3:3); and prophets used the term figuratively (Mic. 4:12; cf. Matt. 3:12; Lk. 3:17).

G. B. FUNDERBURK

threshold. The stone or wood sill of a doorway, hence the entrance (see DOOR). Foundation sacrifices buried under thresholds confirm that it was often a sacred place. References to thresholds in the OT (Heb. *miptān H5159* and *sap H6197*) are sometimes related to violent acts (Jdg. 19:27; 1 Sam. 5:4 – 5; 1 Ki. 14:17). Other passages refer to the thresholds of the TEMPLE, which were lined with gold (2 Chr. 3:7; NIV here and elsewhere, "doorframes"). Priests and Levites served as guardians of the threshold, that is, as doorkeepers (2 Ki. 22:4 et al.; apparently three in number, 25:18 [= Jer. 52:24]).

The doorposts and thresholds of the temple "shook" when ISAIAH had his vision (Isa. 6:4). It was a place where God's glory rested (Ezek. 9:3; 10:4) and where the priests worshiped (Ezek. 46:2). It figured in AMOS's vision of God (Amos 9:1). Water flowed from the threshold of the temple in EZEKIEL's vision (Ezek. 47:1). In Zeph. 1:9, "I will punish all who avoid stepping on the threshold," the reference is probably to a superstitious cultic practice (cf. 1 Sam. 5:5 – 6); others think it alludes to those who would mount up a pedestal for idols, or that it has in view rushing through the door for the purposes of plundering the temple.

F. B. HUEY, JR.

throne. The seat of a sovereign, and a symbol of authority and rule. It was a ceremonial chair (Heb. *kissē, H4058,* Aram. *korsē, H10372,* Gk. *thronos G2585*) occupied by a KING, PRIEST, JUDGE, or military leader. As a symbol of divine power and authority, it is frequently associated with God and his MESSIAH.

Mention is made of the throne of PHARAOH (Gen. 41:40; Exod. 11:5), of the king of NINEVEH (Jon. 3:6), of NEBUCHADNEZZAR (Dan. 5:20), of XERXES (Esth. 5:1 – 2), of governors (Neh. 3:7), and of priests (1 Sam. 4:13). "To sit on the throne" was synonymous with rulership or dynasty (2 Sam. 3:10; 1 Ki. 1:13). Promise of an eternal throne was made to DAVID and his descendants (1 Ki. 2:45; Ps. 89:36; Jer. 33:17), conditioned upon faithfulness (1 Ki. 8:25; 9:5; Ps. 132:12). It also could signify the beginning of a purge of another dynasty (1 Ki. 16:11; 2 Ki. 10:3). The king was to execute justice and righteousness on the throne (1 Ki. 10:9; 2 Chr. 9:8; Prov. 29:14) and was to be faithful (2 Ki. 10:30; Jer. 22:30).

The throne, as a symbol of authority, was portable. On one occasion, for example, both AHAB king of Israel and JEHOSHAPHAT king of Judah sat on their thrones at the threshing floor at the entrance of the gate of SAMARIA (1 Ki. 22:10). JEREMIAH warned that the conquering kings would place their thrones before the gates of Jerusalem (Jer. 1:15); he also foretold that NEBUCHADNEZZAR would set his throne at the entrance to Pharaoh's palace in TAHPANHES (43:10).

Ancient thrones were of opulent magnificence. The remains of a throne of rock crystal were found in the ruins of SENNACHERIB's palace. SOLOMON's throne was made of IVORY overlaid with gold, with six steps leading up to it, and with a lion on either side of each step. The back was carved with the figure of a bull's head, the symbol of strength, and two lions stood beside the arm rests (1 Ki. 10:18 – 20). The lions were probably carved figures of winged CHERUBIM. The throne room was called the "Hall of Justice" (7:7).

God as the divine king is pictured sitting on his throne surrounded by the heavenly host (1 Ki. 22:19; Ps. 11:4; Rev. 5:11). Sometimes HEAVEN is called his throne (Isa. 66:1), which is also said to be in the temple (6:1; Ezek. 43:6 – 7); and in the future JERUSALEM will be called "The Throne of the LORD" (Jer. 3:17). His throne is described in visionary language (Ezek. 1:26; Rev. 4:4 – 6). God is said to administer righteous judgment from his throne (Ps. 9:4), appointing earthly kings (Job 36:7) and overthrowing them (Hag. 2:22). His is an everlasting (Ps. 93:2; Lam. 5:19), universal (Ps. 103:19) reign.

Messianic passages suggest that one called the Branch will build the temple and sit on the throne (Zech. 6:13). The Ancient of Days will sit on his throne with priests by his side (Dan. 7:9). When the SON OF MAN returns in glory, he will take his place on his throne (Matt. 25:31; Lk. 1:32). Believers will sit on thrones and judge the twelve tribes of Israel (Matt. 19:28). On the other hand, warning is given that anyone who would exalt his throne on high with God's will be cast into SHEOL (Isa. 14:13 – 15), where kings will rise to greet the new arrivals (vv. 9 – 10).

The ascension of the king was accompanied by an enthronement festival and rite. The main elements of it can be reconstructed from the detailed accounts of Solomon's enthronement (1 Ki. 1:32 – 40) and that of JOASH (2 Ki. 11:4 – 20). The main elements were the anointing of the king, the blowing of the trumpets, a procession accompanying the new king from the holy place to the throne where obeisance was paid to him. Divine kingship was widely accepted in the ANE, but the belief was not universal. The kings of Israel were not considered divine but only God's unique instruments. (See S. H. Hooke, ed., *The Labyrinth* [1935]; A. R. Johnson, *Sacral Kingship in Ancient Israel* [1955].)

F. B. HUEY, JR.

thrush. A term applied to many species of small, plain-colored, singing birds of the family *Turdidae*. It is used by the NIV to render Hebrew ʿāgûr H6315, which occurs twice (Isa. 38:14; Jer. 8:7). See discussion under SWALLOW.

thumb. This short, thick digit constitutes the most versatile of the five fingers (Heb. *bēhen H991*). Its attachment at the wrist facilitates its rotation into a position in which its tip can directly oppose the tips of any one of the other fingers of the same hand. Experience shows that the loss of the thumb severely cripples the hand. Under modern workmen's compensation laws this loss receives a high percentage of monetary recompense. Modern surgery often endeavors to make one of the other fingers of the hand function as a thumb by making attachments that are similar to those of the thumb, frequently with a fair measure of success. It is therefore noteworthy that special prominence is given to the thumbs of AARON's sons in connection with their consecration to the priestly ministry of the tabernacle, since consecration involves the whole being, and especially those parts of the body that are most serviceable (Exod. 29:20; Lev. 8:23 – 24; cf. also 14:14 et al.).

P. E. ADOLPH

Thummim. See URIM AND THUMMIM.

thunder. The Hebrew term most often used for "thunder" is *qôl H7754*, a common word that more generally means "sound, voice." It almost always occurs with some other manifestation of storm, such as lightning (Job 28:26), hail (Exod. 9:23), and rain (1 Sam. 12:17). In several poetic passages the noun *raʿam H8308* occurs (Job 26:14 et al.; cf. also the cognate verb *raʿam H8306*, which in the qal

stem means "to roar," but in the hiphil, "to [cause] thunder," 1 Sam. 2:10 et al.). In the narrative of the giving of the law on SINAI it is very clear that the thunder is one demonstration of the divine power (Exod. 19:16; 20:18). Nowhere, however, is there any connection, as was alleged in the 19th cent., between the TETRAGRAMMATON (YHWH) and the concept of thunder. The thunder is never God; it is only a phenomenon controlled by him (1 Sam. 12:18).

In the NT, the common Greek term *brontē G1103* is used throughout exclusively. Like the thunder of the OT, that of the NT is often representative of some divine activity (e.g., Jn. 12:29). The largest number of references by far are in Revelation (Rev. 4:5 et al.). These are in all cases allusions to the scene at SINAI at the giving of the law. In Mk. 3:17, the only other occurrence of the term in the NT, it is used to describe the two disciples, James the son of Zebedee and his brother John. See BOANERGES.

W. WHITE, JR.

Thunder, Perfect Mind. An obscure philosophical treatise preserved in the NAG HAMMADI LIBRARY (NHC VI, 2). In it, a female speaker delivers a revelation, the first part of which includes these statements: "I was sent forth from [the] power, / and I have come to those who reflect upon me /…For I am the first and the last. / I am the honored one and the scorned one. / I am the whore and the holy one. /…I am the barren one / and many are her sons. /…I am the bride and the bridegroom, / and it is my husband who begot me. / I am the mother of my father / and the sister of my husband, / and he is my offspring" (*NHL*, 297). Similar paradoxical descriptions characterize most of the document, and even the title proves inscrutable. There is no clear connection between this work and other writings of antiquity, and it is impossible to determine its date, origin, or readership. (See also P.-H. Poirier and W.-P. Funk, *Le tonnerre, intellect parfait (NH VI, 2)* [1995]; *ABD*, 6:545 – 46.)

Thunder, Sons of. See BOANERGES.

Thutmose thy*oot*'mohs, thy*oot*-moh'suh (Egyptian *d☐wty-ms* or Djehutymes, "[the god] Thoth is born" or "born of Thoth"; see THOTH). Variant spellings include Thutmoses (-mosis), Tuthmosis, Thothmes. An Egyptian name popular during the New Kingdom, borne by four kings of the 18th dynasty. See EGYPT V.E.

(1) Thutmose I, the third king of the dynasty (c. 1505 – 1492 B.C.), was the son of Amenhotep I. A vigorous ruler, Thutmose I engaged in military expeditions in Nubia (see ETHIOPIA), reaching beyond the Third Cataract, and in Asia, where he crossed the EUPHRATES and set up a memorial stela. His tomb was the first to be located in the Valley of the Tombs of the Kings (Biban el-Moluk), W of THEBES. He did some building at Karnak, where one of his obelisks still stands.

(2) His son, Thutmose II, had an unimpressive reign (c. 1492 – 1479). He married his half-sister, Hatshepsut, and they had a daughter (who would eventually marry Thutmose III).

(3) Thutmose III was the son of Thutmose II by a concubine. Upon the death of his father c. 1479, the young Thutmose III was crowned, but Hatshepsut succeeded in becoming regent and "king." Thutmose III remained in a subordinate and obscure position until her death (c. 1457), serving as a priest in the temple of Amon in Karnak (see AMON #4), where an inscription purports to describe how he was divinely chosen for the kingship. His brilliant victory over an Asiatic coalition at MEGIDDO marked the first of seventeen campaigns in Palestine-Syria. Like his grandfather (Thutmose I), he crossed the Euphrates and set up a stela. In this area he also engaged in a celebrated elephant hunt. In the S he extended the boundary to Jebel Barkal (Napata), just below the Fourth Cataract.

Ancient Egyptian ax discovered in a tomb at Qourna and bearing the name of Thutmose (III).

Famous as a military strategist and capable as an administrator, Thutmose III created the Egyptian empire. He built extensively at Karnak: the Hall of the Annals, where the accounts of his expeditions were recorded; the Sixth Pylon; the Seventh Pylon; and the large Festival Hall to the E of the site of the Middle Kingdom structures. His mortuary temple, now largely destroyed, stood at the edge of the western desert. He also built at Medinet Habu and other sites in Egypt and Nubia. He died c. 1425 and was succeeded by Amenhotep II.

(4) Thutmose IV, the son of Amenhotep II, was the last of the Thutmosids (c. 1400 – 1390). His Dream Stela, located between the forelegs of the Sphinx at Giza, tells how he became king.

The name Thutmose does not appear in the Bible, but Thutmose III has sometimes been regarded as the pharaoh who was ruling at the time of the Israelite oppression. (See further W. F. Edgerton, *The Thutmosid Succession* [1933]; J. A. Wilson, *The Burden of Egypt* [1951], 166 – 205; G. Steindorff and K. C. Seele, *When Egypt Ruled the East*, 2nd ed. [1957], 34 – 46, 53 – 72; A. H. Gardiner, *Egypt of the Pharaohs* [1961], 177 – 205; B. M. Bryan, *The Reign of Thutmose IV* [1991]; D. B. Red-ford, *The Wars in Syria and Palestine of Thutmose III* [2003]; E. H. Cline and D. O'Connor, *Thutmose III: A New Biography* [2006].)

C. E. DE VRIES

Thyatira thi'uh-ti'ruh (Θυάτειρα *G2587*). A city some 20 mi. ESE of PERGAMUM, on a valley road in the alluvial plain between the Hermus and Caicus Rivers. Both in the days of Pergamum's leadership in W ASIA MINOR and later, when international politics drew ROME strongly into the great peninsula, the city derived strength and wealth from the fact that it was a nodal point of communications. The city was founded, doubtless on some Anatolian site, by SELEUCUS I, the general who, of all four successors of ALEXANDER THE GREAT, inherited the largest area. Seleucus's kingdom stretched from far beyond ANTIOCH OF SYRIA to the Hermus valley, where its frontiers pressed hard on those of Lysimachus, who held part of the old Ionian littoral of Asia Minor. Seleucus planted a demobilized group of Alexander's Macedonian veterans there to form a determined barrier against all attempts to disturb the border.

In 282 B.C., Philetaerus, ruler of the Pergamenians, rebelled, and a dynamic state, destined to endure for a century and a half, was founded. The new nation of Pergamum formed a buffer area between Seleucus and Lysimachus, but a state so founded could not but be militarily alert, and Thyatira, a guard post on the eastern road, stood in the front rank against possible aggression from the

E. The history of the place, pieced precariously together from ruins and coins, suggests that Thyatira on its wavering frontier often changed hands, as Syrian or Pergamenian power flowed or ebbed on the borderlands.

Thyatira, faced with this inevitable garrison role, had no strong acropolis like SARDIS and Pergamum. The city lay on a small hill, and it was valuable in strategy only because a confident defense force there could break the impetus of a hostile assault, while decisive defense was organized in depth behind. This duty imposed on a vulnerable city a spirited readiness to face peril and fight, without reliance on natural defenses, or on anything but personal valor. Religion reflected this duty and attitude. The Macedonian soldiers who were first settled there adopted the worship of a local patron hero, who appears on early coins as a warrior on horseback, armed with a battle axe; hence the symbolism of the risen Christ in John's apocalyptic letter.

Rome appeared in force in Asia after her defeat of the Syrian ANTIOCHUS III in 189 B.C., and the area passed permanently into Roman control when the last of the Pergamenian kings, sensing the shape of the future, bequeathed his kingdom to the rising republic in 133 B.C. With the "Roman Peace," tranquility came to Thyatira. Under CLAUDIUS, Thyatira began to issue its own coinage once more, for the first time after the lapse of two full centuries. The abundance of Thyatiran coins, continuing right into the 3rd cent., suggests a vigorous commerce. Paul's first convert in Europe was LYDIA, a Thyatiran who sold purple cloth in PHILIPPI, hundreds of miles from home (Acts 16:14). The PURPLE or crimson, which dyed the cloth that Lydia sold, was a local manufacture from the madder root, a cheap rival of Phoenician murex dye.

Commercial prosperity attracted a large Jewish minority to Thyatira, for the agricultural Jews began in exile to assume monetary and commercial interests, which were to become their enduring mark (see DIASPORA). Dyed cloth and garments, as well as bronze armor, were famous exports. A coin of Thyatira shows Hephaestus, the divine smith, hammering a helmet on an anvil, and the Greek word in the apocalyptic letter for "burnished bronze" *(chalkolibanon G5909,* Rev. 2:18, also 1:15), found only in Revelation and writings that depend on it, may have been a Thyatiran trade name, caught up for local color. Commerce, indeed, may have been the crux of the Christians' problem in the city. Inscriptions are not numerous, but they mention workers in wool, linen, leather, and bronze, potters, bakers, dyers, and slavers. Each had their guild like that of the silversmiths of EPHESUS.

Thyatira

PAUL'S first letter to CORINTH is clear indication that the trade guilds, with their demanding social life, their pagan ritual, and their periodic feasts, were to be a serious problem for the Christian member pledged by conscience to abjure the licentiousness of the world about them (see CORINTHIANS, FIRST EPISTLE TO THE). It was difficult to abstain from the guild festivities without losing one's business and social acceptance. To conform meant exposure to the licentious background and pagan ritual that marked the guild dinner.

The section of the church that dangerously sought some form of saving compromise—the NICOLAITANS of two other accompanying epistles in the Apocalypse (Rev. 2:6, 15)—seem to have been led by an able woman whom John called "Jezebel." This term was deliberately chosen, for the marriage of AHAB with JEZEBEL of TYRE (1 Ki. 16:31 et al.) was a disastrous compromise, as ELIJAH showed, a damaging arrangement doubtless to keep trade flowing between Samaria and the Phoenicians. John denounced her and pronounced a fierce commination: "So I will cast her on a bed of suffering, and I will make those who commit adultery with her suffer intensely, unless they repent of her ways" (Rev. 2:22). That *she* cannot repent she has demonstrated. A Thyatiran inscription quoted by W. M. Ramsay shows that it was not customary for respectable women to feast publicly with men *(The Letters to the Seven Churches of Asia* [1905], 353). A leading citizen is recorded to have given a religious feast. Men and women were segregated for the occasion. The verse of grim menace probably means that such looseness can only lead to ruin. Therefore let the woman's victims desert her, and leave her to the doom her willful perversion must inevitably bring.

Such heresy was to become rife in the church, as John's last letter shows. Perhaps Thyatira saw the beginnings. The exhortation concludes, "Now I say to the rest of you in Thyatira, to you who do not hold to her teaching and have not learned Satan's so-called deep secrets (I will not impose any other burden on you): Only hold on to what you have until I come" (Rev. 2:24 – 25). The promise that

Remains of the main street (*cardo*) in the city of Thyatira.

follows (vv. 26 – 27) reflects the military nature of the place. Jezebel is a striking figure of speech replete with OT significance, of compromise and apostasy for the sake of commerce and trade partnership with pagan wealth and power. (See further E. M. Blaiklock, *The Cities of the New Testament* [1965], ch. 20; E. Yamauchi, *The Archaeology of New Testament Cities in Western Asia Minor* [1980], ch. 3; C. J. Hemer, *The Letters to the Seven Churches of Asia in Their Local Setting* [1986], ch. 6.)

thyine wood. See CITRON.

Tiamat tee-ah'maht. The name of the goddess of the primordial salt water ocean, the antagonist of the hero-god in the great Babylonian national epic, ENUMA ELISH. In the Mesopotamian texts the name is written with a set of pseudoideographic signs, the phonetic element *ti* followed by the Sumerian compound *GEMEAN*, meaning in this case, "ti- (woman-mountain)" but pronounced as *ti-am(,at* in the lexical lists. Tiamat is a great ugly monster who becomes angry with her own offspring of an innumerable set of lesser gods, similar to the COSMOGONY of Hesiod. The lesser gods select a champion (in the older stories MARDUK, in the later ASSHUR), who then fights a cosmic battle with the chaotic sea. As a result the dead corpse of Tiamat is divided up and separated into the lower and upper cosmos. *Enuma Elish* states in its parallelistic fashion: "he split her like a bivalve into two parts, half of her he set above and ceiled it as sky, he set a bar, he set out watchmen, he exhorted them not to let her waters escape" (4.137 – 40). There are literary allusions to this myth in many ANE traditions. The old proposal that the Hebrew term *te□ôm H9333* in Gen. 1:2 (see DEEP, THE) derives from the name Tiamat is now generally rejected. (See D. T. Tsumura, *Creation and Destruction: A Reappraisal of the Chaoskampf Theory in the Old Testament* [2005]; *DDD*, 867 – 69.) See also MYTH II.A.

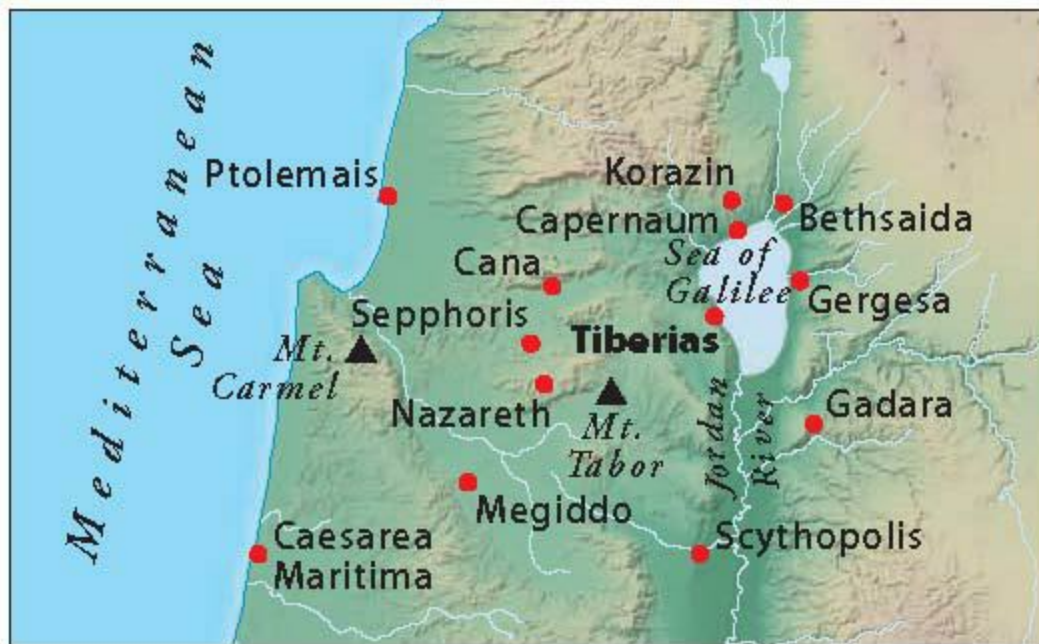
W. WHITE, JR.

Tiberias ti-bihr'ee-uhs (Τιβεριάς *G5500*). A city on the western shore of the Sea of Galilee, halfway down the coast of the lake (see GALILEE, SEA OF). Tiberias itself is mentioned only once in the NT (Jn. 6:23), but the name was extended to the lake, especially in Gentile nomenclature, and John uses it

twice in that sense (6:1; 21:1). Modern Tiberias is known in Hebrew as Tebarya (Arab. Tabariyeh).

Herod Antipas (see HEROD V) founded Tiberias between the years A.D. 18 and 22. Sir George Adam Smith rests his dating conjectures on coinage (*The Historical Geography of the Holy Land*, 25th ed. [1931], 290 n. 2). A coin of Tiberias, issued in the principate of CLAUDIUS, is dated in the thirty-third year of the town. Claudius died in 54, and this would take the foundation back to 21. Two coins of Tiberias, issued under TRAJAN, are dated in the eightieth and eighty-first year from the foundation. Trajan acceded in 98, and on this basis dating can hardly precede A.D. 18. On a third coin of Trajan, also dated in the eighty-first year, the emperor is called Germanicus only, and not Germanicus Dacicus. He won the second title only after the Dacian war in 103. This gives A.D. 22 for the upper limit. The argument appears conclusive.

Herod named the town after TIBERIUS, the reigning emperor and successor of AUGUSTUS. According to Jewish tradition, an old town of NAPHTALI named RAKKATH (which may mean "marshy bank") once occupied the site, and legend said that this place had become a graveyard before Herod appropriated it for a town and for a site of royal residence (Jos. *Ant.* 18.2.3). This may be supposed a propaganda tale aimed at the fact that Herod peopled the new town with Gentiles, but it is not at all impossible that Rakkath had a burial ground in its vicinity, and that this area was included by Herod in his appropriation for the new foundation. In any case, Rakkath is now usually identified with Khirbet el-Quneitireh, less than 3 mi. NNW of modern Tiberias.

Herod's plan was ambitious. The wall was 3 mi. long, and the civic amenities included a forum and a large SYNAGOGUE, Roman and Jewish features curiously illustrative of the dual policy of the Herodian house. The synagogue, however, appears never to have been used, for a Jewish boycott compelled Herod to populate Tiberias with aliens. Herod himself found security there. He built a lakeside palace, and the eminence behind the town was an admirable acropolis, a fact illustrated by Saladin's failure to reduce it after his complete success in the battle of Hattin made the defenders' position hopeless. This took place in A.D. 1187.


Tiberias.

Tiberias was also a famous spa. Hot springs lay S of its walls, a feature noticed by PLINY the Elder, who remarked on their health-giving quality, and commemorated it in coinage. A coin of Tiberias exists showing Hygeia, the goddess of health, on one side and the emperor Trajan on the

other; the goddess feeds a serpent, and the totem of ASCLEPIUS, god of healing, sits on a rock above a spring. In the Rift Valley, and Galilee is part of its long depression, salt beds lie deep down, the site of ancient seas. Underwater springs at Tiberias, part of the thermal system that gave the hot water, add appreciably to the salinity of the Lake of Galilee and of the DEAD SEA, the ultimate terminus of the Galilee water. This fact was an element in the abortive Jordanian measure in 1966 to divert some of the fresh water sources of the Jordan at Banias and deflect the water into the Lebanese Litani. This would have left the springs at Tiberias free to increase the salinity of Galilee to a danger point.

Christ seems to have avoided Tiberias in the course of his Galilean ministry. There were crowded Jewish centers all along that shore of the lake, especially to the N, and this abstention was in accordance with his declared program—to minister first to Israel. After the subjugation of Palestine in the Great Rebellion (see WARS, JEWISH), Tiberias remained intact and became by the irony of history the main center of surviving Jewish scholarship. The codification of the MISHNAH c. A.D. 200 and the development of the Palestinian TALMUD in subsequent centuries took place in Tiberias.

Of the nine towns that once occupied the lake shore, none of them under 15,000 inhabitants, Tiberias alone has survived in spite of the fact that in ancient and medieval times the site was unhealthy. A freak formation of the coast kept the prevailing wind that blows down the lake offshore, and the strip of land where Tiberias lay lacked the healthy movement of air. It was, no doubt, its acropolis and the prestige of the royal abode that insured survival. Tiberias remains the chief center on that shore of the lake. (For a popularized history, see H. Dudman, *Tiberias* [1988]; for archaeological information, M. Dothan, *Hammath Tiberias*, 2 vols. [1983 – 2000]; *NEAEHL*, 4:1464 – 73.)

A view looking W toward the section of Tiberias that was occupied beginning in NT times.

E. M. BLAIKLOCK

Tiberius *ti*-bihr'ee-uhs (Τιβέριος *G5501*). Tiberius Claudius Caesar Augustus, second emperor of Rome and ruler at the time of Christ's ministry (Lk. 3:1), was born in 42 B.C., the son of Tiberius Claudius Nero and Livia Drusilla. Four years later Livia, shortly to become the mother of a second son, Drusus, was divorced in order to marry Octavian, the future emperor AUGUSTUS. Augustus's lack of a direct heir, and his tragic frustrations in his search for a competent successor, are outlined by the

great historian, Tacitus (*Annals* 1.1). Tiberius, as stepson, was groomed for this role with a strange reluctance on Augustus's part, which lacks a full explanation, for he was not potentially an unworthy choice. Tiberius was a brilliant military commander, and from 12 to 6 B.C. contributed effectively to Augustus's long program of stabilizing the frontiers. On the difficult Rhine and Danube frontiers he successfully established security (*CAH* 10 [1934], 12 describes these constructive campaigns).

That Tiberius was still sole heir in Augustus's mind in 11 B.C. is shown by the fact that Augustus compelled Tiberius in that year to divorce Vipsania Agrippina, whom he loved, and marry Julia, the twice-widowed daughter of Augustus. The marriage proved unhappy, and Julia was banished for adultery in 2 B.C. Four years before that date, at the conclusion of his northern campaigns, Tiberius had suddenly retired to Rhodes. Stress with Julia, and Augustus's obvious intention at this time to train Julia's two sons, by her second husband Agrippa, as his successors, may have occasioned this act of withdrawal.

Tiberius returned to Rome in A.D. 2. Two years later, Julia's sons having died untimely deaths, Augustus was forced to recognize Tiberius as his heir. As a mark of this recognition, he was given "tribunician power," one of the devices by which Augustus maintained the fiction of republican rule. Augustus also adopted Tiberius as his son, forcing him to adopt in the same way his nephew Germanicus. On adoption Tiberius received "proconsular authority," another astute constitutional device by which Augustus retained republican form and disguised his real autocracy. Augustus died in August A.D. 14, and, in virtue of his "proconsular authority," Tiberius was able to step smoothly into his place. He was proclaimed emperor in the following month and reigned for twenty-three years (d. March, 37). The city of Tiberias in Galilee was named after him, and it was his image that would have been imprinted on the coin that Jesus used in his well-known statement about what is due to Caesar (Matt. 22:19 – 21 and parallels).
This marble head from a statue of Tiberius Caesar marked his adoption as Augustus's successor in A.D. 4, but at that time

Controversy has surrounded his principate. Following Augustus's behest to hold the empire firmly within its existing lines (Tac. *Ann*. 1:11), Tiberius abandoned the hope of thrusting the German frontier to the Elbe. He gave his attention to consolidation. This austere and cautious policy earned the wrath of the opposition, and there were still many in the senatorial class who had not accepted the coming of the veiled autocracy of the principate. Tiberius himself, soured by long years of rejection and unhappy home circumstances, exerted himself little to win popularity. He was a morose man, obsessed by fears of treachery. This accounts for the spate of trials for treason which marred his reign (*Ann*. 1.72 – 73; 4.6). It was an abuse of a facet of Roman law that was imitated toward the end of the century by DOMITIAN, an admirer of Tiberius.

Tacitus, himself a member of the senatorial aristocracy, had to endure Domitian's principate and used his mordant style to cleverly denigrate Tiberius, who in his view had shown the later emperor the way to tyranny. Sejanus, prefect of the household troops in Rome, was also to blame for some of the evils of Tiberius's generation. It is characteristic of the pathologically suspicious that they will sometimes too readily trust the untrustworthy. Sejanus plotted to replace Tiberius, but was cleverly struck down by the old emperor from his retirement on Capri.

The news of Tiberius's death was welcomed in Rome. The aristocracy hated him for the treason trials, the proletariat for his austerity and contempt for games. Modern scholarship has gone far to rehabilitate Tiberius, but admits the possibility of some mental decay in his declining years. The rumors of unbridled immorality during that time are usually given little credence by recent historians. (See further F. B. Marsh, *The Reign of Tiberius* [1931]; D. C. Braund, *Augustus to Nero: A Source on Roman History 31 BC – AD 68* [1985]; B. Levick, *Tiberius the Politician*, rev. ed. [1999]; D. Shotter, *Tiberius Caesar*, 2nd ed. [2004]; R. Seager, *Tiberius*, 2nd ed. [2005].)

E. M. BLAIKLOCK

Tibhath tib'hath. See TEBAH (PLACE).

Tibni tib'n*i* (תִּבְנִי H9321, prob. "straw-man" [cf. *HALOT*, 4:1685 – 86]). Son of Ginath and unsuccessful rival for the throne of the kingdom of Israel after the deaths of ELAH and ZIMRI (1 Ki. 16:21 – 22). Although the struggle with Omri apparently lasted four years (see OMRI I), ending only with Tibni's death, the biblical narrative is largely silent about this period, prompting much speculation among modern scholars (cf. the brief discussion in *ABD*, 6:550 – 51).

Tidal t*i*'duhl (תִּדְעָל H9331, prob. from Hittite *Tudhalia*). King of GOIIM and ally of KEDOR-LAOMER king of ELAM, who with three other rulers led a punitive expedition against SODOM and other cities (Gen. 14:1, 9). Some scholars render the text, "Tidal king of nations," implying either that he ruled a confederacy of city-states or that he bore an honorific title corresponding to the expression common in Akkadian annals, "King of the Four Corners of the Earth." Others identify Goiim with Gutium in Mesopotamia, while still others appeal to the term *ga)um* (used in MARI texts) and suggest that Tidal ruled a nomadic tribe with no fixed boundaries. It is generally thought that Tidal corresponds to Tudhalia (Tudkhaliyas), the name of several HITTITE rulers, but other proposals have been made (cf. *ABD*, 6:551 – 52). Tidal's identification remains uncertain. See also ARIOCH #1.

C. F. PFEIFFER

Tiglath-Pileser tig'lath-pilee'zuhr (תִּגְלַת פִּלְאֶסֶר [פִּלֶסֶר in 2 Ki. 16:7] *H9325* and תִּלְגַת פִּלְנְאֶסֶר *H9433*, from Akk. *Tukulti-apil-esarra,* "My trust [*or* help] is in the son of Esharra" [Esharra being the name of the temple of the god ASSHUR]). Also Tilgath-pilneser. The name of three kings of A ASSYRIA. Tiglath-Pileser I (1115 – 1077 B.C.) was an important ruler responsible for many military victories and building projects. Tiglath-Pileser II (967 – 935) receives mention in some documents, but almost nothing is known about him. The rest of this article deals with Tiglath-Pileser III (745 – 727), the only king of this name that is mentioned in the Bible.

I. Sources. The principal events of each year of Tiglath-Pileser III's reign are listed in the Assyrian Eponym Canon; additional details are found in the annals written on tablets and bas-reliefs found at Nimrud (CALAH). ESARHADDON reused some of the sculptured slabs in his palace erected in 670/669 B.C., and thus the order of some events remains uncertain.

II. Babylonian policy. Tiglath-Pileser, who succeeded Adad-nirari III, was no usurper as once supposed. Assyria was in a desperate plight and needed the intelligent and vigorous leadership he was to give. His first move was to Babylonia to relieve the pressure of the Aramean tribes on Babylon itself. The tribal lands of Puqudu (PEKOD, Jer. 50:21) were cleared and added to the extended province of Arrapha, which now controlled the area E of the TIGRIS River. The army marched as far S as the River Uknu (Karun), leaving the native king Nabunasir in authority over BABYLON and to the W of the Tigris. His pro-Assyrian policy held until his death in 734, and thus enabled the Assyrian forces to concentrate on other fronts. In 732 Ukin-zēr, sheikh of the Amukani, ousted Nabunasir's heir, Nabu-nadinzēr, and seized the throne in Babylon.

Tiglath-Pileser set out to win over some of the tribes and succeeded in gaining the submission of Marduk-apla-iddin (MERODACH-BALADAN of Isa. 39:1) to save his lands. The army marched down the E bank of the Tigris to besiege the Amukani, Shilani, and Sa,alli in their capital Sapia in the southern marshes. Their villages were razed and Assyrian officials appointed to control them. Tiglath-Pileser himself adopted the title of "king of Babylonia" by "taking the hands of Bēl [MARDUK]" in a ceremony in 729 B.C., the first Assyrian to do so for almost five centuries. In the Babylonian Chronicle, Tiglath-Pileser is referred to as PUL (cf. also 2 Ki. 15:19; 1 Chr. 5:26), perhaps his personal as opposed to throne name.

III. The north. Dispatches from his generals in this sector showed that Tiglath-Pileser realized that his main opponent was Sarduri of Urartu (see ARMENIA). To isolate him from the southern hillsmen he therefore struck against the petty kings in the Zagros Mountains and made them his vassals, enforcing regular payment by periodic raids (744, 739, and 737 B.C.). One distant expedition took him as far as Demavend, and in 735 he unsuccessfully besieged Tushpa, the capital of Sarduri on Lake Van.

IV. The west. In the W, the Assyrians gained much booty, mainly from a series of campaigns originally aimed at the Neo-Hittite allies. When Sarduri came to the rescue of Mati-ilu of Arpad (at Samsat on the Euphrates) the Assyrians captured more than 73,000 prisoners. To punish Arpad it was besieged for three years and then incorporated into the provincial system in 741. In the previous year, the opponent had been Azriau of Yaudi and his N Syrian allies. While this Azriau might be the king of a small Syrian city-state (Sam,al), there is growing evidence that he may well be Azariah (UZZIAH) of Judah, who at this time had an influence over a wide area (cf. H. Tadmor in *Studies in the Bible*, ed.

C. Rabin [1961], 232 – 71). Captive "Judeans" are named in the annals as settled in Ullubu (Bitlis), and this would be in accord with a policy of transportation of prisoners and captured peoples to control the regions in which they were settled as aliens. Tiglath-Pileser was only following a practice first adopted on a grand scale by his predecessor and namesake Tiglath-Pileser I (1115 – 1077) when he had invaded PHOENICIA. The Assyrians overran Bit-Adini (BETH EDEN) and made it part of the province of Unqi.

The effect of these actions was that many kings brought in tribute, among them MENAHEM (*Menuhimme*) of SAMARIA, whose payment of 1,000 talents of silver, at 50 shekels per Israelite (2 Ki. 15:19 – 20), represented their value as slaves at the current price. HIRAM of TYRE and REZIN (Rahianni) of DAMASCUS also submitted, but the Assyrians' hold over them was weak. Egypt, doubtless feeling the economic loss of trade with Syria and especially of the timber trade through TYRE and SIDON, now dominated and taxed by local Assyrian officials, stirred up revolt. ASHKELON and GAZA organized an anti-Assyrian league and found support in TRANSJORDAN and EDOM.

In 734 Tiglath-Pileser made a swift march down the coast to Gaza, whose King Hanunu fled to Egypt. He sacked the area and set up a golden statue of his royal self as a mark of victory, but did not press beyond the border with Egypt at Nahal-Musur (Wadi of Egypt). This advance took Tiglath-Pileser through the territory of Damascus (called "the land of Hazael"), Galilee, and Israel ("the land of the House of Omri"), which were now counted as part of Assyria. He placed PEKAH (*Paqah*) on the throne instead of HOSHEA (*Ausi,*) and may well have instigated the murder of the former (2 Ki. 15:30). AHAZ of Judah seems to have stood by his treaty with Assyria (2 Chr. 28:21) despite the siege of Jerusalem by anti-Assyrian forces (2 Ki. 16:5 – 6). Damascus fell in 733 and Israel was again punished for her opposition.
A village by the Tigris River in N Mesopotamia.

V. Administration. This reign was marked by an extension of the provincial system and appointment of Assyrian officials in all captured cities to collect tribute and act as intelligence officers (*qurbutu*) for the Assyrian court. They were backed by a reorganized Assyrian army, largely composed of levies and therefore more mobile at all seasons than the native drafts. Mass deportations broke any incipient "nationalism" in outlying provinces and provided a supply of labor which in one year amounted to no less than 154,000 persons. While his rule was harsh, it led to a stable and efficient

administration.

(See further R. D. Barnett and M. Falkner, *The Sculptures of Aššur-nasir-apli II, 883 – 859 B.C., Tiglath-pileser III, 745 – 727 B.C., Esarhaddon, 681 – 669 B.C., from the Central and South-West Palaces at Nimrud* [1962]; A. K. Grayson in *CAH*, 3/2, 2nd ed. [1991], 71 – 85; H. Tadmor, *The Inscriptions of Tiglath-Pileser III, King of Assyria: Critical Edition, with Introductions, Translations and Commentary* [1994].)

D. J. WISEMAN

Tigris ti'gris חִדֶּקֶל *H2538,* from Akk. *Idiqlat* [cf. Lat. *Diglitus* in Pliny the Elder, *Nat. Hist.* 6.127]; in Old Pers. the name took the form *Tigrā,* hence Gk. Τίγρης). The eastern river of ancient Iraq, which together with the EUPHRATES formed the alluvial plain of MESOPOTAMIA, "[Land] between Rivers." The Trigris is one of the rivers listed to describe the boundaries of Eden (Gen. 2:14; see EDEN, GARDEN OF); and it was while "standing on the bank of the great river, the Tigris," that DANIEL received an important vision (Dan. 10:4).

The Tigris arises in the Zagros mountains of W Kurdistan and flows with many tributaries, such as the Greater and Lesser Zab and the Diyala, from NW to SE some 700 mi. until it empties into the Persian Gulf. It was for centuries the easternmost boundary of the Sumerian peoples and the meeting place of Elamite, Indo-European, and Sumerian (see ELAM; SUMER). The snows of the Zagros melt and flow S causing the Tigris to reach full flood stage in May and June. The mysterious "protoeuphratean" peoples, whose character is only vaguely known, apparently named the stream.

The overall length of the Tigris, nearly 1,200 mi. in all, was dotted in antiquity by the towns of many lost civilizations. In the far N lived the Urartu (who lent their name to Mount ARARAT), the CIMMERIANS, and centuries later the Guti. In the foothills of the Zagros are the remains of such ancient pre-Neolithic sites as Sanidar and Tepe Gawra, while the Sumerians built Eshunna, Lagash, and the towns that once flourished at the sites of Samarra and Khafajeh. The S became dominated after the end of the 3rd millennium by the Semitic Akkadians and their rulers of Sumer and Agade.

In the northern reaches the Assyrian empire arose. Their capital cities of NINEVEH, ASSHUR, and Nimrud (CALAH) are located on its banks. The plain between the northern reaches of the Tigris and Euphrates, settled by the Arameans, is sometimes called in the Bible ARAM NAHARAIM (Gen. 24:10 et al.), "Aram by the Twin Rivers," a name used in later times for other parts of the Iraqi watershed. The ancient alterations of the course of the Tigris are as yet imperfectly understood. It is known that in recorded history these rivers changed channels more than once, often causing once verdant marshes and grass lands to become parched deserts.

The long caravan route from N India that crossed over to the Syro-Palestinian coast followed the course of the Tigris for hundreds of miles, finally veering off toward the Euphrates at Nineveh, a reason for that city's great wealth and power. The difficulty of the terrain, the harshness of the climate, and the capricious nature of the water supply, demanded close-knit and elaborate social systems for people to survive and for townships to flourish on the banks of the Tigris. Perhaps this inhospitable topography more than any other factor encouraged the rise of Mesopotamian civilization. (For bibliography see EUPHRATES.)

The Tigris River.

W. WHITE, JR.

Tikvah tik'vuh (תִּקְוָה *H9537,* "hope"; also תִּקְהַת *H9534* [2 Chr. 34:22, *Ketib* תּוֹקְהַת]). (1) Son of HARHAS and father of SHALLUM, who was keeper of the royal wardrobe; the latter was married to HHULDAH the prophetess (2 Ki. 22:14). In the parallel passage he is called "Tokhath son of Hasrah" (2 Chr. 34:22; KJV, "Tikvath"). The name Tokhath may be a variant form or a copying error, but some believe it was the original (non-Semitic) name of this person, and that it was altered to Tiqvah to make it meaningful in Hebrew (cf. *HALOT,* 4:1707).

(2) Father of JAHZEIAH (Ezra 10:15; 1 Esd. 9:14 [KJV, "Theocanus"]).

Tikvath. See TIKVAH.

tile. A slab or a tablet of baked CLAY. Such tablets were used for writing in the CUNEIFORM syllabary before 3000 B.C. (see CLAY TABLET). While the clay was soft, impressions were made with a stylus. Then the clay tablet was placed in the sun to bake, or baked in an oven. Tiles were common roofing material through much of the ancient world, but houses in Palestine were usually roofed with a mixture of clay and straw. Roofing tiles are mentioned in Lk. 5:19 (Gk. *keramos* G3041). Some argue that Luke's language here (contrast Mk. 2:4) is only a case of "cultural translation" to make the narrative more meaningful for his Gentile readers. If the house was Palestinian, however, the reference is probably to the clay on the roof (cf. the use of *keramos* in the LXX at 2 Sam. 17:28); moreover, Greek and Roman aliens may have used tiles for their houses in Palestine.

Tilgath-pilneser. See TIGLATH-PILESER.

Tilon t*i*'luhn (תִּילוֹן *H9400,* meaning unknown). Son of Shimon and descendant of JUDAH (1 Chr. 4:20).

Timaeus t*i*-mee'uhs (Τιμαῖος *G5505).* See BARTIMAEUS.

timbrel. See MUSIC, MUSICAL INSTRUMENTS IV.B.

time. See CALENDAR; ETERNITY III.

Timna tim'nuh (תִּמְנָה *H9465* [also תִּמְנִי], perhaps "protected" or "invincible" [see *HALOT,* 4:1755]). (1) Concubine of ELIPHAZ son of ESAU; mother of AMALEK (Gen. 36:12; in 1 Chr. 1:36 MT, Timna appears to be listed as a son of Eliphaz, but the NIV follows CODEX VATICANUS in rendering "by Timna, Amalek"). She is probably the same person identified as sister of LOTAN, thus a daughter of SEIR the HORITE (Gen. 36:22; 1 Chr. 1:39). Calling attention to Timna's status as a CONCUBINE may have been a way of indicating that the Amalekites were not pure descendants of Esau.

(2) Descendant of Esau, listed among the clan chiefs of EDOM (Gen. 36:40; 1 Chr. 1:51). The KJV spells his name "Timnah" probably to distinguish it from #1 above. Some argue that the names in this list are topographical rather than personal. There is today a region called Timna c. 20 mi. N of the Gulf of AQABAH, but its connection with the biblical name is uncertain.

Timnah tim'nuh (תִּמְנָה *H9463,* possibly "portion, territory"; gentilic תִּמְנִי *H9464,* "Timnite"). KJV also Timnath (Gen. 38:12 – 14; Jdg. 14:1 – 2, 5) and Thimnathah (Josh. 19:43, misinterpreting the Hebrew locative form). (1) A town of uncertain location, noted as the place where JUDAH was headed when he had his encounter with TAMAR (Gen. 38:12 – 14). It should perhaps be identified with either #2 or #3 below, though some argue it is the same as Khirbet et-Tabbaneh in the SHEPHELAH, c. 13 mi. WSW of JERUSALEM (*SacBr,* 115c).

(2) A town located between BETH SHEMESH and EKRON, mentioned in the description of the tribal boundaries of JUDAH (Josh. 15:10), but allotted to the tribe of DAN (19:43, where it is possibly referred to as "Timnah of Ekron"; see Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 312). The Danites were unable to take full possession of Timnah and other towns in this territory (19:47). Timnah was controlled by the PHILISTINES in the time of SAMSON (Jdg. 14:1 – 2, 5; cf. "Timnite" in 15:6). The region was evidently conquered by Judah at some later point, and during the reign of AHAZ Timnah was one of the towns recaptured and occupied by the Philistines (2 Chr. 28:18). It is generally identified with modern Tell el-Batashi, c. 3 mi. E of Ekron. (See *NEAEHL,* 1:152 – 58.)

(3) A town in the hill country of the tribe of Judah (Josh. 15:57). It was in the same district as MAON and other towns S of HEBRON, but the precise location is unknown.

Timnath tim'nath. (1) One of the towns in JUDEA that BACCHIDES fortified (1 Macc. 9:50). Its location is uncertain, but it should perhaps be identified with either TIMNAH #2 or, more likely, TIMNATH HERES. See also discussion under PIRATHON.

(2) KJV alternate form of TIMNAH.

Timnath Heres, Timnath Serah tim'nath-hee'riz, tim'nath-sihr'uh (תִּמְנַת־חֶרֶס *H9466* [Jdg. 2:9], possibly "portion [*i.e.*, region] of the sun"; תִּמְנַת־סֶרַח *H9467* [Josh. 19:50; 24:30], perhaps "overhanging region" or "leftover portion"). Also Timnath-heres, Timnath-serah. A place in the hill country of Ephraim (see EPHRAIM, HILL COUNTRY OF) given to JOSHUA as his personal inheritance: "he built up the town and settled there" (Josh. 19:50). When he died, he was buried in this city, which is described as being N of GAASH (Josh. 24:30; Jdg. 2:9). Most scholars identify it with modern Khirbet Tibnah, on the W slopes of the hill country, some 18 mi. NW of JERUSALEM and 14 mi. SW of SHECHEM.

The book of Joshua uses the form *Serah* whereas Judges has *Heres*. During biblical times, when the Hebrew text was not yet vocalized, the difference between these two forms would have appeared to be a simple metathesis or transposition of the first and last consonants (*hrs* vs. *srh*). It is uncertain, however, whether this difference should be attributed to a variance in pronunciation, to a copying error, to an intentional change, or to a combination of these factors. Many scholars believe that Timnath Heres was the town's original name and that because it alluded (or could be misunderstood to allude) to pagan SUN WORSHIP, it was changed to Timnath Serah. The meaning of the latter term is quite uncertain and has given rise to speculation. Some suggest that it reflects the rough and steep terrain ("overhang," but there is no evidence that Heb. *serah H6245*, found only in Exod. 26:12, could be used in this way); others think that it derives from the notion that Joshua was given what was "left over" after the tribes had received their respective allotments (but the text of Josh. 19:49 – 50 does not use that language).

Timnite tim'n*i*t. See TIMNAH.

Timon t*i*'muhn (Τίμων *G5511*, "precious, valuable"). One of the seven men appointed by the early church to serve tables and thereby relieve the apostles for other duties (Acts 6:5). According to a late tradition, Timon had been among the SEVENTY DISCIPLES (Lk. 10:1 KJV) and subsequently became a bishop in ARABIA. See also DEACON III; STEPHEN II.

Timotheus ti-moh'thee-uhs. See TIMOTHY.

Timothy tim'oh-thee (Τιμόθεος *G5510*, "God's precious one" or "God-honoring"). KJV usually Timotheus (but Timothy in the Pastorals and in 2 Cor. 1:1; Phlm. 1; Heb. 13:23; this variation by the KJV has no basis in the Greek text and the reason for it is unclear).

(1) An early Christian who became one of the most constant companions of the apostle PAUL . The first reference to Timothy is in connection with the beginning of Paul's second missionary journey when he revisited DERBE and LYSTRA in LYCAONIA (Acts 16:1 – 3; see S. J. D. Cohen in *JBL* 105 [1986]: 251 – 68; C. Bryan in *JBL* 107 [1988]: 292 – 94). It seems probable that Paul had met Timothy earlier during his visit to this area on his first missionary journey (ch. 14). This young man made a good impression upon Paul and had a good reputation in Lystra and Iconium (16:2), a comment that suggests he was a resident of Lystra rather than Derbe. Later Paul seems to indicate that certain prophetic utterances confirmed Timothy's appointment (1 Tim. 1:18; cf. 4:14). Concerning his parentage it is recorded that his father was a Greek and his mother a devout Jewish Christian (Acts

16:1). His mother's name was EUNICE, and his grandmother was LOIS (2 Tim. 1:5); probably both of them were faithful in instructing Timothy according to the OT Scriptures (cf. 2 Tim. 3:14 – 15 and note the pl. *tinōn* according to the better MSS).

Timothy's mixed parentage motivated Paul to have him circumcised (Acts 16:3). This might seem contrary to the decision of the COUNCIL OF JERUSALEM, held shortly before the second missionary journey (15:27 – 29); the vindication of Paul's position is demonstrated in the fact that TITUS was not compelled to be circumcised (Gal. 2:3). Timothy would have been considered a Jew, however, and his situation could have become an occasion for serious offense in Jewish circles if he had remained uncircumcised. Evidently Paul judged that this concession would be necessary for the maximum effectiveness of Timothy's work. That Timothy was rather young when he joined Paul is suggested by Paul's exhortation, "Don't let anyone look down on you because you are young" (1 Tim. 4:12), which was given some fifteen years later.

Timothy is not mentioned in connection with the experiences and imprisonment of Paul and SILAS in PHILIPPI (Acts 16:12 – 40). Possibly because of his youth Timothy was not imprisoned. Likewise, he is not mentioned in the account of Paul's ministry in THESSALONICA (17:1 – 9). However, Acts 17:14 indicates that Silas and Timothy remained in BEREA after Paul's departure, although Paul requested that they join him as soon as possible (17:15). According to Acts 18:5, they rejoined Paul at CORINTH. However, 1 Thess. 3:1 – 3 indicates that Timothy at least was with Paul in ATHENS and that Paul, being anxious about the believers at Thessalonica, sent Timothy to Thessalonica. This suggests that, during Paul's ministry at Thessalonica, Timothy (who seemingly was present) was not directly involved in the work, so that the "bond" Paul and Silas had to post (Acts 17:9; cf. 1 Thess. 2:18) did not apply to Timothy. Upon his return to Corinth, where Paul now was (1 Thess. 3:6 and Acts 18:5), Timothy informed the apostle about the situation in Thessalonica. In response Paul, with Silas and Timothy as "cowriters," sent 1 Thessalonians (see THESSALONIANS, FIRST EPISTLE TO THE). Shortly thereafter, while still at Corinth, these three men sent 2 Thessalonians (see THESSALONIANS, SECOND EPISTLE TO THE).

Theater and forum at Ephesus (looking NE). Timothy shepherded the Christian congregation in this city.

During his extended residence in EPHESUS on his third missionary journey, Paul sent Timothy to Corinth to deal with the vexing problems in that church (1 Cor. 4:17; 16:10). It appears that he was not successful in this mission and returned to Paul at Ephesus. Prior to Paul's departure from Ephesus, he sent Timothy and ERASTUS to MACEDONIA (Acts 19:22). Later, when Paul joined Timothy in Macedonia, and after Titus had successfully dealt with the problems in Corinth, the apostle wrote 2

Corinthians and included Timothy in the opening (2 Cor. 1:1; cf. 1:19). When Paul wrote his letter to the Romans during the following winter while at Corinth, Timothy, identified as a "fellow worker," was among those who sent their greetings (Rom. 16:21).

Timothy accompanied Paul on his last journey to JERUSALEM (Acts 20:4). It is not indicated that Timothy accompanied Paul on his shipwreck voyage to ROME, but PHILIPPIANS (if written from Rome) suggests that Timothy was sharing Paul's first Roman imprisonment (Phil. 1:1; 2:19 – 20). Likewise, Timothy was included with Paul in two other Prison Epistles, often thought to have been composed in Rome (Col. 1:1; Phlm. 1).

Two of the PASTORAL EPISTLES, written after Paul's first Roman imprisonment, were addressed to Timothy. The close relationship that existed between the apostle and his disciple is very evident from these letters. Paul refers to Timothy as "my true son in the faith" (1 Tim. 1:2), "my son" (1:18), "my dear son" (2 Tim. 1:2). In these two epistles Paul uses a special term to describe the responsible task or consignment that the preacher has. This term, *parathēkē G4146* ("deposit"), is found only in 1 Tim. 6:20; 2 Tim. 1:12, 14; here Paul urges Timothy to guard this deposit, something that had also been entrusted to Paul. The apostle virtually identified his ministry with Timothy's. This continuation of Paul's ministry in the work of Timothy underlies the various exhortations of the Pastoral Epistles.

First Timothy was written from Macedonia while Timothy was at Ephesus. Heterodoxy had infested the church—a kind of legalism (1 Tim. 1:6 – 7) and a kind of speculative theology based on myths and genealogies (v. 4). It was also in this period that ecclesiastical organization was developing, and Timothy was enjoined carefully to supervise the appointment of qualified officers. Personal godliness is a necessary qualification of an effective minister (e.g., 6:11 – 16).

Second Timothy was written while Paul was imprisoned in Rome, apparently the second time. The future looked very bleak for him and he wrote this letter to Timothy to urge him to come to Rome for these last days. Whether Timothy was able to reach Rome before Paul's death is not recorded. This epistle has been aptly called Paul's swan song. It is the picture of a man passing the torch to his successor. Paul's confidence and trust in Timothy as a worthy successor are very evident. It is not indicated where Timothy was—apparently in western Asia, possibly at Ephesus, since he would be passing through Troas (2 Tim. 4:13). Although Paul was at the point of death (4:6) and had been abandoned by certain followers, such as PHYGELUS and HERMOGENES, DEMAS, and ALEXANDER (1:15; 4:10, 14), nevertheless he expressed an assurance and faith to Timothy which must have made a formative impression on this young minister and been an enduring inspiration to him.

A study of these epistles addressed to Timothy gives the impression that he was a fairly young man who was somewhat retiring, perhaps even a bit shy. He appears to be sincere and devoted, but at times possibly frightened by his opponents and their teachings. This trait perhaps is also reflected in his apparent inability to cope with the problems in the Corinthian church.

The last reference to Timothy in the NT is in Heb. 13:23, where it is reported that Timothy had been recently released from prison. Timothy was known to the recipients of this epistle, and its author intends to bring him along on a proposed visit. Timothy's name does not occur elsewhere in the early Christian literature. (See further F. F. Bruce, *The Pauline Circle* [1985], ch. 4.)

(2) A leader of the Ammonite forces defeated by Judas MACCABEE "in many battles" (1 Macc. 5:6 – 7, 11, 34 – 43). The second book of Maccabees has several references to him (2 Macc. 8:30 – 32 et al.), including a record of his death (10:37), but subsequently the name comes up again (12:2, 10, 18 – 25). It is uncertain whether there were two distinct historical figures named Timothy who opposed the Jews (the name was common); some scholars argue that the later narrative is a mangled duplicate or that it otherwise reflects confusion on the part of the writer.

Timothy, Epistles to. See PASTORAL EPISTLES.

tin. A metal that has a bright white color and is easily fusible with a melting point of 232°C. The metal is not very ductile but is very malleable and can be rolled into foil. Tin is only rarely found in the native state, the main ore being cassiterite (tin dioxide), which occurs in veins associated with granitic rocks, as in Cornwall, and as alluvial deposits resulting from the degradation of cassiterite-bearing veins. Articles of tin were used in Egypt at least as early as 1400 B.C., and the metal is mentioned (Heb. *bĕdîl H974*) as one of the objects plundered by the Israelites when they attacked Midian in the wilderness (Num. 31:22). From c. 3700 B.C. onward tin has been alloyed with COPPER to give BRONZE; trade in Cyprus copper and Cornish tin was carried on by the Phoenicians (cf. Ezek. 27:12). Tin also forms alloys with silver (cf. 22:18), and forced draught is employed in metallurgical processes associated with its extraction and alloying (cf. 22:20).

D. R. BOWES

Tiphsah tif'suh (תִּפְסַח *H9527*, perhaps "ford" [cf. BDB, 820]). (1) A town mentioned as marking the NE boundary of SOLOMON's kingdom: "he ruled over all the kingdoms west of the River *[i.e.,* the EUPHRATES]*,* from Tiphsah to Gaza" (1 Ki. 4:24). Tiphsah is generally identified with Thapsacus *(Thapsakos),* described by Xenophon as "a large and prosperous city" on the Euphrates River *(Anabasis* 1.4.11). Called Amphipolis in SELEUCID times, it is now known as Dibseh, about 55 mi. ESE of ALEPPO and 90 mi. NE of HAMATH, near the large bend of the Euphrates. A great E-W trade route that moved around the FERTILE CRESCENT had a staging post here. There is no means of knowing how strongly the remote frontier was held by Solomon, and some scholars are skeptical that Israel's northern boundaries ever reached that far.

(2) A town of uncertain location that was sacked and brutally treated by MENAHEM (2 Ki. 15:16). Although some scholars think this Tiphsah is the same as #1 above, the text suggests rather a place near TIRZAH and SAMARIA. On the basis of some Greek MSS, other scholars emend the MT to read *tappûah.* See TAPPUAH #3.

Tiras ti'ruhs (תִּירָס *H9410,* meaning unknown, but the name apparently corresponds to Egyptian *tywš,* also spelled *twryš).* Last-named son of JAPHETH and grandson of NOAH (Gen. 10:2; 1 Chr. 1:5). Evidently Tiras was also the name of a people group descended from him, and various identifications have been proposed, including TARSUS and TARSHISH. Many scholars accept a connection with the Tursha, one of the SEA PEOPLES that invaded the Syrian coast and even attacked Egypt in the 13th cent. B.C. But the identification of the Tursha is also debated. Some think the reference is to THRACIA, others to a place in Italy named Tyrrhenia *(Tyrsēniē,* gentilic *Tyrsēnoi,* in HERODOTUS, *Hist.* 1.57, 94, 163, 166 – 67; elsewhere *Tyrrēnoi);* the latter refers to Etruria, the land of the Etruscans. Herodotus reports a tradition that the Tyrrhenians moved to Italy from LYDIA, and a location for Tiras in ASIA MINOR seems to fit the biblical data (Tiras's brothers include GOMER and MESHECH, who are usually identified with Anatolian groups). Recent work, however, has called into question the veracity of this story (cf. D. Briquel, *L'origine lydienne des Etrusques: Histoire de la doctrine dans l'antiquité* [1991]).

Tirathites ti'ruh-th*i*ts (תִּרְעָתִים *H9571,* a gentilic form, prob. from an unattested name such as תִּרְעָה).

Among the descendants of CALEB (through his son HUR and grandson SALMA) are listed three "clans of scribes who lived at Jabez: the Tirathites, Shimeathites and Sucathites. These are the Kenites who came from Hammath, the father of the house of Recab" (1 Chr. 2:55). Nothing else is known about these clans, and their names cannot be traced to a particular person or place. On the relationship between Calebites and Kenites, see discussion under JABEZ.

tire. An archaic English term used by the KJV both as a verb (meaning "to adorn," 2 Ki. 9:30) and as a noun ("[hair] ornament," Isa. 3:18; Ezek. 24:17, 23).

Tirhakah tuhr-hay'kuh (תִּרְהָקָה *H9555,* from Egyp. *thrwq).* Also Taharqa, Tahrqa (and various forms in Greek writers). A PHARAOH of the 25th or Ethiopian dynasty in EGYPT (see ETHIOPIA), identified in the Hebrew Bible as king of CUSH (cf. TNIV, 2 Ki. 19:9; Isa. 37:9; NIV, "the Cushite king of Egypt"). His throne name, attested on his temples at Kawa in the Sudan, was *Khunefertēmrē Taharqa;* the short form *Thrwq* gave rise to the Assyrian *Tarqû.* Egypt had been divided into a number of feudal cities and cult centers by the middle of the 8th cent. B.C. About 730 B.C., however, the Cushite (Nubian) chieftain Piankhy (Piye) conquered much of Egypt and assumed the unified throne as pharaoh. After his death his brother Sha-bako, with some difficulty, ascended the throne and ruled for fifteen years until approximately 702. He was followed by Shebiktu, who reigned for twelve years before the accession of Tirhakah (possibly his younger brother) in 690.

Tirhakah was crowned at MEMPHIS and then refurbished the temple of Amon-Re᾿at Kawa. Subsequently he carried on campaigns against the pretenders to the throne in the NILE delta region. He was fairly respected by his Egyptian subjects and was able to maintain some degree of order sufficient to build and restore temples and other buildings at Karnak and Medînet Habu. When the rampaging Assyrian king SENNACHERIB (705 – 681 B.C.) began his campaigns in Syria and threatened HEZEKIAH in Jerusalem, the Jews evidently appealed to Egypt for aid (cf. 2 Ki. 18:21; Isa. 36:6). They were warned by the prophet that Egypt could not save Judah.

When the annals of Sennacherib (cf. *ANET*, 287 – 88) are compared with those of Tirhakah and with the biblical record, several involved chronological problems appear. These difficulties have been the subject of considerable discussion, and many scholars have concluded that the biblical account is in error. One solution to the problem has long been thought to be a second campaign of Sennacherib into the western areas of ASIA MINOR. Another solution would be found if Tirhakah were, in fact, acting under his brother's name and reign in his encounter with Sennacherib at ELTEKEH, where a goodly portion of the combined Egyptian and Ethiopian force was annihilated. It is more likely that Sennacherib was victorious at Eltekeh in 700, and that he moved on Hezekiah in Jerusalem and Tirhakah sometime about 689/688.

Sennacherib's successor and son, ESARHADDON (680 – 669 B.C.), again conquered Syria and "fought daily, without interruption, very bloody battles against Tirhakah (*Tarqû*), king of Egypt and Ethiopia, the one accursed by all the great gods" (from Esarhaddon's stela, *ANET*, 293). After the death of Esarhaddon in Haran, Tirhakah returned to occupy most of his former domain. ASHURBANIPAL, the son and heir of Esarhaddon, had been previously designated the new king. In his first campaign begun in 667 B.C. he again invaded Egypt and recorded the account on a cylinder discovered at Kuyunjik (*ANET*, 294). After this pursuit Tirhakah does not seem to have recovered his sovereign position and he fled to his native southland, to his city of Napata. There he died in 664, after a long reign of twenty-six years.

W. WHITE, JR.

Tirhanah tuhr-hay'nuh (תִּרְחֲנָה *H9563*, derivation unknown, possibly a HURRIAN name). Son of CALEB (by his concubine MAACAH), included in the genealogy of JUDAH (1 Chr. 2:48).

Tiria tihr'ee-uh (תִּירְיָא *H9409*, possibly "might of Yahweh"). Son of JEHALLELEL and descendant of JUDAH (1 Chr. 4:16).

Tirshatha tuhr-shay'thuh (תִּרְשָׁתָא *H9579*, possibly from a Persian word meaning "respected, excellency"; cf. H. G. M. Williamson, *Ezra-Nehemiah*, WBC 16 [1985], 27). KJV transliteration of what appears to be a Persian title meaning "governor" or the like. The term is applied to NEHEMIAH (Neh. 8:9; 10:1) and to another unnamed leader, probably SHESHBAZZAR or ZERUBBABEL (Ezra 2:63; Neh. 7:65, 70). The Persian satrap or provincial governor was, in effect, a petty official with no great power whose principal functions included the assessment and collection of taxes.

M. H. HEICKSEN

Tirzah (person) tihr'zuh (תִּרְצָה *H9573*, "pleasant" or "obliging"). The youngest of five daughters of ZELOPHEHAD of the tribe of MANASSEH (Num. 26:33). Since Zelophehad had no sons, his daughters requested ELEAZAR the priest that they be allowed to inherit their father's property, and the request was granted on condition that they marry into their father's tribe (27:1 – 11; 36:11; Josh. 17:3 – 4). Some think that Tirzah may have settled the town that bears the same name. See TIRZAH (PLACE).

Tirzah (place) tihr'zuh (תִּרְצָה *H9574*, "pleasant" or "obliging"). A royal Canaanite city conquered by JOSHUA (Josh. 12:24). It is possible that the town, located within the tribal territory of MANASSEH, was settled by Tirzah, daughter of the Manassite ZELOPHEHAD (cf. 17:1 – 6, esp. v. 3). See TIRZAH (PERSON). JEROBOAM I maintained a residence at Tirzah (1 Ki. 14:17) and it became the capital of the northern kingdom in the days of BAASHA, ELAH, and ZIMRI (1 Ki. 15:21, 33; 16:6, 8 – 9, 15). Trapped there by OMRI, Zimri destroyed his residence during a dynastic struggle (16:17 – 18). Six years later, Omri transferred the capital to SAMARIA (16:23 – 24), a more central and convenient center that dominated the western approaches to the Samaritan hill country; in addition, Samaria had no older tribal associations, such as Tirzah had (cf. DAVID's earlier action in choosing Jerusalem as his capital). Tirzah then sank into the status of a provincial but still significant town. Toward the end of the northern monarchy of Israel, a citizen of Tirzah, MENAHEM, seized power and usurped the throne from SHALLUM (2 Ki. 15:14,16).
Tirzah.

Tirzah is now generally identified with modern Tell el-Far ͑ah, c. 6 mi. NE of SHECHEM, at the head of the descent of the Wadi Farah, which plunges E into the Jordan Valley to the ford at Adam; see ADAM (PLACE). (The site is not to be confused with another Tell el-Far ͑ah in SW Palestine; see SHARUHEN.) This was the best route connecting TRANSJORDAN with the hill country of Ephraim, and connected westward to the road via Samaria and DOTHAN to the JEZREEL Plain. This longitudinal road helps to explain the rise of important cities like Tirzah, Shechem, and Samaria at major highway junctions.

Noted for the beauty of its environs (Cant. 6:4), the valley where Tirzah was situated is carved out of softer Cenomanian limestones with a good soil cover, in contrast to the rocky Eocene outcrops above the valley. The large mound at Tell el-Far ͑ah was excavated by the Dominican fathers R. de Vaux and A. M. Stève. Their excavations have revealed a continuous settlement from Chalcolithic times, before 3000 B.C., to the end of the kingdom of Israel. It flourished as a city in the 9th cent. B.C., but a burnt level was found terminating the first stratum of the Iron Age occupation that may indicate the civil disorders at the time Omri came to power. There is also evidence of the subsequent reduction of Tirzah from an important fortress to a virtually open town about the time Samaria was created on a new site. All this seems strongly confirmatory that Tell el-Far ͑ah is the site of Tirzah. (See R. de Vaux in *Archaeology and Old Testament Study,* ed. D.W.Thomas [1967], 371 − 83; A. Chambon, *Tellel-Fâr ͑ah I*[1984]; J. Mallet, *Tell el Fâr ͑ah II, 2* vols. [1987–88].)

J. M. HOUSTON

Tishbe tish'bee (תִּשְׁבֵּי *H9586,* conjectured place name [the MT has תִּשְׁבִּי see below]; gentilic תִּשְׁבִּי *H9585,* "Tishbite"). The hometown of ELIJAH in GILEAD, according to the NIV and some other versions at 1 Ki. 17:1. The KJV, following the Hebrew form found in the MT, has "of the inhabitants of Gilead" *(mittosabê gil*(*ad;* cf. NJPS, "an inhabitant of Gilead"). The SEPTUAGINT, however, understood the word as a proper name *(ek Thesbōn).* Most scholars, assuming reasonably that the term Tishbite (in the same verse and elsewhere) means "a native of Tishbe," emend the MT vowels to *mittisbê,* "from Tishbe."

Other less likely proposals have been made. N. Glueck *(Explorations in Eastern Palestine IV, Part I,* AASOR 28 [1951], 218, 225 – 27) suggests that a scribal error was responsible for the confusion surrounding the birthplace of Elijah and that the text originally read "Elijah the Jabeshite, from Jabesh Gilead" (cf. Jdg. 21:8 – 14 and see JABESH GILEAD). Additional speculation has suggested that the passage might be rendered "Elijah the Kenite, of the Kenites of Gilead," a somewhat tenuous viewpoint based on two arguments: (a) these alien settlers in Gilead, represented by the RECABITES, assisted Elisha at a later time in his fight against BAAL worship (cf. 2 Ki. 10:15); and (b) Elijah may have in his day been a representative of the same people (cf. his efforts against the Baalism introduced by AHAB).

A place by the name of Tishbe has never been identified, though some have thought that Listib (in Arabic, el-Istib), in E Gilead, was a likely identification because of name similarity. Listib was founded in the Byzantine period, however, and there is no trace of earlier settlement. The apocryphal book of TOBIT refers to a place called THISBE, located S of KEDESH in NAPHTALI (Tob. 1:2), and it has been suggested that the descriptive adjective *Tishbite* was derived from it (in which case Elijah may have been born there, later settling in Gilead). This view has not been widely accepted.

The familiarity of Elijah with N Gilead is pointed up by the narrative in 1 Ki. 17:2 – 7 concerning his sojourn at the brook KERITH, "east of the Jordan," in hiding from his enemies. It is now fairly certain that Kerith should be so located, and possibly identified with the Wadi Yabis in the highlands of N Gilead. The tradition of Elijah's presence in the region about Jabesh Gilead is seen in the names of the settlement of Listib and, not far from it, of a place on the opposite side of the valley called Mar Ilyas (St. Elias). Substantial surface remains of the Byzantine period, as well as some evidence of Roman occupation, are seen there. Hence the presence of the personality of Elijah is attested from these periods, and the tradition may well come from even earlier times. Respect for the spirit of Nebi-Ilyas (the prophet Elias) is given to a grove of oak trees above the ruins. Although "Tishbe in Gilead" is still a bit obscure, the general location of "Elijah the Tishbite's" homeland seems reasonably secure.

M. H. HEICKSEN

Tishbite tish'b*it.* See TISHBE.

Tishri tish'ree (postbiblical Heb. תִּשְׁרִי). The seventh month in the Hebrew sacred CALENDAR (first month in the civil calendar), corresponding to late September and early October. This term is not found in the Bible, which uses instead the Canaanite name ETHANIM (1 Ki. 8:2). According to Rabbi Eliezer, Tishri was the month in which the world was created (*b. Roš Haš.* 10b). The Jewish New Year is celebrated on the first and second days of Tishri.

tithe. The tenth part of produce or property for the support of the priesthood or for other religious objectives. References to the tithe are found in both the OT and NT (Heb. *ma*(*āśser H5130*; Gk. *dekat*ē, from *dekatos G1281*), but the main teachings are incorporated in three passages in the Mosaic

legislation: Lev. 27:30 – 33; Num. 18:21 – 32; and Deut. 12:5 – 18; 14:22 – 29.

I. Secular examples. Giving a portion of one's labor or of the spoils of war was known among a number of nations in antiquity. In EGYPT the people gave two tenths of their harvest to the PHARAOH (Gen. 47:24). The practice is also attested among the Syrians (1 Macc. 10:31; 11:35), the Lydians (Herodotus, *Hist*. 1.89), and the Babylonians (M. Jastrow, *The Religion of Babylonia and Assyria* [1898], 668). Tithes were both political (tribute and taxation) and religious (connected with offerings). Ancient extrabiblical use appears to be as a TAX in kind imposed by a ruler on a subject people or his own countrymen. Whereas among foreign nations the political purpose for tithes predominated, in Israel it was the religious, for it referred primarily to income dedicated to God.

II. Pre-Mosaic period. The first mention of the tithe was when ABRAHAM, returning from his victory over the invading Mesopotamian kings, gave MELCHIZEDEK, king-priest of SALEM, a tenth of all the spoils (Gen. 14:18 – 20). This incident is explained in Heb. 7:1 – 10 as indicating that the Melchizedek priesthood was superior to the Aaronic. JACOB, fleeing from ESAU, promised this amount in the event God prospered him (Gen. 28:22).

III. Mosaic period. Clearly, it was in Mosaic times that tithing had its greatest emphasis. Under the law of MOSES a tithe of the produce of the ground and of cattle was obligatory (Lev. 27:30, 32). The tithe of fruit and grain could be redeemed by the owner by buying it at one-fifth above market value (v. 31). This arrangement, however, was not allowed for the flock or herd. In such cases the tithe was taken by passing the cattle under the rod and removing every tenth animal, whether perfect or defective. There could be no exchange. Until the tithe was offered to God, the crop was not to be used by the people (23:14). The part given God could be at one time consumed on the altar; at another time only a portion of the tithe was consumed (vv. 9 – 13); the rest was granted to the priests and their families (Num. 18:11). See SACRIFICE AND OFFERINGS.

Some scholars have claimed that between Deuteronomy and the Priestly Code (which includes Leviticus and Numbers) no laws on tithing were given. The use of "tithe" twice in Ezekiel is admittedly in a nontechnical sense of "a tenth" (Ezek. 45:11, 14). The Priestly Code provided that the tithe was to be exclusively for the Levites, who were to give a tenth to the priests (Num. 18:20 – 23). In this code the tithe is connected with the heave offering. Like Deuteronomy, the Priestly Code views the tithe as an agricultural offering, not of cattle (Lev. 27:30 – 31). This practice is verified in Neh. 10:37 – 38; 12:44; 13:5, 12. One reference includes cattle in the tithe (Lev. 27:32 – 33), a detail confirmed elsewhere (2 Chr. 31:5 – 12).

The legislation in Numbers stipulated that grain must be threshed before it was tithed. The fruit of the vine and the olive were processed into wine and oil before a tithe was presented (Num. 18:27). As stated above, the tithe was considered a heave offering and given to the Levites (vv. 21, 24). This was the return for their service at the sanctuary (v. 21) and because of their exclusion from a landed inheritance. The priest was given a tithe (Num. 18:26), and the remainder was eaten elsewhere (v. 31).

Moses prescribed that all the required sacrifices, free-will offerings, and tithes were to be brought to the sanctuary in Jerusalem (Deut. 12:5 – 6, 11). All were to be eaten before the Lord (vv. 17 – 18). If the distance to the sanctuary was great, the offering could be exchanged for money, then taken to the sanctuary, where the money could be used to buy what was needed for the meal (14:23 – 27). His purchase was eaten by the offerer, his household, and the Levites in Jerusalem. Every third

year everyone's tithe was to be stored in his own town, where the Levite, stranger, widow, and orphan could go for a supply (vv. 28 – 29). After a third-year tithe, the tenth was placed at the disposal of those mentioned in Deut. 26:12. It is held by some that there were two third-year tithes between SABBATICAL YEARS, at which time there was no tithe.

Greek dedicatory inscription (c. 500 B.C.) on Pentelic marble stating that a certain Kalis dedicated a tithe of his (or her) labors.

The laws of Deut. 14 appear to conflict with the regulations of Num. 18:21 – 32. The latter passage indicates that all the tithes should be given to the Levites, who in turn pay a tithe of a tithe to the priests. Furthermore, Levites were allowed to eat the tithe where they wished, not just at the central sanctuary. The rabbis attempted to reconcile the apparent contradiction by assuming different kinds of tithes: a first tithe was given to the Levites and priests (Num. 18); a second tithe was eaten by the offerer with his family and guests in a feast at the sanctuary (Deut. 14:22 – 27); and a third tithe, called the "poor's tithe," took the place of the second tithe in the third and sixth years of each sabbatical period (Deut. 14:28 – 29). The question has also arisen as to whether Deuteronomy has in view two separate tithes. It is not necessary to assume this. It was the same tithe but used differently in the third year. The aim of all tithing was to acknowledge that all a person had belonged to God.

In the past, scholars have debated whether there were two tithes or even three (cf. Jos. *Ant.* 4.8.22). Modern research seems to indicate that all the references are to the same tithe, explaining the differences as arising from the variations in time. The reasoning is that in the time of the composition of Deuteronomy (which the critical school dates to the 7th cent. B.C.), the tithe was used for a festal meal for the family, the poor, and the Levites. In the days of the composition of Numbers (which is said to be part of the Priestly Code dated to postexilic times), the tithe was employed solely for the support of the ministry of priests and Levites. The argumentation is not at all compelling: it seems more valid to hold that in the early Hebrew theocracy reflected in Leviticus (Mosaic times), when the nation lived as nomads, festal meals were not feasible; thus the tithes were offered to the priests and Levites as the needy among the people. In the age of Deuteronomy, however, when Israel was about to enter the land and inaugurate a permanent national existence, they were commanded both to bring tithes in kind or money to the main sanctuary and partake of a sacred meal with the Levites, and to stimulate charity for the needy, to give the tithes every third year for the poor, not just the priests and Levites, who in the settled life in the land were better provided for than in the wilderness wanderings. To conclude, the different references in the OT to tithing probably indicate differing practices in various times and places.

What is the relationship between the tithes and FIRSTFRUITS? A. S. Peake (in *HDB*, 4:780 – 81) thinks it better to distinguish between tithes and firstfruits (Deut. 14:22 – 27; 18:4; 26:1 – 15). On the other hand, H. H. Guthrie (in *IDB*, 4:654 – 55) takes the view that they had a common origin, which would account for the absence of mention of the tithe in the Book of the Covenant (see COVENANT, BOOK OF THE). It is difficult to give a final answer here. Because Deut. 26:1 – 15 mentions them together some have concluded that they are the same. It is not likely that a double offering would be asked. Thus the tithe is considered as a further precise statement of the firstfruits. A problem exists in that Deut. 18:4 enjoins that the first-fruits be given the priests. No such provision was made relative to the tithe. The problem remains open for further study.

IV. Period of the monarchy. It became a royal prerogative to exact a tithe of the crops, vineyards, and flocks. SAMUEL warned Israel that they would have to give a tenth to the king (1 Sam. 8:15, 17). It has been suggested that the tithe paid to the king was for the support of the royal sanctuaries. Even in IDOLATRY Israel paid tithes, in such cases at the temple of the idols (Amos 4:4). King HEZEKIAH's order of the tithe, apparently for the Levites, was so well carried out that the king had special chambers in the temple made for their deposit (2 Chr. 31:4 – 12). A similar arrangement was ordered by NEHEMIAH (Neh. 10:39; 13:12).

V. Exilic and postexilic period. EZEKIEL speaks (many believe prophetically) of the support of public

worship by the prince for the collection of a general tax (Heb. *terûmâ H9556*, Ezek. 45:13 – 17). The priests were to have for their support the firstfruits and heave offerings (44:30). In Nehemiah's day (Neh. 10:37 – 39) the Levites collected the tithe in all the cities and towns under the oversight of a priest, then delivered the tithe of the tithes to the storehouse in the temple for the priests. When this plan did not function, the Levites had to support themselves (13:10 – 13). In times of apostasy tithes were neglected (Mal. 3:7 – 12).

VI. NT and later periods. In the time of the NT, changes had taken place (Lk. 11:42; 18:12). When the greed of the high priests impoverished the ordinary priests, the latter took the tithes by force (Jos. *Ant*. 20.8.8; 9.2). The tithe of mint, anise, and cummin was a prescription of the rabbis that went beyond the intent of Scripture (Matt. 23:23; Lk. 11:42). The MISHNAH laid down this general principle: "Everything that is eaten and is watched over and grows out of the ground is liable to tithe" (*m. Ma(aserot* 1:1). The rabbis gave elaborate rules as to the precise time in the year when cattle were tithed, also produce of the land and the fruit of the trees. The stage of growth at which produce was to be tithed was also prescribed. The rabbis placed great merit in the giving of tithes, stating that tithing was one of the three elements through whose merit the world was created (*Gen. Rab*. 1:4). All the tithe was to be given to the poor.

For several centuries in the early church there was no support of the clergy by a systematic giving of a tithe. In time the tithe came to be regarded generally after the pattern in the Jewish SYNA GOGUE. The practice was supported by an appeal to some NT passages (e.g., Matt. 10:10; Lk. 10:7; 1 Cor. 9:7 – 14), but IRENAEUS and other leaders in the church showed the arguments drawn from these texts were not valid. Rather, freedom in Christian giving was emphasized. (See further J. A. MacCulloch and W. H. D. Rouse in *ERE*, 12:347 – 51; H. Lansdell, *The Sacred Tenth or Studies in Tithe-Giving Ancient and Modern* [1906], 45 – 109, 119 – 80; H. Jagersma in *Remembering All the Way* [1981], 116 – 28; M. E. Stevens, *Temples, Tithes and Taxes: The Temple and the Economic Life of Ancient Israel* [2006]; *NIDOTTE*, 2:1035 – 55; *NIDNTT*, 3:851 – 55.)

C. L. FEINBERG

Titius Justus tish'ee-uhs-juhs'tuhs. See JUSTUS #2.

tittle. See DOT.

Titus ti'tuhs (Τιτος *G5519*, from Latin *Titus*). The name Titus appears in the NT only in 2 Corinthians (eight times), Galatians (twice), 2 Timothy (once), and Titus (once). It can be safely assumed that all these references refer to the same individual: a companion and coworker of PAUL who later was the pastor on the island of CRETE. In addition, Titus was the name of a Roman emperor not mentioned in the Bible. Both individuals are covered in this article.

I. Titus the companion of Paul. The absence of any reference to Titus in the Acts of the Apostles complicates the effort to integrate the role of this Christian leader into Luke's account of Paul's missionary activity. Attempts to read or insert the name Titus into the Acts of the Apostles are not convincing, and no good explanation has been given to account for the absence of his name in this book. From the references in the Pauline epistles it appears that Titus was an uncircumcised Greek (Gal. 2:3), an intimate associate of Paul, and an effective pastor (2 Cor. 8:23; 12:18; although disputed and somewhat problematic, the unity of 2 Corinthians is assumed in the following

reconstruction).

It is unknown when Titus joined Paul in his mission activity. The earliest reference to Titus is found in GALATIANS. Paul reports that on his visit to Jerusalem "after fourteen years" (Gal. 2:1) Titus accompanied him and BARNABAS. Some suggest that this incident is the "famine-relief" visit described in Acts 11:27 – 30; others identify it with the COUNCIL OF JERUSALEM of Acts 15. At the time of this visit the issue of CIRCUMCISION had become crucial, and Paul cites, as vindication of his position, the fact that Titus was not compelled to be circumcised. If this is the visit of Acts 11, Titus was then a companion of Paul before the first missionary journey. If it is the visit of Acts 15 (preferable identification in the light of Pauline chronology), Titus's contact with Paul was at least before the second missionary journey. In any case, nothing is recorded concerning Titus's mission work until the third missionary journey shortly after Paul's lengthy stay at EPHESUS (Acts 19:1, 17, 26, 35). Whether Titus accompanied Paul during all these journeys cannot be ascertained. However, Titus's effectiveness with the Corinthians might suggest some prior personal contact with them, although Luke is rather definite in recording that Paul's companions in Greece were TIMOTHY and SILAS, and Paul even stresses that he was alone for a time in ATHENS (1 Thess. 3:1).

The Corinthian correspondence indicates that Paul had a number of frustrating experiences with the church at CORINTH. These apparently occurred during Paul's sojourn of over two years in Ephesus during the third missionary journey (Acts 19), although there is not the slightest allusion to these problems in the Acts account. After various attempts to deal with these problems by correspondence and a personal visit, Paul sent Titus to attempt a reconciliation and resolution of the difficulties. Apparently Paul and Titus agreed to meet in TROAS. When Paul arrived in Troas, however, he did not find Titus (2 Cor. 2:13). Although there were promising opportunities for mission work in Troas, Paul's concern about Corinth and Titus led him to proceed to MACEDONIA (obviously there was a prearranged travel route—either by sea or land—to obviate the possibility of by-passing one another). In Macedonia Titus brings to Paul a comforting report about the Corinthians which gives him much joy and peace of mind (2 Cor. 7:6 – 14). Titus seems to have established a good rapport with the Corinthians and Paul exuberantly expresses his gratitude for the happy turn of events.

The offering for the Judean churches was still pending in Corinth, and from Macedonia Paul sent Titus to Corinth to complete this expression of fellowship with the other churches (2 Cor. 8:6, 16). Apparently, Titus was successful in this mission, and the following spring Paul went to Jerusalem with this offering (Rom. 15:25 – 26). The subscription to 2 Corinthians in many MSS (dating no earlier than the 9th cent.) indicates that the letter was written from Philippi *dia* (i.e., delivered by) Titus and Luke. This late testimony is probably an inference from the biblical data, but it does fit with the givens of 2 Corinthians.

One of the PASTORAL EPISTLES is addressed to Titus. At this time he was working in Crete. The epistle contains some exhortations to Titus, although none of these reflects negatively on his character or ability. It appears that he was dealing with a difficult and somewhat unruly congregation in Crete. Paul suggests that Titus's pastoral qualifications led to this assignment (Tit. 1:5). He also describes Titus as "my true son in our common faith" (1:4; Timothy is similarly described in 1 Tim. 1:2). Titus is instructed to come to NICOPOLIS on the W coast of Greece (Tit. 3:12) to spend the winter there with Paul. At the time of the writing of 1 Timothy, Titus had departed to DALMATIA, apparently from Rome (2 Tim. 4:10). This is the last reference to Titus in the NT.

In many respects Titus appears in the NT as an ideal pastor. Paul reflects very favorably upon Titus's genuine devotion and pastoral concern (2 Cor. 8:16 – 17). His earnestness is mentioned as a challenge to the Corinthians. Titus's joy and devoted concern was an inspiration to Paul in his

reconciliation with the Corinthians (7:13 – 15). Paul substantiates his devotion to the Corinthians by arguing that he was of the same mind and attitude as Titus (12:18). These scattered allusions to the character of Titus indicate his close relationship to Paul and his stellar qualifications as a pastor.

The presence of a letter addressed to Titus in the NT has, among other things, been a great inspiration to ministers of the gospel throughout the history of the church. Although the data regarding Titus in the NT is scanty, nevertheless much can be learned from his pastoral activities and the letter addressed to him as a model and manual for a pastor. (See further F. F. Bruce, *The Pauline Circle* [1985], ch. 8.)

B. VAN ELDEREN

II. Titus the emperor. Titus Flavius Vespasianus was born in A.D. 39 and ruled as emperor of ROME for a short period, 79 – 81. While still a young man he had served as a tribune of the soldiers in Germany and Britain, and later accompanied his father, VESPASIAN, to Palestine at the time of the Jewish revolt. When the latter was called to Rome and was elevated to the imperial seat, Titus was left in charge of the war and brought it to an end by the capture and destruction of Jerusalem in the year 70. Upon his return to Rome he celebrated the triumph with his father, and from this time was made a virtual partner in the government, clearly designated for the succession. When Vespasian died in 79 Titus became emperor.

The Arch of Titus in Rome (W side).

In many ways Titus was a contrast to his father. He was the darling of the populace, good looking, affable to everyone. After the parsimonious policy of Vespasian he spent lavishly and was always remembered with affection in later years. By expelling the hated informers and doing away with trials and executions for treason, he gained the favor of the senate, and thus that body did not oppose his actions. (The primary ancient sources are Suetonius, *The Twelve Caesars: Titus,* and Dio Cassius, *Rom. Hist. 66.17 – 26.*)

The brief reign of Titus was noteworthy mainly for two disasters by which it was visited. In August of 79, Mount Vesuvius erupted and completely destroyed the two towns of Pompeii and Herculaneum, covering the former with a shower of hot ashes and pumice, the latter with a river of

lava. An eyewitness account of this event may be found in two letters written by PLINY the Younger to his friend TACITUS, the historian (Pliny, *Epistulae* 6.16.20). In the year 80 there was a plague and disastrous fire at Rome. Titus generously aided the victims of this disaster, and did a great deal to repair the damage to the city. Among other things he finished the Colosseum (begun by Vespasian), and built the baths which bear his name. The reign of Titus was looked upon as a time of ideal happiness, and his untimely death in the year 81 caused universal sorrow. (See further H. Bengtson, *Die Flavier: Vespasian, Titus, Domitian: Geschichte e. röm. Kaiserhauses* [1979]; B. W. Jones, *The Emperor Titus* [1984]; *OCD*, 1532 – 33.)

R. C. STONE

Titus, Epistle of. See PASTORAL EPISTLES; PSEUDO-TITUS, EPISTLE OF.

Titus Justus. See JUSTUS #2.

Titus Manius. See MANIUS, TITUS.

Tizite ti'zit (תִּיצִי *H9407,* apparently the gentilic form of an unattested name such as תִּיץ). Epithet applied to JOHA son of Shimri, one of DAVID's mighty warriors (1 Chr. 11:45). Presumably this designation identifies him as originating from an otherwise unknown place or tribe named "Tiz" (or the like), but it is unclear why his brother JEDIAEL does not receive the same description.

Toah toh'uh (תּוֹחַ *H9346,* variant תֹּחוּ *H9375,* meaning uncertain [see *HALOT*, 4:1696 – 97]). Son of ZUPH, descendant of LEVI through KOHATH, and ancestor of SAMUEL (1 Chr. 6:34; apparently the same as NAHATH in v. 26 and TOHU in 1 Sam. 1:1). The relationship among these three genealogical lists is debated (cf. *ABD*, 6:583).

Tob tob (טוֹב *H3204,* "good, pleasant"). A town and district of S HAURAN mentioned as the place where JEPHTHAH went when he fled from his brothers (Jdg. 11:3, 5). Later, during the reign of DAVID, the Ammonites hired twelve thousand mercenaries from Tob to defend themselves from the Israelites (2 Sam. 10:6, 8). In the days of Judas MACCABEE, the SELEUCIDS killed about a thousand Jews who lived in that region (1 Macc. 5:13 [KJV, "Tobie"], possibly the same as the T OUBIANI of 2 Macc. 12:17; for the view that in both passages the reference is to the family of TOBIAH, see J. A. Goldstein, *I Maccabees*, AB 41 [1976], 298 – 99; ib., *II Maccabees*, AB 41A [1983], 439 – 40). Tob is apparently mentioned in Egyptian records as *Tby* (no. 22 in the list of THUTMOSE III, *Tubu* in the TELL EL-AMARNA tablets), referring to an Aramean state E of the Jordan River, but NE of the GILEAD hill-country. See ARAM (COUNTRY). It is generally identified as et-Tayibeh, some 45 mi. NE of modern Amman (in Jordan).

E. M. BLAIKLOCK

Tob-Adonijah tob'ad-uh-ni'juh (טוֹב אֲדוֹנִיָּה *H3207,* "good is the Lord Yahweh"). One of six Levites whom King JEHOSHAPHAT sent to teach the law in the cities of Judah (2 Chr. 17:8). Some Greek MSS and other witnesses omit this name, however, and many scholars believe that it was introduced into the Hebrew text by a scribal mistake (duplicating and conflating the previous two names, Adonijah and Tobijah).

Tobiah toh-bi'uh (תּוֹבִיָּה *H3209*, short form of תּוֹבִיָּהוּ *H3210*, "Yahweh is good"; see TOBIJAH). (1) Ancestor of a family of returned exiles who could not prove their Israelite descent (Ezra 2:60; Neh. 7:62; in 1 Esd. 5:37 [where KJV has "Ban," misreading *Touban* as *tou Ban*], he appears as the father of DELAIAH).

This Aramaic inscription from Araq el-Emir (3rd cent. B.C.) bears the name Tobiah.

(2) An Ammonite (or less likely a Jew living in AMMON, descendant of #1 above) who served as a Persian official and who joined with SANBALLAT and others in persistently opposing the work of NEHEMIAH (Neh. 2:10, 19; 4:3, 7; 6:1, 12 – 19; 7:62; 13:4, 7; it has been suggested that instead of "Tobiah the Ammonite official" [Heb. ʿ*ebed H6269*], the text should read, "Tobiah and ʿAbd the Ammonite," but see H. G. M. Williamson, *Ezra-Nehemiah*, WBC 16 [1985], 183). Both he and his son JEHOHANAN bore Jewish names and were married to Jewish women. Tobiah was in high favor with the high priest, ELIASHIB, who gave him a guest room in the temple compound. He tried to frighten Nehemiah, who regarded him as his chief enemy and cast him and his household goods out of the temple guest chamber (13:4 – 9). (For the view that two different historical figures are involved, see D. Edelman in *RB* 113 [2006]: 570 – 84.) Some scholars think that the family of TOBIAS (#2), which in the 3rd cent. B.C. vied with the family of ONIAS for the high priesthood, was descended from this Tobiah. In a mausoleum at ʿAraq el-Emir (central TRANSJORDAN), a rockcut tomb has the name "Tobiah" incised in Aramaic characters of the 3rd cent. B.C., but it is uncertain whether this should be connected with the family of the biblical Tobiah (cf. J. Naveh, *The Development of the Aramaic Script* [1970], 62 – 64).

S. BARABAS

Tobias toh-bi'uhs (Τωβίας, from Heb. תּוֹבִיָּה *H3209*, "Yahweh is good"; see TOBIAH). (1) Son of Tobit (Tob. 1:9 et al.). See TOBIT, BOOK OF.

(2) Father or grandfather of a wealthy Jewish man named HYRCANUS (2 Macc. 3:11; cf. Jos. *Ant.* 12.4.2 §160; 12.4.6 §186). This Tobias may have been a descendant of TOBIAH (#2). According to JOSEPHUS (*Ant.* 12.5.1 §§237 – 41), the powerful Tobiad family later supported MENELAUS against JASON in the struggle for the high priesthood. (See B. Mazar in *IEJ* 7 [1957]: 137 – 45, 229 – 38; *HJP*, rev. ed. [1973 – 87], 1:149 – 50 n. 30; *SacBr*, 303 – 4.)

Tobiel toh'bee-uhl (Τωβιηλ, from תּוֹבִיאֵל [not attested in the Heb. Bible], "God is good"; cf. TOBIJAH). Father of TOBIT (Tob. 1:1, 8).

Tobijah toh-bi'juh (תּוֹבִיָּהוּ *H3210* [2 Chr. 17:8] and תּוֹבִיָּה *H3209* [Zech. 6:10, 14], "Yahweh is good"). (1) One of six Levites whom King JEHO-SHAPHAT sent to teach the law in the cities of Judah (2 Chr. 17:8). Appointed to the same mission were a number of princes and priests.

(2) One of a group of Jewish exiles who brought gold and silver from Babylon to help those who had returned under ZERUBBABEL; from these gifts a crown was to be made for Joshua (JESHUA) the high priest (Zech. 6:10, 14). The form of the Hebrew name in this passage is elsewhere rendered TOBIAH in the KJV and other English Bibles (Ezra 2:60 et al.); this inconsistency has no basis in the Hebrew text.

Tobit, Book of toh'bit (Τωβιτ, also Τωβιθ, possibly short form of Heb. תּוֹבִיָּה *H3209*, "Yahweh is good"; see TOBIJAH). A narrative book found in Greek MSS of the OT (see SEPTUAGINT) but lacking in the Hebrew Bible, thus included among the APOCRYPHA (or Deuterocanonical Books). In the VULGATE and Roman Catholic editions of the Bible, the books of Tobit, JUDITH, and ESTHER form a trio that follows the last of the historical books, NEHEMIAH.

I. Content. The book presents a charming tale in which beauty, suspense, and moral truth are interwoven in a most pleasing fashion, causing Tobit to become one of the most popular of the books of the Apocrypha in the history of the church. The story is set in the times of the Assyrian captivity and concerns the fortunes of a certain Tobit and his son Tobias (the text of the NRSV, based primarily on CODEX SINAITICUS, differs in some details from the KJV and RSV). The following outline may be suggested:

1. Introduction (Tob. 1:1 – 2)
2. The virtues and tribulations of Tobit (1:3—2:14)
3. Tobit's prayer (3:1 – 6)
4. The tribulations of Sarah (3:7 – 10)
5. Sarah's p rayer (3:11 – 15)
6. The mission of Raphael (3:16 – 17)
7. The instruction of Tobias (4:1 – 21)
8. Tobias's traveling companion (5:1 – 21)
9. The fish and the plan (6:1 – 17)
10. The marriage of Tobias and Sarah (7:1 – 18)
11. The trial and victory over the demon (8:1 – 21)
12. Azarias fetches the money (9:1 – 6)
13. The mutual concern of Tobit and Tobias (10:1 – 12)
14. The reunion and celebration (11:1 – 19)
15. Raphael reveals himself (12:1 – 21)
16. Tobit's great prayer of praise (13:1 – 18)
17. The final words and death of Tobit (14:1 – 15)

Tobit is described as a devout Israelite of the tribe of NAPHTALI. He often went to Jerusalem to

worship and regularly gave three tenths of his produce to the temple and other good causes. This righteous man, however, like JOB, appeared to receive only misfortune in return for his piety. He and his family were deported to NINEVEH as captives of the Assyrians, but unlike the other exiles they continued to adhere to the strict dietary regulations of the law. Temporarily, Tobit was the recipient of good fortune as one of SHALMANESER's stewards. During this period, Tobit judiciously entrusted a large sum of his money to a friend in MEDIA. Tobit continued to live a pious life, doing deeds of charity to his brethren, and particularly in giving proper burial to a number of the Jews who were slaughtered by the Assyrian kings. The latter activity became known to SENNACHERIB, and Tobit was forced to flee for his life, leaving behind all his property and wealth.

Tobit, however, continued in his acts of righteousness, and on one occasion buried the body of a Jewish brother only to receive a cruel reward. Having become unclean through his contact with the dead body, he was forced to sleep outside, and his face became accidentally dirtied by sparrow droppings, which got into his eyes and caused a blindness that physicians were powerless to cure. Like the wife of Job, Tobit's wife ultimately cries out the complaint of her frustration, "Where are your acts of charity? Where are your righteous deeds?" (Tob. 2:14). Thereupon Tobit prays in anguish of soul that his life might be taken, for he is convinced that it is better to die than to live under the present reproaches (3:6).

At that same moment some distance away, the same prayer was being uttered by Sarah the daughter of a certain Raguel who happened to be a close kinsman of Tobit. Sarah had the misfortune of being loved by the demon ASMODEUS, who had slain no less than seven husbands of Sarah, each on the very night of their wedding before the marriage could be consummated. Sarah was subject to accusations and reproaches, and in her despair she even contemplated suicide (Tob. 3:10). At this point the stage is set for the main action of the story. God sends his angel RAPHAEL to answer the respective prayers of Tobit and Sarah—not by bringing death, but by bringing happiness to all concerned, thus underlining the goodness of his providence.

The denouement is initiated by Tobit's decision to inform Tobias about the money he had deposited with his friend in Media some years earlier. Taking opportunity of the occasion to impart some very excellent instruction in righteousness (Tob. 4), Tobit informs Tobias concerning the money, and the decision is taken to send Tobias in quest of it. A suitable traveling companion is needed, however, and Tobias chances upon one Azarias who is well qualified and who in reality is the disguised Raphael. Despite the protestations of Tobias's mother, Anna, the pair sets out on their adventuresome journey accompanied, as the narrator quaintly notes, by young Tobias's dog.

Camping on the banks of the TIGRIS that night, Tobias is nearly swallowed by a fish as he washes. Azarias directs Tobias to catch the fish, to cut out its heart, liver, and gall, and to store these safely among his gear. As they continue their journey, upon the questioning of Tobias, Azarias explains that the organs of the fish are particularly useful for two things: the smoke from the burning heart and liver will drive away evil spirits; and from the gall can be made a salve that will take away the white films from a blind man's eyes (thus the reader is made aware of the direction the story will take). Azarias tells Tobias that he is to take Sarah as his wife. Tobias, however, has already heard of Sarah's plight and is consequently not at all eager to follow the direction of Azarias. When Azarias reminds Tobias of the potency of the fish organs, Tobias's mind is changed.

The delightful meeting of Raguel and Tobias occurs next, and in due course the marriage is proposed and indeed, despite Raguel's warning, takes place the same day. That night, as the couple retire to their bed chamber, Sarah, Raguel, and his wife, Edna, are all seized with anxiety. Indeed, so pessimistic is the father that when all have retired he rises secretly and digs a grave for Tobias that he

might be buried immediately. A maid is forthwith sent to see whether Tobias is alive or dead. Tobias, however, upon entering the bed chamber had, as directed, made a fire and placed the heart and liver of the fish on the fire, and the smoke that was produced had driven out the demon as promised. Tobias and Sarah then had prayed together and had gone to sleep, voluntarily forgoing the consummation of their marriage. The maid found them asleep and reported to Raguel that Tobias was alive and well, upon which Raguel prayed a prayer of thanksgiving.

The next day a great feast of celebration lasting fourteen days begins. Tobias sends Azarias to Media to fetch his money and to bring his father's friend to the wedding feast. At this point the narrative returns to Nineveh and to the deep concern of Tobit and Anna at the delayed return of Tobias. Tobit believes that Tobias is well; Anna, however, insists that her boy is dead and is angry with Tobit for trying to deceive her. Meanwhile Tobias and his new wife, with half of Raguel's wealth, accompanied by Azarias and, of course, Tobias's dog, too, finally take their leave of Raguel and Edna. Tobias and Azarias (and the dog) run ahead of the entourage in their haste to return home. At this point the narrator says, "Meanwhile Anna sat looking intently down the road by which her son would come" (Tob. 11:5). Suddenly she catches sight of them in the distance and reports to her blind husband, "Look, your son is coming, and the man who went with him!" (v. 6).

Thereupon follows one of the most delightful reunions of literature—there is much weeping and rejoicing, and, of course, the gall salve is applied to the father's eyes and his blindness is removed. At the gate of Nineveh they meet Sarah and the slaves and cattle that made up part of Raguel's gift. Another week of celebration takes place. Afterward Tobit and Tobias offer half of Raguel's gift to the good Azarias. The latter, however, only remarks that thanksgiving is due to God for his goodness. Then he volunteers, "I am Raphael, one of the seven angels who stand ready and enter before the glory of the Lord" (Tob. 12:15). They fall on their faces in fear, but Raphael says not to be afraid and adds that he was sent by God. After directing them to write what has happened, he disappears.

Then follows a magnificent prayer of rejoicing, which Tobit is said to have written. The final chapter of the book is rather anticlimactic, giving an account of Tobit's last words, including a warning for his descendants to leave Nineveh because JONAH's prophecy was going to come true (Tob. 14:4; according to the text followed by the NRSV, the reference is to NAHUM's prophecy). The death of Tobit and then of Anna is recorded. Tobias and his family then return to ECBATANA, where he eventually buries both Raguel and Edna. The book ends with a notice of the death of Tobias, with the note that before he died he heard of the destruction of Nineveh.

II. Historical background. The story places Tobit in the days of the Assyrian captivity and thus in the 8th cent. B.C. There are, however, a number of difficulties involved in the historical and geographical details of the book. Thus Tobit says that when he was "still a young man" the tribe of Naphtali deserted Jerusalem (Tob. 1:4). This rebellion, however, seems to have occurred about 931 B.C., following the death of SOLOMON (cf. 1 Ki. 12:16, 19) and long before the time of Tobit. A more significant problem lies in the statement that it was in the days of SHALMANESER (in Tobit he is designated by the Greek equivalent Enemessar) that Naphtali was taken into captivity (Tob. 1:2). In reality, it was not Shalmaneser V who did this, but rather his predecessor TIGLATH-PILESER III, in about 734 B.C. (cf. 2 Ki. 15:29). SENNACHERIB is said to have been the son of Shalmaneser and to have reigned in his place after his death (Tob. 1:15). Sennacherib, however, was really the son of SARGON II, a monarch who, although he reigned for some fifteen years, is not mentioned at all in Tobit. The reference at the end of the book to the destruction of Nineveh by NEBUCHADNEZZAR and AHASUERUS is erroneous (14:15 RSV, but see NRSV and mg.), since Nineveh actually fell to

NABOPOLASSAR and the Median king Cyaxares (612 B.C.).

The geographical difficulties are also striking. In particular, it is implied that the Tigris River is E of Nineveh, some distance toward Ecbatana (Tob. 6:1), whereas Nineveh itself lay on the E bank of the Tigris. Further, in one of the major recensions of the book (that of Sinaiticus and the Old Latin, followed by the Vulgate) it is stated that Ecbatana is in the middle of a plain, two days' journey in distance from Rages (5:6 NRSV, but see RSV). Actually Ecbatana lies high in the mountains and is some 200 mi. away from Rages.

These various discrepancies have led almost all scholars to conclude that Tobit cannot derive from the historical period it purports to be from, but instead is probably to be dated much later, when the historical details of the earlier period were not so well known. Indeed, it may be that the story, despite its historical setting, is entirely fictional, although a few scholars have argued for the possibility that there is a historical kernel underlying the present book.

III. Sources. The conclusion that Tobit is a fictional rather than a historical story is confirmed to some extent by its apparent dependence upon a few well-known folk tales of the ancient world. The author of Tobit seems to have known the story of AHIKAR, which recounts how this individual, who held office under Sennacherib and Esarhaddon, became rich only to be falsely accused by his adopted son Nadin and sentenced to death. He was however secretly hidden by a servant who once had also been the victim of false accusations and whom Ahikar himself had saved. Ultimately Ahikar, able to be of assistance to Esarhaddon in satisfying an unreasonable demand of Egypt, was vindicated as righteous and avenged.

At the beginning of Tobit, Ahikar is mentioned as a very important and powerful administrator of Esarhaddon's kingdom who happens also to be Tobit's nephew (Tob. 1:21 – 22). Ahikar and Nadab (one of the several slight variations of the name that occur) are said to have attended the great celebration that took place upon the return of Tobias and his new wife to Nineveh (11:18). At the end of the book, explicit allusion is made to the story of Ahikar. In his last words Tobit reminds Tobias and his grandsons about what Nadab did to Ahikar. "Because he gave alms, Ahikar escaped the fatal trap that Nadab had set for him, but Nadab fell into it himself, and was destroyed" (14:10). The moral of the story, "So now, my children, see what almsgiving accomplishes, and what injustice does" (14:11), is very similar to that which concludes the story of Ahikar. In addition to the similarity of the general theme of the two books, that is, the suffering and vindication of the righteous, there are a number of striking parallels among the wisdom sayings.

A second story that may have been known to the author of Tobit is that which, although occurring in a variety of forms, is known generally as the "Fable of the Grateful Dead." The basic theme of the story concerns the return of a dead man's spirit in human form to reward in various ways (including the bestowal of a bride) the man who had at no small sacrifice gone out of his way to give proper burial to the dead man's corpse. In some versions of the story, the righteous man is advised by the embodied spirit to marry a certain rich young woman (sometimes said to be a princess) whose several husbands have all died on their wedding night as the result of a serpent dwelling within her. The righteous man is aided by his benefactor in subduing the serpent and winning the woman. Usually also included in these stories is the ultimate revelation of the true identity of the benefactor. Although the actual story of Tobit is somewhat different, a number of its motifs are similar to this fable: Tobit's concern with proper burial of the dead; the appearance of a spirit (in this case, angel) in human form; the rewarding of Tobit's righteousness; the bestowal of a bride upon Tobias; the subjugation of the demon; the revealing of Raphael. The author of Tobit appears to have used the various motifs while

transmuting the basic narrative by virtue of his own Jewish viewpoint.

One more source has been suggested as possibly drawn upon by our author. The Egyptian *Tractate of Khôns* speaks of the exorcism of a young demon-possessed princess by Khôns, deity of Thebes, and to that extent parallels the victory won over Sarah's demon in Tobit. However, the parallel is too general to be impressive, and although it has been argued that Tobit was written to counteract the Egyptian story, the contention is too closely tied to an Egyptian provenance (not at all certain) to be regarded as convincing.

IV. Language, place of origin, and date. Prior to the discovery of the DEAD SEA SCROLLS, scholars tended to favor the conjecture that Tobit was written originally in Greek. Among these scrolls, however, fragments of Tobit in Hebrew and Aramaic have been found, arguing for the probability of a Semitic original.

No consensus exists with regard to the provenance of Tobit. Three important locations have been suggested for the composition of the book: Mesopotamia, Egypt, and Palestine. The book itself naturally assumes a Mesopotamian origin. The story takes place in Mesopotamia and reveals a number of Persian influences, especially in the areas of angelology and demonology (cf. the demon's name, Asmodeus, which is of Persian origin). Even in such a minor detail as the occasional reference to Tobias's dog, Persian influence has been detected, since in ZOROASTRIANISM the dog is regarded as sacred whereas in Judaism the dog is generally despised.

However, because of the author's apparent ignorance of the geography of the area, some have preferred Egypt as the place of origin of the book. In addition to the possible dependence of Tobit on the *Tractate of Khôns*, Tobit may reflect a knowledge of Egyptian magic that was able to effect cures employing certain organs of the fish. It has even been suggested that the "fish" that nearly swallowed Tobias (Tob. 6:2) was in reality a crocodile. Moreover, when the demon is finally driven out of Sarah, he is said to have fled "to the remotest parts of Egypt" (8:3), which could possibly be an unconscious indication of the book's place of origin.

Despite apparent indications that the book originated in DIASPORA Judaism, this is by no means a necessary conclusion. Indeed, the discovery of Aramaic and Hebrew fragments of Tobit at Qumran may perhaps add some plausibility to the conjectures of a few scholars that the book originated in Palestine. The religious teaching of the book might favor this viewpoint to some extent (its tenor is similar to that of ECCLESIASTICUS), but at the same time the exilic sympathies of the book cannot be doubted. In sum, the evidence—internal and external—is so insubstantial that although plausible arguments for several places of origin may be put forward, their truth cannot finally be determined.

The date of Tobit too is difficult to establish. Some scholars have dated the book as early as the 7th cent. B.C., but a number of problems militate against this conclusion. The serious historical blunders mentioned earlier suggest that the author was removed from this period by a considerable space of time. Further, unless we are predisposed to allow that the story is literally true or that the author had the gift of prophecy, he betrays an awareness of events (e.g., the fall of Nineveh and Jerusalem, the return from the captivity, and the rebuilding of the temple [cf. Tob. 14:4 – 5]) that took place long after this time. On the other hand, there is no trace of a knowledge of the Maccabean revolt on the part of the author (see MACCABEE).

These facts indicate that the book likely dates from the period between the beginning of the 4th cent. and end of the 3rd cent. B.C. The majority of scholars favor the end of this period, a date of approximately 200 B.C. or shortly thereafter. Whereas this date cannot be established beyond question, it most successfully accounts for the various data available from internal evidence. It goes

without saying that nothing is known of the actual author of the book, except that he was certainly a devout champion of pietistic Judaism.

V. Purpose and theological teaching. If it is correct to assume that the story contained in Tobit is not historical, but rather the fictional composition of an author who made use of contemporary folk legend(s), what may be said of his purpose in publishing the book known to us as Tobit? The story indeed is only a vehicle used by the author in propagating a religious message concerning the importance of right conduct and the faithfulness of God in turn. Of central importance in the author's world are the observance of the law and the performance of deeds of charity. Chapter 4 in its entirety is given over to ethical exhortation put in the mouth of Tobit in preparation for Tobias's journey. This exhortation, as well as the aphoristic material found throughout the book, may be fairly taken as addressed by the author to his readers. This material, however, is only incidental to the actual plot of the book.

Directly underlying the plot is a theme that it was also the author's purpose to convey: despite all appearances, in times of blackness God's providence is at work, assuring that everything ultimately will work out to the good of the righteous involved. The righteousness of the main characters of the drama, their prayers and exhortations, were meant to serve as a pattern of conduct for the writer's contemporaries. Second, and perhaps more important, the experience of these characters—particularly Tobit and Sarah, who are in despair at the opening of the story—is meant to serve as an impetus toward hope in the midst of trying circumstances (such as one might well expect to find in the period leading up to the revolt of the Maccabees) that faced the first readers of the story.

Tobit is important for the light it sheds on Jewish piety of the intertestamental period. The theological stance of its author is rather similar to that of the early Pharisaism of the post-Maccabean age, with the exception that Tobit knows nothing of the RESURRECTION of the dead (rewards and punishments are received in the present life). This is to say that Tobit presents an attractive picture of Jewish piety at its best. The author was, of course, greatly influenced by the OT. Indeed, a large number of parallels to OT passages (esp. the Pentateuch, but elsewhere as well) may be indicated, some of these being close enough to be designated paraphrase or near quotation (e.g., compare Tob. 3:10; 6:15 with Gen. 42:38; 44:29, 31; Tob. 4:14 with Lev. 19:13; Tob. 8:6 with Gen. 2:18; Tob. 7:3 – 4 with Gen. 29:4 – 14; Tob. 4:10; 12:9; with Prov. 10:2; 11:4).

The prayers of the book, of great devotional beauty and theological depth, are worth study in themselves. Therein God is recognized as one whose majesty and power are beyond measure. Indeed, such is his transcendence in the author's view that the mediation of angels assumes a role of importance in the efficacy of prayers (cf. Tob. 12:15). Tobit's concern with ANGELS and DEMONS is important for illustrating how belief in them flourished during the intertestamental period. The prayer by Tobit in ch. 13 refers to future (eschato-logical?) events that include a large-scale return to Jerusalem, the participation of Gentile nations in worship there, and a magnificent rebuilding of the temple. The predominant emphasis is on the present fulfillment of righteousness. Temple worship and religion at the personal level are magnified. Emphasis falls upon tithing and almsgiving, but also upon care for the dead and proper observance of food and marriage regulations.

Large place is given to personal virtue, both in the story and in the accompanying exhortation. Perhaps most impressive of all in this connection is the presence of the golden rule in its negative form: "and what you hate, do not do to any one" (Tob. 4:15). It has been pointed out that the book encompasses the "three Pillars of Judaism": prayer, almsgiving, and fasting (cf. 12:8). The genius of Tobit, however, is found in the completely successful combination of the ethical teaching with the

narrative of the story itself. Where there is righteousness, God will act mercifully on behalf of his servants. This truth, indeed, is uttered as the last words of the dying Tobit, a conclusion that may be regarded as the moral of the whole story: "So now, my children, consider what almsgiving accomplishes, and what injustice does" (14:11).

VI. Text and canonicity. The textual history of Tobit is very complex and reflects what must have been an early and widespread popularity. The Greek text of the book has survived in no less than three distinct recensions, although the third finds only partial witness. These are (1) CODEX SINAITICUS (2) CODEX VATICANUS and CODEX ALEXAN-DRINUS, and (3) a few minuscule MSS (44, 106, 107, according to the numbering of Holmes and Parsons) in Tob. 6:8—13:8, but which otherwise reflect the text of recension (2).

A large number of versions are extant, representing each of the three recensions, and in more than one instance versions in the same language reflect different recensions. For recension (1) the Old Latin, Vulgate, Aramaic, and Hebrew versions are available. Recension (2) is represented by Syriac, Coptic (Sahidic), Hebrew, Ethiopic, and Armenian versions. The third recension is not available in its entirety, either in its "major" Greek witnesses or in the versions. It is clear, however, that a full third recension existed from its presence in a Syriac version from Tob. 7:9 to the end of the book, and also from a papyrus fragment in Greek from Oxy-rhynchus that contains a portion of 2:2 – 8. The third recension seems clearly to be the latest of the three, often combining the readings of the two earlier ones by way of mediation. It is interesting, however, that one of its readings (12:8) appears to be quoted in *2 Clement* 16.4, although this cannot be taken as evidence for an early date of the recension as a whole.

More interesting is the relationship between the first two recensions. The numerous similarities may possibly be the result of interdependence, but a number of conspicuous differences seem to suggest that the similarities may instead be due to the common use of a prior (original?) edition. The first recension as found in Sinaiticus is considerably longer than the second recension, yet it omits two important sections (Tob. 4:1b – 18; 13:8 – 11a) as well as several lesser ones that are preserved in the latter. These omissions in Sinaiticus, however, are probably fortuitous, for other early witnesses to the same recension, notably the Old Latin and one of the Qumran fragments, contain the missing material. Since the first recension is so much longer than the second, it is arguable that it is a later expansion of the latter. Nevertheless, it is also possible that the second recension (i.e., as found in Vaticanus and Alexandrinus) is a later reduction of the first recension.

This conclusion finds support in that many of the differences of the second recension are accountable as improvements and alterations incorporating or reflecting a later viewpoint. Indeed, it is generally conceded that the first recension is the earliest of the two, since its style is clearly more Semitic and thus presumably closer to the original. This is confirmed to a considerable extent by the fact that the Aramaic and Hebrew fragments found at Qumran reflect the text of the first recension.

The two main recensions of the Greek text are both available in Rahlfs's *Septuaginta*. The KJV and RSV generally follow recension (2), whereas the NRSV accepts a large number of readings from Sinaiticus and the Vulgate (relying no doubt on the now standard edition of the Greek text by R. Hanhart, *Tobit*, Septuagint 8/5 [1983]; cf. also Hanhart's *Text und Textgeschichte des Buches Tobit* [1984]; C. J. Wagner, *Polyglotte Tobit-Synopse: Griechisch, Lateinisch, Syrisch, Hebräisch, Aramäisch, mit einem Index zu den Tobit-Fragmenten vom Toten Meer* [2003]; S. Weeks et al., eds., *The Book of Tobit: Texts from the Principal Ancient and Medieval Traditions, with Synopsis, Concordances, and Annotated Texts in Aramaic, Hebrew, Greek, Latin, and Syriac* [2004]).

Tobit is received as canonical in the Roman Catholic Church following the decision concerning apocryphal books taken at the Council of Trent in the 16th cent. Consequently Tobit and Judith take their place beside the OT book of Esther in the Roman Catholic Bible. Despite its popularity in Jewish circles, the book was never included in the Hebrew Bible. Finding a place in the SEPTUA-GINT, however, the book was known and used by the early church. Eventually, it became clear that the book was inferior in status compared to those of the Hebrew canon. JEROME expressed the view that the book was valuable to read, but was not to be reckoned as a part of the canonical Scriptures. In the Protestant Bible, Tobit is relegated to the Apocrypha, where it follows 1 and 2 Esdras.

D. A. HAGNER

Tochen toh'kuhn. See TOKEN.

Togarmah toh-gahr'muh (תֹּגַרְמָה *H9328,* meaning unknown). Son of GOMER and grandson of JAPHETH (Gen. 10:3; 1 Chr. 1:6). He was no doubt the eponymous ancestor of a people group that bore his name. In Ezekiel a nation called BETH TOGARMAH is described as carrying on extensive trade with TYRE in horses and mules (Ezek. 27:14); it is mentioned also as one of the allies of MAGOG in association with Gomer, PERSIA, CUSH, and PUT (38:6).

JOSEPHUS (*Ant.* 1.6.1 §126) regarded them as the Phrygians, who were noted for their horses (see PHRYGIA). Assyrian inscriptions, however, mention a Til-garimmu, which in HITTITE is Tegarama and probably carries on the name of the ancient Togarmah. This city was located in Urartu (ARMENIA), the eastern part of CAPPADOCIA. Since Ezekiel places Togarmah in the N (Ezek. 38:6) and in association with Gomer, it is quite probable that Togarmah is to be located N of Palestine in the area SE of the Black Sea. Til-garimmu was destroyed by the Assyrians in 695 B.C.

Tohu toh'hy*oo*. See TOAH.

Toi toi. See TOU.

Token toh'kuhn (תֹּכֶן *H9421,* possibly "measure"). Also Tochen. A town within the tribal territory of SIMEON, listed between RIMMON and ASHAN (1 Chr. 4:32). The parallel list omits Token and has ETHER in its place (Josh. 19:7 MT), but CODEX VATICANUS has *Thalka* in addition to *Ether,* and on

that basis some scholars believe that Token is original and that it dropped out of the Hebrew text (to keep the total number of towns at four, Ain and Rimmon can be read as the name of one town, EN RIMMON). However, this view leaves unexplained the omission of Ether in 1 Chronicles, and so others argue that Token and Ether are alternate names for the same town (see KD, *Chronicles,* 99 – 100). If they are different towns, the location of Token is unknown.

Tokhath tok'hath. See TIKVAH.

Tola toh'luh (תּוֹלָע *H9356,* prob. "worm" or "crimson" [see *HALOT,* 4:1702]; gentilic תּוֹלָעִי *H9358,* "Tolaite"). (1) Firstborn son of ISSACHAR, grandson of JACOB, and eponymous ancestor of the Tolaite clan (Gen. 46:13; Num. 26:23). In the time of DAVID, the descendants of Tola who were "fighting men" *(gibbôrê hayil;* NJPS, "men of substance") numbered 22,600 (1 Chr. 7:1 – 2; some interpret the number to mean 22 muster units totaling 600 soldiers).

(2) Son of Puah, descendant of Issachar, and judge (leader) of Israel for twenty-three years after the time of ABIMELECH (Jdg. 10:1 – 2). He did not live within the tribal territory of Issachar but rather in the hill country of Ephraim in a town called Shamir. See SHAMIR (PLACE). The expression "rose to save Israel" is used only of Tola, but the text does not give additional details about his work (see *ABD,* 6:595 – 96).

Tolad toh'lad. See ELTOLAD.

Tolbanes tol'buh-neez. KJV Apoc. form of TELEM (1 Esd. 9:25).

toll. See TAX.

tomb. A place of BURIAL, which in the ANE ranged from a simple opening in the ground to natural or hewed-out caves, mausoleums, and pyramid tombs. Because objects of daily use were frequently buried with the dead, tombs have been a rich source of information about the cultural levels and religious beliefs of ancient peoples.

I. Terminology. The two most frequently used Hebrew words for "tomb" or "grave" are *qeber H7700* (Gen. 50:5 et al.) and its cognate *qĕbûrâ H7690* (Gen. 35:20 et al.), both from the verb *qābar H7699*, "to bury." Also relevant are such terms as *šĕ,ôl H8619* (e.g., Gen. 37:35; see SHEOL), *šahat H8846*, "pit" (e.g., Ezek. 28:8), and even *bayit H1074*, "house" (Isa. 14:18). In the NT, the most common term is Greek *mnēmeion G3646* (Matt. 8:28 et al.), but its cognate *mnēma G3645* occurs in several passages (Mk. 5:3 et al.); another noun, *taphos G5439*, is used primarily by Matthew (Matt. 23:27 et al.; the only occurrence outside of Matthew is Rom. 3:13).

II. Kinds. The practice of burying the dead is ancient. The earliest burial places must have been extremely simple, consisting of no more than shallow graves in the ground that have long since been obliterated by erosion or by cultivation. Bodies were carefully placed, sometimes in a tightly or loosely flexed position, and sometimes on their backs in an extended position. Graves of this type dating from the Paleolithic and Mesolithic periods have been found in caves at Wadi el-ʿMugharah. A Natufian culture of the Mesolithic period (c. 8000 B.C.) practiced communal burial; more than sixty persons were buried at the Mugharet el-Wad on Mount Carmel (see CARMEL, MOUNT). Excavations at JERICHO reveal that in the Pottery Neolithic period (c. 5000 B.C.), there may have been no formal burial at all—just exposure of the body.

During the Neolithic period, tombs were made by lining and covering a pit with stones; the boxlike structure formed is known as a *cist* (from Latin *cista*, meaning "box"); it could be considered a forerunner of the coffin. Tombs of this kind have been found at Teleilat el-Ghassul from the Chalcolithic period. A megalithic tomb of Neolithic times called a *dolmen* has been found in various parts of Palestine; it was similar to a cist but much larger. The dolmen was constructed by placing large stone slabs on end to form the sides and a large stone on top as a covering; the structure suggested the form of a primitive house. A large field of dolmens is at el-Adeimeh, E of the Jordan River, opposite Jericho.

During the Early Bronze Age (Proto-Urban period), for the first time in Palestine natural CAVES were used for tombs or else the tombs were hewn out of rock. The limestone hills of Palestine are honeycombed with caves that provided natural sepulchres. Bodies were placed in them in various kinds of containers and safeguarded by large stones placed in front of them. Several hundred bodies were interred in them over a long period of time; at a later period, multiple burials became less common. One of the best known is the cave of MACHPELAH that ABRAHAM bought from the HITTITES when SARAH died (Gen. 23:4 – 16). Approach to the artificial caves hewn out of rock was made by way of a shaft, usually rectangular, sunk vertically to the bottom and varying in diameter from 3 to 10 ft., and in depth from 3 to 15 ft. The shaft was filled with debris to make sure that the tomb would not be disturbed.

Sometimes several chambers connected by adjoining shafts were hollowed out in a family's burial place; this kind of burial was popular down to the Greek period. The bodies were originally

placed in the tomb complete, but when the available space was all taken, many of the bones of earlier burials were thrown out or sometimes collected in a common pile in a corner of the tomb. It appears that frequently only the skull was considered worthy of continuing care, for the rest of the body, even before the flesh had completely decayed, was often no longer treated with any reverence.

In the same period, burial was sometimes made in huge pottery urns in which the body was placed in a prenatal position, with the knees drawn up to the face. At Byblos (ancient GEBAL) urns were large enough to contain the flexed body of an adult. The skeleton of an infant was found curled up in a bowl at Tepe Gawra (prob. from the 4th millennium B.C.). A later development of the rock-hewn tomb consists of those with columned or carved façades such as are preserved at PETRA. The earliest Mesopotamian tombs were located underground and often were vaulted or domed. The tomb of Queen Shub-ad and her husband at UR contained a large retinue of servants buried wth the royal couple as well as numerous personal possessions, in the Egyptian manner.

The most elaborate burial customs developed in EGYPT; no ancient people gave more attention to burial than the Egyptians. The *mastaba* evolved from the simple trench into which the body had been placed and covered with a mound of earth that served as the grave of those who were not of the royal families. Several mastabas placed on top of each other in receding fashion served as the origin of the stepped PYRAMID which later evolved into the square-based pyramidal form usually associated with the three great pyramids at Giza. Mummification required an elaborate preparation of the body for burial; it involved essentially desiccation of the body, removal of the viscera for placement in canopic jars of alabaster or marble, followed by careful wrapping of the body in linen sheets sometimes 24 yards long. Elaborate provisions were made for food, water, entertainment, and whatever might make the future life more comfortable. Astonishing quantities of wealth were buried with the pharaohs. (See also EMBALMING.)

At a later period, the pyramid tomb was replaced by the rock-cut tomb found in the Valley of the Kings in an isolated section of the Libyan Desert. The Israelites were surely familiar with the Egyptian process of mummification, but they never practiced it generally; nor did they ever practice cremation, as did the Babylonians and Romans. Rather, they washed the dead, then dressed them or wrapped them in grave clothes. The clothing or wrappings were sprinkled with sweet-smelling crystals of balm. The body was then laid on a bier or stretcher and carried by friends or relatives to the place of burial (Jn. 19:39 – 40). Mourners walked beside the deceased, weeping and wailing loudly.

Bodies were sometimes placed in CISTERNS. Fifteen bodies have been found in a cistern at GEZER with a number of spear heads. In the Mycenaean period (c. 1580 – 1100 B.C.) burial vaults, called *tholoi*, or beehive tombs, were constructed; they were roofed in corbeled masonry and obviously imitated in shape a primitive house form. They were usually dug in the side of a hill, although in a few cases they were built above ground. They were approached by a horizontal passage open to the sky and normally at right angles to the hill slope. The burial chambers were oval, round, or rectangular. They were family graves and were opened each time a new body was placed in them. Afterward the door was again blocked and the passage way (or *dromos*) was filled with earth to discourage grave robbers. About fifty of these have been excavated in Greece to date.

Jerusalem tomb with head-rests, repository, and place for burial preparation (7th or 6th cent. B.C.).

Sarcophagi, or coffins with lids, were never used generally in Palestine as were ossuaries for the subsequent gathering of the bones. Wooden and stone sarcophagi were used in Egypt from the most ancient times. The rulers of the city of Byblos in Lebanon, which early had close relations with Egypt, were buried in stone sarcophagi toward the end of the 2nd millennium and beginning of the 1st. The best known of these is the sarcophagus of King Ahiram of Byblos, dating probably from the 10th cent. B.C. In Palestine, a clay sarcophagus first appeared in the 12th cent. at BETH SHAN and later in other places. These cylinders of baked clay are anthropoid in shape, just large enough for a body, with a removable lid at the head. They reflect foreign burial customs, perhaps Egyptian.

During the Iron Age, a further development took place in the rock-hewn tomb. The floor in the middle of the burial chamber was made lower so that, at the sides, benches were left on which the dead were placed in an outstretched position. This type of tomb became known as the bench tomb (called by some "divan tomb") and was characteristic of the OT period. There were usually three of these benches in the more or less rectangular shaped tomb so that three corpses could be placed in them at one time. When later burials took place, one bench at a time was cleared by placing its bones in a common pit, which was usually located in a corner of the grave chamber. The fact that they were used for successive burials explains why there were no grave inscriptions (giving such information as name of person buried there). These tombs belonged to individual families and were generally used for many generations; they were regarded as important possessions of the family. Hence, in a very real sense, the people were "gathered" to their fathers in the family tomb (cf. Gen. 49:33). During the Hellenistic-Roman period, variations of the bench tomb evolved. The bench tomb developed to the point that an arch vaulted over the individual bench. A further development was the carving of a trough-shaped depression in the bench into which the corpse was placed.

The next significant development was tombs with drawer-like crypts (often referred to as *kokhim*; the Heb. term, not found in the Bible, is *kûk*, pl. *kûkîm*). In this type, long, low crypts were recessed into the rock, each designated for a single burial. They were usually arranged in several rows, one on top of the other at right angles with the wall of the burial chamber. Some of these were often extensive plans with a number of chambers adjoining each other, each with drawer-like crypts and a broad open vestibule as entrance, which was sometimes embellished with placements of

columns, squared pilasters, etc. Individual burial began with the drawer-like galleries, which were closed with a stone slab after burial, and no future burials were made in them; therefore grave inscriptions began to appear in the graves. They are found, for example, on the burial structure at Marisa (now Tell Sandahannah) and date from the 3rd cent. B.C. The walls of this tomb were elaborately ornamented with painted designs and scenes; the colors were still brilliant when the tomb was first opened but have since faded. The paintings include representations of animals, vases, and musical instruments. The passageway from the vestibule to the first burial chamber was quite small to make it easy to close the burial place. This passageway was often sealed off by means of a rolling stone that could be rolled aside. A large groove was hewn in the rock into which the stone was fitted. These stones were too heavy to be easily moved. It was in this type of tomb that the body of Jesus was placed. The women found the stone rolled away when they went to the tomb on the third day (Matt. 28:2; Mk. 16:3 – 4; Lk. 24:2; Jn. 20:1).

During the Hellenistic period, tower-like burial monuments were constructed above the ground next to or over the subterranean burial place, which made its location visible from a distance. Examples of this kind of monument are found on the Phoenician coast at ʿAmrit. Also the burial monuments in the KIDRON Valley at Jerusalem, called "The Tomb of Absalom" and the "Tomb of Zacharias," are of this type; they date from the Herodian period.

As emphasis on separate burial continued, a new practice developed of preserving the bones of the deceased. Instead of placing the bones in a common pit after removing them from the burial bench or burial trough to make room for a new body as had been formerly done, they were placed in a special chest, called an OSSUARY. A number of small limestone chests dating from the 1st cent. B.C. and the first two centuries A.D. have been found. There were probably also wooden ossuaries which time has obliterated. They were often decorated with carved rosette and geometric designs, and the name of the deceased engraved on them. They were placed in the burial chambers. Their inscriptions have proved to be a valuable source for the supply of personal names of the NT period. One inscription contained the words, "Do not open." Ossuaries of the 1st and 2nd centuries A.D. have been found in a necropolis near the "Dominus Flevit," on the W side of the Mount of Olives with the name Jesus written in Hebrew-Aramaic as well as the symbol of the cross.

During the Persian period, rulers in PHOENICIA were buried in anthropoid or chest-shaped stone sarcophagi, especially in SIDON. Marble and stone sarcophagi were also found in Sidon from the Hellenistic period with beautiful examples of Greek relief art, such as the well-known "Alexander sarcophagus," which depicts events from the life of ALEXANDER THE GREAT. This type of sarcophagus did not appear in Palestine until the Roman period. Large numbers of lead and stone sarcophagi of this type have been found in the Jewish cemetery of Beth Shearim. Tombs of eight of the nine great Persian kings have been identified. That of CYRUS the Great (c. 530 B.C.) is a small structure of simple massive stone, still standing on a lonely stretch of desert near Parsagadae, NE of PERSEPOLIS. When Alexander the Great campaigned in Persia, he found the tomb of Cyrus, but with its treasures already stolen and the body of the king lying on the floor. The tombs of the Achaemenid kings DARIUS I, ARTAXERXES I, and Darius II, were cut in solid rock side by side near Persepolis, and are reminiscent of the rock-hewn buildings of Petra.

Rolling stone at Herod's family tomb.

From the period of SELEUCID domination (165 – 137 B.C.), a very interesting monument is the mausoleum at ⁽Araq el-Emir in central TRANS-JORDAN, thought to belong to the Tobiad family (see TOBIAH #2 and TOBIAS #2) because one of the rock-cut tombs there has the name "Tobiah" deeply incised on the rock in Aramaic characters of the 3rd cent. B.C. (but see discussion in J. Naveh, *The Development of the Aramaic Script* [1970], 62 – 64). The red and brown sandstone cliffs between which Petra nestles are lined with tombs that vary considerably in size and shape, many of them being monumental. Most of them date from the 1st cent. B.C. to the 2nd cent. A.D. Two of these are outstanding for their splendor: El-Khazneh and Qasr Bint Far⁽un. Both have been dated from c. 9 B.C. to c. A.D. 40 during the reign of the greatest of the NABATEAN kings, ARETAS IV Philodemus. Among these rock-hewn monuments with architectural façades, the principal ones were undoubtedly mausolea devoted to the memory and the cult of the dead, rather than temples, as many have held.

Two types of tombs dating from the 2nd and 3rd centuries A.D. have been found at Palmyra, biblical TADMOR (2 Chr. 8:4), W of the city. One was an underground "house of eternity" type; these were often beautifully painted and contained carved statues and reliefs representing the members of the family buried in the tombs. The other was the tower tomb, several stories in height, built of carefully hewn stone blocks. Around the walls were rows of niches, each designed to receive a corpse of the family that owned the monument. They were decorated with skillful art representations of the deceased persons, of gods, and of religious scenes. Cremation of corpses was not commonly practiced in Palestine; it was considered a punishment reserved for criminals (Lev. 20:14; 21:9). There was apparently a relationship between the horror with which the ancient Hebrews looked upon the burning of bones (cf. Amos 2:1) and their early beliefs about life after death. Preservation of the body, as with the Egyptians, seemed to have significance.

Every type of tomb is found in the Roman world. Early on, they built elaborate tombs, sometimes of the *tholos* type, representing the interior of a Roman house, richly carved and painted. There are pyramid tombs (Gaius Cestius, Rome, before 12 B.C.), circular or tumulus types such as that erected by AUGUSTUS for himself in Rome (28 B.C.), and larger and more monumental tombs like that of HADRIAN. The Romans, however, preferred cremation, after which the ashes of the deceased were placed in columbaria, which resembled the filing-case arrangement of modern American crematories. The APPIAN WAY, leading into Rome, is lined with hundreds of tombs of the well-to-do. PAUL must have seen many of these tombs as he made his way from the port of PUTEOLI to ROME (Acts 28:13 –

Tombs hewn in solid rock and grouped together were used by the Etruscans as family burial places. This type of burial place, called CATACOMB, was used during early Christian times in Rome by both Christians and Jews. The catacombs of Rome form a vast labyrinth of narrow passages usually 3 – 4 ft. wide with small chambers at intervals, which were excavated at successive levels. The dead were buried in the galleries in long horizontal recesses or compartments in the walls, stretched out to full length. Sarcophagi were not used. Some compartments held four or more corpses, although most held only one. They were carefully sealed by slabs of marble or huge tiles cemented together. Epitaphs were painted or engraved on these tiles, giving the names of the occupants and often a Christian emblem, such as the sacred monogram (the interlaced letters X and P), the fish, or the shepherd. The family would hold a funeral feast in its vault both on the day of burial and on the anniversary.

Some of the underground passages contained larger halls and connected suites of chapels that were probably constructed for congregational worship during the era of persecution. Baptistries have also been found in the catacombs. The catacombs were used as places of refuge for which they were well suited because of the intricacy of their design and because of their access through secret passages to escape routes. The major part of the catacombs belong to the 3rd and early 4th cent. A. D. When JEROME visited them in A.D. 354, interment in them had become rare. Other catacombs have been found at Syracuse, Malta, Sicily, Alexandria, and Sheikh Abreiq in Palestine (identified as Beth Shearim).

III. Location. Cemeteries in biblical times were generally located outside inhabited settlements, usually near the city or village, even as in modern times. Every city had its own burial place. The dead were generally buried in the ground, away from dwellings, and rarely within the occupied settlement itself. The tombs were usually prominently marked, sometimes painted with whitewash, so that no one would be accidentally defiled by contact with the dead (Lev. 21:1; Num. 6:6; 19:13).

The custom of burying the dead under the floor of the house was well known in Assyria, Syria, and elsewhere, though it was an unusual practice in Palestine (1 Sam. 25:1 is an exception). Evidence of burial beneath the floors of houses and in adjoining courtyards has been found in Neolithic and Chalcolithic times at Wadi el-Mugharah and Teleilat el-Ghassul. A large number of burials were found beneath the floors of houses in Jericho in the Pre-Pottery Neolithic B period. The skulls seem to have received special treatment of plaster to give the appearance of a portrait. Burial of important people seems to have been permitted in ancient times within the city itself; David was buried "in the City of David" (1 Ki. 2:10). The grave of an old woman of Gezer was found within the city in the form of a pit lined with great stones. Children were buried in clay pots inside the settlement, a practice that was generally followed in the Mediterranean region. Skeletons have been found in city walls, but these were not normal burials but a human sacrifice.

Burial alongside the road was not infrequent for various reasons (e.g., RACHEL, Gen. 35:19). Secluded spots under trees were sometimes chosen (burial of DEBORAH, REBEKAH's nurse, under an oak, Gen. 35:8; SAUL and his sons "under the great tree in Jabesh," 1 Chr. 10:12). After settling in the land of Canaan, the Hebrews followed the Canaanite practice of burial in natural and artificially hewn CAVES; the natural caves were not difficult to find in a hilly country like Palestine. One of the best-known burial caves is that of MACHPELAH (Gen. 23:17), which became the burial place for ABRAHAM's family. LAZARUS was placed in a burial cave (Jn. 11:38), as was Jesus (Jn. 19:41).

Most of the burial sites uncovered have belonged to the rich and outstanding, because the poor

were usually interred outside the city in pits, cisterns, caves, and simple earth graves (cf. 2 Ki. 23:6; Jer. 26:23; Matt. 27:7). In Jerusalem, the graves of the people were located in the Kidron Valley on the E side of the city. The potter's field, or AKELDAMA, was a burial place outside the Jerusalem wall for foreigners (Matt. 27:7 – 8; Acts 1:19). There are, of course, practically no remains of the simple earth burials of ancient times; thus a study of tombs and burial customs as they developed through the ages has been largely limited to the more outstanding sites.

The Hebrews maintained a deep sentimental attachment to the family grave. JOSEPH requested permission to take the body of JACOB to the ancestral burial place at Machpelah (Gen. 50:4 – 5) and later requested that his own remains be taken to Palestine when the Israelites returned to their own land (vv. 24 – 25). GIDEON was buried in the tomb of his father (Jdg. 8:32). SAMSON was buried in the family tomb "between Zorah and Eshtaol" (16:31). NEHEMIAH expressed a desire to ARTAXERXES to go to the city of his fathers' sepulchres (Neh. 2:5). Like the Egyptian pharaohs, wealthy Hebrews arranged for construction of their tombs during their lifetime (2 Chr. 16:14; cf. Joseph of Arimathea, Lk. 23:53; Jn. 19:41).

Tombs were located in gardens attached to dwellings (2 Ki. 21:18, 26), within city walls (1 Ki. 2:10), on elevated places (2 Ki. 23:16; Isa. 22:16), on hillsides (2 Chr. 32:33), in natural and artificial caves. The most common burial place was a necropolis located near the city or village, often on a rocky terrain that was not suitable for agriculture.

IV. Contents. Ancient tombs from all periods of the ANE show that it was common practice to bury articles of varying value with the deceased. No one gave more attention to providing for the dead than the Egyptians because of their belief that any future life was simply an extension and glorification of the one they had lived on earth. Every kind of convenience and article of daily life was buried with them, including clothing, jewelry, perfumes, tables, chairs, various implements, boats, even embalmed pets, weapons, lamps, all to be used in the afterlife. The known treasures in them were so great that grave robbing was a common practice. Ancient rulers had a great dread of having their tombs plundered and took every precaution to make the site secure, but rarely were successful.

It was a sign of great evil to be removed from a tomb (Isa. 14:18 – 19), but an even greater calamity was to be deprived of burial (2 Ki. 9:36 – 37; Jer. 8:1 – 3). As a mark of respect, watch was kept over the tomb (Job 21:32). Offerings of food and drink suggest a belief in life after death, and the cult of the dead was widespread in ancient civilizations; even graves of Neanderthal men have been discovered containing offerings of food. Canaanite tombs have been found at RAS SHAMRA with the remains of food and with jars containing what had once been milk; tombs were provided with openings so that food and drink could be brought for the dead. The rich findings in the tombs of Tutankhamen and Queen Shub-ad provide breathtaking evidence of the elaborate burial provisions for royalty in ancient Egypt and SUMER.

This striking sarcophagus from Perga (2nd cent. A.D.) belonged to a certain Domitius Julianus and his wife, Domitia Philiska.

V. Tombs of the kings. Referred to as "the tombs of the kings of Israel" (2 Chr. 28:27), "the tombs of David" (Neh. 3:16), "the tombs of David's descendants" (2 Chr. 32:33), these are the royal sepulchres of the Judean kings of Davidic descent in the City of David, not far from the KING's GARDEN and the Pool of SILOAM (1 Ki. 2:10; 2 Chr. 21:20; Neh. 3:15 – 16). From David to Ahaz, thirteen kings were buried in the City of David: David, Solomon, Rehoboam, Abijam, Asa, Jehoshaphat, Joram ("buried in the City of David, but not in the tombs of the kings," 2 Chr. 21:19 – 20), Ahaziah (who died of wounds in Megiddo but was brought to Jerusalem for burial, 2 Ki. 9:28), Joash ("buried in the City of David, but not in the tombs of the kings," 2 Chr. 24:25), Amaziah (slain but body was brought to Jerusalem, 25:27 – 28), Azariah (or Uzz-iah, who according to 2 Ki. 15:7 was buried with his fathers, but according to 2 Chr. 26:23 in the burial field belonging to the kings because of his leprosy), Jotham, and Ahaz (cf. 2 Ki. 16:20 and 2 Chr. 28:27).

Jehoiada the priest was honored by being buried there also (24:16). The author of Kings does not record the burial place of Hezekiah (2 Ki. 20:21, but cf. 2 Chr. 32:33). Funerals of wives and children of kings are not mentioned. Asa was buried in his own sepulchre (2 Chr. 16:14). Jehoram was not buried in the tombs of the kings (21:20), nor Ahaz (28:27). Manasseh was buried "in the garden of his house in the garden of Uzza" (2 Ki. 21:18), as well as his son Amon (21:26). A special tomb was prepared for Josiah (23:30; 2 Chr. 35:24), the last king whose burial is recorded.

The location of the tombs in the City of David was still known after the EXILE. They were plundered by the HASMONEAN king John Hyrcanus and by HEROD (Jos. *Ant.* 13.8.4; 16.7.1). Their location apparently was still known in NT times when PETER referred to the tomb of David (Acts 2:29). A tablet with an inscription was found by E. Sukenik to the effect that the bones of King Uzziah

had been transferred to the top of the Mount of Olives. Available evidence justifies the conclusion that it was the custom in the E Mediterranean area between the 13th and 6th centuries B.C. to bury kings in their palaces, or in the near vicinity, even within the area of the inner citadel of the city.

The term "City of David" is not to be identified with the entire city of Jerusalem but is a synonym for the citadel or stronghold of ZION. Evidence points to the triangular hill wedged between the valleys of the Tyropoeon and the Kidron, and overlooking the gardens and pools of Siloam, as being the location of the City of David. In this region of the old city of David, long horizontal tunnels have been found in the rock, which may have been the burial place of the Davidic family. There is no definite evidence by which the garden of Uzza may be identified. Some later traditions have located the tomb of David in BETHLEHEM, in the area of GETHSEMANE, or on the SW hill of Jerusalem. There is a so-called Tomb of the Kings of Judah located in the N part of Jerusalem that is actually the tomb of Helen, queen of Adiabene, a district in Upper Mesopotamia. It is mentioned by Josephus (*Ant.* 20.2.1, 3) and antedates the fall of Jerusalem in A.D. 70 by ten or twenty years.

F. B. HUEY, JR.

tongs. This English term is usually the rendering of Hebrew *melqāḥayim H4920* (the dual ending suggests a device consisting of two pieces). Both the NIV and the NRSV use "tongs" in three occurrences of this Hebrew noun (1 Ki. 7:49; 2 Chr. 4:21; Isa. 6:6), but elsewhere the NIV has "wick trimmers" and the NRSV "snuffers" (Exod. 25:38; 37:23; Num. 4:9; the KJV has "tongs" in all but Exod. 37:23, where it uses "snuffers"). The rendering "tongs" seems especially appropriate in the Isaiah passage, which speaks of the instruments used by the SERAPH to remove a burning coal from the altar. But in all the other passages the reference is probably to devices made of gold that were used to dress the wicks of the seven-branched CANDLESTICK in the TABERNACLE and TEMPLE, the burnt parts of the wicks being placed in snuff trays. If "wick trimmers" or the like is appropriate in the Exodus and Numbers passages, the same can be said of the instances in 1 Kings and 2 Chronicles, where the term occurs in connection with "lamps."

The KJV uses "tongs" also in Isa. 44:12 to render Hebrew *ma⁽ăṣād H5108*, "The smith with the tongs both worketh in the coals, and fashioneth it with hammers" (NIV, "The blacksmith takes a tool and works with it in the coals…"; the NRSV emends the text, "The ironsmith fashions it and works it over the coals"). In the only other occurrence of this Hebrew term, it apparently refers to a kind of axe or chisel (Jer. 10:3).

tongue. A symmetrical, very mobile, muscular, unpaired organ, situated in the mouth. It extends from

its attachment to the hyoid bone and epiglottis in the upper part of the front of the neck to its free end at the incisor teeth. It is shaped like a pyramid, flattened above and below, rounded at its angles, and terminated in front by a blunt point. Composed almost entirely of interlacing muscle fibers, its surfaces, which are exposed to the secretions of the mouth and throat, are covered with mucous membrane. Within this membrane on the upper surface of the tongue are located gustatory papillae, or taste buds. Five kinds of such papillae are recognized. They are predominantly located toward the back of the tongue where it approaches the throat. It is by means of these taste buds that the tongue performs its prime function as a sense organ, namely, detection of taste. In fact, it is the only unpaired sense organ of the body. The sense of touch is also highly developed in the tongue so that it can locate food particles in the mouth, and in particular between the teeth, which would otherwise evade attention. Guiding and maintaining food between the upper and lower teeth, the tongue is of importance in mastication. It also aids in the acts of sucking, swallowing, and spitting of saliva and upper respiratory secretions and excretions.

From the physician's standpoint, the custom of having a patient protrude the tongue is important, because certain systemic diseases of the human body manifest their presence with alterations of the tongue, such as allergies, pellagra, sprue, pernicious anemia, iron deficiency, and vitamin deficiencies. Moreover, a paralysis of one-half of the tongue (i.e., right or left) reveals itself in such an examination by reason of the deviation of the tongue to the affected side. This symptom may be indicative of a diseased condition in the brain region such as stroke from internal hemorrhage, thrombosis of an artery, or brain tumor. (See further H. Gray, *Anatomy of the Human Body*, 27th ed. [1959], 1230 – 37.)

The tongue is also a crucial organ of speech in that it makes possible the articulation of both consonants and vowels (by metonymy *tongue* can in addition mean "language," e.g., Esth. 1:22; Rev. 5:9). It is in this connection that the tongue is referred to in the Scriptures as a potent force (Heb. *lāšôn H4383*; Gk. *glōssa G1185*). It is stated that death and life are in its power (Prov. 18:21). James elaborates on this when he refers to the tongue as an untamable and unruly evil, full of deadly poison (Jas. 3:8), and as a fire, a world of iniquity (3:6). Paul, in turn, refers to the tongue as an instrument of deceit (Rom. 3:13) characterizing the unregenerate person. On the subject of glossolalia, see TONGUES, GIFT OF.

An important figurative use of the term is Luke's description of what happened on the Day of PENTECOST: "and there appeared to them divided [*or* distributed] tongues as of fire and [it] sat on each of them" (lit. trans. of *kai ōphthēsan autois diamerizomenai glōssai hōsei pyros, kai ekathisen eph' hena hekaston autōn*, Acts 2:3). Although it is clear that the flamelike appearance rested on all the 120 disciples, there is some disagreement about the precise point being made. Some believe that the picture is one of many tongues and that "a tongue rested on each of them" (NRSV; the KJV's expression "cloven tongues" misunderstands the term *diamerizomena*). Others suggest that a firelike appearance distributed itself among them. The figure of the tongue may be simply a way of indicating "the jagged effect produced by a flame" (BDAG, 233), but it may also have been suggested by the fact that the disciples began to speak in other "tongues," that is, languages (v. 4).

The significance of the fire imagery can also be interpreted in several ways. Some think it indicated the fearless and persuasive witness in the power of the HOLY SPIRIT that was henceforth to characterize the testimony of the disciples of Christ. Others point out that fire is a symbol of the divine presence (e.g., the BURNING BUSH in Exod. 3:2; see FIRE III). More specifically, there may well be an allusion to the prophecy of JOHN THE BAPTIST regarding the filling of the Spirit (Lk. 3:11; see BAPTISM OF THE HOLY SPIRIT), which in turn may indicate judgment (3:16). These various allusions do

not necessarily exclude one another.

<div style="text-align: right">P. E. ADOLPH</div>

tongues, confusion of. Genesis 11:1 – 9 contains the account of the origin of language diversity. That the languages of today root out of a past in which human beings used a common speech is an idea accepted by many specialists engaged in philological research, though the linguistic evidence is ambiguous. The question of the origin of the various languages is closely related to the question whether the different human races have sprung from a single stock. The Genesis account describes how the descendants of NOAH settled in the plain of SHINAR, or Babylonia, and built a city and a tower to reach into heaven, which would serve as a center of unity and power as well as satisfy their ego. See BABEL.

Many towers such as described in the Genesis account have been found on the Babylonian plains. Known as ZIGGURATS, they served as rallying points around which cities and centers of worship were built. Inscriptions have been found relating to some of the ziggurats. Stephen L. Caiger refers to an inscription reporting the collapse of such a ziggurat: "The building of this temple offended the gods. In a night they threw down what had been built. They scattered them abroad, and made strange their speech. The progress they impeded" (*Bible and Spade* [1936], 29, quoting G. A. Smith, *Chaldaean Account of Genesis* [1880]).

<div style="text-align: right">A. C. SCHULTZ</div>

tongues, gift of. One of the ninefold SPIRITUAL GIFTS (1 Cor. 12:4 – 11). The clearest exhibition of this gift in the NT is in Acts 2, describing the Day of PENTECOST; the apostle PAUL gives an extended treatment in 1 Cor. 12 – 14. Whether these two passages refer to the same phenomenon is sometimes disputed.

1. In the OT
2. In the Gospels
3. The experience at Pentecost
4. Later evidence from Acts V. In the Pauline epistles
5. In the postapostolic church

I. In the OT. The NT doctrine of tongues—spiritual utterances believed to be a direct product of divine operation and Spirit-filling and usually thought to be ecstatic, that is, not consciously or rationally controlled by the speaker—has a long prehistory in the OT. When PETER explained this phenomenon to the crowds of Jewish pilgrims gathered at Jerusalem, he did so in terms of the words of JOEL (Acts 2:16 – 21, citing Joel 2:28 – 32). Secondly, in 1 Cor. 14:21 – 22 PAUL explained the evidential nature of tongues to the unbeliever by referring to ISAIAH (Isa. 28:11).

Many scholars would say that the experience recorded of the seventy elders (Num. 11:24 – 29) was ecstatic in character and corresponds to "speaking in tongues," although the word used in the text is "prophesied." Clearly the phenomenon is, in this context, the outward sign of the Spirit's coming and presence. The experience is not directly attributed to MOSES himself; indeed, his position is contrasted with that of the ordinary "prophet" (12:7 – 8; some argue that the Heb. word for prophet, *nābî᾽*, *H5566*, actually means "ecstatic speaker"; see PROPHETS AND PROPHECY IV.H). SAMUEL too was surrounded by a group of ecstatics (1 Sam. 19:18 – 24); their infectious "prophesying," which

seems to have been at least akin to "tongues," was held to be a sign of Yahweh's presence; yet Samuel's reputation as a prophet was based on something else (1 Sam. 3:20). The same is true of ELIJAH and ELISHA. There is also evidence for similar entranced behavior at this time on the part of the prophets of BAAL, probably including ecstatic utterances (1 Ki. 18:28). In the later days of the great "writing prophets" of Israel, there is no reference to any such phenomena whatsoever, unless the "trances" of EZEKIEL should be so considered.

II. In the Gospels. There is no reference in the Gospels to speaking with tongues, either actual or anticipated, with the exception of one textually uncertain passage (Mk. 16:17 KJV; see below). In view of the manifestations of the Spirit's activity in the life of JOHN THE BAPTIST (who was filled with the HOLY SPIRIT from his mother's womb, Lk. 1:15), the life of JESUS CHRIST (on whom the Spirit was seen to descend at his baptism, Matt. 3:16), and the life of the disciples (who performed miracles of healing and demon expulsion, Lk. 10:17), this is remarkable but undoubted. There is thus no necessary connection between "tongues" and "filling with the Spirit" as far as the Gospels state. Mark 16:17, in the midst of signs that are to accompany those who believe, lists "new tongues" (*glōssais kainais*, some MSS omit "new"). This is clearly a reference to glossolalia in some form; but as the ending of this gospel (Mk. 16:9 – 20) is thought by most scholars not to belong to the original text of Mark, it may well have been added by the early church on the basis of Pentecost and subsequent apostolic history. The clause is placed between "cast out demons" and "take up serpents," both of which signs did occur in the apostolic church (Acts 16:18; 28:5). It is not, therefore, independent evidence concerning glossolalia.

III. The experience of Pentecost. At first sight, the description in Acts 2 is crystal clear. All were filled with the Holy Spirit and "began to speak in other tongues" (v. 4)—evidently foreign tongues hitherto unknown to the disciples, but meaningful to the pilgrims then gathered in Jerusalem. This much seems proved by v. 6, "each one heard them speaking in his own language." (See also TONGUE.)

Some scholars, however, feel that such a simple interpretation is inconsistent both with the vague term "sound" mentioned in Acts 2:6 (Gk. *phōnē G5889,* a "noise" sufficiently unusual to attract a crowd) and with the fact that others were able to interpret the whole episode as drunken babbling (v. 13). They further point out that, elsewhere in the NT, the "tongues" spoken seem to be incomprehensible unless accompanied by a spiritual "interpretation," and do not seem to be recognizably human languages (e.g., 1 Cor. 14:2; many believe that 13:1 characterizes "tongues" as angelic languages). These scholars feel that Luke is describing an occurrence of ordinary glossolalia (as at CORINTH), but in such a way as to show that Pentecost was the antithesis of BABEL, where human tongues were confused (Gen. 11:9), and also to demonstrate that Pentecost corresponded to the "giving of the law," which, according to Jewish tradition, was delivered simultaneously to all the nations in seventy languages (G. F. Moore, *Judaism in the First Centuries of the Christian Era: The Age of the Tannaim,* 3 vols. [1927 – 30], 1:277 – 78).

Early Christian scholars suggested that the miracle was one of hearing rather than speaking; Acts 2:8 would lend some support to this. Less convincing are the suggestions that Jews from all the above-mentioned lands would have understood GREEK or ARAMAIC, both of which tongues the apostles presumably knew well, and either of which they could therefore have used on this occasion; or that phrases from foreign languages, once heard but long forgotten, welled up from the subconscious and were spoken aloud for the first time, striking an answering chord in the hearers. When modern scholars speak of "intuitive understanding" or "thought rapport" or "thought

transference," they are either returning to the first explanation (the miracle of hearing) or else saying in Pauline terms that the hearers were given, on that occasion at least, the gift of interpretation.

IV. Later evidence from Acts. If the gift of tongues had a peculiar evidential value as showing the initial coming of the Spirit, then it was appropriate that it should also appear at the Pentecost of the Gentiles (Acts 10:46, the converts in CAESAREA) and probably at that of the Samaritans (8:17). Although tongues are not specifically mentioned in these two passages, there are obviously some clear outward signs of the Spirit's coming. The gift is specifically mentioned of the converts in EPHESUS (19:6); if they were disciples of John the Baptist (and not merely ill-instructed Christians, as is sometimes claimed) there would be an appropriateness here also.

What, then, is Paul's assessment of "tongues"? First, he freely admitted it as a spiritual gift, and indeed one in which he excelled (1 Cor. 14:18), but one which, along with "interpretation of tongues," he placed lowest on the list of spiritual gifts (12:10, 30). He did not expect all to speak with tongues (12:30), nor did he associate this gift with the fullness of the Spirit or with special sanctity.

Whether or not others spoke with tongues on receiving the Holy Spirit is uncertain. It is possible (as being an outward sign clearly seen by all), but more cannot be affirmed, for Acts does not record it. For instance, Paul could speak with tongues later (1 Cor. 14:18). Did he receive this at baptism? Or were these tongues after Pentecost foreign languages or mystic utterances? Lastly, there was no set rule: sometimes, as at Pentecost, the gift came to those long baptized; at Caesarea, it came before baptism, and indeed was the ground of baptism. At Samaria, if it came, it was at "confirmation."

V. In the Pauline epistles. The classic treatment of this doctrine is in 1 Cor. 12 – 14, under the general heading of "spiritual gifts" (1 Cor. 12:1). It was obviously such a familiar part of Corinthian church life that Paul never explained exactly what it was, but assumed that his reader knew. Nor was this manifestation limited to CORINTH among the Gentile churches. Its occurrence at Caesarea and Ephesus has already been mentioned. Moreover, according to some, in Rom. 8:26 the reference to the Spirit interceding for the saints "with groans that words cannot express [*stegmatois alalētois*]" may possibly correspond to praying "with the spirit" (1 Cor. 14:15 NRSV), and thus refer to praying "in tongues." (Others argue that the latter passage is prob. not a direct reference to the Holy Spirit [cf. NIV, "with my spirit"] and that in Romans the term *alalētos G227* may suggest something *nonlinguistic* or *unspoken*; cf. C. E. B. Cranfield, *A Critical and Exegetical Commentary on the Epistle to the Romans*, ICC, 2 vols. [1975 – 79], 1:423 – 24; T. R. Schreiner, *Romans*, BECNT [1998], 444 – 46.)

The exact nature of the "tongues" in question is not clear. It does seem that, at Corinth at least, these were mystic utterances, not foreign languages (1 Cor. 14:2), although some would quote v. 10 against this. At all events, they needed "interpretation," without which they were unintelligible. Indeed, Paul seems to have stressed their very incomprehensibility as having a "sign" value to the outsider (v. 22) and as being the fulfillment of an OT prophecy (v. 21, quoting Isa. 28:11), although he also admitted that this incomprehensibility may expose Christians to the charge of madness (1 Cor. 14:23), as it had exposed them to the charge of drunkenness at Pentecost. Paul, also in the clearest possible terms, differentiated between "tongues" and "prophecy" (vv. 1 – 4). It is clear that, however much is comprehended under the term "prophecy," it is not in a "tongue," but is immediately understandable.

What, then, is Paul's assessment of "tongues"? First, he freely admitted it as a spiritual gift, and indeed one in which he excelled (1 Cor. 14:18), but one which, along with "interpretation of tongues," he placed lowest on the list of spiritual gifts (12:10, 30). He did not expect all to speak with tongues (12:30), nor did he associate this gift with the fullness of the Spirit or with special sanctity.

Paul, then, wanted to be sure that the source was indeed the Holy Spirit (1 Cor. 12:3), a point

made elsewhere in the NT as the "discernment of spirits" (v. 10 NRSV). All gifts, including this one, are for the common good and must be used accordingly (v. 7). Where "tongues" are concerned, they must not be used in the church except where there is an interpretation, either by the speaker himself (14:13) or by someone else (v. 28). God is a God of order; the use of "tongues," even if interpreted, must be limited and controlled in the church (vv. 33, 40). Christians should worship rationally as well as spiritually, using the conscious mind as well as the subconscious (vv. 14 – 15). One should remember that all gifts, including "tongues," are but passing phenomena (13:8). All gifts should be exercised in LOVE, and indeed swallowed up in love, the greatest spiritual gift of all (v. 1).

Within these limits, Paul was happy that the Corinthians should exercise their gift of tongues (1 Cor. 14:26), even if it be often only in the realm of private devotion (v. 28). Certainly he did not have it forbidden—a point sometimes overlooked today.

VI. In the postapostolic church. Perhaps owing to increased institutionalism, little was heard of tongues in the postapostolic age, except in "fringe sects," of which the Montanists are a good example. Perhaps official disapproval led to an unbalanced isolation of, and emphasis on, this spiritual gift. Certainly in these "fringe groups," glossolalia was accompanied by great enthusiasm, coupled with lack of theological balance. By the 4th cent., it must have virtually disappeared, for most church fathers were utterly at a loss to understand the biblical references (as can be seen from the commentaries produced). Nevertheless, in time of spiritual stress or renewal, it has frequently reappeared; the present age seems to many a clear instance of this.

R. A. COLE

tongues of fire. See TONGUE.

tools. The Bible makes reference to tools only incidentally, usually in connection with the arts and CRAFTS. The references to BEZALEL and OHOLIAB, who were especially endowed with skills to build the TABERNACLE (Exod. 31:1 – 11; 35:30—36:1), and to the importation of Phoenician craftsmen by SOLOMON to build the TEMPLE (1 Ki. 7:13) suggest that not many Hebrews were gifted in the use of tools.

Various tools crafted by carpenters, including plow, threshing sledge, olive press, winnowing fork, and broom.

Woodworkers made use of metal SAWS, probably of the Egyptian pull-type, with the teeth pointing toward the handle. They were also used for cutting STONE (cf. 1 Ki. 7:9; Isa. 10:15). According to tradition, ISAIAH was executed by being sawn in two (cf. Heb. 11:37). Mallets were probably used by the CARPENTER instead of HAMMERS (Jdg. 4:21; cf. 5:26). At least a half dozen Hebrew words are used with reference to the AX, indicating a variety of these useful tools. The blade might be set parallel, or at right angles to the handle, which itself might be long or short. Stone, bronze, and iron were materials used, and methods of hafting varied considerably (cf. Deut. 20:19 and 19:5 with 2 Ki. 6:5 and Jer. 10:3). Axes also doubled as weapons (Jdg. 9:48; Jer. 46:22; see ARMOR, ARMS). The carpenter used also scrapers, planes, and chisels for cutting (Isa. 44:13), with awls and drills for making holes (Exod. 21:6; Deut. 15:17). The KNIFE was ubiquitous, and used for all types of cutting. For layout and measuring, the line was used, with the plumb-bob, compasses, some kind of square, and rules. Scripture references to these items are numerous.

The stone MASON used many of the same or similar tools, with the addition of a variety of hammers (1 Ki. 6:7; Jer. 23:29). Chisels, wedges, rubbing stones, levers, rollers, and primitive cranes also were common. Brickmolds and various forms of trowels and picks (cf. the SILOAM inscription) may be added. The metalsmith would use, in addition to some of the hammers already listed, the special kind referred to in Isa. 41:7. He must also have an anvil, a furnace, bellows, molds, ladles, files, drills, etc. Tongs and clamps or vises were also probably devised and used.

Agricultural tools included the plowshare, sickle or pruning hook, ox-goad, mattock, forks and shovels, and the ax (1 Sam. 13:21; 1 Ki. 7:40, 45; Joel 3:13). Sharpening was mostly accomplished with stones and files (1 Sam. 13:21). The BLACKSMITH sharpened many tools by heating the metal and hammering out the edges. The potter had his own variety, including the wheel, kiln, tournettes, paddle-and-anvil, scrapers, and burnishers (see POTTERY). Other crafts, such as weaving, tanning, dyeing, tent-making, painting, jewelry-making, engraving, sculpture, etc., all had their special tools and equipment. See OCCUPATIONS and articles on specific tools.

<div align="right">M. H. HEICKSEN</div>

tooth. A small, hard body fixed in a dental socket, technically called an alveolus, in either of the jaws; it serves to seize, cut, tear, and grind nutritious substances. In general a tooth has the shape of an irregular cone. In a child there are twenty deciduous or milk teeth. In the adult the teeth are thirty-two in number: sixteen in each jaw, namely, four incisors, two canines, four bicuspids, and six molars. The crown of the tooth is the part that appears outside the dental socket. Within the crown is a central pulp cavity containing blood vessels and nerves. When injury occurs to this pulp cavity, toothache often results.

Proverbs 25:19 in referring to a broken tooth (Heb. *šēn H9094*) would seem to imply that a toothache may follow the breaking off of a significant portion of the tooth through exposure of the pulp cavity. Very hard compact tissue called dentine surrounds the pulp cavity. This in turn is covered with a vitreous material called enamel. The teeth are not covered by true skin. It was doubtless the relatively thin layer of enamel on the surface of the tooth to which JOB made reference when he said, "I have escaped by the skin of my teeth" (Job 19:20 NRSV). In the NT (Gk. *odous G3848*), most of the references are in the expression "gnashing of teeth" (Matt. 8:12 et al.; cf. also Job 16:9 et al.). On the phrase "An eye for an eye and a tooth for a tooth," see LEX TALIONIS.

<div align="right">P. E. ADOLPH</div>

topaz. A transparent or translucent mineral used as a gem stone (Gk. *topazion G5535*, Rev. 21:20). Topaz is an aluminum fluosilicate that occurs as prismatic crystals. It is usually colorless or pale yellow, less often pale blue or pink and occurs mainly in granites and related rocks. It resembles some yellow varieties of quartz that are referred to as "false topaz." Oriental topaz is a yellow variety of corundum (aluminum oxide). The rendering "topaz" is also used by the NIV for Hebrew *piṭdâ H7077* (Exod. 28:17; 39:10; Job 28:19; Ezek. 28:13; the NRSV interprets this Heb. term as a reference to CHRYSOLITE).

<div align="right">D. R. BOWES</div>

Tophel toh'fuhl (חֹפֶל H9523, meaning uncertain). A town or region "in the desert east of the Jordan," mentioned only in the opening words of Deuteronomy; it is one of several places that help to locate the area where MOSES spoke to Israel (Deut. 1:1). The precise location of Tophel is uncertain. Many scholars tentatively identify it with the modern village of eṭ-Ṭ afileh, in a fertile valley some 20 mi. SE of the S tip of the DEAD SEA and 7 mi. NNE of PETRA.

<div align="right">E. M. BLAIKLOCK</div>
The Valley of Ben Hinnom (looking E), a section of which was known as Topheth.

Topheth toh′fit (תֹּפֶת *H9532* and תָּפְתֶּה *H9533* [Isa. 30:33], possibly "hearth, cooking stove," if related to Aram. תְּפָיָא; the vowels may have been borrowed from the word *bēšet H1425*, "shame," to indicate disapproval, as in the names Ish-Bosheth and Mephibosheth [see further *HALOT*, 4:1781]). KJV Tophet. An area in the Valley of Hinnom; the latter was probably part of the Wadi er-Rababi, the deep-sided valley W and S of Jerusalem that traditionally separated the tribes of Benjamin and Judah. The Valley of Hinnom served as a sacred grove or garden of the Canaanites, later the center of Baal worship by apostate Jews (Jer. 32:35). The cultic activity seems to have involved the ritual sacrifice of firstborn infants to the god Molech. Although some doubt has been expressed as to whether such a gruesome rite actually existed, infant jar-burials from various periods of Palestine have demonstrated the plausibility of the accounts in the prophetic writings. And death by exposure has been practiced by tribal peoples around the world, the victims being female infants and sets of twins.

The name Topheth occurs only in the OT (2 Ki. 23:10; Isa. 30:33 [where NRSV has "his burning place"]; Jer. 7:31 – 32; 19:6, 11 – 14). The cult practiced there was most popular in the reigns of Ahaz and Manasseh, who are said to have sacrificed their own sons in Hinnom, undoubtedly a reference to Tophet (2 Chr. 28:3; 33:6). Under the restoration of Josiah the shrine of Topheth was desecrated and apparently destroyed (2 Ki. 23:10), but the memory of the awesome place lived on and became a symbol of the desolation and judgment of sin. It was filled with refuse from the walled city throughout later antiquity and its precise location is lost. (See G. C. Heider, *The Cult of Molek: A Reassessment [1985], 346 – 65*; *ABD,* 6:600 – 601.)

W. White, Jr.

toponymy. The study of place names. See name II.B.

Torah toh′ruh (תּוֹרָה *H9368,* "instruction, rule, law"). The Hebrew name given to the Pentateuch, that is, the five books of Moses. This noun derives from the verb *yārâ H3721,* meaning "to throw, shoot [as an arrow]." By association of ideas the noun came to mean "guidance, instruction" (cf. 2 Ki.

12:2), and also "commandment, law" (cf. Exod. 12:49 and frequently). The term *tôrâ* must not be interpreted in a solely legal sense—a connotation that was encouraged by the Septuagint with its rendition of the Hebrew noun with Greek *nomos G3795*. Rather, *tôrâ* is primarily a way of life derived from the covenant relationship between God and Israel. See law (OT).

That *tôrâ* is not only law can be seen from the fact that it can refer equally well to prophetic utterance (cf. Isa. 1:10; 8:16) and to the counseling of the wise (Prov. 13:4). Even in the Pentateuch, the term sometimes means decisions in respect to equity (Exod. 18:20), instruction in respect to behavior (Gen. 26:5; Exod. 13:9), rules in respect to cult (Lev. 6:9, 14, 25; et al.). It also covers the principle of justice: there shall be one *tôrâ* for the native and for the stranger (Exod. 12:49). From Exod. 24:12 it would appear that commandment (here *miṣwâ H5184)* is supplementary to *tôrâ* but not identical with it.

In the NT, *nomos* generally stands for the Mosaic code (cf. Lk. 2:22; 16:17; Jn. 7:23; 18:31; Acts 13:39; et al.). In at least one instance it stands for the Scriptures generally (Jn. 10:34). In rabbinic tradition, *tôrâ* connotes the written code plus oral interpretation as codified into the 613 precepts. See Mishnah. At no time is *tôrâ* purely law in the legal sense; it is rather the Jewish way of life requiring total dedication by reason of the covenant (cf. the Mishnaic tractate *Pirke᾿Abot*).

J. Jocz

torch. In biblical times torches, variously prepared, were used when stronger illumination was desired than that provided by lamps, as for night activities outdoors. The Hebrew word for "torch" is *lappîd H4365* (e.g., Jdg. 7:16, 20), although the KJV usually renders it "lamp." The Greek word *lampas G3286* can be translated either "lamp" (e.g., Matt. 25:1) or "torch" (e.g., Rev. 8:10). Similarly, the adjective *phanos G5749* ("bright"), when used as a noun, referred first to a torch, but later to any kind of portable light. On the night of betrayal, Judas Iscariot, procuring a band of soldiers and some officers from the chief priests and Pharisees, came to the garden of Gethsemane with "torches *[phanōn],* lanterns *[lampadōn]* and weapons" (Jn. 18:3; the KJV and NRSV translate, "lanterns and torches and weapons").

J. H. Skilton

tormentor. This term is used by the KJV as the literal rendering of *basanistēs G991,* which occurs only in Jesus' parable of the two debtors (Matt. 18:34). The Greek term was applied to jailers whose job it was not only to guard prisoners, but also to examine and torture them. Ordinarily, debtors were sold into slavery if they could not pay, but sometimes they were sent to a detention center; here a merciless *basanistēs* would make their lives miserable until restitution was made. See prison.

tortoise. The KJV rendering of ṣ*āb H7370,* which is found once only in a list of unclean animals (Lev. 11:29). This identification is incorrect; modern translations render it "great lizard." See lizard.

Tosefta toh-sef᾿tuh (Aram. תּוֹסֶפְתָּא, "addition," from יְסַף *H10323,* "to add" [cf. Heb. יָסַף *H3578])*. Name given to a collection of legal rulings and discussions (see Halakah) thought to supplement the official Mishnah; as such it is the main source of *baraitot* (teachings of the Tannaim not included in the Mishnah). The Tosefta, which has the same basic structure as the Mishnah (the same number of tractates organized under six orders), is by tradition attributed to Rabbi Ḥiyya bar Abba (student of Rabbi Judah, compiler of the Mishnah) and secondarily to Rabbi Hoshayah (R. Ḥiyya's student), but

some scholars reject or modify this view. There is also debate concerning the precise relationship between the Mishnah and the Tosefta. (See J. Neusner, *The Tosefta: Translated from the Hebrew* , 6 vols. [1977 – 86]; id., *The Tosefta: An Introduction* [1992]; H. L. Strack and G. Stemberger, *Introduction to the Talmud and Midrash* [1992], 167 – 81; H. Fox and R. Meacham, eds., *Introducing the Tosefta: Textual, Intra-textual, and Intertextual Studies* [1999].)

totemism. The term *totem* comes from *ototeman*, a word in Ojibwa (a N American Algonquin language) meaning probably "he is a relative of mine" (it was spelled variously by early scholars: *dodeme* [Father de Smet], *toden* [Father Petitot], *toodaim, dodaim, totam* [J. K. Long]). Totemism is a socioreligious complex formerly thought to be an organic unity including some combination of the mythical relationship of a kin group with a species of animal, plant, natural phenomenon (black duck's egg, sunlit cloud), or artifact (stone ax, canoe mast); ceremonies for the increase of the species; taboos on killing or eating these except ritually; kin groups named for these; matrilineal descent; and exogamy (marriage outside one's clan).

Although the concept was introduced to Europeans by the 17th-cent. Jesuit missionaries to North America, the first publication of the term in English is generally credited to J. K. Long (*Voyages and Travels of an Indian Interpreter and Trader* [1791]). The first American account was a posthumously published *History of the Ojebway Indians* by an Ojibwa chief named Peter Jones who died in 1856. It was J. F. McLennan, a Scottish lawyer, who brought the topic to the attention of science in a series on "The Worship of Animals and Plants" in the *Fortnightly Review* in 1869 and 1870. Then W. Robertson Smith (*The Religion of the Semites*, 2nd ed. [1894]) precipitated a debate among Bible scholars with the claim "that clear traces of totemism can be found in early Israel."

Totemism was described in many parts of the primitive world, but was most richly and dramatically manifested among aboriginal Australians. These tribes represented the most primitive cultures known. Thus, for Robertson Smith, Emile Durkheim (*The Elementary Forms of Religious Life* [1912]), J. G. Frazer (*Totemism and Exogamy* [1910]), Sigmund Freud (*Totem and Taboo* [1918]), and for many encyclopedists, anthropologists, theologians, and students of comparative religion down to the 1920s, Australian totemism presented a sense of organic unity among the constituent elements of the pattern found there, with two closely related consequences: (1) the necessity of theoretical explanations for divergencies found elsewhere, and (2) the concept of a "stage" in religious evolution from which all constituent elements found individually or in combination anywhere must be derived.

Premises of inquiry were influenced by preoccupation with origins. Reconstructions of primitive totemism rested upon beliefs that contemporary savagery represented early stages of human evolution, and that all primitives were fairly alike. Totemic theory in much of the standard literature was thus innocent of precepts of cultural diversity, relativity, and history basic to modern ethnological research. Edward B. Tylor significantly cautioned in 1899, "What I venture to protest against is the manner in which totems have been placed almost at the foundation of religion.…Totemism…has been exaggerated out of all proportion to its real theological magnitude." Other contemporaries of Robertson Smith "opposed or abandoned the theory as applied to Israel" (M. O. Evans in *ISBE* [1929], 4:300).

Examples of alleged biblical indicators of totemism may be grouped under five elements. (1) Families named for animals (Gen. 36; 49; Num. 26:17, 23, 26, 35, 39; 1 Sam. 25:3) and the use of family standards or ensigns (Num. 1:52; 2:2). (2) Food taboos, dietary laws (Lev. 11:44 – 47; 20:25 – 26; Deut. 14), and breaking these (Isa. 65:4; 66:17). (3) Matrilineal descent (Gen. 22:20 – 24; Jdg.

8:19; Ruth 1:8; 2 Sam. 17:25). (4) Exogamy (Jdg. 12:9). (5) Animal worship (Ezek. 8:7 – 11).

The Bible, however, makes no reference to human descent from the totem species, to ritual eating of them, or to ceremonies for their increase. In addition, biblical examples have been erroneously interpreted as the totemic elements in question. Prohibited foods do not correlate with family names, some of which represent clean and some unclean animals. The evidence cited is wholly insufficient to prove matrilineal descent, not to mention totemism, since matrilineal clans occur widely in nontotemic societies.

Important also is the methodological error of deriving totemism from the separate elements that are identified correctly. Animal names are altogether too common to infer a relationship of totemic pattern merely from the name; exogamy is a rule in all clans, totemic or not; Ezek. 8 clearly indicates patrilocality and thus, presumably, patrilineality rather than matrilineality; and worship of animals is very rare in totemic societies, also occurring in nontotemic ones. Thus, regarding totemism in the Bible one may conclude with E. Kautzsch, "the religion of Israel as it presents itself in the OT has not retained the very slightest recollection of such a state of things" (*HDB*, extra vol., 613 – 14).

Anthropologists have practically demolished totemism as a cultural complex. In 1916 Franz Boas (in *American Anthropologist* 18 [1916]: 319 – 26) called it "an artificial unit, not a natural one" and claimed that there was "no proof that all these customs belong together and are necessary elements of…a 'totemic complex.'" Later scholars concurred (R. H. Lowie, *Primitive Society* [1920]; A. Golden-weiser in V. F. Calverton, ed., *The Making of Man* [1931], 363 – 92).

Later consensus among Western anthropological structuralists is expressed by C. Levi-Strauss (*Totemism* [1963], 29): "totemism does not constitute a phenomenon *sui generis* but a specific instance in the general field of relations between man and the objects of his natural environment." There is general agreement with him that "totemism is an artificial unit, existing solely in the mind of the anthropologist, to which nothing specifically corresponds in reality." Some Soviet anthropologists repudiated this "nihilistic point of view," believing that "the bourgeois scientist is not usually able to understand fully the regularity of social phenomena; such understanding is only possible on the basis of Marxist methodology" (S. A. Tokarev in *Current Anthropology* 7 [1966]: 185 – 88; 8 [1967]: 260 – 61). Since then, however, totemism has largely become a "decadent concept" (R. Franz, *Totemismus, oder Die Decadenz eines Begriffs* [1980]; for a more recent approach, see A. Bleakley, *The Animalizing Imagination: Totemism, Textuality, and Ecocriticism* [2000].)

J. O. BUSWELL III

Tou t*oo* (תֹּעוּ *H9495* [1 Chr. 18:9 – 10] and תֹּעִי *H9497* [2 Sam. 18:9 – 10], possibly a HURRIAN name; cf. P.-E. Dion, *Les Araméens à l'âge du fer: histoire politique et structures sociales* [1997], 76 – 77). Also Toi. King of HAMATH on the ORONTES River. All that is known about him is that he sent his son JORAM (Hadoram) to DAVID with gifts, congratulating the Israelite king for his defeat of their common foe HADADEZER of ZOBAH (2 Sam. 8:9 – 10; 1 Chr. 18:9 – 10). G. N. Knoppers (*I Chronicles 10 – 29*, AB 12A [2004], 697 – 98) renders the Hebrew phrase *lišᵉāl-lô lĕšālôm*, "to sue for peace" (most versions translate, "to greet him"), and says there is merit to the common view that the "objective was to establish or confirm a client-treaty relationship with David"; but he thinks it is more "likely that the narrator considers the relationship to be founded on a mutual antipathy toward Hadadezer," and points out that "the establishment of an ongoing diplomatic relationship would be beneficial to both Tou and David."

Toubiani *too*'bee-ay'nee (Τουβιανοί). KJV Tubieni. The name of a group of Jews who lived in the otherwise unknown town of CHARAX (2 Macc. 12:17). The term Toubiani is commonly thought to correspond to *en tois Toubiou* (genitive of *Toubias*, 1 Macc. 5:13; NRSV, "the land of Tob"), but perhaps it refers to the Tobiad family (see TOB and TOBIAS #2).

tow. This English term, referring to the short and coarse fibers of FLAX before spinning, is used by the KJV in three passages, twice to render *ně'ōret H5861* (Jdg. 16:9; Isa. 1:31), and once to render *pištâ H7325* (Isa. 43:17; the KJV translates this word "flax" in Exod. 9:31 and Isa. 42:3). Although the KJV rendering is correct (and followed, e.g., by the NJPS for the first word), modern versions use a variety of equivalents, such as "string, fiber, tinder, wick."

towel. This word is used by English versions only in Jn. 13:4 – 5, where it renders Greek *lention G3317*, referring to the linen cloth used by Jesus to dry the feet of the apostles in the upper room.

tower. The usual Hebrew word for "tower" or "watchtower" is *migdāl H4463* (Gen. 10:4 – 5 et al.), although several other terms can be so rendered in certain contexts (e.g., *'ōpel H6755* in 2 Ki. 5:24 KJV; *'armôn H810* in Ps. 122:7 NRSV; see CITADEL). In the NT, the Greek word *pyrgos G4788* is used a few times (Lk. 13:4 et al.).

Although towers were sometimes built to guard property (e.g., a vineyard, Isa. 5:2; NIV, "watchtower"), the defensive tower was of particular importance and had roughly three types. Solitary towers served both defensive and refuge purposes, though in the latter case they could become a trap (Jdg. 9:51); they also appeared occasionally along the highway for the protection of travelers (2 Ki. 17:9; cf. C. M. Daughty, *Travels in Arabia Deserta*, 2 vols. [1921], 1:9, 13). A second type of a defense tower was built as a part of the city wall. A third type was the large hollow structures flanking city gates or situated as wall corners (Y. Yadin, *The Art of Warfare in Biblical Lands*, 2 vols. [1963], 1:160).

Agricultural watchtower.

Towers varied in size depending on their purpose. Tell el-Far ⁽ah (biblical Tirzah) exhibits a gate with thick-walled towers on either side, having rooms within, provided with a stair to the top to repel attackers (Yadin, *Art*, 1:54). In Gibeah (Tell el-Ful), Saul's citadel had rectangular towers with inner spaces at each corner and was constructed of rough-hewn stones in casemate style. A later fortress in smaller scale replaced it, but was soon abandoned when Jerusalem became the capital. The most spectacular example is a Neolithic tower at Jericho, c. 7800 B.C., surviving to approximately 27 ft. high, with a small tight stair to the ground. (See *ABD*, 6:622 – 24.)

H. G. Stigers

town. One normally thinks of the English word *town* as referring to something larger than a village but smaller than a city, yet in actual usage the distinctions often blur (as when we speak of Chicago as a town). In the Bible it is even more difficult to discriminate clearly between the relevant terms. The primary Hebrew word for "city," ⁽*îr H6551*, can be applied to a place as large as Nineveh (Jon. 1:3), but it is also used very frequently of towns whose inhabitants could not have numbered more than a few hundred. The same is true of Greek *polis G4484* (applied, e.g., to Jerusalem, Matt. 4:5, but also to Nazareth, 2:23).

The Hebrew term for "daughter," *bat H1426*, can refer to the dependent villages of a walled city

(e.g., the settlements surrounding HESHBON, Num. 21:25), but it is applied as well to larger cities in figurative language (e.g., "daughter Zion," Isa. 1:8 NRSV). Hebrew terms that usually refer to small villages include ḥawwâ H2557 (meaning perhaps "tent camp," applied only to the settlements of JAIR, Num. 32:41 et al.), pĕrāzôt H7252 ("open village," Esth. 9:19 et al.; cf. perazî H7253, Deut. 3:5 et al.), and ḥāsēr H2958 (a very frequent term with various meanings, but often referring to unwalled settlements, as in Neh. 11:25 – 30). Greek kōmē G3267 is applied only to small towns (Matt. 9:35 et al.); kōmopolis G3268, which has a similar meaning, occurs only once in the NT (Mk. 1:38).

According to Lev. 25:31, "villages without walls" come under a different law of redemption: its houses were to be returned to the seller in the JUBILEE YEAR, whereas city houses could not be redeemed if more than a year passed from the time of sale. In the OT period, the city was distinguished by having a defensive wall as well as being the center of commerce and industry, and in some cases the place where the local governor lived. In the NT period, the difference between city and town (or village) consisted in the possession of a constitution and law differing from country law, and following the law of the crown. In later times, a city was so designated if it was the bishop's seat. Towns were principally agricultural centers, dependent on walled cities for protection and for the sale and exchange of farm produce. Buildings were of lower quality, often crude. Evidence of many hundreds of towns and villages from the era of Jeremiah and before is to be seen, but most of them were never thereafter reinhabited.

H. G. STIGERS

town clerk. See CLERK, CITY.

Trachonitis trak'uh-n*i*'tis. See TRACONITIS.

Traconitis trak'uh-n*i*'tis (Τραχωνῖτις *G5551,* "rugged region"). A district E of the province of GALILEE and S of the city of DAMASCUS; during the time of Jesus it was part of the tetrarchy of PHILIP (Lk. 3:1). See HEROD VI; TETRARCH. In 23 B.C. Herod the Great received the task of pacifying Traconitis, BATANEA, and Auranitis (HAURAN), unruly tribes to the NE of the Jordan. After Herod's death in 4 B.C., his domain was divided among his three sons, and Philip was granted this territory. It consisted of newly settled lands, most of his subjects being non-Jews. The Jews, forming a minority of colonists, remained loyal to Philip since they had been settled there by the dynasty. Philip died in A.D. 34 and his territory came under the jurisdiction of SYRIA, but in 37 the emperor CALIGULA granted it to Agrippa, grandson of Herod the Great (subsequently he was given the rest of his grandfather's domains by the emperor CLAUDIUS).

Traconitis.

Traconitis was only a small part of this tetrarchy, located around Tracon in the NE of the territory. It corresponds with the modern el-Leja‛, a plateau of some 350 sq. mi., consisting of volcanic lava beds, intercalated with volcanic necks, ash beds, and sills. The dissected terrain, the thin soils, and its proximity to the desert to the E, all contributed to its poverty, sparsity of population, and the lawless character of the district. The region of ARGOB (Deut. 3:4), within the domain of OG of BASHAN, probably included part of this wild country. JOSEPHUS, in the 1st cent. A.D., refers to its inhabitants as predatory (*Ant.* 16.1.1 §§27ff.). Several Roman officials attempted programs of pacification with varying success. Later a Roman road was constructed through the area, and eventually in A.D. 106 TRAJAN transformed Traconitis into a new province which he called ARABIA. Its new capital was Bostra (see BOZRAH #3).

J. M. HOUSTON

trade, commerce, and business. Trade is essentially the exchange of commodities either by barter or for some fiscal medium, while commerce is trade on a large scale, especially on an international basis. The term *business* has a broad meaning but is here taken in the sense of intricate commerce, with credits, futures, and multiple exchanges of commodities.

1. Local trade
2. International commerce
3. III. Trade in the Greco-Roman period
4. Business

I. Local trade. The major local products carried over the ROADS of OT PALESTINE were foodstuffs of all kinds. These included the GRAINS (esp. WHEAT and BARLEY) and other seeds such as sesame, lentils, and beans. Also included were in-season fruits of many varieties. The city dweller ate green fruit as well as ripe fruit. Grapes, especially valuable (see VINE), could be consumed fresh, dried as raisins, fermented into wine and vinegar, or boiled down into dibs, a variety of sweet syrup similar to maple syrup. FIGS, like grapes, were dried for use in winter as well as summer. DATES were ideal for food since they were always fresh and contained a heavy sugar content.

As for "sweets," there was HONEY—both native (wild) and farm varieties. Palestinian honey could be bought in many flavors since the beehives were moved among the wide variety of flowers in season. The OLIVE, another year-round food, was preserved either in brine or OIL. Olive oil had several uses—for cosmetics, cooking, or lamp fuel, corresponding to grades one, two, and three. Nuts of all kinds, with the almond and the pine nut leading the sales list, were sought for their oil content, since meat fat was too expensive. Vegetables of many varieties were sold to city dwellers; JERICHO could grow them every month of the year.

Most meat animals, that is, SHEEP and GOATS, were taken to market on foot. CATTLE were primarily farm animals and took the place which the HORSE later held in farm work. When cattle became too old to work or languished in a drought, they were sold for food. The rich, however, always had meat on their menus, especially if the animals had been stall fed. Wild animals of the DEER family and a good variety of wild fowl always found a ready market (see FAUNA). The same was true of FISH, but the travel distance before sale was necessarily shorter. Salted fish, however, was a staple food everywhere. Rome used some salted fish from the Sea of Galilee. Dairy products such as milk and cheese were profitable (see FOOD).

Selling grains and spices is still part of trade and commerce today in Jerusalem's Old City.

Nonperishable foodstuffs such as grains, oil, and wine were sold in small stores within the city. Perishable goods were usually sold at a daily market, outside the gates of the city. In the larger cities sheep might be sold at one gate, and vegetables and fruit at another. When fruits were in season, hucksters went from street to street with their produce.

Both rich and poor liked condiments and SPICES. Among the former were anise, bay leaves, coriander, caper berries, cummin, mint, mustard (various varieties), rue, and saffron. Their favorites were onions, leeks, and garlic, which Israelites missed most in the Sinai experiences. Their spices were usually imported, especially from ARABIA. The most important were cassia, cinnamon, and

cloves. (See separate articles on these various condiments.)

The city dweller either went to the countryside to obtain his fuel for COOKING, or bought it at the city gate. The best fuel was charcoal, second came wood, and finally thornbush.

Some foodstuffs were "locally manufactured goods." One could, for example, go to a bakery to buy bread, cakes, and pastry instead of baking them at home. One could also buy a meal at a small cafe or a drink at a winery. Most people, however, usually thought of manufactured goods in other terms. The cook, for example, needed pottery storage jars for flour, oil, and wine, as well as jars to carry the water from the spring or cistern, cooling jars for the table, and cups to serve it. There was also a need for various sizes of cooking pots and a variety of dishes in which to serve the meal. POTTERY was in large part of local manufacture, although imported ware attracted the rich as it does today.

Clothing was the next major industry after food. Every woman was expected to spin, weave, and sew. There was always a market for superior workmanship in CLOTH and clothing. The most expensive garments were listed among the prizes in war. The most common cloth was WOOL; LINEN was more expensive. SILK became available in NT times, as did COTTON, but cotton lacked the popularity of silk. In the winter, fleeces were used as overcoats and shoes. The shepherd's sling was woven of wool, but might have had a LEATHER pocket.

WEAVING was accomplished using reeds and branches. BASKETS were a major type of container for many materials. Reed mats became a popular floor covering; they were also used in summer houses, especially for those who watched the vineyards and cucumber fields. If pottery was not fit for containing liquid, a leather bag was used. The farmer's seed bag for scattering grain might be cloth or leather, but the shepherd's bag was probably leather. Water bags and wineskins were made of leather.

If foot coverings could be afforded, leather SANDALS, shoes, and boots were available. JOHN THE BAPTIST wore a leather girdle. The leather worker was also busy making saddles and harnesses, and in NT times making PHYLACTERIES. Fine leather was also the MS material used for the copying of the books of the Bible, as well as other valuable writings.

The craftsman in wood had plenty of work. He made the farmer's plow, threshing sledge, pitchforks, and the yoke for his oxen. He also made the doors and door frames, the windows and window frames for the new and old houses in the city, as well as all the furniture used in the house. In the larger cities the craftsmen of the same trade lived in one section of the city. Thus, there would be a potters' quarter, a clothing quarter, a food market, a bakers' street, etc.

Different sections of Palestine would exchange products. The shepherds and farmers exchanged produce and sheep. The maker of charcoal found a market in areas where the forests had been cut down. The coastal cities and Jericho sold salt to the inland population. The carpenter was probably often paid in kind by the people for whom he worked.

Palestine had a few major exports for nearby nations. Because PHOENICIA needed food, central and northern Palestine sold to her grains and olive oil, wine and food animals. EGYPT had plenty of grain and animals but she needed olive oil and wine. SYRIA and Palestine grew the same farm products so there was little international commerce in these items except in periods of war or drought. When the CAMEL made trade with ARABIA common, the caravans sought Palestinian food stuffs. Raisins, dried figs, and dates were probably international produce because they were easily transported. Linen was sold to all nearby nations except Egypt, which made the best linen.

Natural products other than those already mentioned were primarily copper, bitumen, and raw wool. The prosperous COPPER periods were in patriarchal times, under SOLOMON, and during the

southern kingdom. The intervening time has produced no evidence either for or against the working of the great copper deposits in the mountains on either side of the ARABAH, S of the DEAD SEA. The military campaign described in Gen. 14 may have been occasioned by the desire to control the valuable copper deposits in EDOM and SINAI. Since IRON was the ideal metal in Solomon's day and quite inexpensive (GILEAD was a major center for iron ore), he sold his copper to the backward people in the RED SEA area. In return Solomon received gold, precious incense, and rare spices.

BITUMEN had a good market in Egypt, Palestine, and the adjacent lands. Its source was the Dead Sea, which according to JOSEPHUS came to be known as Lake Asphaltites or "asphalt lake" (*limnē gegonen hē Asphaltitis legomenē, Ant.* 1.9.1 §174). Its quality was excellent but the quantity was small, quite the opposite of MESOPOTAMIA. Sulphur was also a natural product from the Dead Sea area.

Palestine always produced more wool than she could manufacture so this was a constant export commodity, especially to heavily populated areas. MOAB was the major wool producer. Palestine also exported rare resins and gums as myrrh and balm. BALM was very expensive and was a major source of income for HEROD the Great, from his vast balm groves at Jericho.

The real manufacturing age in Palestine began about the time of ISAIAH in the 8th cent. B.C. (note that the PENTATEUCH has no laws relating to manufacturing), while JEREMIAH, more than a century later, saw the climax and then the cataclysmic end of such industries. Here were modern assembly-line techniques and one-industry towns. The farmers flocked to the industrial cities and the sweat shops absorbed them. Oversupply of labor glutted the market and wages fell to starvation levels. "Micah, a farmer contemporary of Isaiah, attacked the courts for their conniving in the nation's economic crimes. In 3:1 – 3, using the background of the butchering of sheep and cutting them up for stew, Micah calls these business tycoons and their lawyers cannibals living off the flesh of their helpless employees" (J. Kelso, *Archaeology and Our Old Testament Contemporaries* [1966], 144).

The potter used mass-production techniques with assembly-line methods, turning out a good product in great quantities at a reduced price. These ancient potters knew all the skills of their trade, and a modern ceramist can do nothing but admire them.

Industry's greatest change came in the cloth market. KIRIATH SEPHER, when excavated, turned out to be a one-industry town. It was located in a fine sheep district and the whole city was given over to the weaving and dyeing of cloth. Every house had large looms and dye plants, each one of them standardized. The raw material was right at the "factory's" door, and both industries had a heavy and constant market. Most manufactured goods were sold in Palestine itself and did not reach international markets.

Palestine's major imports seem to have been luxury goods. Human nature has always enjoyed the label that reads "made in a foreign country." Both Abraham and Solomon were international businessmen. The latter's work is well known, but modern scholars have begun to appreciate the fact that Abraham was a major businessman who may have traded in a territory reaching from HARAN to Egypt. It is possible that the patriarch "would buy copper cheap at the mines in Edom or Sinai and transport it to Phoenicia and Syria which were then the major manufacturing centers. From there he could sell these products anywhere from Anatolia to Egypt and Arabia" (Kelso, *Archaeology*, 18).

II. International commerce. Palestine's major commercial neighbor on the S was Egypt, one of the great civilizations of antiquity. It is no surprise to discover the strong influence of Egyptian commerce in the objects found in the excavations in Palestine. Even ETHIOPIA sent EBONY to Palestine, and part of the IVORY probably came via the Sudan. The main trade road left Egypt about where the modern

Suez Canal is located and then followed along the coast past RAPHIA, ending at GAZA. This city was the great bridgehead for Egypt in all of history, even as late as World War I.

Palestine's other commercial neighbor on the S was Arabia. Her water commerce came to EZION GEBER on the Gulf of Aqabah and then it was carried by camel caravan N to Macan. One of the land caravan routes from Arabia also ended here. The Wadi Sirhan was another long caravan route from Arabia, but it was E of Palestine proper, and its commerce only came into the N-S trade route at RABBAH (AMMON). This Arabian commerce consisted entirely of luxury items, such as gold, frankincense, myrrh, coral, pearls, emeralds, agates, and other precious stones. Rare spices and scented woods of various kinds from INDIA also came in via Arabia. In the intertestamental and NT periods the NABATEANS dominated the trade from Arabia to Palestine. As for international trade, note that a Babylonian garment was listed in the spoil at Jericho (Josh. 7:21), which was only a small fortress in early Israelite history.

To the N of Palestine was Syria, which was not a good market for Palestinian goods since both countries produced similar products. Syria and Palestine, however, did have some commercial dealings, for the dynasties of OMRI and BEN-HADAD had business quarters in one another's capital city. Damascus was rightly called the "seaport for all the desert people." The important fact is that the route by which both Mesopotamian and Anatolian commerce went S to Egypt was via Syria and Palestine. Anatolia, that is, ASIA MINOR, was one of the world's most important sources of metals in antiquity. There the HITTITES and their successors were the miners, smelters, and refiners of copper, silver, and iron ores. They also manufactured all types of metal wares. Before David's era this area had a major monopoly on iron. Copper was so important to the island of CYPRUS that its name became (in the form *cyprium*) the Latin word for this metal.

SSUMER and its successors (see ASSYRIA AND BABYLONIA) were the only early great manufacturing civilizations rivaling Egypt. Abraham represented these two commercial giants, for his father, TERAH, may have run the trade routes from UR to HARAN (PLACE) under the shadow of Anatolia, and Abraham carried it on from there to Egypt, possibly with a major banking office in Damascus under ELIEZER. The Babylonian trade route started at the Persian Gulf and followed the EUPHRATES River to the Taurus mountains of Asia Minor at Haran and CARCHEMISH. The Assyrian capital of NINEVEH on the TIGRIS was also a commercial center. It was not as large a manufacturing district as Babylonia to the S, but it was a collecting point for commerce from PERSIA and points E, and also a junction point for goods from Urartu (see ARMENIA) and points N. From Nineveh the trade route followed the Armenian foothills W to Haran and Carchemish.

Just N of Palestine and bordering the Mediterranean was PHOENICIA, whose E boundary was usually the LEBANON Mountains. The Litany and Orontes valleys were normally Syrian. Phoenicia, like England at her peak, was both a manufacturing and maritime nation. This was the country that taught GREECE to become a manufacturer. The Greeks obtained their ALPHABET by copying it from their Phoenician business teachers. Phoenicia's major natural resource was her CEDAR forests, whose lumber all the world prized. Her wares ran from excellent to mediocre. The most important international product she manufactured was PURPLE dyed cloth. The wool was imported, but the cloth and dye were Phoenician. Some commerce going to Phoenicia went overland via the sources of the Jordan River N of Lake Huleh and into Phoenicia at the upper reaches of the Litany River. Some followed a road along the Mediterranean Sea from ACCO to YYRE. Most commerce probably traveled by sea from a Palestine port to one in Phoenicia. Indeed, most of the sea freight of Palestine went in Phoenician ships. Egypt, however, probably sent her own ships to Palestine. When Persia came to world power, she used the Phoenicians as her maritime agents. With Persia's fall, ALEXANDER THE

GREAT and his successors controlled Mediterranean commerce until ROME made that sea her own.

Much of Egypt's manufacturing was a government monopoly and was part of her produce trade, especially in grains. Solomon had a definite monopoly in copper. He was also the nation's "horse trader," which included chariots (1 Ki. 10:28 – 29). Solomon and HIRAM of Tyre had a joint business venture in the Red Sea trade (9:26 – 28; 10:11 – 12, 22). Later JEHOSHAPHAT planned a similar venture but the ships were wrecked at Ezion Geber (2 Chr. 20:36 – 37).

III. Trade in the Greco-Roman period. Alexander's successors revolutionized some of the Palestinian business. Greek became the dominant influence. All over the world people of many nationalities suddenly became hellenized, even taking new Greek names. At Marisa in Palestine the tombs show that in one generation many Semitic families changed their names. Some of the worst features of Greek life were revealed in Palestine under the Ptolemaic and the Seleucid rulers of that land (see PTOLEMY; SELEUCUS).

Much SLAVERY among the Israelite population in OT times was simply "a man paying a bad debt by working a few years for his creditor." Greek slavery was entirely different. Greek culture was largely built around slavery; the slave was simply merchandise, not a person. Since Palestine was the object of contention between the Ptolemies and Seleucids, Jews often were taken as slaves in the booty of war. The Seleucids were the worst offenders for they sold their prisoners of war, including women and children, at bargain prices. ANTIOCHUS Epiphanes, who made Jerusalem into a pagan Greek city, led in this crime. Palestine had two cultures; the Maccabean revolt (see MACCABEE) was the Jews' desperate but successful return to Judaism, although it was still tinted by some features of Greek culture. Some later Jewish (HASMONEAN) leaders, however, were virtually Greeks themselves so far as their actions were concerned. Nevertheless, from the time of the restoration of true worship in Jerusalem under the early Maccabees, Palestine had two cultures—one Jewish and one Greek. The fullest influence of the latter was most evident in the cities of the DECAPOLIS in TRANSJORDAN.

There is not too much information from the intertestamental period concerning trade and commerce in Palestine. One major improvement was the quality of FLAX, which, woven into first-class linen, went into the international market. As mentioned earlier, Herod the Great had large estates near Jericho where he grew the balm that was one of the most expensive gums. The fisheries around the Sea of Galilee prospered, exporting their salted fish as far as Rome.

International business between differing national groups was inevitable. Sidon dealt with the Palestinian town of Marisa; Egypt dealt with Trans jordanian Philadelphia. Greek influence was also seen in Palestinian real estate. Marisa was planned like a Greek city, and NT Samaria used the same layout of city blocks. The Nabateans carried by camel caravan much of the Arabian traffic that the Egyptians had shipped via the Red Sea.

When the Mediterranean became Roman property, sea commerce took on new life. The major harbors were expanded to handle the increased commerce. Rome was fed in large part from the grain of the valleys of the NILE and the ORONTES, and of N Africa.

As a result of the Diaspora, the Jew was a world citizen and was often involved in world trade. At PENTECOST Jews gathered from numerous countries, including Parthia, Media, Elam, Cappadocia, Pontus, Asia, Phrygia, Pamphylia, Egypt, Libya, Rome, Crete, and Arabia (Acts 2:9 – 11). As PAUL traveled the eastern Mediterranean world he was in a new commercial world. Much of it was old; but there were new attractions. The apostle made ANTIOCH OF SYRIA ("Antioch on the Orontes") the center for world evangelism. Antioch was the second most influential city in the world, although ALEXANDRIA outranked it in size. Antioch was the end of the road for all overland commerce coming

in from China via Persia to the Mediterranean. Alexandria, on the other hand, was the shipping point for all African commerce, whether it came via the Nile River or the Red Sea. There were no major seaports between these two cities but a wealth of local ports, some of which Paul used. Antioch catered primarily to the luxury trade, and the world was as avid for luxuries then as now. Alexandria catered to both the common and luxury markets.

Paul's home city was TARSUS. It was the S terminus of the best pass from the great Anatolian plateau through the rugged Taurus mountains, in the SE part of Asia Minor. Tarsus was a major business center since it also had direct access to the Mediterranean. ICONIUM was one of the key commercial cities of that great Anatolian plateau. It is often referred to as "the Damascus of Turkey" because of its abundant water supplies. When the Turks became masters of the Eastern world they made it their capital city, and from there they moved on to capture Constantinople.

When Paul wanted to reach BITHYNIA, he was headed for Constantinople, then called Byzantium. It has always been a major commercial city since it dominates Black Sea traffic. Russia is N of that sea. One can ride horseback across the rolling Russian plains between the Atlantic and the Pacific, and only occasionally be interrupted by major mountain masses. Paul knew that this commercial center would be an ideal evangelistic center. He always appreciated the businessman and established his major church centers at great commercial centers. See TRAVEL.

Paul wished to visit the Roman province of ASIA, but he was denied entrance at this time, although he did conduct a glorious ministry later at EPHESUS. Asia was the most populous province in the empire; even today the ruins of its great cities testify to the former prosperity of that area. The province was the most fertile area in Asia Minor and also the most fertile area around the AEGEAN SEA. It is no wonder that the Greeks loved it and colonized it early. Ephesus was later considered the capital of the empire, when the emperor was in the E.

THESSALONICA was the next major commercial city visited by Paul. It was situated at the S end of the best pass between the Danube Valley and the Mediterranean. A great amount of commerce passed over this road, as the civilizations at each end were different. The Danube Valley was so valuable commercially that Emperor TRAJAN added it to the empire early in the 2nd cent. A.D. He also conquered the Nabateans, giving Rome direct access to the Arabian commerce.

In Paul's time ATHENS was living on her past glory. CORINTH became "the" city of Greece. Its growth had been quick and spectacular. Julius CAESAR had recognized that this city in ruins could rise to become one of Rome's major commercial centers. He was murdered before he could found the city, but his wish was eventually fulfilled and the city was named in his honor (Laus Iulia Corinthus, "Corinth, the praise of Julius"). It became the greatest transshipment center in the Mediterranean. Corinth also quickly developed into a major manufacturing city with most of the labor done by slaves.

In Corinth, Paul was one of the "freeborn" laborers, as he was by trade a weaver of awnings used in the great market places, and also of sails used by the ships entering either of Corinth's two ports. It was here that Christianity obtained its legal right to be a "permitted religion." Every religion in the Roman empire had to have a government license to exist. The Jews of Corinth tried to persuade GALLIO, the proconsul of ACHAIA, that Christianity was an illegal religion for it was not Judaism. Gallio rejected their charge and thus ruled Christianity a legal religion. Later NERO persecuted the church in Rome, but he did it to save his own influence as emperor. The next century saw extensive Christian persecutions. Corinth demonstrated that then, as now, major commercial ports are often wicked places; "Corinthian" became an adjective to express the utmost wickedness. Antioch was runner-up to this disgraceful epithet. Nevertheless, both cities were major centers for world evangelism.

When Paul visited Ephesus during his third journey, his preaching seriously challenged two major industries of the city. The makers of books of magic watched their publications, valued at 50,000 pieces of silver, burn (Acts 19:19). That sum was the equivalent of one day's wage paid to 50,000 men. The makers of silver shrines of the goddess ARTEMIS suffered such losses that they created a riot (19:23 – 41).

The book of Revelation includes the letters to the seven churches of the province of Asia. From Ephesus the gospel had gone with such evangelistic power that strong churches were established in the adjacent cities, each one also a commercial center. LAODICEA was a major banking center but the church members were admonished "to buy from me [Christ] gold refined in the fire" (Rev. 3:18). The city was famous for its heavy black felt coats of goat hair for use in the bitter Anatolian winter, but the church folk were admonished to obtain "white garments." From the same city came one of the famous "patent medicines" of the age, a special salve for the eyes (see EYESALVE). The Christians were advised to procure another "salve to put on [their] eyes."

IV. Business. When money becomes a major factor in trade and commerce, the emphasis is on business, for the common denominator in all business is money. In the OT there were three major methods of sale: (1) barter, (2) weighing of silver or gold, and later (3) coins. Barter was the most common method of sale among the poorer people, although King Solomon and King Hiram also used the method. Hiram furnished cedar and cypress wood to Solomon, who, in turn, gave wheat and olive oil to Hiram (1 Ki. 5:10 – 11). These farm products were the taxes Solomon had collected, for taxes were at that time paid in kind. The farmer gave wheat and oil and wine, the shepherd sheep and goats, etc. Each man paid taxes in what he produced. In the southern kingdom the government had its own pottery factories that made standard-sized jars with the government stamp on the handle. These were required for use in the payment of taxes.

If commerce is to be successful in international markets it must have a basic medium of exchange, for which the ancients used SILVER and/or GOLD. The former was rarer and thus more valuable until the metallurgists solved the problem of smelting and refining complicated silver ores. Gold, then, took first place. Another reason for gold taking priority was that placer gold was becoming rare and the miner turned to gold ores, which were expensive to work. These metals came in various sized rings, bars, and other shapes. The Hebrew term for "silver" (*kesep H4084*) was equivalent to "money" (e.g., Isa. 55:1). If a less valuable metal was used as money, it was copper. Rare gems and expensive jewelry also served as money. They provided a means whereby a large amount of wealth could be transported easily and secretly.

The metals were weighed, and this act could be either honest or dishonest. Archaeologists have found weights with which to purchase items, and a different set of weights by which to sell that same purchase. This dishonesty is referred to in Deut. 25:13, "Do not have two differing weights in your bag—one heavy, one light." In Amos 8:5, the prophet echoes the same theme and adds that dry measures were used dishonestly in his day (cf. Deut. 25:14).

The next step in currency was the COIN. Not only was there dishonesty in the weight of gold and silver bars, etc., but there was a wide variety in the purity of the metal, especially in silver. That problem was solved by governments minting coins and guaranteeing the weight and purity of each coin struck. This was done by putting the symbol of that government (state or city) upon the coin. The first such coin mentioned in the Bible is the Persian gold daric (Ezra 2:69). The Persians permitted the Jewish exiles to mint their own silver coins in Judea. Coins did not become commonplace in Palestine until the times of the Ptolemies and the Seleucids.

Where money is used—either the weighing of gold or silver, or the use of the coin—the banker is present, and money itself becomes a new commodity. See BANKING. There is no evidence of OT banking, but early Mesopotamia was very efficient in banking methods. During the EXILE, the Jews learned Babylonian banking techniques. Jewish bankers from BABYLON were widely used later by the successors of Alexander the Great. The author believes that good banking is the most likely reason Paul's ancestors secured their Roman citizenship at Tarsus. The exile marked the beginning of the Jews' major emphasis on banking and business in general. This was augmented by Jewish business exiles in the intertestamental times who were taken to Alexandria where they later controlled much of the business of that city. This meant branch offices for the Jewish enterprises in all the seaports of the Roman empire.

By NT times, banking covered the whole ROMAN EMPIRE; and bankers were licensed to be kept under control. The banker, then as now, took money on deposit and paid interest for its use. Jesus referred to this in his parable of the talents (Matt. 25:27). A common interest rate was eight percent in the days of Jesus and Paul. The banker then, as now, lent this money on mortgages. The earliest Bible reference to a mortgage is Neh. 5:3. The people borrowed money to pay their taxes (vv. 4 – 5), just as people do today. One position of the banking fraternity was the MONEY CHANGER, and Christ dealt with them. Checks were used then as now; bills of exchange were available, that is, one could deposit money in one city and draw it out in another. Banks related to one another were scattered all over the empire. Good bookkeeping systems, however, were much earlier than banking; they can be traced to the early Sumerians, who invented writing.

D'Arms, *Commerce and Social Standing in Ancient Rome* [1981]; M. I. Finley, *The Ancient Economy*, updated ed. [1999]; P. J. King and L. E. Stager, *Life in Biblical Israel* [2001], 176 – 200; J. G. Manning and I. Morris, eds., *The Ancient Economy: Evidence and Models* [2005]; *ABD*, 6:625 – 33.)

J. L. KELSO

trade guilds. Associations of people in the same CRAFT or TRADE who have organized for mutual protection and for social and religious benefits. In ancient times, guilds were more like fraternal orders than like labor unions. They seldom concerned themselves with wages, hours, or conditions of labor. Many of them were mutual benefit societies to defray the cost of a funeral. Their chief aim was pleasure and social intercourse.

Trade guilds were found all over the ancient world—in Egypt, Assyria, Babylonia, Greece, Rome, Syria, Persia, Palestine. In ROME, as early as the 7th century B.C., there were guilds of flute players, goldsmiths, coppersmiths, fullers, shoemakers, dyers, and carpenters. By the 2nd century B.C., cooks, tanners, builders, bronze workers, ironworkers, coppersmiths, weavers, priests, all had their own guilds, and membership in a guild was compulsory. No one was permitted to leave the guild in which he was enrolled, and a son was required to follow the trade of his father. In ASSYRIA, people were divided into five classes, with the patricians or nobles at the top, and craftsmen and professions organized into guilds directly below them. In PERSIA, there was a well-organized guild of physicians and surgeons, whose fees were fixed by law.

These ancient copper ingots from Israel are a reminder of the trade guilds common in the ancient world.

In ancient Palestine, manufacturing centers were located in places where raw materials necessary for the business were readily available. The region around Tell Beit Mirsim was good for the raising of sheep, and therefore the place became a center for the weaving and dyeing of woolen cloth. There was an abundance of ore in EDOM, and consequently a mining and smelting industry grew up in that country. BETH ASHBEA, in southern Palestine, was the center of the linen industry (1 Chr. 4:21).

It was the custom for tradesmen in larger cities in the ANE to live in separate quarters. For example, Jerusalem had a bakers' street (Jer. 37:21) and a goldsmiths' district (Neh. 3:32). People who pursued a definite trade or profession often were designated by their particular calling, such as "Joseph, member of the perfumers." Each guild had a chief officer or president. The Bible tells of three families of SCRIBES who lived in the same town (1 Chr. 2:55).

In the postexilic period, guilds were powerful organizations and were recognized by the government. A guild could prevent a craftsman from another area from working in its territory. It had a trade monopoly in its particular locality. A guild could monopolize the market. Guild members were insured against loss of tools, animals, and boats used in their business, unless the loss was caused by their own negligence. Guilds had their own religious and social institutions, even their own synagogues, next to which there were burial grounds for the members. In some cases, members of a guild collectively built and operated businesses. (See I. Mendelsohn, "Guilds in Ancient Palestine," *BASOR* 80 [Dec. 1940]: 17 – 21; id., "Guilds in Babylonia and Assyria," *JAOS* 60 [1940]: 68 – 72.)

J. L. KELSO

trades. See CRAFTS; OCCUPATIONS.

tradition. The collective wisdom of any given culture, the notions of its worldview, and the insights of its institutions.

I. In the ANE. Tradition existed before the Neolithic food-producing revolution of the 9th – 8th millennia B.C. It was formulated by two processes: the conservation of accumulated wisdom and the symbolization of ideas transmitted beyond the limits of communication. In effect, tradition in the ANE was a complex literary vehicle that came into being before the innovation of WRITING. Ancient

tradition was almost always verified and grounded in the religious ground-motif of the archaic-religious states. All of the most ancient literate cultures assumed that their writing system and its literary monuments were rooted in the very cosmos and enforced by the gods. To a great degree the keeping of tradition was a sympathetic magic bringing the microcosm of the town and its inhabitants into alignment with the universal macrocosm of the world order. The traditional texts of the Sumerians, Elamites, Babylonians, and Hittites, as well as the Ugaritic tablets, all follow this pattern.

II. In the OT. The writers of the OT are adamant in insisting that the word-revelation of God was antithetical to the traditions of the nations. The common ANE assumption that hoary antiquity verified authority, an underlying motif in all tradition, is refuted in every book of the OT. The God of the PATRIARCHS is stated to be a God of present action, and this aspect is restated to MOSES before the exodus (Exod. 3). The essential concept is that divine REVELATION must be distinguished from human knowledge. Nowhere does the OT support the word of any human group as authoritative; the traditions of the nations are judged and condemned. The three sacerdotal offices of the theocratic administration, prophet, priest, and king, were God-ordained and God-centered.

Undoubtedly the village elders during the period of the judges followed formal traditions of justice (Ruth 4:1 – 3 et al.), which acted as insulations or hedges to the written Pentateuchal law. This intent to ring the oracles of Yahweh with additional and more precise requirements came to its fulfillment after the Babylonian captivity. Under the later Judean kings and into the Hellenistic age, the various institutions of the Israelite monarchy became fixed and somewhat independent. The rise of the temple administration ultimately placed the chief priest in the foremost executive position in the state during the Roman period. With the expansion and solidification of the temple services and powers, a reliance upon tradition was a natural outcome. The ever-present threat of dilution of the core of the Jewish religious faith through syncretism with the paganism of the Persian and Greek worldviews enforced a greater stricture in the keeping of the law and a further development of tradition about the law.

III. In the intertestamental period. In the conflict between JUDAISM and HELLENISM a new orthodox party appeared, the PHARISEES. This popular movement fostered the further growth of a religious and cultural tradition. Archaeological excavations at MASADA and QUMRAN have produced ritual lavation pools and other ritual constructions not specifically mentioned in the OT, but frequently cited in later literature (see DEAD SEA SCROLLS). Thus it can be assumed that many of the traditions that became fixed in the postbiblical period had their origins in the intertestamental age. Of specific importance were the various types of temple taxes. During the OT period such taxes were based upon the commands of the Levitical code, but in the ensuing centuries the elaborate temple hierarchy levied taxes in a great number of areas of the economy without specific biblical warrant. These practices mentioned often in the TALMUD were sanctified by tradition alone.

The breakup of the Second Commonwealth into an array of religious and political parties left each to be founded and justified by tradition. The dependence upon oral authorities in the time-honored oriental fashion can be traced throughout the documents that have survived from this post-Hellenistic era. The APOCRYPHA and PSEUDEPIGRAPHA were written at this time, and they both include large portions of traditional method and material. In an age of turmoil and tension it is natural that people turn to a more stable and secure past and hallow its accomplishments, and the intertestamental period did this in abundance. The process of "hedging" the five books of Moses by layers of oral tradition, commenting upon and solidifying the interpretation of the text, went on

unabated throughout the period after the close of the canon (see MISHNAH).

IV. In the NT. The Greek term for "tradition," *paradosis G4142* (lit., "a giving over, handing down"), is used in the NT in both positive and negative contexts. A key passage is Mk. 7:1 – 13 (paralleled in Matt. 15:1 – 9), which records that some Pharisees and scribes criticized Jesus because his disciples, by eating with unwashed hands, were not following "the tradition of the elders." Quoting Isa. 29:13, Jesus accused his opponents of giving more weight to their own human traditions than to the divine commandments, thus setting aside the word of God (see esp. Mk. 7:8 – 9, 13). The background here is the large body of oral teaching that would eventually be codified in the MISHNAH.

The apostle PAUL referred to the same teachings when he said that prior to becoming a Christian he "was extremely zealous for the traditions of my fathers" (Gal. 1:14). Elsewhere Paul speaks in more general terms of "human tradition" opposed to Christ (Col. 2:8; cf. 1 Pet. 1:18). The apostle, however, also writes in positive terms regarding the Christian *paradosis* that he passed on to the Corinthians (1 Cor. 11:2; cf. 15:1) and to the Thessalonians (2 Thess. 2:15; 3:6). Thus the issue at stake is not the passing on of teachings from some people to others, but whether the teachings in view have their origin in divine revelation or in the human heart.

<div align="right">W. WHITE, JR.</div>

tradition history. Also *tradition criticism* and *traditio-historical criticism.* An approach to the study of the Bible that, building on the results of FORM CRITICISM, seeks to reconstruct the development of texts in the process of both oral and written transmission, and to infer what may have been the religious needs of the various audiences during the stages of that development. This label is used primarily in OT studies and corresponds roughly to *redaction criticism* in the study of the Gospels (see BIBLICAL CRITICISM V.E.).

Trajan tray'juhn. Emperor of ROME, A.D. 98 – 117. Marcus Ulpius Trajanus was born in Spain in the year 53, and after serving in various military and civil capacities was made governor of Germany in 97. While there he learned of his adoption by the then emperor, NERVA, an act which according to the custom of the time assured him of the succession to the throne. Nerva's action was prompted by a revolt of the PRAETORIAN guard, which made him realize the need of a firmer hand upon affairs of state.

Upon Nerva's death in 98, Trajan lingered in Germany on some unfinished business and did not come to Rome until 99. His first act was to punish the mutinous praetorians, and then to show his displeasure he gave to the people only half the usual donation. He won the favor of the senate by confirming all their privileges. A natural leader, he soon became popular with both army and people.

The general administration of Trajan was paternalistic. He took upon himself the burden of ruling and manifested an unusual capacity to deal with the complex problems of the huge empire. His policy, however, discouraged initiative on the part of the provinces, which soon learned to look to Rome for the solution of all their problems. By continuing the free distribution of grain and the provision of money for feeding the poor children of the municipalities, and especially by choosing good governors, he maintained the well-being of the provinces. He greatly expanded the program of public works, building new baths for the city of Rome, as well as a magnificent forum, and by constructing new roads throughout his domain.

The combined humanity and firmness of his character is illustrated by his attitude toward the

Christians (see PLINY the Younger, *Epistulae* 10.96 – 97). On the one hand, he ordered that Christians should not be hunted and that those who confessed their faith but then recanted should be let go; on the other hand, he instructed Pliny to execute those who refused to give up their faith. This was in fact the first official policy that Christians should be put to death.

His reign was marked by two great military ventures. In two campaigns (101 – 102 and 105 – 106) he subjugated Dacia, the region N of the Danube, and made it into a Roman PROVINCE where gold and salt mines were successfully operated. These wars were commemorated in the famous Column of Trajan, a 100-ft. marble pillar set on a rectangular base, with a statue of the emperor on top; it includes more than 2,000 finely carved figures. The second endeavor was against the PPARTHIANS in 113 – 117. He made at best a precarious conquest, and died in CILICIA while on the way back to Rome. (See further F. A. Lepper, *Trajan's Parthian War* [1948, reprinted with new material in 1993]; F. Coarelli, *The Column of Trajan* [2000]; J. Bennett, *Trajan: Optimus Princeps*, 2nd ed. [2001]; *OCD*, 1543 – 44).

R. C. STONE

trance. A state of hypnosis or ecstasy. In this rapt condition, although apparently otherwise awake, the person's mind is drawn off from all surrounding objects and available stimuli, becoming obsessively fixed on things invisible (divine, hallucinatory, or unconscious). Persons in such a condition may think and report that they perceive with their natural senses (visual and auditory, in particular) realities shown by God or other supernatural forces. Religious or emotionally marked trances are described as an overwhelming joy or rapture. In extreme form, trance resembles or is *coma*.

English versions of the NT use "trance" in three passages in Acts as the rendering of Greek *ekstasis G1749*, which usually means "confusion, astonishment" (Mk. 5:42 et al.). Two of those passages refer to the vision that PETER received in JOPPA (Acts 10:10; 11:5), and the other is an account by PAUL of an experience he had while praying in the temple (22:17). The English term is rarely used in the OT (though the phrase "into a trance" is supplied by the KJV at Num. 24:4, 16, and the NRSV uses "fell into a trance" to render Heb. *rādam H8101* [niphal, "to sleep deeply"] in Dan. 8:18; 10:9). However, various references to deep sleep in the OT are often interpreted as instances of trance (e.g., Gen. 15:12; 1 Sam. 26:12; Isa. 29:10). In addition, many scholars argue that the prophetic experience involved some kind of ecstatic trance (cf. 1 Sam. 19:20 – 24 and see PROPHETS AND PROPHECY IV.H).

J. M. LOWER

transfiguration. A change in form or appearance. The term is used specifically with reference to a unique experience of Jesus recorded in the Synoptic Gospels (Matt. 17:1 – 8; Mk. 9:2 – 8; Lk. 9:28 – 36; alluded to in Jn. 1:14 and 2 Pet. 1:16 – 18). The use of the noun *transfiguration* in this context derives from the fact that the KJV, followed by most versions, renders the Greek phrase *metemorphōthē emprosthen autōn* as "he was transfigured before them" (Matt. 17:2; Mk. 9:2; in Lk. 9:29, "the appearance of his face changed"). The Greek verb *metamorphoō G3565* occurs in two other passages, where it is rendered by the more common English term "transform" (Rom. 12:2; 2 Cor. 3:18).

I. Place. A tradition from the 4th cent. named TABOR, in GALILEE, as the mountain where the transfiguration occurred. By the 6th cent., three churches were built there. In the 19th cent., opinion

changed in view of the fact that Tabor's summit was occupied by a fortified city at the time of the event. The preceding context is set in the city of CAESAREA PHILIPPI (N of Galilee in Gentile territory), and there is no evidence of a departure from that region except that they "passed through Galilee" later (Mk. 9:30). Most scholars now think of Mount HERMON, Palestine's only snow-capped peak, as the "high mountain" to which Matt. 17:1 and Mk. 9:2 refer. Rising N of Caesarea Philippi, it dominates the area.

Some, however, object that the mountain must have been in Jewish territory, since teachers of the law were nearby (Mk. 9:14). Accordingly, W. Ewing (*ISBE* [1929], 5:3006) suggests Jebel Jermuk, the highest mountain in Palestine proper, which dominated N Galilee. Still others spiritualize the "high" and "holy" mountain, but these tend to deny the historicity of the event or the accuracy of the reporting.

II. Time. Early autumn of the year prior to the CRUCIFIXION appears to be the time. Matthew and Mark say it was six days after PETER's confession. Luke says "about eight," perhaps including the terminal days or allowing for an evening ascent and return on another day. Others, rejecting the time references, imagine that the account was transferred from a real or mythical resurrection appearance (cf. C. Carlston in *JBL* 80 [1961]: 233 – 40). Resemblances must be granted between the transfigured and the glorified Christ, but it is a bold criticism that deletes an event that is so persistently reported in historical context and substitutes another for subjective reasons. No such necessity exists for those who accept the NT picture of Jesus as the supernatural and divine Christ.

Mosaic depicting Jesus' transfiguration (from the Church of Transfiguration on Mount Tabor).

III. Event. In a context of prayer, the threefold event transpired: Jesus was transfigured, MOSES and ELIJAH talked with him, and a voice spoke from heaven. The nature of the change in Jesus' appearance is not specified, except that Matthew adds the words, "His face shone like the sun" (Matt. 17:2). All three evangelists first mention the apparent change in Jesus himself before referring to his clothing. Borrowing the light from within, his clothing became "white as the light" (Matthew), "dazzling white, whiter than anyone in the world could bleach them" (Mk. 9:3), "as bright as a flash of lightning" (Lk. 9:29).

In the atmosphere of this transcendent glory, two persons, long glorified, became plainly visible, talking with Jesus. According to all the synoptists, Moses and Elijah were addressing Jesus. Luke adds that the subject was Jesus' impending death in Jerusalem. This glory and free intercourse with the spirit world appealed to Peter. He sought to seize and retain it, but a bright cloud settled upon them all, obscuring the scene and perhaps dazing the disciples. From this cloud came the voice, "This is my Son, whom I love. Listen to him!" When Jesus roused them (Matthew), they looked about and saw only Jesus (all three synoptists). The display was over.

IV. Significance. The meaning of this incident is firmly based upon the facts of the event. Every mention in the NT assumes that this was a deliberate self-revelation of Jesus to meet specific needs. No doubt Jesus himself received benefit from the heavenly event, but the need of the disciples was apparently primary. They must be prepared for the dark days ahead and for the bright outcome. They must see that Jesus was already what he would eventually demonstrate himself to be.

To his supernatural birth, the earlier divine attestations, the miracles, the signs, and the lesser manifestations must be added this supreme assurance of his origin and mission. His glory had been but thinly veiled in human flesh. In this revelation, it was allowed to shine forth. His supremacy was freely admitted by the lawgiver (Moses) and the prophet (Elijah), who may indeed have come for the express purpose of a formal resignation from their mediatorship before the one true Mediator (M. Dods, in a footnote to J. Lange, *The Life of the Lord Jesus Christ* [1872, repr. 1958], 2:327). The voice from heaven assured the disciples that Jesus was indeed the Son of God, as it had once assured JOHN THE BAPTIST at the Jordan (Matt. 3:17) and would again assure the multitude in Jerusalem (Jn. 12:28). The evangelists saw in this preview of the RESURRECTION glory, the God Incarnate—the sinner's only hope of glory.

W. T. DAYTON

transgression. The breaking of the LAW. There is a fine distinction between SIN (Gk. *hamartia G281*) and transgression (*parabasis G4126*), for one who is under no express law may sin (Rom. 5:13), but with the introduction of a law one commits transgression if that law is violated (Rom. 4:15; 5:14; Gal. 3:19). Hence, "sin" causes us to transgress (Rom. 7:7, 13). In some cases sin may be implicit disobedience, but transgression indicates explicit disobedience. (Cf. R. C. Trench, *Synonyms of the New Testament*, 9th ed. [1880], 244 – 45; J. Schneider in *TDNT*, 5:739 – 40.) See also TRESPASS.

H. W. HOEHNER

Transjordan trans-jor'duhn. This term, meaning "on the other side of the Jordan" (cf. the common Heb. expression ⁽ēber hayyardēn, Deut. 1:1 et al.), is used with reference to the territory that lies to the E of the JORDAN River (contrast *Cisjordan*, "on this side of the Jordan," meaning the Land of CANAAN). East PALESTINE as a whole can sometimes be comprehended under the name of the central part of this area, GILEAD (e.g., Josh. 22:9). Generally, Transjordan is reckoned from the region of BASHAN on the N to the RED SEA on the S; the Arabian desert marks an indefinite boundary on the E

and SE. Here were the countries of MOAB, EDOM, and AMMON; here too the tribes of REUBEN, GAD, and half of MANASSEH received their inheritance. Cut through by numerous gorges, some with constant water flow, the soil in Transjordan produces abundant crops of grain even without irrigation. It is rugged tableland, 2,000 to 3,000 ft. in elevation, with heights of around 5,000 ft.

The book of Genesis contains incidental references to this territory (e.g., Gen. 32:10). Later, as the Israelites were approaching Palestine, they sought to use the important KING'S HIGHWAY in Transjordan, but the Edomites would not permit them to do so (Num. 20:17 – 20). North of Edom lay Moab; there, from Mount Nebo (near the upper end of the Dead Sea), MOSES was granted sight of the land promised to Israel (Deut. 34:1 – 4; see NEBO, MOUNT). Moab is the primary setting of the book of RUTH. Here also DAVID took refuge to escape SAUL (1 Sam. 22:3 – 4). In this same territory, JEHORAM king of Israel, aided by Judah's JEHOSHAPHAT, sought to subdue the rebellious king MESHA (2 Ki. 3).

Next, between the rivers ARNON and YARMUK, comes Gilead proper and the AMORITE kingdom of SIHON, who denied Israel passage (Num. 21:21 – 31; Deut. 12:2). This also was the territory allotted to the tribes of Reuben and Gad (Deut. 3:12; Josh. 13:8 – 12). To this district, David a second time fled for sanctuary, escaping his insurrectionist son ABSALOM (2 Sam. 17:21 – 29). To the E of Gilead and N of the Arnon was the country of Ammon. The northernmost territory was Bashan, of uncertain boundary, remembered for its fat cattle (Amos 4:1) and its King OG of iron bedstead fame (Num. 21:33 – 35; Deut. 3:1 – 11; Josh. 12:4 – 5). Here was Manasseh's half-tribe allotment (Deut. 3:13), roughly from the JABBOK River through Bashan.

In NT times, PEREA referred to a territory E of JUDEA and SAMARIA across the Jordan that afforded in part a bypath for strict Jews going from GALILEE in the N to Judea in the S (avoiding contamination by Samaria in between; cf. Jn. 4). To the N lay the Hellenistic DECAPOLIS, a trade federation of ten cities formed in the 1st cent., nine being on the E of Jordan, and one (BETH SHAN) on the W. The grouping secured protection from marauders. Antagonism existed between the Decapolis and both NABATEANS and Jews. Earlier, during the HASMONEAN period, the Jews had secured dominance over a large part of Transjordan, from GADARA in the N to MACHAERUS in the S, strongly fortified to resist the Nabateans. ROME, in A.D. 106, made the Nabatean country a part of the province of ARABIA. (See further G. A. Smith, *Historical Geography of the Holy Land*, 25th ed. [1931], chs. 24 – 29; N. Glueck, *The Other Side of the Jordan* [1970]; H. O. Thompson, *Archaeology in Jordan* [1989]; B. Mac-Donald, *"East of the Jordan": Territories and Sites of the Hebrew Scriptures* [2000].)

trap. For the biblical writers the most common form of trap or snare (usually Heb. *paḥ H7062* or *môqēš H4613*) was the automatic birdnet, "the snare of the fowler" (Prov. 6:5 et al.). This common form of bird trap or netting device is familiar from Egyptian illustrations. It was a piece of net mounted to spring up and envelop the bird when it alighted on a tripstick or some other form of trigger (Ps. 141:9; Ezek. 12:13; Amos 3:5). Note the illustration of sudden contrived disaster and catastrophe to which the victim thoughtlessly and unwarily exposed himself when in search for imagined or illusory advantage.

Another form of trap was the noose carefully set on the "run" of a bird or an animal and

designed to tighten around the neck by the creature's own forward momentum (Job 18:10; 1 Cor. 7:35; this form of trapping device seems to be the metaphor behind Prov. 22:8). Ezekiel 17:20 may refer to a noose falling from above, though it could as likely be a descending net, falling as the victim entangled his feet in some low-lying trigger. Or, perhaps the fowler concealed in ambush pulled a releasing string when the birds ventured under the suspended net (Prov. 1:17 – 18). A camouflaged pit was an additional form of snare or trap used for the capture of unwary animals (2 Sam. 17:9; Isa. 24:17 – 18; 42:22; Jer. 18:22; 48:43 – 44; Lam. 3:47). Psalm 9:15 develops the metaphor; ironically, the hunter fell into the pit designed for his victims. There are numerous other figurative uses (Job 18:8; Ps. 69:22; 91:3; 124:7; 140:5; Prov. 6:5; 7:23; 12:13; Hos. 9:8; in the NT, Gk. *pagis G4075*, Lk. 21:34 [35]; Rom. 11:9 [with *thēra G2560*]; 1 Tim. 3:7; 6:9; 2 Tim. 2:26).

<div align="right">E. M. BLAIKLOCK</div>

travail. This English term, referring to a woman's labor at birth or more generally to any kind of painful or strenuous work, is used frequently by the KJV to render a variety of words, such as Hebrew ḥîl H2655 (e.g., Isa. 54:1) and Greek ōdin G6047 (e.g., 1 Thess. 5:3). Most of the uses are figurative. For instance, travail may portray the agonies of divine judgment on the wicked (Babylonians, Isa. 13:8; Zion, Mic. 4:9 – 10; Israel, Jer. 6:24; Judah, 4:31; Lebanon, 22:23; Damascus, 49:24); the thought of it caused Isaiah anguish like the pains of a woman in labor (Isa. 21:3).

Travail may picture the painful exertion necessary to achieve satisfying goals. The Suffering Servant "who makes an offering for sin" shall "see the fruit of the travail of his soul and be satisfied" (Isa. 53:10 – 11 KJV). The apostle PAUL, in the Lord's service, could not forget the "labour and travail" night and day to plant the church at THESSALONICA (1 Thess. 2:9 KJV; cf. 2 Thess. 3:8). The Galatians seemed to return to legalistic works, so Paul was "again in travail until Christ be formed" in them (Gal. 4:19 RSV).

Jesus used the figure of travail to represent the disciples' sorrow in a world that would crucify him. However, just as the anguish is forgotten by the mother rejoicing that a child is born, so also their sorrow would be taken away (Jn. 16:21 – 22). Travail also portrays the agony of the world until Christ returns. "We know that the whole creation has been groaning in travail together until now" (Rom. 8:22 RSV). At Christ's return, furthermore, will come sudden destruction "as travail comes upon a woman with child, and there will be no escape" (1 Thess. 5:3 RSV).

travel. In the OT, almost all the traveling recorded was by land; the NT mentions travel by water more frequently, especially in connection with the journeys of Paul. The present article focuses primarily on the ROAD system in PALESTINE.

1. In the OT
    1. The nature of roads in Palestine
    2. Major roads
    3. Minor roads
    4. International travel
    5. Water travel
2. In the NT
    1. Land travel
    2. Water travel
    3. Reasons for travel in NT times

I. In the OT

A. The nature of roads in Palestine. Land travel in OT times was normally by path (e.g., Heb. *ʾōraḥ H784*) or road (*derek H2006*), although the various Hebrew terms do not differentiate clearly between these two types. If there was little travel, then a narrow path or track was sufficient. When there was volume travel, the track simply widened out into a road. These OT roads, however, did not approximate even the poorest roads used today. In hilly country a road normally had two branches, one for slow climbing up a hill and the other for fast downhill travel. In the mountains, rocks and trees had to be removed, especially after the time of DAVID, when the CAMEL became the hauler of heavy freight. The donkeys, which preceded them and which always carried light loads, were much more sure-footed (see ASS, DONKEY). HORSES were only for the army until Persian times, while the MULE was for royalty and the rich. On level ground when the old road became too rough, the caravans simply moved over a few feet; autos and trucks do the same today in the desert.

Any major engineering on the roads occurred only on special occasions, as when royalty traveled or when large armies were on the march. On such occasions better grades were made in the mountains, and fills were put in on troublesome terrain, such as swamps. ISAIAH describes the work: "In the desert prepare / the way for the LORD; / make straight in the wilderness / a highway for our God. / Every valley shall be raised up, / every mountain and hill made low; / the rough ground shall become level, / the rugged places a plain" (Isa. 40:3 – 4). Here the Hebrew word for "highway" is *měsillâ H5019*, referring to an elevated road, that is, one made with a fill.

This aerial view shows a section through which passed the major trade road of ancient Palestine, connecting Egypt, Europe, and Asia. (View to the W.)

Because of the poor conditions of the roads, vehicles were rare in OT times. The CHARIOT was primarily a weapon of war, for use on level or slightly rolling ground. The engineers often prepared ground for them. The wagon for heavy freight was more common than a carriage or other light vehicle for persons. The latter, however, is referred to in the JOSEPH story when PHARAOH suggested sending wagons for JACOB and the wives and children of his sons (Gen. 45:19 – 27). The heavy wagon or ox CART was used to transport the heavy materials of the TABERNACLE (Num. 7:3 – 9). A cart was used by the PHILISTINES when they returned the ARK OF THE COVENANT to Israel, but it was drawn by cows unbroken to harness (1 Sam. 6:7 – 12). DAVID, however, later moved that ark by ox cart (1 Chr. 13:7 – 9). Amos 2:13 refers to an ox cart used as a hay wagon. This reflects the days of big farms. Most pictures of wagons or carts show solid wooden wheels, which are still useful in parts of Turkey today. The Assyrians used spoke-wheel wagons at times in their baggage trains. The two-wheel cart was much more common than the four-wheel wagon.

Travel was slow, for both men and animals walked; the length of the day's march depended upon the urgency of the trip (even Paul, who was under orders from the high priest, walked to DAMASCUS, Acts 9:8). Average travel for men would be about 15 mi. a day. Donkey caravans tried to make 20 mi. a day. The ordinary camel caravan of freight, with each animal carrying between 500 and 600 lbs., traveled approximately 3 mi. an hour on a 6-hour day. A swift dromedary, on the other hand, could carry a rider on long journeys at 70 mi. a day. The camel was, of course, the ideal animal to use in the desert, and often the only animal available.

The more common caravan before and after David's reign was the donkey caravan. The largest of these donkey trains ranged from 1,000 to 3,000 animals. ABRAHAM is the most famous "caravaneer." The donkey was an ideal carrier for passengers or freight, an animal with surprising power and endurance, and the most sure-footed of all animals used, which rode comfortably and was inexpensive. In a passage such as Jdg. 5:6, which comments that "caravans ceased and travelers kept to the byways" (NRSV), the reference is to political unrest, during which brigands and robbers made travel dangerous and unprofitable. The best and fastest travel service in OT times was the "pony express," horse travel between relay stations, used by the Persian government for diplomatic correspondence (cf. Esth. 8:10).

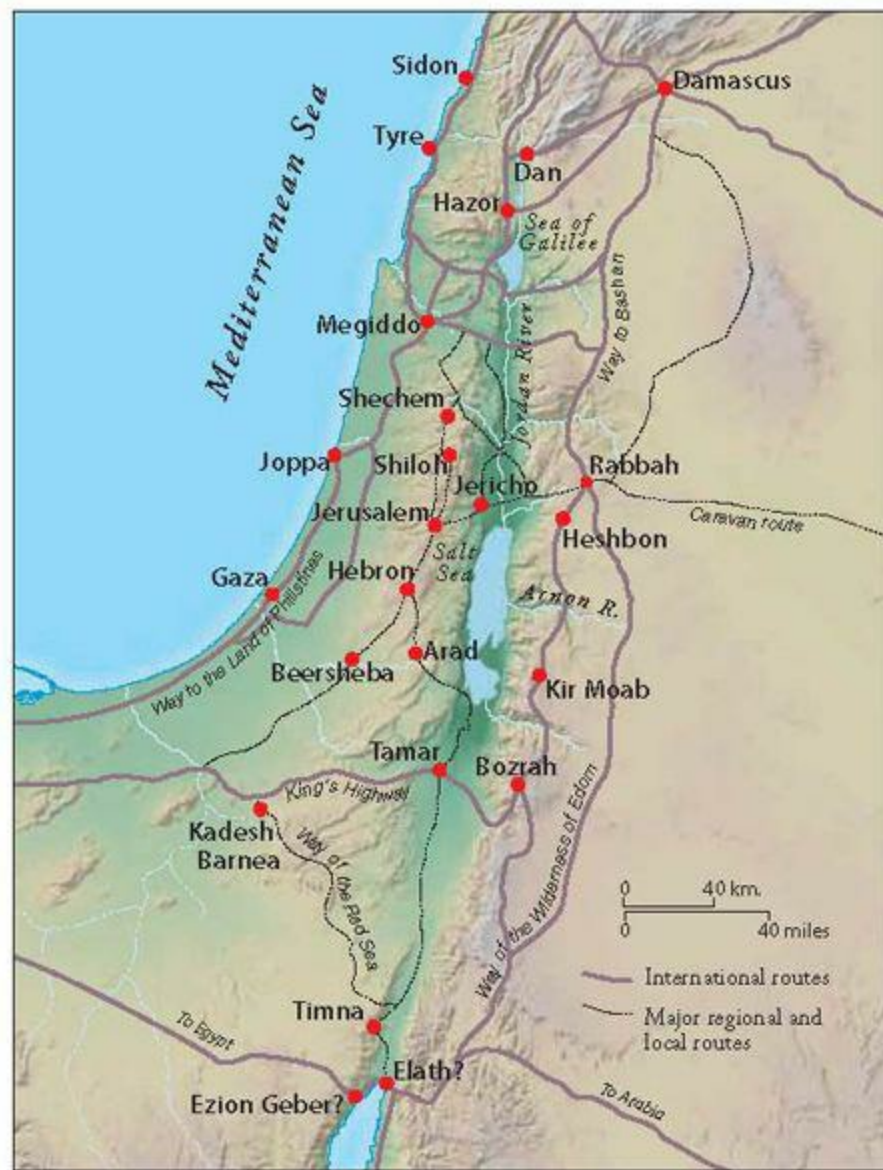
These were fair-weather roads in the OT, and only the most important business was carried on during the rainy season. WAR was seldom pursued in rain or snow or during flood seasons. The heaviest rains fell from November into February, with lighter rains earlier and later, and none usually

during the long hot summer. The winter storms often compelled the use of alternate roads. The Plain of SHARON, for example, was a summer road; in winter a new road farther E followed the higher land at the foot of the hills. Much of the Plain of ESDRAELON was a swamp in the winter during Bible times. The roads were modified by the geology of the terrain through which they passed.

The halting places had plenty of water and food for travelers and their animals. Such caravan sites often became commercial centers; at strategic points fortresses were built to protect the commerce.

B. Major roads. The most important N-S road in Palestine was known as VIA MARIS ("the way of the sea") or the Great Trunk road. It was a continuation of the great road from Egypt that had followed the Mediterranean coast from near the present Suez Canal to GAZA, which through all its history has been the bridgehead to Egypt. From Gaza the road ran just E of the sand dunes of the Mediterranean close to JOPPA, where it moved to the E edge of the Plain of Sharon until it could cut through the pass at MEGIDDO and then climb across GALILEE to the key road junction at HAZOR. It then crossed the Jordan River just below Lake Huleh. At this point it climbed out of the Jordan Valley and up to the Syrian plateau and direct to DAMASCUS. This was the fastest route, whereas caravans carrying heavy baggage took an easier grade: at Megiddo they turned E across the Plain of ESDRAELON and down to BETH SHAN, then turned N up the Jordan Valley near the Sea of Galilee, where they climbed out to the Syrian plateau, and then directly to Damascus.

Another N-S road handled mostly local Palestinian traffic rather than international commerce. It began at BEERSHEBA and reached the central ridge of W Palestine at HEBRON; it continued through JERUSALEM, BETHEL, SHECHEM, SAMARIA, and DOTHAN to EN GANNIM at the edge of the Plain of Esdraelon. Traffic could continue on the international route to Damascus or take an alternate course to the Mediterranean coast at ACCO and then N to PHOENICIA.

A second international trade route in Palestine, on the high plateau E of the Jordan River, was known as the KING'S HIGHWAY. It picked up Arabian commerce at EZION GEBER or at Maʿan (the latter was replaced by PETRA in intertestamental times). The road then moved N about equidistant between the desert and the cliffs dropping off into the Jordan Valley. The major towns on the route were Kir of Moab (see KIR HARESETH), DIBON, MEDEBA, HESHBON, RABBAH (AMMON), EDREI, and Damascus. On the stela of MESHA (see MOABITE STONE), this Moabite king praised himself for making a highway in the ARNON Valley. Anyone who has seen a picture of that valley can appreciate the task. It is c. 2.5 mi. from rim to rim and c. 2300 ft. deep. After David's era the Wadi Sirhan became an alternate trade route from ARABIA to Rabbah. By that time camels were plentiful, and they could be used on this shorter but poorly watered route.


Major routes and roads.

There were two main E-W routes in Palestine, each following an ideal water grade. One left the Mediterranean at Joppa and moved NW to the pass between Mounts GERIZIM and EBAL, where Shechem was located. It then continued down a valley to the Jordan River, which it crossed at Adam. See ADAM (PLACE). In TRANSJORDAN it ascended the JABBOK Valley through the GILEAD district where it met the king's highway going N to Damascus.

The other key E-W road left the Mediterranean at Acco and went SE through the Plains of Acco and Esdraelon to the Jordan River at Beth Shan. Here it crossed the river and ascended a pass to the great wheat-growing plateau to BETH ARBEL (modern Irbid) and on to Edrei, where it met the king's highway going N to Damascus.

C. Minor roads. A short but important road along the Mediterranean ran from Acco (NT, Ptolemais) to TYRE and SIDON and other Phoenician cities. Most scholars doubt if there was a coastal road through the Plain of Sharon, since most of the shore area was swampy.

The main ridge road from Shechem to the Plain of Esdraelon had one route via Samaria, already mentioned. It was on the W side of the ridge. Before Samaria came to prominence, the main road probably ran E of the ridge through the earlier Israelite capital of TIRZAH. This same main ridge road

had a less important road that went S from Beersheba via KADESH BARNEA to Egypt. It was important only in the period of the PATRIARCHS, especially Abraham, and after JEHOSHAPHAT'S time. A minor N-S road followed up each side of the Jordan Valley from JERICHO to CAPERNAUM. In Transjordan, a minor N-S road paralleled the king's highway, but it skirted the edge of the desert.

The most important E-W road S of Shechem left the Mediterranean at Joppa and climbed up the Valley of AIJALON to the central ridge. One branch turned S and in a few miles came to Jerusalem. This was the only military road from the PHILISTINE plain to Jerusalem. The other fork went N a few miles to Bethel and then descended to the Jordan River, passing through Jericho. It then crossed over the river and climbed up to Rabbah of Ammon.

Another short but important E-W road went from Acco via a depression called Sahl Battuf to the Sea of Galilee. A minor E-W road much farther S led from the seaport of ASHKELON to Hebron. From there a track led down to the Dead Sea at EN GEDI. Another road stretched from nearby Gaza to Beersheba and on to the edge of the Jordan depression, where a track led down to the ARABAH.

A look at a contour map of Palestine will show how rugged most of the country is, which necessitated a great number of still smaller roads to connect the various minor trade centers. These played a large part in local history but are seldom mentioned in the major historical accounts of Israel. David's flights from Saul, however, used these minor tracks, which he had learned as a shepherd lad working out of Bethlehem.

D. International travel. The label FERTILE CRESCENT is the best introduction to understanding OT travel, for it denotes the belt of arable land extending northward up the E coast of the Mediterranean to the headwaters of the EUPHRATES and TIGRIS Rivers, and then SE along the river valleys to the Persian Gulf. The great Arabian desert and the Syrian steppes N of them made E-W travel across them almost impossible until one reached the first good E-W commercial center at Palmyra (TADMOR). One of the few important crossings of the southern desert was made by NEBUCHADNEZZAR, who used that route from the Mediterranean to shake hands with the god NEBO on New Year's day at BABYLON, and thus validate his right to continue as king.

There were two major world civilization centers in OT times: EGYPT and MESOPOTAMIA (for the latter, see SUMER and ASSYRIA AND BABYLONIA). PERSIA and GREECE came into international importance only toward the end of the OT period. The HITTITES of ASIA MINOR made their greatest contributions to ANE cultures as miners and workers of metals during OT times. Phoenicia, after David's time, was to the ancient Mediterranean world what Great Britain was in her greatest maritime days. Assyria was primarily a military machine but she also modified Babylonian civilization. These countries dominated OT travel.

The traveler from Egypt to Palestine left Egypt near where the Suez Canal is today, and then normally traveled along the Mediterranean coast keeping inland behind the sand dunes. The road ended at Gaza, the bridgehead for Egypt. The only alternative route was the one Abraham used: from Goshen in Egypt to Kadesh Barnea at the N end of the Sinai desert and then to Beersheba. This route, however, was little used after his time until Solomon's reign. The only other travel alternative was to go by sea.

The various travel routes N-S in Palestine have been listed. In Galilee, several important roads left Palestine for Phoenicia or Syria. Phoenicia is a Greek word. In the OT that area was actually a part of CANAAN and was so called at times; in the OT it is usually referred to by its cities, especially Tyre and Sidon. Some commerce came overland into Phoenicia via the sources of the Jordan River above Lake Huleh, and then crossed the border into the Litany River Valley of Phoenicia. Additional

commerce traveled along the Mediterranean coast road from Acco to Tyre and Sidon. Still more commerce went by sea.

SYRIA (or ARAM as it was more often called), consisted of two fertile grain areas separated by the Antilebanon mountains. Just E of the LEBANON mountains lies the fertile Litany Valley. The Litany River rises at BAALBEK and flows S to the Mediterranean near Tyre. At Baalbek the ORONTES River also has its source, but it flows N and enters the Mediterranean near ANTIOCH OF SYRIA. This was a large fertile valley, a major breadbasket in the ancient world. It lay between the Nosairiyeh Mountains along the Mediterranean and the Antilebanon range. East of the Antilebanons was another grain area; as the rainfall becomes less eastward, the land turns to what some call the desert; but more accurately it is the steppes, and beyond that is the desert proper. One road followed the Litany Valley from Palestine N to Baalbek and then paralleled the Orontes River to the Mediterranean. Another road branched off from the Orontes at HAMATH, going northeastward to CARCHEMISH on the Euphrates.

The Syrian route, mentioned more often in the OT, led through Damascus and continued N to Hamath on the Orontes, or farther on to Carchemish on the Euphrates. Faster traffic heading for Mesopotamia left Damascus and cut NE for Palmyra (Tadmor); from there it went E to the great city of MARI on the Euphrates.

Carchemish and HARAN (of Abraham's time) were at the top of the Fertile Crescent. At this junction the Syrian roads ended, and here, of vital importance, roads from Asia Minor converged. From central Anatolia and its famous Hittite population one route went through the Taurus Mountains S to TARSUS and then turned E across the passes of the Amanus Mountains to Carchemish. Another route went farther E on the great central Anatolian plateau and then turned sharply S to Carchemish and Haran. From these key geographic cities a traveler could go SE to Babylonia or E to Assyria. Persia lay E of both of them.

From Carchemish the road followed the Euphrates River past Mari, on to Babylon, Ur, the Persian Gulf, and points S via the sea to Arabia. Babylonia was the successor of Sumer, where WRITING—the world's greatest invention—had its beginning. In this land, civilization in antiquity always seemed to be at home. East of Babylon, beyond one of the rare good passes in the Zagros Mountains, lay ELAM and what later became Persia.

To reach Assyria from Carchemish a route went E past Haran along the fertile foothills of the Armenian mountains through the lands of the Horites and Mitanni to the Tigris River and the capital city of NINEVEH. From here, passes reached into Persia, but the traveling was rough.

E. Water travel. The Hebrews did little water travel, in contrast to the maritime economy of the Phoenicians. When SOLOMON sent his ships down the RED SEA to OPHIR, and when JEHOSHAPHAT planned a similar expedition, Phoenician mariners were asked to conduct the adventures. JONAH was the one famous seafarer of the OT. His intended voyage was passage from Joppa to TARSHISH, which was probably on the Atlantic coast of Spain near the mouth of the Guadalquivir River. This was one of the longest commercial trips made in OT times. The only longer sailings were made to the British Isles for tin.

Coastal traffic of OT Palestine was in Philistine hands, between Gaza and Joppa. Later, the coastal towns became independent under Assyria. Joppa was not always considered a Philistine city. The only port on the Plain of Sharon was DOR, which belonged to the Tjeker, another of the SEA PEOPLES allied to the Philistines. Acco was allotted to the tribe of Asher but was never conquered by the Israelites. It was either an independent city or allied with Tyre in the N.

The other coastal water of Palestine was the Gulf of Aqabah with its two seaports: Ezion Geber (the more important) for Transjordan, and Elath for W Jordan. Solomon's fleet used Ezion Geber as its home port (see also II.B below).

II. In the NT

A. Land travel. Travel in Palestine in NT times was very similar to OT times. There were no major changes except that a larger population meant more travel and therefore better roads. It is doubtful, however, if Palestine had any Roman-constructed roads in the days of Christ and Paul. Certain OT cities acquired new (Hellenistic) names before the NT period: Acco became Ptolemais; Rabbah of Ammon, Philadelphia; and Samaria, Sebaste. Two important new cities, CAESAREA and JERICHO, were built by HEROD the Great. The latter city was not a rebuilding of OT Jericho, but a new city on a new site nearby the OT site.

NT travel is apparent in the trips taken by JESUS CHRIST and the apostle PAUL. When Paul branched out from Syrian Antioch on his missionary journeys through Asia Minor and points W, he used some of the famous Roman roads. With good roads came more carriages for people and more wagons for freight. Carriages could make 25 mi. a day on a good Roman road. Government business and army orders could travel 50 mi. a day by a horseman. Government orders could travel from Rome to Caesarea, the capital of NT Palestine, in fifty to sixty-five days in good weather. Commercial business would probably have taken longer, up to a hundred days or more. The world of the NT, a saga of international travel, reached from Germany to China, and from Scandinavia and Russia to central Africa. NERO sent army engineers to search for the sources of the NILE River, and they went as far S as the Sobat River.

© Dr. James C. Martin

Foundation of the ancient Husan ridge road connecting Bethlehem to the Elah Valley.

The major reason for travel was business, which included any saleable items from the vast land areas described above. An abridged list of commerce from the Far E and the Near E is given in Rev. 18:11 – 13.

B. Water travel. The major cities that transshipped the ANE commerce to ROME and other points W were ALEXANDRIA and ANTIOCH OF SYRIA. The various efficient ways of handling cargo across the Isthmus of CORINTH greatly expedited E-W shipping. The isthmus was less than 5 mi. wide, but saved 200 mi. of sailing around Cape Malea, which was a graveyard for ships. In ancient times, clearing that cape was like clearing Cape Horn in the days of the clipper ships. Emperor Nero dug a part of the canal that now cuts through the isthmus. He would doubtless have finished it if political problems had not driven him to suicide. The canal was completed only in modern times, at the end of the 19th cent., using Nero's survey.

Nautical travel in OT and NT times used ships of various types. They ranged in size from very small to very large. The larger ones were decked over (see the excellent description of a ship used by the royalty of Tyre in Ezek. 27:3 – 9). Lucian mentions a large Alexandrian grain ship some 180 ft. long (its capacity would have been about 1200 tons). The vessel in which Paul was shipwrecked carried 276 in its crew and passenger list (Acts 27:37), while JOSEPHUS reports that he was in a shipwreck when there were 600 persons on board (*Life* 15). Ships were normally "powered by sail only, although on important business auxiliary oar power was used in calm weather. The ship would carry a large mainmast and small foremast, both using square sails. Great oars mounted over the stern served as rudders" (J. Kelso, *Archaeology and Our Old Testament Contemporaries* [1966], 121). A day's sail would probably have been about 55 nautical miles.

C. Reasons for travel in NT times. The most important reason for travel in NT times was commerce, but this involved far more than the shipment of goods. There were commercial travelers of all categories, and tradesmen changing their places of employment, as PRISCILLA AND AQUILA had done (Acts 18:2), whose original home was on the Black Sea (PONTUS). Banking and the insurance of cargoes were big business, and their agents were always on the move. There were Roman military and naval men of every category, on special duties for the government, such as the procuring of supplies. Rome often shifted large units of her military forces. VESPASIAN, who was in charge of Rome's war with the Jews, was on duty in Britain when he was called to his new command.

Also in NT times, people traveled on religious pilgrimages. Jerusalem attracted the faithful Israelites, from Rome to Arabia (Acts 2:5 – 11). Among the most famous pagan shrines were those at EPHESUS, ATHENS, and ELEUSIS, but minor ones were located throughout the empire and all of them attracted pilgrims. New temples were erected everywhere, which necessitated travel for the craftsmen employed and transportation for the material used in construction. Many of the temples were famous for their healing miracles, and the sick traveled from temple to temple. People also traveled to hot springs, which were usually considered medicinal. CAPERNAUM was near two famous hot springs, which may be one of the reasons so many sick people came to Christ in that city.

Athletes traveled the length of the Mediterranean for the "Olympian games," which were held in contests from Spain to Antioch. They were well scheduled so that the best professional athletes could make the rounds of all the important games. Crowds flocked to these games in large numbers, as today. The modern football stadium is a modified Roman amphitheater. Professors and scholars traveled widely; most of the population with money sought an education for their sons, which involved foreign travel. TARSUS ranked just a little below Athens on the university circuit. Jewish

scholars finished their studies at Jerusalem (cf. Paul). Scientists, too, traveled everywhere. ALEXANDER THE GREAT started this movement when he took many varieties of scientists with him on his world conquest.

In NT times, tourists traveled everywhere to see the famous sights. By the next century, Pausanias was writing excellent guidebooks. The ancient world, however, could not solve the problem of winter. Sea travel could obtain favorable insurance rates only between May 26 and September 14. The sea was normally considered closed to traffic from November 10 to March 10. Emergency voyages were occasionally made in the closed season. The ship that took Paul to Rome tried to beat the season, but was shipwrecked. Fairly good sea charts and land maps, however, were available.

The greatest seasonal handicaps to land travel were snow and floods; when at their worst in Asia Minor, the roads might be blocked for weeks. There were few good inns throughout the whole empire, but wherever possible travelers stayed with business friends or with a friend of a friend.

J. KELSO

Travelers, Valley of the. According to Ezek. 39:11, God "will give to Gog a place for burial in Israel, the Valley of the Travelers east of the sea" (NRSV; similarly NJPS); as a result, the place will be called the Valley of HAMON GOG. The Hebrew of the last clause reads, *gê hā⟨ōběrîm qidmat hayyām*, which the KJV takes in a more general sense, "the valley of the passengers on the east of the sea."

On the reasonable assumption that "the sea" here is a reference to the DEAD SEA, the NRSV rendering indicates a place in TRANSJORDAN. And if the phrase *gê hā⟨ōběrîm* is a name, the simple revocalization *hā⟨ăbārîm* would yield a reference to the ABARIM, a range of mountains in MOAB (though the term ⟨ōběrîm [ptc. of ⟨ābar H6296, "to pass over, cross"] occurs a second time in this verse and again in vv. 14 – 15—might this be a play on words?). It seems strange, however, that a location E of the Dead Sea would be characterized as being "in Israel" (for other objections and alternate proposals, none convincing, see W. Zimmerli, *Ezekiel*, Hermeneia, 2 vols. [1979 – 83], 2:317).

The NIV understands the syntax in a slightly different way, "the valley of those who travel east toward the Sea," implying some otherwise unknown place in Canaan proper. Possibly the passage should be understood symbolically, without reference to a specific geographical location.

treasure. This English term is used frequently in Bible versions to render several words, especially Hebrew ᾽ôṣār H238 (e.g., 1 Ki. 7:51) and Greek *thēsauros G2565* (e.g., Matt. 2:11), both of which often refer to a STOREHOUSE or treasury. Treasure in the Holy Scriptures consisted in money or any possession—jewels, gold, silver, vessels, ointments, spices, arms, grain and food, instruments of war —considered WEALTH or valuable, and which a king, a government, or an individual stored in a safe,

guarded place to keep from thieves and robbers. Thus, for example, the sacred vessels and furnishings of the TEMPLE in Jerusalem, or even the temples of heathen gods, were considered treasures (e.g., 1 Chr. 32:27 – 29; Ezra 1:9 – 11; Neh. 7:70). Because treasure signified a person's highest desires and possessions which gave him food, power, and luxury, often the term is used by the prophets, Jesus, and the apostles to signify spiritual wealth and possessions, such as wisdom, love, heaven, and the gospel (e.g., Prov. 10:2; Isa. 33:6; Mk. 10:21).

When enemy forces invaded a country, they generally headed for the king's palace or the temple for the treasures stored there, and these plus the captives and slaves of the people were the booty of WAR in ancient times. The entire concept of treasure or storehouse in the Bible indicates the monarchial aspect of the culture and economy of the ancient world in that all wealth was concentrated in the king, in the sacred temple, or in the hands of princes or wealthy individuals. The common people had little of this wealth, nor did they think they should have it, but they revered the king in the temple for storing it for the entire country. There was extreme wealth among a few and POVERTY among the multitudes.

There were no banks, nor did the treasure houses have safety deposit boxes, so the temples and palaces were always under heavy guard. Wealthy individuals hid their possessions beneath their houses, in caves, and in fields. Many wars were fought for these treasures (1 Ki. 14:26). Plundering the cities and temples of others was a method of gaining wealth for a nation. When Jerusalem fell to the invading armies from the E, all the treasures were carried off to foreign countries. Very often emperors, kings, and queens, as in EGYPT, had their treasures buried with them in secret sealed tombs. The PYRAMIDS of Egypt are an outstanding example of this method. The place in the temple in Jerusalem where the trumpet-shaped offering boxes were set out for gifts was thus called a "treasury" (Gk. *gazophylakion G1126*, Mk. 12:41; Lk. 21:1).

One of the first references to treasure in the OT is the episode of JOSEPH's brothers buying food in Egypt during the famine. When Joseph returned their money in their sacks with the food, he said to his frightened brothers, "Don't be afraid. Your God, the God of your father, has given you treasure in your sacks; I received your silver" (Gen. 42:23). Kings DAVID and SOLOMON were known for the great wealth they amassed in their palaces, and also stored in the house of the Lord. The treasure of the temple in Jerusalem consisted of the vessels, the golden altar, the golden table for the bread of the Presence (SHOWBREAD), the lampstands of gold, the lamps, the tongs, and other accessories; even the doors and the building itself were a great treasure all made of gold (1 Ki. 7:48 – 50). "When all the work King Solomon had done for the temple of the LORD was finished, he brought in the things his father David had dedicated—the silver and gold and the furnishings—and he placed them in the treasuries of the LORD's temple" (v. 51). See TREASURY OF THE TEMPLE.

Like the residences of other monarchs of the ancient world, so the palaces of the kings of Judah and Israel had vast storehouses for the treasures of the nation. Concerning the wars with the powerful countries around Israel, the OT speaks again and again of foreign powers taking away the treasures of the king's house. SHISHAK king of Egypt besieged Jerusalem and "carried off the treasures of the temple of the LORD and the treasures of the royal palace. He took everything, including all the gold shields Solomon had made" (1 Ki. 14:26).

Sometimes the treasures of the Israelite palaces were at stake in the local wars in Palestine. For example, when BAASHA king of Israel and ASA king of Judah were at war, Asa sent all of the treasures of the nation to BEN-HADAD king of Aram, to make a bargain with him to attack Baasha so that he would leave Judah. "Asa then took all the silver and gold that was left in the treasuries of the LORD's temple and of his own palace. He entrusted it to his officials and sent them to Ben-Hadad…in

Damascus" (1 Ki. 15:18). In the rebuilding of Israel during the days of EZRA and NEHEMIAH, the same system of gathering huge treasures and wealth in the ruler's house and in the temple was used (Ezra 2:69; Neh. 7:70 – 71; 10:38; 12:44).

When the Arameans invaded Israel, King AHAZ asked TIGLATH-PILESER king of Assyria to come to his rescue against them. In order to entice the Assyrian king to do this, Ahaz took the silver and gold and all of the treasures of the house of the Lord, and sent them as presents to him (2 Ki. 16:7 – 9). A similar incident took place in the days of HEZEKIAH when another Assyrian king, SENNACHERIB, invaded Judah. The booty which the king of Assyria required of Judah was the silver and gold that was in the house of the Lord (18:13 – 16). Years later, when the king of Babylon took JEHOIACHIM of Judah as prisoner, he carried off all the treasures of the house of the Lord, cutting in pieces all the vessels of gold which Solomon had made—an indication of the vast treasures that could be found in the temple at Jerusalem through the centuries.

The source of these temple treasures had been the dedicated offerings David and others had given to the Lord: spoil won in battles and dedicated to the temple. Special groups of people or families of Israel were assigned the task of guarding the treasures there (1 Chr. 26:22 – 28). Other sources of wealth and treasure were large gifts from heads of families of Israel as freewill offerings for the house of God. "According to their ability they gave to the treasury for this work 61,000 drachmas of gold, 5,000 minas of silver and 100 priestly garments" (Ezra 2:69). The tithes of the people were also added to the treasure storehouse at the temple.

The book of Proverbs repeats the wisdom that the fear of the Lord is always greater than earthly treasures and the trouble that accompanies them (Prov. 8:21; 15:16). The prophet Isaiah speaks of "treasures on the humps of camels" (Isa. 30:6), indicating the wealth that was carried in CARAVANS. That the wealth of ancient countries consisted in the treasures in storehouses at the seat of the government is indicated by God's word against Jerusalem: "I will hand over to their enemies all the wealth of this city—all its products, all its valuables and all the treasures of the kings of Judah. They will take it away as plunder and carry it off to Babylon" (Jer. 20:5). Hezekiah had tremendous storehouses while he was king, consisting of "the silver, the gold, the spices and the fine oil—his armory and everything found among his treasures" (2 Ki. 20:13; Isa. 39:2). Sometimes invading kings, such as NEBUCHADNEZZAR of Babylon, besieged Jerusalem and took the precious vessels of the temple and of the king and would place them into the temple of his own idol, indicating that all temples in ancient times had secret storehouses for vessels, jewels, gold, and silver as a sacred treasury (Dan. 1:1 – 2).

Often the term *treasure* or *storehouse* is used in the OT in a figurative sense. For instance, in a dry land like Palestine RAIN from heaven for the parched crops was considered treasure: "The LORD will open the heavens, the storehouse of his bounty, to send rain on your land in season and to bless all the work of your hands" (Deut. 28:12). WISDOM was considered a great treasure among the ancients: "Precious treasure remains in the house of the wise, / but the fool devours it" (Prov. 21:20 NRSV). Another common word-picture is that the fear of the Lord is a person's treasure, as Isaiah told the people of Israel, "The fear of the LORD is the key to this treasure" (Isa. 33:6). The prophet Ezekiel echoes the same sentiment: "By your wisdom and understanding / you have gained wealth for yourself / and amassed gold and silver / in your treasuries" (Ezek. 28:4).

The NT speaks of treasure in individual terms as personal property. The MAGI of the E (not kings) brought great treasures to the child Jesus in Bethlehem. Since Jesus is a King their gifts were those fit for royalty—gold, frankincense, and myrrh (Matt. 2:11). Their gifts remind one of the king's treasury in the OT. Aside from a few instances—such as in Heb. 11:26, where we are told that Moses

"regarded disgrace for the sake of Christ as of greater value than the treasures of Egypt," or in Matt. 13:44, where Jesus compares the kingdom of heaven to a "treasure hidden in a field"—the term is used more generally in the NT in a metaphorical sense. Jesus admonishes his disciples, "But store up for yourselves treasures in heaven, where moth and rust do not destroy, and where thieves do not break in and steal. For where your treasure is, there your heart will be also" (Matt. 6:20, 21).

Our Lord also uses the term to designate the good and evil in a person: "The good man brings good things out of the good stored up in him, and the evil man brings evil things out of the evil stored up in him." (Matt. 12:35). Since the kingdom of heaven is the ultimate desire, Jesus likens it to a man who, finding a treasure hidden in a field, sells all of his possessions and buys the entire field so that he is certain to obtain the treasure (13:44). LOVE and works of love are treasures that are stored in heaven, as Jesus tells the young man, "If you want to be perfect, go, sell your possessions and give to the poor, and you will have treasure in heaven. Then come, follow me" (19:21). Jesus tells his disciples that such works of providing for the poor through selling one's possessions is "a treasure in heaven that will not be exhausted" (Lk. 12:33).

The writer of the Gospel of Matthew speaks of treasure as the spiritual wisdom and knowledge which a scribe who is a member of the kingdom produces: "Therefore every teacher of the law who has been instructed about the kingdom of heaven is like the owner of a house who brings out of his storeroom new treasures as well as old" (Matt. 13:52). The apostle PAUL terms the gospel of Jesus Christ a treasure which dwells in weak human beings: "But we have this treasure in jars of clay to show that this all-surpassing power is from God and not from us." (2 Cor. 4:7). The capstone and ultimate meaning of treasure in the NT is Paul's statement that in Jesus Christ "are hidden all the treasures of wisdom and knowledge" (Col. 2:3).

L. M. PETERSEN

treasury of the temple. Solomon's TEMPLE contained a place for storing gifts of gold and silver dedicated to the use of the house of the Lord (1 Ki. 7:51). Most ancient sanctuaries had a treasury attached to them; for example, the *opisthodomos* ("back chamber") served as the treasury for the Parthenon at ATHENS. The location of the treasury in the temple of Jerusalem is a matter of dispute. From NT evidence it appears that receptacles for freewill offerings were accessible to women, hence in the forecourt of the temple (cf. Mk. 12:41 – 42; Lk. 21:1 – 2). Most exegetes place the treasury elsewhere, though Strack and Billerbeck think that this is unwarranted (Str-B, 2:42ff.; cf. Jos. *War* 5.5.2).

From 1 Chr. 26:20 it would appear that it belonged to the function of the Levites to administer the treasury, but later it became the prerogative of the priests (cf. Jos. *Ant*. 11.5.2). At the time of Christ the high priest was the chief administrator. Later rabbinic writings indicate that a committee served under him which was hierarchically constituted and headed by financial officers or controllers.

The main source of income was the half-shekel (Exod. 30:13 – 15), which was paid by every Israelite "twenty years old or more" before the first of NISAN each year. Thirteen receptacles were placed in the court of women to receive the offerings. Six of these trumpet-shaped urns were specially designated to receive, for example, new shekel dues, old shekel dues, bird offerings, etc. The rest were for free-will gifts (cf. *m. šeqal.* 6:5 – 6). Every adult Jew, both in Palestine and in the DIASPORA, was under obligation to pay the half-shekel annually. Delegations from communities all over the empire and from beyond came to Jerusalem with their gifts. The MONEY CHANGERS (Mk. 11:15; Jn. 2:14 – 15) were necessary because only the Tyrian shekel was allowed for temple use. In

older times booty acquired in battle was dedicated for the use of the sanctuary (cf. Josh. 6:19, 24).

Since the temple possessed considerable wealth, the treasury was thus a great attraction to invading armies (cf. 1 Ki. 14:26; 2 Ki. 24:13; 1 Macc. 1:20 – 24; 2 Macc. 3:1 – 13). Frequently the reigning princes themselves, in time of need, made use of the treasury to buy political advantage (cf. 1 Ki. 15:18 – 19; 2 Ki. 12:18), or to pay tribute money (18:14 – 15). See also TREASURE.

J. JOCZ

treaty. A document containing the terms of arrangement or COVENANT agreed upon by two or more parties. Archaeological research has provided examples of international treaties of the lands of the ANE drawn up during the 2nd millennium B.C.—the time when the biblical Israelites entered their covenant with the Lord at Sinai (Exod. 19 – 20). Political treaties were of two types: (a) *Parity* treaties were drawn up to state relationships existing among equals; two great powers such as EGYPT and the HITTITES might find it useful to formalize their relations in this way. (b) *Suzerainty* treaties declared relationships formalized between a "great king" and his vassal: the great king (or "king of kings" or "lord of lords") thereby claims authority over other, lesser rulers. Yahweh, the God of Israel, uses suzerainty terms in declaring his right to absolute loyalty from all earthly rulers and people (cf. Ps. 2).

Six elements may be distinguished in suzerainty treaties of the 2nd millennium B.C.: (1) The treaty begins with the identification of the great king. Similarly, in covenant passages in the OT we often find the formula "I am the LORD your God" (Exod. 20:2) or "This is what the LORD, the God of Israel, says…" (Josh. 24:2).

(2) Then follows a statement of the historical background of the relations between the great king and his vassal; the purpose is to emphasize the goodness and kindness of the lord to his vassal, with a view to causing the latter to accept gladly his responsibilities and obligations. Similarly, the OT emphasizes the gracious acts of the Lord on behalf of his people: after identifying himself as the Lord, Israel's God, he continues, "who brought you out of Egypt" (Exod. 20:2). Following the conquest of Canaan, the Lord identified himself as the God who gave the Israelites a land in which to dwell (Josh. 24:2 – 13).

(3) Next the treaty gives the obligations of the vassal, who is not permitted to consort with foreign powers. The suzerain will protect the vassal, but the vassal must not act in a way that would suggest disloyalty to his suzerain. The first commandment forbids Israel from consorting with any other deities (Exod. 20:3). God demands absolute loyalty of his people.

(4) Ancient suzerainty treaties stipulated that a copy be placed in the shrine of the vassal and that it be read periodically. A copy of the biblical TEN COMMANDMENTS was placed in the ARK OF THE COVENANT (Exod. 25:16, 21; 1 Ki. 8:9), which was first housed in the TABERNACLE. With the settlement in Canaan we read of the "house of God…in Shiloh" (Josh. 18:31), which was the center of Israelite religious life. After the time of DAVID, JERUSALEM became the spiritual center for Israel, and the ark became part of the TEMPLE furnishings. There were periodic occasions when the law was read to the people (cf. Josh. 24:22). The priests in charge of the Israelite sanctuary were instructed to read the law every seven years (Deut. 31:9 – 13).

(5) An ANE treaty would invoke the gods of the two parties as witnesses. Since Israel had no gods, Josh. 24:22 depicts God as saying, "You are witnesses." The people themselves bear witness to the claims of their God.

(6) The treaty concludes with blessings on those who keep the terms of the treaty and curses on those who violate the covenant. No specific penalties are mentioned. Even the ancient suzerainty

treaties were religious in nature. The gods would hold the parties to the covenant accountable. The blessings and curses of Deut. 27 – 28 are similar in form (cf. Exod. 23:20 – 33; Lev. 26; Josh. 8:34). The treaties of the ANE indicate that the biblical covenant was expressed in terms understood in its cultural context. Biblical monotheism was unique to Israel, but much of the language in which it was expressed was common to the lands of W Asia.

This cuneiform tablet contains the Kadesh Treaty (1258 B.C.), a pact between the Hittite king Hattusilis III and the Egyptian pharaoh Ramses II. Written in Akkadian, the international language of the day, it is the earliest known parity peace treaty.

C. F. PFEIFFER

tree. See FLORA.

tree of knowledge. According to Gen. 2:9, God "made all kinds of trees grow out of the ground" in the Garden of Eden. See EDEN, GARDEN OF. The verse continues, "In the middle of the garden were the tree of life and the tree of the knowledge of good and evil." God commanded ADAM not to eat of the tree of knowledge on penalty of death (2:17). The serpent's temptation of EVE (3:1 – 5) centered on this command, and when he had convinced her that she would not die but become "like God," she ate of it to her sorrow.

The precise significance of the tree has been a matter of debate. Elsewhere in the Bible, lack of knowing good and evil is treated as a mark of immaturity (Deut. 1:39; Isa. 7:14 – 17) and possibly senility (2 Sam. 19:35, though here the NRSV has, "what is pleasant and what is not"), but in such passages something different seems to be in mind, namely, moral discernment. In Genesis the phrase "good and evil" possibly indicates the extremes, and thus the totality, of knowledge. If so, the tree may have symbolized God's OMNISCIENCE and the power associated with it. In partaking of its fruit, Adam and Eve reached for divinity but obtained guilt, shame, condemnation, and expulsion instead. (See *ABD*, 6:656 – 60.)

G. H. LIVINGSTON

tree of life. Along with "the tree of the knowledge of good and evil" (see TREE OF KNOWLEDGE), the tree of life was originally placed by God in middle of the Garden of Eden (Gen. 2:9). At this point in the narrative, nothing is said about the significance of either. There was no command given to ADAM and EVE not to eat of the tree of life; in fact, permission to partake of it would seem to be included in the statement, "You are free to eat from any tree in the garden" (v. 16), for the only exception listed is the tree of knowledge (v. 17). After their sin, when they were expelled from the garden, the reason given was, "The man has now become like one of us, knowing good and evil. He must not be allowed to reach out his hand and take also from the tree of life and eat, and live forever" (Gen. 3:22). Two CHERUBIM, armed with a flaming sword, were then stationed to guard the tree of life. Evidently this tree was identified with everlasting LIFE, and as a result of the original SIN, humanity would no longer have access to the tree, but would instead be subject to deterioration and DEATH.

In Ezek. 31:1 – 12 there is also a juxtaposition of a river, which here abundantly gives life, and a group of trees that are evergreen, everblooming, and life-giving in that they produce food and medicine. In the OT elsewhere, only in Proverbs does the phrase "tree of life" occur, depicting such virtues as WISDOM (Prov. 3:18), "the fruit of the righteous" (11:30), "a longing fulfilled" (13:12) and the "tongue that brings healing" (15:4). In each case, it would seem, people are vitalized and renewed, but there is no elaboration on the theme nor is any cosmic significance given to these trees of life.

In the NT only the book of Revelation has any reference to the tree of life, and in each occurrence it does have a spiritual, cosmic meaning. In Rev. 2:7 a promise is given that the overcomer will partake of this tree, which is said to be located in "the paradise of God." The end of the book gives more detail. From the throne of God in the new Jerusalem will flow "the river of the water of life," bearing fruit every month, and providing healing for the nations (22:1 – 3).

The motif has been common in most pagan religions also. In contrast to the Bible, the life it symbolizes is the natural power of reproduction, resident in plants, animals, and human beings, personified by gods and goddesses. See FERTILITY CULTS . The COSMOGONY related to it is nature-bound, whereas in the Bible it is tied to a positive, spiritual relationship between God and human beings. From ancient MESOPOTAMIA have come cylinder seals and other art objects that depict a tree

and figures of perhaps divine beings. On clay tablets written in CUNEIFORM script are recorded many of the ancient myths of the people who lived there. In many of these mythical stories, sacred trees of varied kinds play a more or less prominent role. Rather than being in an earthly paradise where man was living, as in Gen. 2 – 3, the sacred trees are in the abode of the gods with very limited access to it granted to a few fortunate men.

On the other hand, the sacred tree of life was closely associated to the reigning king of almost every ancient nation. Quite often he is portrayed as the guardian and sacramental priest who dispenses its powers through the cultus. In another context, the tree of life was closely associated with the mother goddess, who represented the female principle of natural reproduction, whether in crops, herds, or human family. She could also represent the throne, and hence the giver of life and power to the monarch.

In temples belonging to pagans, the vital life principle of nature would be represented by a grove of trees or the trunks of trees with branches lopped off. In some cases, a wooden post or a block of stone planted in holes, so they might stand upright, would be adequate. The rites associated with these symbols were concerned with magically inducing life in the fields, in the herds, or in the family. Hence, it was closely bound with procreation, with birth, and with growth. These rites would also be aimed at curing barrenness, bringing rain, and preventing death.

(See G. Widengren, *The King and the Tree of Life in Ancient Near Eastern Religions* [1951]; E. O. James, *The Tree of Life* [1966]; H. N. Wallace, *The Eden Narrative* [1985]; J. Magne, *From Christianity to Gnosis and from Gnosis to Christianity: An Itinerary through the Texts to and from the Tree of Paradise* [1993].)

<div align="right">G. H. LIVINGSTON</div>

trespass. An overstepping of the boundaries, thus an unfaithful or treacherous act that incurs guilt (cf. SIN; TRANSGRESSION). The KJV OT uses this English term frequently, both as a noun and as a verb, to translate several Hebrew words; for example, the phrase "trespass offering" occurs many times as the rendering of the noun *ʾāšām H871* (Lev. 5:15 – 19 et al., where modern versions usually have "guilt offering"; see SACRIFICE AND OFFERINGS IV.A.2).

In the KJV NT the word occurs as a verb a few times to translate Greek *hamartanō G279*, "to sin," when the context has to do with an offense against another person (Matt. 18:15, 35 [following the TR]; Lk. 17:3 – 4); and it occurs as a noun in five passages to translate Greek *paraptōma G4183*, literally "misstep, fall," but then "offense, wrongdoing, sin" (Matt. 6:14 – 15; Mk. 11:25 – 26 [v. 26 missing in important early witnesses]; 2 Cor. 5:19; Eph. 2:1 [with *hamartia G281*, "sin"]; Col. 2:13). The Greek noun is found in a number of other passages where the KJV uses "offence" (Rom. 4:25; 5:15 – 20), "fall" (11:11 – 12), "fault" (Gal. 6:1), "sin" (Eph 1:7; 2:5). The NRSV uses "trespass" consistently (except for Rom. 11:11 – 12, "stumbling"), whereas the NIV uses it only in Rom. 5. It is difficult to determine whether a sharp distinction is intended between *paraptōma* and *hamartia* (see esp. Rom. 5:20 and Eph. 2:1; and cf. Matt. 6:14 – 15 [the LORD'S PRAYER] to its parallel, Lk. 11:4).

trespass offering. See SACRIFICE AND OFFERINGS IV.A.2.

trial. See CRIMES AND PUNISHMENTS; TEMPTATION; TRIAL OF JESUS.

trial of Jesus. Two of the greatest champions of human rights, Jewish and Roman law, met in a most tragic injustice—the mistrial of Jesus Christ. Jewish leaders were blinded by their determination to

be rid of Jesus, and the Roman governor yielded to fear of reprisals. Together they represent both the religious and the secular worlds, which, too often, have been plunged by selfish interests into rejection of their Lord. See also JESUS CHRIST V.G.2.

I. The Jewish trial. The purpose of the Jewish leaders was "to arrest Jesus in some sly way and kill him" (Matt. 26:4). This goal, not legality, was the controlling principle of the trial and the reason for the many irregularities.

A. Preliminary examination. While the SANHEDRIN gathered, Jesus was held at the house of ANNAS, former high priest and sharer of the dignity and power of the office with his son-in-law CAIAPHAS. As no part of a regular trial, Jesus was interrogated concerning his disciples and doctrine (Jn. 18:19). The purpose was to gain evidence for the trial. Jesus insisted, in effect, that the trial begin with examination of witnesses, not with probing of the accused (18:20 – 21). Charges must come before answers.

B. The night trial. Haste was important, though illegal. Jesus must be condemned before his friends could rally. The temple gates were closed for the night. The high priest's quadrangle served as informal emergency quarters. Off the open center court was a large room isolated only by pillars. Here they assembled, just across the courtyard from the apartment of Annas. As the members of the Sanhedrin were assembling, the chief priests worked frantically to find and train witnesses. Though carefully instructed and solemnly sworn in, the perjured witnesses could not agree (Mk. 14:56; Deut. 19:15). Jesus treated this phase of the trial with silent disdain.

In a move of desperation, the high priest put Jesus under oath (Matt. 26:63 – 64). Jesus freely admitted his claim that he was the Christ (MESSIAH), the SON OF GOD (vv. 65 – 66), though he knew it would cost his life. The issue was clear. On this claim and nothing else hinged the condemnation of Jesus by the Jewish court. By the clever ruse Caiaphas made each member of the Sanhedrin, including himself, an accredited witness. Since Jesus, a man, could not be deity, they assumed he must be a blasphemer worthy of death. Jesus was condemned by common consent, but not sentenced. The group broke into disorder. Some spat upon Jesus, others struck him (Mk. 14:65).

C. The morning session. The Friday trial at daybreak was to give semblance of legality to the decision of the night trial and to prepare to present the matter to PILATE. The high priest began the trial again, eliminating parts that had been unfruitful. Jesus was questioned directly by the court, and again he testified that he was the SON OF GOD. All claimed to witness the blasphemy. All arose and led him to Pilate (Lk. 22:66—23:1). Blasphemy was still the one and only charge.

II. The Roman trial. Jesus was still condemned but not sentenced. As a jury, they brought the verdict of guilty, but ROME alone could legally give the sentence of death.

A. Attempted evasion. The Jews hinted strongly that Pilate should yield to them the right of trial and exercise only his right of execution. This was sometimes done by Roman governors either through indolence or as a favor, especially in matters of religion. Pilate was in no mood to yield, and said in effect, "Give me both the power to try and to execute or be satisfied with the penalties you are allowed to inflict on the condemned" (cf. Jn. 18:29 – 31).

B. Accusations. If Jesus was to be tried and sentenced by Rome, a new case must be made. Rome was not interested in blasphemy. Forced against their will and expectation to formulate a charge, the Jews began to pour forth vehement accusations. There were three main counts: perverting the nation, preventing the paying of tribute to CAESAR, and claiming to be king (Lk. 23:2). Only the third impressed Pilate. If it should be true, Jesus could be guilty of treason. If so, he must die. Rome knew no greater crime than treason.

C. Examination and acquittal. Pilate returned to the PRAETORIUM to examine Jesus. Jesus admitted that he was a king, but explained to Pilate that he was not the kind of king that would seek to overthrow the government. His authority was in the realm of truth (Jn. 18:33 – 37). Pilate, being satisfied, went out to the Jews and pronounced the words of acquittal: "I find no basis for a charge against him" (v. 38). This would have ended the trial if justice had been the object.

D. Referral to Herod. When the Jews shouted all the more accusations, Pilate feared a hopeless impasse. Finally, the word GALILEE gave him a thought. Herod Antipas was in the city (see HEROD V). Why not give him the honor and danger of passing on the case? The gesture was appreciated by Herod, but he was too astute to allow himself to be involved in a treason trial. He treated Jesus as a cheap entertainer and heaped ridicule upon him when he did not cater to the desires of the court. No legal purpose was served.

E. Jesus or Barabbas. Evasion did not solve Pilate's problem, for Jesus came back from Herod without the matter being resolved. Pilate tried twice more to gain consent for the release of Jesus (Lk. 23:13 – 23). Justice, scourging, pity, and festive spirit made no difference. The people wanted only Jesus' blood; that of BARABBAS would not do (23:18).

F. "Behold the Man!" In a final appeal to their humanity, Pilate brought Jesus out with bleeding back from the scourging, with the crown of thorns on his head, and with the purple robes of mockery. The Jews were all the more insistent that Jesus be crucified (Jn. 19:1 – 6).

G. The sentence. Compromise became impossible. Pilate had to release Jesus at all costs or crucify him at all costs. Finally, fear of Jewish blackmail became greater than his sense of justice. Pilate was unwilling to face his record before Caesar. To appease the Jews, Pilate crucified Jesus (Jn. 19:16). See CRUCIFIXION.

W. T. DAYTON

tribe. A large social group composed of families and clans. In the Bible it is applied specifically to

the fundamental divisions of the people of Israel. The Hebrew terms for "tribe" are *maṭṭeh H4751* and *šēbeṭ H8657*, both of which mean "staff, rod, scepter," but are applied to people groups under the rule of a chief who holds, literally or figuratively, the scepter of authority. The Greek term *phylē G5876* (*dōdekaphylon G1559* only in Acts 26:7) is used in the NT not only with reference to the Israelite tribes but also more generally to designate Gentile groups and nations (Matt. 24:30; Rev. 1:7 et al.).

I. The origin of the Israelite tribes. Some earlier scholarship, with its unavoidable lack of knowledge about the first half of the 2nd millennium B.C., could conceive of the PATRIARCHS merely as personifications of tribes, for some of the stories seemed to involve more than individuals. Since then, archaeology has shown us that the population of the FERTILE CRESCENT was relatively low at this time, and that it was marked out by the movements of many seminomadic groups, most of fairly small size.

In addition, it is clear that in the Fertile Crescent the unit of government was, and remained to a much later date, the fortified settlement or CITY, however much one city or another could establish general control over a wider area. Archaeological estimates of the population of Canaanite cities during the 2nd millennium B.C. show that it was seldom over 5,000 and often smaller. Under such circumstances, ABRAHAM with his 318 slaves born in his house represented a considerable force, which explains why MELCHIZEDEK and ABIMELECH could deal with him as an equal (Gen. 14:17 – 20; 21:22 – 31), and why the elders of Hebron regarded him as "a mighty prince" (23:6). Similarly, when ESAU came from SEIR to meet JACOB, he had 400 men at his disposal (32:6), whereas Jacob was strong enough to fight and capture land (48:22).

Under these conditions, the leader of such a group had absolute control over it, but his family, slaves, and any broken and homeless people that might throw in their lot with him were regarded as little more than extensions of his personality. However big or small a patriarchal group at any given moment—Jacob fleeing to HARAN was a single individual—Genesis is correct in depicting the decisions made, whether material or spiritual, as those of its head.

As is shown by LOT's having to leave Abraham (Gen. 13:1 – 13), there was a size beyond which such a seminomadic group could not grow, unless it settled down as tillers of the soil. The same process would inevitably have taken place in Jacob's family, if he had not gone down into Egypt. As it was, he had to divide his flocks (37:12, 17). In Egypt, even if Jacob's sons and their descendants had wished to separate, the permission under which they had entered the country would not have allowed it; in addition, even then there was no room in Egypt for seminomadic groups. Passing references (Exod. 3:22; 11:2) show that at least most of the Israelites had adopted a settled life, and that many were living intermingled with Egyptians. Although the twelve tribal groups regarded themselves as independent units, they were held together by a common origin, situation, persecution, and hope. A passage such as 1 Chr. 7:21b – 22 shows how independent action at the time was possible. (For the history and development of the various tribes, see separate articles under each tribal name.)

II. Tribal organization. The anarchist's ideal, lack of leadership and organization, has never existed, even among the most primitive of peoples. The mention of "the elders of Israel" (Exod. 3:16 et al.) shows that the Israelites never became a mere mob of slaves in Egypt; they preserved a living tradition and code of behavior from their ancestral past. See ELDER (OT). It has often been shown that the Sinaitic legislation, social and religious, is based on ancient Fertile Crescent patterns, though

transformed and purified. The passages relied on to deny this process (viz., Exod. 18:13 – 26; Deut. 1:9 – 18) point another way. Much of the organization introduced by Moses at JETHRO's suggestion was clearly military and was intended to bring the tribes unitedly through unknown and difficult desert country. On the judicial side, the purpose was probably mainly to help people from different tribes and those of non-Israelite origin (the "mixed multitude" of Exod. 12:38 KJV) to live together in peace under novel, demanding circumstances.

Already in the wilderness the individual tribes were composed of fundamental divisions (Num. 1:2; cf. Josh. 7:14). Each tribe was divided into a number of clans (Heb. *mišpāḥâ H5476*), which in turn were constituted by households (*bêt ʾāb H1074 + H3*). The latter term, which means literally "father's house," indicates a paternal family (*HALOT*, 1:125 [s.v. בַּיִת A.5]), "which comprised not only the father, his wife or wives and their unmarried children but also their married sons with their wives and children, and the servants" (R. de Vaux, *Ancient Israel* [1961], 7 – 8).

Breaches of the law and customs within the family, provided they were not calculated to bring down the divine wrath on the wider community, were the sole concern of the family head. The whole force of the story of DAVID and the woman from TEKOA (2 Sam. 14:4 – 11) derives from this fact. Only where the head of the family could not enforce his authority (Deut. 18:21) was it referred to the elders of the city. It is clear that GIDEON's father was held responsible for his son's behavior (Jdg. 6:28 – 32). (It should be noted that another term, *ʾelep H548*, lit. "[a group of] one thousand," seems to be an alternate way of referring to a clan [as in Jdg. 6:15]; it may have covered the inhabitants of one city, whose normal contribution to the tribal militia was about a thousand.)

The rulers of the individual city, of the clan, and of the tribe were the elders. In addition there seems to have been a supreme individual in each tribe called the *nāśîʾ H5954* (Num. 1:16; 34:18; Josh. 9:15; et al.). The role of this "leader" (NIV, NRSV) or "chieftain" (NJPS), apart from problems of general concern, was mainly confined to settling disputes. There is no evidence that before the time of the monarchy there was any form of appeal from their decision. The type of JUDGE, religious or secular, envisaged in Deut. 17:8 – 13 and 19:16 – 19 does not seem to have functioned before the time of the monarchy. The situation involving SAMUEL's sons (1 Sam. 8:1 – 2) does not seem to constitute an exception. The area around BEERSHEBA was still largely seminomadic and thus called for special arrangements for justice between rival groups. In difficult cases people would gladly turn to those who had shown that they had the Spirit of God in special measure, and so those who had delivered Israel on the battlefield, the "judges," were appealed to by those who felt themselves wronged to deliver them as well.

So far as the evidence available allows one to judge, this simple system proved adequate in the early centuries of Israel's life in Canaan. It had only one major inadequacy. As soon as a person passed beyond the borders of his own tribe, he had no rights beyond those given to the resident alien. The force of the tragic story in Jdg. 19 – 21 is that the wronged Levite had no way of obtaining justice, if the leaders of Benjamin refused it (20:12 – 13). There was no middle way between fighting and allowing open evil to have its way.

III. Intertribal organization. When Martin Noth (*Das System der zwölf Stämme Israels* [1930]) argued that Israel's early tribal organization could be viewed as an amphictyony, many scholars initially regarded his analysis as valid (though few were prepared to accept his views in all their details). The term *amphictyony* is taken from Greek history and covers a system there and in Italy by which a number of unconnected tribes joined together to maintain and protect a common sanctuary.

"Early Israel was neither a racial nor a national unit, but a confederation of clans united in covenant with Yahweh. This covenant both created her society and held it together" (J. Bright, *A History of Israel*, 2nd ed. [1972], 143, but modified in 3d ed. [1981], 162 – 65). Today most scholars regard the use of this term as unhelpful or even inappropriate, though the general principle remains useful in understanding the Israelite organization. (For a recent summary of the history of criticism regarding the concept, see A. G. Auld in *DOTHB*, 26 – 32.)

The central sanctuary of the confederacy was at SHILOH for most of the period of the judges. The old critical view that there was no central sanctuary has been decisively disproved, but it is clear that it was not an exclusive one. It is generally accepted that representatives of the tribes met at the sanctuary at the three pilgrim feasts and possibly at a special covenant festival. It will have been on these occasions that intertribal disputes on the personal or group level were dealt with. The story in Jdg. 19 – 21 is to be understood from this viewpoint. The refusal to give justice to the wronged Levite meant quite simply that Benjamin was trying to opt out from the confederacy, and the other tribes evidently felt that this was equivalent to apostasy, a renunciation of Yahweh.

The manner in which this tribal confederation worked is perhaps best illustrated in Jdg. 5. The campaign against SISERA is presented as a religious one. At the same time there was no method by which compulsion could be exercised. Those tribes that did not respond to the call to fight were regarded as failing Yahweh rather than Israel. When the town of MEROZ, however, is mentioned (5:23), it is bitterly cursed because its inhabitants "did not come to help the LORD." The reason is that it lay within the area of one of the participating tribes, probably NAPHTALI, and therefore its holding back was treason both to God and the tribe.

IV. The later development of the tribes. The destruction of Shiloh and its sanctuary, probably by the PHILISTINES (Jer. 7:12), was carried through to demonstrate that the confederacy was dead, as it no longer had its sanctuary. To this must in large measure be ascribed the subsequent neglect of the ARK OF THE COVENANT, for it was the symbol of the confederation.

The area of Lebonah (looking W). It was near this place that the Benjamite men, after the near destruction of their tribe, seized the girls of Shiloh during the harvest festival at Lebonah and married them (Jdg. 21:16 – 23).

Saul's method of summoning the militia against NAHASH (1 Sam. 11:7) seems to have been the old "amphictyonic" method (cf. Jdg. 19:29), and there are other signs that he considered he was in

some way continuing it. His neglect of the ark, however, shows that he was conscious that an irreversible change had been made. Judah's unilateral action after SAUL's death (2 Sam. 2:4) and the northern tribes' lack of enthusiasm for ISH-BOSHETH and ABNER (2:8 – 9) show that they did not feel committed by what had happened in the anointing of Saul. It is clear, too, that the acceptance of DAVID by the tribes of Israel (5:1) shows that they were still acting as independent entities. Though David tried to recreate the confederacy by the importance he gave to the ark, the unity he created was centered on his own person. On the death of SOLOMON, the northern tribes were acting entirely legally when they refused to accept REHOBOAM as king. Thereafter, however, the ever increasing power of the king and his court made local and tribal autonomy of decreasing significance. JEZEBEL might use the forms of the judicial past (1 Ki. 21:8 – 14) to achieve her ends, yet it was clearly a meaningless shadow compared to court power.

This erosion of tribal independence began with Solomon's division of the country into twelve administrative districts, which, though they did not depart widely from the tribal boundaries, were yet willing to ignore them (1 Ki. 4:7 – 19, cf. J. A. Montgomery, *A Critical and Exegetical Commentary on the Book of Kings*, ICC [1951], 119 – 24). Another factor was the breaking down of local life, partly due to its domination by the rich, so often denounced by the prophets, and partly by the development of a royal judiciary (cf. 2 Chr. 19:4 – 11). By the time of the return from exile, many had forgotten their genealogies and knew only the places from which their ancestors had come (cf. Ezra 2). No stronger indication is needed that the tribes as living organizations had ceased to exist. Also, a number of slaves had gradually been absorbed into the people; for them the old tribal system was a meaningless tradition.

V. Tribes in the NT. A considerable portion of the Jewish people in NT times consisted of descendants of those who had been forced to convert to Judaism by the HASMONEAN rulers John Hyrcanus and Aristobulus I (Jos. *Ant*. 13.9.1; 13.11.3), as well as from large numbers of PROSELYTES. The result was that those who really knew their genealogy probably were a minority. Cases like ANNA (Lk. 2:36) and PAUL (Phil. 3:5) show that when tribal origin was known, it was treasured. (In the case of modern Jewish families, it is considered improbable that their genealogies can be genuinely traced back beyond the late Middle Ages.)

In the NT the term "the twelve tribes" is used in several ways: of historical Israel as a whole (Acts 26:7), of the CHURCH as the people of God (Jas. 1:1), and of eschatological Israel (Matt. 19:28; Lk. 22:30; Rev. 7:4; 21:12); some would argue, however, that these eschatological references, at least in Revelation, designate God's people as a whole. The NT seems to be completely unconcerned about the fate or whereabouts of the "lost" ten tribes (popular Jewish orthodoxy still expects the "lost" northern tribes to reappear, but there is no consensus as to where they may be found). When the word *tribe* is used in non-Jewish or non-Christian contexts, it means simply a racial or political subdivision without any more exact force.

H. L. ELLISON

tribes, location of. The main information about the tribal portions is found in Josh. 13 – 21, supplemented by 1 Chr. 4 – 8. Whatever views are held of the date and composition of Joshua (see JOSHUA, BOOK OF II), it has been generally accepted ever since the work of M. Noth and A. Alt that the tribal boundaries are very ancient. The geographer has been able to show that with a few exceptions they conform to the natural divisions of the land. In some cases, however, the places named have not been identified and therefore the interpretation of the information is not always

certain.

For reasons that are not given, the tribal portions of Judah (Josh. 15 – 16) and of Ephraim and half-Manasseh (ch. 17) were allocated in advance. The portions for Reuben, Gad, and the other half of Manasseh had been allocated already by MOSES from the land conquered in TRANSJORDAN, that is, E of the Jordan River (Num. 32; Deut. 3:12 – 22; Josh. 13:8 – 32). The remaining land was divided into seven portions that were apportioned by lot (Josh. 18:11—19:46). The tribe of Levi was granted only sixty-one cities, of which thirteen were for the priests (Josh. 21). The division was made in advance of complete conquest, and so some of the boundaries remained an ideal that was never achieved. See also TRIBE.

1. The Transjordanian tribes
    1. Reuben
    2. Gad
    3. Half-Manasseh (Makir)
2. Tribes without stated boundaries
    1. Simeon
    2. Issachar
    3. Dan
3. Judah
4. The central tribes
    1. Ephraim
    2. Manasseh
    3. Benjamin
5. The northern tribes
    1. Zebulun
    2. Asher
    3. Naphtali
6. The Levitical cities

I. The Transjordanian tribes. The tribal portions as given in Ezek. 47:13—48:29 should be a constant reminder that there is an abiding lack of clarity regarding the exact limits of the Promised Land. Whatever the interpretation of the boundaries suggested by God's promise to ABRAHAM (Gen. 15:18 – 21), there is a very early description of the full extent of Canaan in Num. 34:1 – 12. The remarkable feature in it is that it excludes GILEAD and the northern part of the Moabite plateau round HESHBON. Ezekiel 47:15 – 18, with its difficult text, seems to draw the same boundary in the N and NE. Both passages agree in making the Jordan the eastern boundary only from the Sea of Galilee southward. Quite consistently with this, the land of SIHON was captured only because of his own obstinacy (Num. 21:21 – 24; Deut. 2:26 – 36); on the other hand, Israel marched against OG (Num. 21:33 – 35; Deut. 3:1 – 10). Gilead is clearly regarded as not being in the land of Canaan (Josh. 22:10 – 11, 32). It would seem, therefore, that though Transjordan as a whole fell into the boundaries delineated in Gen. 15:18 – 21, only part belonged to the heartland of Israel.

The main divisions of Transjordan are fairly clear. The ARNON River, flowing into the DEAD SEA about mid-distance between the N and S ends, was always the S boundary of Israelite territory. All S of it was MOAB, whether independent or subject to Israel. The next effective boundary to the N

was the Wadi Heshban (not mentioned in the Bible), N of Heshbon. Of little importance in itself, it marks the N end of the tableland, where the broken hills of Gilead begin. Gilead stretches N to the Yarmuk River (not mentioned in the OT), and is divided in two by the JABBOK. North of the Yarmuk lies BASHAN (cf. Deut. 3:10). Since these divisions are not very great and the eastern tribes were owners of cattle, and hence seminomadic, the frontiers dividing the Transjordan tribes were constantly fluid.

A. Reuben. The tribe of REUBEN received the tableland between Heshbon and AROER, on the edge of the Arnon Valley, that is, the former kingdom of Sihon (Josh. 13:15 – 23). Fourteen cities in all are mentioned, but DIBON and Aroer (Num. 32:34), Reubenite towns, are mentioned as in the hands of Gad; ATAROTH was probably also in this area. It would seem that Reuben was not able to hold its territory for long, for the last mention of its effective presence is in Jdg. 5:16 (1 Chr. 5:26 is hardly a contradiction of this). MESHA, king of Moab, mentions Gad on the Moabite stone, whereas Reuben does not appear. There are indications that some Reubenites may have moved into Judah and Benjamin.

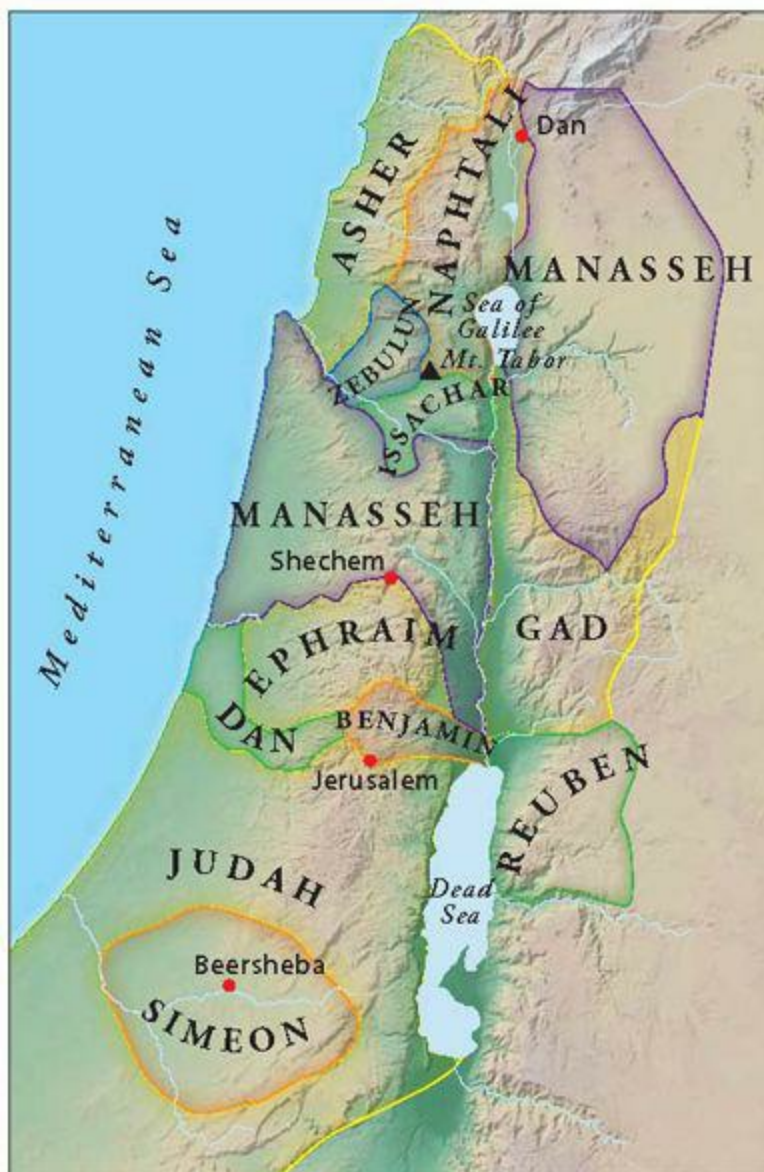
B. Gad. The tribal portion of Gad lay between Reuben and the Jabbok, but it took in the Jordan valley as far as the S tip of the Sea of Galilee. See GAD, TRIBE OF. Eleven cities are mentioned (Josh. 13:24 – 28), but MAHANAIM seems to have been shared with Manasseh (13:29). RAMOTH GILEAD, which was in the area of Manasseh, is said to belong to Gad (20:8; 21:38). The overlap in this case was in part due to the fact that northern Gilead was very thinly populated at the time of the conquest, being largely covered with forest.

C. Half-Manasseh (Makir). The descendants of MAKIR, MANASSEH's eldest son, were given their portion E of Jordan (Josh. 13:29 – 31). See MANASSEH, TRIBE OF. It included N Gilead and ARGOB (Deut. 3:13). It is far from clear how its territory was occupied. If Jdg. 5:14 is taken literally, Makir was still W of Jordan at that time. The details of the expeditions of JAIR and NOBAH (Num. 32:41 – 42; cf. Deut. 3:14) suggest later activity than the defeat of Og. (The gibe mentioned in Jdg. 12:4 may very well mean that a considerable number of Ephraimites had filtered across the Jordan and found homes in the wooded district N of the Jabbok in the area near Zaphon; cf. v. 1.)

II. Tribes without stated boundaries. For three tribes, cities are mentioned but few if any boundaries are indicated. The reason seems to be that they were never able to consolidate their hold on their land, so that when the territory finally came into effective Israelite control, it was incorporated into other tribes.

A. Simeon. It is clearly stated that the nineteen settlements of SIMEON were within the territory of Judah (Josh. 19:1 – 9; 1 Chr. 4:28 – 33). Not all can be identified, but they all fell into the NW NEGEV. It is probable that ZIKLAG (1 Sam. 27:6) was not the only one to come under PHILISTINE rule. The statement that these places remained Simeonite "until the reign of David" (1 Chr. 4:31) probably implies that their dispersion (4:34 – 43) began then, leading to the vanishing of the tribe as an entity. It may have been partly due to a period of drought, which would be particularly felt in the Negev (cf. 2 Sam. 21:1). In the list of Judean administrative districts (see below), the Simeonite towns are simply listed as Judean. (With regard to the basic literary framework in the variant Simeonite town lists, see Z. Kallai in *VT 53* [2003]: 81 – 96.)

B. Issachar. The tribal portion of Issachar clearly lay in the Plain of Esdraelon and the valleys running down from it to the Jordan, but only its N border, separating it from Naphtali and Zebulun, is indicated (Josh. 19:17 – 23). No clear N boundary is given for W Manasseh (17:10 – 11), but it is stated that it controlled a number of places in Issachar and Asher (apparently only Dor). These were all Canaanite strongholds, which were first made tributary by Manasseh and then absorbed by it. Issachar held only the weaker places (Josh. 19:17 – 21), at first doubtless under sufferance, and probably at the price of tribute (cf. Gen. 49:14 – 15).

C. Dan. It might be thought that the boundaries of Dan are not given because those of its neighbors have already been described. The S border of Ephraim (Josh. 16:5 – 6) reads as though it took in the coastal portion of Dan. Of the eighteen Danite cities mentioned (19:40 – 46), five sites have not been identified, six appear as Judean elsewhere, one as Benjamite, and six as Ephraimite. Though there is no reason to suppose that all members of the tribe moved to Dan in the N (19:47 – 48; Jdg. 18:27 – 28), it is clear that most of its territory fell into the hands of the Philistines, and then, as these were driven back, the area was incorporated into its neighbors. A large portion of it appears in two of the Judean administrative districts (see below). The history of the tribe was continued in this small area at the far N of the Jordan valley; strictly it belonged to Naphtali, but it was isolated from the remainder of its territory by the marshes of the Huleh basin.


III. Judah. The description of Judah's boundary and territory (Josh. 15) is much more detailed than that of any other tribe. Whereas the boundary description is early, there are very clear indications that the list of cities (vv. 21 – 62) must be considerably later. In the Septuagint, v. 58 is followed by eleven names in north-central Judah, including Bethlehem and Tekoa, which have been rightly included in the NEB. A careful use of 1 Chr. 2 – 4 will also throw some light on Josh. 15.

Since the pioneering work of A. Alt, scholars have come to general agreement that Joshua gives the list of the twelve administrative districts of Judah after the division of the kingdom, though there are disagreements concerning the identity of one of the districts and the date of the list. Alt dated it in the time of Josiah; Cross and Wright preferred the time of Jehoshaphat; Aharoni first suggested the time of Uzziah, but now prefers that of Jehoshaphat. Archaeology, however, will apparently not permit a date before the 9th cent.

Though some of the places mentioned have not been identified, there are no real problems in tracing the boundary of Judah. The S border was the southern limit of settled population, and indeed much of the southern part remained semi-nomadic until the reign of David, if not longer. The W boundary was the Mediterranean, which took in all of what was to become the Philistine country; but this was an ideal never fulfilled in OT times. The N boundary ran just above Ekron, dividing Judah from Ephraim (Dan had migrated), and then along the line of the Sorek to Timnah; it then went NNE to the N of Kiriath Jearim. From there it ran ESE below Nephtoah to take in the Valley of Rephaim (see Rephaim, Valley of) and the Valley of Hinnom. Finally it passed through the wilderness of Judah S of Jericho to the Dead Sea, which formed its eastern boundary.

The abandonment of part of Judah's territory to Simeon is explained in Jdg. 1:3. Judah evidently felt that its manpower would be too widely spread over what was the largest tribal area (except perhaps that of Makir). The area placed at Simeon's disposal, however, was shrewdly chosen by Judah as being most open to pressure from the coastal plain.

The Hinnom Valley (center of photo) separates the territory of the tribe of Benjamin (N, left) from that of Judah (S, right).

IV. The central tribes. EPHRAIM, the W half of MANASSEH, and BENJAMIN occupied the central hill country, which forms a clearly marked physical unity, with the territory of Benjamin forming the link with the Judean hills. The transitional nature of the Benjamite territory is seen in the fact that under the divided monarchy the frontier between the northern and southern kingdoms ran almost all the time through Benjamin and not along the Ephraimite border; this has left its mark on the Benjamite city list in Josh. 18:21 – 28. The paucity of detail about Ephraim and Manasseh may be compared with a similar attitude in 1 Chr. 7:14 – 29; it expressed the conviction of Scripture that these two tribes moved out of God's will. No indication is offered why the house of JOSEPH (Ephraim and Manasseh) had a prior claim to its territory.

A. Ephraim. Apparently, Ephraim received the less attractive portion of the central area (Josh. 16), since its height is repeatedly referred to as "the hill country of Ephraim" (see EPHRAIM, HILL COUNTRY OF). In the long run, however, it was probably a gain for them and one of the reasons for their early prominence in Israel. Owing to its wooded nature (17:15), it was very thinly settled, the only Canaanite cities in their portion being BETHEL (cf. Jdg. 1:22 – 26) and GEZER, on the edge of the plain (Josh. 16:10). They were able to consolidate their position at a time when other tribes were still struggling. This probably explains how they were able to infiltrate into Manasseh (16:9) and also to capture the Canaanite city of Tappuah, though Manasseh had occupied its lands (17:8). See TAPPUAH (PLACE). Its S border started at the Jordan N of Jericho and ran fairly due W, passing to the S of Bethel and on to the sea. In the N, its territories stretched to near SHECHEM; from here the boundary ran SE to near Jericho and SW along the Wadi Qanah. In other words, it had no real footing on either the Jordan or the sea. In the list of Levitical cities (see below), Shechem is identified as Ephraimite (Josh. 21:20 – 21), thus suggesting further infiltration.

B. Manasseh. The W half of this tribe was intended to occupy not merely the northern part of the central hill country, but also SHARON and the N Jordan Valley (Josh. 17:1 – 13). In fact, it found itself facing a line of unconquered Canaanite fortresses that controlled Esdraelon and the passes over Carmel. As it first made them tributary and then merged them in its territory, the tribe found that it had encroached heavily on the territory of Issachar and to a less extent on that of Asher (vv. 11 – 13). The fact that the lead against the Midianites was taken by GIDEON, a Manassite, rather than by a member of the tribe of Issachar, which was most heavily involved, is typical of the position. Indeed, so heavily had the people of Issachar been ground down, that they are not even mentioned in the story of Gideon.

C. Benjamin. The tribe of Benjamin was the worst sufferer from Israel's pact with the Gibeonite tetrapolis (Josh. 9) and from Judah's failure to deal adequately with JERUSALEM (Jdg. 1:8), for these cit ies lay within the boundaries allotted to it (Josh. 18:11 – 28). This situation may well have been the grievance that led to Benjamin's desire to leave the Israelite confederacy, an act followed by a great disaster (Jdg. 20 – 21). It was not merely Benjamin's weakness but also its centrality that made SAUL's kingship politically acceptable. The only explanation that carries conviction of the division of the Benjamite cities into two groups is that Josh. 18:21 – 24 gives the cities that were incorporated into Israel, while vv. 25 – 28 lists those that were incorporated into Judah at the division of the kingdom. When Jerusalem was captured by David, it became royal property instead of reverting to Benjamin.

V. The northern tribes. With regard to the northern tribes that had undefined boundaries (Issachar and Dan), see above, section II. The present section deals with the remaining three tribes.

A. Zebulun. The description of Zebulun's boundary (Josh. 19:10 – 16) begins with Sarid in its SE extremity and follows the Kishon W to near Jokneam. The western boundary ran W of Galilean Bethlehem and took in most of Lower Galilee within its northern stretch until it turned almost due S to Mount Tabor and then back to Sarid. This was an area with no Canaanite cities of importance. Zebulun seems to have been able to capture it all and then hold it effectively.

B. Asher. Because of the uncertain identifications of many of Asher's cities (Josh. 19:24 – 29), it is impossible to trace the boundary given in some of its parts. The mention of Dor (Josh. 17:11) as belonging to Asher shows that its territory extended into the coastal plain S of Carmel. Since, however, Dor is not mentioned in ch. 19, it is likely that the factual boundary lay along the N slopes of Carmel. Then its E boundary was that of Zebulun and Naphtali. Its northern section is far from clear. Inland it ran as far N as Sidon and then seems to have reached the coast just S of Tyre. It may be questioned, however, to what extent Asher was able to maintain its hold on the coast, though Jdg. 5:17b shows that for a while the sea coast was in fact its boundary.

C. Naphtali. The border of the tribe of Naphtali is traced eastward from Heleph, in all probability at the foot of Mount Tabor, to the Jordan just S of the Sea of Galilee (Josh. 19:32 – 34). It was a natural line, that of the Wadi Fajjas. For the western border the boundaries of Zebulun and Asher are given. The eastern is the upper Jordan, and no northern border is suggested. Since Dan was able to establish itself N of Huleh, apparently without protest from Naphtali (see above), it would seem that Naphtali had never tried to push past the Huleh marshes, and it probably never established itself as far as the Litani River.

VI. The Levitical cities. Though there are considerable differences between the lists of Levitical cities in Josh. 21:1 – 42 and 1 Chr. 6:54 – 81, W. F. Albright can say, "With the aid of the Greek… we can eliminate nearly all the differences between the lists in Joshua and Chronicles. The two or three remaining apparent divergences may be plausibly excised by simple textual changes of well-known types" (*Archaeology and the Religion of Israel*, 5th ed. [1968], 121). In his list so established, he is able to divide the forty-eight cities evenly among the twelve tribes. He has given strong reasons for thinking that the lists come from the time of David. Both archaeology and known history make it almost impossible to move them back into the time of Joshua, unless one follows Y. Kaufmann and sees it as a utopian forecast.

Alt pointed out that most of these cities are located either in frontier areas or in such as had been Canaanite. The Levites were intended to have a religious influence especially where the standard of religion was low. Certain premonarchical stories suggest that in the troubled period after the conquest no effort had been made to provide the Levites with the homes and means of livelihood that had been promised them.

<div align="right">H. L. ELLISON</div>

tribulation. This English term, referring to severe distress, usually as the result of oppression, is used by the KJV a few times in the OT (for Heb. ṣar *H7639*, Deut. 4:30 et al.) but more than twenty times in the NT to render the common Greek word *thlipsis G2568* (Matt. 13:21 et al.; in one verse, 1 Thess. 3:4, "suffer persecution" is the KJV rendering of the verb *thlibō G2567* in the passive voice). In the many other occurrences of the Greek noun the KJV uses various renderings, especially "affliction" (Mk. 4:17 et al.). The English word *tribulation* is found less frequently in modern versions (rarely in the NRSV); the NIV uses it only in the expression "the great tribulation" (Rev. 7:14; the same combination of *thlipsis* with the adjective *megalē* [from *megas G3489*, "great"], but without the definite article, occurs also in 2:22, as well as in Matt. 24:21 and Acts 7:11).

Clarity requires that a distinction be made regarding the source and the object of tribulation. For example, God may afflict his people for their unfaithfulness. Should Israel sin like the nations it drove out of Canaan, it too would be driven out and scattered among the nations: "When you are in tribulation, and all these things come upon you in the latter days, you will return to the LORD your God and obey his voice" (Deut. 4:30 RSV). See SUFFERING I.

The unbelieving world, on the other hand, may oppress God's people on account of their faithful testimony. Faced by such oppression, anyone who has no root "quickly falls away" (Matt. 13:21). In the case of true Christians, however, nothing —including "tribulation, or distress, or persecution"— can separate them from the love of God (Rom. 8:35 – 39 KJV). So believers are "patient in tribulation" (12:12 KJV). After PAUL had been stoned and left for dead at LYSTRA, he returned exhorting the disciples "to continue in the faith, and saying that through many tribulations we must enter the kingdom of God" (Acts 14:22 RSV). See PERSECUTION.

Silver-plated copper *follis* (second in value only to the gold coin) minted by Emperor Diocletian, who at the beginning of the 4th cent., in an attempt to stabilize the Roman empire, initiated the last and greatest persecution of Christians, bringing much suffering and tribulation on the church.

Reminiscent of Dan. 12:1, Jesus predicted a "great tribulation, such as has not been from the beginning of the world until now, no, and never will be" (Matt. 24:21 RSV; cf. v. 9). It includes more intense persecution of God's people by the anti-Christian forces. The period also includes acts of God in pouring out his righteous wrath on the ungodly. "Immediately after the tribulation of those days the sun will be darkened, and the moon will not give its light, and the stars will fall from heaven, and the powers of the heavens will be shaken" (Matt. 24:29 RSV). Such manifestations of divine wrath are described in detail by John in Rev. 6 – 19. Out of "the great tribulation" comes a multitude seen before the throne of the Lamb (Rev. 7:14).

On the identity of the people of God in the great tribulation, as well as the time of the rapture, theologians differ. Posttribulationists see the church continuing on earth to the end of the tribulation when the rapture occurs. Midtribulationalists look for the church to survive the first half of the tribulation when the rapture takes place. Pretribulationalists anticipate the rapture prior to the tribulation so that the people of God on earth are members of the restored Jewish nation. See SECOND COMING.

G. R. LEWIS

tribune. This term, referring to a Roman military officer in command of a COHORT, is used by the NRSV and other versions in the book of Acts to render Greek *chiliarchos G5941*, which means literally "commander of a thousand" (Acts 21:31 – 37; 22:24 – 29; 23:10 – 22; 24:22; 25:23; NIV, "commander," except for the last reference, "high ranking officers"). The Latin term *tribunus* (lit., "officer of a tribe") was applied primarily to certain officials charged with defending the rights of

plebeian citizens; in the Roman army, however, the rank of the *tribunus militum* referred to the commanders o f *cohortes milliariae*, composed of approximately 1,000 soldiers (technically 760 infantrymen and 240 cavalrymen, but the numbers varied). Thus the Roman *tribunus* was considered equivalent to the Greek *chiliarchos*. The latter term, however, occurs also in other passages where the meaning is evidently less precise (Mk. 6:21; Jn. 18:12; Rev. 6:15; 19:18).

tribute. This English term, in the sense of compulsory payment to a superior, occurs frequently in Bible versions, especially in the OT (*minḥâ H4966* is the most common Hebrew word). Before the setting up of the Israelite kingdom there were instances of tributes being paid under various conditions, such as when JACOB's sons were seeking the favor of PHARAOH (Gen. 43:11 – 12, where the Heb. term is rendered "gift" or "present"), or when one of the judges was forced to contribute to an overlord (Jdg. 3:15 – 18). With the establishment of the kingdom, the people obligated themselves to the regular exaction of money and services for the support of the court (cf. 1 Sam. 8:10 – 18). Besides the regular exactions, it was customary to bring presents to one's superiors on special occasions (1 Sam. 10:27). In addition to the payments received from their own people, the kings of Israel and Judah received tribute from foreign peoples and rulers: the Moabites and the Arameans brought tribute to DAVID (2 Sam. 8:2, 6; see MOAB, ARAM); many nations brought tribute to SOLOMON (1 Ki. 4:21); AHAB imposed tribute on Moab, but this ceased upon his death (2 Ki. 3:4 – 5); JEHOSHAPHAT received payment from the PHILISTINES and the ARABIANS (2 Chr. 17:11); and UZZIAH from the Ammonites (26:8; see AMMON).

More often, particularly after the division of the kingdom, the Israelites found themselves vassals rather than overlords and paid tribute to others. The Arameans collected tribute from Israel, the northern kingdom, as the price for peace (2 Ki. 12:17 – 18). When later the Assyrians became the dominant power in the E, both Israel and Judah paid tribute to their rulers, including TIGLATHPILESER III (16:8) and SHALMANESER V (17:3). Finally Israel was captured and depopulated by the Assyrians.

With Judah, the southern kingdom, the situation was much the same. Already mentioned is the payment made by Ahaz when he appealed to Assyria for help (2 Ki. 16:5 – 9). HEZEKIAH was forced to pay tribute to SENNACHERIB of Assyria (18:13 – 16), and later he foolishly displayed all his treasures to the envoy from Babylon (20:12 – 15). From this time on, Judah was constantly torn between Babylon and Egypt, and tribute was the price of stability (23:33 – 35). In the end, Babylon took the last of Judah's wealth (ch. 25).

When NT history began, ROME was the dominant power. Roman taxation was mainly indirect; but in addition tribute was levied, which was a form of direct TAX. Between 404 and 167 B.C., tribute was intermittently imposed on Roman citizens to pay for the costly wars which filled that period. After 167 B.C. only provincials paid the *tributum*, a fixed sum for some provinces, and a variable amount for others. This payment applied to all provincials, whether Roman citizens or not. Under the empire, a distinction was made between the *tributum soli* (imposed on provincial land) and the *tributum capitis* (imposed on all other forms of property). Tribute was based on the CENSUS, but the rate is unknown. Grants of immunity might be given to communities or individuals for various reasons.

Of the three Greek terms translated "tax" or "tribute," the NT usage appears to be as follows: *kēnsos G3056* refers to the poll tax (the *tributum capitis*), and is mentioned by Jesus when questioned by the PHARISEES (Matt. 22:17, 19; Mk. 12:13 – 17). Luke in the parallel passage, and again when Jesus is questioned by PILATE, uses the word *phoros G5843*, referring possibly to the *tributum soli* (Lk. 20:22; 23:2); but perhaps the distinction is somewhat blurred here. When PAUL

urges the Christian community to pay their taxes he uses the same term (Rom. 13:6 – 7). In addition to these exactions, a temple tax was required from all Jewish males above age twenty for support of the TEMPLE; this was the *didrachmon G1440* or half-shekel (Matt. 17:24 – 25). After the destruction of Jerusalem the emperors collected this tax for support of the temple of Jupiter Capitolinus in Rome. (See further Pauly-Wissowa, *Real-Encyclopädie der classischen Altertumswissenschaft* VII A/1 [1939], 44 – 47; *OCD*, 1551.)

R. C. STONE

Trimorphic Protennoia. A Gnostic tractate included in the NAG HAMMADI LIBRARY (NHC XIII, 1). Written in the form of a revelatory discourse in the first person, this document is preserved only in a 4th-cent. Coptic MS, but it appears to be the translation of a Greek original produced possibly two centuries earlier. Protennoia, the divine First Thought, is a female heavenly redeemer figure who claims to have descended three times—respectively as Father, Mother, and Son—bringing salvation to a fallen world. Some scholars view this tractate as providing significant analogies with the prologue of the Gospel of John. (English trans. in *NHL*, 511 – 22.)

Trinity. The Christian doctrine of GOD is distinguished by its emphasis on divine three-in-oneness, that is, the eternal coexistence of the Father, Son, and Holy Spirit in the inner personal life of the Godhead. Evangelical theology affirms that the living, speaking, and acting God is a personal divine Trinity in the eternal unity of God himself and in his work. The one God, the subject of all divine REVELATION, is self-disclosed—the Bible authoritatively teaches—as the invisible Father (from whom all revelation proceeds), the Son (who through his objective INCARNATION mediates that revelation in a historical manifestation), and the HOLY SPIRIT (who is divinely outpoured and subjectively applies that revelation to believers).

It was Karl Barth's special merit that he reiterated the indissoluble connection of this view with the fact of divine self-revelation. Not only medieval Scholasticism but also modern Protestant theology readily expounded God's essence and attributes first, and then appended a discussion of God's triunity, as if the reality of God as personal, and specifically as triune, were irrelevant to our knowledge of the divine nature and perfections. The Bible witnesses to plurality of personality in the self-revealed God; it does not, as neo-Protestant writers prefer to put it, affirm that God is a person or that he has a personality. In his 1918 Gifford Lectures, Clement C. J. Webb emphasized that the historic creeds affirm personality *in* God rather than the personality *of* God (*God and Personality* [1919], Lecture III).

The doctrine of the Trinity, or of divine triunity, has been at the heart of much theological controversy. The routine objection is that the doctrine sacrifices MONOTHEISM to tritheism. But this objection thrives on a misconception of divine personality in the image of disparate individual human selves. A type of rationalistic apologetics, promotive of trinitarianism on speculative rather than revelational grounds, regrettably encourages this misunderstanding. Insisting that divinity must by definition be personal, and presuming to derive the doctrine of the Trinity by formal logic from empirical philosophical considerations rather than from God's revelational activity, the argument is vulnerable to secular counterattack.

Independently of divine disclosure, human beings possess no knowledge of divinity that qualifies them to declare surely who or what God is. No a priori reason can be given why God must or must not be an invisible person, or the spirit of the universe (regarded as his body), or the eternally triune God—unless God has somehow truly revealed his reality and perfections. Indeed, divine

revelation is a matter of sovereign freedom; no advance necessity exists that God should reveal himself, or reveal himself intimately.

But the reality and nature of God known in the light of divine disclosure yields the historic Christian conviction, grounded in the NT, that God's being is Father, Son, and Holy Spirit in his self-manifestation. This insistence on three eternal modes of consciousness in the one God has no parallel in religious philosophy. Quite different are the Platonic *Ideas* and *Demiurge*, the triadic gods of some ancient polytheistic religions, the Stoic *Logos* and the Neo-Platonic *Nous*, and Hegel's exposition of a three-beat movement in the self-manifestation of the Absolute, much as they seek to emphasize vital relationships within the life of the divine.

By its very emphasis on the progressive character of historical revelation, the scriptural record of the self-manifestation of the living God cautions against any notion that the doctrine of the Trinity was fully knowable in OT times. First and foremost, the revelation of the Bible presents throughout the truth of monotheism, against the polytheism and the practical atheism of the ancient world. God's unique transcendent glory is reflected by the OT's explicit prohibition of all graven images, whether in the similitude of nature or creatures. The Genesis creation narrative emphasizes, however, that God made Adam and Eve in the divine image. In the NT, God's glory is manifested in the incarnation of the LOGOS, bearing the express image of the divine in human nature. Nowhere does the NT emphasis on the DEITY OF CHRIST, or its trinitarian statements, deviate in the slightest from the uncompromising monotheism of the OT; both Testaments deplore polytheism.

However, the possibility of OT intimations of the doctrine of the Trinity is discussed by some modern writers. G. A. F. Knight (*A Biblical Approach to the Doctrine of the Trinity* [1953]) notes that of the two Hebrew words for "one,")*eḥād H285* and *yāḥîd H3495*, the latter indicates uniqueness (the only one of its kind), whereas the former does not preclude distinguishable entities (as in Gen. 2:24, where Adam and Eve are said to be one flesh). The Shema (Deut. 6:4 – 5) uses)*eḥād*. Moreover, Knight contends, to consider the name Elohim (see ELOAH) a plural of majesty, rather than as indicative of diversity in unity, is to impute a modern way of thinking to the ancient Hebrews, who addressed all their OT kings in the singular. The plural vocalization of the word ADONAI may witness to the same phenomenon.

Explicit trinitarianism is dependent upon the NT revelation of the sending Father, the sent Son, and the outpoured Spirit. In the experience of the disciples, the disclosure of the deity of Christ may at first have impressed them with an intermediary or temporary binitarianism of Father and Son. Since Jews viewed Jesus' claim of oneness with the Father as blasphemous, his assertion of the unity of Father and Son clearly implied oneness of essence and was not reducible only to moral and purposive harmony. But God's revelation in Christ was soon grasped as a revelation not of a part of deity but of complete divinity; Jesus of Nazareth unveiled the Father, the Son, and the Spirit. The revealed presence of God demanded recognition not only of the person of the Son alongside the person of the Father, but the person of the Spirit as well.

In view of the interdependence of trinitarianism and progressive divine disclosure, the question might be raised whether God may not yet show himself to be other than we now know. The query has the merit of emphasizing that authentic religious knowledge turns on God's self-revelation. Christian theology has no other reason for asserting the finality of trinitarian monotheism than the fact of God's self-disclosure attested in Holy Scripture. The content of the Christian doctrine is given by the divine affirmation of Jesus of Nazareth as the supreme and final revelation of the Father, and the Holy Spirit's witness to the Son, and not to another. Whoever takes his stand beneath the reality of the NT revelation—rather than behind it or outside it—is driven to trinitarian theology.

C. K. Barrett remarks that more than any other NT source, the writer of the fourth gospel "lays the foundations for a doctrine of a co-equal Trinity" (*The Gospel According to John*, 2nd ed. [1978], 92). But the threefold formula is found also in the Great Commission (Matt. 28:19; see COMMISSION, GREAT), and the unitarian attempt to dismiss this as a late interpolation has failed; the formula is now widely viewed as integral to the original text and anticipative of *Didache* 7.1 – 4. It occurs also in Paul's early writings (2 Cor. 13:14).

The word *Trinity* is not a biblical term, and Scripture gives the doctrine not in formulated definition but in fragmentary units similar to many other elements of the Christian system of truth. R. B. Crawford insists rightly that there are "good grounds for believing that the doctrine of the Trinity is scriptural" (*Scottish Journal of Theology* 20 [1967]: 286ff.). It is the unifying presupposition of the NT revelation of God. B. B. Warfield remarked that the entire NT "is Trinitarian to the core; all its teaching is built on the assumption of the Trinity; and its allusions to the Trinity are frequent, cursory, easy and confident" (*ISBE* [1929], 5:3014). There is in the NT, as in the OT, only one true and living God; and in its view, Jesus Christ and the Holy Spirit are each God in the fullest sense; and Father, Son, and Spirit stand related to each other as I, Thou, and He.

Many passages in the Gospels teach Jesus' divinity and the Son's unity with the Father, and in the context of such passages it is emphasized that the same essential interrelationship extends to the Holy Spirit (cf. Jn. 14:16 – 26; 15:26; 16:5 – 15). The importance of the baptismal formula (Matt. 28:19) lies in the fact that it most nearly approaches the doctrine in the words enunciated by the Lord himself, preserved, moreover, by one of the synoptic writers. This formula impressively asserts the unity of Father, Son, and Holy Spirit by embracing them as a single name, yet emphasizes the distinctiveness of each person by repeating the prefatory article: "In the name of the Father and of the Son and of the Holy Spirit."

The Pauline letters likewise not only repeatedly refer to God the Father and to Jesus Christ in juxtaposition, as joint objects of adoration, but the Holy Spirit appears with them as a personal source of all divine blessing. In the early as well as the later writings of Paul, all three persons are mentioned together as joint sources of the blessings of salvation (1 Thess. 1:2 – 5; 2 Thess. 2:13 – 14; 1 Cor. 12:4 – 5; 2 Cor. 13:14; Eph. 2:18; 3:2 – 6; 4:4 – 6; 5:18 – 20; Tit. 3:4 – 5; 2 Tim. 1:3, 13 – 14). The other NT writings repeat the same pattern (Heb. 2:3 – 4; 6:4 – 5; 10:29 – 31; 1 Pet. 1:2; 4:13 – 14; 1 Jn. 5:4; Jude 20 – 21; Rev. 1:4 – 6).

Crawford notes that unitarian views have invariably tended toward deism or toward pantheism, whereas trinitarianism has preserved the unity of God. The inner life and outer work of God were soon conformed to unitarian prejudices to avoid tritheism once the term *persona* was detached from a biblical witness to God's self-revelation, and speculatively expounded in the context of the modern understanding of the finite self as a disparate psychic entity. Modern philosophy then regarded the absoluteness and infinity of God as incompatible not only with a doctrine of the Trinity, but with divine personality as well (misunderstood in this speculative way), and idealistic philosophy soon revived the pagan Greek antithesis of sovereignty or personality. This antitrinitarian claim that God's uniqueness precludes his inclusion in the highest values of human nature, such as personality, was unfortunately countered by the wrong reasons for personality in God—for example, that man's highest perfection must be like God (so that transcendent personality could be projected from the finite). The door was now open to every variety of postulatory theism in the name of Christianity. An ingenious "theology" of that kind—based on the longing of the human heart, the will to believe, the supposed infinite value of human personality, or the significance of personality in world culture, etc.—was readily inverted and dismissed as "higher anthropology." Leonard Hodgson (*The Doctrine of the*

Trinity [1943]) argues in defense of the Trinity that organic unity is more complex than mathematical unity; that psychological unity (thinking, feeling, and willing) is more complex still; and that the nature of God is even more complex than human nature.

Evangelical Christianity needs to heed every warning against a speculative derivation of divine personality simply by examination of the sinner's consciousness apart from reliance on supernatural revelation, for this requires different presuppositions about God than does the view of divine nature and activity predicated upon the living God who speaks and acts and is present in his self-disclosure. For the very reason that the scriptural revelation is the decisive center of God's self-disclosure, first given in deed and then authoritatively interpreted in word, neo-Protestant speculation is doubly arbitrary in its dismissal of trinitarian theology as a reflex of pagan philosophy, while it proceeds to recreate the God image along the lines of fashionable contemporary thought.

<div align="right">C. F. H. HENRY</div>

Tripartite Tractate. A theological treatise, representative of Valentinian GNOSTICISM, included in the NAG HAMMADI LIBRARY (NHC I, 5). Originally written in Greek in the 3rd cent. A.D., it is preserved only in a 4th-cent. Coptic translation. The work begins with a lengthy presentation of Gnostic COSMOGONY, followed by a discussion of the Genesis account of CREATION; it concludes with a description of salvation in terms of restoration into the Pleroma ("fullness"). (English trans. in *NHL*, 58 – 103.)

Tripolis trip'uh-lis (Τρίπολις, "three-city"). Also Tripoli. This once important seaport in PHOENICIA, some 20 mi. N of Byblos (GEBAL), derived its name from its triple occupancy by citizens of TYRE, SIDON, and ARVAD (Strabo, *Geogr.* 16.2.15). Perhaps during the latter Persian period (in the 4th cent. B.C.), it became the center of the conclaves from the neighboring localities. It was a member of the Phoenician League. It seems to have been a place of commercial importance, being bounded on three sides by the sea. Tripolis was also the seat of the federal council of the represented Phoenician states. It is possible that the city is mentioned in the OT (Ezra 4:9 NIV; see TARPELITES).

The SELEUCID ruler DEMETRIUS Soter (162 B.C.), fleeing from Rome where he had been a hostage, collected a large force, took the city, and gained possession of the country, executing his cousin ANTIOCHUS V (2 Macc. 14:1; cf. 1 Macc. 7:1; Jos. *Ant.* 12.10.1). Both the Seleucids and later the Romans added much to the city; HEROD the Great built a GYMNASIUM there (Jos. *War* 1.21.11). According to the spurious CLEMENTINE LITERATURE, Tripolis figured in the ministry of the apostle PETER (e.g., *Homilies* 7.12) and became a prominent Christian center.

Tripolis was taken by the Muslims, A.D. 638; later by the Crusaders in 1109; and again in 1299 by the Muslims under Sultan Kalaʿun of Egypt, who wrought great destruction. Constant attacks by enemies, and the feeling of insecurity, prompted removal two miles inland, where the present

Tarabulus was founded in 1366 on the banks of the Nahr Kadisha. The ancient Tripolis, under the later name of el-Mina, became the seaport for the modern Tarabulus. The British occupied the city in 1918; in 1920 it was incorporated in the State of Gran Liban. In 1941, it became part of the independent Republic of Lebanon. It specializes in soap, tobacco, sponges and fruits; and it exports eggs and cotton. (See A. H. M. Jones, *Cities of the Roman Empire*, 2nd ed. [1971], 230 – 31 et passim.)

triumphal entry. On the first day of the week in which Jesus was to be rejected and crucified, he entered Jerusalem like a conqueror and king (Matt. 21:1 – 11; Mk. 11:1 – 11; Lk. 19:29 – 44; Jn. 12:12 – 19), thus fulfilling, as Matt. 21:4 – 5 notes, the prophecy of Zech. 9:9 (see JESUS CHRIST V.F). The impression is gained that Jesus was deliberately presenting himself in such a way that his royal claims would be manifest and Israel brought to a place of decision. Yet for all the acclamation he was not such a MESSIAH as they desired.

Leaving BETHANY, two miles from Jerusalem, he passed BETHPHAGE where, perhaps by previous arrangement, the donkey with her unbroken colt was obtained. "A great multitude" that had come to the feast were pilgrims, many of them from GALILEE where most of Jesus' ministry had taken place. As they met and then accompanied him with expressions of praise and joy, the natives of Jerusalem, stirred but puzzled, questioned his identity. One discordant note casts a shadow on this otherwise "triumphal" entry: in the midst of the exultation, Jesus stopped to weep over the Holy City, voicing the judgment that marks the tragic, sinful reality behind the momentary rejoicing. (Cf. A. Edersheim, *The Life and Times of Jesus the Messiah*, 2 vols. [1889], 2:363 – 73.)

triumphal procession. This phrase is used by the NIV and other modern versions in 2 Cor. 2:14: "But thanks be to God, who always leads us in triumphal procession in Christ." The KJV renders, "causeth us to triumph," while the RSV has, "leads us in triumph," which evokes the image of a general *guiding his troops* to victory in combat. There is, however, no clear evidence for such uses of the verb *thriambeuō G2581*, which normally means "to triumph [over someone]" or "to lead/exhibit [someone as captive] in a triumphal procession" (cf. BDAG, 459). In other words, the direct object of this verb always appears to be a conquered prisoner.

Thus many recent interpreters prefer to understand this passage as an allusion to the Roman military *triumphus*, the procession of a victorious general to the Capitoline Hill to offer sacrifice to Jupiter. The honor of a triumph could be granted only by the Roman senate and in accordance with strict rules, among which was one that the victory had to be against foreigners, not in a civil war. The procession was elaborate: the magistrates led off, followed by the senate, trumpeters, spoils captured from the enemy, the white oxen for sacrifice, the principal captives in chains, the lictors, the victorious general himself in a four-horse chariot, and finally his army. The general wore the dress of a king, including scepter and crown. When he reached the capitol, he placed a laurel wreath on the lap of the god. Many triumphs lasted more than one day. The triumphator was privileged to appear in special dress at public gatherings, and his name was inscribed on the list of persons so honored.

Because the captives in such a procession were normally led to their death, PAUL in 2 Cor. 2:14

may be alluding to his sufferings, but the apostle's precise point is debated by scholars. According to one view, "God's leading him *in Christ* as a suffering servant thereby legitimates his ministry. Christ's humiliation in crucifixion is reproduced in the life of his servant" (P. Barnett, *The Second Epistle to the Corinthians,* NICNT [1997], 150; for more extensive discussion and alternate interpretations, see S. J. Hafemann, *Suffering and Ministry in the Spirit: Paul's Defense of His Ministry in II Corinthians 2:14 – 3:3* [1990], 16–34; M. E. Thrall, *A Critical and Exegetical Commentary on the Second Epistle to the Corinthians,* ICC, 2 vols. [1994 – 2000], 1:191 – 96; R. D. Aus, *Imagery of Triumph and Rebellion in 2 Corinthians 2:14–17 and Elsewhere in the Epistle* [2005]). In the other occurrence of this term, Col. 2:15, where the object of the verb certainly refers to Christ's enemies, the meaning may be "triumphing over them" (so most translations) or "exhibiting them in triumphal celebration" (cf. BDAG, 491, meaning 1.b).

R. C. STONE

Troas troh'az (Τρῳάς *G5590).* A port on the AEGEAN coast of western ASIA MINOR, opposite the island of Tenedos, at the mouth of the Dardanelles. It is not to be confused with Homeric Troy, whose fortress ruins stand on an escarpment dominating the coastal plain 10 mi. away. Troas was founded in 300 B.C. in the spate of Greek city building that followed the division of ALEXANDER THE GREAT's short-lived empire. It belonged to the SELEUCID dynasty, but western Asia Minor was seldom strongly held from distant ANTIOCH OF SYRIA. Troas early asserted her independence and maintained it in some form even when the kingdom of PERGAMUM was dominant in the W of the peninsula, and even when ROME came to Asia. The port was important as the nearest point to Europe, and both Pergamum and Rome may have found it sound policy to keep this important haven satisfied and conscious of its importance. There is a persistent hint in Augustan literature (cf. Horace, *Odes* 3.3), supported by a statement of SUETONIUS *(Divis Julius* 79), that Julius CAESAR considered the idea of transferring the Roman center of government to Troas.

Troas figured largely in the story of PAUL (Acts 16:8 – 11). LUKE recorded in terse narrative how Paul and SILAS had arrived on the Aegean coast under a strange sense of compulsion. Alexandria Troas, to give the port its ancient name, had long since been a Roman colony, but Paul could not accept the city as the goal of his journey. Here he appears to have met Luke, who may indeed have been a certain "man of Macedonia," whom he saw in the dream that compelled him to take the gospel into Europe. The party traveled by sea, from Troas past Imbros and SAMOTHRACE, N of Thasos to NEAPOLIS in THRACIA, and thence by road to PHILIPPI.

Troas.

Remains of the ancient harbor at Alexandria Troas.

Ten years later, after the riot in EPHESUS, Paul returned to Troas and established a Christian church (2 Cor. 2:12). After a briefly recorded ministry in Greece (Acts 20:1 – 3), Paul came again, but Luke confined his narrative to a matter that interested his physician's mind (Acts 20:4 – 12). Perhaps the apostle was in Troas again around the time of his arrest (c. in A.D. 66), for he left essential possessions in that city (2 Tim. 4:13).

(See further W. Leaf, *Strabo on the Troad* [1912]; R. Macaulay, *The Pleasure of Ruins* [1933], 42, 46 – 47; C. J. Hemer in *TynBul* 26 [1975]: 79 – 112; E. Schwertheim and H. Wiegartz, eds., *Die Troas: Neue Forschungen zu Neandria und Alexandria Troas II* [1996]; M. Ricl, ed., *The*

Inscriptions of Alexan-dreia Troas [1997]; *ABD*, 6:666 – 67.)

E. M. BLAIKLOCK

Trogyllium troh-jil'ee-uhm (Τρωγύλλιον *G5591* [not in NIV]). Some 20 mi. S of EPHESUS, a high headland N of the mouth of the Maeander forms a sharply pointed cape called Trogyllium, which protrudes westward and makes a narrow channel between the mainland and the island of SAMOS. This waterway, barely a mile wide, forms a protected roadstead in which a coasting vessel might naturally pass the night before running across the open gulf to MILETUS. The pause in the protected anchorage is mentioned in Acts 20:15, according to the TR (followed by the KJV). Aside from CODEX BEZAE (D), all early Greek MSS lack the clause *kai meinantes en Trōgylliō* ("and after remaining in Trogyllium") and thus it is omitted in most modern versions. It is possible that the clause was original and later omitted either through carelessness or in an effort to improve the style (cf. B. M. Metzger, *A Textual Commentary on the Greek New Testament*, 2nd ed. [1994], 424); and certainly the disputed phrase occasions no difficulty geographically or historically (see W. M. Ramsay, *The Church in the Roman Empire before A.D. 170* [1893], 155). In view of the strong external evidence, however, it seems more likely that the words were added by the editor behind the "Western" text because he interpreted the previous verb, *parebalomen*, in the sense "we passed by," and thus he felt the need to provide an alternative port of call (so C. K. Barrett, *A Critical and Exegetical Commentary on the Acts of the Apostles*, ICC, 2 vols. [1994 – 98], 2:958).

E. M. BLAIKLOCK

Trophimus trof'uh-muhs ([   ] *G5576*, "nourished" [foster child?] or "nourishing"). A Christian from EPHESUS who, with other believers, accompanied PAUL on his way back to Jerusalem toward the end of the apostle's third missionary journey (Acts 20:4; cf. 21:29). In the light of 2 Cor. 8:19 – 20, it appears that Trophimus, along with TYCHICUS, was a delegate from the province of ASIA chosen by the churches to bear the collection (see CONTRIBUTION). When they arrived in Jerusalem, Jews from Asia saw Paul and Trophimus together in Jerusalem and hastily supposed that Paul had taken him illegally into the TEMPLE proper beyond the outer Court of the Gentiles (21:29). Since it was punishable by death for an uncircumcised Gentile to enter the Court of Israel, thus defiling it, the ensuing uproar led to an attempt on Paul's life and to his arrest. The serious but false charge of profaning the temple was later repeated against Paul by TERTULLUS before the Roman governor Felix (24:6).

In 2 Tim. 4:20, Paul says that he left Trophimus ill at MILETUS. Such a notice does not fit the recorded journeys in Acts since Paul did not leave Trophimus when they were together in Miletus (Acts 20:15), nor did he go to Rome via Miletus. If this is the same man, it shows him traveling again with the apostle, who had been freed from his first imprisonment in Rome before 2 Timothy was written.

A. M. ROSS

trumpet. See MUSIC, MUSICAL INSTRUMENTS IV.C.

Trumpets, Feast of. This phrase, though not found in the Bible, is often used with reference to a

celebration described in Lev. 23:24 – 25: "On the first day of the seventh month you are to have a day of rest, a sacred assembly commemorated with trumpet blasts. Do no regular work, but present an offering made to the LORD by fire" (cf. Num. 29:1 – 6 for greater details concerning the offering). Because the seventh month of the religious CALENDAR (TISHRI) corresponded to the first month of the civil calendar, the rabbis identified the Feast of Trumpets with New Year's Day (cf. *m. Roš Haš.* 1:1; 3:3). It is uncertain, however, whether the feast had this or some other significance in OT times (cf. *ISBE*, rev. ed. [1979 – 88], 4:924).

trustee. This English term, meaning "a person to whom the management of another's property is entrusted," is used once by the NIV and other versions to render the Greek noun *oikonomos G3874*: "as long as the heir is a child," PAUL says by way of illustration, that heir "is subject to guardians and trustees until the time set by his father" (Gal. 4:2). The Greek word is more commonly rendered "manager," "steward," and the like (e.g., Lk. 12:42; 16:1 et al.; 1 Cor. 4:1 – 2 NRSV). See GUARDIAN; STEWARD.

truth. Scripture does not directly address the question of the nature and tests of truth which has received so much philosophical attention. Indeed, the cognitive conception of true KNOWLEDGE appears to be secondary to, and derivative from, the more fundamental conception of moral truth ascribed to persons and their acts.

I. Biblical terminology. In the OT the word)ĕmet H622 (root)mn, cf. cognate)ĕmûnâ H575) indicates firmness, stability, fidelity, a reliable basis of support. It is attributed to God as well as creatures, and appears in such expressions as "truly," "of a truth," etc. It is ascribed not only to statements (e.g., Ruth 3:12) but also to behavior (Gen. 24:49) and to promises (2 Sam. 7:28). It is associated with kindness (Gen. 47:29), with justice (Neh. 9:13; Isa. 59:14), with sincerity (Josh. 24:14). (See further *TDOT*, 1:292 – 323; *NIDOTTE*, 1:427 – 33.)

The SEPTUAGINT translation, to express the moral aspect, frequently uses Greek *pistis G4411* ("faith, faithfulness, trustworthiness") rather than the usual term for "truth," *alētheia G237*, though this latter word can also indicate "truthfulness, sincerity." In the NT, *alētheia* retains the moral and personalist emphasis of the OT, even though the notion of faithfulness is more often carried by *pistis* (see FAITH, FAITHFULNESS). Some have argued that the etymology of *alētheia* is "not concealed," suggesting that something is open, uncovered, revealed for what it indeed is. Although this analysis is uncertain, the word does indicate real and genuine rather than imaginary or spurious, and true rather than false. Hence we read of "the true God" (e.g., Jn. 17:3) and "the true vine" (15:1), just as the Nicene Creed speaks of "very God of very God," phrases where the adjective *alēthinos G240* appears. Another adjective, *alēthēs G239*, appears to be used with the same basic meaning (Matt. 22:16; Jn. 3:33; et al.). NT references to true statements make it evident that the conception of cognitive truth derives from the notion of reliability (e.g., Mk. 5:33; 12:32; Jn. 8:44 – 46; Rom. 1:25; Eph. 4:25).

The cognitive conception, however, is more explicit in the NT than in the OT. Truth is related not only to fidelity and justice but also to knowledge and to revelation. This is partly due to the intrusion of Greek culture with its more theoretical interests into the Jewish world, partly due therefore to the GREEK LANGUAGE. But it would be a mistake to suppose that the NT use of *alētheia* reflects a Platonic dualism of form and particular, and thereby a Platonic or even Gnostic epistemology (see GREEK RELIGION AND PHILOSOPHY; GNOSTICISM). In the first place, Greek

philosophy is far more varied than this implies: there was no one Greek epistemology. In the second place, the biblical writers shape the meanings they intend by their own careful use of language. Undoubtedly, writing for a hellenized culture with its conflicting truth-claims, they keep cognitive truth in mind. But their thinking is more directly shaped by OT concepts, and most of all by the belief that the true God, *alēthinos*, is not hidden, but acts and speaks with an openness that is wholly trustworthy (*alēthēs*). (See further R. C. Trench, *Synonyms of the New Testament* [1880], 26 – 30; *TDNT*, 1:232 – 51; *NIDNTT*, 3:874 – 902.)

II. Three concepts of truth. Biblical usage suggests three related concepts: (1) moral truth, (2) ontological truth, and (3) cognitive truth. The last two depend logically on (1), while (3) depends logically on (1) and (2). In each case the basis of truth is in God, the source and standard of (a) righteousness, (b) being, and (c) knowledge.

A. Moral truth. Truth is an attribute of God. As such the term speaks of his integrity, his trustworthiness, his faithfulness. It is celebrated by the Hebrew poet throughout Ps. 89 and by the prophet in Hos. 2:19 – 23, in both cases in association with the mercy and love of God. According to several passages (Deut. 32:4; Ps. 100:5; 146:6) his faithfulness is revealed in CREATION; and in the Apocalypse it is this attribute of God on which rests the expectation of judgment (Rev. 3:7, 14; 6:10; 15:3 – 4; 19:11; 21:5).

Since the character of God is to be emulated by human beings, truth in the same sense is to be their moral attribute as well. It entails honesty (Ps. 15:2; Eph. 4:25) and civil justice (Isa. 59:4, 14 – 15). Speaking the truth is therefore mandatory, so that truthfulness (cognitive truth) marks the trustworthy person (moral truth). However, an overall integrity before both God and neighbor is expected (Exod. 18:21; Josh. 24:14). Truth, in this moral sense, is no perfunctory veneer, but stems from the heart, characterizing the whole inner character of a person (1 Sam. 12:24; Ps. 15:2; 51:6).

B. Ontological truth. Arising from the concept of one who is wholly trustworthy is the further concept of one who is truly what he purports to be, rather than being a deceiver, living a fiction, or being an imperfect example. In this sense "the true light" (Jn. 1:9) is the perfect expression of the kind of light JOHN THE BAPTIST was in part and for which he prepared; "the true bread" (6:32) contrasts with the imperfect MANNA; and "true worshipers" (4:23) contrast with those whose WORSHIP was still anticipatory. The Thessalonians, moreover, turned from their idols to serve "the true God" (1 Thess. 1:9).

In this sense we speak of a "true man" or a "true scholar," meaning one who is true to an ideal, who perfectly embodies our standard. The Greek theory of universals saw all particulars as participating to some degree in their ideal forms; Christian thinkers like Augustine, Anselm, and Aquinas equated these forms with divine ideas and decrees (eternal truths), and ascribed "ontological truth" to natural objects embodying them. This notion arises, however, not from biblical usage but from combining the Greek theory of forms with the biblical concept of the Creator who makes all things according to his perfect wisdom.

C. Cognitive truth. A further outcome of moral truth is that one speaks truth and not falsehood. In God, truthfulness stems from OMNISCIENCE, so that the attribute of truth refers in part to his perfect knowledge (Job 28:20 – 26; chs. 38 – 39). Since he is creator, whatever we know depends on him. All truth is God's truth. Our cognitive abilities are his creation, and the intelligibility of nature attests

his WISDOM. God's knowledge is therefore archetypal and ours ectypal. What we declare true is such only insofar as it accords with the truth known perfectly to God alone. Ectypal truth is therefore contingent, limited, and provisional. We "see in a mirror dimly" and "know in part." But archetypal truth is unlimited, unchanging, and absolute. Truth-for-man is still in the making, but truth-for-God is complete.

This notion is expressed in John's LOGOS concept (Jn. 1:14, 17) and Paul's discussion of the Christ "in whom are hidden all the treasures of wisdom and knowledge" (Col. 2:3). It is the Christ, by whom all things were made and are sustained, who gives intelligible order and purpose to nature and history. To know him is to know the omniscient source of all knowledge—not to know all he knows, but to understand how wisdom and knowledge are at all possible. He it is who guarantees the trustworthiness of the truth we acquire.

While in the NT the cognitive concept of truth is evident (e.g., Mk. 5:33; 12:32; Rom. 1:25), it is applied particularly to the message of Christ and his apostles (Jn. 5:33; 8:31 – 47; Rom. 2:8; Gal. 2:5; 5:7; Eph. 1:13; 1 Tim. 3:15; 1 Jn. 2:21 – 27). The faithful messenger speaks the truth from God, and in responding to the truth the believer accordingly trusts the God from whom the message comes. Faith is both assent to truth and dependence on God. We are therefore said to "do the truth" when our assent to the message and trust in God are evident in our "moral truth" or faithfulness (1 Jn. 1:6 – 8; 2:4; 3:18 – 19).

III. Philosophical concepts of truth

A. Cognitive truth. If God is the ground of all truth, then whatever truths we know bear witness to him. Recognizing this fact, AUGUSTINE of Hippo (354 – 430) constructed an argument for God's existence from our knowledge of truth (*On Free Will* 2). The mind apprehends certain universal and necessary truths that cannot change, including logical truths (e.g., "A is either B or non-B") and mathematical truths. They are neither made true nor amended by the mind as if they were its inferiors; rather the mind willingly submits to being corrected and judged by them, as by its superiors. Truth exists independently of the mind and is superior to it. The mind fluctuates in its apprehension of truth, but truth remains forever the same. What accounts for its eternal, changeless, and universal status? Individual truths must participate in Truth-itself, the eternal and changeless God "in whom and by whom are all things."

Partial reconstruction of the interior of the library at Ephesus, one of the centers where the Greco-Roman world searched for truth through human learning.

Augustine's argument reflects his transformation of the Platonic theory of forms into a theistic context. There are no longer self-subsistent archetypes unified in the Form of the Good. The forms now are eternal truths (*rationes aeternae*) subsisting in the mind of God for whom all truth is one. They may still be known by recollection, for Augustine (*Concerning the Teacher* and *Soliloquies*) also adapts the Platonic theory of innate ideas and dialectical method, but any truth that humans grasp is due to the Logos "who teaches within," enlightening everyone who comes into the world.

Anselm of Canterbury (1033 – 1109) pursues the Augustinian direction by distinguishing three senses of "truth." (1) A proposition is true when it states what actually exists, but (2) what actually exists is what it should be ("ontological truth") when it conforms to (3) the archetypal idea in the mind of God ("eternal truth"). God is accordingly the eternal cause of all truth. Anselm also discusses "truth in the will," referring to the concept of "moral truth" discussed above. (See Anselm, *Dialogue on Truth*, in R. McKeon, ed., *Selections from Medieval Philosophers*, 2 vols. [1929], 1:164 – 65.)

Thomas Aquinas (1223 – 1274) modifies this scheme by arguing (*De veritate*, Q. 1) that truth is to be predicated primarily of an intellect and only secondarily of a thing, for a thing is called true ("a true man," etc.) only insofar as it conforms to some idea. Natural things are what they are because of archetypal ideas in the divine intellect. Truth then is ultimately in the divine intellect. Insofar as it is in the human intellect, and people learn from natural things, truth comes ultimately from God. In God, truth means that his knowledge accords first with his essence and secondly with things he has created. Aquinas therefore defines truth as the adequation of thought to thing, and applies this definition to both divine and human knowledge. By doing so, he lays the foundation for modern correspondence theories of truth.

René Descartes (1596 – 1650) was educated in the Jesuit school at La Flèche, and the influence of scholastic thought remained with him. In this light, it is not surprising that he rests the trustworthiness of human reason and sense perception on the character of God (*Meditations* 4 – 5). The logical possibility of our achieving truth depends, he argues, on knowing that a God exists who would not deceive us. Error can never be blamed on God, but arises when the human will affirms or

denies something that lies beyond the limited scope of human reason. Truth is insured by the careful, logical use of the created intellect. Truth depends on God.

Other Christian thinkers of the Renaissance and Enlightenment took similar positions. Malebranche, Berkeley, Leibniz, and others maintained in terms of their own philosophical schemes that all truth is ultimately God's truth, and that our knowledge of truth depends ultimately on God. The classic correspondence and coherence theories were formulated in this manner, the former in the context of empiricist epistemologies, and the latter more in a rationalist or idealist context. Nontheistic thought, detaching the theory of truth from these moorings, raises serious doubts as to the attainability of truth and its objectivity. Pragmatic and relativistic epistemologies are the reasonable outcome of naturalistic and other nontheistic philosophies. By the same token the rise of early modern science, with its confidence in the rational investigation of empirical findings, may be traced to the belief that a rational and trustworthy God created both an intelligible universe and finite minds that are reliable for their intended purposes. In these regards the biblical conception of cognitive truth has pervaded and inspired Western thought.

B. Moral truth. In the biblical sense of personal rectitude, moral truth has historically been overshadowed by cognitive truth. Søren Kierkegaard (1813 – 55) is largely responsible for its rediscovery. In his *Concluding Unscientific Postscript* he distinguishes between the objective path to truth through historical or philosophical inquiry, and the "subjective" path. Grasping truth, he declares, is "subjectivity." Kierkegaard does not mean that truth is either private or relative. He means that the individual must approach truth as a whole person, in all his subject-hood, passionately involved and utterly authentic in his concern. This kind of response distinguishes the true from the nominal believer. It is what the NT calls "being in the truth."

Kierkegaard's conception of truth, like that of a Descartes or a Leibniz, has however been distorted by nontheists. In this case the result is the existentialist view which regards truth as *wholly* personal, so that there is no objective truth in the mind of God which is intelligible to finite minds. That is, moral truth is retained without cognitive truth, and one achieves moral truth by existential experience. Martin Heidegger's analysis of truth as the "uncoveredness" of Being is extremely valuable (*Being and Time* [1962], §44), but his analysis of Being (*Dasein*) in terms of our own being-in-the-world tends to confine truth to self-discovery or personal self-authentication. The influence of Heidegger's view of truth is evident on the one hand in the theology of Paul Tillich and on the other hand in the nihilism of Jean-Paul Sartre, both of which suffer from a loss of the biblical and theistic conception of truth.

The insufficiency of either the cognitive or the existential concept of truth alone leads Herman Dooyeweerd to call for the elaboration of a truly Christian idea of truth which rejects the purported religious neutrality of theoretical truth and does justice to the biblical concern with truth "in the heart," thereby linking moral truth with theoretical truth (*A New Critique of Theoretical Thought*, 4 vols. [1953], 2:571). The ingredients of such an account are certainly present in Scripture and in subsequent Christian thought.

A. F. HOLMES

Truth, Gospel of. A Gnostic document included in two forms in the NAG HAMMADI LIBRARY (NHC I, 3; XII, 2 [the latter poorly preserved]). In spite of its title, the work contains no narrative, nor does it report the sayings of Jesus, but is rather a kind of homily or meditation on Christ, emphasizing the joy that the gospel gives to "those who have received from the Father of truth the gift of knowing him."

Because it uses the NT to give a mild and attractive presentation of Christian GNOSTICISM, many think that it may have been authored by VALENTINUS or more probably by his followers (cf. Irenaeus, *Haer.* 3.11.9: "Indeed, they [the Valentinians] have arrived at such a pitch of audacity, as to entitle their comparatively recent writing 'the Gospel of Truth,' though it agrees in nothing with the Gospels of the Apostles, so that they have really no Gospel which is not full of blasphemy" [*ANF*, 1:249]). In any case, the document was likely written in Greek before A.D. 200 and subsequently translated into Coptic. (English trans. in *NHL*, 38 – 51.)

Truth, Testimony of. A Gnostic document included in the NAG HAMMADI LIBRARY (NHC IX, 3). Although preserved only in a fragmentary 4th-cent. Coptic MS, the original work is thought to have been written in Greek, possibly in ALEXANDRIA, c. A.D. 200. It may be described as a polemical tractate, although the first part is in the form of a homily. The author inveighs against the law, the physical resurrection, and even the views of competing Gnostic groups. On the other hand, the work affirms the value of esoteric knowledge and adopts an extreme form of ASCETICISM. (English trans. in *NHL*, 448 – 59.)

Tryphena and Tryphosa tr*i*-fee'nuh, tr*i*-foh'suh (Τρύφαινα *G5586* and Τρυφῶσα *G5589*, both from the verb τρυφάω *G5587*, "to live delicately *or* luxuriously"). Also Tryphaena. Christian women in ROME to whom PAUL sent greetings (Rom. 16:12). He describes them as "women who work hard in the Lord," possibly a deliberate contrast to their names. Because their names are so similar, it is often thought that they were (twin?) sisters or very close relatives. Both names occur among slaves at the imperial court of CLAUDIUS and have been found in a cemetery used chiefly for the emperor's servants. On that basis, J. B. Lightfoot (*St. Paul's Epistle to the Philippians: A Revised Text with Introduction, Notes, and Dissertations* [1868], 175 – 76) suggested that Tryphena and Tryphosa may have been among "the saints…who belong to Caesar's household" (Phil. 4:22). ("Tryphaena" is also the name of a queen who befriended Thecla in the apocryphal *Acts of Paul and Thecla*, chs. 27ff.)

A. M. ROSS

Trypho tr*i*'foh (Τρύφων, "luxurious"). KJV Tryphon. The surname of Diodotus, a usurper of the SELEUCID throne. He was a native of Apamea in SYRIA. The name Trypho was adopted by him after his accession to power. He was a general of Alexander I Balas, king of Syria (150 – 145 B.C.), who claimed to be the son of ANTIOCHUS V Epiphanes and seized the Seleucid throne at the death of DEMETRIUS I Soter (162 – 150 B.C.). When Alexander Balas died, Trypho set Alexander's son, Antiochus VI Dionysius, on the throne and declared himself the regent, against the claims of Demetrius II Nicator, the son of Demetrius I Soter (1 Macc. 11:38 – 40, 54 – 56).

Because of quarrels with Demetrius II, the Jews, led by Jonathan MACCABEE, accepted Antiochus VI, and Trypho expelled Demetrius from Antioch (1 Macc. 11:54 – 56). Trypho, who planned to seize the Seleucid throne for himself, first treacherously murdered Jonathan at Ptolemais and then killed Antiochus VI (1 Macc. 12:39-13:32). He declared himself sole ruler of Syria (142 B.C.; 1 Macc. 13:31 – 32). Because of his tyranny and rapacity, the brother of Demetrius II, Antiochus VII Sidetes, invaded the country and inflicted a decisive defeat on Trypho at Dor in Phoenicia (1 Macc. 15:10 – 14, 25). Trypho fled to Orthosia on the Lebanon coast and then to Apamea, where he died (Jos. *Ant.* 13.7.2; Strabo, *Geogr.* 14.5.2).

(Regarding the *Dialogue with Trypho the Jew*, see JUSTIN MARTYR.)

Tryphon tr*i*'fon. KJV Apoc. form of TRYPHO.

Tryphosa. See TRYPHENA.

tsadhe tsahd'ee (צָדֵי, meaning uncertain). Also *sade, tzaddi,* etc. The eighteenth letter of the Hebrew ALPHABET (צ), with a numerical value of 90. Its sound in Modern Hebrew corresponds to that of English *ts,* but in biblical times it was a so-called "emphatic" consonant, possibly an *s* characterized by a compression of the pharynx or by an additional velar articulation (i.e., with the back of the tongue touching or approaching the soft palate).

Tubal t*oo*'buhl (תֻּבַל H9317, corresponding to Akk. *Tabāl).* Son of JAPHETH and grandson of NOAH, included in the Table of NATIONS (Gen. 10:2; 1 Chr. 1:5). Mentioned between JAVAN (corresponding to the Ionians of W ASIA MINOR and GREECE; cf. also Isa. 66:19) and MESHECH (corresponding to the Mushki or Moschoi who occupied central Asia Minor for a long time; cf. also Ezek. 32:26 et al.), Tubal was apparently the eponymous ancestor of a Neo-Hittite confederacy located in the heartland of the Taurus mountains in SE Asia Minor. This nation came to prominence during the 1st millennium B.C. after the decline of the great HITTITE kingdom of Hattusas. EZEKIEL refers to Tubal as the source of slaves and metals (Ezek. 27:13); elsewhere he speaks of GOG as the chief prince of Meshech and Tubal who will fall under God's judgment (38:2 – 4; 39:1 – 6).

As the Assyrian military power expanded N and E, it came into long and bitter conflict with the tribal confederacies of Anatolia from the rise of ASHURNASIRPAL II (884 – 859 B.C.), until the onslaught of the SCYTHIANS in 679 B.C. The name Tabal(a) is mentioned in numerous records of the punitive campaigns sent into the Taurus during these centuries. The people of Tabal/Tubal are evidently the ones later referred to as *Tibarēnoi* by HERODOTUS *(Hist.* 3.94), who states that they supplied troops to the Persian armies of DARIUS and XERXES. Their ferocity was proven by the fact that their defeat and destruction came only after hundreds of years of continual warfare. SARGON II died in his campaign against them in 705 B.C. (See further E. Yamauchi, *Foes from the Northern Frontier: Invading Hordes from the Russian Steppes* [1982], ch. 1.)

W. WHITE, JR.

Tubal-Cain t*oo*'buhl-kayn' (תֻּבַל קַיִן H9340, possibly "Tubal the metal-worker" [cf. CAIN]; the first element of the name perhaps should be linked to the root יָבַל H3297 [cf. JUBAL] or to the name TUBAL [see *HALOT,* 4:1694 – 95]). Son of LAMECH by his second wife ZILLAH (Gen. 4:22). Because the SEPTUAGINT reads simply *Thobel,* some scholars argue that the second element in the name, "Cain," is not original but rather a later scribal addition to distinguish him from Tubal the son of JAPHETH (10:2). If the double-name is original, it is possible that Tubal-Cain was viewed as the ancestor of the KENITES (15:19), often thought to have been metal workers. In any case, he is described as "a sharpener of every artisan of copper and iron" (lit. trans.); this phrase can be understood either in the sense "an instructor of every artificer in brass and iron" (cf. KJV) or, more likely, "a forger of all implements of copper and iron" (cf. NIV and other modern versions).

Tubieni t*oo*'bee-ee'nee. KJV Apoc. form of TOUBI-ANI (2 Macc. 12:17).

tumbleweed. This English term—referring to various plants that, breaking from their roots, roll about driven by the wind—is used by the NIV to render Hebrew *galgal H1650,* which occurs only twice (Ps. 83:13 [KJV, "wheel"]; Isa. 17:13 [KJV, "rolling thing"; NRSV uses "whirling dust" in both passages]). This Hebrew word is either a homonym of *galgal H1649,* "wheel" (Isa. 5:28 et al.) or the same word used metaphorically. The plant referred to is thought by some to be *Gundelia tournefortii,* a member of the THISTLE family whose dried calyx has the shape of a wheel. Others identify it as *Anastatica hierochuntica,* the "resurrection plant," also called "the rose of Jericho" (it is found abundantly about that town). This annual loses its leaves after flowering; the stems become incurved and hard, forming a hollow ball. This ball breaks off at ground level in the wind, and then rolls away as light as a feather, distributing the ripened seeds on the surface of the soil as it travels. When this weed is prevalent, one can see large numbers of these "rolling things" traveling before the wind and making quite a noise (however, see *FFB,* 187 – 88). See also FLORA (under *Cruciferae*).

W. E. SHEWELL-COOPER

tumor. An abnormal enlargement of some part of the body; or a neoplasm, that is, a growth of abnormal tissue distinct from the healthy tissue underneath (such a neoplasm may be as benign as a pimple, or as malignant as carcinoma). This English term is often used to translate Hebrew ⁽*ōpel H6754,* which occurs in Deut. 28:27 ("The LORD will afflict you with the boils of Egypt and with tumors, festering sores and the itch, from which you cannot be cured") and in connection with the capture of the ARK OF THE COVENANT by the PHILISTINES (1 Sam. 5:6, 9, 12; 6:4 – 5). In all of these references, the Masoretes include the *Qere tĕḥōrîm H3224,* "hemorrhoids," which is in fact the word found in 1 Sam. 6:11 and 17 (the NJPS translates "hemorrhoids" throughout; KJV, "emerods"). Many believe that the "gold tumors" prepared by the Philistines were emblematic of the buboes characteristic of PLAGUE, that is, enlarged and defeated lymph glands. When infective organisms, or their products, reach the lymph glands, the latter make a valiant effort to keep them from entering the systemic circulation. They may swell to a hundred times their normal size endeavoring to lock up the undesirable elements and then destroy them. But sometimes the flow of infective material is so great, as in plague, that even many lymph glands in succession are overwhelmed, and the body succumbs to the disease.

R. H. POUSMA

tunic. See COAT.

turban. This term is used by the NIV and other modern versions to render several Hebrew words, especially *miṣnepet H5200* (Exod. 28:4 et al.; KJV, "mitre") and *pĕ⁾ēr H6996,* a loanword from Egyptian *pyr* (Ezek. 24:17 et al.). The turban is a length of linen, wool, or silk cloth, wound into a head covering. Since Muhammad, it has been a distinctive headgear of the Muslims, but its usage originated in the era of the Assyrians, Babylonians, and Hebrews, who used various forms of wound cloth headdress, especially for ceremonial occasions and in higher ranks of society. The use of the relevant terms indicates that linen headdress was the sign of rejoicing or solemnity, the adornment of priest and bridegroom (Isa. 61:10 NJPS), and probably a lighter article than the wound and heavier headgear generally called a turban today.

E. M. BLAIKLOCK

turpentine tree. See TEREBINTH.

turquoise. A bluish-green or greenish-gray mineral used in jewelry. It is a basic hydrous phosphate of aluminum and copper, rather brittle and with a hardness similar to that of iron. Turquoise is a mineral of secondary origin, occurring in thin veins, as patchy deposits or as encrustations in seams of rock that have undergone extensive alteration. The highly prized oriental turquoise occurs in much broken rock, together with secondary iron oxides, in Persia. It also occurs on the Sinai Peninsula in the Wadi Maghara and S of Samarkand, Turkestan. The NIV and other versions use "turquoise" as the rendering of *nōpek H5876* (Exod. 28:18 et al.; KJV, "emerald"), but the precise meaning of this Hebrew word is disputed. See also ANTIMONY.

<div align="right">D. R. BOWES</div>

turtledove. A wild pigeon (*Streptopelia turtur*) noted for its plaintive cooing. Many races and related species occur through Europe, Asia, and north and central Africa. Turtledoves are common in PALESTINE at all seasons and many more pass through on migration, traveling between Africa and their N breeding grounds. The closely related collared and palm doves are resident in Palestine and all go under one common name. The barbary dove, paler than the turtledove and rather bigger, was domesticated from the collared dove in early times, and it can be assumed that this was kept for sacrificial use; in any case, it does not seem to have been the practice to use wild animals for this purpose. See DOVE.

Tychicus tik'uh-kuhs (Τυχικός *G5608*, "fortunate"). A close friend and valued helper of the apostle PAUL. Along with TROPHIMUS, Tychicus was evidently a delegate from the province of ASIA chosen by the churches to accompany the apostle as he took the collection to Jerusalem (cf. Acts 20:4 – 6 with 2 Cor. 8:19 – 20; see CONTRIBUTION). Later, Tychicus was with Paul during the latter's first Roman imprisonment and was entrusted with the important mission of delivering the letters to the EPHESIANS and the COLOSSIANS with instructions to inform them of Paul's welfare and to encourage them (Eph. 6:21; Col. 4:7 – 9). Traveling with Tychicus was ONESIMUS, the runaway slave of PHILEMON, whom Paul was returning to his master in COLOSSE. The presence of Tychicus would reduce the possibility of harsh treatment to Onesimus and give Tychicus opportunity as Paul's representative to mediate personally between the slave and his owner.

Paul purposed to send either ARTEMAS or Tychicus to relieve TITUS in the oversight of the churches on the island of CRETE so that Titus might be free to join the apostle at NICOPOLIS (Tit. 3:12). Tychicus is thus seen laboring again with Paul after the apostle was released from his first imprisonment. Loyal and useful to the end, Tychicus was dispatched during Paul's second Roman imprisonment to EPHESUS (2 Tim. 4:12) to care for the churches in and around what was probably his native home (note that Trophimus is identified as an Ephesian in Acts 21:29 and that CODEX BEZAE [D] has "Ephesians" for "Asians" in 20:4). This arrangement would free TIMOTHY to rejoin Paul who desperately wanted to see him before the apostle met his fate as a martyr for the gospel (2 Tim. 4:9, 21). The NT portrays Tychicus as a man whose ability and experience commanded respect and authority as an apostolic delegate. He justifies Paul's high regard for him as "a dear brother, a faithful minister and fellow servant in the Lord" (Col. 4:7).

A. M. ROSS

Tyndale's Version. See VERSIONS OF THE BIBLE, ENGLISH IV.

typology. Typology may be defined as "that form of biblical interpretation which deals with the correspondence between traditions concerning divinely appointed persons, events, and institutions within the framework of salvation history" (Paul Achtemeier in *IDBSup*, 926). Behind this approach is the belief that God acts in similar ways in both Testaments, and so his action in the NT repeats and thus "fulfills" his action in the OT.

The term *typology* stems from Greek *typos G5596*, which means "copy, image, pattern." This Greek word can be used in a general sense of a "pattern" to be copied in a moral or ethical sense (e.g., Phil. 3:17; 1 Thess. 1:7). In certain passages, however, the term is used somewhat technically to depict a salvation-historical correspondence between historical situations like the flood and baptism (1 Pet. 3:21, *antitypos G531*), figures like ADAM and Christ (Rom. 5:14), the heavenly pattern and its earthly counterpart (the tent or TABERNACLE, Acts 7:44; Heb. 8:5), Israel's experience in the wilderness (1 Cor. 10:6; in v. 11 the adverb *typikōs G5595* is used), institutions like the Jewish feasts in Jn. 5 – 10, and priestly imagery like MELCHIZEDEK and Christ in Heb. 7. The "type" is the OT pattern, and the "antitype" (Heb. 9:24; 1 Pet. 3:21) is the NT counterpart or FULFILLMENT. Yet typology is found not just in the NT, for the OT contains examples as well, such as exodus-salvation in Isa. 40:3 – 5, exodus-exile in Hos. 11:1 – 2, the rebellion in the wilderness in Ps. 95:7 – 11, and Melchizedek in Ps. 110:4.

I. Related concepts. Typology can be placed within the framework of a "promise-fulfillment" relationship between the Testaments. This concept is related to salvation-history: JESUS CHRIST is the culmination or finalization of God's plan of salvation and as such fulfills the promises made in the OT. He relives and thus completes or "fills up" what God had done earlier. Behind this approach is the idea of CORPORATE SOLIDARITY, in which a king or high priest represented the nation in his actions. He acted not just for himself but also for his people as a whole. As MESSIAH, Jesus was identified with the entire history of the nation and relived it. Isaiah's SERVANT OF THE LORD was identified with the nation (Isa. 44:1), the remnant (49:5) and the Messiah (chs. 52 – 54). Jesus as the "Servant" fulfilled all of these.

Typology is thus linked to the idea of "correspondence in history," in which the climactic events in Israel's history become the paradigm that explains what God is doing in the new era (K. R. Snodgrass in *Interpreting the New Testament: Essays on Methods and Issues*, ed. D. A. Black and D. S. Dockery [2001], 215). For instance, at the TRANSFIGURATION, according to Luke, MOSES and

ELIJAH discussed Jesus' "departure" (Gk. *exodos G2016*, Lk. 9:31), thus looking at Jesus' passion as a new exodus. Also, Ps. 69 was a lament psalm from DAVID, and Jesus as the Son of David has relived his experiences in a messianic sense (Ps. 69:9=Jn. 2:17; Ps. 69:21=Matt. 27:34 and parallels; Ps. 69:22 – 23=Rom. 11:9 – 10). The same is true of the use of Ps. 22 in the crucifixion narratives.

There is great debate regarding the connection between typology and *sensus plenior*, a view that says the characters and authors often did not see the messianic significance of the events, but God had in mind a "fuller" or "deeper" sense. It is generally thought that typology sees no prospective element in the original itself (rather, it is the NT writer that recognizes the typological relationship) while *sensus plenior* does. For the latter the deeper meaning is intended by God already in the OT text, while for typology the new connection is only recognized by the NT writer on the basis of historical fulfillment.

However, Douglas J. Moo (in *Hermeneutics, Authority, and Canon*, ed. D. A. Carson and J. D. Woodbridge [1986], 206) has endorsed a cautious use of *sensus plenior* on the basis of a canonical approach to Scripture that sees it as a literary whole: "the meaning of the text itself that takes on deeper significance as God's plan unfolds—a '*sensus praegnans*.'" In this sense typology and *sensus plenior* come together in the larger plan of God, part of the intertextual relationship between the parts of the canon. While not a direct prophecy, David's coronation (Ps. 2; 72; 110) foreshadows the enthronement of Jesus as Royal Messiah.

II. Hermeneutical principles. During the biblical period typology was clearly centered on the historical correspondence between events within a promise-fulfillment pattern. However, during the patristic period *typos* more and more came to be interpreted allegorically, concluding with the allegorical school of ORIGEN and his successors. See ALLEGORY. This approach was opposed by the Antiochene school (CHRYSOSTOM, Theodore of Mopsuestia), who advocated the literal sense and developed typology as a tool to demonstrate the literary relationship between the Testaments. However, the allegorical school was victorious and dominated until the Reformation, when Luther and especially Calvin used typology to espouse the unity between the Testaments.

With the rise of the historical-critical method, many critical scholars considered typology an inferior method that assumed the unity of the Bible without recognizing tradition-critical development. However, in the second half of the 20th cent. the rise of the biblical theology movement and of the salvation-historical school of Oscar Cullmann and others brought back the viability of typology as a valid hermeneutic, while the masterwork of Leonard Goppelt (*Typos: The Typological Interpretation of the Old Testament in the New Testament* [1982]) brought the discipline into the mainstream of academic discussion. Recently, however, the influence of deconstruction and reader-response criticism has somewhat marginalized it once more in the eyes of many, since it is so clearly connected with a historical interpretation of Scripture. See INTERPRETATION II. Still, typology reigns supreme in most discussion of the use of the OT in the NT.

Moo speaks of "appropriation techniques" and "hermeneutical axioms" (*Hermeneutics, Authority, and Canon*, 194), with typology being an appropriation method that is anchored in the basic hermeneutic of the 1st-cent. church, namely, the belief that Jesus fulfills the plan of God and that therefore all the Scriptures point to him. Not just direct prophecy but all the experiences of God's people are fulfilled in him. He has relived them in himself. Connected with this, then, the people of the new covenant, the church, have also relived the experiences of Israel. They are "a chosen people, a royal priesthood, a holy nation, a people belonging to God" (1 Pet. 2:9), in typological fulfillment of Old Israel. The new community, built on the Messiah, is also analogously linked to the past

experiences of God's people of old.

There are two kinds of typological figures—an innate type that is specifically mentioned in the NT (e.g., 1 Cor 10:6; 1 Pet. 3:21) and an inferred type that does not use the terminology but is based upon the principles (e.g., the uses of OT texts in Hebrews or Revelation). Both are valid uses of typology, but the latter are more open to fanciful and allegorical exegesis so must be studied carefully. Due to the hundreds of OT quotations and allusions in the NT (e.g., some 107 explicit quotations in Paul, 36 in Hebrews, and up to 600 allusions in Revelation alone), the question of how to interpret the use of the OT in the NT is complex and worthy of very careful study.

Briefly, a series of steps are necessary: (1) Do a careful exegesis of the OT text to discern the intention of the original author, that is, to determine whether it shows any prophetic interest in a future Messiah. (2) Study the NT use of the OT passage just as carefully, asking whether it is a quotation or allusion and whether it follows the Hebrew, the SEPTUAGINT, or some other text-type (e.g., Ps. 104:4 does not mention angels, but Heb. 1:7 quotes the LXX, which did introduce angels into the psalm). (3) See how it uses the OT passage and how its use is in keeping with the OT meaning or transforms that meaning in some way (e.g., the use of Zech. 12:10 [Israel mourning for sin] in Rev. 1:7 [the nations mourning for judgment]). (4) Determine whether it is direct prophecy, typology, or sensus plenior.

(See further P. Fairbairn, *The Typology of Scripture: Viewed in Connection with the Whole Series of Divine Dispensations*, 6th ed., 2 vols. [1876]; R. M. Davidson, *Typology in Scripture: A Study of Hermeneutical τύπος Structures* [1981]; C. R. Seitz, *Figured Out: Typology and Providence in Christian Scripture* [2001]; R. Kuntzmann, ed., *Typologie biblique: De quelques figures vives* [2002].)

G. R. OSBORNE

Tyrannus t*i*-rah'uhs (Τύραννος *G5598*, "tyrant" [i.e., a ruler with absolute powers, not necessarily a despot]). An Ephesian in whose hall PAUL lectured (Acts 19:9). When the Jews of EPHESUS opposed Paul's teaching in the synagogue, where he had boldly preached for three months about the kingdom of God, he and his followers withdrew to the lecture hall of Tyrannus. Here he reasoned daily for two years. CODEX BEZAE (D, supported by a few witnesses) adds, "from the fifth hour to the tenth," meaning approximately from 11:00 a.m. to 4:00 p.m. If this is correct, Paul took advantage of the hottest hours of the day when most people rested after the midday meal. The hall would normally be vacant, and perhaps rent cheaper, after Tyrannus, or whoever the teacher was, lectured in the cooler morning hours (see Martial, *Epigrams* 9.68; 12.57; Juvenal, *Satires* 7.222 – 26). This would allow Paul to work at his own trade during business hours (Acts 20:34; 1 Cor. 4:12). Then, instead of resting, he engaged in mission work and apologetics when those in trades and business were at leisure to hear him. As a result, "all the Jews and Greeks who lived in the province of Asia heard the word of the Lord" (Acts 19:10).

Harbor road leading to the theater at Ephesus. Some suggest the hall of Tyrannus, where Paul taught, was along this road not far from the theater.

It is not certain just who Tyrannus was. Lecture halls could be found in gymnasia in every Greek city (see GYMNASIUM); here a philosopher, orator, or poet could expound his views or give a recitation. Tyrannus may have been a Greek rhetorician living in Ephesus at that time, having his own private lecture hall. Meyer thinks he was a Jewish rabbi, in whose private synagogue Paul and his doctrines were more secure from annoyance than in the public synagogue (H. A. W. Meyer, *Critical and Exegetical Handbook to the Acts of the Apostles*, 4th ed. [1869], 368). It may be that the "hall of Tyrannus" was either a building for hire, named after its owner, or the private residence of a sympathetic donor. Whatever the case, Paul's regular and unmolested use of the room for two years, with such a wide hearing, indicates his exclusive use of a spacious, well-situated room for a period of each day. (See also W. M. Ramsay, *The Church in the Roman Empire before A.D. 170* [1893], 152; id., *St. Paul the Traveller and Roman Citizen*, 8th ed. [1905], 271; F. F. Bruce, *The Acts of the Apostles: The Greek Text with Introduction and Commentary*, 3d ed. [1990], 408.)

A. M. ROSS

Tyre t*i*r (צוֹר *H7450*, "rock"; Τύρος *G5602*). A famous port city in PHOENICIA, some 25 mi. S from

the sister port of SIDON and 15 mi. N of the modern Lebanese border with Israel. It is a natural geographical frontier. Behind Tyre, the high coherent spine of the LEBANON Range is already broken down into the confused hill country that continues S to form the uplands of GALILEE, and then, with the sole break of the ESDRAELON Plain, to build the hill country of Ephraim and Judah. A dozen miles S of Tyre, a seaward thrust of hills and promontories forms a natural wall. It marks the modern border, a score of miles S of which lies the great Israeli port of Haifa. Both Tyre and Sidon still function as ports, but the ruins of Tyre are far more extensive and the subject of major archaeological investigation and excavation.

The Greek historian HERODOTUS (c. 490 – 430 B.C.) reports that in a visit to Tyre the priests of the temple dedicated to Heracles claimed that the city "had already stood for two thousand three hundred years" (*Hist*. 2.44). Other sources date its founding later, but the missing factor in all such dating is the exact time of the coming of the Phoenicians to the coastal strip between the Lebanon mountains and the coast. Excavation at more than one point of settlement on the coast reveals a Neolithic layer under the mass of Phoenician remains, themselves heavily overlaid by the structures of Greeks, Romans, and sometimes Crusaders, a phenomenon visible from Byblos (GEBAL) to Tyre. The Phoenicians, like the Greeks, were not a national unit, and never achieved anything like unity. Like the Greeks they were organized in city states, and rival claimants in historical tradition might fix varied points for a city's significant beginning.

Isaiah seems to imply that Tyre was a colony of Sidon (Isa. 23:1 – 2, 12). She was a "Virgin Daughter of Sidon," according to the prophet, and the phrase "Sidonian goods" in Homer might imply that Sidon was the more ancient city. "Then she went down to her fragrant chamber where were her embroidered robes, the work of Sidonian women, whom Alexandros himself brought from Sidon when he sailed over the wide sea" (*Iliad* 6.288 – 90). Homer mentions Sidon several times, but not Tyre. In Latin authors, the adjective "Sidonian" is often attached to Tyre. Dido, for example, daughter of Belus of Tyre, is called by Vergil "Sidonian Dido." The TELL EL-AMARNA letters, from the 14th cent. B.C., contain an appeal from the local governor of Tyre asking for help against the invading HABIRU. Whoever these invaders were, the appeal addressed to Amenhotep IV shows that Egyptian power, having penetrated so far N, was wavering on the Phoenician coast, its strength too far extended. JOSHUA assigned Tyre to the tribe of ASHER, but it does not appear likely that the Hebrew invasion reached so northern a locality (Josh. 19:29; 2 Sam. 24:7).

There are no clear records over the next three or four centuries, but history becomes sharp and definite with HIRAM, king of Tyre and friend of DAVID. Hiram seems to have enjoyed an extraordinarily long reign, for he is mentioned first when he sent cedar and craftsmen to David (2 Sam. 5:11), and later when he did the same for SOLOMON (1 Ki. 5:1). Tyre seems to have been the center of Phoenician power at the time, for the Sidonians are described in the same context where Hiram's servants and masons of Gebal, the ancient Byblos, are also listed. This town is 75 mi. N of Beirut. It is interesting to note that ETHBAAL, reputed to be a grandson of Hiram, is identified as king of the Sidonians a century later (1 Ki. 16:31). Power would appear to have oscillated between the two great ports. The canny Hiram profited greatly from the partnership with Israel. As the famous papyrus of Wenamon shows, the princes of the Phoenicians were preeminently businessmen, and it is clear that Solomon gravely embarrassed Israel by his heavy payments of wheat and oil (5:11), his supply of manpower for the Tyrian lumbering, and his unwise surrender of twenty Galilean centers of population to the northern power (9:10 – 13). Hiram, however, later expressed his dissatisfaction with the Galilee acquisitions, and it is possibly an indication that Solomon had exercised a certain native shrewdness.

In this scene of the sack of Tyre by the Assyrians in the 9th cent. B.C., goods from the defeated city are ferried to the mainland, where they are unloaded and then carried as tribute to Shalmaneser III, king of Assyria. (Copy of bronze decoration from the gates of Shalmaneser's palace in Balawat.)

Together the two monarchs established a trade partnership based on the Gulf of AQABAH, to the N of which Solomon had his ore-smelting plants. Hiram was glad to trade Phoenician skill in shipbuilding and navigation for ready access across Hebrew territory to the RED SEA and the trade routes to OPHIR, INDIA, and Ceylon. In addition to the CEDAR timber, which was the first occasion of the commercial contacts with Israel, Tyre also traded in the incomparable PURPLE dye made from the murex shellfish on her coast. Timber, DYE, dyed cloth, a mighty carrying trade, her cargoes of TIN and tin ore from Cornwall, SILVER from SPAIN, and COPPER from CYPRUS made the Tyre of Hiram one of the great commercial cities of the ancient world.

As far as the fragmentary record can be pieced together, it would appear that grave dynastic strife followed the stability of Hiram's long reign. The shift of power to Sidon under Ethbaal has been noted above. It was the daughter of Ethbaal who became AHAB's notorious queen, JEZEBEL, a dynastic marriage of convenience, which marked the transfer of the profitable trading partnership established and exploited by Solomon to the northern kingdom of the now sundered Hebrew people. Tyre and Phoenicia generally were poor in agricultural land, and the primary products of Israel were the natural exchange for her luxury goods.

Throughout the long two centuries of Assyrian domination in the ANE, Tyre had her share in common with other communities of aggression and strife, but her naval power and her almost impregnable position on her offshore island gave her a measure of immunity. It is significant that she contrived to break free from the dominance of NINEVEH a generation before that last stronghold of the Assyrian imperialist kings fell in the closing decade of the 7th cent. B.C. The date was either 612 or 606 B.C. This was another Golden Age of Tyrian affluence and power. Ezekiel's chapters of stern denunciation give a striking picture of the wealth, might, and varied trade that gathered around the Phoenician port (Ezek. 28 – 29). When BABYLON succeeded Nineveh as the great aggressor of the ANE, Tyre resisted NEBUCHADNEZZAR, but the strain of the long siege, the drain of her wealth and manpower, and the disruption of her commerce over this period of war ended the dominance of the great Phoenician port.

Tyre appears to have endured a time of dependence upon Egypt, then the rule of Babylon, and then that of PERSIA, which succeeded to Babylon's empire and pattern of command. Ezra 3:7 quotes an order of CYRUS II to Tyre to supply cedar for the restoration of the temple in Jerusalem, which the Persian monarch had sanctioned. Lebanon cedar at this time must have been increasingly scarce. The

mountain forests had already suffered at least seven centuries of exploitation. Seafaring, however, remained a Tyrian expertise, and there is evidence that the mad CAMBYSES II conscripted a Tyrian fleet for his assault on Egypt, and that Tyrian galleys also sailed with the ill-fated Persian expedition against GREECE, which the Greeks shattered at Salamis in 480 B.C.

In 332 B.C., in the course of his march through the crumbling Persian empire, ALEXANDER THE GREAT appeared before Tyre, and the city, confident in her strong position, closed her gates against the small Macedonian army. The siege that followed became one of the epic stories of military history. Alexander built a causeway across the narrow strait, which still remains the core of the wedge-shaped promontory that to this day attaches the ancient island site of Tyre to the mainland. The modern town occupies the shore and the artificial isthmus. It was only by this vast engineering feat and the costly assault at the end that Alexander took Tyre. Ezekiel's prophecy came true, and the great city became a drying place for the nets of fishermen (Ezek. 26:5, 14; 47:10).

The site, however, retained its old prestige, and Tyre made a measure of recovery and functioned for a time as a republic. She recognized the rising star of ROME, established early political relations with the Roman republic, and retained her independence until AUGUSTUS and the empire. When the prince absorbed Tyre into his provincial system in 20 B.C., the city disappeared from history.

The remains, uncovered with some care, are extensive, and the stratification reads like a history of the whole crowded and historic coast. The ruin of Phoenician docks and warehouses lies beneath the building of Greeks and Romans. An odd feature of the Greek period is an oblong theater, unique in the Mediterranean world. A fine 1st-cent. pavement, a mosaic-floored street of shops and colonnades, has special interest, for it dates from the time when Christ, following the hill paths from Galilee, visited the Phoenician coast. He might have trod this pavement on his further journey N. Today the hostile frontier lies across his path.

U

The Aramaic inscription on this marble plaque from the late Second Temple Period refers to the transferring of the bones of King Uzziah to a new tomb on the Mount of Olives.

Ucal y*oo*'kuhl (אֻכָל *H432*, meaning uncertain). TNIV Ukal. One of two men—perhaps sons, disciples, or contemporaries—to whom Agur addressed his oracular sayings; the other was Ithiel (Prov. 30:1). The name Ucal is not found anywhere else in the OT; moreover, neither the Septuagint nor the Vulgate interprets the Hebrew words *'itî'ēl* and *'ukāl* as proper names. For these and other considerations many scholars revocalize the text and, instead of *we'ukāl*, read *wā'ē'kel* ("and I faint"; cf. NIV mg.) or *wayyûkāl* ("and will I prevail?"; cf. NRSV, TNIV) or the like. See also Ithiel #2.

Uel y*oo*'uhl (אוּאֵל *H198*, perhaps "will of God"; so BDB, 15, and J. D. Fowler, *Theophoric Personal Names in Ancient Hebrew* [1988], 124, but see *HALOT*, 1:20]). One of the descendants of Bani who agreed to put away their foreign wives (Ezra 10:34; called "Joel" in 1 Esd. 9:34 [KJV, "Juel"]).

Ugarit *oo*'guh-rit, y*oo*-gahr'it. An important maritime city (modern Tell Ras Shamra), situated in N SYRIA, 50 nautical mi. E of the point of CYPRUS. The bay on which it was located was known to the Greeks as Leukos Limen ("White Harbor," modern Minet el-Beida). During the Bronze Age, COPPER ore passed through Ugarit en route from Cyprus to MESOPOTAMIA. Ugarit had important contacts with the HITTITES of ASIA MINOR and with the Egyptians. It served as the crossroads between Mediterranean culture and the world of the Sumerians and Akkadians in Mesopotamia. With the coming of the Iron Age to the ANE, copper lost its importance and Ugarit lost its position as a major trading port.

The modern discovery of Ras Shamra dates from 1928, when a Syrian peasant accidentally plowed up a flagstone that covered a subterranean passageway. Charles Virolleaud, director of Archaeological Works in Syria and Lebanon, then administered by the French, excavated the site, which proved to be a burial chamber. Pieces of Cypro-Mycenaean pottery were found in the tomb, but the initial dig was not otherwise productive. The systematic excavation of Ras Shamra began in 1929 when Claude F. A. Schaeffer of the Strasbourg Museum and his associate George Chenet conducted a French expedition at the site. Work continued for several months each year until the outbreak of World War II, and it was resumed in 1950 following the war. Excavations have brought to light the royal tombs of Ugarit, two large temples, and artifacts illustrating international commerce among Ugarit, Egypt, Mesopotamia, the Hittites of Asia Minor, and the Cretan-Mycenaean areas. The most significant discovery was the library with inscriptions in several ANE languages, including a previously unknown Semitic language now called Ugaritic, written in an alphabetic CUNEIFORM script. Through the efforts of Charles Virolleaud, Edouard Dhorme of the École Biblique, and Hans Bauer of Halle, the alphabet was deciphered. See LANGUAGES OF THE ANE II.F.

Excavations indicate that the history of Ugarit extended back as far as the 5th or 6th millennium B.C. Schaeffer numbered five levels of occupation, the lowest of which contained flint and bone implements of a prepottery, Neolithic people. The fourth or Chalcolithic level yielded fine examples of painted ceramics of the type known as Halafian (from Tell Halaf, where they were first identified). During the latter half of the 3rd millennium the city identified as Level III was destroyed by fire. The people who next occupied the site used the type of pottery that bears the name of Khirbet Kerak. Most of Schaeffer's work—and that part more directly related to biblical studies—was on the top two levels, Strata II (2100 – 1600) and I (1600 – 1200). The flowering of Ugaritic literature and culture took place during the time represented by Level I.
Syrian cylinder seal made of hematite (18th cent. B.C.), with enlarged reproduction below. The center figure is the weather god (prob. El or Hadad-Baal), depicted as a Canaanite warrior in the smiting posture (center), brandishing a mace in one hand and holding an ax and the serpent in the other.
