Of several hundred Ugaritic texts discovered, the epics found in the library of King Niqmad II, who is known to have paid tribute to the Hittite King Suppiluliuma I (c. 1380 – 1340 B.C.), are of greatest interest. The epics probably had an earlier oral form, but the copies found in Ugarit date from the 14th cent. They illustrate the religious ideas and mythology of the Canaanites that the Israelites encountered in the land of CANAAN or PALESTINE.

The *Baal Epic* describes a series of encounters between BAAL and his rivals Yam ("sea") and Mot ("death"). As the epic begins, Yam demands recognition as the supreme lord of mankind. The waves of the sea, lashing against the seashore, could be interpreted as Yam's claim of the land for himself. Similarly, the flooding of rivers would be looked upon as his work. For a time Yam seemed the undisputed lord. He had a "house" (hence an abode, a temple) of his own, and Baal did not. Baal was the storm god (also known as HADAD, or Baal Hadad) who showed his claim on the land by the thunder and lightning and by the storms that brought rain to the earth. The battle between Yam and Baal was decided in Baal's favor when the artisan gods, Kothar-wa-Khasis, gave Baal two magical maces with which to attack his rival. Baal was successful. Yam was destroyed and Anat (A NATH), Baal's sister, proceeded to annihilate his foes.

After some hesitation, EL, the head of the Ugaritic pantheon, ordered that materials be gathered to build a house for Baal. Cedar wood was brought from LEBANON (as it was for Solomon's TEMPLE), and within seven days Kothar-wa-Khasis built the house. Baal traveled from city to city announcing his victory and claiming each city as part of his realm. From the netherworld, however, Mot issued a further challenge to Baal. After some insistence, Baal journeyed to the netherworld, and while he was there the world above became dry and barren: the fields did not produce their crops, and animals and humans could bear no young. Anat determined to secure Baal's release. Finally the Sun goddess, who

visited the netherworld each night, brought Baal back on one of her appointed rounds. Baal returned to his domain above, accompanied by thunder and lightning and the storms which they heralded.

Baal, representing life, and Mot, representing death, provide imagery for the ideas of conflict between LIGHT and DARKNESS, LIFE and DEATH. Death is often personified in the Bible. The last enemy to be destroyed is death (1 Cor. 15:26). Death and HADES are flung into the LAKE OF FIRE (Rev. 20:14). Biblical MONOTHEISM could not picture Death as an evil god, a rival of Yahweh as Mot was a rival of Baal among the Canaanites. It did, however, employ the concept of battle as a figure of speech to declare the victory of God over the power of death. See WARRIOR, DIVINE.

The *Keret Epic* tells of a prosperous and godly king who was distressed because he had no heir. He had lost a succession of wives and feared that his line would soon become extinct. The god El appeared to Keret in a dream and ordered him to mobilize his armies and proceed to the land of Udm and demand the hand of Huriya, the beautiful daughter of King Pabil. After making appropriate vows to the goddess Athirat, Pabil marched against Udm and besieged the capital city of Pabil. Pabil offered tribute to Keret, but Keret insisted that the siege would be lifted only if the fair Huriya were offered as his wife. Reluctantly Pabil gave his daughter to Keret, and in due time Keret was blessed with sons and daughters of his own.

Keret, however, forgot his vow to Athirat, and the goddess caused him to fall sick. The youngest son and daughter, Elhu and Thitmanet, were genuinely grieved at their father's condition, but the firstborn Yassib thought only of his own prospects as his father's heir. The god El, however, intervened to restore Keret's health. Here the epic breaks off, but its conclusion may be surmised. The faithless Yassib would certainly have been disinherited, and the faithful Elhu and Thitmanet would have been rewarded. Doubtless Elhu would succeed to the throne after Keret died in a ripe old age. The idea of the elder brother losing his rights in favor of a younger brother is common in the biblical record. ESAU, the firstborn, lost his birthright to JACOB (Gen. 25:29 – 34). In blessing JOSEPH's sons, JACOB gave his best blessing to EPHRAIM rather than to the firstborn, MANASSEH (48:14).

The *Aqhat Epic* tells of a son of the pious King Danel (a variant of the name DANIEL) who accidentally acquired a bow which was meant for the goddess Anat. The goddess was so anxious to get the bow from the lad that she offered him riches and immortality in exchange for it. Aqhat, however, did not recognize the girl who spoke to him as a goddess, and he dismissed her promises as meaningless. Anat then decided to use force to get her bow. She employed a ruffian, Yatpun, to knock out Aqhat and take the bow. The breath of life was knocked out of Aqhat, with the result that he died, much to Anat's dismay. The bow was dropped into the sea, so Anat did not get it after all. A vulture ate the body of Aqhat, and his death was mourned by his father Danel and sister Pigal. The story breaks off here, but one can be sure that it went on to tell how Pigal identified the murderer of her brother and brought about his death in retaliation.

The Ugaritic texts give us firsthand information on the Baal cult and on the ideas and ideals of the people of Canaan at the time of the biblical PATRIARCHS. Sacrifices mentioned in these documents bear names similar to those of the biblical sacrificial system. The Ugaritic texts speak of burnt offerings, whole burnt offerings, trespass offerings, wave offerings, peace offerings, firstfruits offerings, new moon offerings, and others. As in the biblical sacrifices, it was necessary that animals offered be without blemish.

Although the vocabulary is similar to that found in the Hebrew Bible, the religious meaning is quite different. Offerings were made to Baal and a host of other gods at Ugarit, while the Israelite religion prescribed the worship of Yahweh alone. While biblical offerings were regularized in the

Mosaic law, particularly the book of Leviticus, biblical sacrifices go back to the earliest times. CAIN and ABEL (Gen. 4:3 – 4), NOAH (8:20), and the line of ABRAHAM (15:9 – 10) all offered sacrifices prior to the giving of the law. Some elements of the Mosaic law seem to be directed against practices documented in the Ugaritic texts. The epic entitled *The Birth of the Beautiful and Gracious Gods* describes a ritual of seething a kid in its mother's milk in order to procure rain for the parched soil of Canaan. The rite was specifically forbidden in Israelite law (Exod. 23:19; 34:26), a fact which gives rise to the Jewish dietary insistence that milk products and meat products must not be mixed.

The prophetic leaders of Israel were concerned that the people resist the temptation to adopt Canaanite religious practices. Since the Ugaritic texts were written in a language closely related to Hebrew, their study provides a wealth of information for the elucidation of the biblical text. Similar figurative expressions are used in the bible and Ugarit. Baal, like Yahweh (cf. Ps. 68:4, 33), rides the clouds. Thunder is his voice (cf. Ps. 29:3). When the writer of the biblical flood story wanted to describe the torrents of rain that fell on earth, he used the poetic expression, "the windows of the heavens were opened" (Gen. 7:11 NRSV). In Ugarit we read that Baal opened a window of his celestial house, uttered his voice, and thus sent a thunderstorm to the world (*Baal* II. vi. 25 – 35).

The mythological figure Lotan (biblical LEVIATHAN) appears in the Ugaritic texts as an enemy of Baal. The *Baal Epic* (I. i. 28 – 30) says, "When thou smotest Lotan, the slippery (serpent), (and) madest an end of the wriggling serpent, the tyrant (with seven heads).…" The words are reminiscent of Isa. 27:1: "In that day, / the LORD [i.e., Yahweh] will punish with his sword, / his fierce, great and powerful sword, / Leviathan the gliding serpent, / Leviathan the coiling serpent; / he will slay the monster of the sea." Biblical Leviathan, like Ugaritic Lotan, had a multiplicity of heads: "It was you who crushed the heads of Leviathan" (Ps. 74:14). Biblical Leviathan, unlike his Ugaritic counterpart, was not a god. Leviathan was a rebellious creature of Yahweh. He represents the forces of evil that come under divine judgment. The high ethical monotheism of the Israelites is not paralleled at Ugarit. Both Israel and Ugarit had a common linguistic and cultural heritage, but Israel alone contributed her high religion to the rest of mankind.

Ugarit has provided textual and linguistic material for the Semitic scholar. The Hebrew word *bāmâ H1195* is used often in the OT (mostly in the pl.) with the sense of "high place." In Ugaritic texts, however, the cognate word can signify the back of a person or animal, and this usage makes good sense in Deut. 33:29, "Your enemies shall come fawning to you; and you shall tread on their backs" (NRSV; cf. NIV mg.). Artistic portrayals from the ANE frequently depict a conqueror with his foot on the back of his victim, so the rendering "backs" here is more meaningful than "high places."

In DAVID's lament over the death of SAUL and JONATHAN, he cries out: "Ye mountains of Gilboa, let there be no dew nor rain upon you, neither fields of offerings" (2 Sam. 1:21 KJV). Biblical scholars have puzzled over the expression "fields of offerings" (Heb. *šĕdê tĕrûmōt*). In the *Aqhat Epic* (C i [= *CTA* 19.1] 43 – 46) we read a statement that is similar to that uttered by David: "Seven years shall Baal fail, / Eight the Rider of the Clouds. / No dew, / No rain; / No welling-up of the deep, / No sweetness of Baal's voice" (*ANET*, 153). The Hebrew word for "fields" is similar to the Ugaritic word for "upsurging," and the Hebrew "offering" is similar to Ugaritic "deep." H. L. Ginsberg (in *JBL* 57 [1938]: 209 – 13; cf. *ANET*, 153 n. 34) suggested that David's prayer should read: "Ye mountains of Gilboa, let there be no dew nor rain upon you, neither welling up of the deep" (emending the Heb. to *šrʿ thwmt*; cf. RSV). The "upsurgings of the deep" were mountain springs, as we know from Ugaritic texts. Dew, rain, and mountain springs were the three sources of moisture in Syria and Palestine. David thus prayed that Mount Gilboa might be barren as a sign of mourning for Saul and Jonathan (cf. the discussion in P. K. McCarter, Jr., *II Samuel*, AB 9 [1984], 69

– 71).

C. F. PFEIFFER

Ukal y*oo'*kuhl. TNIV form of UCAL.

Ulai y*oo'*l*i* (אוּלַי *H217*, from Assyr. *Ulaia*, known to classical authors as Εὐλαῖος, Lat. *Eulaeus*). A stream or artificial irrigation canal near SUSA, capital of ELAM (PLACE) in SW PERSIA, where DANIEL received the vision of a two-horned ram and a goat (Dan. 8:2, 16; the LXX and other ancient versions describe Ulai as a "gate" rather than a watercourse). Owing to topographical change, which can be swift and confusing in sand and alluvial silt, the identification of Ulai is uncertain. D. J. Wiseman (in *NBD,* 1218) suggests that the reference is to two present-day rivers, the upper Kherkhah and the lower Karun, which in ancient times may have been a single stream debouching into the delta at the head of the Persian Gulf. The river appears in reliefs of ASHURBANIPAL's assault on Susa in 640 B.C.; with sanguinary relish typical of Assyrian inscriptions, the monarch claims to have reddened the Ulai with blood.

E. M. BLAIKLOCK

Ulam y*oo'*luhm (אוּלָם *H220,* perhaps "first, leader"). (1) Son of Peresh (or of Sheresh), grandson of MAKIR, and great-grandson of MANASSEH (1 Chr. 7:16 – 17).

(2) Firstborn son of ESHEK and descendant of BENJAMIN through SAUL (1 Chr. 8:39). Ulam's sons "were brave warriors who could handle the bow," and his descendants were numerous (v. 40).

ulcer. A breakdown of skin or mucous membrane in a localized area with gradual destruction of the flesh underneath. This English term is used by the NRSV once to render Hebrew ʿ*ōpel H6754* (Deut. 28:27). See TUMOR.

R. H. POUSMA

Ulla uhl'uh (עֻלָּא *H6587,* possibly "the small one"). Descendant of ASHER (1 Chr. 7:39). Ulla's place in the genealogy is left unstated, and some scholars believe the name is a textual corruption for some other Asherite mentioned earlier, such as Amal (v. 35).

Ummah uhm'uh (עֻמָּה *H6646*, possibly "connection" or "near"). A town on the Mediterranean coast within the tribal territory of ASHER (Josh. 19:30). Ummah was apparently between ACZIB and APHEK on the Plain of ACCO, but its precise location is unknown. Because Acco, an important city allotted to Asher (cf. Jdg. 1:31), is not otherwise included in the list of Asherite towns in Josh. 19:24 – 31, many scholars believe that Ummah here is a scribal corruption for Acco (a reading that has slight support in the Gk. textual tradition; see *BHS* apparatus).

umpire. See DAYSMAN.

uncial un'shuhl. An ancient form of Greek (and Latin) handwriting based on the shapes of capital letters; the term is also applied to MSS written with this type of writing. See TEXT AND MANUSCRIPTS (NT) II.B.

uncircumcised. In the Bible this word is used both literally and figuratively (in figurative passages, modern versions sometimes use other terms). Uncircumcision represented unbelief and disobedience to the COVENANT of God (Jer. 6:10; 9:25). Rebellious Israelites have an "uncircumcised heart"; and those whose ears are closed are said to have "uncircumcised ears" (Lev. 26:41; Jer. 6:10). In the NT, unbelieving Jews, though physically circumcised, are said to be spiritually uncircumcised (Rom. 2:28 – 29); while Gentiles, though physically uncircumcised, are regarded as circumcised if they keep the righteousness of the law (2:25 – 27). Christ makes no distinction between the circumcised and the uncircumcised (1 Cor. 7:19; Gal. 5:6; 6:15; Col. 3:11); if regenerated, they are united in one body of believers (Eph. 2:11 – 22). CCIRCUMCISION has nothing to do with JUSTIFICATION, for ABRAHAM was justified while still uncircumcised (Rom. 4:9 – 12).

<div align="right">S. BARABAS</div>

uncle. This English term renders Hebrew *dôd H1856*, referring specifically to a father's brother (Lev. 20:20 et al., although in some passages the precise relationship is not made explicit). In the Song of Solomon, the Hebrew is used regularly with the meaning "beloved, lover" (Cant. 1:13 – 14 et al.; in the pl. form *dōdîm* it can mean "love," Prov. 7:18 et al.). The connection between these two meanings, according to some, lies in the fact that a woman often married the son of her father's brother (cf. *HALOT*, 1:215, meaning #1).

uncleanness. The notion of ceremonial uncleanness or defilement is expressed in Hebrew primarily with the verb ṭāmē, *H3237* and its cognates (Lev. 11:24 – 47 et al.; various analogous terms are also used). In the NT, the Greek noun for "uncleanness" is *akatharsia G174* (Matt. 23:27 et al.; adj. *akathartos G176*, 10:11 et al.), but the verb *koinoō G3124*, which literally means "to make common," can have the force of destroying HOLINESS, thus, "to make [or count as] unclean" (Mk. 7:15 et al.; adj. *koinos G3123*, v. 2 et al.; note the use of *akathartos* together with *koinos* in Acts 10:14, 18; 11:8). See also CLEAN; PURITY.

I. The meaning of the concept. Persons, foods, places, and objects could all be unclean. The uncleanness could be inherent or acquired by contamination. "In the minds of the ancients there was a close connection between the notion of purity or cleanness and the notion of being consecrated to God. There was a mysterious and frightening force inherent in things which were impure and in things

which were sacred, and these two forces acted on everything with which they came into contact, placing the objects or persons which touched them under a kind of interdict. Both what was impure and what was consecrated were alike 'untouchable', and any person who touched them became himself 'untouchable'" (R. de Vaux, *Ancient Israel* [1961], 460). We are dealing with concepts that go back into the infancy of humanity and that have been modified in the OT, where there is a wide area between the holy and the impure. In the NT the concept of uncleanness is dealt with differently: not that which goes into a person, but what comes out of him, is what defiles him (Mk. 7:18 – 20); similarly, nothing God has made is essentially unclean (Acts 10:13 – 15; 1 Tim. 4:4 – 5).

Burial site on the Mount of Olives. Human bones were among the items that could make a person ceremonially unclean by contact.

II. Things that make unclean. (a) Animals are either clean or unclean, the uncleanness being imparted by eating them or touching their dead bodies (Lev. 11; Deut. 14:3 – 20). Whatever motivations may be offered by readers for the distinction, according to the Bible it lies essentially in God's decree.

(b) All bodies that died of natural causes imparted impurity, whether the body was of a person (Num. 19:11), of an impure animal (Lev. 11:4 – 8, 24 – 28), or of a pure animal (11:39 – 40). The reason behind this principle may be that death, the outcome of human sin, is by its very nature a negation of God's holiness. The killing of a pure animal for food, however, did not render it impure; and on analogy, presumably, a man taking part in a holy war for the God of Israel would not be rendered impure by those he killed.

(c) All forbidden sexual unions rendered impure anyone participating in them (Lev. 18). All sexual perversions (cf. Rom. 1:26 – 27) are a rebellion against the God-created order of nature and therefore a stepping out of the sphere of holiness.

(d) Virtually everything linked with sex could impart uncleanness. Some acts of worship required abstention from sexual relationships (Exod. 19:15; 1 Sam. 21:4 – 5). The sexual act was seen as communicating uncleanness (Lev. 15:16 – 18), though Jewish tradition, based on v. 31, makes it refer merely to those coming into contact with anything belonging to the sanctuary. Menstruation

(15:19 – 24), childbirth (12:1 – 5), and various discharges from the sexual organs (15:1 – 12, 25 – 27) created uncleanness.

(e) An "infectious skin disease" made a person seriously unclean (Lev. 13:1 – 46). Especially if taken with the teaching of Hag. 2:11 – 14, these instructions suggest that uncleanness has a stronger effect than cleanness; the divine command was thus intended to impress on people how serious impurity is. No one can escape it.

III. Cleansing from uncleanness. The simpler forms of uncleanness were dealt with by washing; these included the simpler sexual impurities (Lev. 15:5 – 12, 16 – 18, 21 – 24, 27) and those created by an animal carcass (11:24 – 28, 39 – 40). The one who touched a human corpse, however, had to take advantage of the sacrifice of the red heifer (Num. 19:11 – 19). For the cured leper, for the mother after childbirth, and for certain sexual discharges a sacrifice had to be brought (Lev. 12:6 – 8; 14:1 – 20; 15:13 – 15, 29 – 30). The ritual of the Day of Atonement was intended to cleanse the defilement the sanctuary might have contracted, and by the intertestamental period this notion was extended to all the unintentional impurities of the people. Deliberately contracted uncleanness or the refusal to seek cleansing (Num. 19:20 – 22) brought "cutting off" from the people. In essence there was virtually no difference between uncleanness and sin considered as an unintentional falling short. A connection may be seen in what one may call "ritual impurity" contracted by the person who burned the carcasses of the sin offerings on the Day of Atonement (Lev. 16:28) and by those involved in the burning of the red heifer and the collecting of its ashes (Num. 19:8, 10).

IV. The spiritualizing of the concept. In the PROPHETS there is a deepening of the concept. It is expressed especially in Isaiah's cry, "I am a man of unclean lips" (Isa. 6:5), and in his confession, "All of us have become like one who is unclean, / and all our righteous acts are like filthy rags" (64:6). Similarly, his picture of God's restoration in 35:8, "The unclean will not journey on it [*i.e.*, on the Way of Holiness]," has obviously a moral rather than a ritual implication. Unfortunately, in the postexilic period ever-increasing stress came to be laid on the avoidance of formal uncleanness. It was an obsession both with the Qumran Covenanters (see DEAD SEA SCROLLS) and the PHARISEES. In the later Talmudic developments questions of purity and impurity provide some of the most complex sections of rabbinic legislation. In the church, however, Christ's teaching was continued. The decisions of the apostolic gathering in Jerusalem were based on regard for those Jews who were law-bound (Acts 15:19 – 21). Romans 14:14 is PAUL's expression of the fact that uncleanness is something essentially spiritual in its nature (cf. Heb. 12:15). The ritual of washing has become purely pictorial, and WATER becomes a symbol of the word (Eph. 5:26).

<div align="right">H. L. ELLISON</div>

unction. This English term, meaning "the act of anointing," is used once by the KJV with reference to the effect of the Spirit's presence upon the believer (1 Jn. 2:20). See ANOINT; HOLY SPIRIT III.H.

undergirding. See SHIPS IV.

undersetter. This archaic English term is used by the KJV in one passage referring to the supports of the laver in Solomon's TEMPLE (1 Ki. 7:30, 34).

underworld. See HADES.

unforgivable sin. See FORGIVENESS V; HOLY SPIRIT III.B; UNPARDONABLE SIN.

unicorn. A mythical horselike beast having a single horn growing from the center of its forehead. Following the SEPTUAGINT (which has *monokerōs* in the relevant passages), the KJV wrongly uses "unicorn" as the rendering of Hebrew *rĕʾēm H8028* (Num. 23:22 et al.). See WILD OX.

union with Christ. While the expression "union with Christ" does not occur in the Bible, it describes the central reality in the salvation revealed there, from its eternal design to its eschatological consummation.

Human beings were created in God's image, to live in fellowship and communion (COVENANT) with God, trusting his promises and obeying his commands, loving and being loved. SIN, however, destroyed this fellowship bond, by rendering humanity guilty and corrupt, and so, alienated from God and deserving of DEATH. In response, God, as Savior, undertakes to restore and perfect the life and communion lost. This saving purpose, intimated already in Gen. 3:14 – 15, unfolds toward its fulfillment primarily in God's ongoing dealings with Israel as his covenant people, a bond expressed variously but perhaps most evocatively in the description of God himself as "the portion" of his people (Pss. 73:26; 119:57; Jer. 10:16); reciprocally, they are "the LORD's portion" (Deut 32:9; cf. Isa. 53:12, with anticipatory reference to Christ). The climactic realization of this covenantal bond between the triune God and the church centers in union with Christ.

This union finds its most prominent NT expression in the phrase "in Christ" or "in the Lord" (with slight variations), occurring frequently and almost exclusively in PAUL's letters (elsewhere, e.g., Jn. 14:20; 15:4 – 7; 1 Jn. 2:28). Scholarly debate about its meaning ranges from a purely instrumental understanding of the preposition "in" (Gk. *en G1877*) to a local or atmospheric sense, and even the notion of an actual physical union between Christ and believers (A. Schweitzer). In fact, Paul's usage is varied, its scope best gauged by the contrast between ADAM and Christ (the "last Adam" or "second man," Rom. 5:12 – 19; 1 Cor. 15:20 – 23; cf. vv. 45, 47). What each does is determinative, respectively, for those "in him." For those "in Christ" this union or solidarity is all-encompassing, extending from eternity to eternity: they are united to Christ not only in their present possession of salvation but also in its past, once-for-all accomplishment (e.g., Rom. 6:3 – 7; 8:1; Gal. 2:20; Eph. 2:5 – 6; Col. 3:1 – 4), in their ELECTION "before the creation of the world" (Eph. 1:4, 9), and in their still future glorification (Rom. 8:17; 1 Cor. 15:22).

Present union (union in the actual appropriation of salvation) is often called "mystical" and "spiritual." But both terms are subject to misunderstanding. Involved is not a mysticism of ecstatic experience at odds with reasoned understanding; rather, it is a mystery in the NT sense of what has been hidden with God in his eternal purposes but now, finally, has been revealed in Christ, particularly through his death and resurrection, and is appropriated by FAITH (Rom. 16:25 – 26; Col. 1:26 – 27; 2:2). Certainly, in its full dimensions this mystery is beyond the believer's comprehension. Involved here, as much as in anything pertaining to salvation and the gospel, is that knowledge of Christ's love "that surpasses knowledge" (Eph. 3:18 – 19; cf. 1 Cor. 2:9).

Ephesians 5:32 highlights the intimacy of this union ("a profound mystery") by comparing it to the relationship between husband and wife. Elsewhere, other relational analogies bring out various facets of union: the foundation-cornerstone together with the other stones of a building (Eph. 2:19 – 22; 1 Pet. 2:5); a vine and its branches (Jn. 15:1 – 7); the head and the other members of the human body (1 Cor. 12:12 – 27; see BODY OF CHRIST); the genetic tie between Adam and his posterity (Rom.

5:12 – 19). The climactic comparison is to the unique ontological union between Father, Son, and Spirit (Jn. 17:20 – 23). Similarity is not identity, but especially this inner-trinitarian analogy shows that the highest kind of union that exists for an image-bearing creature is the union of the believer with the exalted Christ. "[T]he greatest mystery of creaturely relationships is the union of the people of God with Christ. And the mystery of it is attested by nothing more than this that it is compared to the union that exists between the Father and the Son in the unity of the Godhead" (J. Murray, *Redemption: Accomplished and Applied* [1961], 169; see the whole of ch. 9 in this book for an illuminating discussion).

Mystical union is also *spiritual*, not in an immaterial, idealistic sense, but because of the activity and indwelling of the HOLY SPIRIT. This circumscribes the mystery and protects against confusing it with other kinds of union. As spiritual, it is neither ontological (like that between the persons of the TRINITY), nor hypostatic (between Christ's two natures), nor psychosomatic (between BODY and SOUL in human personality), nor somatic (between husband and wife), nor merely moral (unity in affection, understanding, purpose).

Spiritual union stems from the relationship between Christ and the Holy Spirit. Because of his resurrection and ascension, the incarnate Christ ("the last Adam") has been so transformed by the Spirit and is now in such complete possession of the Spirit that he has "become life-giving Spirit," and "the Lord [= Christ] is the Spirit" (1 Cor. 15:45; 2 Cor. 3:17). In view is a functional equation, a oneness in their activity of giving resurrection life and eschatological freedom, so that in the life of the church and within believers, Christ and the Spirit are inseparable (cf. Jn. 14:18). In Rom. 8:9 – 10, for example, the phrases "in the Spirit," "the Spirit in you," "belonging to Christ" (equivalent to "in Christ"), and "Christ in you" are all facets of a single union (cf. Eph. 3:16 – 17: to have "his Spirit in your inner being" is for "Christ…[to] dwell in your hearts"). Union with Christ is reciprocal. Not only are believers in Christ—he is "in them" (Jn. 14:20; 17:23, 26; Col. 1:27: "Christ in you, the hope of glory"). Such union, then, is inherently *vital*; Christ indwelling is the very life of the believer (Gal. 2:20; Col. 3:4).

Especially since the Reformation, a perennially important issue, both in formulating church doctrine as well as interpreting Paul, has been the relationship between union with Christ and JUSTIFICATION (respectively, the participatory and the forensic aspects of salvation). On the one hand, these are not merely alternative or complementary metaphors for salvation. But neither may union be coordinated as just one in a series of acts, whether after or even before justification, in the application of salvation (*ordo salutis*; see SALVATION IV). Rather, as John Calvin, faithful to the NT, already has pointed the way (*Institutes of the Christian Religion* 3.1), being united to Christ by faith through "the secret energy of the Spirit" establishes the bond within which the believer, without either separation or confusion, is both reckoned righteous and renewed in righteousness. (See also M. A. Siefried in *DPL*, 433 – 36.)

R. B. GAFFIN, JR.

unity. Scripture portrays great richness and variety in its teaching concerning oneness and harmony. There is the unity of the believer with his Lord (see UNION WITH CHRIST), and there is the union manifested in the BODY OF CHRIST, the CHURCH, which rests eventually on a deeper unity of believers in "one Lord, one faith, one baptism." Unity with Christ is illustrated in many ways: that of husband and wife, or the stones and the building. The classic analogy is the vine and the branches (cf. Jn. 15:1 – 8). Apart from such unity the follower of Christ can "do nothing." The unity is his life and the ground of his action.

PAUL took special interest in the unity within the body of believers, and he did not argue for an invisible bond but for a oneness that should characterize the visible body. He recognized unity in diversity and diversity in unity, and he amplified this approach (1 Cor. 12) with the appeal to LOVE as the unifying bond (ch. 13). The apostle looked upon unity as reality already in existence, but also as a reality yet to be attained. As we are "patient, bearing with one another in love," we are then eager "to keep the unity of the Spirit" (Eph. 4:2 – 3). There exists this unity already, but it is the unity of the *Spirit*, and this feature relates to Paul's treatment of diversity in unity (1 Cor. 12). One should thus expect "one Lord, one faith, one baptism" (Eph. 4:5). That the real unity here described is not fully manifest in the church nor among the most ardent followers of Christ is quite clear, for Paul wrote of unity as something yet to be attained. There are varieties of gifts and offices for the building up of the body of Christ "until we all reach unity in the faith and in the knowledge of the Son of God." Then will come maturity, "the whole measure of the fullness of Christ" (4:13).

<div align="right">A. H. LEITCH</div>

unity of the Bible. See BIBLE IX.

unknown god. When the apostle PAUL addressed the meeting of the AREOPAGUS in ATHENS, he said to his listeners that he had noticed how religious they were, and added: "For as I walked around and looked carefully at your objects of worship, I even found an altar with this inscription: TO AN UNKNOWN GOD [*Agnōstō theō*]. Now what you worship as something unknown I am going to proclaim to you" (Acts 17:23). The existence of such an altar, presumably built in a scrupulous attempt to include every possible deity, was an indication of the Athenians' religious sensitivity. It also betrayed a lack of religious knowledge, which Paul sought to remedy in his address (vv. 24 – 31).

As no comparable dedication to a single unknown deity has been found, some have questioned the existence of this inscription. However, there is evidence of inscriptions to unknown deities in the plural (Pausanias, *Description of Greece* 1.1.4 [*bōmoi de theōn te onomazomenōn Agnōstōn*]; Philostratus, *Appolonius of Tyana* 6.3.5; Diogenes Laertius, *Lives of the Philosophers* 1.110). It is also theorized that in a polytheistic culture, a single deity would not have been addressed, and that Paul might have altered a polytheistic inscription to fit his monotheistic concepts. On the contrary, the syncretism of the Hellenistic period, the occasional merging of Jewish ideas with pagan forms, and the tendency toward both the unifying of principles and the personifying of abstract religious concepts, provided a matrix within which such an inscription was not at all unlikely. (See E. Norden, *Agnostos Theos* [1913]; K. Lake in *BC*, 1/5: 240 – 46; P. W. van der Horst in *ANRW*, 2/18/2 [1989]: 1426 – 56; W. H. Wachob in *ABD*, 6:753 – 55.)

<div align="right">W. L. LIEFELD</div>

Unknown Gospel. See EGERTON 2, PAPYRUS.

unknown tongue. See TONGUES, GIFT OF.

unleavened bread. Bread made without yeast. In the preparation of household bread, a piece of fermented dough from a previous baking was placed in the kneading trough along with fresh flour, kneaded into cakes, and then baked. Unleavened bread lacked the fermented dough. See LEAVEN. Unleavened bread or cakes (*maṣṣôt*, pl. of *maṣṣâ H5174*) are associated with the elements eaten at PASSOVER, the feast that commemorates the deliverance of Israel from Egypt. Only unleavened bread was to be eaten for the seven days that followed Passover (Exod. 12:15 – 20; 13:3 – 7). Some

scholars think that the Feast of Unleavened Bread (seven days) which followed the Passover was originally a nature festival associated with the occasion of the barley harvest, and that it was transformed later into the historical feast, the Passover.

The prohibition of leaven eventually became most scrupulously observed. A Hebrew who did not eat unleavened bread was "cut off," that is, excommunicated from the camp of Israel. In eating unleavened bread, the Hebrews were reminded of their haste in leaving Egypt during the great exodus. They could not wait to bake bread to take with them, but carried dough in their bread troughs in their hurried flight into the desert. They baked their bread as they traveled, as do the desert BEDOUIN today. Israel, in eating the "bread of bitterness," remembered that dark night in Egypt and then began a period of one week using unleavened bread.

<div align="right">F. E. YOUNG</div>

Unni uhn'*i* (עֻנִּי H6716 [Neh. 12:9 *Ketib*, עֻנּוֹ]), possibly "one who has been heard" or short form of עֲנָנְיָה H6731, "Yahweh has answered" [see ANANIAH]). (1) A Levite in the time of DAVID appointed among others to play the lyre (NRSV, harp) as a part of the ministrations before the ARK OF THE COVENANT (1 Chr. 15:18, 20).

(2) A Levite who served after the EXILE; he is described as an associate of MATTANIAH, the director of worship (Neh. 12:9; NRSV, "Unno," following the *Ketib*).

Unno uhn'oh. See UNNI #2.

unpardonable sin. In one of his controversies with the PHARISEES, Jesus said that blaspheming or speaking against the HOLY SPIRIT would not be forgiven (Matt. 12:31 – 32; Mk. 3:29; Lk. 12:10). Other apparent parallels (cf. Heb. 6:4 – 6; 10:26 – 27; 1 Jn. 5:16) should be exegeted in the light of that statement.

The threat of this sin must be understood against the promise of salvation represented always as free and complete. Such gracious redemption is magnified in the context of the "unpardonable sin." "Every sin and blasphemy will be forgiven men" (Matt. 12:31), even "a word against the Son of Man" (12:32). What is the specific sin that is set against this assurance of forgiveness? In the context it must mean that because people, by choice or by habit, confuse the Holy Spirit of God with the unclean spirit of BEELZEBUB, it is impossible for God to reach them with the message of salvation and therefore they continue to call his truth a lie. It is not that God *will not forgive* them, but that they, by destroying the very offer of the gospel, place themselves outside the possibility of forgiveness. See FORGIVENESS V; HOLY SPIRIT III.B.

<div align="right">A. H. LEITCH</div>

untempered morter. This phrase is used by the KJV to render the Hebrew noun *tāpēl H9521*, which refers to plaster or whitewash (Ezek. 13:10 – 15; 22:28). The prophet uses this word in a metaphorical sense of the false prophets who instead of exposing and denouncing the sinful enterprises of the people weakly acquiesced to them. This is like daubing a stone wall with whitewash to give it the appearance of solidity and strength. A heavy rainstorm will destroy it.

<div align="right">S. BARABAS</div>

untimely birth. See BIRTH, UNTIMELY.

upharsin. See MENE, MENE, TEKEL, PARSIN.

Uphaz y*oo*'faz (יִפֿﬡ *H233*, derivation unknown). An unidentified location famous for its GOLD (Jer. 10:9; Dan. 10:5 [KJV, NRSV]). In Jer. 10:9, the Aramaic and Syriac versions have OPHIR, a reading accepted by some scholars; others emend *zāhāb me᾽ûpāz* ("gold from Uphaz") to *zāhāb mûpaz* ("fine gold"; from the verb *pāzaz H7059*, cf. 1 Ki. 10:18). In Dan. 10:5, the NIV and NJPS emend *bĕketem᾽ûpāz* ("with gold of Uphaz") to *beketem ûpaz* ("with gold and refined gold," i.e., very fine gold; from the noun *paz H7058*, cf. Cant. 5:11). It remains uncertain whether a place by the name of Uphaz ever existed (see further *ABD*, 6:765).

Upper Gate. KJV, "high gate" and "higher gate." One of the gates of the TEMPLE in Jerusalem, first mentioned in the time of King JOASH. After the assassination of ATHALIAH, the young monarch was brought "from the temple of the LORD. They went into the palace through the Upper Gate [*ša῾ar hā῾elyôn*] and seated the king on the royal throne" (2 Chr. 23:30; in the parallel it is called "the gate of the runners/guards" [*ša῾ar hārāsîm*, 2 Ki. 11:19; cf. v. 6]). This description is interpreted by some to mean that the Upper Gate faced S (cf. *ABD*, 6:765), but EZEKIEL uses the same name with reference to a gate that "faces north" (Ezek. 9:2, evidently the same as the "north gate" of 8:14, which according to W. Zimmerli, *Ezekiel 1* [1979], 247 – 48, was "on the inner raised area of the most central part of the temple").

The "Upper Gate" is probably the same as "the Upper Gate of Benjamin at the LORD's temple" (Jer. 20:2), and one of the few things mentioned regarding the reign of JOTHAM is that he "rebuilt the Upper Gate of the temple of the LORD" (2 Ki. 15:35; 2 Chr. 27:3). Some speculate that after this reconstruction it came to be known as the NEW GATE (Jer. 26:10; 36:10). Zimmerli (ibid.) distinguishes the gate mentioned in the story of Joash from the one referred to in the other passages. Whether or not these various names refer to the same gate, however, the precise location is unknown.

upper room. Traditional name given to the room where Jesus celebrated the Last Supper (see LORD'S SUPPER); accordingly, the teaching recorded in Jn. 14 – 16 is referred to as the Upper Room Discourse (although 14:31 seems to indicate that part of the discourse took place as the group was on its way to GETHSEMANE). The name derives from the instructions that the Lord gave to the disciples in preparation for the meal: "He [the owner of the house] will show you a large upper room [*anagaion*], furnished and ready" (Mk. 14:15; similarly Lk. 22:12). Large upper rooms with outside and inside staircases above the noise and bustle of the city are mentioned in the OT as an architectural feature of Palestinian houses (Heb. ῾*ăliyyâ H6608*, 2 Ki. 1:2 et al.).

After the ASCENSION OF CHRIST, the disciples "went up into an upper room" (Acts 1:13 KJV; NIV, "went upstairs to the room"), where the disciples met for prayer (v. 14), MATTHIAS was chosen to replace JUDAS ISCARIOT (vv. 15 – 26), and the initial events of PENTECOST took place (ch. 2). Here, however, Luke uses a different Greek term (*hyperōon G5673*, used by the LXX to translate ῾*ăliyyâ* and by Luke again with reference to other places, Acts 9:37, 39; 20:8). Many have identified the room where the Last Supper was held with the room mentioned in Acts 1, but there is no evidence that proves (or disproves) this theory. An ancient tradition identified the room of Pentecost with what is now known as the Cenacle (above the "Tomb of David" and adjacent to the Dormition Abbey), and later this place was thought to be the site of the Last Supper, but this building is no earlier than the

14th cent. (see J. Wilkinson, *Jerusalem as Jesus Knew It: Archaeology as Evidence* [1978], 164 – 72).

Ur (city) oor (אוּר *H243*, "light, flame"). Referred to in the Bible as "Ur of the Chaldeans [KJV, Chaldees]," this city in MESOPOTAMIA was the home of ABRAHAM prior to his family's migration to HARAN (Gen. 11:28, 31; 15:7; Neh. 9:7).

I. Name and location. Until 1850, "Ur of the Chaldees" was considered to be modern Urfa (EDESSA), not far from HARAN, in SE Turkey, which according to a local tradition was the place of Abraham's residence (note that the patriarch refers to the area of Haran as ʾereṣ môladtî, lit., "the land of my birth," Gen. 24:4, cf. v. 7). This view was revived in more recent times by Cyrus H. Gordon (in *JNES* 17 [1958]: 28 – 31), who interpreted the OT as implying that Abraham was a merchant prince who did business in N Mesopotamia (he places Ur at Uraᶜ near Haran). He considered that the term CHALDEA can be adequately explained as a reference to this area (as he thinks is meant by Isa. 23:13). Against this view it must be noted that any tradition of Abraham at Urfa/Edessa goes back only to the 8th – 9th cent. A.D. The OT scarcely implies that Abraham was a merchant or that he moved only a short distance from Ur to Haran. Moreover, "the land of my birth" (Gen. 24:4 and 7) could equally be translated "land of my kindred." There are also several places called Uraᶜ, one a seaport in CILICIA, another a HITTITE fortress in NE ANATOLIA.

In favor of a more southerly location can be cited a strong local tradition linking Abraham with both Warka (ERECH) and Kutha (Tell Ibrahim). In addition, according to Pseudo-Eupolemus (see EUPOLEMUS), Abraham was born "in the Babylonian city of Camarina, although others state that the city was named Ourie" (Euseb. *Praeparatio Evangelica* 9.17.2; see *OTP*, 2:880). By 1866 the name *U-ri* was read on several buildings and other inscriptions from the site of Tell el-Muqayyar in S Iraq, 6 mi. SE of Nasiriyah on the EUPHRATES River. This ancient city of Ur certainly lay in territory called Kaldu (Chaldea) from the early 1st millennium B.C. Since this area was normally named after the tribes living there, and no earlier general name for the area is known, it would be unscientific to call the reference to Ur "of the Chaldees" in the 2nd millennium an anachronism. The southern identification for the biblical Ur is now generally accepted. (See further A. R. Millard in *BAR* 27/3 [May-June 2001]: 52 – 53, 57.)

II. Excavations. In 1853 – 54 J. E. Taylor, British Vice-Consul at Basra, was asked by the British Museum to investigate the site of "Múgeyer," and he explored the ZIGGURAT and vicinity. A few soundings were made by R. C. Thompson in 1918 and shortly afterward by H. R. Hall; the latter, however, concentrated on Tell al-ᶜUbaid, 4 mi. to the NW, where he found a circular oval with a decorated temple of Ninhursag in use from prehistoric (Ubaid) levels (c. 4000 B.C.) until the 3rd dynasty of Ur (2113 – 2066). From 1922 to 1934 a joint expedition of the British Museum and University Museum of Pennsylvania led by Sir C. L. Woolley excavated large areas of the site, which measured 1,200 by 675 meters and housed an estimated population of c. 34,000, possibly representing a quarter of a million persons in the whole of the Greater Ur district.

This small clay tablet from Ur (3rd dynasty, c. 2046 B.C.) is a commercial text in cuneiform that records the purchase of plough-oxen from various merchants.

A. Ziggurat. The three-staged step PYRAMID tower built by Ur-Nammu (2113 – 2096) and remodeled by NABONIDUS (556 – 539) dominated the city. This massive structure of burnt-brick skin over a mud-brick core of 200 x 150 ft. originally stood to a height of 70 ft. above the plain, though only 50 ft. of the lowest platform now remains. There is some evidence that the different stages were each colored differently below the silver one-roomed shrine of Nannar, the moon-god (also called Sin), at the top. The terraces were planted with trees. Identification of the ziggurat of Ur by name and of the work of restoration by Nabonidus is provided by foundation deposits found at the corners of the building. Close by the ziggurat, which rose from an inner court, is found a shrine of Ningal and, in the angle formed by the main stairway leading up into the ziggurat, two small chapels. Around the wall were associated kitchens. A single gateway (Edublalmah) led into the sacred area or *temenos* with its open-air altar and large storehouse for receiving offerings. On this temenos was a temple for Ningal (Enumah), a palace of Amar-Su)en, and farther to the SE Ehursag, the palace of Ur-Nammu and Shulgi. The whole complex was divided from the town by a wall last rebuilt by NEBUCHADNEZZAR II.

B. Royal cemetery. An outstanding discovery were the tombs of the rulers of the brilliant Early Dynastic III period (c. 2500 B.C.), near and below the mausoleum of kings Shulgi and Amar-Su)en. The finest equipped of the sixteen graves were those of Meskalamshar and his "queen" Pū-Abi (Shub-ad) and of the founder of the 1st dynasty Mesannipada and his son A,annipada, who are known to have been contemporary with the early kings of MARI. The ritual of burial included human sacrifice: from six to as many as eighty retainers accompanied the deceased to the tomb, where they too were

killed, probably by poisoning or suffocation. Objects of gold, silver, precious stones, wood, ivory, and shell with lapis-lazuli mosaic inlay were found in abundance and testify to the wealth of this early time. They include chariots, sledges, standards, musical instruments, weapons and vessels, gaming-boards, and much personal jewelry. An outlying cemetery at Diqdiqqeh yielded grave goods of a later period.

C. Flood level. In a deep sounding to virgin soil in Pit F (and at other check points) Woolley met at 4.50 meters above sea level a stratum of clean, water-laid sand more than 3 meters deep, which he considered to have been laid in two subsequent stages dating to the end of the Ubaid period, c. 3500 B.C. He linked this with the flood mentioned in the Bible and in the Babylonian Epic of GILGAMESH (see FFOOD, GENESIS). Though some take this discovery as proof of these events, the archaeological evidence here does not necessarily warrant this interpretation. The flood layer seems to have been an accumulation of debris and is not strictly paralleled by the similar layers found at other sites that may be more closely related to the classical event (e.g., Kish and Shurrupak, c. 2500 B.C.). No flood level is known from ERIDU, 12 mi. to the SW.

D. Private houses. A quarter of the city occupied during the Isin-Larsa period was cleared to show the layout of thickly populated private houses. From many tablets discovered, the activity of the market and seaport sections of the city can be reconstructed. Trade was carried on over a wide area by merchants, including sea-borne traffic with India and Africa via the Persian Gulf from a canal-basin harbor.

III. History. The city of Ur—following the strong Semitic dynasty of III Agade to the N (2350 – 2150 B.C.) and a period of eclipse after the Gutian infiltration (2150 – 2070)—became a flourishing city in Sumerian times, dominating S Babylonia and sometimes farther afield. See SUMER. The Ur Dynasty founded by Ur-Nammu saw a revival of Sumerian prosperity and the extension of Ur's influence once again to Syria and N Mesopotamia which continued during the reigns of his successors, Shulgi and Amar-Su⁾en. When the AMORITES overran the S, HAMMURABI (1792 – 1750) controlled Ur for a time, but when it rebelled against his son it was sacked. Ur's importance as a religious center insured that it was never abandoned for long, and later kings Kurigalzu II (1345 – 1324) and Marduk-nadin-aḫḫe (1098 – 1081) kept it in repair, as did Nebuchadnezzar II and Nabonidus in the 6th cent. The latter rebuilt the ziggurat and other shrines before installing his daughter, Bel-shalṭi-Nannar, as high priestess in her own new palace. CYRUS paid reverent attention to the shrines but after the 4th cent. the city fell into decline with the diversion of the Euphrates River and the silting up of the canal system.

(See further C. L. Woolley, *Excavations at Ur: A Record of Twelve Years' Work* [1954]; H. W. F. Saggs in *Iraq* 22 [1960]: 200 – 209; M. E. L. Mallowan and D. J. Wiseman, *Ur in Retrospect* [1960]; C. J. Gadd in *Archaeology and Old Testament Study*, ed. D. W. Thomas [1967], 87 – 101; P. R. S. Widell, *The Administrative and Economic Ur III Texts from the City of Ur* [2003].)

D. J. WISEMAN

Ur (person) oor (אוּר *H244*, "light, flame"). Father of ELIPHAL; the latter was one of DAVID's mighty warriors (1 Chr. 11:35). The parallel list reads differently (2 Sam. 23:34); see discussion under AHASBAI.

Urartu yoo-rahr'*too*. See ARARAT.

Urbane uhr'bayn. KJV form of URBANUS.

Urbanus uhr-bay'nuhs (Οὐρβανός *G4042*, from Lat. *Urbanus*, "urbane, refined"). KJV Urbane. A member of the Christian church at Rome to whom PAUL sent greetings (Rom. 16:9). The apostle calls him "our fellow worker in Christ," a description applied also to PRISCILLA AND AQUILA in this passage (v. 3), but to no one else. Presumably, Urbanus had assisted Paul in Asia Minor or Greece and subsequently migrated to the capital of the empire. It is impossible to determine whether he was Jewish or Gentile. According to P. Lampe, Urbanus "was not ordinarily a slave name" (*ABD*, 6:767; contra C. E. B. Cranfield, *A Critical and Exegetical Commentary on the Epistle to the Romans*, ICC, 2 vols. [1975 – 79], 2:790).

Uri yoor'*i* (אוּרִי *H247* and אֲרִי *H788* [1 Ki. 4:19], "light, flame," possibly short form of URIAH or URIEL). (1) Son of Hur and father of BEZALEL; the latter was the primary artisan in the building of the TABERNACLE (Exod. 31:2; 35:30; 38:22; 1 Chr. 2:20; 2 Chr. 1:5).

(2) Father of GEBER; the latter was one of SOLOMON's district managers (1 Ki. 4:19).

(3) One of the three Levitical gatekeepers who agreed to put away their foreign wives in the time of EZRA (Ezra 10:24).

Uriah yoo-ri'uh (אוּרִיָּהוּ *H250* [only Jer. 26:20 – 23] and אוּרִיָּה *H249*, apparently meaning "Yahweh is [my] light" [cf. URIEL], but possibly from Hurrian *ewir*, "lord" [see *HALOT*, 1:25]; Οὐρίας *G4043*). KJV also Urijah (in 2 Kings, Nehemiah, and Jeremiah) and Urias (NT). (1) A HITTITE officer in DAVID's army who was the husband of BATHSHEBA (2 Sam. 11:3 – 26; 12:9 – 10, 15; 1 Ki. 15:5); he was included in the elite corps called "the Thirty" (2 Sam. 23:39; 1 Chr. 11:41). Some scholars have suggested that his name is HURRIAN (in which case the form reflects the Hittite *-ia* ending rather than the divine name *Yah*), but it seems more likely that he accepted Israelite citizenship and then adopted a Hebrew name to indicate that he was a worshiper of Yahweh. David, in order to cover his adulterous connection with Bathsheba, recalled Uriah from war in order that the latter might visit his wife, but he refused to do so, even though the king tried to make him drunk. When David failed to make this device effective, he gave Uriah a sealed dispatch to JOAB, the commander of the army, requesting that Uriah be placed in a dangerous position and that support be withdrawn. Joab complied and Uriah was killed in battle. Upon his death, David married Bathsheba. The child conceived in adultery was born, but did not survive. Uriah is mentioned in Matthew's GENEALOGY OF JESUS CHRIST (Matt. 1:6).

(2) A priest contemporary with the prophet ISAIAH; Uriah and a certain Zechariah son of Jeberekiah were chosen "as reliable witnesses" of the prophecy concerning MAHER-SHALAL-HASH-BAZ (Isa. 8:2). He is probably the same Uriah who, at the request of King AHAZ, built a replica of an altar the king had seen in DAMASCUS; this "large new altar" replaced the original bronze altar, and the latter was subsequently used by the king "for seeking guidance" (2 Ki. 16:10 – 16; for a discussion of

Ahaz's possible motive, see M. Cogan and H. Tadmor, *II Kings*, AB 11 [1988]; 192 – 93). The fact that Uriah was given this responsibility suggests that he was the high priest, but his name is missing from the list in 1 Chr. 6:1 – 15.

(3) Son of Shemaiah; he was a prophet from KIRJATH JEARIM who protested the policies of the king and was sentenced to death. Uriah escaped to Egypt but was captured, brought back to Jerusalem, and executed (Jer. 26:20 – 23).

(4) Father of MEREMOTH, who was an important postexilic priest (Ezra 8:33; Neh. 3:4, 21; 1 Esd. 8:62 [KJV, "Iri"]).

(5) One of the prominent men (not identified as priests) who stood near EZRA when the law was read at the great assembly (Neh. 8:4).

<div align="right">F. E. YOUNG</div>

Urias yoo-ri'uhs. KJV NT form of URIAH.

Uriel yoor'ee-uhl (אוּרִיאֵל *H248,* "God is [my] light" [cf. URIAH]). (1) Son (or descendant) of Tahath and descendant of LEVI through KOHATH (1 Chr. 6:24; his name is omitted in v. 37). During the reign of DAVID, Uriel was one of the Levite leaders who helped to bring the ARK OF THE COVENANT from the house of OBED-EDOM to Jerusalem (15:5, 11).

(2) A man of GIBEAH whose daughter Micaiah (see MAACAH #9) was the wife of REHOBOAM and the mother of ABIJAH, kings of Judah (2 Chr. 13:2).

(3) One of the four angels mentioned in *1 En.* 9.1. The others are Michael (see MICHAEL THE ARCHANGEL), GABRIEL, and RAPHAEL. Uriel appears in a number of places in *1 Enoch*. Uriel was sent to tell NOAH that the earth would be destroyed by a deluge (10.1). He described the angels who had led men into false worship (19.1) and was assigned to watch over the world and TARTARUS (20.2). He prophesied to ENOCH that the fallen angels (stars) would be bound and punished for 10,000 years (21.5 – 6) and that those who said unseemly things about the Lord would be punished in "the accursed valley" (27.2). He instructed Enoch in the names of the stars, as well as their positions and movements according to their months (33.4), and told him about the courses of the heavenly luminaries, their relations to each other, and how they regulate the time and condition of the world (72.1); he discussed the lunar year (74.2) and the movements of the moon (75.3 – 4; 78.10; 79.6; 80.1). Uriel is mentioned also in 2 Esdras (2 Esd. 4:1, 36 [KJV; NRSV, J EREMIEL]; 5:20; 10:28). He rebuked Esdras for questioning the ways of God by propounding questions that have no answers. In later literature, Uriel appears as the angel who helped to bring Adam and Abel into Paradise, and as the angel who wrestled with Jacob. (See further *DDD,* 885 – 86.)

<div align="right">F. E. YOUNG</div>

Urijah yoo-ri'juh. KJV alternate form of URIAH.

Urim and Thummim yoor'im, thum'im (אוּרִים [sg. אוּר *H242]* and תֻּמִּים *H9460* [sg. uncertain], traditionally understood to mean "lights and perfections," but the derivation of both terms is debated). These words are usually mentioned together as a phrase (Exod. 28:30; Lev. 8:8; Deut. 33:8 [in reverse order]; 1 Sam. 14:41 [NRSV and other versions, following LXX]; Ezra 2:63 = Neh. 7:65 = 1 Esd. 5:40), but Urim occurs alone twice (Num. 27:21; 1 Sam. 28:6). Since the definite article is used in the Hebrew text (except for Ezra 2:63 = Neh. 7:65; in Deut. 33:8 the words occur with a possessive pronoun), it is clear they were not strictly proper names. The varying renderings of the

ancient versions show that no valid tradition of their meaning had survived to their time. Hence it is pointless to record the various guesses of their meaning, both ancient and modern.

I. Their use. The high priest wore the BREAST-PIECE of judgment on the front of the EPHOD; the breastpiece was so made as to form a pouch (Exod. 28:16), and in it were placed the Urim and Thummim (v. 30). From most of the passages (Num. 27:21; 1 Sam. 14:41; 28:6; Ezra 2:63 and parallels) it is clear that they were used for discovering God's will. If one accepts the SEPTUAGINT text of 1 Sam. 14:41 (as do most scholars in whole or in part), it would indicate that one or the other could be drawn out of the pouch, thus giving a yes-or-no answer; hence it is generally assumed that they were two almost identical stones, perhaps gems.

However, 1 Sam. 28:6 makes clear that a definite answer was not always obtainable, and so a number of other suggestions have been made. Some think they were two flat objects, one side of each being called Urim, possibly from)ārar H826, "to curse," the other Thummim, from tāmam H9462, "to be perfect." When tossed out of the pouch (cf. Prov. 16:33), if both showed Urim the answer was negative, if both Thummim, it was affirmative; one of each was inconclusive. Others see in the plural forms an indication of a larger number of objects, possibly bearing the letters of the alphabet. It is also possible that SAUL, in the incident recorded in 1 Sam. 28:6, may have asked a series of questions (cf. 23:10 – 12) to which he received mutually contradictory answers.

The foregoing is based on the supposition that the English versions are correct in their rendering of Exod. 28:30, namely, that the Urim and Thummim were placed in the breastpiece of judgment. The SEPTUAGINT, however, renders the clause in question, "And you shall put upon the oracle of judgment the Urim and Thummim" (*kai epithāseis epi to logeion tēs kriseōs ten dēlōsin kai tēn alētheian* [lit., "…the manifestation and the truth"]; the Gk. preposition *epi G2093*, "upon," translates Heb.)*el H448*, which has a variety of uses). This understanding of the Hebrew has been a dominant Jewish interpretation. It involves identifying Urim and Thummim with the breastpiece of judgment itself or its jewels. This view finds support in the fact that neither in Exod. 28:30 nor in ch. 39 is there any command for making the Urim and Thummim or any record of their having been made. The SAMARITAN PENTATEUCH, which obviously did not make the identification, tried to meet the argument by interpolating such a command in both passages. It would, however, be entirely consistent with what we know of the cultic background of Israel if the Urim and Thummim were precious oracle stones which had come down from the PATRIARCHS and which God was now officially incorporating into his people's worship.

Targum Pseudo-Jonathan (which though not receiving its final form until c. A.D. 650, contains much pre-Mishnaic and even pre-Christian material), followed by Rashi and Nachmanides, considered that Urim and Thummim were some material on which the Tetragrammaton (the four-consonant sacred name of God, *YHWH*) had been engraved. But JOSEPHUS, linking them with the twelve stones of the breastpiece, considered they were capable of shining out to give divine guidance (*Ant*. 3.8.9 §215). This view was further developed in the TALMUD. Many maintained that the letters of the tribal names engraved on the precious stones of the breastplate—they added the names of Abraham, Isaac, Jacob, and "the tribes of Jeshurun" to complete the alphabet—were illuminated in turn to give the divine pronouncement (the word Urim was understood as the plural of Heb.)*ôr H240*, "light"; that a miraculous light was involved has more recently been defended by C. Van Dam, *The Urim and Thummim* [1997], 224). Though a few modern Jewish scholars, such as J. H. Hertz, still favor the identification with the breastplate, most have abandoned it. The divergencies in Jewish tradition itself, and the clear indications that the ancient versions had no real tradition to guide them,

suggest that very little regard should be paid to these and similar fancy views.

One of the difficulties is uncertainty whether Urim and Thummim were used in certain cases when LOTS were drawn or cast. For example, were they used to discover ACHAN's guilt (Josh. 7:16 – 18)? It is possible but by no means certain. It certainly seems clear that they were not used for the apportioning of the tribal portions (Josh. 18:8 – 10).

II. Their disappearance. It is clear from Ezra 2:63 and parallels that the Urim and Thummim did not exist after the return from the Babylonian EXILE. While Ben Sira mentioned their past existence with respect (Sir. 45:10), he clearly considered that a man versed in the law would not feel their loss (33:3). This turning away from them is illustrated by 1 Macc. 4:46, where the ultimate disposal of the polluted stones of the altar was referred to a prophet yet to come. Among the DEAD SEA SCROLLS, only one possible veiled reference to them has been found (1QH IV, 6). Though the Talmud has theoretical discussion about the use of the Urim and Thummim, there is clearly no expectation of their restoration. The statement is made more than once that they ceased after the death of the former prophets. This temporal reference is normally understood as meaning the destruction of Solomon's temple, but in *b. Soṭah* 48b Rab Huna identifies "the former prophets" as DAVID, SAMUEL, and SOLOMON. This minority view seems supported by the OT evidence.

The evidence is not limited to the fact that the Urim and Thummim are not mentioned under the monarchy, for the OT is not given to stressing the everyday. More important is the increasing stress on prophetic oracles. Even more significant is ABIJAH's failure to mention them in 2 Chr. 13:8 – 12, when he recounted Judah's privileges; indeed, in spite of its stress on the Aaronic priesthood, Chronicles, a postexilic work, nowhere mentions them. Even in the later stages of David's reign there is no probable reference to them, where it might be expected.

The reason for their dropping out of favor may be indicated by a comparison of 1 Sam. 23:6 – 12 with 28:6. The importance of the ephod (23:6) was simply that it belonged to the high priest, and by its help David could ascertain God's will (vv. 9 – 12). Its oracular power came from the Urim and Thummim. The ephod was still with David when Saul had marched to his death at GILBOA (30:7). How then had Saul been able to consult the Urim and Thummim (28:6)? It is reasonable to assume that either because of the multiplying of sanctuaries, or possibly to satisfy Saul's demands, the original oracular objects had been counterfeited.

When this situation became plain, it reinforced certain already existing tendencies and doubts. The more spiritually minded must have increasingly come to realize that the discovery of God's will was not something as automatic as the use of the Urim and Thummim might suggest. For those living at a distance from the central sanctuary such a method was linked with much inconvenience and could even be impossible. Without the presence of ABIATHAR and the ephod, David would have been excluded from this form of divine guidance. Possibly even more influential must have been the realization that, in view of priests like ELI's sons, there could be no guarantee that the Urim and Thummim would not be manipulated; in any case they were available only to the rich and influential.

III. Their spiritual significance. Jesus Ben Sira showed real spiritual understanding when he placed knowledge of the law on the same level as, or on a higher level than, Urim and Thummim (Sir. 33:3), even though he regarded them as a divine gift (cf. 45:10). This was also the reason the rabbis were not really interested in them. For Christians, with their knowledge of the indwelling HOLY SPIRIT, this feeling will be even stronger. But if, even in the Christian dispensation, God is prepared to give believers just beginning their Christian life guidance by methods that may seem strange to those who

know his will better, how much more to Israel in the days of its spiritual childhood. It was more important that they should discover God's will than that the spiritually more advanced should approve it. Note that it is never suggested that MOSES had to make use of them. This is the most likely reason we are told so little about them.

(See further J. Buxtorf in *Thesaurus aintiquitatum sacrarum…*, ed. B. Ugolini, 34 vols. [1744 – 49], vol. 12; W. Muss-Arnolt in *Jewish Encyclopedia* [1901 – 06], 12:384 – 85; M. H. L. ELLISON

Ur-Markus oor-mahr'kuhs. Also *Ur-Marcus*. This term (German for "Proto-Mark") is the name given to a proposed early edition of Mark's gospel, which supposedly was later edited into the form of the existing text. According to some scholars in the past, Ur-Markus was the document used by Matthew and Luke in the composition of their gospels, but this theory has fallen out of favor. On the synoptic problem, see BIBLICAL CRITICISM IV.A; GOSPELS III.B.1; JESUS CHRIST IV.A.

Ur-Theodotion oor-thee'uh-doh'shuhn. See SEPTUAGINT IV.C.

Uruk yoor'uhk . See ERECH.

usury. See INTEREST.

Uta y*oo*'tuh. KJV Apoc. form of UTHAI (1 Esd. 5:30).

Uthai y*oo*'th*i* (עוּתַי *H6433*, perhaps short form of עֲתָיָה *H6970* [see ATHAIAH and note the discussion in *ABD*, 6:770]). (1) Son of Ammihud and descendant of JUDAH (1 Chr. 9:4). He was among those who settled in Jerusalem after the EXILE (v. 3).

(2) A descendant of BIGVAI, part of the company that traveled with EZRA from Babylon to Jerusalem (Ezra 8:14). On the basis of the parallel passage ("Uthai son of Istalcurus," 1 Esd. 8:40 [KJV, "Uthi the son of Istalcurus"]), some emend the Ezra text from "Uthai and Zaccur" to "Uthai son of Zaccur."

(3) Ancestor of a family of temple servants (NETHINIM) that returned from exile under ZERUBBABEL (1 Esd. 5:30 [KJV, "Uta"]). His name is missing in the parallel lists (Ezra 2:45; Neh. 7:48).

F. E. YOUNG

Uthi y*oo*'th*i*. KJV Apoc. form of UTHAI (1 Esd. 8:40).

Uz (person) uhz (עוּץ *H6419,* derivation uncertain). (1) Son of ARAM and grandson of SHEM (Gen. 10:23; 1 Chr. 1:17). See also Uz (PLACE).

(2) Son of NAHOR (ABRAHAM's brother) by MILCAH (Gen. 22:21).

(3) Son of Dishan and grandson of SEIR the HORITE (Gen. 36:28; 1 Chr. 1:42).

Uz (place) uhz (עוּץ *H6420,* derivation unknown). The "land of Uz" was apparently a district or a section of the country E of Palestine, on the border of ARABIA. It was the home of JOB (Job 1:1), and

the prophet JEREMIAH refers to it twice (Jer. 25:20; Lam. 4:21). The area may have received its name from one of the individuals who bore the same name; see Uz (PERSON).

The country is nowhere specifically located either in sacred or secular history or geography, yet biblical and traditional references provide several clues to its location: (a) it was a land of plentiful pastures (Job 1:3); (b) portions of it were suitable for plowed crops (v. 14); (c) it was near the desert (v. 19); (d) it was sufficiently extensive to have a number of kings or "sheikhs" (Jer. 25:20); (e) it was in more or less proximity to such places as TEMAN (or TEMA), BUZ, and DEDAN (Job 2:11; 32:2; Jer. 25:23); (f) it had some connection with EDOM (Lam. 4:21); (g) it was within raiding distance of the SABEANS and CHALDEANS (Job 1:15, 17); (h) according to an ancient tradition, the land of Uz lay on the borders of IDUMEA (Edom) and Arabia (see the reference to "the Syriac book" in the additional material at the end of the book of Job in the LXX, 42:17b).

The precise location of the land of Uz is uncertain, and some scholars (associating it with Uz son of ARAM, Gen. 10:23; 1 Chr. 1:17) identify it with HAURAN, an area E of the Sea of Galilee. A region farther S is more likely, however, and Wadi Sirhan, SE of Jebel ed-Druz, seems to fit the biblical description best. This area is a great shallow plain-like depression some 210 mi. long and averaging 20 mi. wide. It begins at the present inland town of Azraq, a typical oasis with many palm groves, some 50 mi. ESE of Amman, and continues in a southeasterly direction to within 10 mi. of Jauf, an important caravan junction of central Arabia. Many localities in the NW portion of Wadi Sirhan (the general area where Job prob. lived) are only 40 to 100 mi. from the eastern borders of Edom.

Much of Wadi Sirhan is a vast, flat pasture land, fairly well suited to the raising of camels, donkeys, sheep, and goats. And to this day it sustains wild life such as gazelle, oryx, ostrich, and the wild ass, though in smaller numbers than in Job's day. The chief wealth of the plain lies in its abundant water supply. From the southern slopes of Jebel ed-Druz, from the ranges of hills N and NE, and from the wadi-cut plateau stretching 100 mi. along its SW border, the water from winter and spring rains flows, either on the surface or subterraneously, into this depression. It becomes somewhat of a catchment basin for rain and run-off water; as a result, such a reservoir of underground water is built up that in many places the water table is high enough to afford an abundance of water when a thin limestone sheet has been penetrated some 18 – 24 in. below the ground surface. In other places there are wells and water holes where at times many thousands of camels and smaller cattle may be seen in the area at the same time. In some parts, however, they depend on rain water caught in cisterns and reservoirs.

In 1925, during the Druse rebellion against the French rule in Syria, many Druse chiefs with their people fled for refuge to Wadi Sirhan, where they pastured their vast herds and lived in their tents until the trouble was over. In ancient times the district lay near the caravan route from Sheba and Tema, being exposed to the people of this area and to the bands of Sabeans and Chaldeans as they came along the caravan route from the E. The residence of Job was in or near a city, at the gate of which he sat with the elders to administer justice. (See N. Glueck, *The Other Side of the Jordan* [1940], 40 – 43, 175; *NBD,* 1220.)

G. F. OWEN

Uzai *yoo'zi* (אוּזַי *H206,* derivation uncertain). Father of PALAL; the latter assisted NEHEMIAH in repairing the Jerusalem walls (Neh. 3:25).

Uzal y*oo'*zuhl *(*אוּזָל *H207,* derivation uncertain). Son of JOKTAN and descendant of SHEM, included in

the Table of NATIONS (Gen. 10:27; 1 Chr. 1:21); he was also the eponymous ancestor of a tribe or country (Ezek. 27:19; however, the text here is uncertain, and the Masoretic pointing, *měʾûzzāl*, indicates the pual ptc. of *ʾāzal H261*, "to go away," in this case perhaps referring to "spun" goods; cf. BDB, 23). The two sons of EBER, PELEG and Joktan, represent the two main divisions of the Semitic-speaking people, and Joktan is considered by some scholars to be the founder of the Arab nation.

There is an Arabic tradition that Uzal was the original name of Sanaa (Ṣanʿaʾ), the capital of Yemen in SW ARABIA in both Himyaritic and modern times (but see discussion in *ABD*, 6:775 – 76). Wrought iron is mentioned by Ezekiel as one of the exports of Uzal to TYRE, and Sanaa is still noted for its steel. On the assumption that the SEPTUAGINT of Ezekiel reflects the original reading ("wine" rather than JAVAN), others have suggested Izalla/Aṣalla (cf. TNIV, "Izal"), a city or country known for its wine, located in the hills of NE Syria, between HARAN and the TIGRIS, N of the Khabur River Valley (*Real-lexikon der Assyriologie*, 5 [1976 – 80]: 225 – 26; *NBD*, 1220; A. R. Millard in *JSS* 7 [1962]: 201 – 3; W. Zimmerli, *Ezekiel*, Hermeneia, 2 vols. [1979 – 83], 2:36 and 68n.; cf. *ANET*, 305b). Possibly the same place is mentioned by ASHURBANIPAL, the Assyrian king, when he records in his annals the capture of Azalla in the context of an expedition against the NABATEANS (*ANET*, 299a); he mentions also two nearby towns, Iarki and Hurarina, which recall two other sons of Joktan listed in Gen. 10:26 – 27, JERAH and HADORAM. (For a different approach to the passage, cf. M. Elat in *VT* 33 [1983]: 323 – 30.) See also VEDAN.

<div style="text-align: right">F. E. YOUNG</div>

Uzza uhz'uh. See UZZAH.

Uzzah uhz'uh (H6438 and H6446 [only 2 Sam. 6:7 – 8; 1 Chr. 6:29; MT 6:14], possibly short form of H6459, "Yahweh is [my] strength"; see UZZIAH). The KJV has the form Uzzah only in 2 Sam. 6:3, 6 – 8, and Uzza elsewhere; the NIV and NRSV have Uzzah in this passage as well as in 1 Chr. 6:29; 13:7 – 11 (Uzza in 2 Ki. 21:18, 26; 1 Chr. 8:7; Ezra 2:49; Neh. 7:51). The spelling in none of the English Bibles corresponds precisely with the Hebrew spellings, mainly because of inconsistency in the latter (note that, according to the Heb., 2 Sam. 6:3 and 6 would require the spelling Uzza, but vv. 7 – 8 would require Uzzah).

(1) Son of Abinadab (2 Sam. 6:3; see ABINADAB#3). Uzzah was killed while driving the oxcart which carried the ARK OF THE COVENANT to Jerusalem. The ark had been in the house of Abinadab for some time following the disaster it had occasioned in the PHILISTINE cities and in BETH SHEMESH (1 Sam. 6:19; 7:2). DAVID, wishing to add to the prestige of JERUSALEM by making it a religious center, decided to bring to this city the ark of the covenant, the sacred object of Israel's early faith. Uzzah and his brother, AHIO, were driving the cart. As they reached the threshing floor of NACON, the oxen stumbled and the ark began to slide. Uzzah reached out to steady the ark and was fatally smitten. His death was attributed to the violation of the sacred character of the ark (2 Sam. 6:7; 1 Chr. 13:10). David was greatly distressed at the incident, and immediately canceled his plans to enshrine the ark in Jerusalem. Instead, he deposited it in the home of OBED-EDOM. He named the place PEREZ UZZAH, "the breach of [*or* the breaking out against] *Uzzah.*" The ark remained in the home of Obed-Edom for three months.

(2) Son of Shimei and descendant of LEVI through MERARI (1 Chr. 6:29; MT 6:14).

(3) The owner of a garden in which MANASSEH and AMON, kings of Judah, were buried (2 Ki. 21:18, 26).

(4) Ancestor of a family of temple servants (NETHINIM) who returned from the EXILE (Ezra 2:49; Neh. 7:51; 1 Esd. 5:31 [KJV, "Azia"]).

<div align="right">F. E. YOUNG</div>

Uzzen Sheerah uhz'uhn-shee'uh-ruh (אֻזֵּן שֶׁאֱרָה *H267,* "ear [*or* corner] of Sheerah"). KJV Uzzen-sherah. A village built by SHEERAH, the daughter of EPHRAIM (1 Chr. 7:24). The town must have been near BETH HORON, but its precise location is unknown.

Uzzen-sherah uhz'uhn-shee'ruh. KJV form of UZZEN SHEERAH.

Uzzi uhz'*i* (עֻזִּי *H6454,* prob. short form of עֻזִּיָּה *H6459* or עֻזִּיאֵל *H6457,* "Yahweh/God is [my] strength"; see UZZIAH, UZZIEL). (1) Son of Bukki, descendant of LEVI through KOHATH, and ancestor of EZRA (1 Chr. 6:5 – 6, 51 [MT 5:31 – 32; 6:26]; Ezra 7:4; 1 Esd. 8:2 [KJV, "Ezias"]; 2 Esd. 1:2 [KJV, "Ozias"]).

(2) Firstborn son of TOLA and grandson of ISSACHAR; he was a family head who had a large progeny, including numerous warriors (1 Chr. 7:2 – 4).

(3) Son of BELA and grandson of BENJAMIN; a family head (1 Chr. 7:7).

(4) Son of Micri and descendant of Benjamin; his son Elah was among the first to resettle in Jerusalem (1 Chr. 9:8; cf. v. 3).

(5) Son of Bani, descendant of ASAPH, and "chief officer of the Levites in Jerusalem" at the time of EZRA; he was among "the singers responsible for the service of the house of God" (Neh. 11:22).

(6) Head of the priestly family of JEDAIAH during the days of the high priest JOIAKIM (Neh. 12:19).

(7) A priest or Levite who took part in one of the choirs at the dedication of the wall (Neh. 12:42).

<div align="right">F. E. YOUNG</div>

Uzzia uh-zi'uh (עֻזִּיָּא *H6455,* prob. short form of עֻזִּיָּה *H6459* or עֻזִּיאֵל *H6457,* "Yahweh/God is [my] strength"; see UZZIAH, UZZIEL). An "Ashterathite" (i.e., a man from the town of ASHTAROTH in BASHAN) listed among David's mighty warriors (1 Chr. 11:44).

Uzziah uh-zi'uh (עֻזִּיָּהוּ *H6460* and עֻזִּיָּה *H6459,* "Yahweh is [my] strength"; cf. UZZIEL). (1) Son of AMAZIAH and his successor as king of Judah; also known as AZARIAH (2 Chr. 26 et al.; cf. 2 Ki. 14:21 et al.). See below.

(2) Son of Uriel and descendant of LEVI through KOHATH (1 Chr. 6:24).

(3) Father of a certain Jonathan who "was in charge of the storehouses" during the reign of DAVID (1 Chr. 27:25).

(4) A postexilic priest; he was one of the descendants of Harim who agreed to put away their foreign wives in the time of EZRA (Ezra 10:21).

(5) Son of Zechariah and descendant of JUDAH; his son Athaiah was a provincial leader who settled in Jerusalem after the EXILE (Neh. 11:4).

(6) Son of Micah; he was a prominent magistrate in BETHULIA, the town where JUDITH lived (Jdt. 6:15 – 16 et al.).

The rest of this article is devoted to Uzziah king of Judah.

I. Name. The interchange between the names Uzziah and Azariah is paralleled in the case of UZZIEL (#4), who was also called AZAREL (#2), and it reflects the semantic similarity between the verbs ʿāzar H6468 ("to help, come [with valor] to the aid of") and ʿāzaz H6451 ("to be strong [valiant]," sometimes in the context of God's power to help, e.g., Ps. 68:28). The very common name Azariah is used of this king only once in Chronicles (1 Chr. 3:12) and regularly in Kings (2 Ki. 14:21; 15:1, 6 – 8, 17, 23, 27), whereas Uzziah occurs in Kings a few times (2 Ki. 15:13, 30 – 34) and consistently everywhere else (2 Chr. 26:1—27:2; Isa. 1:1; 6:1; 7:1; Hos. 1:1; Amos 1:1; Zech. 14:5). Some have thought that Azariah was his personal name and that Uzziah was a throne name he assumed when he succeeded his father Amaziah as king (cf. A. Honeyman in *JBL* 67 [1948]: 20 – 21), but the evidence for this view is ambiguous.

II. Chronology. Uzziah was probably coregent with Amaziah for many years. The information given in 2 Kings is (1) that the reign of JJEROBOAM in the northern kingdom of Israel lasted forty-one years (2 Ki. 14:23); (2) that Uzziah became king (and by implication that his father died) in the twenty-seventh year of Jeroboam (15:1); and (3) that Jeroboam's reign ended in Uzziah's thirty-eighth year (15:8). From JEHU's rebellion in 841 B.C., the date of Amaziah's death can be derived as 767; on this basis Uzziah counted his years from 792 and died in 740 (E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, 3rd ed. [1983], 113 – 16, 118 – 23; cf. V. Pavlovsky and E. Vogt in *Bib* 45 [1964]: 326 – 37). W. F. Albright, working from a terminal date of 738 for MENAHEM, dates Uzziah 783 – 742, and alters the length of some reigns to dispose of the surplus arising from simply adding up the MT figures (see *BASOR* 100 [Dec. 1945]: 18 – 22). H. Tadmor (in *Studies in the Bible*, ed. C. Rabin [1961], 232 – 71) arrives at the dates 785/4 – 733/2 B.C.

III. Achievements. During the time of Uzziah there was both expansion and consolidation of the kingdom. His reign is briefly noted in 2 Ki. 15:1 – 7 as events in Israel move to their climax; but 2 Chr. 26 reveals him as one of the most energetic and successful kings of Judah. His crowning achievement was the rebuilding of ELATH (once EZION GEBER, modern Eilat/Tell el-Kheleifeh) "after Amaziah rested with his fathers" (26:2) and when Uzziah himself was about forty years old. Although Amaziah's victory over EDOM had opened a way into the territory that the Edomites had won from JEHORAM, Uzziah had had to build up his strength after the defeat by JOASH. Specifically, he had been extending his control across the NEGEV, building forts and securing water supplies in that region. The "desert" (26:10) may refer to the Negev or to the wilderness of NE Judah (F. Cross and J. Milik, *BASOR* 142 [April 1956]: 142). No full archaeological proof connects such forts as Khirbet Gharra and Khirbet Ghazza with Uzziah, but N. Glueck (*Rivers in the Desert* [1959], 166 – 79) shows at length how the effective use of the Negev has always depended on firm government, and Elath could not have been held in isolation. It was all part of one policy for Uzziah to reduce the PHILISTINES, extend his control up to BEERSHEBA, and subdue the MEUNITES (2 Chr. 26:6 – 7; see further Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 345).

Uzziah's southward policy had three clear aims: (1) to bring Arabian trade by the sea coast; (2) to exploit the mineral wealth of the Rift Valley; (3) to develop agriculture in the SHEPHELAH W of the Judean hills, and to extend pasturing in the Negev. Much of the coastal plain too, now covered in sand, was then fertile. Uzziah established well-defended settlements on land which the Philistines probably could no longer cultivate for lack of manpower (8th-cent. remains at Tell Mor, about half a mile inland of ASHDOD, may illustrate 2 Chr. 26:6). He may have built the forts in the N wilderness,

and SE of HEBRON ("attesting the existence of desert routes," according to Y. Aharoni in *IEJ* 11 [1961]: 15 – 16).

The defenses of Jerusalem were rebuilt and developed, with new towers at two principal gates (2 Chr. 26:9). Assyrian reliefs show the new-style upperworks that gave the defenders better protection (Y. Yadin, *The Art of Warfare in Biblical Lands*, 2 vols. [1963], 2:326). Uzziah reorganized the army with a regular staff and made shields and weapons a government issue; thus he provided the military support for his expansion without disrupting agriculture by frequently calling out a militia.

IV. The Azriyau mystery. The *Annals* of TIGLATH-PILESER (745 – 723 B.C.) record that in or after his third year he assaulted the city of Azriyau of Yauda (Azriau of Iuda in *ANET*, 282b); it seems that he built a royal palace there to mark its subjection. Though the context is apparently SYRIA, many scholars have argued that Azriyau must have been Uzziah (Azariah) of Judah; this view has been strongly contested.

Some have pointed to Ya,udi (i.e., Sam,al, modern Zenjirli), whose king witnessed the triumph of Tiglath-Pileser at Damascus in 732, but Tadmor denies that Assyrian *Ya-u-da* could represent *Y)di*, or that such an insignificant state could have headed a coalition against Assyria. He suggests that after the death of Jeroboam, while Israel was rent by civil war, Uzziah inherited the leadership in the N; he dates the events noted in the *Annals* to 738, following the usual reconstruction (a date disputed by E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, 3rd ed. [1983], ch. 7). The available fragments of the *Annals* are not clear as to Azriyau's activities or his ultimate fate; but Uzziah could not have been involved except as a leader. Tadmor (in *Studies in the Bible*, 271) does not show that he could be defeated without repercussions in Judah. Further, a northern involvement would be out of keeping with Uzziah's general policy, and unlikely at the very end of his reign.

The Aramaic inscription on this marble plaque from the late Second Temple Period refers to the transferring of the bones of King Uzziah to a new tomb on the Mount of Olives.

V. Illness and closing years. Chronicles records a confrontation between King Uzziah and Azariah the high priest, who objected to the king's offering incense in the Holy Place (2 Chr. 26:16 – 20). During this unhappy scene, as Uzziah was simultaneously in an act of prayer and losing his temper with the priests, a skin disease broke out on his forehead. Humiliated and rejected, he left the temple, and for his remaining years was unable to fulfill the royal office, particularly as he was excluded from the temple. The event is dated by JOTHAM's coregency in 750/1 B.C.

JOSEPHUS (*Ant.* 9.10.4) adds that the day was a great festival (which is likely), that there was a severe earthquake (one occurred in Uzziah's time, cf. Zech. 14:5 and Targum on Isa. 28:21), and that the leprosy came by the sun shining through a crack in the temple. J. Morgenstern (in *HUCA* 12/13 [1935]: 1 – 53) takes these details as "essential and significant" to support his theory that the king had hitherto officiated at a sunrise ceremony on New Year's Day. This is hardly consistent with his basic hypothesis that, at the moment in question, the sun would in any case be shining down the central axis of the temple.

Uzziah now lived in a "separate house" (*bêt haḥopšît*, lit., "house of the freedom," 2 Ki. 15:5; 2 Chr. 26:21 [*Qere*]). The meaning of the phrase is debated. The word ḥopšî *H2930* in 1 Sam. 17:25 probably indicates exemption from certain obligations; it is used of freed slaves or prisoners, but in

Ps. 88:5 it may be rendered "set apart" (NIV) or "forsaken" (NRSV). Since *ḥopšît H2931* is an adverbial form, some have revocalized the phrase to *bêtōh ḥopšît*, "[in] his house without duties" (or, "forsaken"). Others have proposed "house of pollution," adducing the Ugaritic *bt ḫptt*, which refers to the underworld. (For further discussion see M. Cogan and H. Tadmor, *II Kings*, AB 11 [1988], 166 – 67.) In comparing Uzziah's case with NAAMAN's, it may be relevant that the latter was not an Israelite; moreover, he may have had a less serious form of the disease.

When Uzziah "rested with his fathers," he was buried "in the City of David" (2 Ki. 15:7), "in a field for burial that belonged to the kings" (2 Chr. 26:23). An inscription in Aramaic from the 1st cent. A.D. purports to identify a tomb to which his bones were at some time removed (cf. *PEQ* Supplement [Oct. 1931]: 217ff., plate; S. Yeivin, *JNES* 7 [1948]: 31 – 36).

J. LILLEY

Uzziel uhz'ee-uhl (עֻזִּיאֵל *H6457*, "God is [my] strength"; gentilic עֻזִּיאֵלִי, "Uzzielite"; cf. AZIEL, UZZIAH). (1) Son of KOHATH, grandson of LEVI, and eponymous ancestor of a Kohathite clan (Exod. 6:18, 22; Lev. 10:4; Num. 3:19; 1 Chr. 6:2, 18; 23:12, 20). One of his brothers was AMRAM, the ancestor of MOSES and AARON. One of Uzziel's children, ELZAPHAN (Elizaphan), was the leader of the Kohathite clans "responsible for the care of the ark, the table, the lampstand, the altars, the articles of the sanctuary used in ministering, the curtain, and everything related to their use" (Num. 3:30 – 31). Members of this family were among the Levites who assisted David in bringing the ARK OF THE COVENANT to Jerusalem (1 Chr. 15:10). They were also given special assignments in David's preparatory arrangements for the temple ritual (23:12, 20; 24:24). (On the difficulties presented by the genealogies of 1 Chr. 6, see *ABD*, 6:779 – 80.)

(2) Son of Ishi and descendant of SIMEON; he was one of the leaders of a band of 500 Simeonites who engaged the Amalekites (see AMALEK) at Mount SEIR in a decisive battle and came out victorious. The Simeonites extended their boundary to include that of the vanquished foe (1 Chr. 4:42 – 43).

(3) Son of Bela and grandson of BENJAMIN; a family head (1 Chr. 7:7).

(4) Son of HEMAN, the king's seer (1 Chr. 25:4). The fourteen sons of Heman, along with the sons of ASAPH and JEDUTHUN, were set apart "for the ministry of prophesying, accompanied by harps, lyres and cymbals" (v. 1). The assignment of duty was done by lot, and the eleventh lot fell to Uzziel, his sons, and his relatives (25:18, here called AZAREL).

(5) Descendant of JEDUTHUN the musician; he and his brother SHEMAIAH were among the Levites assigned to consecrate the temple in the days of HEZEKIAH (2 Chr. 29:14).

(6) Son of Harhaiah; he was a goldsmith who helped NEHEMIAH in rebuilding the walls of Jerusalem (Neh. 3:8). Some scholars emend the text to read "Uzziel, a son [*i.e.*, member] of the guild [*ḥeber*] of the goldsmiths."

vail. KJV alternate form of VEIL.

vain. This English term, meaning "worthless" or "futile," is used over 100 times in the KJV to render a variety of Hebrew and Greek terms; it occurs less frequently in modern versions (fewer than 70 times in the NRSV and about 30 times in the NIV). For example, God warns the Israelites that if they violate his COVENANT they will plant seed "in vain" (*lārîq,* "for nothing") because their "enemies will eat it" (Lev. 26:16); the Hebrew word *rîq H8198* means "emptiness." Similarly, in the third commandment not to take the Lord's name "in vain" (*laššāw*ʾ, Exod. 20:7; Deut. 5:11), the word *šāw*ʾ *H8736* means "emptiness, nothingness," and is often rendered with such adjectives as "worthless" and "false." Both the NIV and the NRSV render the Hebrew idiom in the command with the English phrase, "misuses his name" (the NJPS interprets it more specifically, "swears falsely by His name";

see TEN COMMANDMENTS). Of several Greek words rendered "vain" in the NT, the most frequent is *kenos G3031*, "empty" (e.g., 1 Cor. 15:58; Gal. 1:2). For further discussion see VANITY.

Vaizatha vi'zuh-thuh (וַיְזָתָא *H2262*, an otherwise unattested Persian name of uncertain meaning). KJV Vajezatha. One of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:9).

Vajezatha vuh-jez'uh-thuh. KJV form of VAIZATHA.

vale. See VALLEY.

Valentinian Exposition. A Gnostic tractate included in the NAG HAMMADI LIBRARY (NHC XI, 2). The author, representing one of the schools derived from (but not identical with) the teachings of VALENTINUS, claims to reveal "my mystery" regarding both creation and redemption. The Father is represented as dwelling in silence, and the Son is described as "the Mind of the All"; the latter part of the document recounts the Sophia myth. Although very fragmentary, this MS preserves (in Coptic translation) an original 2nd-cent. Valentinian work that supplements and nuances the information available to us from IRENAEUS and other Christian writers. (English trans. in *NHL,* 481 – 89.)

Valentinus val'uhn-tee'nuhs. An early and influential Christian Gnostic theologian. Probably born early in the 2nd cent. in Egypt, Valentinus first taught in ALEXANDRIA, then moved to ROME c. 135, and eventually became a candidate for the position of bishop. Having been rejected, he seceded from the church, and after some years of living in the eastern parts of the empire he returned to Rome, where he died c. 170. It appears that Valentinus sought to adapt some of the classic myths of non-Christian GNOSTICISM to the theological framework of Christian orthodoxy, and his popularity gave rise to several Valentinian schools that were severely attacked by the church fathers, especially IRENAEUS. In modern times several Valentinian works have been discovered, such as the *Gospel of Truth* (which some attribute to Valentinus himself; see TRUTH, GOSPEL OF) and the VALENTINIAN EXPOSITION. (See B. Layton, ed., *The Rediscovery of Gnosticism: Proceedings of the International Conference on Gnosticism…*, vol. 1 [1980]; K. Rudolph, *Gnosis: The Nature and History of Gnosticism* [1984], 317 – 25; *ABD*, 6:783 – 84.)

Aerial view from the southern end of the Sea of Galilee looking S along the Jordan Valley.

valley. The various Hebrew terms that may be translated "vale" or "valley" fall readily into two distinct categories, and in doing so reflect clearly the structure and surface of the Bible lands. (1) The nouns ʿēmeq H6677 (from ʿāmaq H6676, "to be deep") and biqʿâ H1326 (from bāqaʿ H1324, "to split") indicate a broad vale or lowland, sometimes more than 10 mi. in breadth. In contrast, (2) naḥal H5707 ("wadi" or "river valley") and gayʾ H1628 indicate a steep-sided valley, that is, a *gorge.* In Palestine the terms in the first category apply primarily to structural features such as the Plain of ESDRAELON and the Rift Valley of JORDAN; thus we read about "the Plain [*kikkār H3971*]— that is, the valley [*biqʿâ*] of Jericho" (Deut. 34:3) at a point where the Rift Valley is some 12 mi. wide. The words in the second category describe valley features that are the result of streams cutting down into the limestones and sandstones of Palestine in a dry climate, creating a highly dissected landscape, and in some areas producing a "badland" topography. Such gorges represent serious obstacles to movement and played a prominent part in the military operations of biblical times (cf. Josh. 8:11; 1 Sam. 17:3).

Since Israel in OT times was largely a mountain dwelling people, their view of the lowlands which surrounded them (and which were largely occupied by their enemies) was naturally colored by this fact. Consequently, the term *šĕpēlâ H9169* (almost always with the definite article), often translated "the valley" or "the vale" by the KJV (Deut. 1:7 et al.), was reserved for a specific region, lying between the mountains of Judea and the Mediterranean. It is not a valley at all, but a kind of piedmont zone of low hills lying between the coastal plain proper and the Judean hills, and separated from the latter by a narrow (true) valley. Thus the NIV renders it, "the western foothills." See PALESTINE III; SHEP-HELAH.

In the NT, the word "valley" occurs in two passages. It renders the Greek nouns *pharanx G5754*, "cleft, ravine" (Lk. 3:5, a citation from the LXX), and *cheimarros G5929*, "[winter] torrent" (Jn. 18:1).

J. H. PATERSON

Valley Gate. A city gate on the SW side of Jerusalem. The Valley Gate was equipped with towers by UZZIAH, c. 760 B.C. (2 Chr. 26:9). It was the point from which NEHEMIAH began his tour of inspection in 444 B.C. (Neh. 2:13, 15); and it figured in his work of rebuilding, being located some 500 yards N (or W?) of the DUNG GATE (3:13). If Jerusalem was at this time still confined to the hills E of the central Tyropoeon Valley, the Valley Gate would have been N of the Dung Gate, corresponding to the large, later gateway across the city from the WWATER GATE and GIHON spring, and excavated by J. W. Crowfoot in 1927 (see H. G. M. Williamson in *PEQ* 116 [1984]: 81 – 88). Otherwise it would have been W of the Dung Gate, opening out from the city onto the slopes of the SW hill (prob. named GAREB, Jer. 31:39), and specifically its E side, toward the central valley (see diagrams of three different proposals in M. Ben-Dov, *Historical Atlas of Jerusalem* [2002], 86 – 87). From the Valley Gate the two parties led by EZRA and NEHEMIAH proceeded along the walls for their dedication in 444, in opposite directions, so as to meet at the TEMPLE, on the NE side of the city (Neh. 12:31, 39). See JERUSALEM II.D.2 and III.A.

J. B. PAYNE

Vaniah vuh-n*i*’uh (וַנְיָה *H2264*, possibly from Persian *vānya*, “lovable”). One of the descendants of BANI who agreed to put away their foreign wives in the time of EZRA (Ezra 10:36; 1 Esd. 9:34 [KJV, “Anos”]). Several Hebrew MSS have “Zaniah,” and some scholars emend the name to *mibbĕnê*, “from the sons of.”

vanity. This English term, in the sense of “futility” or “worthlessness” (rather than in its common meaning of “conceit,” for which see PRIDE), occurs almost 100 times (13 times pl.) in the KJV, 45 of them in Ecclesiastes alone. The NRSV preserves the term in this book, but uses it rarely elsewhere (Ps. 89:47 et al.), while in the NIV it does not occur at all. The word is most familiar in the saying, “Vanity of vanities; all is vanity” (Eccl. 1:2 et al. KJV; NIV, “Utterly meaningless! Everything is meaningless!”; NJPS, “Utter futility! All is futile!”). Here and in most other instances, “vanity” translates the Hebrew noun *hebel H2039*, which in some passages is best rendered “breath,” probably its original meaning (note that it parallels *rûaḥ H8120*, “wind,” in Isa. 57:13, and ṣēl *H7498*, “shadow,” in Ps. 62:9). It is always used with its figurative connotation of that which is weak, ephemeral, transitory.

The KJV uses “vanity” also as the rendering of other words, such as *šāwᵓ H8736*, meaning “emptiness, nothingness” (Job 7:3 et al.; cf. the similar Gk. term *mataiotēs G3470*, Rom. 8:20 et al.), but also “falsehood” (e.g., Job 31:5, parallel to *mirmâ H5327*). Another Hebrew noun, *ᵓāwen H224*, has a similarly broad range of meanings, including “trouble, disaster” (Prov. 22:8). These various terms can refer to that which appears to have meaning, substance, or value, but which turns out to possess none of these elements, and so it is false or deceitful. Those who follow after such things are not only deceived but wicked. Not surprisingly, idols are referred to repeatedly as “vanities” (NIV, “worthless idols,” Deut. 32:21; 1 Ki. 16:13; et al.; cf. Gk. *mataios G3469*, “empty [thing],” used in the pl. in Acts 14:15). See IDOLATRY; VAIN.

Some of the things designated as vanity (in addition to those mentioned above) include: (a) the thoughts and words of the godless (Job 15:35; Pss. 10:7; 144:8); (b) leaving the fruit of one’s toil to another (Eccl. 2:19, 21); (c) human fate (2:15; 3:19); (d) life (9:9; 11:10); (e) the message of false prophets (Ezek. 13:6 – 9 et al.); (f) nations and rulers (Isa. 40:17, 23); (g) pleasure (Eccl. 2:1); (h) wealth (5:10 et al.; cf. Prov. 13:11; 21:6); (i) everyone and everything (Pss. 39:11; 62:9; Eccl. 1:1; 12:8).

The progress of meaning, therefore, seems to be this: empty, useless, deceitful, wicked. In line with its purpose to reveal the truth that is ultimate and lasting, the Scriptures warn against that which gives the appearance of reality and value, but which proves in fact not to have any real worth. Since people are being led astray by such deceits, the Bible discloses and denounces them.

E. L. ACKLEY

Vashni vash’n*i* (וַשְׁנִי *H2266* [not in NIV]). Firstborn son of SAMUEL, according to the MT, followed by KJV (1 Chr. 6:28 [MT 6:13]). However, since 1 Sam. 8:2 says, “The name of his firstborn was Joel and the name of his second was Abijah” (*wayĕhî šem-bšnô habbĕkôr yôᵓēl wēšem mišnēhû ăbîyâ*), most scholars believe that the Chronicles passage has suffered textual corruption (due to the same ending of the names “Samuel” and “Joel”). Accordingly, they emend the verse in Chronicles by inserting *yôᵓēl* and changing *wašnî* to *wĕhaššēnî*: “And the sons of Samuel: Joel the firstborn and the second Abijah” (*ûbĕnê šĕmûᵓēl yôᵓēl habbĕkôr wĕhaššēnî ᵓ ăbiyyâ*, for which there is support from some ancient versions; cf. NIV and NRSV).

Vashti vash'ti ([Hebrew] *H2267,* possibly from Persian *vahišta,* "the best," or from Avestan *vas,* "to desire," thus "desired one"; see H. S. Gehman in *JBL* 43 [1924]: 322). Queen of Persia and wife of Ahasuerus (XERXES I) who refused to exhibit her beauty to his lords on the seventh day of a feast (Esth. 1:9 – 19; 2:1, 4, 17). The king banished her and made an edict that each man should be lord over his own house (1:22). Her deposition led to the selection of ESTHER as the new queen. HERODOTUS *(Hist.* 7.61; 9.108 – 12) says Xerxes' queen was Amestris and mentions no other wives, leading some scholars to question the reliability of the biblical account. Others believe that Amestris and Vashti are the same woman and that either (1) the names are variant forms (W. H. Shea in *AUSS* 14 [1976]: 227 – 46, esp. 236 – 37) or (2) the use of the name Vashti is a literary device calling attention to the woman's beauty. Perhaps more likely is the view that Xerxes had several wives and that Herodotus is interested only "in the royal wives who bore successors to the throne" (K. H. Jobes, *Esther,* NIVAC [1999], 67; see also R. L. Hubbard, Jr., in *ZAW* 119 [2007]: 259 – 71, who argues that the evidence from Herodotus is of little value but that possibly Amestris is the same as Esther).

A. K. HELMBOLD

vassal. See TREATY.

vat. See WINE IV.

Vaticanus. See CODEX VATICANUS.

vau, vav. See WAW.

Vedan vee'duhn ([Hebrew] *H1968* [not in NIV]). In EZEKIEL's lament over TYRE, the NRSV reads, "Vedan and Javan from Uzal entered into trade for your wares" (Ezek. 27:19; similarly NJPS). If this understanding of the Hebrew text is correct, identification may be made with *Waddan* (also called al-ʾ Abwaʾ), a place between Mecca and Medina, involved in Muhammad's first expedition. The name JAVAN normally refers to the Ionians (and thus the NIV has "Greeks"), but because of the context some have thought there was a Javan in ARABIA or that the reference is to a Greek settlement in that area (perhaps distinguished from the usual Javan by the qualification "from Uzal"; cf. KD, *Ezekiel*, 1:396). The phrase "from Uzal" is problematic (see UZAL); if it refers to a place, its location is uncertain, though most scholars look for it somewhere in Arabia.

The Hebrew form *wĕdān* has traditionally been understood to mean "and Dan" (thus NIV, "Danites"; cf. Vulg. and KJV), but the pairing of Danites with either Greeks or Arabians does not yield good sense; moreover, no other name in the whole passage includes the conjunction *waw,* "and." The matter is complicated by the SEPTUAGINT, which omits the first word of the verse and then has Greek *oinon,* "wine," instead of "Javan" (evidently reading Heb. *yayin* instead of *yāwān,* though it is impossible to determine which of the two words was in the translator's Heb. MS). This Greek reading is reflected in the RSV, "and wine from Uzal they exchanged for your wares" (similarly TNIV; for a proposal that follows the LXX even more closely, see W. Zimmerli, *Ezekiel*, Hermeneia [1979 – 83], 2:49).

vegetables. Modern English versions use this word to translate Hebrew *yārāq H3763*, which occurs

three times (Deut. 11:10; 1 Ki. 21:2; Prov. 15:17 [KJV, "herbs"]), as well as two terms that appear to be variant plural forms of *zera* (*H2446*, "seed" (*zērō(îm H2447*, Dan. 1:12; *zēr(ōnîm H2448*, v. 16). In addition, the Greek noun *lachanon G3303*, "garden plant, herb," is properly rendered "vegetable" in at least one NT passage (Rom. 14:2).

Vegetables are otherwise referred to in various other passages. When the children of Israel left Egypt, one of the first thing they did was to lust after "cucumbers, melons, leeks, onions and garlic" (Num 11:5). Those who are forced to live a nomadic life cannot grow their vegetables. ABRAHAM, ISAAC, and JACOB were herdsmen, always moving on to new pastures. Their food was not fresh vegetables and salads—nor is it so with the BEDOUINS today. Jacob is said to have made "some lentil stew" (Gen. 25:34); did his father grow lentils or were they obtained in exchange for beasts? Maybe the *Lens esculenta* was found growing wild. Herdsmen would look for grazing where this vetch was to be found, because the plant is known as a milk stimulant. See FLORA and separate articles for individual vegetables.

W. E. SHEWELL-COOPER

veil. KJV usually *vail*. In the OT several Hebrew words are used with reference to a head or face covering (Gen. 24:65 et al.; Exod. 34:33 – 35 [LXX, *kalymma G2820*, used by Paul in the corresponding passage, 2 Cor. 3:13 – 16]; Cant. 4:1 et al.; Isa. 3:19 et al.). The KJV uses the English word also to render Hebrew *pārōket H7267*, a technical term applied only to the inner CURTAIN that divided the Holy Place from the Most Holy Place in the TABERNACLE (in LXX and NT, Gk. *katapetasma G2925*). It was a symbol of God's unapproachability.

This curtain was made of blue, purple, scarlet, and fine twisted linen embroidered with figures of CHERUBIM (Exod. 26:31 – 37; 36:35). JOSEPHUS said that the mixtures of colors of the veil had a mystical interpretation (*War* 5.5.2). It was hung with golden hooks upon four pillars of ACACIA wood overlaid with gold which were set in sockets or bases of silver. It is likely that the curtain was quite thick to correspond with its great size. Behind the veil was placed the ARK OF THE COVENANT with the MERCY SEAT resting on it. It was sometimes called "the veil of the screen" (Exod. 39:34 RSV; NIV, "the shielding curtain") to distinguish it from the screen hung at the entrance to the tabernacle. Only the high priest was permitted to enter behind the veil, and that only one day each year—the Day of Atonement (Lev. 16; Num. 18:7; Heb. 9:7). Instructions were given for taking down the veil when the tabernacle was to be moved (Num. 4:5). Mention is made only once of the veil in Solomon's TEMPLE (2 Chr. 3:14).

The veil of the second temple is referred to in 1 Macc. 1:22 as part of ANTIOCHUS's desecration of the sanctuary. Josephus records that when POMPEY conquered Jerusalem and entered the temple (63 B.C.), the place was empty and the secret shrine contained nothing (*War* 1.7.4; *Ant.* 14.4.4).

During the CRUCIFIXION of Jesus (Lk. 23:45), or at the moment of his death (Matt. 27:51; Mk. 15:38), and at the time the priests were busy with the evening sacrifice, the veil of the temple was torn in two, from top to bottom, exposing the Holy of Holies and symbolizing that Jesus, as the High Priest who could enter the Most Holy Place (Heb. 6:19 – 20; 9:11 – 12), had opened the way for all believers to enter into the presence of God through his flesh, symbolized by the veil (10:19 – 20).

F. B. HUEY, JR.

vengeance. Punishment inflicted in retaliation of injury or offense. In the Bible (Heb. *nĕqāmâ H5935*; Gk. *ekdikēsis G1689*), different aspects may be discerned through context or parallelism. (1) WRATH as the motivating force in vengeance is prominent in some cases (Prov. 6:34; Isa. 59:17; 63:4;

Nah. 1:2; Sir. 5:7; 12:6; Rom. 3:5); human wrath may take the form of malice (Lev. 19:18; 1 Sam. 25:26; Lam. 3:60; Ezek. 25:12, 15). (2) The idea of punishment for sin or injury appears often (Lev. 26:25; Ps. 99:8; Lk. 21:22); this gradually shades over into the concept of recompense or retaliation (Gen. 4:15; Isa. 34:8; Jer. 50:15; Sir. 35:18). (3) The justice of God or the faithfulness of his servants is vindicated by the punishment of enemies (Jdg. 11:36; Ps. 94:1 – 2; 2 Thess. 1:8); sometimes an individual appeals to God for divine vengeance (Ps. 58:10; Jer. 11:20; 15:15; 20:12).

In the majority of cases God himself is the author of vengeance, whether directly (Deut. 32:35; Ps. 94:1 – 2; Isa. 59:17 – 18; Jer. 46:10; Jdt. 8:27; 16:17; Rom. 12:19; Heb. 10:30), through his commands to his people (Num. 31:3; Josh. 22:23; Jer. 50:15; Jdt. 9:2), or through other means (Wisd. 11:15; Sir. 39:28). Of the half dozen passages where vengeance arises from human beings, one (Prov. 6:34) is an observation of a natural tendency, one (1 Sam. 25:26) is a case where David was restrained from taking vengeance, one (Lev. 19:18) is a command not to do so (cf. Sir. 28:1), and three (Lam. 3:60; Ezek. 25:12, 15) are examples of vengeance against Judah on the part of her enemies (cf. Jdt. 6:5; 1 Macc. 7:9). Therefore the teaching of Rom. 12:19, "Do not take revenge, my friends, but leave room for God's wrath" (cf. Deut. 32:35; Heb. 10:30), is amply supported throughout Scripture. There are perhaps a few cases where the author of vengeance is not clear (Gen. 4:15; Wisd. 1:8; Sir. 7:17). Judas Maccabee took vengeance on those of his own nation who had deserted or rebelled against him (1 Macc. 7:24). The lex talionis (Exod. 21:23 – 25; Lev. 24:19 – 20; Deut. 19:21) was not for the individual to take into his own hands; it was a part of judicial procedure and operated under divine sanction. See also AVENGER OF BLOOD.

In two instances, Acts 28:4 and Jude 7, the KJV uses the rendering "vengeance" for Greek *dikē G1472* ("right, justice," etc.). In the latter passage this word is more appropriately translated "punishment," whereas in Acts the concept is personified as a goddess: when the people of MALTA saw that a snake had bitten PAUL, they commented, "This man must be a murderer; for though he escaped from the sea, Justice has not allowed him to live."

venison. See GAME.

vermilion A bright red pigment obtained from various sources, used in paints (Heb. *šāšar H9266*; NIV, "red"). Formerly derived from the *kermes* insect, it is derived also from cinnabar (also called red mercuric sulphide). Cinnabar is usually found in massive, granular, or earthy form of a bright red hue. It is also derived from hematite, an ore of iron (called also red ocher). It was used in the time of JEREMIAH by the wealthy classes to paint the walls of their houses. The king was condemned by the prophet for being more concerned with adorning his palace than with justice (Jer. 22:14). In an allegory related by EZEKIEL, Oholibah, a harlot representing Jerusalem, "saw men figures carved on the wall, images of the Chaldeans portrayed in vermilion" (Ezek. 23:14 NRSV), which suggests that this pigment was used also in mural decorations. It was used also to paint idols that had been carved out by a carpenter (Wisd. 13:14 KJV; Gk. *miltos*, "red chalk" or "red ocher"). The Greeks, as well as the Romans, used it to make pottery. Several African tribes covered their bodies with it and some used it as war paint (Herodotus, *Hist.* 4.191, 194; 7.69).

versions of the Bible, ancient. The earliest and most important translation of the Hebrew OT was into the GREEK LANGUAGE and is known as the SEPTUAGINT, although this imprecise name is often used

to cover a variety of Greek versions. Also of great value for biblical studies are various translations into ARAMAIC known as the TARGUMS (or *Targumim*). The OT of the Syriac Peshitta and of the Latin Vulgate are also direct translations from the Hebrew text, but such OT versions as the Coptic, Old Latin, and Armenian are *secondary* translations made from the Greek Septuagint. Because of the special significance of the Septuagint and the Targums, separate articles are devoted to these OT versions. The present entry covers the rest of the versions, with emphasis on the NT.

1. Introduction
2. The Latin versions
    1. Old Latin
    2. Vulgate
3. The Syriac versions
    1. Diatessaron
    2. Old Syriac

    5. Slavonic
    6. Arabic
    7. Persian
    8. Frankish
    9. Sogdian J. Nubian

I. Introduction. The origins of the earliest OT translations were closely tied to the needs of the Jewish people. Their adoption of the Aramaic language at the time of the EXILE led to the use of oral translations of the Scriptures into that language in the SYNAGOGUES, and it was only a matter of time before that oral tradition was put into writing. Similarly, the presence of a very large Jewish presence in Hellenistic ALEXANDRIA—and elsewhere in the DIASPORA—necessitated the translation of the Torah into Greek. The production of NT versions, however, is to be explained differently.

When the first Christian missionaries began to carry the gospel message beyond the bounds of Judea and Samaria, the Greek language was known and spoken almost everywhere they went throughout the ROMAN EMPIRE. Even Latin, the official language of the Roman conquerors, was less the common language of the empire than was Greek. As a result, many people of the lands around the Mediterranean were bilingual or even trilingual, speaking their own language as well as Greek and

often Latin. To many, of course, either Greek or Latin was their native tongue; but in many areas their own language was neither of these. Therefore, although a missionary could have preached in Greek in many areas, in order to be lastingly effective the gospel needed to be translated into the language which the people used in their homes and in intimate conversation. An indication of this fact is seen in PAUL's experience at LYSTRA (Acts 14:8 – 18): even though the people evidently understood the apostle's Greek, when they themselves wanted to speak of religious matters they used their own Lycaonian speech (see LYCAONIA).

Thus the ancient versions of the NT were missionary in origin and purpose. They were produced so that the people to whom the Christian message was being taken could read it in their native tongue rather than in a language which they may have known, if at all, only as a means of communication in the context of trade and commerce.

These translations differed in quality and accuracy. At times they reflect interesting interpretations of a Greek word or phrase. One of their most important uses today, however, is the contribution they make in the field of NT textual criticism by aiding in the reconstruction of the original text of the Greek NT. See TEXT AND MANUSCRIPTS (NT) III.B. In this respect, it is not the wording of the version itself which is important, but rather the information the version gives concerning the wording of the Greek text from which the version is derived. For example, versions are generally reliable in reflecting the presence or absence of a phrase or passage in the underlying Greek, such as the addition or omission of *en tō phanerō*, "openly," at the end of Matt. 6:4 (included in the Old Latin and most Syriac versions [cf. KJV], but absent in the Vulgate and Coptic versions).

At the same time, there are limitations in the use that can be made of the versions in determining the Greek text from which they were translated. First, some variants in the Greek text cannot be or would not ordinarily be reflected in certain versions. For example, many differences in word order found among Greek MSS cannot be reproduced in languages whose meaning is largely dependent upon a fixed word order, as is English. Again, Latin has no definite article and therefore does not ordinarily reflect the presence or absence of that feature in Greek. Some languages might translate the Greek aorist and perfect tenses, or the aorist and the imperfect, without distinction. Differences of orthography of Greek words would not commonly be reflected in other languages. (For more details on such linguistic differences, see the respective sections in B. M. Metzger, *The Early Versions of the New Testament: Their Origin, Transmission, and Limitations* [1977].)

Second, in no case is the original MS of an ancient version extant, but only copies more or less remote from the original, just as is the case of the Greek MSS. This means that the version itself must be submitted to text-critical study for the purpose of determining as nearly as possible its original wording before it can be used to determine the Greek from which it was translated. This process is further complicated when the version has been later revised. Even if there was no official revision, individual MSS of the version may have been compared with other Greek MSS and corrected on that basis.

Third, it must be determined whether the version was translated directly from Greek or whether it is a *secondary* version, that is, one translated from another version.

Fourth, the usefulness of a version in determining the underlying Greek text will be affected by the extent of the translator's knowledge both of Greek and of the language of his version. For example, B. M. Metzger and B. D. Ehrman (*The Text of the New Testament: Its Transmission, Corruption, and Restoration*, 4th ed. [2005], 95 n. 76) quote a complaint of St. AUGUSTINE concerning translators into Latin, that "no sooner did anyone gain possession of a Greek manuscript, and imagine himself to have any facility in both languages (however slight that might be), than he

made bold to translate it" (*Doctr. chr.* 2.11 [16]). In addition, care must be taken not to mistake the liberties of interpretation or paraphrase by the translator for indications of textual differences in the underlying Greek.

Finally, a version that is in the best literary form of its language will generally be less helpful to the textual critic than one that is literal and unidiom-atic, since the better the style of a version the more likely it is to fail to reflect the very differences which form the basis for many Greek textual variants.

Despite these limitations, the ancient versions of the NT have much to contribute to biblical studies. Not only do they provide, by their very wording, a certain amount of interpretation and commentary upon the Greek text together with some indication of the time and location in which these interpretations were known, but they are also of significance in the determination of the original form of the Greek text. Yet to a large degree the use of the versions in textual criticism has been neglected in the past. To some extent this neglect has been due to a failure to recognize the contribution which the versions could make, as is reflected in Bishop Walton's comment that the use of ancient translations to correct the Greek text would be like using a clock to correct the sun (*Biblia Sacra Polyglotta* [1655], referred to by B. M. Metzger in *New Testament Manuscript Studies: The Materials and the Making of a Critical Apparatus*, ed. M. M. Parvis and A. P. Wikgren [1950], 25).

Even when text-critical scholars recognize the importance of the evidence of the versions, they must still either learn the language of each version they wish to use, and learn it thoroughly enough to use it accurately, or else depend upon the work of someone who does know the language. Rare indeed is the contemporary scholar who has been willing to expend the time and effort to learn most of the languages of the significant ancient versions of the NT (but see the work of Arthur Vööbus, *Early Versions of the New Testament: Manuscript Studies* [1954]). This limitation, together with the lack of generally available full collations of the versions in a form which the Greek student can easily use, constitutes a serious obstacle to their adequate use in cases where they would be an important or even crucial factor.

It is worth noting that the very existence of ancient versions of the NT is unusual. Prior to the Christian era, literary works were rarely translated into another language; and in the few instances in which it was done, the resulting translation was generally too free a rendering to have appreciable value in determining the text of the original. Thus when the OT PENTATEUCH was translated into Greek in the 3rd cent. B.C., it stood virtually alone as a version which, on the whole, adequately reflected the sense of the Hebrew original.

II. The Latin versions

A. Old Latin. The origin of the Latin Bible is obscure. Greek continued to be used widely throughout the Mediterranean world, especially in the centers of trade and culture, even after NT times. In writing to the church in ROME, not only Paul but also IGNATIUS (beginning of the 2nd cent.) used Greek. Vööbus states that not until nearly the middle of the 3rd cent. did Latin become the language of literature in Rome.

It has therefore been believed by many that the Vetus Latina or Old Latin (OL) originated in response to needs from people in other parts of the Roman empire. In the case of the OT, as mentioned earlier, the OL is a translation not of the Hebrew Bible but of the SEPTUAGINT; being a secondary version, it is thus of lesser value than the OL translation of the NT (made directly from the Greek). Some scholars, claiming to detect a knowledge of Hebrew (and Aramaic) by the Latin

translators, have suggested that the Latin Bible originated in SYRIA. The more commonly accepted view, however, is that it was produced in N Africa, where Latin was the common and official language. Indeed, the earliest clear evidence of the use of the Latin Bible is in the writings of church fathers of N Africa, including Cyprian and perhaps TERTULLIAN.

On the other hand, Vööbus insists that Italy must not be ruled out as a possible place of its origin, either in the provinces or even in Rome itself, where there may have been a significant number of non-Greek-speaking believers at a relatively early date. (The OL translation, esp. in NT studies, is sometimes referred to as the *Itala*, and the siglum "it" is used in some critical editions of the Greek NT.) The Latin of the earliest form of the text is inelegant and at times literalistic, which some have taken to imply that the Latin Bible originated either away from centers of culture or from interlinear translations in Greek MSS; but some of these characteristics may reflect nothing more than translation by simple believers whose bilingualism was not highly literary. In summary, therefore, the place of origin of the OL remains uncertain.

The date of the OL also has not been definitely established, but it was likely during the latter part of the 2nd cent.; and not long thereafter the Latin Bible was known on both sides of the Mediterranean. It is not certain to what extent this OL is one version or a number of versions, or to what extent the text of N Africa was independent of that of Europe. There are both noteworthy agreements and noteworthy differences between these two families of MSS. Even within these two principal families, however, there are textual differences so great and so frequent that they suggest that the OL represents a number of translations, and possibly some revision. In Lk. 24:4 – 5, for example, there are some twenty-seven forms of the text in OL MSS (Metzger and Ehrman, *Text of the New Testament*, 101).

There is no single OL MS of the complete OT or NT, and most of the extant MSS are fragmentary even regarding the books they contain. Metzger (*Early Versions*, 296 – 308) lists about a hundred NT MSS, almost half of which contain the Gospels. They come from as early as the 4th cent. and as late as the 13th, thus indicating that the OL was in use to some extent long after it had officially been replaced by the Vulgate. These MSS are commonly designated by lower-case letters. Some of the more significant are the following: *a* or Codex Vercellen-sis, in the cathedral in Vercelli, Italy, dating from the 4th cent., and one of the two most important OL MSS of the Gospels; *b* or Codex Veronensis, in the cathedral of Verona, Italy, a 5th-cent. MS written in silver ink on purple parchment, containing the Gospels in the Western order of Matthew, John, Luke, Mark; *d*, which is the Latin side of the bilingual CODEX BEZAE, a 6th-cent. MS of the Gospels and Acts in the library of Cambridge University, which reflects a basically 3rd-cent. text; *gig* or Codex Gigas ("giant"), a 13th-cent. MS in the Royal Library of Stockholm whose pages measure 20 x 36 in., containing the entire Latin Bible and other works, but preserving the OL only in Acts and Revelation; *k* or Codex Bobbiensis, containing about half of Matthew and Mark, in the National Library of Turin, the most important witness to the African form of the OL; and *m*, a symbol that refers to any of several MSS of Speculum, a collection of biblical passages illustrating points of conduct (the quotations represent the African OL).

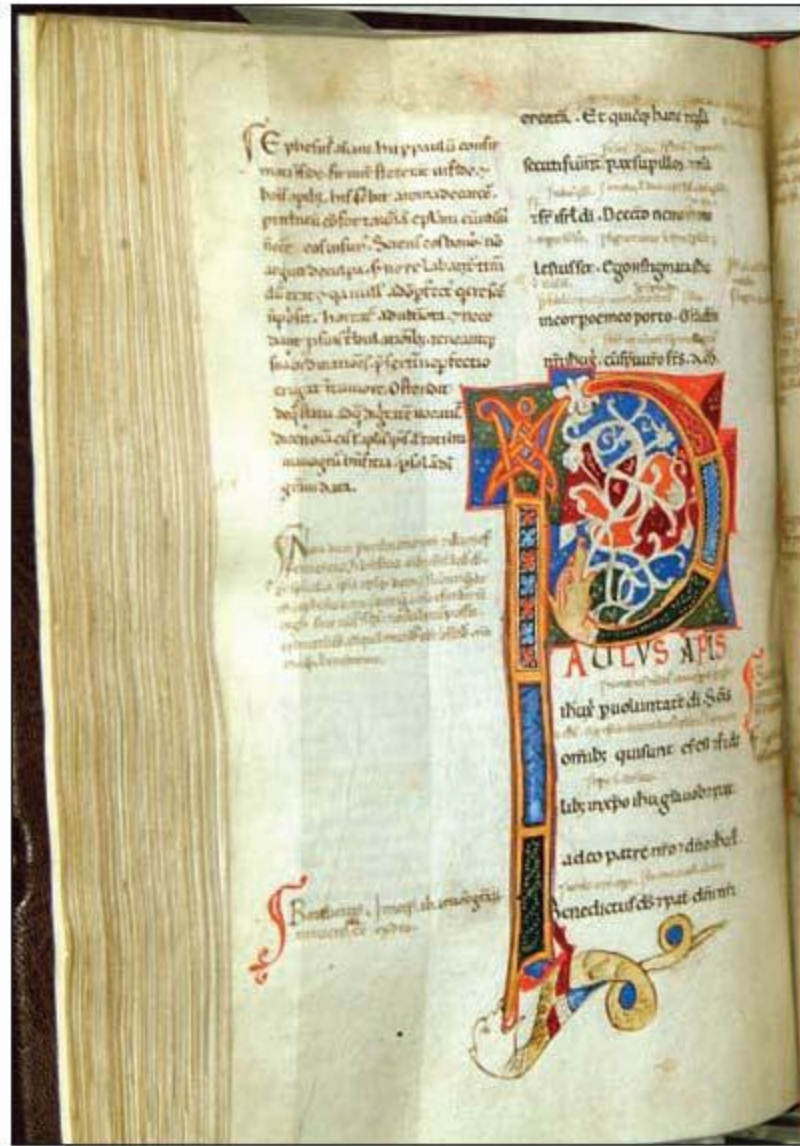
This MS of Exodus (c. A.D. 1170) contains the Latin Vulgate text with glosses or explanatory comments.

B. Vulgate. As time passed, particularly after Christianity became officially recognized early in the 4th cent., the wide range of variation within the OL MSS became increasingly intolerable. Finally, in 382 Pope Damasus asked his theological adviser, Sophronius Eusebius Hieronymus, now commonly known as St. JEROME, to undertake a revision of the Latin text, standardizing it by the "true Greek text." Jerome was doubtless the best-qualified man of his day for this task. He had studied Latin and Greek in Rome, as well as Hebrew in Palestine, and had devoted his life to biblical studies.

Jerome undertook the task as a labor of love, yet with reluctance, well realizing that his work would provoke criticism by those resenting any change in the biblical text from the form with which they were familiar. Partly, perhaps, for this reason, Jerome worked under very conservative principles which he set for himself, as he explained in his letter of preface to his translation of the Gospels: he selected what he felt was a relatively good Latin text as the basis for his work, comparing it with some old Greek MSS and revising the Latin only where he felt the meaning of the original was distorted by the Latin. Neither the Latin MSS which Jerome used nor the Greek MSS with which he compared them are known, and subsequent revisions and changes to the translation make it impossible to determine the nature of these documents with certainty, but they seem to have included some that preserved a valuable form of the text.

Questions persist concerning the extent of Jerome's revision. Qualitatively, his work seems to have been more careful at some points than at others: in some instances he changed the OL renderings, but not always (e.g., he retained three different renderings for "high priest" in three Gospels). Quantitatively, most scholars now believe that Jerome did little work beyond the Gospels and that the rest of the NT was revised by others, though included with Jerome's translation under his name.

Determination of the original form of Jerome's text, which much later became known as the Vulgate (Lat. *vulgatus* means "commonly known, in wide circulation"), is almost hopelessly complicated, not only because of the scribal errors that resulted from ordinary copying of the MSS, but also from the inevitable mixing of readings from the OL, since for some centuries the OL continued to

be known and used alongside the Vulgate. This contamination of readings led to attempts during the Middle Ages to edit the text to recover the original text of Jerome; but these efforts produced even greater confusion. As a result, the MSS of the Vulgate include a wide range of textual affinities.


Glossed Latin codex of the NT Epistles (12th cent., open to the beginning of Ephesians).

More than 8,000 MSS of the Latin Vulgate are known. Since many additional ones certainly perished, the Vulgate is thus seen to be the most frequently copied work of literature of ancient times. The MSS are commonly designated by capital letters or by the first syllable of their names (e.g., A or *am*, F or *fu*, Z or *harl*). The oldest known is Codex San-gallensis (Σ or *san*), a 5th-cent. MS of the Gospels, part of which is in the monastery of St. Gall in Switzerland. The "Golden Gospels" of the Pierpont Library in New York City is a 10th-cent. document written in gold letters on purple parchment, possibly the finest purple biblical MS in existence.

III. The Syriac versions. Syriac is a dialect of ARAMAIC (usually classed as a form of Eastern Aramaic because it shares features with Jewish Babylonian Aramaic and Mandaic). A different dialect, Jewish Palestinian Aramaic, was the common language of Palestine in the 1st Christian cent. and therefore probably the language that Jesus and his disciples ordinarily spoke. Modern Christians who are part of Aramaic-speaking Christianity (such as the Assyrian Church) often claim that what modern scholarship refers to as the Syriac NT is really the original Aramaic form of the NT. Virtually

all specialists, however, recognize that the language of the Syriac MSS is different from Palestinian Aramaic, that these MSS represent translations from an original Greek, and that they are thus secondary witnesses to the text, as are all other versions, with no claim to represent the words of Jesus as faithfully as does the Greek text. (For a general survey, see S. Brock, *The Bible in the Syrian Tradition (English Version)* [2006].)

A. Diatessaron. The earliest form in which the gospel message was known in Syriac may have been a continuous account in which all four canonical Gospels were interwoven. It is not certain whether this work, known as the *Diatessaron* ("by means of four"), was composed originally in Syriac or in Greek. The only known MS which is assumed to contain any actual text of the Diatessaron itself is a fragment in Greek which was discovered at Dura in the Middle E in 1933.

Codex Sinaiticus Syriacus (palimpsest of the Gospels, 5th cent.).

The author, or editor, of the Diatessaron was Tatian, a Syrian, native of MESOPOTAMIA, who was converted to the Christian faith c. A.D. 150 in ROME and became a student under JUSTIN MARTYR. Tatian probably composed the Diatessaron c.A.D. 170, and it soon became popular in its Syriac form. The work was still in use in SYRIA in the 5th cent., but at that time, since Tatian had accepted some heretical views later in his life, Bishop Theodoret ordered all copies of the Diatessaron destroyed and separate Gospels substituted for them.

Other than the Dura fragment, no direct remains of the Diatessaron are extant, and the work is known only through quotations from it found in the writings of Syrian church fathers, especially St. EPHRAEM'S commentary on the Diatessaron. Certain harmonies in Arabic, Persian, Latin, and other

languages, written at a much later date, are assumed to exhibit some degree of dependence upon the work of Tatian. (See further the entry DIATESSA-RON, which includes a bibliography.)

B. Old Syriac. Apart from the Diatessaron, all or most of the NT had been translated into Syriac by the end of the 2nd cent. or shortly after. Some scholars maintain that this Old Syriac (OS), as it is called, antedates even the Diatessaron, but more likely it is later. The OS is known in two MSS. The first of these was discovered in a monastery in the Nitrian Desert of Egypt in 1842 by Dr. William Cureton and edited by him in 1858. This MS, known as the Curetonian Syriac (Syr^c) and housed in the British Museum, was written in the 5th cent. It contains the Gospels but with large gaps in the text. The second MS was discovered in 1892 in the Monastery of St. Catherine on Mount Sinai by Mrs. A. S. Lewis and published in 1894. This MS, designated the Sinaitic Syriac (Syr^s), is a PALIMPSEST. It dates from the 5th cent. and likewise contains extensive portions of the Gospels.

These two OS MSS preserve a 3rd-cent. text, although they differ from each other at various points. The Sinaitic appears to represent a slightly earlier form of the text than does the Curetonian. Generally speaking, they are witnesses to the so-called Western text. The OS version outside the Gospels has not survived in MSS, but is known in fragmentary form from quotations in the writings of Syrian fathers.

C. Peshitta. This name (also *Peshitta* and *Peshitto*), meaning "stretched out" or "simple," is applied to the standard translation of the Bible used by Syriac-speaking churches. The designation, first used c. A.D. 900, perhaps indicates only that it was the "common" or "widely diffused" version (cf. the term *Vulgate*), but possibly it is intended to contrast this translation from others that were accompanied by special textual markings (e.g., the Syro-Hexapla [also called Syro-Hexaplar], a Syriac translation of ORIGEN's edition of the Greek LXX that included the hexaplaric signs and marginal readings). The origins of the Peshitta of the OT are uncertain. Parts of it, such as the Pentateuch, may have been produced by a Jewish community, and most of it seems to have been completed during the 2nd cent. A.D. (A full critical edition, *The Old Testament in Syriac, according to the Peshitta Version*, published in fascicles by Brill, is nearing completion. See further P. B. Dirksen, *An Annotated Bibliography of the Peshitta of the Old Testament* [1989]; M. P. Weitzman, *The Syriac Version of the Old Testament: An Introduction* [1999].)

The origins of the NT Peshitta have also been hotly debated. Some have thought that it was the work of Rabbula, Bishop of EDESSA (411 – 435), but his work may actually have been a transitional stage between the OS and the Peshitta. The Peshitta lacked 2 Peter, 2 – 3 John, Jude, and Revelation. That this version was in circulation well before the schism of the Syriac church in 431 is indicated by the fact that both branches of the church accept it. The Peshitta (Syr^p) remains today the Syriac version in common use (with the missing books supplied from the later Philoxenian version). It is extant in some 350 MSS, from the 5th cent. and later. Its textual affinities are closer to the later or Byzantine text than is the OS, although it has numerous "Western" readings in Acts.

D. Philoxenian. The first Syriac NT to include all the books of the canon was produced in 508 by Polycarp, "rural bishop" to Philoxenus, Bishop of Mabug in eastern Syria. The NT books not included in the Peshitta were incorporated into that version from the Philoxenian (Syr^{ph}), and it is possible that only these books of the Philoxenian version survive. This issue, however, is interwoven with the question of the nature of the Harkleian version.

E. Harkleian. Also *Harclean* and *Harklensis*. The question of the relationship between the Philoxenian and the Harkleian Syriac versions is exceedingly confused. In 616 Thomas of Harkel, who like Philoxenus was Bishop of Mabug, issued a Syriac NT. In a colophon Thomas says that he took the version of 508 and compared it with a few Greek MSS. It is much disputed, however, whether Thomas did content himself with merely adding variant readings and marginal notes on the basis of his comparison of the Syriac with his Greek MSS, or whether he revised the Philoxenian so extensively that he produced a new version. The solution to this problem is complicated by the fact that the Philoxenian as such survives in only one copy of 2 Peter, 2 – 3 John, Jude, and Revelation.

The Harkleian (Syr^h) is extant in numerous MSS, most of which are of a late date. Those who distinguish the Harkleian from the Philoxenian state that while the Philoxenian was a highly literary and idiomatic version, the Harkleian renders the Greek so literally that it violates Syriac style.

F. Palestinian. Part of the NT exists in a somewhat different dialect of Syriac that is more closely related to Jewish Palestinian Aramaic. This Palestinian Syriac version (Syr^pal), as it is called, is of uncertain date but probably originated about the 5th cent. It is unique not only in its dialect but also in the fact that it is known almost entirely in LECTIONARY form, with only fragments of the Gospels, Acts, and Epistles in continuous text. The three principal MSS of this version are lectionaries dating from the 11th and 12th centuries, with affinities to the Caesarean type of text. This version appears to have been made directly from a Greek lectionary, since the Scripture passages and even the introductory phrases of the lections are almost completely identical with those of Greek lectionaries.

IV. The Coptic versions. Greek was well known in EGYPT in the early part of the Christian era. Not only have MSS of the Greek NT from as early as the 2nd cent. been recovered from the sands of Egypt, but also countless business documents, personal letters, and other literary and nonliterary items in Greek have been preserved from the centuries before and after the time of Christ. See PAPYRUS. These documents make it clear that Greek was known by both educated and uneducated people, and in various parts of the country. At the same time, Greek was not the language of the country. Many of the people doubtless knew Greek only as a second language, if at all, and needed the Scriptures in the language that was native to them.

No later than the 2nd Christian cent., there had been developed an ALPHABET for the Coptic language that used Greek letters, supplemented, where Greek had no equivalent symbol, by additional forms taken from the older demotic script. The Coptic language had developed into six dialects by this period, with the two principal forms located in the N and in the S and intermediate dialects geographically between. These dialects differed from one another primarily in phonetics, and to a lesser degree in vocabulary and syntax. As in the case of the OL, the Coptic versions of the OT are translations of the Greek LXX, not of the Hebrew Bible (cf. M. K. H. Peters, *A Critical Edition of the Coptic (Bohairic) Pentateuch*, vols. 1 – 2 and 5 [1983 – 86]). The discussion that follows deals with the Coptic NT, but some of the information is relevant for the Coptic OT as well.

A.Sahidic. By the beginning of the 3rd cent., part of the NT had been translated into Sahidic (sometimes called Thebaic), the dialect of THEBES and S Egypt, and the complete NT was available shortly after that, apparently translated at various times by several people. The extant MSS include most of the NT, although Revelation exists only in fragments. Some papyri are included in these MSS, which date from the 4th cent. and later. The Sahidic version is generally Alexandrian in text-type, but

with some "Western" affinities.

B. Bohairic. The region of ALEXANDRIA and N Egypt, which was the cultural center of the country, seems not to have had the NT in its dialect, Bohairic, until later than the production of the Sahidic version. (A form of Bohairic is still used in the Coptic Orthodox Church.) Although about a hundred Bohairic NT MSS have been known for a long time, none was written earlier than the 9th cent., and the earliest complete MS of the Gospels was from the 12th cent. Thus some scholars argued that the Bohairic version was no older than the 7th cent. In 1958, however, a Bohairic papyrus codex of the Gospel of John from the BODMER Library was published, which its editor assigns to the 4th cent. Although its text is unusual, this document is generally regarded as strong evidence that the classic Bohairic version was produced no later than the 5th cent. Much like the Sahidic version, the Bohairic is related to the Alexandrian text-type.

C. Middle Egyptian dialects. Between the two principal Coptic dialects were spoken four others—Memphitic, Fayumic (Bashmuric), Achmimic, and sub-Achmimic. A 4th-cent. papyrus codex in Fayumic containing half of the Gospel of John is in the University of Michigan Library. In sub-Achmimic, the Gospel of John is extant in a 4th-cent. papyrus. In Achmimic, fragments of Matthew, Luke, John, James, and Jude survive, at least part of which date from the 4th or 5th cent.

V. Other versions

A. Gothic. Ulfilas, called the apostle to the Goths, was born about 310 to Christian parents who had been carried captive from their native Cappadocia to Dacia, in Europe, by invading Goths. When he was about thirty years of age he was consecrated bishop for Dacia. After some seven years he was driven out by the king of the Goths and settled in the Roman empire in what is now part of Bulgaria and Yugoslavia. Here he translated the Bible into the language of the Goths. Since he apparently translated on a very literalistic basis, his version often retains Greek word order even against Gothic idiom. Ulfilas is also credited with having created the Gothic alphabet and reducing the language to writing as a preliminary to translating the Scriptures, although this is disputed by some. At any rate, the Gothic Bible is the earliest written Gothic literature, having been completed before the death of Ulfilas about 383. The Gothic NT is extant in some six MSS, almost all fragmentary palimpsests. An exception is Codex Argenteus, in Uppsala, Sweden, which contains portions of all four Gospels written in silver and gold ink on purple vellum. All of the Gothic MSS are from the 5th and 6th centuries.

B. Armenian. There have been two principal theories of the origin of the Armenian NT. According to one view, which goes back to Armenian writers of the 5th and 6th centuries, St. Mesrop created the Armenian alphabet and translated the NT into Armenian from Greek with the help of St. Sahak. According to another 5th-cent. writer, St. Sahak translated the NT from Syriac. Both views have been espoused by modern scholars, and the question cannot be regarded as decided. The Armenian is said to be one of the most beautiful and accurate of all versions. Moreover, its more than 1,500 extant MSS rank it second only to the Latin Vulgate and the Greek. The oldest MS is dated A.D. 887. A revision that became the dominant form of the version in the 8th cent. is the basis of the Armenian text still in use.

C. Georgian. Christianity was introduced into the country of Georgia, between the Black and Caspian seas, in the 4th cent. Soon thereafter, at least by the middle of the 5th cent., the NT had been translated into the Georgian language. Tradition attributes the Georgian alphabet to the same Mesrop who is said to have developed the Armenian alphabet. Various theories have been put forth concerning the origin of the Georgian, holding that it was translated from Greek, Syriac, or Armenian. In any event, the Georgian exhibits close relationships to the Armenian. It underwent several revisions in the course of time, the principal one occurring in the 10th or 11th cent. and based on Greek MSS of the later or Byzantine text-type. There are numerous MSS of the Georgian version; three of the most important date between 897 and 995, and are believed to preserve significant elements of the Old Georgian.

D. Ethiopic. Widely divergent views of the date of the origin of the Ethiopic NT have been put forward, ranging all the way from the 2nd to the 14th cent. There is difference of opinion, too, as to whether the version was made from Greek or Syriac. Although none of the more than 100 MSS is earlier than the 13th cent., and most are even later, the NT in Ethiopic must have originated by the 6th cent., or possibly earlier. Relatively little attention has been given to this version, although careful investigation of it might prove rewarding.

A relatively recent Ethiopic MS of the Bible, dating to the 18th cent.

E. Slavonic. The Slavonic version of the NT owes its origin to two brothers, St. Cyril and St. Methodius, who died in 869 and 885 respectively. They were sons of a wealthy official in Salonica, and were thus presumably acquainted with the Slavic dialect spoken in Macedonia. Cyril was christened Constantine, taking the name Cyril only when he entered a monastery in Rome shortly before his death. There are two Slavonic alphabets, the Glagolitic and the Cyrillic. The latter is named in honor of St. Cyril, who is credited with having invented it; but it is actually unclear whether he, possibly aided by his brother, constructed one or both forms of the alphabet or revised an alphabet already in existence. On the other hand, the Glagolitic may be the work of the brothers and the Cyrillic an adaptation to Greek by one of Cyril's disciples. Cyril is said to have begun translating the Gospels about 862. The description of the work given in the biographies of the brothers suggests that this earliest translation was in the form of a lectionary. Having begun his task of translation in

Constantinople, Cyril completed it on the mission field, with the assistance of his brother in the Epistles and the OT. Extant MSS in Old Slavonic, which include an appreciable amount of Gospel lectionary material, date from the 11th cent. and later.

F. Arabic. From the 7th cent. and onward, if not earlier, numerous translations of the NT into Arabic were made. Indeed, one modern scholar has suggested that there are more versions of the Gospels in Arabic than can be welcome to scholars. They were made from Greek, Syriac, Coptic, Latin, and various mixed sources. Some MSS exhibit a text in the form of rhymed prose which is found in the Koran. The form of the text in use today, at least in the Gospels, is based on a 13th-cent. revision; it is primarily a translation from the Bohairic NT with some Greek and Syriac influence.

G. Persian. The Gospels in Persian survive in a 14th-cent. MS, which is derived from a version translated from Syriac and a later version based on Greek.

H. Frankish. Fragments of Matthew in Frankish, a Germanic language of west-central Europe, survive in one 8th-cent. MS, with Latin and Frankish on facing pages, in the library of the Benedictine monastery at Monsee.

I. Sogdian. Sogdian was the trade language of Eastern Turkestan and regions to the E between the 6th and 10th centuries. In addition to a small amount of other literary remains in Sogdian, a lectionary of the Gospels and fragments of 1 Corinthians and Galatians are extant, written in a consonantal script and translated from Syriac.

J. Nubian. Two Christian kingdoms seem to have existed in Nubia, between Ethiopia and Egypt, during the early Middle Ages. The northern kingdom received the Christian message in the 6th cent.; little is known of the southern kingdom. A fragment of an Old Nubian lectionary is extant, dating from about the 10th cent. and containing small portions from the Gospels and Epistles.

versions of the Bible, English. Published translations of the Holy Scriptures in the English language.

1. The need for versions and new versions
2. Principles of Bible translation
3. Anglo-Saxon and Middle English versions
4. Modern versions prior to 1611

I.The need for versions and new versions. Only a Bible-reading believer can be an effective Christian to the limit of his or her potential; only a Bible-reading church can be truly effective in service to God and in witnessing to the world. The ordinary person today, however, cannot read the Scriptures in the original Hebrew and Greek. These considerations require the translation of the Bible into all languages of the world, including English, and the progressive revision and improvement of translations.

The English language continues to change. Since the earliest Bible translations into English, the language has evolved so much that the versions of 600 years ago are barely intelligible to the ordinary reader today. The language is still changing, with new words and expressions coming into use and old ones becoming obsolete and, in time, unintelligible. If the Bible is to be understood and believed by present-day people it must be in a language which conveys a clear meaning to them. As long as English continues to be a living language there will be a need for new and improved translations of the Bible in English.

In addition, new MSS have been discovered, giving a truer text as a base for translation. Since the KJV was produced, there have been three great discoveries of previously unknown MSS which have greatly increased the available resources for reconstruction of a thoroughly accurate and trustworthy text of the Scriptures in the original languages, thus making possible more accurate and faithful versions. These discoveries are:(1) CODEX SINAITICUS, discovered in 1844 in the monastery of St. Catherine in the Sinai peninsula by Tisch-endorf. This Greek MS of the NT, written in the 4th cent. and containing most of the NT, proved to be of immense value for establishing the genuine text of the NT. It is generally recognized as one of the three or four most important Greek MSS of the NT. (2) The NT papyri (see PAPYRUS), consisting of fragments discovered in Egypt since 1895, have proved of great value for the scholarly study of the NT. (3) The DEAD SEA SCROLLS, discovered in caves near the Dead Sea beginning in 1947, have provided an almost complete MS of the Hebrew text of Isaiah, another scroll of Isaiah somewhat less complete, and portions of almost every book of the OT. These MSS are hundreds of years older than the oldest previously known extant MSS of the OT in Hebrew. In large part they have strongly confirmed the authenticity of the previously known Hebrew text, but at some points they have enabled scholars to determine a more accurate form of the text.

Moreover, biblical scholarship has progressively advanced, making greater accuracy possible. Present knowledge is built upon foundations laid in the past, and with the passing of time an increasing storehouse of knowledge is laid up. Scholars of the present day have at their disposal resources that were comparatively unknown two or three centuries ago. This is the case especially along two lines: (1) Textual criticism as an exact and rigorous discipline has been largely a development of the last two centuries. This discipline undertakes to establish the genuine text of a book or document, as far as possible, by the use of scholarly procedures of great precision in determining which of existing variant readings is the authentic original and therefore correct one. When the KJV and prior translations were made, textual criticism was merely in its infancy. (2) Philology or the study of languages has made great advances during the last 300 years. Not only has great progress been made in the study of Hebrew and Greek as languages, but the study of cognate languages has added to the understanding of the Scriptures. This is especially true of ANE languages that are cognate to Hebrew and have often provided a key to the meaning of rare Hebrew words. See

The need for new versions should not be exaggerated. The differences between the KJV and the most accurate modern versions are comparatively slight, and all the main teachings of the Bible are quite clear in the KJV or almost any other translation. The importance of the Bible, however, requires the best possible contemporary version for the times. As the Bible is the message of God addressed to human beings, it should be made available in the finest translations, which will most faithfully reproduce in English the thought of the original and which will be most easily grasped by the present-day reader. Providing the best possible English version will not of itself induce Christian faith, but it will remove one of the semantic obstacles to faith and thus clear the way for the Holy Spirit's work of producing repentance, faith, and commitment.

II. Principles of Bible translation. (1) The starting point is a reliable text. There are many MSS of the Scriptures in Hebrew and Greek, and there are often slight variations between these documents. In the case of the Greek NT, there are thousands of MSS of all or part of the NT, and of these no two are exactly alike. Obviously some errors have been committed in the process of copying MSS before the invention of printing. To weed these errors out is the task of textual criticism, which seeks to restore insofar as possible the genuine text of the lost original documents (called autographs). No translation can be better than the text from which it is made. It is possible to make a poor translation of a good text, and it is also possible to make a good translation of a poor text. In the latter case the "good" translation will faithfully reproduce the errors that may exist in the corrupt original text. In the case of the KJV of the N T, it is a good translation of a rather poor text, inferior to what is available to scholars of the present day. Manuscript discoveries since the KJV translators worked, and textual criticism in the hands of competent scholars, have given a text of the Greek NT greatly superior to the best that was available in 1611. See TEXT AND MANUSCRIPTS (NT).

(2) Fidelity to the meaning of the original text is important. A low degree of fidelity may arise from: (a) lack of philological and/or theological learning; (b) excessive zeal for modernizing the language of the Bible, which may lead translators to take liberties with statements of the original; and (c) theological bias. With regard to this last point, complete objectivity is impossible in any scholarly work, and it is inevitable that a translator's personal faith, theological convictions, basic assumptions, and worldview will affect his or her work as a translator. If a given word can be legitimately translated in either of two different ways, and one of these is in harmony with the language and teachings of Scripture elsewhere, while the other introduces a contradiction or conflict into the English version of the Bible, the translator who is committed to the plenary inspiration and inerrancy of the Bible and its internal consistency as an organic whole will choose the translation that is compatible with these principles; the translator who does not accept these principles may choose the rendering that is most compatible with the modern worldview, even though it involves a contradiction of other Scripture statements.

(3) Skill in the use of English is needed. Much depends on the ability of the translators, their facility in using the English language in such a way as to combine accuracy and fidelity with lucidity and forcefulness in the use of modern diction and idiom. A danger exists of going to an extreme in one direction or another. (a) Excessive literality should be avoided. A close literal translation, rather than being the most faithful, may actually be misleading to the modern reader. The KJV rendering of Matt. 20:2, "And when he had agreed with the labourers for a penny a day, he sent them into his vineyard," is certainly literal, but may mislead modern readers into supposing that these men were paid almost nothing for their work. The translator must strive to use language that will accurately convey the

precise *thought* of the original to the reader. And, of course, a translation that is too literal, even when faithful to the thought of the original, may be clumsy and unnatural English.

(b) Excessive freedom also should be avoided. Paraphrases and "expanded translations" may or may not be helpful, depending on the learning and skill of the translators and their restraint and self-discipline in their work. Excessive freedom in translation often tends to substitute general or inclusive ideas for particular or specific ones of the Bible (e.g., "church officer" instead of the specific "presbyter" or "deacon"). The greatest danger involved in excessive freedom, however, is that modern ideas that are really foreign to the Scriptures may be introduced into the translation. Excessive freedom in translation gives an entrance to all kinds of theological bias and thus militates against fidelity.

(c) A wise middle ground should be sought. The ideal translation will be neither too literal nor too free. Just where the line will be drawn between literality and freedom will depend on the purpose for which the translation is intended. No universally applicable rule of thumb can govern in a matter of this kind. To produce a translation that is neither too literal nor too free, the translation must be not only learned and skillful, but also wise. The truly great and good translations are products not only of scholarship but also of real wisdom, and they will stand the test of time when those of less merit lapse into oblivion.

III. Anglo-Saxon and Middle English versions. Anglo-Saxon, a W Germanic language, was the true parent of English, even though so different from modern English as to be unintelligible today without special study. This language in its several dialects was the speech of the people of England when Christianity reached them in the 6th cent. The Old British Church, dating from Roman times, was made up of people of the Celtic race and used the Scriptures in Latin. This church was largely eliminated or driven into the mountains of Wales by the invasions of Germanic tribes from the Continent. When Christianity reached the English (as distinguished from the earlier British), the Angles, Saxons, and Jutes were pagans with a religion similar to that of the Germans and Scandinavians. As English became Christianized, there was need for the Bible in their common language, even though the Latin Bible remained dominant throughout the Middle Ages. About A.D. 675 Caedmon composed and sang paraphrases of passages of the Bible in Anglo-Saxon. His production, however, was not really a translation of the Bible, but a song based on biblical narratives. This served for a time as a sort of makeshift Bible for the English people.

Some versions of the Psalms and Gospels appeared in Old English or Anglo-Saxon times. A bishop named Aldhelm is credited with translating the Psalter about the year 700. Bede, a learned monk, translated portions of the NT into Anglo-Saxon or Old English. King Alfred (871 – 901) provided for the translation into the common language of the Ten Commandments and portions of Exodus and Acts. He is said also to have made a new translation of some of the Psalms.

Interlinear translations into Old English appear in some Latin MSS, dating from the 9th and 10th centuries. From the same period come the Wessex Gospels in Old English. About the end of the 10th cent., an abbot named Aelfric translated portions of the OT from Genesis through Judges. The Wessex Gospels and Aelfric's translations are not completely unintelligible to the modern reader, though it is impossible to follow them closely without a special study of their language. It should be realized that these Anglo-Saxon or Old English translations of portions of Scripture were never the sole or main Bible of the church. Latin was the basic Scripture and was used almost exclusively by the clergy, while the vernacular portions had an appeal to the ordinary Christian who was ignorant of Latin.

The Norman conquest of England (A.D. 1066) marked the end of the production of Scripture translations into English for some three centuries, during which time Norman French largely supplanted English among educated people, and Latin, of course, continued to be used by the clergy. In the 14th cent. English translations of the Scriptures began to appear again, the form of the language being what is now called Middle English. These included two translations of the Psalms and one of several of the NT letters. Somewhat later came the book of Acts and part of Matthew. A modern reader who is familiar with the Bible can follow these versions with a high degree of comprehension of the meaning. Often it is only the spelling that impresses one as strange.

A significant turning point takes place with the Wycliffite versions. John Wycliffe was born about 1330 and died in 1384. He was a learned theological scholar of Oxford. A strong believer in the Bible as the Word of God and as a message addressed to every person, he felt the need of providing the Scriptures in a form that ordinary people could use. Interested in both religious and political reform in England, Wycliffe had powerful enemies who finally were able to bring him to trial for heresy. In the ecclesiastical trial that followed, Wycliffe's doctrines were condemned as heretical, and he was forced to retire from public life. He spent the remaining year and a half of his life in retirement.

Wycliffe himself was not a translator of the Bible, as far as is known. However, he promoted Bible translation, and two complete versions of the Bible were produced as a part of his movement. These were handwritten, as printing had not yet been invented. The first Wycliffite version appeared soon after 1380, and the second one some years later, after Wycliffe's death. Both were translated from the Latin version known as the VULGATE.

The first Wycliffite version is a literal rendering of the Latin. The identity of the translator(s) is unknown, but there is some evidence that a monk named Nicholas of Hereford did at least part of the work. The second Wycliffite version was made by Wycliffe's secretary, John Purvey, after Wycliffe's death. Purvey started with the first Wycliffite version and revised it completely, producing a Bible with much more natural and idiomatic English than the earlier version had. Purvey found that many existing MSS of the Latin Vulgate were corrupt, and he did considerable critical study in collected Vulgate MSS in order to obtain as pure a Latin text as possible. Purvey's version, although of necessity circulated only in MS form, had wide influence, not only immediately after Wycliffe's time and among the membership of his movement, but also among the general population of England down to the time when printing was invented and newer translations began to be published.

IV. Modern versions prior to 1611. *The Tyndale version, 1534.* William Tyndale was born about 1494. He studied at the Universities of Oxford and Cambridge. Two things prepared the way for the publication of his monumental English version of the NT: the invention of the art of printing, about 1450, and the publication of Erasmus's edition of the NT in the original Greek in 1516, with subsequent revisions. Although printing had been in existence for three quarters of a century before the publication of Tyndale's version, there were obstacles that had prevented the production of Purvey's Wycliffite version in printed form. Tyndale's was therefore the first printed edition of the Scriptures in English.

Tyndale was a student of both Greek and Hebrew. He translated the NT directly from Greek into English, unlike previous versions that had depended on the Latin Vulgate. While still a young man, Tyndale conceived the idea of making a new and better translation of the Scriptures in English, an idea that increasingly became his life's interest and passion. About 1523 he sought help and encouragement from the Bishop of London, but obtained none, and the next year he decided that it

would be virtually impossible to do what he had in mind anywhere in England. He left England for Germany in 1524, never to return. He found it necessary to move from place to place several times in order to escape interference. At one point he visited the Reformer Martin Luther at Wittenberg. In 1525 or 1526 copies of Tyndale's first English NT reached England. He published repeated editions of his NT and also worked on the translation of the OT. His OT translation was based on the original Hebrew, the Latin Vulgate, and early modern translations. More than 15,000 copies of the first six editions of Tyndale's NT were printed. Many copies were purchased by the Bishop of London with the intention of burning them. Tyndale used the money thus obtained to publish new editions and larger printings.

In 1523 Tyndale was betrayed to his enemies while living in Belgium. He was imprisoned, tried for heresy, and convicted; he was put to death by strangling (6 Oct. 1536), and his body was burned. His last words were: "Lord open the king of England's eyes." Before his death an edition of the whole Bible, based largely upon Tyndale's work but without his name, was being circulated and read in England, openly, with the permission of the king, so Tyndale's dying prayer was already being answered, though he was not aware of this at the time.

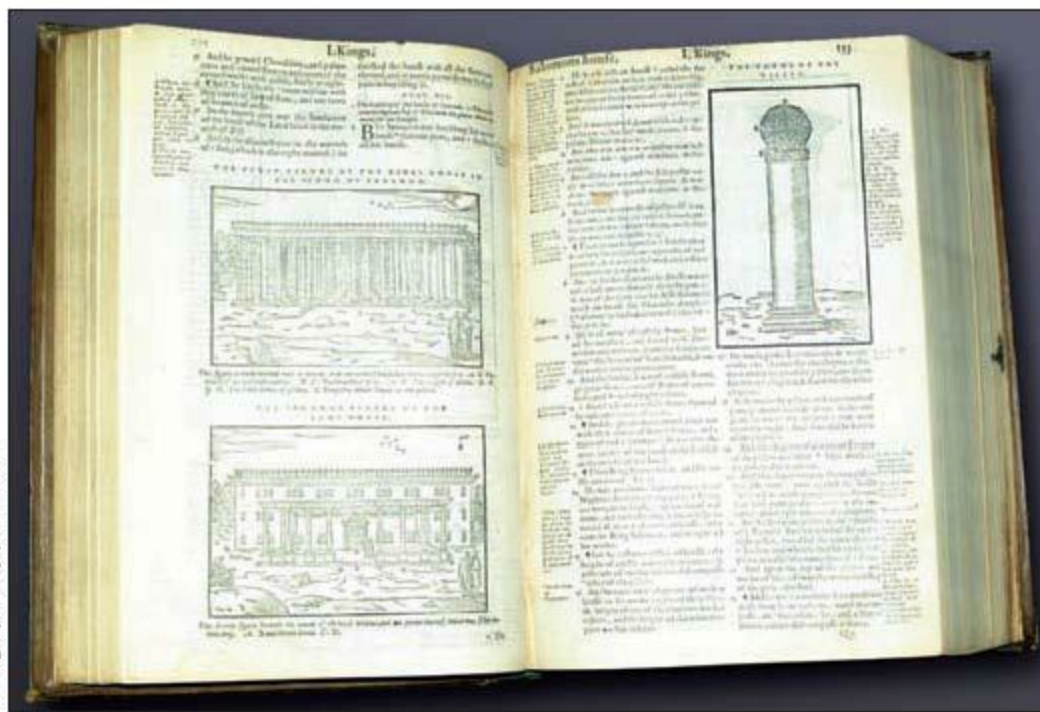
Tyndale's version is important not only because it was a pioneer effort in translating the Scriptures directly from the original languages into English, but also because of the great influence it had upon later versions. There is a fresh naturalness in Tyn-dale's style, a simplicity and directness that mark the work as a truly great achievement in literature, apart from its epoch-making religious importance. A great deal of the beautiful English style of the KJV goes back to the work of William Tyndale, so that one may rightly say that Tyndale's work lives on in the Bibles of the present day.

The Coverdale version, 1535. Born about 1488, Miles Coverdale was a few years Tyndale's senior. After being educated at Cambridge and becoming a priest, he developed a consuming passion for learning, especially in the field of biblical studies. He went to Germany in 1528. In 1535 his translation of the Bible was printed, probably in Germany. Though not officially endorsed by the English government, it was not banned. In 1538 – 39 Coverdale worked in Paris supervising the printing of another English version, the Great Bible (published 1540). He died in 1569. Unlike Tyndale, Coverdale did not attempt to translate directly from Hebrew and Greek into English. He depended largely on the Latin Vulgate, on Luther's German translation, and on Tyndale's English one. Coverdale's was the first complete English Bible to be printed. Bishop Westcott stated that Coverdale's NT is a revision of Tyndale's first edition, revised by means of Tyndale's second and also by comparison with Luther's German version. While not having the pioneering importance of Tyndale's work, Coverdale's Bible holds a noble place in the history of the English Bible.

Matthew's Bible, 1537. This translation is believed to be the work of a man named John Rogers, who came into possession of some of Tyndale's yet unpublished translations of some of the OT books. Rogers, born in or about 1500, served for a period of years as a pastor in Germany. After returning to England he was burned alive in 1555. It is believed that the name "Thomas Matthew" which appears on the title page is a pseudonym intended to veil the identity of the real translator and to prevent people from identifying the book with Tyndale and Tyndale's disciples. Part of the OT is virtually identical with Tyndale's version, but part is a new translation. It is estimated that about two-thirds of Matthew's Bible is the work of Tyndale. Matthew's version became the basis for the Bishops' Bible, the Great Bible, and the KJV.

Taverner's Bible, 1539. Richard Taverner was born about 1505. He studied at the universities of Oxford and Cambridge. On one occasion he was jailed for reading Tyndale's NT. He studied law and became a lawyer, while continuing his interest in the English Bible. Taverner had a good

knowledge of Greek. For a time he was imprisoned in the Tower of London because of his activity in Bible translation and revision. Under Queen Elizabeth I, however, he was appointed to political office. Taverner's Bible was first published in London in 1539. This version is a minor revision of Matthew's Bible. Its influence was not great, though it did have a permanent effect in introducing some good English words in place of terms of Latin derivation.
A page from the Pentateuch in Tyndale's Bible (1530).

The Great Bible, 1540. Both Coverdale's and Matthew's versions were being freely circulated and read in England, yet there existed a demand for a better version, and especially one without the marginal explanatory notes of Matthew's version, which were regarded as objectionable by some of the clergy as too strongly Protestant. Thomas Cromwell, King Henry VIII's vicegerent in matters pertaining to the Church of England, encouraged the production of the Great Bible, which was printed in Paris. The printing was interrupted by the Roman Catholic Inquisition, but later resumed and completed in England. The term "Great" comes from the size of the volume, which was the largest of all English Bibles yet published. It came out in 1540, with a preface by Cranmer, the Archbishop of Canterbury, and the title page bore the words, "This is the Bible appointed to be read in Churches." It was really an "authorized" version. Because of political changes in England, this Bible had its ups and downs. At one time it was ordered placed in churches, at another time ordered removed, and then later again restored. The last printing took place in 1569.


The Geneva Bible (1560).

The Geneva Bible, 1560. Roman Catholic ascendancy and persecution in England under Mary (1553 – 58) made further Bible translation and publication there virtually impossible. Several English Protestant scholars fled to Switzerland for safety and gathered at Geneva, the headquarters of the Reformed type of Protestantism and the residence of the Reformer John Calvin. William Whittingham had a revised NT published at Geneva in 1557. Soon after this, several scholars began work on a revision of the whole Bible, a labor on which they spent some two years. The outcome of this effort was the Geneva Bible, published in 1560. This work was based mainly on the Great Bible in the OT and on Tyndale's version in the NT. It contained copious notes, most of which were scholarly explanations of difficult points in the text, such as historical and geographical references. Some of the notes were doctrinal and some hortatory. A few were objected to by some Protestants as too Calvinistic. The Geneva version soon became popular and widely read and its influence was great, more perhaps in the homes of the people than in the churches and among the clergy.

The Bishops' Bible, 1568. In 1566 Matthew Parker, Archbishop of Canterbury, initiated the effort to produce a revision of the Bible by the bishops of the Church of England. They used the Great Bible as their basis for revision. The product is of uneven quality, the NT being much better, in general, than the OT. The Bishops' Bible was used generally in churches until 1611. Printing of it ceased in 1602.

The Rheims-Douay Bible, 1582 – 1610. After Elizabeth I became queen, many Roman Catholics left England, most of them going to France or Belgium. Among English Catholic refugees at the University of Douay in northern France, there came to be felt a need for an English version of the Bible approved by the authorities of the Roman Catholic Church. This resulted in the production of the Rheims-Douay Bible, of which the NT was published at Rheims in 1582 and the OT at Douay in 1610. This version was made from the Latin Vulgate, with occasional slight help from the Hebrew and Greek originals. The English style and diction are poor in comparison with the contemporary Protestant versions and especially in comparison with the beautiful English of the KJV, which appeared soon after the Rheims-Douay version was completed. In 1749 – 50 it was published in revised form by Richard Challoner. There also have been further revisions since Chal-loner and on

the basis of his work.

V. The King James Version, 1611. James I became king of England in 1603. In 1604 he called the Hampton Court Conference, an effort to prepare the way for reconciliation between the religious parties existing in his kingdom. This conference failed to bring about any real reconciliation between the bishops and the Puritan party. It did however have the positive result of preparing the way for the production of the King James Version of the Bible. A resolution was passed calling for a translation of the whole Bible from the original Hebrew and Greek into English, with no marginal comments, to be the sole Bible for use in the public worship services of the Church of England. Though not all the bishops were in favor of the new project, King James endorsed it, stating that none of the existing English versions was translated well, and in his opinion the Geneva version was the worst of them all! James called for a new version to be prepared by the best scholars in Oxford and Cambridge universities, then reviewed by the bishops of the Church of England, and finally to be officially approved by the Privy Council and the king as the only Bible to be used in the Church of England.

Forty-seven scholars were recruited for the work, and these were the most learned men of their time in England. The work of translation took some two years. The Bishops' Bible was used as a basis, but others, including Tyndale's, Coverdale's, and the Geneva version could be used as added helps. The KJV translators had at their disposal better Hebrew and Greek texts than were available to previous scholars. The final product was certainly the best English Bible that had ever existed. The English style is universally recognized as superb. Most noteworthy, however, is the remarkable fidelity of the KJV translations to the truth of the Scriptures. That the KJV held its own as the leading English Bible for so long is a monument to their diligence and faithfulness.

Even after four centuries and numerous revisions and new translations, the KJV is still very popular. It has been precious to millions who have loved it for its simple, dignified, beautiful presentation of the Word of God. The KJV has abundantly proved itself preeminently the Bible of the English-speaking world.

VI. Important versions since the KJV. *Young's Literal Translation, 1863.* This version was produced by Robert Young, the compiler of the well-known *Young's Analytical Concordance*. Young held that the only truly faithful translation is a literal one. The first edition was published in Edinburgh in 1863.

The English Revised Version, 1881 – 1885. The impulse to produce this version came from within the Church of England, but scholars of several denominations participated in the work, including an American committee. The basis for revision was the KJV, which could be changed only by a two-thirds vote of the main committee. The NT was published in 1881 and included an appendix with readings preferred by the American committee but not adopted by the British committee. The OT was issued in 1885, and the entire Bible in one volume in 1898. This version is a conservative, cautious revision of the KJV, retaining much, but not all, of its English style. It has had considerable circulation but has never come near the KJV in sales or popular favor.

The American Standard Version, 1901. The American Revision Committee that cooperated in producing the English RV had promised to refrain from publishing an American edition of the RV for 14 years. In 1901 the American Revised Version or ASV came out, embodying those readings favored by the American committee. Among the important differences between the two are the use of "Jehovah" instead of "Lord" in the OT as the translation of the Hebrew *yhwh*, the use of "Holy Spirit" in place of "Holy Ghost," and the use of "love" instead of "charity" in 1 Cor. 13. Lacking

something of the literary beauty of the KJV, the ASV version excels it in accuracy, and is based on a superior Greek text in the NT. It has been used widely as a Bible for study, but has never enjoyed the popularity of the KJV.

The 1611 King James "He" Bible, so designated because in Ruth 3:15 it reads, "and he went into the city," whereas most editions of the KJV have, "and she went into the city."

Weymouth's Modern Speech NT, 1903. Translated by R. F. Weymouth, a British Baptist layman, this version has twice (1924, 1933) been revised by others since the translator's death. It is a product of substantial scholarship and is marked by a reverent attitude toward the text of Scripture.

The Twentieth Century NT, 1904. This version was made by about twenty scholars of various denominations. The order of books varies from that of most Bibles, the Gospel of Mark coming first. The translation is very free.

The Jewish Version of 1917. This work contains the canonical books of the OT only, and in general is very similar to the KJV. The preface states that "the christological interpretations in non-Jewish translations are out of place in a Jewish Bible" (p. viii; cf. the rendering of Gen. 3:15 and Isa. 9:5).

Moffatt's New Translation, 1924, 1935. James Moffatt was an outstanding theological liberal, who frankly disclaimed belief in the verbal inspiration of Scripture. This viewpoint affected his work, especially in certain crucial passages. Still, this is a work of solid scholarship and brilliant style and was popular for many years.

The Smith-Goodspeed Version, 1931. Edgar Goodspeed published his NT in 1923, the OT was translated by H. M. Powis Smith and others (1927), and the whole Bible appeared in 1931. The subtitle is "An American Translation." At some points the freedom of translation verges on paraphrase.

The Charles B. Williams NT, 1937. Subtitled, "A Translation in the Language of the People," this version by an American Baptist scholar must be carefully distinguished from that of the British scholar Charles K. Williams. That of Charles B. Williams is regarded by many as one of the best of the modern versions of the NT.

Ronald Knox's Catholic Version, 1944 – 50. This work by a British Roman Catholic scholar is a production of real merit. Though based on the Latin Vulgate, the work shows thorough acquaintance with the Hebrew and Greek originals. The translation is forceful and readable, and quite faithful to

the original. Many Roman Catholic interpretations are found in the footnotes. Knox's version has been popular, especially among British Roman Catholics.

The Revised Standard Version, 1946 – 52. This purports to be a revision of the KJV, RV, and ASV. It still retains something of the literary style of the KJV. Its renderings are dignified and free from vulgar, slangy or merely contemporary usages. The theological viewpoint of the translators certainly affected their work, especially at certain crucial points such as Isa. 7:14. Exception may be taken, also, to the rather free use of conjectural emendation (which is sometimes, but not always, indicated in footnotes). The RSV has proven very popular and has been widely used (including in a Roman Catholic ed.).

The Confraternity Version, 1948. This is a Roman Catholic version and is essentially a modern English revision of the Rheims-Douay-Challoner version. The OT is not completed in the new version; most printings have several books of the OT in the new version and the rest of the OT in the older version. It is a scholarly production but suffers from the disadvantage of being a translation of the Latin Vulgate rather than of the Hebrew and Greek originals. It contains numerous footnotes, many of which are typically Roman Catholic in tendency.

The New World Translation, 1950 – 60. Published by the Watchtower Bible and Tract Society, an agency of the International Bible Students Association, this is the Bible of the sect commonly known as Jehovah's Witnesses. It is marred throughout by its very obvious bias in favor of the peculiar doctrines of the sect that produced it. Apart from this, it is of uneven quality, sometimes being stiffly literal and sometimes excessively colloquial.

The New Testament in Modern English, by J. B. Phillips, 1958. This is a paraphrase rather than a translation. Many have found it very acceptable, and beyond question it presents the NT in a form that the modern reader can grasp easily. It manifests a tendency to broaden specific scriptural concepts to more general ones which are not always biblical, such as the use of "agreement" instead of "covenant," "acquitted" instead of "justified." This version will be of value chiefly as a sidelight used along with one or more of the less free "standard" versions.

The Berkeley Version, 1959. The NT of this version was published in 1945, the entire Bible in 1959; published after further revision in 1971 under the title *The Modern Language Bible.* The theological orientation is evangelical and the Scriptures are treated throughout as the infallible Word of God. The English is more modern than that of the RSV, but not excessively colloquial. In its day it was probably the most faithful and satisfactory version of the whole Bible in truly modern English. Among the numerous footnotes are many of real value in helping the reader to grasp the meaning of the text.

Wuest's Expanded Translation of the New Testament, 1961. This work is similar to the Amplified version. Essentially a paraphrase, it should be used as such, along with more literal versions, not by itself alone.

The New English Bible. The NT appeared in 1961 and the entire Bible in 1970. Unlike the RV and the RSV, this is not a revision of previous versions but a completely new translation from the Hebrew and Greek. Its chief merit is its rendering the text of Scripture into modern yet dignified English. It has been criticized as using needlessly sophisticated language in some places (e.g., "bedizened" in place of "decked" in Rev. 17:4; 18:16). A more serious criticism that has been brought against it is that it lacks theological precision and awareness, and in crucial texts betrays a distinctly liberal bias. For example, in Gen. 1:1 the NEB reads, "In the beginning of creation, when God made heaven and earth…"; in 3:15, "I will put enmity between you and the woman, between your brood and hers. They shall strike at your head, and you shall strike at their heel" (here the Heb.

sg. pronouns have been arbitrarily changed to pl. forms, thus eliminating a prophetic reference to Jesus Christ); in Ps. 2:11, "Kiss the king"; in Isa. 7:14, "a young woman is with child"; in 53:10, "Yet the Lord took thought for his tortured servant and healed him who had made himself a sacrifice for sin." In passages where the Greek *sarx G4922* (lit., "flesh") is used to mean fallen sinful nature, the NEB renders the word with terms that seem to confuse man as a sinner with man as a creature: "lower nature" (Rom. 8:3 – 5, 7, 12; Gal. 5:13, 16, 19, 24; 6:8; Col. 2:11); "unspiritual nature" (Rom. 7:18, 25); "bodily appetites" (Rom. 13:14); "sensuality" (Eph. 2:3); "instincts" (Eph. 2:3). In all these passages the NEB introduces an idea found in philosophical thought, but foreign to the Bible: that human beings have a "higher" and a "lower" nature, and that evil is identified with the "lower" nature. In the Bible the *whole* of human nature is regarded as corrupted by sin. Those capable of weighing this version critically should use it with due caution; the reader who knows no Greek may be seriously misled by it.

The New Testament in Plain English (Charles Kingsley Williams), 1963. This version is an attempt to render the NT into English with a very limited vocabulary—only about half as many words as are in the Greek NT. What a version of this type gains in apparent simplicity is lost in real communication of truth. This version may be of some use to readers for whom English is a foreign language.

The New Testament in the Language of Today: An American Translation (William F. Beck), 1963. This modern English version by a Lutheran scholar is an excellent production. Faithful to the Scriptures, modern in language and style, free from vulgarity, it is a work of able scholarship and reverent faith.

The New American Standard Bible. This translation was prepared by fifty-eight originally anonymous (but now acknowledged) scholars under the auspices of the Lockman Foundation of La Habra, California. The NT appeared in 1963 and the whole Bible in 1971. Based on the ASV, the NASB is the most consistently literal of major English versions produced over the last half century. Examples of this include its use of italicization of English words that do not have Greek or Hebrew parallels and the identification of historical present tense verbs in the NT with an asterisk. The NASB is theologically conservative and was produced in part in response to theological concerns related to the RSV. An updated edition was released in 1995 that removed some archaic language, increased readability, and removed the archaic "thees" and "thous" with reference to deity.

The Amplified Bible, 1965. The NT of this version appeared in 1958, the OT later in two parts, and the entire Bible in 1965. By the use of parentheses and brackets it attempts to bring out more fully the meaning of important expressions. Such "amplification," of course, opens the door to debatable interpretation. Often the "amplification" is merely superfluous; nothing is really added by inserting "changed" in parenthesis after "transformed" (Rom. 12:2). A version of this type should be used as a help, with a more conventional version, not as an authority by itself.

The Letters of Paul: An Expanded Paraphrase (F.F.Bruce), 1965. This version gives the RV on the left-hand pages, and Bruce's "expanded paraphrase" on the opposite right-hand pages. A work of substantial learning, it should help many readers to grasp more fully the thought of Paul's epistles.

Today's English Version , also called *Good News for Modern Man*, and subsequently *Good News Bible*. The NT was translated by Robert Bratcher under the auspices of the American Bible Society (1966). The OT was subsequently produced by a team of translators, and the whole Bible was published in 1976. The TEV/GNB was the first English version to consistently adopt *dynamic equivalence*, the meaning-based translation principles developed by Eugene Nida and others involved in international Bible translation. This method is better known today as *functional*

equivalence (to be distinguished from *formal correspondence* or *formal equivalence*; see below). The GNB is a clear, readable, and generally accurate version that paved the way for other meaning-based versions. It has sometimes been criticized for oversimplifying the text and for imposing a uniform pedantic style on the highly diverse styles and genres of scripture. A revised edition was introduced in 1992, which updated the translation generally and incorporated a moderate use of gender-inclusive language.

The Jerusalem Bible, 1966. This is a Roman Catholic version first published in England. It began as a French version, *Bible de Jérusalem* (1956), produced by Catholic scholars in Jerusalem, hence its name. It includes a commentary on the same pages as the text. Various viewpoints of negative biblical criticism are incorporated in the notes.

The New American Bible, 1970. This work is a Roman Catholic version that arose in part as a result of an encyclical issued by Pope Pius XII in 1943, declaring that study of the original Hebrew and Greek text of Scripture had greater authority than ancient or modern versions. Prior to this time, Roman Catholic versions were translated from the Latin Vulgate. The NAB was originally based on the Confraternity Version of 1941, but was revised following the Hebrew and Greek. The complete Bible was released in 1970. It is more literal than the JB, but more idiomatic than other formal-equivalence versions. The NAB seeks to be more ecumenical than previous versions, and five of the fifteen members of its committee were Protestants. In 1986 a revised edition of the NT introduced, among other changes, the moderate use of inclusive language. In 1991 a revised edition of the Psalms did the same.

The Living Bible, 1972. This rather free paraphrase has become very popular and widely circulated. As in all "expanded translations" and paraphrases, debatable interpretation is sometimes introduced.

New International Version. The NIV was the result of a transdenominational effort by 100 scholars, sponsored by the New York Bible Society (now the International Bible Society). Each book was developed by a separate team of experts, then submitted to three successive editorial committees. Since its editors represented many different denominations, the translation was relatively free from sectarian bias. A smaller Committee on Bible Translation (CBT) of 15 members continued to examine and update the text. The NT was released in 1973 and the whole Bible in 1978. A minor revision was released in 1984. The NIV achieved huge success and by the mid-1980s began outselling the KJV. Twenty-five years after its release over 110 million copies were in print. The NIV's success may be due to its balance between formal correspondence and functional equivalence. It is readable yet closer to the cadence of the KJV tradition than other meaning-based versions. Because of a 1997 furor over plans to introduce gender-inclusive language, the 1984 NIV will remain the standard edition. The TNIV will carry forward the CBT's revision process.

New King James Version, 1982. A revision of the KJV, this translation was sponsored by Thomas Nelson Publishers of Nashville, Tennessee. More than 130 evangelical scholars produced the version over a seven-year period. The NT appeared in 1979 and the whole Bible followed in 1982. The primary distinction of the NKJV is its textual basis, utilizing the Textus Receptus, the edition of the Greek NT behind the KJV. Almost all other modern translations use the critical text derived from older Greek MSS. Footnotes in the NKJV alert the reader to different readings in the critical text as well as in the Majority text. While updating archaic words, the NKJV consciously seeks to retain the cadence, style, and idiom of the KJV. The NKJV is one of the most literal of the modern versions and in many cases is even more so than the KJV.

New Jerusalem Bible, 1985. A Roman Catholic translation, the NJB was a revision of the JB.

When a new edition of the French version, *Bible de Jérusalem,* was published in 1973, the decision was made to update the JB. Among other changes, the NJB introduced the moderate use of inclusive language. This translation is slightly more literal than its predecessor but somewhat freer than the NAB.

Tanakh, 1985. The Jewish Publication Society's *The Holy Scriptures According to the Masoretic Text* of 1917 (see above) remained the standard Jewish version for most of the 20th cent. By the middle of the century, however, a more contemporary version was deemed necessary, and the JPS authorized a new translation. The result was the *Tanakh* or *New Jewish Version*, published in stages (Torah, 1962; Prophets, 1978; Writings, 1982) and released as a whole in 1985. *Tanakh* is an acronym based on the first letter of the Hebrew names for the three divisions of the OT: *tôrâ* (Law; see TORAH) , *nebî îm* (Prophets; see NEBIIM), and *ketûbîm* (Writings; see KETUBIM). This work is a highly respected version that utilizes the best of Jewish scholarship and a contemporary and idiomatic style.

New Century Version and International Children's Bible, 1986. The NCV and the ICB arose as revisions of a Bible originally designed for the deaf, produced by the World Translation Center in Fort Worth, Texas. The whole Bible was published in 1986 under two titles, the ICB for children and the NCV for more general readers. In 1991 the NCV was revised for a slightly higher reading level. Both versions are now published by Thomas Nelson. They are thoroughgoing functional-equivalent versions guided, according to the NCV preface, by two basic premises, faithfulness to the original text and clarity so that anyone can read and understand the Bible. Clarity is achieved especially through vocabulary selection based upon *The Living Word Vocabulary* , the standard used by the editors of *The World Book Encyclopedia.* Difficult words are replaced with more easily understood terms: "justify" becomes "make right"; "genealogy" becomes "family history." Figures of speech are simplified and idiomatic expressions are clarified. The NCV has achieved marketing success especially through the publication of Nelson's Bible-zines, glossy magazines with the text surrounded by pictures and articles geared for teens and young adults.

Revised English Bible, 1989. Shortly after the publication of the NEB in 1970, a committee was formed to assess and critique the text. The eventual result was the REB, a major revision published in 1989. The "thees" and "thous" used for prayer in the NEB have been removed, the somewhat highbrow style has been muted, and certain idiosyncratic readings have been changed. Greater consistency is achieved. For example, the Greek *ekklēsia G1711* had been rendered in a variety of ways in the NEB: "church, congregation, meeting, community." The REB more consistently uses "church." The REB also introduced a moderate use of gender-inclusive language.

New Revised Standard Version, 1990. Like its predecessor, the RSV, the NRSV was not intended to be an entirely new translation, but rather to stand in a line of revision that began with the KJV of 1611. After the publication of the RSV in 1952, its translation committee continued to meet every few years to consider future changes and to make minor corrections to the text. In 1974 the National Council of Churches, which held the copyright to the RSV, authorized a new revision. The complete Bible was published in 1990. Like its predecessors, the NRSV is a formal-equivalence version, but not slavishly so, being more sensitive to Greek and Hebrew idiom than other literal versions. It is widely used in academic and scholarly circles. The NRSV was also the first English version to consistently and comprehensively introduce gender-inclusive language for masculine generic terms in Hebrew and Greek.

The Contemporary English Version, 1995. The CEV, like the TEV, is a functional-equivalence version produced by the American Bible Society. It is a committee work, overseen by translator and

linguist Barclay Newman. Its goal was to apply even more consistently the translation principles developed by Eugene Nida and international Bible translators. The CEV's strength is clarity and natural English. Its weakness (for some readers) is that it seldom sounds like "the Bible"—the cadence and rhythm of the KJV so well known to many English speakers. This is of course also a strength, since the Bible sounded natural and idiomatic to its original readers. The CEV identifies itself as a *companion* rather than a *replacement* for traditional versions—a missionary version that seeks to cross cultural boundaries that other versions do not. Recognizing that many people hear the Bible more than they read it, particular attention is given to the clarity of the text when read aloud. Like other meaning-based versions, the CEV utilizes gender-inclusive language.

God's Word, 1995. This translation was produced by God's Word to the Nations Bible Society, an American Lutheran organization. In its preface the version claims to be using neither formal correspondence nor functional equivalence, but rather "closest natural equivalence"—a translation policy that avoids the awkwardness of literal versions and the loss of meaning of idiomatic ones. Despite this attempt to distinguish itself as unique, *God's Word* clearly fits into the genre of functional-equivalence versions like the TEV, NCV, NLT, and CEV. It is generally accurate and readable, comparable to these others in style and quality.

New Living Translation, 1996. The NLT is the long-awaited revision of the immensely popular *Living Bible*. While the latter was the work of a single translator (Kenneth Taylor), the NLT is a committee work involving some ninety evangelical scholars from various denominations. While the original work was a paraphrase, the NLT identifies itself as a dynamic or functional-equivalence translation that seeks the closest natural equivalent in the receptor language. The goal, according to the preface, is to have "the same impact on the modern readers as the original had on its own audience." The intentional shift from paraphrase to dynamic equivalence is evident in a verse like Jn. 1:1. Whereas the *Living Bible* read, "Before anything else existed, there was Christ," the NLT retains both the allusion to Gen. 1:1 and the Christological title "the Word": "In the beginning, the Word already existed." A revised edition was released in 2004. The NLT, like all recent functional-equivalence versions, utilizes gender-inclusive language.

New International reader's Version, 1996. This work is a basic English version based on the NIV. It is designed for children, adults with lower reading skills, and those for whom English is a second language. Simplicity and ease of understanding are emphasized throughout.

New English Translation (NET Bible), 2001. Something is always "lost in the translation," and this innovative and constantly evolving version arose from discussions among Bible scholars concerning the insufficiency of a simple translation to communicate the complexities of the meaning of Scripture. The NET's most distinctive feature is its inclusion of over 60,000 (ever-growing) footnotes that provide insight into the interpretation and nuances of the Greek and Hebrew text. The acronym NET is a play on words, referring both to the version's name and to its internet format. Although primarily an internet version, a printed edition of the NT was published in 1998 and the whole Bible in 2001. Subsequent editions have followed.

English Standard Version, 2001. The ESV is a light revision of the RSV (less than 5 percent changed) that seeks to move the latter in a more conservative and evangelical direction. In addition to "correcting" RSV readings viewed by some as liberal (cf. Isa. 7:14), the ESV removes "thees" and "thous," updates other archaic language, and at times moves the text in a slightly more literal direction. The ESV also adopts a moderate (though sometimes inconsistent) use of gender-inclusive language.

The Message, 2002. This work was produced by Eugene Peterson, with various scholars

serving as translation consultants. The NT appeared in 1993 and the whole Bible in 2002. Its engaging and evocative language has struck a chord with many readers—much like the *Living Bible* in the 1960s and 70s—and has made the text a popular supplement to traditional versions. Peterson's goal was not to produce a word-for-word translation, but to convert the tone, rhythm, and ideas of the Bible, into the way people think and speak today. *The Message* does not really fit either formal or functional categories, but should be viewed as a response-oriented Bible, seeking vivid relevance more than historical precision.

Holman Christian Standard Version, 2004. The HCSB was produced by the Sunday School Board of the Southern Baptist Convention (SBC), and was intended to serve as an alternative to the NIV for Southern Baptist curriculum and ministry. It is published by Broadman Holman, the publishing wing of the SBC. The HCSB is more literal than the NIV but less so than other formal-equivalence versions. It strives for "optimal equivalence" or "precision with clarity." Though following the critical Greek text, the HCSB is unique among modern versions in supplying many alternate readings from the Textus Receptus and the Majority text in its footnotes (cf. NKJV). The massive constituency of the SBC should assure the commercial success of this version.

Today's New International Version, 2005. The TNIV arose over controversies surrounding the decision to introduce gender-inclusive language as part of the continuing revision process of the NIV. Faced with opposition, the International Bible Society (the NIV copyright holder) and Zondervan publishers chose to freeze the NIV in its 1984 edition, and to release the TNIV as a new and revisable version. The TNIV updates the NIV in light of advances in biblical scholarship and for greater accuracy and clarity. About 7 percent of the NIV has been altered, with approximately one third of these changes related to gender. The NT was released in 2001 and the whole Bible in 2005.

VII. Contemporary issues in translation

A. Formal versus functional equivalence.
The most fundamental issue in Bible translation is whether to translate according to form or according to function (= meaning). Formal equivalence, also called literal, word-for-word, or direct translation, seeks to retain the formal structure of the source language. Functional equivalence, also known as dynamic equivalence or idiomatic translation, seeks to produce the closest natural equivalent in the receptor language. In reality, there are no pure examples of either approach, and all versions lie on a spectrum between form and meaning. Even the most literal Bible translation must regularly introduce idiomatic readings in order to be comprehensible. Recent versions that are generally formal equivalent include NASB, NKJV, ESV, RSV, and NRSV. Functional equivalent versions include TEV, CEV, NCV, *God's Word*, and NLT. Mediating versions somewhere in between are NIV, TNIV HCSB, NAB, NET, NJB, and REB.

Both formal and functional versions have a place in Bible study, and students of the Word should be encouraged to use a variety of versions from across the translation spectrum. Formal-correspondence versions are helpful for examining the formal structure of the original text, identifying Hebrew or Greek idioms, locating ambiguities in the text, and tracing formal verbal allusions and recurring words. Functional-equivalence versions are more helpful for communicating accurately the meaning of the text, and for providing clarity, readability, and natural-sounding language.

B. Gender language. The gender language debate is closely related to the issue of form versus

function. Supporters of gender-inclusive translation (sometimes called "gender-accurate" or "gender-neutral") claim that using inclusive terms like "person" for masculine generic terms in Hebrew and Greek is simply translating accurately the meaning of the text. Opponents counter that gender-inclusive language condescends to cultural feminism and downplays the patriarchy inherent in biblical languages and in a biblical worldview. Among recent versions, the consistent use of gender-inclusive language appears in CEV, NRSV, NCV, NLT, TEV, *God's Word*, and TNIV. Significant but not comprehensive use appears in NET, NAB, NJB, REB, ESV, and HCSB. None of these versions eliminate masculine God-language; two more radical versions that do are *The New Testament and Psalms: An Inclusive Version*, published by Oxford University Press (1995), and *The Inclusive New Testament,* published by Priests for Equality (1994).

While most scholars today would agree that terms like Greek *anthrōpos G476* (lit., "man") and *adelphoi* (pl. of *adelphos G81*, "brother") are often used generically in Scripture and thus may be accurately rendered with inclusive language ("person" and "brothers and sisters," respectively), other issues cause more controversy and debate. Some of these include: (1) whether it is appropriate to translate masculine generic pronouns that are singular in Hebrew and Greek with English plural pronouns or other generic constructions; (2) whether pluralizing OT passages interpreted messianically in the NT distorts their meaning (e.g., Ps. 8:4 – 6 [cf. TNIV, "mortals…human beings…them"], cited in Heb. 2:6 – 8); (3) whether masculine terms like Hebrew *ādām H132* and Greek *anthrōpos G476* are true generics (= "person"), or whether they indicate male representation and hence male headship (= "man" as representative of the human race); (4) whether the English language has changed sufficiently to warrant such sweeping revisions.

While these and other issues will continue to be debated, common ground should be sought in the goal of rendering the biblical author's historical intention in language that is clear and comprehensible for the modern reader.

C. Historical particularity versus contemporary relevance. Some versions are denigrated as mere "paraphrases," which usually means highly idiomatic versions that are even one step farther from the original meaning than functional-equivalence versions. This definition, however, begs the question, since functional-equivalence versions claim to be *more accurate* than their formal-equivalence counterparts (by focusing on the meaning rather than the form of the text). The term *paraphrase* is also unhelpfully vague, and its normal definition is "to restate something using different words." Since all versions restate Greek and Hebrew words using English ones, *all translation* is paraphrase in this sense. More technically, linguists use the term for restating something in the same language. In this case, *no translation* would be paraphrase, except those like the *Living Bible,* which are simplified renderings of other English versions.

It is better, therefore, not to distinguish between "paraphrase" and "real translation," but between versions that seek to reproduce the *historical particularity* of the original text and those that strive for *contemporary relevance*. To state it another way: while both formal-correspondence and functional-equivalence translations seek to transport the modern reader backward into the world of the text, some versions seek to bring the world of the text to the contemporary reader. As with the difference between form and function, there are no pure examples of either strategy. All versions to some extent alter the historical particularity of the text to achieve contemporary relevance (e.g., by translating the Heb. idiom "to cover his feet" as "to relieve himself"; cf. 1 Sam. 24:3 NASB). Yet certain versions, like the *Living Bible,* Phillip's *New Testament in Modern English*, and *The Message,* are less concerned with historical precision and more with vivid relevance—bringing the

text into the reader's own world. An extreme example is *The Cotton Patch Version* by Clarence Jordan, which sets the Gospels in the rural South during the U.S. civil rights movement. This approach has clearly crossed the line from translation to "transculturation," radically altering the historical particulars of the text. On the other hand, versions like *The Message*—though less concerned with historical precision and occasionally introducing anachronisms—are true translations since they generally strive to retain the original meaning of the text *in its own setting*. Yet they clearly lie on the "contemporary relevance" side of the spectrum.

versions of the Bible, medieval and modern.
This article surveys translations of the Bible into languages other than English. See also VERSIONS OF THE BIBLE, ENGLISH.

1. Early medieval versions
2. Late medieval versions
3. The Reformation
4. From the 17th cent. to the present

I. Early medieval versions. In the period between the making of the ancient versions of the Bible and modern times, the Scriptures (esp. in parts) were translated much more frequently than is commonly realized. Certain powerful stimuli for translation activity may have been absent to some extent in the middle period, but occasion nevertheless arose not infrequently for vernacular renderings of biblical material. Translation work of a sort, or paraphrase, was called for by codes of law (which took account of the TEN COMMANDMENTS), historical surveys (which might include both biblical and nonbiblical narrative), vernacular religious drama, epics, gospel harmonies, homilies, and other works.

The Latin VULGATE was, of course, the dominant version in the W, but even this dominance, although from one point of view stultifying, may have made some contribution to the translation of the Scriptures into the vernacular. See VERSIONS OF THE BIBLE, ANCIENT, II.B.To assist in the mastery of the Latin text, vernacular glosses or rudimentary translations may, in the first instance, have been written in the MSS. Missionary activity and the emergence and development of certain languages in the Middle Ages, such as the Romance languages, presented new fields and needs for translation work.

Manuscripts surviving from the early Middle Ages contain the translation of biblical material into vernacular languages of Europe. From about the end of the 8th cent. or shortly after, there is a fragmentary survival of the Gospel according to Matthew in a Bavarian dialect. The MS is bilingual, with a Latin as well as a German text. Also from the 8th cent. is a Latin MS with a small number of glosses in French. This is quite remarkable, for it comes from the earliest days of the French language. At an early time, German glosses and Irish glosses appeared in Latin MSS. Biblical material in Old Irish has been preserved in homilies. A late 8th-cent. MS contains the Lord's Prayer in Allemannic. A rendering of this prayer into Bavarian dates from the beginning of the 9th cent. Still a third version—in Rhenish Franconian—survives in MSS from the early 9th cent.

A version of the gospel harmony of Tatian, the DIATESSARON, with a Latin text and a close rendering into E Franconian, was made in Fulda c. 830. The 9th-cent. *Heliand*, a Saxon work in alliterative verse form, used the Diatessaron as its chief source. Of a similar type from this period was the Old Saxon epic, *Genesis*.

The beginning of Bible translation in Old Church Slavonic may be assigned to the latter part of the 9th cent. At this time the missionaries Cyril and Methodius translated parts of the Bible and formed the basic Slavic version, later amplified and accommodated to dialectal developments. In the latter part of the 9th cent. also the monk Otfrid of Weissenburg completed his *Liber Evangelio-rum*, a poem which combines scriptural and other material and provides a considerable amount of interpretation.

In the early part of the 10th cent. a verse paraphrase of Ps. 138 was prepared in Bavarian, and at about the same time a verse treatment was written concerning Christ and the woman of Samaria. It survives in fragmentary form in a text which unites both Allemannic and Franconian dialectal traits. A fragment of the Song of Solomon in Rhenish Franconian is extant in a MS from the latter part of the 10th cent. In the 9th or 10th cent. twenty-five psalms were translated into Low Franconian. The Psalter was very popular in the Middle Ages. As early as the 10th cent. parts of the Bible were in use in Old Netherlands dialects. The earliest is possibly a version of the Psalms from the beginning of the century. With noteworthy ability the monk Notker (c. 950 – 1022) translated the Psalms into Alemannic. He is also to be credited with a translation of Job. An Old Frisian version of the Psalms, perhaps from the 11th cent., has survived. In the second half of that century Abbot Williram of Ebersberg made a very popular paraphrastic rendering of the Song of Solomon in E Franconian. In addition to the German text Williram included the Vulgate and Latin paraphrase.

In this early period, then, significant foundations were laid for important developments to come.

II. Late medieval versions. In the following centuries (12th – 15th), up to the time of the Protestant Reformation, there was a large amount of translation work of a sort. "Historical Bibles" stemming from Peter Comestor's *Historia scholastica*, including vernacular treatments of biblical and other material, were popular. Lives of Christ and the Psalter were in demand. There continued to be an interest in glossing, commenting, paraphrase, and in the use of verse for presenting biblical content. By the end of the period there was a serious concern about translation proper, and a notable effort to translate extensive sections of the biblical text, even the entire Bible. The Renaissance and the invention of printing from movable type had, of course, an influence on the translation and the dissemination of the vernacular Scriptures. The large number of biblical MSS and printed editions of the Bible at the close of the Middle Ages formed a fitting prelude to the Reformation.

A. German. Among the German translations of this period, mention might be made of an interlinear version of the Psalms from the latter part of the 12th cent. and the numerous other Psalters of this period (including the very popular and accomplished version of Heinrich von Mügeln in the latter part of the 14th cent.); the high German version of the entire NT known as the "Augsburg Bible" (1350); the Codex Teplensis, a MS of the NT from c. 1400, perhaps of Waldensian background; and the Wenzel Bible (1389 – 1400), which contained OT material. A great many MSS survive from the 15th cent. The first of the printed German Bibles, the Mentel Bible of 1466, was the first of eighteen printed editions of the entire Bible in German which antedated Luther's version. It made use of a text from the 14th cent.

B. Dutch (and Flemish). About the middle of the 13th cent. the Diatessaron was translated into Dutch from a text significantly different from that of the Latin Vulgate. Found in a liège MS of c. 1270, it is a work of considerable literary merit. In 1271 appeared the meritorious *Rijmbijbel* by Jacob van Maerlant, which drew chiefly on Comestor's *Historia scholas-tica*. It is the precursor of the later "History Bible" in Dutch. From the same time comes a popular Southern Dutch Psalter. By 1300 the Gospels and Epistles had been translated into Southern Dutch. From the latter part of the 14th cent. on, noteworthy Dutch "History Bibles" appeared. In 1383 Gerard Groote included translations of biblical material in his *Book of Hours*. In the following year Johan Schut-ken produced his very popular version of the NT and Psalms. A translation of the OT without the Psalms was published at Delft in 1477, the first biblical version to be printed in Dutch. Its text is basically that of a previous century, perhaps dating from c. 1300.

C. French. There was much translation activity in France in the 12th – 13th cent. The Psalter—popular in France as well as elsewhere—was translated at the beginning of the 12th. Toward the end of the century, Peter Waldo and some of his followers issued translations of parts of the Bible. In the early part of the 13th cent., the entire Bible was translated at the University of Paris. In the latter part of that century, Guyard des Moulins undertook a free translation of Comestor's *Historia scholastica*. He supplied additional material and otherwise modified it. This introduced the French "Historical Bible," the *Bible historiale*, which was popular for centuries. It was frequently revised. What had been credited with being the first full Bible in French, *La Grande Bible*, was printed c. 1487 and went through many editions.

D. Italian. Gospel harmonies in Italian are preserved in MSS from the 13th to the 14th cent. The Psalter was also translated at an early date. It may be that the Bible, in its entirety, had been translated into Italian by the middle of the 13th cent. The first Bible to be printed in Italian was the version of Nicolo di Malherbi, which was published in 1471 and often reissued in the following century. Another version was also published in that year, but it did not obtain similar acceptance. The verse form was employed in Italy as well as elsewhere in the Middle Ages as a vehicle for biblical material. A verse rendering of the Psalms dates back to the 13th cent. and a Diatessaron in verse to the end of the 14th cent.

E. Spanish and Catalan. There is evidence to support the view that at least part of the Bible had been translated into Spanish by the 13th cent. Notable in the medieval period is the vast historical work, the *General estoria*, which dealt with biblical and other material after the fashion of Comestor's *Historia scholastica*. It was the longest of the medieval historical Bibles. Noteworthy also is the use of the Hebrew text in translations of the OT.

Bonifatius Ferrer in the early 15th cent. translated the Bible into Valencian. This Catalan Bible was printed in 1478, but the Inquisition succeeded in destroying every copy; only one leaf survives. A Psalter printed in 1480 offers a somewhat revised reissue of this book of the Valencian Bible. Another important Psalter was published in 1490. Among other versions there was a rhymed Bible in Catalan, a type of work popular in France.

F. Portuguese. The first translations known in Portuguese are of portions of the Bible that date back perhaps as far as the 13th cent. A harmony of the Gospels was printed in 1495. Portuguese texts of the Gospels, Acts, and Epistles soon followed.

A 15th-cent. French lectionary.

G. Scandinavian. The oldest surviving translations into the languages of Scandinavia were free renderings made from the Latin Vulgate. Attention might be called to an Old Norwegian version of

Genesis – Kings that dates back to c. 1300; a 14th-cent. Swedish version of the Pentateuch and Acts; a Swedish translation of portions of the Bible dating from the late 15th or early 16th cent.; and a Danish MS of Genesis – Kings from the latter part of the 15th cent.

H. Hungarian. The oldest survivals of translation of biblical material into Hungarian come from the 15th cent. Surviving from the early part of that century are portions of a version made by two monks. The version made by Ladislas Batori likewise dates from the earlier half of the 15th cent.

I. Slavic. At the end of the 15th cent., the first complete Bible in Church Slavonic appeared. In the 14th cent., Bohemian or Czech translations were made of the Psalter and of other biblical material. The NT printed in 1475 was the fruit of the work of revision performed by Jan Hus (John Huss) and a number of his followers; the entire Bible was published in 1488. The Psalter was translated into Polish by the 14th cent., and a Croatian version of NT pericopes appeared in 1495.

J. Other versions. In the 14th cent., some biblical material was translated into Welsh. By the 15th cent. a NT version in Breton had made its appearance. In the 13th cent., the Pentateuch was translated from Hebrew into Arabic. In the 14th cent. the Gospels were translated into Hebrew.

By the end of the 15th cent. and the dawn of the Reformation, the Scriptures had been introduced into language after language in Europe in a very substantial way—even to versions of the entire NT and the whole Bible. The Middle Ages had performed a very important work of ground-breaking. The way had been prepared for the period of distinguished translation activity that was to come with the Reformation.

III. The Reformation. Without the preparation that had been made in the preceding centuries, the accomplishment of the Reformation in translation work would not have been so spectacular as it was. The Reformation did not disdain to draw fruitfully on the work that had been done before. But for all that, it generated a fresh and original development. It brought renewal of zeal and an impassioned sense of urgency for giving the Bible to all the people in their own language. The familiar story of Tyndale's pledge to make the Scriptures understood by the plowboy expresses the true sentiment of the Reformation.

In the Reformation memorial in Geneva, Calvin is represented with other Reformers, standing as it were on the foundation Christ Jesus with an open Bible in his hands. In the background in letters of heroic size are the words *POST TENE-BRAS LUX* ("after darkness, light"). In the opening of the Bible and in the diffusion of the Light, the translation work brought forth by the Reformation was to play an exceedingly important part. It is not inappropriate that vernacular versions of the Lord's Prayer are included in the memorial.

A. German. One of the greatest events in the history of Bible translations was the appearance of Martin Luther's version. Its outstanding contribution to the knowledge and dissemination of the Scriptures in Germany and elsewhere, as well as its influence on the language, literature, and general culture of the German people, can hardly be overstated. Luther had already translated portions of the Bible before he determined to prepare a version of the whole Bible. He began his work on the entire NT at the close of 1521, and in September of 1522 published at Wittenberg his translation of the NT, his "September Testament" or *Septemberbibel*, as it has been called. The OT was published in stages beginning in 1523. The whole Bible with the addition of the APOCRYPHA was published in 1534. In his translation of the OT Luther made use, among other things, of the Brescian edition of 1494, and for the NT he made use of the second edition of Erasmus's Greek NT of 1519. See TEXT AND MANUSCRIPTS (NT) IV.B. For the remainder of his life, Luther continued to revise his translation.

Other German versions of the 16th cent. were unable to displace Luther's translation from its well-merited preeminence; in fact, some of them were themselves greatly influenced by Luther's work. A meritorious version of the Prophets from the Hebrew by the Anabaptists Ludwig Hätzen and Hans Denck was published in 1527, some years before Luther's own version of the Prophets was ready, and he took account of it in his work. The Bible published in Zurich (in parts, 1525 – 1529; entire Bible, 1530) drew on Luther's Bible to the extent that it was then available, and provided its own version of the Prophets. Emser published a Roman Catholic NT in 1527, which was essentially Luther's text brought into conformity with the Vulgate. Another Roman Catholic work was the Bible assembled by Johann Dietenberger, published in 1534. The NT section was Emser's revision of Luther's work. In the OT, considerable use was made of the versions of Luther and of Hätzen and Denck, with revisions to align the text to the Vulgate.

B. Dutch. The first NT to be printed in Dutch appeared in 1522. It was based on the Latin Vulgate, but did take account of the Greek text. Shortly after its issuance, Luther's NT was translated into Dutch (1523). In 1525 an OT was published which made use of Luther's text to the extent that it had then been issued and also of the Delft Bible of 1477. The first complete Bible to be published in Dutch, a work which follows Luther closely and apparently uses also a Low German Bible of c. 1480, was printed in 1526. This Bible became very popular and was frequently reprinted. For its marginal notes of a strongly Protestant character the publisher, Van Liesveldt, was put to death.

Several Roman Catholic editions of the NT appeared between 1527 and 1539, and a Roman Catholic version of the entire Bible was published in 1548 at Cologne and Louvain. This formed the basis for the editions used by Roman Catholics in following centuries.

The translation of the NT prepared by Jan Utenhove (in which he had been aided by God-fried van Wingen) and published in 1556 did not attain much popularity. More warmly received and more

widely used was the so-called *Deus-aes* Bible of 1561 – 62 (the designation, meaning "deuce-ace," alluding to a game of dice, is derived from a marginal note on Neh. 3:5 taken from Luther). This Bible, dependent on Luther, did not give full satisfaction, and the need for a superior version was expressed at synods of the Reformed churches. The Bible generally used by the Mennonites up until the 18th cent. was first printed in 1558 and was published in 1560 by Nicolaes Biestkens, from whom it receives the designation "Biestkens Bible." It was often reprinted.

C. French. Jacques Lefèvre d'Étaples made a revision of the *Bible historiale* in the early 16th cent. He was probably the translator of an anonymous version of the NT published in Paris in 1523. His translation of the Bible was published in 1530 at Antwerp. The most illustrious work of the period was the highly meritorious version of the entire Bible made by a cousin of Calvin, Pierre Robert Olivetan, and published at Waldensian expense in Switzerland in 1535. Calvin himself wrote some introductory material for this version. The edition of 1553, issued by Robert Estienne, the Parisian printer, was marked by the introduction of his chapter and verse divisions, the first complete Bible to have these aids. The NT made considerable use of Lefèvre's work, but did give some attention to the Greek text. In the OT Olivetan consulted the Hebrew text and Pag-nini's Latin translation of the Hebrew. His French was of a better grade than Lefèvre's. As revised in Geneva in 1588, it became known as the "Geneva Bible" (not to be confused with the Geneva Bible in English). The favored text for French Protestants, it was reprinted many times during the following two centuries. In 1550 the Louvain Bible appeared, a Roman Catholic revision of Lefèvre's work; and an extensive further revision appeared in 1578, the foundation for Roman Catholic Bibles to follow.

D. Italian. Antonio Brucioli, who had been influenced by the Reformation, published Italian versions of the NT in 1530, of the Psalms in 1531, and of the entire Bible in 1532. In 1536 there appeared the Zaccaria NT, translated from the Greek; and in 1538 the Bible prepared by Marmochini was published. The text of this Bible, whatever its particular sources, has a Vulgate orientation. M. Teofilo in 1551 issued a NT translation from the Greek. This version was included in revised form in the first Protestant issue of the entire Bible in Italian (Geneva, 1562). The OT of this Bible was a revision of Brucioli's version. Numerous translations of parts of the Bible in Italian were published in the latter part of the 16th cent. The most distinguished of Italian versions, that of Diodati, was soon to follow, in 1607 at Geneva.

E. Spanish and Catalan. The Spanish Inquisition adversely affected translation work in Spain, but it failed to suppress it completely. Ecclesiastical opposition to versions in the vernacular languages, whether in Spain, Italy, or elsewhere, may at times have necessitated the publication of versions in more congenial places such as Geneva, Basel, and Antwerp; but translations were nevertheless made, published, and used. Montesino issued a Spanish version of the liturgical Epistles and Gospels at Alcalá in the early 16th cent. Francisco de Enzi-nas in 1543 at Antwerp published a NT translation from Erasmus's Greek NT. Juan Pérez de (la) Pineda produced a NT from the Greek in 1556, making use of Enzinas's version. He also published a translation of the Psalms in 1557. Translations of Romans and 1 Corinthians by Juan de Valdés were issued in 1556 and 1557. In 1553 the Ferrara Bible, a close translation of the Hebrew OT, was published. It is a revision of an older Jewish version.

The first complete printed Bible (with Apoc.) in Spanish was published in 1567 – 69 in Basle. It was prepared by Cassiodoro de Reyna (Casiodoro de Reina), a Lutheran who had been a monk in

Seville. His OT was a revision of the Ferrara Bible. A light revision of this work was made by Cipriano de Valera, who likewise had been a monk in Seville. The NT was published in London in 1596 and the Bible with Apocrypha in Amsterdam in 1602. The Reina-Valera translation became the standard Protestant version and has been the basis of numerous later Spanish Bibles.

F. Portuguese. The first printed version of biblical material in Portuguese was a version of the *Vita Christi*, the gospel harmony of Ludolph of Saxony, which was published at Lisbon in 1495. A version of the Acts and Catholic Epistles was issued in 1505, and a translation of the liturgical Epistles and Gospels was published c. 1510.

G. Scandinavian. In the Scandinavian countries the influence of Luther's version was very great. Some use of Luther's NT was made in the first Danish NT, which was prepared by Hans Mikkelsen and Kristian Winther (1524). In 1528 a Danish Psalter translated by Frans Wormord-sen was issued. In 1535 Hans Tausen published a translation of the Pentateuch made from Luther's version. Christen Pedersen is to be credited with a unique contribution to the Danish Bible. In 1529 he published a translation of the NT in smooth Danish, in which he made use of the work of Mik-kelsen, of Luther, and of Erasmus. In 1531 his metrical version of the Psalter appeared. Pedersen's part was large in the preparation of the first complete Danish Bible (1550), a version which held closely to Luther's translation. A popular work, it was later revised and was reprinted for centuries.

The first printed NT in Swedish (1526) was based on Luther's version, but it did give attention to the Greek text, to the Latin version supplied by Erasmus, and to the Latin Vulgate. The first Swedish Bible, the "Gustaf Vasa Bible," was published in 1540 – 41. It was based on Luther's Bible. It was accepted as the Bible of the Church of Sweden until the 20th cent. An Icelandic NT was published in 1540, and a Bible, influenced by Luther's work, in 1584, a version which has been highly regarded for its style. It has undergone numerous revisions down to the 20th cent.

H. Hungarian. The first printed book in the Hungarian language was a translation of Paul's letters made from the Vulgate (1533). Among the 16th-cent. versions might be mentioned the first Hungarian NT, which was based on the Greek text (1541), and the first full Bible in Hungarian, the version made by Károlyi from the Greek and Hebrew with consideration of the Latin Vulgate and other translations (1590). This became the favorite version of Protestants and was often reprinted.

I. Slavic. A recension of the Old Church Slavonic version is represented by the Ostrog Bible of 1581. Among the 16th-cent. Czech versions, mention might be made of the highly influential Kralice or Kralitz Bible, which was made from the original languages by the Moravian Brethren (1579 – 93). Of the Polish versions of the 16th cent., attention might be called to the first NT to be printed in Polish (1553), to the Cracow Bible of 1561, the first Polish Bible, and to the Brest Bible of 1563 translated from the Hebrew and Greek, a version which did not obtain general acceptance. Of great importance, especially to Roman Catholics, was the work of J. Wujek, a Jesuit. Wujek translated the Vulgate, but did give attention to the original languages. His NT was published in 1593, his Psalter in 1594, and his OT in 1599. His became the accepted Roman Catholic version, and it has been used even by Protestants. In the early 16th cent., F. Skorina translated many of the books of the Bible into (White) Russian. A version of the NT in Lower Sorbic was published in 1547. In the second half of the 16th cent., the NT was translated into Serbo-Croatian. Also in the latter part of the 16th cent., the NT was translated into Slovenian by the Reformer P. Truber and the OT was translated by the Lutheran J.

Dalmatin. Jan Bretkun translated the entire Bible into Lithuanian (1579 – 90), but only the Psalms were published.

J. Other versions. A follower of Luther, M. Agricola, published in 1548 a translation of the NT into Finnish from the Greek with the help of Luther's version. One of the first works printed in Basque was a Protestant translation of the NT (1571). The first Welsh NT appeared in 1567 and the whole Bible in 1588. Translations of biblical material into other languages, such as Latin, Modern Greek, and Hebrew, were made in the 16th cent.; but enough detail has been given to indicate the extent and the vitality of the translated work of the Reformation period.

IV. From the 17th cent. to the present.

The Reformation, as has been noticed, brought in a new and distinguished period of translations of the Bible. The zeal which marked the period for giving the Scriptures to all the people in their own tongues and the spiritual discernment essential for the making of great versions were assisted among other things by improved knowledge of the original languages of Scripture, genius and brilliance on the part of translators, and maturing vernacular languages that afforded fresh and vigorous media for translation. The accomplishment was distinguished and enduring. The 16th and early 17th centuries produced versions that were long to be dominant and that influenced immeasurably the spiritual, intellectual, and cultural life of nations.

For genius and brilliance, the Reformation age must still be granted the preeminence, but the period that followed has been one of great activity and of multiple revisions and new translations. The time spent, the labors, and the volume of translations have been prodigious since the mid-17th cent. As advances have been made in textual and other biblical studies, and as the vernacular languages themselves have changed, the need has often been felt to revise or to translate anew in order that the Bible, with all the new light available, might be presented to people of a new day in language quite intelligible to them. In addition, the extensive missionary activity of the church since the Reformation has called for the translation of the Bible in whole or in part into a vast number of tongues throughout the world. Of necessity, the survey that follows is very selective, especially for the last decades of the 20th cent. and the beginning of the 21st, a period of explosive activity in Bible translation.

A. German. A great many German versions, Protestant and Roman Catholic, have appeared since Johannes Piscator opened the 17th cent. with his uneven Latinate version (1602 – 03). It is not our purpose to catalogue them all here. Mention might be made, however, of the various revisions of Luther's work that have been produced since the 19th cent. (the 1984 revision is the most widely used German Bible); the 17th-cent. Roman Catholic revisions of Dietenberger's version; the Zurich revision (1931); and versions by F. E. Schlachter (1903 – 1904), H. Albrecht (NT, 1920), H. Menge (Bible, 1926; subsequently revised), F. Tillmann (NT, 1927), A. Schlatter (NT, 1931), L. Thimme (NT, 1946), and P. Parsch (Bible, 1952). The Elber-felder Bibel, a literal translation, was begun in 1854 and has been revised as recently as 1985. Other important versions include a Roman Catholic publication known as Einheitsübersetzung (1980) and Die Gute Nachricht (corresponding to the Good News Bible; latest edition, 1997).

B. Dutch. The Synod of Dort (Dordt) felt the need of a new version of the Bible that would be made from the original languages of Scripture. The result was the most important version in the history of

the Dutch Bible. The new translation was issued in 1637 with the government, the States-General, paying the expense. It was officially approved and authorized by the States-General, and therefore has been called the *Staten-Bijbel* or *Statenvertaling*. It attained widespread favor in the Netherlands and has been admired elsewhere. As one of the illustrious fruits of the Reformation, it has continued in use into the 20th cent. Adolf Visscher's version from Luther's text (1648) was revised in 1823 and has continued to be in use by Lutherans. A noteworthy version in modern Dutch was completed under the auspices of the Netherlands Bible Society; the NT was published in 1939 and the Bible in 1951. More recent versions include the Groot Nieuws Bijbel. A translation of the Bible into Afrikaans (the Dutch-related language of S Africa) was published in 1943, and subsequent translations have been produced.

C. French versions. In the 17th cent. there was a paucity of Protestant translation work in French. Revisions of the dominant Geneva Bible were made by Diodati (1644), Des Marets (a lighter revision than Diodati's, 1669), and Martin (NT, 1696; entire Bible, 1707). Roman Catholic efforts were more numerous in this period. Among the Roman Catholic translations were Jacques Corbin (entire Bible from the Vulgate, 1643), François Véron (NT, 1647), de Marolles (Psalms and Song of Solomon, 1644; NT, 1649; certain books of the OT, 1677 – 78), and Amelote (NT, 1666 – 70). Special mention should be made of the meritorious version associated with Port-Royal and Louis Isaac le Maistre de Sacy and others (NT, 1667; OT, 1672 – 96). Ecclesiastical opposition did not prevent this able work from becoming one of the most highly esteemed of the French versions down to the present.

The 18th cent., although a somewhat barren time in general for Bible translations, did bring forth such versions as those of Richard Simon (NT, 1702), Barneville (NT, 1719), Mésenguy (1729), Beausobre and Lenfant (NT, 1718), and Le Cene (Bible, 1696 – 1741). Influential revisions of the Geneva Bible were those of David Martin (mentioned above; NT, 1696, Bible, 1707) and of Ostervald (1744). Based mainly on these is the revision made by Louis Segond (1874 – 80) which has been widely used by Protestants. In 1910 a revision of Ostervald's version was published, and has since been revised a number of times. Mention might also be made of Abbé Crampon's popular Roman Catholic version (1894 – 1904; rev. 1907); Decop-pet's translation of the NT based on the Greek text of Westcott and Hort (1903); the translation of the NT by Goguel and others (1929); *Bible du Centenaire de la Jeunesse* (1947); *Bible de Jérusalem* (1948 – 54); *Bible en français courant* (1982); *Traduction oecuménique* (10th ed., 2004).

D. Italian. The first complete Protestant Bible in Italian was that of Giovanni Diodati (Geneva, 1607). The translation was faithfully made from the Hebrew and Greek into excellent Italian. It is not strange that this exceptionally praiseworthy version has been cherished and used by Italian Protestants to this day. The version made by Antonio Martini (NT, 1769 – 71; OT, 1776 – 81) was based on the Latin Vulgate (although in the NT note was taken of the Greek text). It has frequently been reprinted and has been honored with the status of an Italian classic. Other Italian versions include the following: A. Guerra's revision of Malermi's (Malherbi's) Bible (1773); a version of the Port-Royal Bible (1775 – 85); revisions of the Diodati version (1925, 1991); G. Luzzi's translation of the entire Bible (1921 – 30); the translation from the original languages into modern Italian made under the auspices of the Pontifical Biblical Institute (1923 – 58); and the Nuova Riveduta (1994).

E. Spanish and Catalan. The Reina-Valera version of 1602 has been reprinted and revised even to

recent years. The first complete Bible in Spanish to be printed in Spain was that of Felipe Scío de San Miguel (1790 – 93, rev. 1794 – 97), a version of the Latin Vulgate. In 1825 Félix Torres Amat published a translation of the Vulgate in which he gave some attention to the Hebrew and Greek texts. Among later versions have been the following: translations of the NT by Guillermo Juenemann (Chile, 1928) and Juan Staubinger (Argentina, 1944); the Bible translation for the Pontifical University of Salamanca (1944); a version by José María Bover and Francisco Cantera (1947); *Nueva Biblia Española* (1976, later *Biblia del Peregrino*, 1993), under the direction of L. Alonso Schökel; *Dios Habla Hoy* (corresponding to the Good News Bible, 1979); *Nueva Versión Internacional* (1999); and many others.

In 1832 a Protestant translation of the NT into Catalan was published. In the 20th cent. Roman Catholic Catalan versions of the Bible have appeared, as well as an interconfessional translation in 1996. The Gospel according to Luke was translated by George Borrow into Gitano or Spanish Romany (1837); biblical material has been translated into numerous other types of Romany.

F. Portuguese. The first translation of the entire Bible into Portuguese was made by J. Ferreira de Almeida. The NT was published in 1681 in Amsterdam; the OT was finished by others and published in 1753. The version of the Vulgate by A. Pereira de Figueiredo was issued in Lisbon toward the end of the 18th cent.; it was completed in 1790. This was the first Portuguese version of the Bible to be printed in Portugal. The entire Bible was translated from the Vulgate by Matos Soares (1927 – 30). Various revisions of the de Almeida Bible have been published, and the *Nova Versão Internacional* appeared in 2000.

G. Scandinavian. In the early 17th cent. Hans Paulsen Resen made a Danish version from the Hebrew and Greek texts (1607); it was revised by H. Savne in 1647. This Bible, further revised a number of times, obtained great and prolonged favor. In the 20th cent. a new version made from the original languages (OT, 1931; NT, 1948) received official authorization. Among other translations into Danish are: C. Bastholm (NT, 1780), O. H. Guld-berg (NT, 1794), J. C. Lindberg (OT, 1837 – 53; NT, 1856), C. Kalkar (entire Bible, 1847), K. F. Viborg (gospels, 1863), T. S. Rördam (NT, 1886), and A. S. Poulsen and J. L. Ussing (NT, 1897).

In the 19th cent. a version was made into Danish-Norwegian on the initiative of the Norwegian Bible Society (OT, 1842 – 87, revised 1891; NT, 1870 – 1904). A version of the NT in New Norwegian appeared in 1889. The OT followed in 1921, and a revised edition in 1938. A Roman Catholic version in Danish-Norwegian was issued in 1902, and revised by taking account of the original languages in 1938.

H. M. Melin published a new Swedish version that took notice of the original languages and of Luther's translation (1858 – 65). In 1917, as the culmination of more than a century of effort, a fresh translation from the original languages was published. It received official ecclesiastical approval and became the Bible of the Swedish Church.

The 1584 Icelandic Bible has undergone revision down to the 20th cent.

H. Hungarian. The first Roman Catholic version of the entire Bible in Hungarian appeared in 1626 and has been revised down to recent times. New Hungarian versions have appeared in the 20th cent., including the Karoli Bible (1993).

I. Slavic. The Ostrog Bible (Old Church Slavonic) has been revised a number of times, very notably

in the "Elizabeth Bible" (so named from its connection with the Empress Elizabeth) in 1751. The St. Wenceslaus Bible, a Roman Catholic translation into Czech, was issued 1677 – 1715. It was extensively revised 1778 – 80, taking account of the Protestant Kralitz Bible. Of the versions in modern vernacular Bulgarian, attention might be called to the fresh translation sponsored by the Synod of the Bulgarian Orthodox Church published in 1925. The Brest Bible gave way to the Danzig Bible in Polish (Danzig, 1606 – 32), a version that won the high esteem of Protestants. It has been reprinted frequently and has continued in use into the 20th cent.; a new version of the NT from the Vulgate was published in 1947.

In the 19th cent., a translation was made of the entire Bible into vernacular Russian. It took more than fifty years to complete. The first version in Ruthenian was a translation of the Pentateuch by P. A. Kulisch (1869). After his death his translation of the whole Bible, to which others had made some contribution, was published in 1903. In 1709 a version of the NT in Sorbic was issued by Gottlieb Fabricius. In revised form it was published by the British and Foreign Bible Society in 1860. A version of the NT in Wendish (Upper Sorbic) appeared in 1706 and the whole Bible in 1728. A Roman Catholic translation of the NT from the Vulgate was issued in 1887 – 92.

The Bible was first published in its entirety in Serbian and Croatian in the early part of the 19th cent. (1804, 1831). Special mention should be made of the NT version made by Vuk (1847) in a style that has been highly commended. A translation from the Vulgate into Slovenian was published in 1784 – 1802. Another Roman Catholic translation (from the German version of Allioli) appeared in 1856 – 59. A Slovakian version of the Vulgate was published in 1829 and 1832. It was superseded in 1926 by another Roman Catholic version. A Protestant NT was issued in 1913 and the Bible in 1936.

More recent versions in most of these Slavic languages appeared in the second half of the 20th cent.

J. Other versions. A Finnish version of the Bible was published in 1642 and has been frequently revised since. Translations of the Bible in its entirety or in part into Estonian were published in the 17th and 18th centuries and have often been revised. In 1727 the NT was first published in Lithuanian, and the entire Bible in 1735. There have been frequent revisions. Revisions of the Lettish Bible appeared in 1877, 1899, and 1902. In the 18th and 19th centuries, translations of the NT and of the OT appeared in Lapp dialects.

And so the record of Bible translations in the period since the Reformation continues. It would seem impossible to make it even approximately complete. The record should take notice of versions in Rumanian, Albanian, Maltese, Arabic, Modern Greek, Irish, Scottish Gaelic, Welsh, Manx, Cornish, Breton, Modern Hebrew, to say nothing of hundreds of other languages or dialects in the Americas, Africa, and Asia. The global extent of the missionary activity in the period since the Reformation has brought with it translations into a vast number of tongues—to date, more than 2,300. In some of them multiple versions or revisions have already appeared. This account has been concerned chiefly with a limited section of the world and the great history of translation work there. New tongues are constantly being trained to speak of the wonderful works of God. The chronicler of translations must now be prepared to write many new chapters.

<div align="right">J. H. SKILTON</div>

Vespasian ves-pay'zhuhn. Titus Flavius Sabinus Vespasianus was born in A.D. 9 and ruled as emperor of Rome from 69 to 79. Before the age of twenty, Vespasian became military tribune in THRACIA, and he subsequently filled various roles in CRETE. It was not until his forties, however, that he won recognition by his military campaigns in Britain. Little is reported about him during the next two decades, but in the year 67 he was given the responsibility of subduing the Jewish revolt (see WARS, JEWISH).

After the death of NERO in 68, a period of civil war saw the rise and fall of three emperors (Galba, Otho, and Vitellius; see ROMAN EMPIRE VII). In the summer of 69 Vespasian was proclaimed emperor by the eastern legions, and he left his son TITUS in charge of the Jewish war. Before the end of the year, the senate confirmed his emperorship. Vespasian's main task was one of reconstruction after the misrule of Nero and the year of anarchy that had followed it. His blunt, straightforward, and honest character, coupled with simplicity of life and common sense, fitted him perfectly for his task. The successful completion of the war in Palestine by Titus, the suppression of a revolt in Gaul, and the establishment of peace on all frontiers caused a revival of public confidence. In celebration of the new era Vespasian began the rebuilding of the Capitoline temple.

One of the most pressing problems faced by Vespasian was that of imperial finance. He met this obstacle by retrenchment at home and by raising the provincial tribute while at the same time enforcing strict collection. He also took over for the state public lands that had been unlawfully occupied by private individuals. These methods, accompanied by the imposition of new taxes in ROME, gave him a reputation for parsimony. Yet he did benefit the entire empire by his forward-looking policies. He began construction of the famous Colosseum in the capital city, and throughout the provinces built roads and public buildings where these were needed. He also sponsored the production of works of art, and encouraged educational activity in every way.

In his political attitude Vespasian was quite liberal. To fill up the depleted ranks of the senate, he appointed Italians and provincials, conferred Latin rights on all the towns in Spain, and encouraged romanization by establishing colonies in backward provinces. He encouraged and fostered municipal life throughout the realm, appointing governors and other officials over whom he exercised strict control, and who were liable to severe punishments for maladministration. His foreign policy was more conservative: strengthen the existing frontiers rather than seek expansion.

Although Vespasian made little change in the constitution, and showed his respect for the senate by formally consulting it on all occasions, his tendency was toward autocracy. For example, he made it abundantly clear that his sons, first Titus, then Domitian, were to be his successors. This kind of high-handed disposition of imperial power produced strong opposition on the part of the STOIC

aristocracy, which resulted in the execution of their leader Helvidius Priscus. However, the general esteem in which he was held is indicated by the fact that upon his death in 79 he was deified by the senate. (See further J. Nicols, *Vespasian and the Partes Flavianiae* [1978]; H. Bengtson, *Die Flavier: Vespasian, Titus, Domitian: Geschichte e. röm. Kai-serhauses* [1979]; B. Levick, *Vespasian* [1999]; R. Caratini, *Vespasien: Le bon empereur* [2003]; *ABD*, 851 – 53; *OCD*, 1590 – 91.)

<div align="right">R. C. STONE</div>

vessel. A container for a liquid or some other substance. Vessels were used for storage of food or valuables (e.g., the DEAD SEA SCROLLS; cf. also PAUL's figure: "we have this treasure in earthen vessels" [2 Cor. 4:7 KJV]). Materials varied from the ubiquitous POTTERY of ancient civilizations to precious metals, glass, and ornamental stone, such as ALABASTER (Mk. 14:3). Size varied from small flasks for cosmetics to vast jars, such as those which figure in the story of "Ali Baba and the Forty Thieves," and which may be seen, fitted with multiple handles for ropes, in the storerooms of Minos's palace at Knossos in CRETE.

BASKETS varied in size from those that could be carried on head or shoulder (Gen. 40:16; Exod. 29:3)—made for holding fruit (Jer. 24:1 – 2) or for serving as a brickmaker's hod (Ps. 81:6)—to containers large enough to hold a man (Acts 9:25; 2 Cor. 11:33). Baskets are mentioned in connection with the feeding of the 5,000 (Matt. 14:20; Mk. 6:43; Lk. 9:17) and the 4,000 (Matt. 15:37; Mk. 8:8). The former instance has the word *kophinos G3186*, a rush or wicker basket used by Jews to contain food free from alien pollution. Juvenal (*Sat.* 3.14) uses the corresponding Latin term, *cophinus*, in a reference to the Jews in the slum ghetto outside Rome's Capena Gate. Curiously, the accounts of the feeding of the 4,000 have a word (*spyris G5083*) that possibly describes the large bottle-shaped Gentile basket; the incident took place in the predominantly Gentile territory of the DECAPOLIS.

Other containers included LEATHER bottles, that is, animal skins used for keeping water (Gen. 21:14 – 15, 19), milk (Jdg. 4:19), and wine (Josh. 9:4, 13; 1 Sam. 1:24; 10:3; 16:20; 2 Sam. 16:1); jars or PITCHERS used, for example, for drawing water from wells (Gen. 24:14 – 19; cf. Jn. 4:11); BASINS or BOWLS used mainly for libation and mentioned frequently in connection with the ritual utensils of tabernacle and temple (e.g., 1 Ki. 7:43, 50), but also in domestic contexts (2 Sam. 17:28; Jn. 13:5); CUPS of various types (Gen. 44:2 and frequently); and DISHES or PLATES that were often large deep containers commonly of bronze, still used for the common meal of the BEDOUIN (Prov. 19:24 et al.).

<div align="right">E. M. BLAIKLOCK</div>

vestibule. A passageway or hall used as an entry to a larger room. This English term is employed by the NRSV and other versions to render Hebrew *,êlam H395*, referring to the PORCH or portico of the temple (1 Ki. 6:3 and often). See TEMPLE IV.B.3.

vestment, vesture. See DRESS.

vestry. This English term, in its archaic sense of "wardrobe," is used by the KJV to render Hebrew *meltahâ H4921*, which occurs only once (2 Ki. 10:22).

Via Appia vee'uh-ah'pee-uh. See APPIAN WAY.

Via Dolorosa vee'uh-doh-luh-roh'suh. A phrase (Latin for "sorrowful way") used with reference to the traditional route followed by Jesus from the PRAETORIUM or Judgment Hall to GOLGOTHA, the place of his CRUCIFIXION. The exact route followed by Jesus after his condemnation to death by PILATE (Matt. 27:26; Mk. 15:15; Lk. 23:25; Jn. 19:16) is debated because of uncertainty regarding those two locations. The Praetorium has been placed by some at the Castle of ANTONIA at the NW corner of the temple area (e.g., L. H. Vincent in *RB* 59 [1952]: 513 – 30), and by others at the Palace of Herod near the Jaffa Gate (e.g., P. Benoit in *RB* 59 [1952]: 531 – 50). As for Golgotha, it may have been located at the site of the present Church of the Holy Sepulchre or at a place known as Gordon's Calvary.
Station 5 (Simon of Cyrene takes up the cross for Jesus) on the Via Dolorosa.

The traditional route followed by many pilgrims today begins near the so-called Ecce Homo arch in the vicinity of the Convent of the Sisters of Zion in modern Jerusalem. The present streets are many feet above the streets of 1st-cent. Jerusalem, and the Ecce Homo arch dates from a time after Christ. However, excavations in the property of the Sisters of Zion have uncovered remains that convincingly appear to be the Castle of Antonia. The Via Dolorosa follows a westerly direction to the Church of the Holy Sepulchre. On the route there are fourteen stations representing various scenes, some related in the Gospels and others preserved in Latin tradition, which occurred as Jesus made that tragic journey. These fourteen stations are: (1) Jesus is condemned to death; (2) Jesus receives the cross; (3) Jesus falls the first time; (4) Jesus meets his afflicted mother; (5) Simon of Cyrene helps Jesus to carry his cross; (6) Veronica wipes the face of Jesus; (7) Jesus falls the second time; (8) Jesus speaks to the daughters of Jerusalem; (9) Jesus falls the third time; (10) Jesus is stripped of his

garments; (11) Jesus is nailed to the cross; (12) Jesus dies on the cross; (13) the body of Jesus is taken down from the cross; (14) Jesus is laid in the sepulchre.

Although the authenticity of the Via Dolorosa cannot be firmly established (extensive investigation is made almost impossible by the structures of the modern city), nevertheless the events of that fateful Good Friday become more vivid when contemplated in the context of the old city of Jerusalem. (See J. Wilkinson, *Jerusalem as Jesus Knew It* [1978], 144 – 51; L. and K. Ritmeyer, *Jerusalem in the Year 30 A.D.* [2004], 70 – 71.)

B. VAN ELDEREN

Via Egnatia vee'uh-eg-nah'tee-uh. A major road linking the city of Dyrrhachium, on the W coast of MACEDONIA, to Byzantium, the easternmost city in Europe. Built c. 130 B.C. and named after the Macedonian proconsul Gnaeus Egnatius, the Egnatian Way passed through some of the cities visited by the apostle PAUL , such as THESSALONICA and PHILIPPI.

vial. See BOWL.

Via Maris vee'uh-mah'ris. This Latin phrase, meaning "the way of the sea" (cf. Isa. 9:1), refers to a major road that ran along the Mediterranean coast in southern Palestine and served as an international route (although some scholars question the appropriateness or historical accuracy of the term; see esp. *SacBr,* 250 – 51). Caravans traveling from EGYPT to either PHOENICIA or SYRIA would often go N through the PHILISTINE coastal towns of GAZA and ASHDOD. At JOPPA the road veered inland to APHEK, then continued N to MEGIDDO. Here one branch took travelers NW to ACCO, TYRE, and SIDON; another branch went NE to HAZOR and thence to DAMASCUS.

vice. See ETHICS OF PAUL III.C; SIN.

victual. This English term—especially in the plural, meaning "supplies of food, provisions"—is used more than twenty times by the KJV (e.g., Gen. 14:11; Matt. 14:15). Since the word is uncommon in everyday English, it is seldom found in modern versions. See FOOD.

village. Among various Hebrew words that can be translated "village," the most common is *hāsēr H2958*, referring to an unwalled but permanent settlement (Lev. 25:31 et al.; this term can often be rendered "courtyard" as well). Other relevant Hebrew words include *bat H1426* (lit., "daughter," Num. 21:25 et al.) and *kāpār H4107* (only 1 Chr. 27:25 and Cant. 7:11; k*ōper H4108* in 1 Sam. 6:18). In the NT, the Greek word *kōmē G3267* is used with some frequency (Matt. 9:35 et al.; outside the Gospels, only in Acts 8:25). See TOWN.

In distinction from a CITY, the village was unwalled and easy prey for conquest. Villages had no defensive facilities such as moats, towers, or fortified gates (Ezek. 38:11; here the word is *pĕrāzôt H7252*, referring to habitations in "open country"). When threatened, the villagers thronged into the city, increasing the danger of famine (cf. 2 Ki. 6:24 – 29). In Talmudic times a community was distinguished as a village if it did not have a SYNAGOGUE. In the NT, villages, cities, and country were the object of Christ's ministry (Mk. 6:56), but it is not clear that only cities had synagogues.

Villages increased in number northward from the NEGEV because of greater rainfall. In Chalcolithic times, the Middle Bronze era, and the Iron Age, the Negev was well-occupied, and in the Nabatean-Byzantine era most intensively, when careful conservation of rainfall prevailed. From HEBRON northward a gradual increase of villages occurred toward and beyond JERUSALEM, with the

greatest frequency in the territory of ZEBU-LUN of Lower GALILEE, where rainfall was greatest. In Roman times the Roman army made it a peaceful territory where the people lived without fear, and agriculture and industry flourished in its many villages. Upper Galilee was too broken and too wooded to support the agriculture necessary to village life. TRANSJORDAN was dotted with towns and villages before the 19th cent. B.C., and after the 13th cent. the villages were again mentioned in the record of the conquest. The raids of Gen. 14, as well at the destruction of SODOM and GOMORRAH, appear to be related to the hiatus in the record.

Aerial view of the reconstructed Talmudic village of Qatzrin on the Golan Heights.

Local village government was administered through the ELDERS who also acted as JUDGES (Ruth 4:2), but the villages were under the larger jurisdiction of the towns (cf. Josh. 15:20 – 62; 18:24, 28; et al.). The scene of these frequent functions was the city GATE, at times provided with benches (W. F. Albright, *Archaeology of Palestine* [1951], 139). The size of villages varied according to whether the country was farmed intensively or not. In the agricultural centers, grain was threshed within the confines of the villages. Activity increased at harvest time, but many of the villagers would be away with the herds at other times.

H. G. STIGERS

vine, vineyard. The English term *vine* can be applied to any of various plants that require support and that either climb by twining or that creep on the ground, but it is used more specifically of the grape plant, *Vitis vinifera* (Heb. *gepen H1728* [used of a wild climbing plant in 2 Ki. 4:39]; Gk. *ampelos G306*). The term *vineyard* always refers to a planting of grapevines (Heb. *kerem H4142*; Gk. *ampelōn G308*). See FLORA (under *Vitaceae*).

I. Viticulture in the ANE. The vine has been cultivated in PALESTINE from the earliest times. The climate there is peculiarly adapted to viticulture with the country's bright sunshine and the heavy dew of the late summer nights. The best location of a vineyard for the direct sunshine is on the gentle slopes of the hillside, where most of the vines have grown throughout the centuries in the Holy Land (Jer. 31:5; Amos 9:13). Of course, not all the vineyards are on hillsides. Important vineyards are on the plains, such as the Plain of ESDRAELON and around JERICHO.

When the Israelites arrived in Canaan the land was already devoted to viticulture (Deut. 6:11; Josh. 24:13; Neh. 9:25). The Israelites are said to have taken over this industry. Viticulture thrives best under peaceful conditions because the vines need constant care, and several years of watchful cultivation are necessary before they bear fruit (Zeph. 1:13). A vineyard calls for harder and more regular labor than any other form of agriculture. Constant pruning of the vines is necessary if the clusters of grapes are to grow to full maturity. The prophet ISAIAH describes the procedure usually followed in the cultivation of a vineyard (Isa. 5:1 – 4). The husbandman planted his vineyard "on a fertile hillside," which was fenced in for its protection from animals and thieves (cf. Ps. 80:12 – 13). He "dug it up and cleared it of stones" before planting it "with the choicest vines" (Isa. 5:2) in orderly rows about three paces from each other. "He built a watchtower in it" (cf. Matt. 21:33) to guard against the approach of intruders including foxes and boars (cf. Cant. 2:15; Ps. 80:13).

The watchtower in the vineyard was an ancient institution. It is mentioned frequently in the OT, as when Isaiah compares the "Daughter of Zion" to "a shelter in a vineyard" (Isa. 1:8). To complete the vineyard the husbandman "cut out a winepress" (5:2; NRSV, "hewed out a wine vat"). This was usually cut out of the solid rock and lined with mortar. Such wine presses have been found everywhere in Palestine. There were usually two, sometimes three vats, square, rectangular, or circular in shape and cut on different levels, connected with channels, the upper being the one in which the grapes were trodden out. The lower vats received the juice.

Most of the vines in Palestine trail on the ground, because it is believed that the grapes ripen more slowly under the shadow of the leaves. Too much exposure to the sun in the early period of the growth of the clusters would cause the grapes to ripen before they are fully grown. Sometimes the vines were permitted to climb along the branches of a tree (Ezek. 19:11), and in some areas the vines are grown over a trellis, providing a cool place where a person could sit (1 Ki. 4:25).

The grapes begin to ripen in July and continue to bear fruit into October, although the HARVEST usually takes place in September. The fresh grapes are eaten in great quantities during the season between July and September, but the early fruit is quite sour so that the "teeth are set on edge" (Jer. 31:29 – 30; Ezek. 18:2). Besides the fresh grapes, the vineyard produces raisins and WINE. In an open spot in the vineyard a smooth area is prepared where bunches of grapes are spread out to dry. They are frequently sprinkled with olive OIL to keep them moist, and turned over. When the grapes have been dehydrated to the proper point, they are stored usually in earthenware jars, becoming an important part of the food supply. Another product of the vine was grape HONEY; it was a boiled-down, molasses-like treacle or jelly and very sweet. It is still used in the Near E but was more important before sugar cane came into use. References to honey in the Bible frequently refer to this product rather than to the honey of the BEE.

The OT contains suggestions as to the regulations of viticulture. In accordance with the TITHE, the first tenth of every crop of grapes belonged to God. The Levitical instructions were that the farmer should leave the corners of his field unreaped for the poor: "Do not go over your vineyard a second time or pick up the grapes that have fallen. Leave them for the poor and the alien" (Lev. 19:10). The gleanings were to be left for the needy. Another regulation said, "If you enter your neighbor's vineyard, you may eat all the grapes you want, but do not put any in your basket" (Deut. 23:24). One may take enough to satisfy immediate needs, but no more. The regulations required that the vineyards were to lie fallow in the SABBATICAL YEAR (Exod. 23:10 – 11; Lev. 25:3 – 5). Other kinds of seeds were not to be planted in the vineyard (Deut. 22:9). This was in accordance with the general principle of guarding against unnatural combinations that violate the purity of the species (Lev. 19:19). Occasionally this regulation was ignored, as in the case of the man whose vineyard contained

a fig tree (Lk. 13:6).

II. Vines and vineyards as symbols. Vines and vineyards were sometimes symbols of prosperity and blessing among the ancient Hebrews. The messianic blessing of peace and security is symbolized thus: "Every man will sit under his own vine / and under his own fig tree, / and no one will make them afraid, / for the LORD Almighty has spoken" (Mic. 4:4; cf. 1 Ki. 4:25; Zech. 3:10). Abundant and fruitful vineyards were an expression of God's favor, as in Hos. 2:15 after Israel's spiritual restoration. In Gen. 49:22, JOSEPH is described as "a fruitful vine, / a fruitful vine near a spring, / whose branches climb over a wall."

The vine is frequently used as a symbol of Israel. The nation is compared to a choice vine that God brought from Egypt and planted in the land of promise, where "it took root and filled the land" with blessing (Ps. 80:9). But she became "a corrupt, wild vine" (Jer. 2:21; cf. Ps. 80:13; Isa. 5:1 – 7). Some have thought that the plant referred to by Jeremiah is *Vitis orientalis* (synonym *Ampelopsis orientalis*), a climbing shrub well known all over ASIA MINOR and SYRIA; it has a resemblance to the vine, but bears red fruits like red currants (might these be the wild grapes of Isa. 5:2 and 4?). Others claim that the plant was a useless seedling of the ordinary vine, which would of course look similar to a cultivated vine, but which would bear worthless fruit. This is the wild or seedling vine to which Ezekiel refers, the only value of which is as fuel for the fire (Ezek. 15).

The vine was also sometimes a symbol of adversity and God's judgment (Deut. 28:30; Amos 5:11; Zeph. 1:13). The identification of the so-called "vine of Sodom" (Deut. 32:32) is uncertain. Some have identified it with the Colocynth (*Citrullus colocynthus*), a wild herbaceous vine called also "bit ter gourd" and "bitter apple." The fruits are round and look like oranges, sometimes mottled with green; from their bitter pulp is prepared a powerful cathartic. This plant was found around the Dead Sea. In Deut. 32:15 – 38, Israel is compared to a vine whose fruit is bitter and poisonous. The thrust of the statement is that Israel's sins are the inevitable result of their corrupt nature, a stock comparable to the corruption that led to the destruction of SODOM and GOMORRAH. (See further C. E. Walsh, *The Fruit of the Vine: Viticulture in Ancient Israel* [2000]; P. D. Akpunonu, *The Vine, Israel and the Church* [2004].)

A. C. SCHULTZ

vinegar. A sour liquid consisting of acetic acid, produced by the fermentation of WINE or other alcoholic liquors. Faulty methods of manufacture produced in ancient times an inferior wine liable to turn sour rapidly (Heb. *hōmes H2810*, from *hāmēs H2806*, "to be leavened or sour"; Gk. *oxos G3954*, cf. *oxys G3955*, "sharp," and figuratively "acid-tasting"). It was equivalent to the Roman *posca*, a cheap sour wine which, mixed with water, was the common beverage of peasants (cf. Ruth 2:14). The book of Proverbs speaks of its strong acidic taste ("as vinegar to the teeth," Prov. 10:26) and its irritant quality ("like vinegar poured on a wound," 25:20 TNIV; cf. B. K. Waltke, *The Book of Proverbs Chapters 15 – 31* [2005], 306).

The NAZIRITE'S vow of abstinence excluded this form of alcoholic beverage, as well as the intoxicating wine of more common use in higher levels of society, because such a vow could be made in all strata of the community (Num. 6:3). The wine used antiseptically by the Good Samaritan was of the more costly variety (Lk. 10:34). It is uncertain whether the vinegar offered to Christ on the cross was the soldiers' ration wine, the *posca* brought by the squad on duty, and thus possibly given in kindliness rather than derision (Matt. 27:48; Mk. 15:63; Lk. 23:36; Jn. 19:29; cf. the discussion by D. A. Carson on Matt. 27:34 and 27:48 in *EBC*, 8:575, 579).

A curiosity of literature is the so-called "Vinegar Bible," a magnificent edition of the KJV published by J. Baskett in 1717 that included numerous beautiful engravings, but also many mistakes (it is sometimes referred to as "the Baskett-full of Errors"). The nickname is derived from the fact that the heading for the parable of the vineyard in Lk. 20 was misprinted as "the parable of the vinegar."

viol. This English term is used by the KJV in four passages (Isa. 5:12; 14:11; Amos 5:23; 6:5) to render Hebrew *nēbel H5575*, which means "harp" or "lyre." Elsewhere the KJV translates "psaltery" (1 Sam. 10:5 et al.). See MUSIC, MUSICAL INSTRUMENTS IV.D.

violet. See BLUE; PURPLE.

viper. This English term, like *adder*, is applied generally to any of a family of venomous SNAKES (*Viperidae*, though it often refers specifically to *Vipera berus*), and the biblical texts do not provide sufficient information to identify particular species with certainty. The NIV uses the word to render Hebrew *šĕpîpōn H9159*, probably the horned or sand viper (*Cerastes cornuta* [also *Cerastes cerastes*], only Gen. 49:17); *akšûb H6582*, probably the same or a similar species (only Ps. 140:3); and *siponî H7626*, possibly the Palestine viper (*Vipera xan-thina palestinae*, Prov. 23:32 et al.; cf. *sepaʿ H7625*, only Isa. 14:29). The NRSV uses "viper" also as the rendering of ʾepʿeh H704, which may refer to the carpet viper (*Echis coloratus*, Job 20:16; Isa. 30:6; 59:5b; NIV, "adder"). In the NT, "viper" translates Greek *echidna G2399* (Matt. 3:7 et al.) and *aspis G835* (only Rom. 3:13; see ASP).

One of the OT references, Isa. 59:5, uses two of the Hebrew terms: "They hatch the eggs of vipers [*siponî*], / and spin a spider's web. / Whoever eats their eggs will die, / and when one is broken, an adder [*epʿeh*] is hatched" (the NRSV and NJPS invert the terms "viper" and "adder"). Although purely figurative, this passage may confirm that vipers are in view. In most members of this family, the eggs are retained in the body of the female until they hatch and are ready to emerge. If a gravid snake is crushed these may appear. Such an accident gives rise to the old story that a viper swallows her young to protect them in time of danger.

Of the five NT occurrences of *echidna*, four are in the expression "brood of vipers," used by JOHN THE BAPTIST (Matt. 3:7; Lk. 3:7) and by the Lord (Matt. 12:34; 23:33). Reference is clearly to dangerous snakes, while the word "brood" (from *gennēma G1165*, "child, offspring") suggests the batch of young vipers that emerge from the mother, anything from a dozen or so in smaller species to fifty or more in the giant vipers. The remaining reference is the only literal one (Acts 28:3), which records that PAUL was bitten by a snake. This is traditionally identified as the common viper of the Mediterranean, but today there are no venomous snakes on MALTA. It is possible that the viper became extinct after Paul visited the island, though some have argued that the species concerned was harmless (in undeveloped countries even today all snakes are regarded as poisonous, and a "bite" by even a nonpoisonous species can result in severe shock). According to a recent view, the island was not Malta but Cephallenia (modern Kefallinia, in the Ionian Sea off the W coast of Greece), where the long-nosed or nose-horned viper, *Vipera ammodytes*, is still found (H. Warnecke, *Die tatsächliche Rom-fahrt des Apostels Paulus* [1987], 108–10), but this identification is not generally accepted.

<div align="right">G. S. CANSDALE</div>

virgin. This English term (from Latin *virgo*, "maiden, [unmarried] young woman," often with the connotation of chastity) has several uses, including "an unmarried woman who has devoted herself to a religious life." In common modern usage, however, it most frequently refers to a woman who has not had sexual intercourse, though the term is often applied to men as well. In what follows, the English term *virgin* will be used in this specific sense.

The relevant Hebrew terms are *betûlâ H1435*, which occurs over fifty times (Gen. 24:16; Exod. 22:16 – 17; et al.), and ⟨*almâ H6625*, which is used only seven times (Gen. 24:43; Exod. 2:8; Ps. 68:25; Prov. 30:19; Cant. 1:3; 6:8; Isa. 7:14). The former term is rendered "virgin" in the standard lexicons, and this translation does seem appropriate in many, or even most, passages. Moreover, the abstract cognate *betûlîm H1436*, a plural form, appears to indicate virginity (Lev. 21:13 [clarified in v. 14]; Jdg. 11:37; in Deut. 22:14 – 20, it means "evidences of virginity"; but see on Ezek. 23:3 and 8 below).

There are, however, several considerations that should be kept in mind. (a) In a number of passages where *betûlâ* occurs, nothing in the context suggests that virginity is a factor under consideration, and thus the rendering "maiden" or "young woman" is more appropriate; this is especially true in poetic passages where the word is used in parallel with *bahûr H1033*, "young man" (Deut. 32:25 et al.). (b) Sometimes the word *betûlâ* is accompanied by the comment that the woman or women in question had not had sexual relationships (Gen. 24:16; Jdg. 21:12). It may be that such descriptions are simply intended to emphasize the point, but it is also possible that the word by itself did not necessarily indicate virginity and that a qualification was needed to remove the ambiguity. (c) In at least one passage, the word is used of young women who have had sexual intercourse (Esth. 2:19, applied to the "virgins" who have already spent a night with the king; Joel 1:8 probably refers to a betrothed virgin who was not able to marry her intended husband); and Ezekiel uses the term *betûlîm* in his symbolic representation of a woman involved in prostitution (Ezek. 23:3, 8).

Old photograph (1905) of a young Algerian woman.

What may have been the precise status (sexual or social or other) indicated by *betûlâ*, particularly in legal contexts, is a matter of debate. It may well be that the word had a fairly general meaning, "[marriageable] young woman"; and because in Hebrew society (as in many others) it would be assumed that she was a virgin, the word probably took on the sense of "chaste." J. H. Walton proposes the definition, "an ostensibly reputable young girl who is past puberty and is, by default at least, still in the household of her father" (*NIDOTTE*, 1:782).

The second Hebrew term, ʿ*almâ*, is clearly the feminine form of ʿ*elem H6624*, "young man" (only 1 Sam. 17:56; 20:22), and the abstract plural form ʿ*alûmîm H6596* appears to mean "youth" or "youthful vigor" (Job 20:11; 33:25; Ps. 89:45; Isa. 54:4). Thus the lexicons give "young woman" or the like as the meaning of ʿ*almâ*. Similarly, most versions use "maiden" or "young woman" or even "girl" (Exod. 2:8) as the rendering of the word in a majority of its occurrences. The KJV uses "virgin" in four instances (Gen. 24:43; Cant. 1:3; 6:8; Isa. 7:14), the NIV in only two (Cant. 6:8; Isa. 7:14), and the NRSV not at all. The occurrence of *almâ* in Cant. 6:8 is of lexical significance because

in this verse the term is contrasted to "queen" and "concubine"; even here, however, the reference is ambiguous (true virgins? women in the royal harem that have not borne children?). That the term may be applied to virgins is not in doubt (Gen. 24:43 [parallel to *betûlâ*, v. 16]; Exod. 2:8), and no passage requires a reference to someone who is not a virgin (even Prov. 30:19 very likely has in view a woman's initial sexual experience; cf. B. K. Waltke, *The Book of Proverbs Chapters 15 – 31* [2005], 491 – 92). On the other hand, the evidence does not suggest that the term by itself indicates virginity.

Clearly, *betûlâ* and *almâ* overlap in meaning, and apart from the fact that the former term is much more frequent, drawing a clear distinction between them is difficult (J. H. Walton [in *NIDOTTE*, 3:417] seems to suggest, on the basis of Isa. 54:4, that the latter term implies the ability or opportunity to bear children, but the argument is not convincing). This factor affects our understanding of *almâ* in the most controversial passage, Isa. 7:14, which traditionally has been translated, "Behold, a virgin shall conceive, and bear a son" (KJV; NIV, "The virgin will be with child and will give birth to a son"); the NRSV and other modern versions, however, use "young woman" in this passage. Some have argued that if Isaiah had intended the meaning "virgin," he would have used *betûlâ* instead, but clearly this argument does not work, for as noted above *betûlâ* too often has a general meaning without reference to sexual experience (cf. also E. J. Young, *The Book of Isaiah*, 3 vols., NICOT [1965 – 72], 1:288, though he overstates his case when he claims that *almâ* "seems to be the only word in the language which unequivocally signifies an unmarried woman"). On the other hand, it is a fair argument to say that if Isaiah had wanted to stress the woman's virginity, he had other means of doing so (e.g., "a woman who has not known a man," as in Num. 31:35). It may well be that *almâ*, like *betûlâ*, refers normally to a young woman of sexual maturity who is unmarried and therefore assumed to be a virgin.

In Isa. 7:14, as is well known, the SEPTUAGINT (followed by Matt. 1:23) translates *almâ* with Greek *parthenos G4221*, which usually means "virgin." This Greek term too, however, is not free of ambiguity, and in many passages the sense "young [*or* unmarried] woman" is preferable (cf. Aristophanes, *Clouds* 530, in which a woman who had given birth to a child and had decided to abandon it says, "I was still a maiden [*parthenos*], and I was not permitted to bear [a child]"). In later Greek the narrower sense "virgin" is more common, and the LXX normally itself uses *parthenos* to translate *betûlâ*; but occasionally this Greek word is also found as the rendering of *almâ* and *na(arâ H5855*, "girl" (cf.Gen. 24:14, 16, 43; Deut. 22:19; et al.; for more details, see *TDNT*, 5:826 – 37).

In the NT, *parthenos* is used with reference to MARY, MOTHER OF JESUS (Lk. 1:27), who is explicitly described as not having known a man (v. 34) and as having conceived supernaturally prior to her being joined to Joseph (Matt. 1:18). Thus her virginity does not depend on Matthew's citation from Isaiah, though undoubtedly the evangelist regarded the LXX rendering as singularly appropriate. See VIRGIN BIRTH. Other uses of the word in the NT include the parable of the ten virgins (Matt. 25:1, 7, 11), the reference to PHILIP's "unmarried daughters" (Acts 21:9), PAUL's discussion about whether virgins should marry (1 Cor. 7:25 – 38), and its occurrence with the masculine definite article referring to chaste men (Rev. 14:4). See also MARRIAGE.

Virgin, Apocalypse of the. Title given to two late works in which MARY, MOTHER OF JESUS was shown the tortures of the damned. Both documents are dependent on earlier works and quite distinct from the widespread legend of the ASSUMPTION OF THE VIRGIN.

(1) The first work is extant in Greek and other versions, and was edited by M. R. James in 1893

(*Apocrypha anecdota*, 115 – 26). The Virgin prays to be told about the torments of hell, and MICHAEL is sent to guide her. In the W she sees the lost who did not worship the TRINITY, and unbelievers for whom no one has yet interceded; in the S the souls of sinners are immersed at varying depths in a river of fire. In the W again she sees the fate of other sinners, an interesting catalog including that of those who had lain in bed late on Sunday and those who had not risen at the entry of a priest (appropriately condemned to sit on fiery seats!). Others placed "on the left hand of paradise" are the Jews who crucified Jesus, those who denied baptism, and those guilty of various impurities. The Virgin entreats all the saints to intercede with her, and the Son grants the days of Pentecost as a season of rest for the lost. The chief interest of this text lies in its revelation of what the author considered sinful, and the punishments he felt appropriate.

(2) The completely different Ethiopic apocalypse is almost wholly borrowed from the *Apocalypse of Paul* (see PAUL, APOCALYPSE OF), but one section shows affinity with that of Peter (see PETER, APOCALYPSE OF). John is the narrator and describes the mystery revealed to Mary, which she had recounted to him. The contents represent chs. 13 – 44 of the *Apocalypse of Paul*, sometimes amplified with biblical quotations. (See further *ABD*, 6:854 – 56.)

R. McL. WILSON

Virgin, Assumption of. See ASSUMPTION OF THE VIRGIN.

virgin birth. The supernatural birth of JESUS CHRIST, who was conceived through the HOLY SPIRIT and born of a virgin (Matt. 1:18 – 25; Lk. 1:26 – 38).

I. Definition. Virgin birth, as here considered, is a specific term. It refers only to Jesus Christ and the manner in which he came into the world, as described in Matthew and Luke, as believed by the early church, and as held in the Christian creeds through the centuries. The unique person and mission of Christ, as well as the specific manner of his INCARNATION, put this event in a class by itself. Comparison with other miraculous births, discoveries of birth myths, or even scientific experimentation and achievement in human methods of reproduction would neither support nor invalidate this unique and divine act of incarnation. This is the virgin birth in which, it is claimed, the Word was made flesh (Jn. 1:14).

A. The fact. The gospel accounts are not presented as myths, legends, didactic devices, or "noetic" patterns to popularize Christianity to the naive masses (cf. T. Boslooper, *The Virgin Birth* [1962], 227 – 30). They purport to state factually the data needed to solve a crucial problem in the minds of believers: How could Jesus, a man, be the SON OF GOD and Savior? The two parts of the explanation occur in the two Gospels that the early church considered the earliest. The report was accepted as factual. The explanations were not repeated in later works. Before long, no one was baptized into the faith without expressing faith in the virgin-born Christ. In the earliest literature that reflects direct confrontation with pagan, Jewish, and heretical contenders, the fact of the virgin birth is defended as both true and fundamental.

B. Presupposition. Only in a certain context, of course, could this position be held. Both the Scriptures and the believers assumed the supernatural. God was no MYTH. He was the sovereign, transcendent Being, who was also Creator. He who made man in the beginning could accommodate to him and communicate with him. The early Christians saw no problem in a God who acts and speaks

and redeems. In the context of Scripture and the faith of a regenerate and Spirit-filled church, the virgin birth of Christ was no more unthinkable than the other three ways by which people have come into the world (ADAM with neither father nor mother, EVE from Adam's side, and others with both father and mother). God was utterly real. His acts and words were fact and truth. Gnostics, Docetists, pagans, and unconverted Jews did not always share this context of faith. Therefore, they did not share the Christian belief in an actual incarnation by the virgin birth, but the belief survived in orthodox Christianity.

II. Importance. It is not contended that God could not have sent the Savior in any other way. It is simply affirmed, on the basis of Scripture, that this is how he did it. The virgin birth is consistent with the other great facts of redemption in a way that no other explanation is. Consistent orthodoxy demands the virgin birth. As was pointed out even by the controversial scholar Charles A. Briggs (in *AJT* 12 [1908]: 201): "Undoubtedly the divinity of Christ is the most essential doctrine, the incarnation is secondary to this, and the virgin birth of a third grade of importance. I have already recognized that a man may doubt or deny the third without, in his own mind, denying the second, or the first. And yet, from a historic and dogmatic point of view, he surely has put himself in an untenable position, which he cannot maintain. Historically and logically the divinity of Christ and incarnation are bound up with the virgin birth, and no man can successfully maintain any one of them without maintaining them all."

A. In the early church. Accordingly, it is not strange that "there is no fact, no Christian doctrine that is more emphasized by the early Christian writers than that of the virgin birth of our Lord" (Briggs, 199). They considered it essential, used it in the baptismal formula and the earliest creed, and vigorously defended it in the debates with nonbelievers. No voice of doubt or protest is recorded within the early church.

B. In modern times. The facts have not changed, only the climate. The authority of the Bible is still involved. Those who accept the Scriptures as the fully reliable Word of God do not doubt the virgin birth. The factual account must still be accepted or rejected. It is true or false. If redemption is not based on the kind of incarnation that is reported in the Scriptures, what can be believed about it? As J. P. Lange says of the virgin birth, "Its positive denial robs every other doctrine of Christianity of its full value. Neither the death of Christ nor his resurrection can be known in their whole significance, if his birth is positively misconceived. In this case, there is a crack in the bell, and its pure, full, penetrating sound is gone" (*The Life of the Lord Jesus Christ*, 4 vols. [1872], 1:279). Or, as J. G. Machen says, "Let it never be forgotten that the virgin birth is an integral part of the New Testament witness about Christ, and that that witness is strongest when taken as it stands" (*The Virgin Birth of Christ* [1930], 396).

III. Source of the doctrine. It is often said that the doctrine of the virgin birth comes from the 2nd cent. This can hardly be true. The virgin birth was as explicit in the early Roman form of the APOSTLES' CREED as in the 5th- or 6th-cent. Gallican form. TERTULLIAN and IRENAEUS used the creed; therefore, it must have been extant by the middle of the 2nd cent. Indeed, F. Kattenbusch (*Das apostolische Symbol*, 2 vols. [1894 – 1900], 2:328) placed it at about A.D. 100, and T. Zahn (*Das apostolische Symbolum: Eine Skizze seiner Geschichte und eine Prüfung seines Inhalts*, 2nd ed. [1893], 47) supposes that the baptismal formula attained essentially the form which it has in the old

Roman symbol at some time between 70 and 120. Since no new, strange, or debatable doctrine would be incorporated into the baptismal formula or into so brief and elementary a creed, the doctrine must have been old when the creed was established.

Earlier writers support the same conclusion. JUSTIN MARTYR (d. 165) defends the virgin birth at length against Jewish and pagan objections and shows familiarity with its mention in Christological summaries, such as are used in exorcism (Machen, *Virgin Birth of Christ*, 5). IGNATIUS (d. 117), in debate with Docetists who denied the real body of Jesus, insisted not only on Jesus' birth but also on its having been a virgin birth (*Smyrn.* 1.1). A. von Harnack says that "Ignatius has freely reproduced a 'kerygma' of Christ which seems, in essentials, to be of a fairly historical character and which contained, inter alia, the virgin birth, Pontius Pilate, and the *apethanen*" (in Herzog-Hauck, *Realency-klopädie fur protestantische Theologie und Kirche*, 24 vols. [1896 – 1913], 1:751).

These testimonies are unequivocal. They are not dealing with a new doctrine. No protest within the church has to be answered. The only objectors are on the outside. All believers were baptized in this faith. The one alleged and much publicized exception to universal agreement within the church is in *Dialogue with Trypho* when Justin argues that some Jews accept the messiahship of Jesus without accepting his preexistence and virgin birth. Justin's statement has been misread as saying "our race" instead of "your race" and so has been applied to Christians. Harnack exposed the error. Machen explains and confirms his findings (*The Virgin Birth of Christ*, 15 – 16). The situation is clear. The virgin birth was already an old and long-established distinctive of the Christian church early in the 2nd cent.

The time and manner of the first public statement about the virgin birth, however, is a matter of conjecture. It cannot be later than the Gospels that bear the account (Matthew and Luke). The facts may have been known earlier, at least by some. The moves from Nazareth to Bethlehem, then to Egypt and back to Nazareth may have permitted Mary and Joseph to keep the secret from all but the most trusted confidants until God's own time of vindication. When faith in Christ had already been demonstrated, the explanation solved a problem. Where such faith was lacking, the account would have been abused or rejected if given prematurely. J. Orr thinks that Matthew and Luke are the source of any public knowledge of the birth of Christ (*The Virgin Birth of Christ* [1907], 67). Sooner or later the facts had to be shared by Mary and Joseph. Is it not reasonable to suppose that the report would be given to the leaders of the church and especially to those who were committing the gospel to writing?

IV. Gospel accounts. The whole NT presents a divine-human Savior. Only Matthew and Luke explain the means of the incarnation. Repetition is unnecessary. Consistency with the revelation is sufficient.

A. Linguistic factors. Mary is called a VIRGIN (*parthenos G4221*) in Matt. 1:23 and in Lk. 1:27. The former is a citation of Isa. 7:14, where it is said that a virgin (Heb. (*almâ H6625*) was to conceive and bear a son. In biblical usage, the word always may and often must be construed to mean an unmarried young woman. The connotation of "pure" is often associated with at least the NT usage. Both words have been demonstrated to have a broader extrabiblical meaning at times. Linguistic evidence, then, renders the virgin birth probable, but needs the support of the positive statements in the context for certainty.

B. Literary factors. All alleged ambiguity vanishes when the passages are read in full. Specifically,

it was "before they came together" that Mary "was found to be with child through the Holy Spirit" (Matt. 1:18). The assertion is repeated that Joseph "had no union with her until she gave birth to a son" (1:25). Luke is no less specific. Mary's response to the annunciation was one of bewilderment. She said, "How can this be, since I am a virgin?" (Lk. 1:34 NRSV). The answer was, in effect, "No husband is necessary. God will cause you to conceive" (v. 35). These are the clear affirmations of the virgin birth. They cannot be explained away by textual evidence. They can only be accepted or denied. The reporting is modest but clear. It is history or the boldest fiction.

C. Documentation. The facts formed a network of interlocking prediction and data that broadened the witness and reduced the normal probability of chance fulfillment to absurdity. What if Elizabeth or Mary had borne a girl? Or what if something else had broken the predicted pattern? Abundance of detail guaranteed the authenticity of the accounts. This birth is not only an event in time; it is the event from which, as if arranged by a true instinct, time is reckoned forward and backward. It is a historical fact full of the mysteries of both the divine and the human. It is the handle by which one can take hold of God's greatest self-revelation in Jesus Christ, Son of God and Son of Man. If this is not the true explanation, no one will ever know how the Redeemer came. No other adequate explanation has been given.

V. Alleged silence. It has been objected that the virgin birth cannot be true in view of the silence of the rest of the NT.

A. Doubtful silence. Explicit statement is indeed lacking, except in Lk. 1 and Matt. 1. Are there not allusions, inferences, and expressions that could hardly be understood apart from such a belief? How did Mark think Jesus could be the "Son of God" (Mk. 1:1)? Why did Mark quote reference to Jesus as "the carpenter" when Matthew called him "the carpenter's son" (6:3; Matt. 13:55)? Was it not to avoid a misunderstanding, whereas Matthew had answered the question by his opening chapters? John dwells continually upon the divine glory and attributes of Jesus but gives no account of his birth. The "Word became flesh" (Jn. 1:14). But how?

Paul's emphasis is on the death and resurrection of Christ, not on his birth, hence not on the virgin birth. How does one explain Paul's strange ways of referring to the coming of Christ as "being sent" (Rom. 8:3), having "made himself nothing" (Phil. 2:7), "taking the very nature of a servant" (ibid.), etc.? Did he know how it occurred? Undoubtedly he did if Luke, his assistant, did. Irenaeus said, "Luke, a companion of Paul, wrote in a book the gospel preached by the latter" (*Haer*. 3.1). In any case, the early church had no doubt of the intention of the Scripture writers or of the fact of the virgin birth. Their testimony is so clear that Briggs dares to affirm, "it is therefore a perversion of history for anyone to say that 'born of Mary the virgin' means any less than what St. Luke gives us, or than Ignatius, Justin, Irenaeus, Hippolytus and Tertul-lian battle for" (*AJT* 12 [1908]: 199).

B. Reasons for silence. In the nature of the case, the report of the virgin birth does not need constant repetition. If the explanation is available and known, that is enough. This is especially true in view of the nature of the first transmission of the gospel facts. They were reported as good news (Mk. 1:1) or as a proclamation (1 Cor. 2:4). They were not a committee report evolving from dialogue or even from the life of the church. They were a tradition (2 Thess. 3:6) handed down by the apostolic witnesses. This content of the oral and written gospels was not debated but accepted. This tradition, in its written form at least, included the virgin birth. It was accepted and became a pillar of the faith,

expressed in the baptismal formula and the earliest creed. Debate would have been considered irreverent except to convince pagans, heretics, and unbelieving Jews.

VI. Conclusion. The faith of the early church included belief in the virgin birth because it was a clear teaching of the NT. To reject it would have been tantamount to denying the Word of God and being aligned with the pagans, heretics, and unbelieving Jews. The virgin birth was not a stumbling block. It was a pillar of their faith. So it has continued.

(In addition to the titles mentioned in the body of this article, see A. Edersheim, *The Life and Times of Jesus the Messiah*, 2 vols. [1886], 1:144 – 59; W. Ramsay, *Was Christ Born at Bethlehem?* [1898], 73 – 91; L. Sweet, *The Birth and Infancy of Jesus Christ* [1906]; F. Ramsay, *The Virgin Birth* [1926]; D. Welburn, *From a Virgin Womb: The Apocalypse of Adam and the Virgin Birth* [2008].)

W. T. DAYTON

virtue. This English term, meaning "moral excellence," is rarely used in modern Bible versions, but it occurs in the KJV as the rendering of Greek *aretē G746* (Phil. 4:8; 2 Pet. 1:3, 5; the KJV uses it also to translate *dynamis G1539*, "power," referring to Jesus' miraculous ability in Mk. 5:30; Lk. 6:19; 8:46). In a few OT passages, the KJV uses "virtuous woman" to render the Hebrew phrase *ʾēšet-hayil* (*H851 + H2657*), which literally means "woman of power" and indicates competence or noble character (Ruth 3:11; Prov. 12:4; 31:10; cf. 31:29, "virtuously").

Among Greek moralistic writers, especially the STOICS, the term *aretē* was used very frequently to indicate the highest good, the social uprightness that evokes recognition, merit, and honor. Both PAUL and PETER employ this term in lists of positive moral traits (Phil. 4:8 and 2 Pet. 1:5; the focus is different in 1 Pet. 2:9 [a pl. translated "praises" by the NIV and "mighty acts" by the NRSV] and 2 Pet. 1:3 [referring to God and usually translated "goodness," but possibly meaning "power"]). Some scholars argue that the word in these lists must convey the meaning it has in Greco-Roman writings, especially in the numerous catalogs of positive and negative traits of behavior referred to as "virtue-vice lists" (cf. *ABD*, 6:857 – 59). Undoubtedly, the language used by the apostles reflects the world in which they lived, but given the Christian context, it is difficult to believe that they were merely asking their readers to conduct themselves like well-behaved Greeks. The word rather signifies the moral excellence distinctive of those who have been cleansed from their sins: it builds on faith and generates godliness and love (2 Pet. 1:5 – 9; cf. also the detailed discussion in P. T. O'Brien, *The Epistle to the Philippians: A Commentary on the Greek Text*, NIGTC [1991], 499 – 507). See ETHICS OF PAUL III.C.

vision. This English word, while including within its meanings that of physical sight or ocular perception, places the emphasis on those dimensions that are extraphysical—something seen otherwise than by ordinary sight, something beheld as in a dream or ecstasy, or revealed as to a prophet; a visual image without corporeal presence, an object of imaginative contemplation; unusual discernment or foresight. Several Hebrew words can be translated "vision," the most frequent being

hazôn H2606 (from the verb *hazâ H2600*, "to see"; cf. also the related nouns *hizzayôn H2612* and *mahazeh H4690* and the Aram. cognate *hezû H10256*). Occurring ten times is *mar,â H5261* (from another verb meaning "to see," *rā,â H8011*; the similar and very common noun *mar,eh H5260* usually refers to a physical seeing, but in a few passages it too can be translated "vision"). The NT writers use three Greek works: *optasia G3965*, *horama G3969* (the most frequent), and *horasis G3970*.

References to visions are especially frequent in the book of Daniel, a factor that, considering the nature of this book, may furnish insight into the peculiar and suggestive connotations of the word. (See DANIEL, BOOK OF.) The references there and elsewhere in the OT seem consistent with the manifest nature of God. Throughout the Scriptures, God is declared as revealing himself and making his ways known through chosen individuals. The PATRIARCHS commonly reported that God had chosen to make his messages known through a vision. "After this, the word of the LORD came to Abram in a vision" (Gen. 15:1). Speaking to AARON and MIRIAM, God said, "When a prophet of the LORD is among you, / I reveal myself to him in visions, / I speak to him in dreams" (Num. 12:6). Although the NT records a few instances of visions during the apostolic period (Acts 9:10, 12; 10:3; et al.), the coming of Christ supersedes other means of REVELATION: "In the past God spoke to our forefathers through the prophets at many times and in various ways, but in these last days he has spoken to us by his Son" (Heb. 1:1 – 2a). See also DREAM; PROPHETS AND PROPHECY; TRANCE.

visitation. This English term, in the sense of a special manifestation of divine favor or displeasure, is rarely found in modern versions but is used by the KJV in about a dozen passages (most of them in Jeremiah, e.g., Jer. 8:12; 10:15) to render Hebrew *pequddâ H7213*, which has various meanings, such as "appointment," "supervision," and "punishment." In the KJV NT it occurs twice (Lk. 19:44; 1 Pet. 2:12) as the rendering of *episkopē G2175*, which has a semantic range similar to that of the Hebrew word. Similarly, the very common Hebrew verb *pāqad H7212* ("to inspect, take note of, attend to, visit, appoint") is often used of God with reference to his activity, whether gracious or punitive. For example, when recounting that God fulfilled his promise to SARAH that she would bear a child, the biblical text says, "And the LORD visited Sarah as he had said" (Gen. 21:1 KJV; NIV, "was gracious to Sarah"; cf. also 50:24 – 25; Exod. 3:16; Ruth 1:6; 1 Sam. 2:21; et al.; in the NT, *episkeptomai G2170* ["to examine, visit, look after"], Lk. 1:68 et al.). Conversely, after the Israelites worshiped the golden calf, God said, "in the day when I visit I will visit their sin upon them" (Exod. 32:34 KJV; NIV, "when the time comes for me to punish, I will punish them for their sin"; cf. also Lev. 18:25; Ps. 59:5; Isa. 26:14; et al.). (See *NIDOTTE*, 3:657 – 63; 1:190 – 91.)

Vophsi vof's*i* (H2265, derivation uncertain). Father of Nahbi; the latter, representing the tribe of NAPHTALI, was one of the twelve spies sent out to reconnoiter the Promised Land (Num. 13:14).

votive offering. See SACRIFICE AND OFFERINGS IV.C.

vow. A pledge or OATH of a religious character, and a transaction in which a person dedicates himself or his service or something valuable to God. A common feature in ancient religions, the vow was also a frequent exercise in religious life among the Israelites. Though it was generally a promise made in expectation of a divine favor eagerly sought, there were also vows of voluntarily imposed self-discipline for the achievement of character, and of self-dedication for the attainment of certain goals.

Of the first kind, sometimes called "bargains" (they were made on condition of favors to be

returned by God), are those made by JACOB, who vowed to make BETHEL a shrine and to give a tithe if God would supply his needs and give him protection (Gen. 28:20 – 22); by JEPHTHAH, who vowed as sacrifice to God whatever should first meet him on his return if God would grant him victory over the Ammonites (Jdg. 11:30 – 31; in grief he offered his only child who so met him, vv. 34 – 40); by HANNAH, who vowed that if God should grant her a son she would consecrate him to God's service (1 Sam. 1:11, 27 – 28). Of this nature, no doubt, are most of the vows so frequently mentioned in the Psalms, vows of thanksgiving and sacrifice paid to God for prayers answered and deliverances granted (Pss. 22:25; 50:14; 56:12; 65:1 – 2, 8; 116:14, 18). Somewhat related is ABSALOM's vow to serve the Lord if God would bring him again to Jerusalem, but perverted to conspiratorial use in his rebellion against his father DAVID (2 Sam. 15:7 – 12). The vows made by the seamen after JONAH was cast overboard were perhaps more in the nature of a pagan attempt to propitiate a deity whom they "greatly feared" (Jon. 1:15 – 16).

There were also vows made for discipline of life and purpose, in dedication or CONSECRATION to God, and for the accomplishment of a set goal. The major vow in this category was the NAZIRITE vow, the promise of one separated or consecrated to God, and for which certain austerities and enunciations were prescribed (Num. 6:1 – 8); release from them could be obtained after fulfillment and designated sacrifices (6:13 – 21). SAMSON, SAMUEL, and JOHN THE BAPTIST were apparently Nazirites for life. Other vows short of this major commitment include David's promise to give himself no rest until he should have found a house for the Lord (Ps. 132:2 – 5), the "choice vows" associated with the call of Israel to obedience (Deut. 12:11 KJV), the vows associated with free-will offerings (Num. 29:39), the solemn binding of the soul to God (Num. 30:2). See SACRIFICE AND OFFERINGS IV.C. PAUL and his associates assumed vows to show conformity to Jewish law for the sake of appeasement without surrender of conscience (Acts 18:18; 21:23 – 24). Of less wise or worthy character are SAUL's adjuration against eating food till victory be secured (1 Sam. 14:24), and the vow of Paul's enemies to abstain from food until they had slain him (Acts 23:21).

In the OT vows were not commanded, but those made were carefully regulated. It was no sin to forbear making a vow (Deut. 23:22), but once made it was solemnly binding (vv. 21, 23; Eccl. 5:4). For this reason there were warnings against vows rashly made (Eccl. 5:5 – 6; Prov. 20:25); and for security against vows not responsibly or rashly made, vows could be disallowed by a father for a daughter in her minority (Num. 30:5), or by a husband for the rash utterance of his wife (v. 8).

The fulfillment of vows was strongly emphasized in the OT, and set up as significant indication of the piety and faithfulness of God's people (Pss. 22:25; 50:14; 56:12; 76:11; Isa. 19:21; Jer. 44:25; Jon. 2:9; Nah. 1:15). Only that could be pledged to God which belonged to the devotee; firstlings and tithes were considered as already belonging to God (Lev. 27:26 – 30). Blemished sacrifices or offerings in payment of vows were forbidden and brought under severe censure (Mal. 1:14), and "the earnings of a female prostitute or of a male prostitute" were an abomination to God and not to be used in payment (Deut. 23:18).

Jesus rebuked as reprehensible the payment of vows when used as occasion for escape from obligation to parents (Matt. 15:3 – 9; Mk. 7:9 – 13). Apart from this condemnation of vows wrongly used, it is not evident that Jesus or any of the NT writers made significant reference to vows, which are so prominent an expression of OT piety. The NT call to dedication and thankfulness and service stands in the deeper and richer relationship of life to the cross of Christ (Matt. 16:24; Rom. 12:1 – 2; 1 Cor. 6:20; 1 Pet. 1:15 – 19). See WORSHIP.

G. STOB

Vulgate vuhl'gayt. Name applied to the standard Latin translation of the Bible (the Lat. adjective *vulgatus* means "commonly known, in wide circulation"). During the first few centuries of the Christian era, the books of both the OT and the NT were translated into Latin piecemeal by different people at different times, and by the 4th cent. the form of the text differed widely from place to place. About the year 382 Pope Damasus commissioned JEROME to revise and standardize the Latin Bible. With regard to the OT, this meant not just a revision of the so-called Old Latin (which had been made from the Greek LXX); to a large extent, the work involved a fresh translation directly from the Hebrew. Jerome's revision of the Old Latin of the Gospels was spotty, and he probably was not responsible for the revision of the rest of the NT. See VERSIONS OF THE BIBLE, ANCIENT II.B. **vulture.** This English word, referring to a number of large birds that subsist on carrion, is used variously in Bible versions to render different Hebrew words. The contexts are either food lists or purely figurative, giving no help in identification. There is general agreement, however, that the term *peres H7272* (Lev. 11:13 and Deut. 14:12) does refer to some type of vulture. It is also likely that the word for "eagle," *nešer H5979*, connotes "vulture" in some passages (Mic. 1:16; Hab. 1:8; so NIV and NJPS). Some believe that ⸀*ozniyyâ H6465* refers specifically to the black vulture (also in Lev. 11:13 and Deut. 14:12; cf. again NIV and NJPS, but NRSV has OSPREY). Another term is *rāhām H8164*, rendered "carrion vulture" by the NRSV (Lev. 11:18 and Deut. 14:17; NIV, "osprey"; NJPS, "bustard"); the carrion vulture is also known as the Egyptian vulture (*Vultur percnopterus*, or better, *Neophron percnopterus*). The Greek term *aetos G108*, which generally means "eagle," is appropriately translated "vulture" in Jesus' well-known saying, "Wherever there is a carcass, there the vultures will gather" (Matt. 24:28; Lk. 17:37); eagles are usually solitary birds, but vultures come together in great numbers to feed. (See FFB, 82 – 84.)

A page from Nicolas Jenson's edition of the Latin Vulgate (1479).

Palestine has at least three resident species: the black vulture (*Coragyps atratus*), the bearded vulture (*Gypaetus barbatus*), and griffon (*Gyps fulvus*); the conspicuous black-and-white Egyptian vulture is a summer breeder. All are scavengers that find life more difficult in countries where civilization has brought sanitary methods of refuse disposal. The larger wild animals have become scarce, and almost the only carcasses likely to become available to vultures in Palestine are those of

sheep, goats, and camels that have died of disease and are not acceptable as food.

The bearded and black vultures are birds of the desert edge, where they nest on cliffs and escarpments. The griffon has a wider distribution, and one long-used nesting place is in the crags above the Valley of the Doves, W of the Lake of Galilee. The griffon is huge, though not the biggest of all vultures, with a length of 3 – 4 ft. and a wing spread of roughly 8 ft. It is dirty brown, with a pale, down-covered head, but color is not distinguishable as it soars on motionless wings several thousands of feet above the ground. The Egyptian vulture is smaller, only 2 ft. long, and easily identified, for both sexes are black and white, with bare yellow face. Flying scavengers hang high in the sky great distances apart, and can see when a neighboring bird drops down, so that vultures from a wide area soon collect. See also BIRDS OF PREY.

G. S. CANSDALE
Wadi Feifa S of the Dead Sea. (View to the NW.)

wadi wah'dee. Sometimes spelled *wady*. The bed of a stream that is usually dry except during the rainy season; the term is also applied to the stream itself. The word is Arabic and is used only of river beds in SW Asia and N Africa; it corresponds to Hebrew *nahal H5707,* which can be rendered variously ("valley, ravine, brook, river, torrent"). See BROOK; VALLEY.

wafer. This English term is used to render two different Hebrew words. The noun *sappîhit H7613* occurs only once, when the MANNA is said to have "tasted like wafers made with honey" (Exod. 16:31). The second term is *raqîq H8386,* which refers to a flat cake or thin crisp bread used as part of some offerings (29:2 et al.). It usually occurs in combination with *massâ H5174* (pl. *massôt*), a flat BREAD made with unleavened dough. See LEAVEN; SACRIFICE AND OFFERINGS.

wages. Compensation to a person hired for performing some work or service. In the nomadic, pastoral society of the patriarchal period there was no wage-earning class. When men worked for

others, it was generally for their own maintenance; and often they received some payment in kind for their services. JACOB's service to LABAN was on this basis (Gen. 29:15; 30:32 – 33; 31:8, 41). With the increasing complexity of a more settled community, once the Israelites were in Canaan, people were needed to engage in TRADES and CRAFTS of all kinds. For these services, payment was made, in whole or in part, by weighing out quantities of bronze or silver. Coinage in the standard sense was a later invention, being first used in ASIA MINOR by the Lydians just before 700 B.C. From here its use spread throughout the Greek world, but it was probably not in common use in the ANE until the Hellenistic period (beginning approx. 300 B.C.).

There were certainly many industrial and commercial enterprises for which wages were paid and which are not directly mentioned in the biblical text. Some specific occupations for which people received wages are mentioned, however: shepherds (Gen. 29:15; 30:32 – 33; Jn. 10:12); laborers and farm hands (Matt. 20:1 – 2; Lk. 10:7; 15:17; Jn. 4:36; Jas. 3:4); fishermen's helpers (Mk. 1:20); mercenary soldiers (Lk. 3:14); nurses (Exod. 2:9).

As is the case in near-eastern countries even today, bargaining was a common practice. Where there were no set scales for payment, it was usual to negotiate terms in this way in each individual case. The story of Jacob and Laban illustrates such a practice, from the very beginning of the discussion ("Name your wages," Gen. 30:28) down to the last accusation ("you changed my wages ten times," 31:41). The story details the kind of cheating and trickery that both parties practiced. The same tendency to bargain appears in the parable of the vineyard (Matt. 20:1 – 16), but here the employer was a just and generous man.

In Israelite society a laborer, who is a free man, would hire himself out for a particular job. As some families grew poorer, they would hire themselves out to rich farmers or to the government. In the contemporary Middle E there is still the practice of hiring day laborers for a specific job. To protect workers against exploitation certain safeguards were instituted; for example, wages were to be paid daily, before sundown, to those who had earned them (Lev. 19:13; Deut. 24:14 – 15). In spite of such injunctions, however, the lot of the wage earner was hard, and the prophets found it necessary constantly to condemn the practices of employers who took advantage of those who worked for them (Jer. 22:13; Mal. 3:5).

The biblical writers make figurative use of the Hebrew and Greek terms with reference to God's dealings with human beings. Thus God's benefits to his people are referred to as recompense (Isa. 40:10; 62:11); and the RETRIBUTION of God is spoken of as REWARD (Ps. 109:20) or gain (2 Pet. 2:15). DEATH is called the wages due for serving sin (Rom. 6:23).

R. C. STONE

wagon. See CART.

Waheb way'heb (H2259, possibly "giver"). A place "in Suphah," probably near the ARNON River in MOAB, mentioned in a citation from the Book of the Wars of the Lord (Num. 21:14; TNIV, "Zahab," apparently following the reading of the LXX, *Zōob*). Some think it refers to the well from which the Arnon flows (*HALOT*, 1:259). The Hebrew text is very difficult, however. See discussion under SUPHAH; see also WARS OF THE LORD, BOOK OF.

wail. See MOURNING.

waistcloth. See DRESS III.B.

walk. Both the Hebrew and Greek terms for "walk" (*hālak H2143*; *peripateō G4344*) are often used in the Bible figuratively to indicate conduct or manner of life (e.g., Gen. 5:22; 1 Ki. 15:3; Ps. 1:1; Eph. 2:2, 10), including the observance of laws or customs (Lev. 26:3; Acts 21:21 [cf. HALAKAH]). Modern versions frequently avoid a literal translation and instead use "live" or other equivalents. See WAY.

wall. The most common Hebrew word for "wall" is *hômâ H2570,* applied mainly to the structures surrounding a CITY (e.g., Josh. 2:15), but sometimes also to those around a building or some other area (e.g., Lam. 2:7). A less frequent term, *gādēr H1555,* is used of dry stone walls in the fields (e.g., Num. 22:24; Isa. 5:5; see HEDGE), but in at least one passage it refers to a city wall (Mic. 7:11). The primary Greek term used in the NT is *teichos G5446,* applied also to city walls (Acts 9:25; 2 Cor. 11:33; Heb. 11:30; Rev. 21:12 – 19; see also WALL OF PARTITION).

House walls were usually made of mud brick set on rubble-stone-base courses, with walls of rubble stone occasionally set in mud mortar. City walls in early times were built vertically without any outer glacis for protection; down to the beginning of Iron Age II they were casemate type walls and later they were solid and thick to resist the Assyrian battering rams. Thicknesses varied between three and five meters with projecting bastions. The latter were crowned with overhangs to ward off attackers, and crenelations to protect archers.

H. G. STIGERS

wall of partition. The KJV uses the phrase "the middle wall of partition" to translate *to mesotoichon tou phragmou,* which occurs only once (Eph. 2:14). The noun *mesotoichon G3546* (from *mesos G3545,* "middle" or "between," and *toichos G5526* [variant of *teichos G5446*], "wall") is rare, but it clearly refers to a dividing wall; *phragmos G5850,* on the other hand, is a very common word meaning "fence" or "hedge" (Matt. 21:33; Mk. 12:1; Lk. 14:23). The two nouns are probably in apposition, so that the phrase can be translated literally as "the partitioning wall, [that is,] the fence," and most modern versions render it simply as "the dividing wall." The following clause (Eph. 2:15 in the KJV) has another noun in apposition, *echthra G2397,* "enmity"; thus the NRSV offers the translation, "the dividing wall, that is, the hostility between us," while the NIV has, more simply, "the dividing wall of hostility" (v. 14).

In the context, PAUL is addressing Christians of both Jewish and Gentile backgrounds. Between these Christians there had been a dividing wall, not literally but socially, thus segregating them. The division was seen in the church in many places (cf. Acts 15; Gal. 2:11 – 14). In Christ, however, this dividing wall was broken down: there was no longer to be any distinction between Jew and Gentile in Christ's kingdom.

In the TEMPLE area, there was literally a wall that segregated Gentiles from Jews. No Gentile was allowed to cross that dividing line. However illustrative of the point Paul was making, he was not referring to a literal structure. The dividing wall of which he spoke was far more formidable, being a wall of blind prejudice.

J. B. SCOTT

want. See COVET; DESIRE.

war, warfare. The common Hebrew term for "battle" or "war" is *milhāmâ H4878* (Gen. 14:2 et al.),

used more than 300 times in the OT. In the NT, however, there are fewer than twenty occurrences of Greek *polemos G4483*, about half of them in Revelation (Rev. 12:7 et al.; cf. also the verb *strateuomai G5129*, used figuratively in 2 Cor. 10:3; 1 Pet. 2:11; similarly, *antistrateuomai G529* in Rom. 7:23). See also ARMY.

1. General
2. The Canaanite period
3. The period of the Israelite conquest and settlement
4. The period of the Israelite monarchies
5. Siege warfare
6. The period of the second temple

I. General. War was a constant feature in the history of Israel from its beginnings up to the destruction of the second TEMPLE. Long periods of peace seldom occurred, and so the Bible emphasizes them (e.g., "the land had peace for forty years," Jdg. 3:11). The nature of the Israelite wars changed according to the political and sociological conditions, such as during the conquest and settlement, the defensive wars of the tribes against the aggressive neighbors in the period of the judges, the wars of consolidation on the borders during the first days of the monarchy, the constant struggle for the existence of the kingdoms of Israel and Judah, and the last desperate stand against the great imperial forces.

The days of the second temple are marked, too, with long periods of continuous warfare. In the earlier wars, mainly concerned with border disputes, and in the later wars of liberation from imperial control, first SELEUCID and then Roman (see ROMAN EMPIRE), the principal cause was religious; that is, there were struggles to preserve a national identity based on the temple in Jerusalem and the Jewish religious laws.

In ancient times, two types of wars were distinguished: (a) wars of defense and expansion, which were basically political and which were fought because of physical necessity, and to which there were fixed legal limitations (see below); and (b) holy wars, which were compulsory for the entire nation and did not have comparable limitations. This distinction was recognized also in the second temple period. Thus, a radical religious population participated in the early Maccabean wars because they were believed to be holy wars (see MACCABEE); later, when the HASMONEANS turned to politically oriented wars, the people refused to participate.

Deuteronomy 20 and 21 contain some of the laws of war that were upheld in the first temple period; more laws and practices are found in other sources describing the wars themselves. The laws of war first describe the encouragement of the troops by the priests, who assured them of the support of the Lord (Deut. 20:1 – 4). Other sources indicate that the kings and military leaders often assured themselves by consulting oracles; these included the holy ARK OF THE COVENANT (Jdg. 20:27); the EPHOD (1 Sam. 30:7 – 8); the URIM AND THUM-MIM (14:41; 28:6); and various prophets (28:6). Occasionally—as was Canaanite custom—they even appealed to the spirits of the dead, as did SAUL through the medium of the witch of ENDOR (ch. 28; see DIVINATION). The priests and holy ark even accompanied the army on the battlefield in the earlier wars (1 Sam. 4:4; 30:7; 2 Sam. 11:11).

Further, to secure God's aid, the troops would make sacrifices prior to battle (Jdg. 6:20, 26; 20:26)—sometimes even human sacrifices, as in the story of JEPHTHAH's daughter (according to one interpretation of Jdg. 11:39) or of the son of the king of MOAB (2 Ki. 3:27). This custom seems also to

have been taken from earlier Canaanite traditions, for in many Egyptian reliefs from the late kingdom, depicting the capture of towns in Palestine, the besieged are shown throwing their children from the walls in seeking the gods' favor. Military victory was believed to be the victory of one god over another, often leading to literary depictions of the gods as taking part in actual battles (in the Bible, cf. Josh. 10:11).

The laws concerning war in the book of Deuteronomy deal, inter alia, with the instances in which persons could be exempt from military service, as with those who were seized with fear, were newly married, had recently built a house, planted a vineyard, and so forth. Other laws deal with vanquished peoples, spoils, prisoners, and the prohibition of cutting down fruit trees in conquered lands.

The customs and laws of war were fixed and had much in common throughout the ANE. Troops were often drawn from the peasantry, and fighting was generally limited to the agricultural off-seasons—from just after HARVEST till the first rains. War usually was not "declared"; it was naturally assumed that the strong were free to take possession of the lives and possessions of the weak. Only by maintaining a strong army could a nation keep potential enemies at bay, and the only satisfactory alternative was to accept all of the enemy's demands without going into battle.

II. The Canaanite period. We possess detailed descriptions of battles in Palestine from as early as the late Canaanite period, that is, from the period of expansion of the Egyptian new kingdom (18th – 20th dynasties). They are of two types: (a) reliefs or wall paintings in Egyptian temples and (b) inscriptions or literary texts. The value of either type is rather limited, but together they provide a fairly clear picture. The reliefs usually are schematic and show the conquest of cities in Palestine, with the besieged in the last stages of resistance. These reliefs mainly give details on the methods of Egyptian siege-warfare, which included the use of ladders, mining the walls, and breaching the gates with axes and fire. The battering ram, however, seems not to have been employed by the Egyptians.

Most of our information on warfare comes from literary texts, some of which are of the heroic or mythological sort. Of the former type is the story of the conquest of JOPPA under THUTMOSE III (c. 1479 – 1425 B.C.), which resembles the story of the conquest of Troy. The Egyptian general sent a conciliatory "present" in several hundred sealed baskets which, in fact, contained armed soldiers; once within the city, the hidden soldiers revealed themselves and seem to have opened the gates to the besieging army. More realistic war records, prepared by military scribes, enable modern scholars to reconstruct various battles from beginning to end.

The earliest concerns the Battle of MEGIDDO in the days of Thutmose III. A coalition of many Canaanite kings ("330 rulers") gathered under the leadership of the king of KADESH ON THE ORON-TES and attempted to block the Egyptian army at Megiddo, thus preventing it from penetrating into N Palestine and Syria. The detailed account tells of the deceptive tactics adopted by the Canaanites prior to the battle, to divert the Egyptians toward an ambush. The Egyptian king saw through this ruse and, by a daring march, surprised the Canaan-ites in their main camp outside the city, defeating them swiftly, though besieged Megiddo held out for seven months longer. The king boasts that he could have captured the city the same day had it not been for his soldiers' desire for loot, which diverted them from pursuing the enemy. This enabled the enemy survivors to reach safety behind the city walls. This case seems not to have been the first time, nor the last, in the history of the ANE in which soldiers could not be held to their task, preferring to plunder rather than pursuing the enemy (cf. 1 Sam. 14).

Another battle taking place in that period and about which a complete account survives, is the

Battle of Kadesh (1280 B.C.) between the Egyptian army under RAMSES II and the armies of a Syrian league headed by the king of the HITTITES. Just as the Canaanites before were fully aware of their military inferiority (esp. against the Egyptian archery), so also the Syrians attempted deceit by sending out spies with the intention of their being caught. These gave false information leading the Egyptians toward a well-prepared ambush. The ruse seems to have been successful, at least initially, and one of the Egyptian units was wiped out. Egyptian superiority in weaponry and training, and the sudden appearance of a special unit, turned the battle. It is interesting to note that, in both cases, the Egyptians' adversaries avoided open battle, rather seeking the security of strongly fortified cities. The ultimate outcome in either case proved the wisdom of such tactics.

The third battle of which we possess a detailed description took place in the days of Ramses III (c. 1180 B.C.), in which the Egyptians repulsed the invasion of the SEA PEOPLES (including the PHILISTINES). This battle is depicted on the walls of Ramses' temple at Medinet Habu. The Sea Peoples' attempt was twofold: one wave seems to have come by way of Syria and Palestine, and was defeated near el-Arish; the second wave came by sea and was defeated in the NILE delta. This is the first detailed description of a sea battle in the history of the ANE. As depicted in the reliefs, the Egyptians won mainly through their superiority in archery—a weapon which their enemies lacked altogether. See ARMOR, ARMS.

The Egyptian sources contain much data on the organization of the Egyptian army, the size of its units, its logistics, and so forth. They are not, however, the only sources on military matters in the ANE. In CUNEIFORM archives discovered at such sites as MARI, ALALAKH, Boğazköy (Hattusas, the ancient Hittite capital), and TELL EL-AMARNA, thousands of documents provide details on the weapons, tactics, and logistics of Mesopotamian, Syrian, Canaanite, Hittite, and other armies. Further, there are many examples of the actual weapons, found in excavations on the various sites. Art objects, such as ivories (esp. those from UGARIT and Megiddo) also provide depictions of weapons and battles.

III. The period of the Israelite conquest and settlement. Early in the Iron Age (12th cent. B.C.), political conditions in Palestine changed: the great empires of the previous period, Egypt and the Hittites, were weakened or destroyed, largely by the Sea Peoples; and in the regions between them, many small city-states rose. Palestine was also invaded by two nations new on the political scene and very different in character: the Israelites, who at the time were poorly equipped nomadic tribes settled in the mountainous areas, and groups of Sea Peoples that the Bible collectively calls the "Philistines." These latter settled in the coastal plain and were organized around a pentapolis (ASHDOD, ASHKELON, EKRON, GATH, and GAZA); they developed a proper standing army, equipped with iron weapons. Small pockets of the older inhabitants of the land remained; these were Canaanites who also were centered on city-states, with the battle CHARIOT as their most formidable weapon.

Israelite military inferiority forced the tribes also to deception of the enemy; they usually found it too difficult to penetrate fortified cities by force and thus they resorted to other means, such as by sending spies to seek out hidden ways into the city (Josh. 2). The most interesting biblical story in this connection is the capture of JERICHO. Here the army with the priests and the holy ark at its head marched around the city for seven days (6:14 – 15). In the opinion of Y. Yadin (*The Art of Warfare in Biblical Lands*, 2 vols. [1963], 1:99 – 100), JOSHUA sought to lull the suspicions and ease the tension of the defenders till he could launch a sudden attack with success. At AI (chs. 8 – 12), the Israelites succeeded in luring the enemy out of the city by a ruse. Later, DAVID captured JERUSALEM

by penetrating secretly through an underground water conduit (2 Sam. 5:7 – 8). Night or dawn attacks were also sprung (1 Sam. 11:11), as well as other forms of surprise attacks (Josh. 10:9). Often armies were split into several parts (usually three) to achieve surprise or to provide a ruse (Jdg. 7:16; cf. also 1 Sam. 11:11; 13:16; 2 Sam. 18:2).

Assyrian ramp used against the siege of Lachish during Sennacherib's invasion of Judah in the days of Hezekiah.

In the period of the settlement, the Israelites had to withstand the attacks of various nomad tribes, especially in the S (the Amalekites) and the JEZREEL valley (the Midianites), who would raid villages and take prisoners (see AMALEK, MIDIAN). Warfare against these peoples was conducted in the same manner as before, that is, by means of small and maneuverable units (Heb. *gedûd H1522*, which at the time of GIDEON numbered 300 men, and in the days of the united monarchy, some 400 – 600). Larger "militia" units were raised only in times of extreme danger: against the Canaanites (Jdg. 4; 5) or Ammonites (1 Sam. 11), or at a time of intertribal strife (Jdg. 20).

Using these same tactics (combined small attacks and opposing the enemy in open array), the Israelites succeeded, at least at first, in standing up to their bitterest rivals, the Philistines. It is in this context that we learn of another form of war, that is, the personal duel between two opposing warriors, as in the case of DAVID and GOLIATH (1 Sam. 17; cf. 2 Sam. 2:12); such a form of fighting is known in other lands. Upon the death of SAUL and JONATHAN his son, it became obvious that new tactics were called for. The danger presented by the Philistines was the main impetus for the union of the Israelite tribes into a single kingdom to enable successful resistance. Only political unity could bring about a standing well-trained and equipped army.

The army organized by David, under the skilled leadership of JOAB, soon enabled the Israelites to achieve the upper hand over the other small states surrounding them. David consolidated the borders of his kingdom and even considerably expanded them. Actually, there was never a day of peace throughout his reign. Most interesting are the detailed chapters describing the wars against the Ammonites and the Arameans (2 Sam. 10:10; 1 Chr. 19), where we learn that HANUN, king of the Ammonites, hired Aramean troops to help him in his defense. See ARAM (COUNTRY). Joab soon found himself in the midst of the enemy, and in a very characteristic way he brought in the Israelite militia which, alongside his small standing army, defeated the Arameans and then turned to besiege the capital of AMMON.

The great victories of the Israelite army in the days of David, however, and the expansion into

most of Syria, can be explained only by the fact that by this time the great empires no longer were able to control this region.

IV. The period of the Israelite monarchies.

In the first stages of this period, Israel was divided into two kingdoms. At first rivals, they later came to conduct combined operations against their common enemies, especially the Arameans. Already in the mid-9th cent. B.C., upon the advent of the mighty armies of Assyria in this region, the petty wars came to an end and the small states grouped themselves into coalitions so as to be able to stand up to the common foe. From 734 B.C. on, Assyria slowly conquered the entire region, taking the petty states one by one. Babylonia, her powerful heir, completed this task.

The Aramean soldiers and their weapons are well known to us from reliefs discovered at Tell Halaf (biblical Gozan), Carchemish, Malatya (ancient Maldiya, in SE Asia Minor), and other sites. They were fully as strong as the armies of Israel and Judah, and the struggle between them was long-lived. The character of these wars is known from 1 Ki. 20, which contains extensive details. Ben-Hadad king of Damascus, at the head of a league of thirty-two vassal kings, came to Succoth on the eastern bank of the Jordan River, opposite Samaria. When he sent messengers demanding that the Israelites surrender, King Ahab outrightly refused. Ben-Hadad, confident in the superior strength of his forces, ordered them to cross the river and besiege the city of Samaria. The Arameans rather heedlessly began the ascent along the steep path of Wadi Farʿah, the main route from Succoth, well known, of course, to the Israelites. Rather than waiting for the enemy in Samaria, Ahab gathered his troops (about 700) and ambushed the Arameans while they were still on the march, thoroughly routing them.

This method of ambushing, in narrow mountain defiles by large, well-equipped forces, takes maximum advantage of the difficulties encountered by anyone attempting to penetrate into the hills of Samaria or the Judean mountains; it became one of the standard methods of warfare among the Israelites down to the fall of the kingdoms. A similar battle was conducted between Jehoshaphat king of Judah and a combined Moabite-Ammonite force that was making for Jerusalem through the Judean Desert (2 Chr. 20).

It was even more characteristic during the Hellenistic period when the Jews rose against the Seleucids, and later, during the revolts against Rome (see below). The maneuver is typical of guerrilla warfare and enables small forces to achieve the upper hand over numerically superior armies. Not in vain were the Arameans afraid to enter the mountain passes of Samaria, saying, "Their gods are gods of the hills" (1 Ki. 20:23).

V. Siege warfare. The battles against the Arameans, Moabites, and Ammonites occurred in the open, but not so the wars fought against the mighty armies of Assyria and Babylonia. In the initial clash (in the mid-9th cent. B.C.), Ahab dared to participate against Assyria in a league of southern Syrian rulers that repulsed the invaders in four successive campaigns, near the city of Qarqar. But 100 years later, when the Assyrians approached, the petty kingdoms were unable to unite, and the war degenerated into mere defensive actions, centered upon fortified cities, while the Assyrians were in complete control of the countryside.

The methods of fighting based on fortified cities are well known from excavations and from Egyptian and Assyrian reliefs, in which this subject was quite popular. Remains of city fortifications, including walls and gates, have been exposed at most of the excavated sites of the Israelite period in Palestine, revealing even minute details. Moreover, systematic study has clarified the development of

siege tactics in this period. The main problem in preparing a city to withstand a siege, besides the construction of the fortifications, was to provide for an adequate source of water within the city walls. This was achieved either by digging vast cisterns for storing quantities of rain water, or by diverting water sources beneath the ground to within the fortified area, concealing any original opening outside. Several such water systems have been discovered, mainly dating from the period of the Israelite kingdoms (at HAZOR, MEGIDDO, IBLEAM, GEZER, GIBEON, JERUSALEM, ARAD, and BEERSHEBA). The famous SILOAM tunnel inscription from Jerusalem describes King HEZEKIAH's efforts to bring water from the GIHON SPRING into the city (c. 705 B.C.). In much later times, extensive water systems were built by HEROD the Great to bring huge quantities of water into the same city; similar projects by this king included enormous cisterns constructed at MASADA, the HERODIUM, and MACHAERUS.

The methods of pressing siege in the ANE were many and varied. We have already noted various ruses employed by the Israelites against Canaan-ite cities. The Egyptian and Assyrian reliefs reveal even more: scaling walls by means of ladders; breaching walls with battering rams; breaking down gates with axes and fire; and mining beneath walls. Often several methods were employed simultaneously. The Assyrians were depicted as slaying prisoners beneath the very eyes of the besieged so as to weaken their morale.

If a city resisted all these measures, the attackers had to fall back upon the difficult pursuit of an extended siege, cutting off the inhabitants of the city from all supplies, and making continuous attacks upon the walls at various locations until a weak spot was found or until the city gave in. After the appearance of the great imperial armies in Palestine, the Israelite kings concentrated their efforts on fortifying and preparing their cities to withstand prolonged sieges. They sometimes succeeded in stemming a siege of many months or even years. The longest siege recorded in history was that of ASHDOD by Psammetichus II of Egypt, which lasted no less than twenty-nine years (Herodotus, *Hist.* 2.157). In a relief from NINEVEH, there is an exceptional depiction of a Judean city under siege by the Assyrian army; it shows LACHISH as the Assyrian troops were storming its walls with many battering rams, light archery in the fore (mostly non-Assyrian troops from vassal kingdoms), then heavy Assyrian spearmen and archers, followed by slingers. The defenders, on their part, attempted to forestall the work of the siege machines by shooting arrows and throwing stones, oil, and flaming torches down upon them.

VI. The period of the second temple. From the Persian period on (see PERSIA), our principal sources are literary. The Greek historians, such as Herodotus, Xenophon, Thucydides, and Dio-dorus, have provided detailed descriptions of the wars between the Persians and the Greeks, as well as the wars among the Greeks themselves. One of the most interesting of these descriptions, Xeno-phon's *Anabasis*, tells of the engagement of the Persian army with that of Cyrus, satrap of SARDIS, in whose service were the 10,000 Greek mercenaries commanded by Xenophon. In this battle the clear advantage of the new Greek formations over the traditional oriental armies is quite apparent—a superiority that was even more telling in the victorious campaigns of ALEXANDER THE GREAT.

The main force of Greek armies in this period were the units of heavily armed infantry, the *hoplites*. Their name, meaning "heavy-armed," is derived from the large bronze shield they carried into battle on their left arms, protecting most of the body and enabling the warrior to use his right arm for maneuvering his heavy spear, sometimes even at a distance of some 10 ft. from his enemy. The hoplites also carried a short sword and wore protective armor, including a bronze helmet. These troops fought in a close formation, the phalanx, where the shield of one soldier overlapped that of his

neighbor, providing double protection. The superiority of this formation was based upon the fact that the soldiers in the front row, who were in direct contact with the enemy, were immediately supported by their comrades in the rows behind.

Replica of a catapult used by the Roman army during the siege of Gamla c. A.D. 67.

From the time of the Peloponnesian wars on, a basic change occurred in the organization of Greek armies. Besides the hoplite, there was now a lightly armed soldier, the *peltast*, whose name was also derived from a type of shield (Gk. *peltē*), smaller and round; these had no protective armor and their principal armament was the small throwing javelin, a weapon derived from Thrace (THRACIA) and common especially among mercenaries. In the Macedonian army, the spear was lengthened, sometimes even reaching a length of 20 ft.; actually the several rows of the phalanx used spears of varying lengths so as to present the enemy with a maximum of "fire power" at one time. The bow was little used in classical times (except in Cretan units, with mercenary archers serving in large numbers with the Greeks). In the Hellenistic period, oriental influence brought archers a greater role, and even mounted archers appeared, usually being employed as a protective curtain before the phalanx.

War chariots were not used at all in classical Greece; instead, the Greeks did make use of cavalry as an organic part of the army in several cities. Thus, ATHENS had cavalry units and, for a short period, also mounted archers. In the classical period, however, the lack of the stirrup seriously impaired the effectiveness of such troops. Philip and Alexander made more common use of cavalry, and since then such units held an important place in every battle, especially in outflanking the enemy or pursuing him in flight. The Hellenistic period, too, saw the introduction—again under oriental influence—of heavy cavalry: chariotry was also used on a small scale.

As for siege machinery, the Greek sources up to the end of the 5th cent. B.C. are largely silent. An extraordinary discovery in the recent excavations at PAPHOS in CYPRUS has revealed some of the methods employed by the Persians in the successful siege of this city in 498 B.C.; this included the remains of a developed siege ramp. From the literary sources we know that only in the beginning of the 4th cent. B.C. did the Greeks first use a primitive sort of catapult (at Syracuse), which they copied

from the Carthaginians. This machine was employed only in siege warfare, throwing darts for a great distance. Later, the catapult was improved, increasing its effective range considerably. Such machines were employed by Alexander in his siege of TYRE (in 332 B.C.). The Greeks actually had two types of siege machines: the catapult for darts, and the balista for throwing stones; these had an effective range of some 600 ft., which the Romans later were able to increase to about 800 ft.

In the Hellenistic period, the Greeks followed the Persians in using ELEPHANTS in warfare. Alexander brought over 100 elephants from INDIA, and SELEUCUS I had over 500. They were particularly effective against enemy cavalry and could also break through the heavy phalanx. In the Battle of Gaza (312 B.C.), the Egyptian army defended themselves against the Seleucid elephants by studding the battlefield with sharp nails—the first "mine field" in history. ANTIOCHUS III employed elephants against the Hasmoneans, leading to the well-known story of Eleazar, who was crushed beneath an elephant he had killed with his spear (2 Macc. 13:2). The Romans normally did not use the elephant, probably because of its awkwardness.

The army of the Hasmoneans appears to have been patterned after the Hellenistic model; the Herodian army, however, was more composite, Hellenistic but with Roman elements. The Roman entry into Palestine in 63 B.C. brought about a change in the weaponry and in the military formations of this area; actually, it is especially in this field that Roman influence is felt. In excavations of sites in Palestine, few remains of Roman weapons have been found (mainly arrow and javelin heads, a few swords and scales of armor), though many remains of Roman military architecture are known. The most important of these are the siege camps, the circumvallation wall, and the ramp at Masada; the siege camps above the caves in Nahal Hever; the siege ramp at BETHER (from the period of the second revolt, A.D. 132 – 135); and many small forts in the NEGEV and E of the ARABAH that were parts of the *limes*, the defensive border system of the Roman empire in this area.

The principal sources on the warfare between the Jews and the Romans in Palestine are the detailed accounts by Flavius JOSEPHUS in his monumental work, the *War of the Jews* (see WARS, JEWISH). Being of inferior strength, the Jews resorted mainly to two forms of fighting: ambushes in narrow mountain defiles and defense within fortified cities. Josephus relates the events of three such sieges—at Yodfat in Galilee, at Jerusalem, and at Masada in the Judean Desert. A most valuable addition to the sources on the military organization of the Jews in this period are the documents recently found in caves in the Judean Desert: the *Scroll of the War of the Sons of Light against the Sons of Darkness* (see DEAD SEA SCROLLS) and the BAR-KOKHBA letters, found in Nahal Hever and sent originally by the leader of the second revolt to his subordinates at EN GEDI.

warrior, divine. On numerous occasions as recorded in the Hebrew Scriptures, Israel experienced the presence of Yahweh on the battlefield. The first explicit proclamation of God as a warrior is found in the Song of the Sea, MOSES' hymn celebrating God's victory over the Egyptians at the RED SEA: "The LORD is a warrior; / the LORD is his name. / Pharaoh's chariots and his army / he has hurled into the sea" (Exod. 15:3 – 4a). God made his appearance known on this occasion by dividing the waters so his people could pass through in safety. He then closed the waters on the Egyptians who attempted to follow and destroy the unarmed people of God. This single action of the divine warrior demonstrates the two-sided nature of God's warring activity: SALVATION and JUDGMENT.

The theme of the divine warrior is integrally connected to the institution of holy WAR in the Hebrew Scriptures. Indeed, warfare is made holy by the fact that God was with the army in all phases of its activities. In other words, at the heart of holy war is the divine warrior. In early Israelite history, his presence was represented by the ARK OF THE COVENANT, which was a mobile symbol of God's presence. The ark was constructed in the wilderness and was carried at the front of the tribes as they marched, as if to war, during the forty years of wandering. That the wilderness wandering was conceived as a long march to battle is reflected in Moses' words each morning as the ark left the TABERNACLE: "Rise up, O LORD! / May your enemies be scattered; / may your foes flee before you" (Num. 10:35).

Later, as the Israelites under JOSHUA began the conquest of the promised land, the ark played a prominent role in the divinely imparted strategy to defeat the heavily walled city of JERICHO (Josh. 6). Indeed, on the eve of that important victory, the divine warrior himself visited Joshua in a human form with drawn sword to impart the battle plans to his servant, the human war leader (5:13 – 15). On most occasions, however, the divine warrior made his presence known to the troops in other than human form. God frequently worked through the forces of nature that he created and controlled. At the Red Sea, he used the wind to push back the waters. During the conquest of the coalition of southern kings of Palestine, he killed the enemy by throwing down huge hailstones, and to prolong the slaughter he commanded the sun and the moon to stop in the sky (ch. 10).

The appearance of the divine warrior causes convulsions in the creation. Mountains shake; rivers dry up; nature grows impotent (Jdg. 5:4 – 5; Isa. 24:1 – 7; Nah. 1:2 – 6). Furthermore, music ceases from the land (Isa. 24:8 – 9). When victory comes, however, fertility bursts at the seams and music is jubilant. As a matter of fact, some of the most powerful early songs (Exod. 15; Jdg. 5) and many psalms (e.g., Pss. 24; 98) celebrate God's warring success.

Interestingly enough, though God could win any battle on his own, he always insists on Israel's participation. That participation is always that of a junior partner, however. The battle of GIDEON against the Midianites is a prime example (see esp. Jdg. 7). Showing up on the battlefield with 32,000 troops, God first tells Gideon to send home those who are afraid. When only 22,000 men leave, other means are instituted to whittle the troops all the way down to 300, and with these God wins the battle. If Israel had gone in with a superior force, then their victory would have led to pride in their own power.

DAVID well expresses the heart of divine warrior theology when, as he confronts GOLIATH, he proclaims: "You come against me with sword and spear and javelin, but I come against you in the

name of the LORD Almighty, the God of the armies of Israel, whom you have defied. This day the LORD will hand you over to me, and I'll strike you down and cut off your head. Today I will give the carcasses of the Philistine army to the birds of the air and the beasts of the earth, and the whole world will know that there is a God in Israel. All those gathered here will know that it is not by sword or spear that the LORD saves; for the battle is the LORD's, and he will give all of you into our hands" (1 Sam. 17:45 – 47).

Since God is present with the army on the battlefield, the troops must be spiritually prepared to go to battle. This requirement explains why the Israelite men had to undergo mass CIRCUMCISION before engaging in war at Jericho (Josh. 5:2 – 8). In historical narratives recounting Israel's wars, there are reports about preliminary sacrifices (1 Sam. 13). URIAH the Hittite refused to have sexual relations with his wife BATHSHEBA, probably in part for fear that an emission of semen would render him ritually unclean and unable to return to the battlefield where the ark of the covenant was located (2 Sam. 11:6 – 11; cf. Lev. 15:16 – 18).

When God is present with the army, there is no doubt about the outcome. After victory, all the plunder and all the prisoners of war are to be brought to Yahweh. Everything is rendered *hērem H3051*, a Hebrew word difficult to translate, but meaning "that which is dedicated to God for a particular purpose" (see BAN). In terms of the prisoners of war, *hērem* is a death penalty. Within the land of Canaan, all enemies—men, women, and children—were executed (Deut. 20:16 – 18). Outside the land of promise, the defeated enemies were subjected to perpetual servitude (7:10 – 15).

Israel not only experienced the help of the divine warrior, but also his ANGER when they were disobedient. Indeed, in the curses of the Sinai COVENANT, God promises to defeat the enemies of his obedient people, but to give the victory to the enemy when Israel disobeys (Deut. 28:25 – 26, 49 – 57). The defeat of the Israelite forces at AI during the conquest (Josh. 8) and at EBENEZER under the leadership of the two sons of ELI (1 Sam. 4:1 – 11) are illustrative. The most dramatic example, however, is when God used the Babylonian army to defeat his recalcitrant people. Lamentations gives voice to the horror of that destruction when it says: "The Lord is like an enemy; / he has swallowed up Israel. / He has swallowed up all her palaces / and destroyed her strongholds. / He has multiplied mourning and lamentation / for the Daughter of Judah" (Lam. 2:5).

Israel was not the only ANE civilization to practice holy war or to conceive of their deity as a divine warrior. The Egyptians, the Mesopotamians, the Moabites, and others have left literature that indicates that they too understood that their gods participated in their battles.

Finally, the NT picks up the theme of the divine warrior and applies it to Christ. However, his warfare has a different objective. His battle is against the spiritual powers and principalities, and he wins this battle not with the sword (Matt. 26:47 – 56), but by his death and resurrection (Col. 2:13 – 15). Paul declares that Christ's followers participate in this spiritual warfare (Eph. 6:10 – 20). The book of Revelation culminates this theme when it pictures Christ's return for the great final battle, when all of God's enemies—physical and spiritual—will be cast into the LAKE OF FIRE (cf. Rev. 19:11 – 21).

(See further P.D.Miller, Jr., *The Divine Warrior in Early Israel* [1973]; M.C.Lind, *Yahweh Is a Warrior: The Theology of Warfare in Ancient Israel* [1980]; S.-M. Kang, *Divine War in the Old Testament and in the Ancient Near East* [1987]; T. Longman III and D.G.Reid, *God Is a Warrior* [1995].)

T. LONGMAN III

wars, Jewish. The general causes of the two Jewish wars against the Romans, in A.D. 66 – 70 and

132 – 135, lay in at least four factors. There was in Israel a long tradition that combined religious zeal and violence. The priest PHINEHAS exercised his zeal for the Lord by killing a sinning Hebrew man and Moabite woman (Num. 25:6 – 13). As the intertestamental Maccabean revolt began (see MACCABEE), the aged priest MATTATHIAS slew a SELEUCID official and an apostatizing Jew; he then cried, "Let every one who is zealous for the law and the covenant come out with me!" (1 Macc. 2:27). At the time of the Roman census in A.D. 6, Judas of Gamala, driven by a "passion for liberty… convinced that God alone is…leader and master" (Jos. *Ant.* 18.1.4 §23), led an abortive revolt promising his followers "that Heaven would be their zealous helper."

The second factor arose when, in 63 B.C., the Roman general POMPEY took control of Jerusalem. Probably made curious about its contents by rumors within the Gentile world, he forcibly entered the Holy of Holies in the TEMPLE. To him the act was nothing more than the privilege of a conqueror. To the Jews it was the ultimate sacrilege. They did not soon forget, and the incident precipitated the atmosphere of mistrust, misunderstanding, and hostility that marked all future Jewish-Roman relations.

Third, many of the officials who ruled the Jews in the name of the Romans were motivated by personal greed and characterized by brutality, incompetence, and misunderstanding of Jewish sensitivities. The result was an increasing Jewish hatred for their conquerors, an attitude that was a part of the background against which Jesus carried on his ministry.

Finally, the Jews remembered their experience of independence under their own Maccabean rulers (166 – 63 B.C.). Even though most of these were as despotic as any pagan overlord, this memory intensified the Jewish hope for "the redemption of Jerusalem" (Lk. 2:38).

Our knowledge of the A.D. 66 – 70 war comes largely from the Jewish historian Flavius JOSEPHUS, who was an eyewitness and participant in the war. Josephus began as the general in charge of the defense of GALILEE. When captured he became a traitor and directed his energies to assisting the Romans. His writings are one-sided, self-seeking, and frequently inaccurate in details. Nevertheless, without them we would know next to nothing about the conflict and the events that led to it.

Jewish unrest simmered from the time of Pom-pey onward. At times it broke into the open but was always contained, sometimes with substantial loss of life. The immediate causes of the first revolt against Rome took place during the procuratorship of Gaius Florus (A.D. 64 – 66). When the governor took seventeen talents from the temple treasury, public patience was exhausted. The procurator was ridiculed, and a routine ceremony of courtesy to visiting officials resulted in violence.

The daily temple sacrifices for the emperor were stopped, an open declaration of revolt. Jerusalem leaders sought to halt the rebellion by force. They and the Roman garrison in Jerusalem were defeated, and many were killed. Outside Jerusalem, in cities with both Jewish and Gentile populations, battles broke out; when the Jews were victorious Gentiles were massacred. Rebels occupied the desert fortress of MASADA. Eventually the Roman governor of SYRIA, Cestius Gallus, invaded with a large army. He succeeded in taking and burning the northern suburb of Jerusalem but was unable to break into the temple. When he withdrew, his retreating army was attacked and defeated.

The Jews began to prepare for all-out war against Rome. They appointed commanders over the various districts of the country with instructions to organize resistance forces. In attempting to carry out his commission in Galilee, Josephus was faced with the distrust of many citizens and armed opposition led by one John of Gischala.

The Romans entrusted the subduing of the Jewish revolt to their veteran general VESPASIAN, who

was accompanied by his able son TITUS. At Josephus's first encounters with the Romans his army fled as the enemy approached Garis, a northern border town. He and his remaining forces took refuge at Jotapata. After a lengthy siege the city fell and Josephus, in spite of participating in a suicide pact, surrendered to the Romans. He predicted that Vespasian would become emperor, was spared, and held captive.

Other northern towns fell, including Gamala, east of the Sea of Galilee, after a bitter battle and suicide of most of the town's inhabitants. The last Galilean stronghold to come under Roman domain was Gischala. The night before it was taken John, with a band of ZEALOTS, escaped to Jerusalem. By the end of the year 67 all of the northern part of the country was under Roman control.

The rabid nationalists in Jerusalem precipitated a bloody civil war and replaced the former leaders. John of Gischala and his Zealots gained control. Many prominent citizens were imprisoned and murdered. A commoner was elected high priest. Some of the older authorities briefly persuaded the people to resist the Zealots. The Zealots urged the Idumeans from the S to join the fight (see IDUMEA). Once these gained access to the city they, supported by their Zealot allies, began to rob, murder, and pillage. Prominent and well-to-do leaders in Jerusalem were charged with being allies of the Romans and eliminated. Eventually the Idumeans had enough and withdrew from Jerusalem. The Zealots continued their reign of terror.

Although his generals wanted to take advantage of conditions in Jerusalem and attack immediately, Vespasian chose to allow the Jewish factions to devour one another. In 68 NERO died and Vespasian ceased military operations to await developments in Rome. He was eventually elected emperor (as Josephus had predicted) and left the Jewish war in the hands of Titus.

Simon bar Giora, a bandit chief in the southern part of the country, eventually appeared before the gates of Jerusalem. Many of the people, tired of the tyranny of John of Gischala, invited him in, only to discover that they now had two tyrants. Eleazar, son of Simon, broke with John's Zealot party and formed his own. Simon controlled the upper city and a substantial part of the lower. John held the temple mount and Eleazar the inner forecourt of the temple. Anarchy reigned in Jerusalem; it became a continuous battlefield. The rebels burned the grain supplies in the city, thus condemning themselves and the rest of the inhabitants to starvation.

The church historian EUSEBIUS (*Eccl. Hist.* 3.5.3) relates that sometime during the war the Christians in Jerusalem withdrew from the city to PELLA, a town of PEREA. The exact time (or even the fact) of this retreat is debated. Shortly after John of Gis-chala entered the city or while Vespasian awaited developments in Rome are possibilities.

Titus began the siege of Jerusalem shortly before Passover (March/April) of the year 70. He attacked Jerusalem with four legions (about 6,000 men per legion) plus units from allied countries. The tenth legion attacked from JERICHO on the E, the thirteenth and fifteenth legions came from the N, and the fifth from EMMAUS on the W.

The fighting between the Jewish parties within Jerusalem continued. At Passover Eleazar's faction opened the gates of the temple to admit pilgrims. Some of John of Gischala's men disguised themselves, entered with the festival goers, then attacked and defeated Eleazar and his followers. With the Idumeans gone and now Eleazar eliminated, only the parties of John and Simon bar Giora remained to fight the Romans—and each other.

Deep ravines protect Jerusalem on the E, W, and S. Of necessity Titus attacked from the N and set his battering rams to work on the wall there. Only then did John and Simon's factions unite against the invaders. It took fifteen days to breach the first wall; even then the Romans faced a second wall and then the walls of the temple complex. The fighting was fierce. At times the Jewish forces

acquitted themselves well, but they faced superior well-supplied forces. Throughout the siege of the Jewish capital, Josephus appealed to his countrymen to surrender. On one occasion he was wounded while so doing.

Throughout the battle for Jerusalem both sides showed no compassion for noncombatants who were slaughtered randomly. Titus erected a "siege dike," a wall around the city to deprive the Jews of supplies and to keep any from escaping. Starvation racked Jerusalem but it was no worse than the atrocities the Jews inflicted on one another in their desperate attempt to obtain food. Lack of food and other resources continually weakened the Jewish defenders.

In midsummer the Romans broke into the temple area. The fighting intensified. Josephus reports that Titus had decided not to destroy the temple. Nevertheless in their furor the Roman soldiers set parts of the structure ablaze and eventually it was completely consumed.

The battle continued in the lower parts of the city. Finally, in September of A.D. 70 Jerusalem was completely in Roman hands. Some Jews, including John of Gischala and Simon bar Giora, hid in the underground cisterns but were eventually forced out by the Romans or hunger. Numerous Jews were slaughtered, others held to take part in gladiatorial contests; many were sold as slaves or sent to work in the mines. John was condemned to prison for life, while Simon and the stronger soldiers were reserved for the triumphant procession in Rome. Jerusalem was destroyed.

The defeat of Jerusalem did not end the Jewish resistance. The last stronghold was Masada, the desert palace-fortress of HEROD the Great. Eleazar ben Yair, a descendant of Judas the Galilean who inherited his ancestor's spirit, had occupied the fortress since the beginning of the war. After the fall of Jerusalem he and a detachment of almost 1,000 Zealots (or Sicarii; see ASSASSINS) held out for over three years. Eventually the Romans, having constructed a ramp and brought their siege engines against the walls of the towering fortress, were prepared to break into the citadel the next day. That night Ben Yair persuaded his followers to kill their families and then themselves. He argued that death was preferable to slavery.

The Roman senate honored Vespasian and Titus with a triumphant procession in Rome. Captive Jewish soldiers were forced to march; Simon bar Giora was dragged behind the victor's chariot and then executed. A large amount of plunder from Jerusalem was displayed to the citizenry. Included was the table of showbread and the seven-branched lamp holder from the Jerusalem temple. Representations of these may still be seen in the triumphal arch erected by Titus in Rome.

The Romans were not yet done with Jewish political-religious war. Disturbances and revolts broke out from time to time, mostly outside of Palestine. About 60 years after the victory of Titus, a man arose in Palestine claiming to be "The Prince of Israel" (i.e., the MESSIAH). From about A.D. 132 to 135 he led his followers in a war, the second revolt, so vicious that at its conclusion the emperor HADRIAN, in his letter to the Roman senate, omitted the traditional opening statement, "I and the legions are in health."

The more likely specific causes of the second revolt include the following: (1) Jewish response to Hadrian's decision to build a Gentile city where Jerusalem once stood and a temple to Jupiter on the site of their temple; (2) reaction after Hadrian gave permission to rebuild the Jerusalem temple but rescinded it because of Samaritan objections; and (3) the view that Hadrian's prohibition of mutilating genitals included CIRCUMCISION so that the Jews regarded it as an affront to their religious practice. Ultimately, the cause of the revolt lay in the Jewish longing for freedom and the appearance of an attractive claimant who was heralded as Messiah by the famous Rabbi AKIBA. Although traditionally called BAR KOKHBA ("Son of a Star" [a messianic title, Num. 24:17], also referred to by a number of other name-descriptions, including, after his defeat, "Son of a Liar"), it was not until the

middle of the 20th cent. that, with the discoveries of letters written by this leader himself, his real name, "Shimeon Bar Kosiba," became known.

At the outset the Jewish rebels apparently (but not certainly) captured Jerusalem. Their coins bore pictures of the temple, objects used in worship, and proclaimed, "For the Freedom/Liberation of Israel" or "For the Freedom of Jerusalem." There are no chronological records of this second revolt such as the writings of Josephus provide for the first. Brief scraps of information come from a variety of Roman sources (such as the Roman historian Dio Cassius, *Rom. Hist.* 69.12 – 14), Christian (esp. Eusebius and Epiphanius), and Jewish rabbinic writings, coins, and other artifacts. Recent archaeological discoveries provide additional important data about the Bar Kokhba war.

Bar Kokhba's memory is preserved in recollections of his charismatic leadership, bravery, brutality, toughness, and personal strength. He is a legendary hero, born in national yearning, clothed in myth. Christian sources, now confirmed by his own letters, say that he persecuted Jewish Christians. Obviously they who believed Jesus to be Messiah could not acknowledge Bar Kokhba's claim to that office.

We have no account of major battles, save sketchy remembrances of the last one at a place called Bethar, near BETHLEHEM. Virtually all of the fighting took place in Judea. Surviving documents give the names of over 12 rebel centers, EN GEDI, HERODIUM, and Bethar being among the more important. But even so there do not appear to have been many pitched battles. Dio Cassius says that the Jews refrained from engaging the Romans in open fields, but used concealed rural areas and caves and tunnels from which they could emerge quickly, attack, and then return for safety. The Romans, when these caves were found, besieged the inhabitants, asphyxiating or starving many Jews to death. It is the discovery and exploration of many of these underground installations that have yielded the new data about this revolt. The contents included household and personal items, processing plants, storage facilities, military equipment, coins, letters and documents, and skeletons. After a prolonged siege Bethar fell. The Jewish forces were thoroughly defeated. Hundreds of women and children were brutally slaughtered. Bar Kokhba was killed.

The carnage from the war on both sides was staggering. Dio says the Romans destroyed 50 or more fortresses, over 985 settlements, and killed 580,000 Jews in raids and battles plus unknown numbers who died from other causes. Many Romans also died. As already noted, Hadrian refrained from claiming the well-being of his legions. After the war untold numbers of Jews were sold as slaves. It is said so many were sold at HEBRON that a single person was valued no more than a horse. Many Jews died as they were being forcibly transported to Egypt or other countries.

Jerusalem, renamed as Alia Capitolina, was rebuilt as a thoroughly pagan city. Its main religion was the worship of Jupiter on temple hill, but many other gods were revered throughout the city. One tradition says a shrine to Aphrodite (counterpart of Astarte; see ASHTORETH) was erected on the traditional site of the tomb of Jesus. Jews, on pain of death, were forbidden to come even within sight of the city. Not until the time of Con-stantine (313 – 361) were Jews again permitted to enter Jerusalem, and that only one day a year, to weep on the anniversary of its destruction. (See further *HJP*, rev. ed. [1973 – 87], 1:484 – 557; L. L. Grabbe, *Judaism from Cyrus to Hadrian*, 2 vols. [1992], chs. 7 – 9.)

J.J. SCOTT, JR.

Wars of the Lord, Book of the. One of several books no longer extant which are mentioned in the OT and which played an important, if somewhat obscure, part in Israel's literary history. It is cited by name and quoted in Num. 21:14 – 15 to substantiate the narrator's statement concerning the boundary

cut by the deep ravines of the ARNON River between MOAB and AMMON. The quotation as it stands is obscure (the syntax is apparently incomplete and nothing is known of the names WAHEB and SUPHAH) and sheds little light on the character of the book itself. It is a plausible conjecture, however, that vv. 17 – 18 and 27 – 30 are drawn from the same source, not only because of their proximity to the first quotation, but also because of the occurrence (in the case of vv. 27 – 30) of a number of identical place names as well as the suitability of the taunt itself for the content of the book as suggested by its title. Evidently the book consisted of a number of victory songs written to be sung in celebration of the triumphs of Yahweh in the conquest of Canaan by Israel. That Yahweh was a "a man of war" (Exod. 15:3 KJV; see WARRIOR, DIVINE) who brought Israel victory in battle was a fact the nation loved to commemorate in song.

What is apparently another book of this type is the Book of JASHAR (or "the Upright") mentioned and quoted in Josh. 10:12 – 13 and 2 Sam. 1:18 – 19. What relationship may exist between these two books (or are they the same book?) and certain other unidentified poetical quotations in the OT (e.g., Exod. 15:1 – 18; Jdg. 5; 1 Ki. 8:53 LXX) can no longer be determined. Questions of the date and authorship of this book remain shrouded in obscurity, but it would seem naturally to derive from the heroic age, and thus to be among the most ancient of Israel's literature. (See O. Eissfeldt, *The Old Testament: An Introduction* [1966], 132ff.; D. L. Chris-tensen in *CBQ* 36 [1974]: 359 – 60; B. A. Levine, *Numbers 21 – 36*, AB 4A [2000], 92 – 95.)

<div align="right">D. A. HAGNER</div>

watch, watchman. For the use of the noun *watch* referring to the periods of time into which the day was divided, see DAY, HOUR, and NIGHT. As a verb, this word translates a variety of biblical terms, such as Hebrew *sapâ H7595*, "to keep watch, look about, spy" (Gen. 31:49 et al.; often as a ptc. meaning "watchman," 2 Sam. 13:34 et al.) and Greek *grēgoreō G1213*, "be watchful, alert" (Matt. 24:42 – 43 et al.).

Watchmen were stationed on city walls (2 Sam. 18:25; 2 Ki. 9:18; Ps. 127:1; Isa. 62:6), on watchtowers (2 Ki. 9:17; 17:9; 18:8), or on hilltops (Jer. 31:6). In times of danger they were on the alert for hostile action against a city, and it was their duty to give word to the king of any suspicious person approaching the city wall (2 Sam. 18:24 – 27; 2 Ki. 9:17 – 20). Such watchmen who were on duty at night naturally looked forward eagerly to the breaking of day (Isa. 21:11). In Cant. 3:3 and 5:7 reference is made to watchmen that go about the city, possibly suggesting some kind of city police.

Watchmen kept watch over fields and vineyards during the time of harvest. Sometimes whole families would act as watchmen; to protect themselves from the heat, they frequently erected simple booths, and to facilitate observation they built watchtowers (2 Ki. 17:9; 2 Chr. 20:24; Job 27:18). Prophets in the OT are described as being watchmen of God, announcing to the people of Israel impending doom from Yahweh or bringing good news to them (Isa. 21:6; 52:8; 62:6; Jer. 6:17; Ezek. 3:17). The solemn responsibility of the prophets of Israel to the nation is described in Ezek. 33:2 – 6. False prophets are blind watchmen (Isa. 56:10).

<div align="right">J.L.KELSO</div>

watcher. Literal translation of the Aramaic word *ʿîr H10541*, which occurs in only one passage with reference to angelic creatures (Dan. 4:13, 17, 23 [MT, vv. 10, 14, 20]). The NIV translates this term as "messenger." The designation of certain angels as "watchers" becomes more common in the PSEUDEPIGRAPHA, and chs. 6 – 36 of *1 Enoch* are usually referred to as the Book of the Watchers. (See *DDD*, 893 – 95.)

watchtower. See TOWER; WATCH, WATCHMAN.

water. A liquid compound of hydrogen and oxygen (H_2O) which is convertible by heat to steam and by removal of heat (cold) to ice. Most water is derived directly from the ocean by evaporation. It condenses to form clouds and is precipitated as RAIN, SNOW, or HAIL on the earth's surface, where it either runs into rivers, lakes, etc., or sinks into the ground. Here some is used by plant life as an essential support, but much forms underground water that may reappear in springs, be brought to the surface from wells, or return to the sea.

I. General. Naturally occurring waters contain impurities in varying degrees. During the process of evaporation, the salts in the ocean are left behind but rain water acquires traces of ammonium salts and various gasses from the air. In mountainous districts lake and river water is relatively pure, but running water progressively dissolves salts and picks up suspended mineral or vegetable matter. Where the surface drainage pattern ends in an inland lake, such as the DEAD SEA, the proportion of salts in the water progressively increases as evaporation takes place. Underground waters are generally clear and free from suspended matter, having been filtered by the rock strata (aquifers) through which they flow. However, during their passage through rock strata they may dissolve considerable quantities of mineral salts, particularly in limestone regions where solution CAVES are formed. Some mineral salts, particularly magnesian salts, make the water unfit for consumption by humans or animals; in many cases such water has a bitter taste. Other underground water contains little dissolved material (cf. Jas. 3:12).

With water being essential for human existence, as well as for animals and plants (Isa. 1:30; 55:10), early civilizations developed and were able to flourish where the rainfall was sufficient to support crops and animals as well as humans, or where rain fed rivers like the EUPHRATES, TIGRIS, and NILE, which flowed continuously. The establishment of permanent habitation away from the FERTILE CRESCENT and away from the Nile relied heavily on the availability of usable underground water: natural springs (cf. Deut. 8:7) feeding streams were important for larger centers of habitation, and wells (cf. Gen. 26:18) were vital to those keeping animals. The siting of cities like JERUSALEM and JERICHO had defense and water supply as major considerations. In the case of Jerusalem, to be described as the world's most significant city (Ps. 87:2 – 5) and the dwelling place of God (1 Ki. 8:13), the existence of the GIHON SPRING in the immediately adjacent KIDRON Valley (2 Chr. 32:30; Isa. 7:3) was vital. In the case of the strategic city of Jericho—on the crossroads of trade and important in the protection of the Judean hill country and the JORDAN Valley from invasion from the E and S (Josh. 6)—there is a copious spring in an otherwise inhospitable region.

The availability of water has been at the heart of the constant conflict, throughout the history of the Near E, of the tillers of ground and keepers of sheep (cf. Gen. 4:2). With the progressive increase of AGRICULTURE in any region, the nomadic herdsmen have been forced out of regions with reliable water supplies. In keeping with the slaying of ABEL by CAIN (4:8) these nomadic peoples have consistently harried the settled people, with any hydraulic works being prime targets. And the herdsmen have fought amongst themselves for the ownership of wells (26:20).

Not surprisingly, water has been linked with BREAD as necessities of human existence (1 Sam. 25:11; 1 Ki. 18:4), and the giving or withholding of these was considered to be of great importance (Deut. 23:4; Matt. 10:42). The provision of water was recognized as a divine gift. Divine blessing is spoken of in terms of water (Isa. 44:3; Jn. 4:13), and both the paucity of and the desire for spiritual

LIFE described in terms of thirst for water (Amos 8:11; Matt. 5:6). The use of water as a symbol is especially prominent in the Gospel of John (cf. L. P. Jones, *The Symbol of Water in the Gospel of John* [1997]; W.-Y. Ng, *Water Symbolism in John: An Eschatological Interpretation* [2001]). Both the common custom of carrying water to the household (Mk. 14:13) and the way in which water was drunk (Jdg. 7:5 – 6) were used as signs, while the common custom of washing feet (Gen. 43:24) was used by Jesus as a means of teaching (Jn. 13:5 – 9) and as an indicator of attitudes (Lk. 7:37, 38, 44). The use of water in religious ritual was widespread both in OT and NT times (e.g., Exod. 29:4; Lev. 15:12; Mk. 1:5, 9).

Not only inland water but also the adjacent seas have been important. Much of the rain precipitated on the Holy Lands is water evaporated from the Mediterranean Sea, a mass of water that played an important role in trade (e.g., the Phoenicians) and transport (Acts 27). The RED SEA and the Gulf of AQABAH also provided means of access for trade (1 Ki. 9:26) with ARABIA, northeastern and eastern AFRICA, and possibly INDIA. It also provided natural resources, such as ONYCHA and PEARL.

II. Rainfall, evaporation, run-off, and infiltration. The prevailing westerly winds (1 Ki. 18:42 – 45) over the eastern Mediterranean pick up moisture, which is precipitated when the air is forced to rise over the Judean and E Jordan highlands. Most precipitation occurs as rain, although snow falls on the higher ground and there are some hail storms. This precipitation is seasonal from October to May, with the greatest proportion falling from December to March. Average precipitation is greater than 1,000 mm. (about 40 in.) on the high ground SE of DAMASCUS and greater than 500 mm. (about 20 in.) over Lebanon, parts of Syria and Israel, and limited parts of Jordan. However, there are wide variations, the average rainfall for Jerusalem being 620 mm. (about 25 in.), with a maximum of 1090 mm. (about 41 in.) and a minimum of 210 mm. (about 9 in.). Much of eastern Jordan and eastern Syria is in a rain-shadow region with precipitation being less than 200 mm. (about 8 in.) over large areas. In the S the rainfall is even lower despite the higher elevations of the Jordan highlands compared with those farther N. The low rainfall results from the winds being mainly southerly from the dry N African continent, but in these desert regions water is deposited as DEW (Exod. 16:13). Rainfall in the southern part of the Jordan Valley and adjacent to the Dead Sea is also very low.

A large proportion of the rain evaporates, with humidities on the E bank of the Jordan River being in the order of 75 percent in the winter and 35 percent in the summer. In one part of northern Jordan where the annual average precipitation is 415 mm. (about 16 in.), an estimated 81 percent is evaporated, 9 percent is run off into the surface drainage system, and 10 percent infiltrates into the underground water system. In other regions, with comparable moderate rainfall, as little as 5 percent or as much as 15 percent of total rainfall infiltrates and adds to the vital store of underground water (cf. Deut. 11:11). In regions where rainfall is less than 200 mm. (about 8 in.) there is little or no direct infiltration except from flood flow in wadis crossing outcrops of aquifers.

III. Underground water. The catchments for underground water as well as underground water conditions, including emergence as springs and supply in wells, are almost entirely dependent upon geological factors. These include the porosity and permeability of strata, the location of strata that form aquifers, the juxtaposition of aquifers and aquicludes (formations that do not transmit water), the inclination of the strata, and the existence of structural features such as folds and faults. Much of the water that infiltrates the soil and surface rocks seeps downward to a zone where the rocks are saturated with water. The upper surface of this saturated zone is called the water table, and its height at any place is given by the level at which water stands in a well there.

There are two main groups of underground water in the Holy Land, these being the underground water in the permeable sections of the folded and faulted hill regions and that in the sediments of the
The mountains in Palestine rise to form a continental divide diverting surface water either into the Mediterranean Sea or into the Dead Sea.

Irrigation in the land of Goshen.

main plains. In the hilly country, such as much of Judea, Samaria, and Galilee, underground water is generally at a considerable depth below the surface, but the water table undulates. Where it meets the surface in the valley districts between the higher terrain, ground water emerges as springs (Deut. 8:7). Many such springs occur where an inclined junction of pervious and impervious strata (aquifer and aquiclude) meets the surface or where there is a faulted junction between the two such types of strata. These springs are generally perennial, and supply pools which in turn feed streams (2 Sam. 17:20).

At the sides of valleys springs also occur where the water table meets the land surface. However, seasonal variations in precipitation, as well as long periods of drought, cause variation in the level of the water table with the result that some springs may cease to flow for a period (2 Ki. 2:19). Other intermittent springs flow only from the sides of valleys after abnormal infiltration, following prolonged heavy rain, causes the water table to rise and meet the land surface. Where the ground elevation is not great, such as in the foothills of the Judean mountains, the depth of underground water below the surface decreases and the water can be tapped by relatively shallow wells. Underground water is also tapped by wells from aquifers below the plains, such as the coastal plain, ESDRAELON, and the region around BEERSHEBA (see PALESTINE III). Here the water table is almost flat, with a very gentle inclination toward the Mediterranean Sea. The aquifers are always underlain by aquicludes with the level of the water—hence the depth of any well, dependent upon the position relative to the sea, the situation of impervious strata, and the permeability of the aquifer.

In some cases underground water may travel for tens of miles before emerging as springs. This is the case for the relatively few and important watering places in the southern desert between the Dead Sea and the Gulf of Aqabah. The water mainly infiltrates sandstone aquifers below wadis during periodic floods and then travels large distances underground.

The nature of the aquifers varies from place to place dependent upon the regional geology. However, the main sources of water on the coastal plain of Palestine are sandstones overlying clay beds, while the main sources of underground water in both Israel and Jordan are limestone bands in the Judean limestone (see STONE). The interbedded marls act as aquicludes preventing further downward migration of the ground water and forcing it to issue as springs. In southern Syria basalt

lava flows are good aquifers and from them issue the springs that feed the YARMUK River. In the southern desert, between the Dead Sea and the Gulf of Aqabah, sandstones act as aquifers for the little water available (e.g., the Ram Spring), while at PETRA a shale acts as an impermeable bed giving rise to a small spring.

IV. Jordan drainage system. The Jordan River, its tributaries, the Sea of Galilee, and the Dead Sea constitute the major surface drainage system of the Holy Land. The Jordan River has two main sources. One is near Banias (CAESAREA PHILIPPI, Matt. 16:13) at the southern base of the Mount HERMON range in Syria, where the Nahr Banias issues from a cave; the other source is at a spring in Tell el-Qadi (see DAN (PLACE)). Two longer streams, but with less water, also form the Jordan headwaters, namely, the Nahr Hasbani (which occupies the northern continuation of the Jordan Rift Valley) and the Nahr Bareighit. The four streams unite below Banias and flow into the now drained Lake Huleh, which was formed by the damming of the river by volcanic rock. From there a clear, fast-flowing river falls below sea level and in the 9 mi. to Lake Tiberias its base drops 600 ft., with BETHSAIDA (Mk. 6:45) and CAPERNAUM (Jn. 6:17) on the E and W sides, respectively, of its entrance into the lake.

The Sea of Galilee, which is 12 mi. long and up to 7 mi. across, also exists because of the damming of the Jordan River by volcanic rock, while there are hot springs containing chlorides and sulphides near its shores. See GALILEE, SEA OF. Its OT name, Sea of KINNERETH, results from its harplike shape. NT names are Lake of GENNESARET (Lk. 5:1) and Sea of TIBERIAS (Jn. 6:1). About three-quarters of the inflow into the lake comes from the Jordan River; the rest comes from springs, seepage of underground water, rainfall, and wadi floods. The water is warm, varying from 12.5°C (55°F) to 30°C (86°F). Between February and August there is abundant plankton in the lake, and fishing, which was a major industry in NT times (Jn. 21:3), is at its peak. Strong, dry E winds affect the lake in winter, often causing storms, while sudden summer squalls result from strong, hot westerly winds (Mk. 4:37).

The Jordan River S of Lake Tiberias becomes muddy and twists for more than 180 mi. along its valley floor in traversing the 60 mi. to the Dead Sea, with the base dropping only 900 ft. in that distance. In flood it fills its flood plain but in the summer it is less than 100 ft. wide and 3 ft. deep in some places, and it has been known to have been blocked by rockfalls near Adam about 24 mi. N of its entrance into the Dead Sea. See ADAM (PLACE). This is probably related to the EARTHQUAKE activity which is common along the length of the Rift Valley in which the river flows and would account for the dry passage of the Israelites under JOSHUA (Josh. 3:16). The plain of Jordan was chosen by LOT because of the abundance of water (Gen. 13:10 – 11). The river played an important role in the lives of ELIJAH (2 Ki. 2:6) and ELISHA (6:2), and its muddy waters were repugnant to NAAMAN, the leper who came from a district with clear rivers (5:12). However, because of its association with Jesus, including his baptism by JOHN THE BAPTIST (Mk. 1:9), this river has become a symbol of cleansing and purity.

The Dead Sea, also referred to as the Salt Sea (Gen. 14:3; Josh. 3:16), is fed mainly by the waters of the Jordan River, which supplies an annual average of 1.2×10^9 cubic meters of water out of a total intake of 1.6×10^9 cubic meters. The remainder of the water comes largely from the ARNON and from Wadi Zarqa Ma‘in, together with some from springs and some from seasonal floods of otherwise dry rivers. This inland lake has no outlet, is situated in the deepest part of the Jordan Rift Valley, and is 44 mi. from N to S with an average width of 8 mi. The Lisan Peninsula protrudes from the eastern shore and divides the lake into a shallow southern basin and a deep northern basin; the

latter makes up about three-quarters of the total area and most of its total volume of 142 km^2. There is evidence to suggest that the last flooding of the southern basin took place c. 1,500 years ago and that it was dry in biblical times. The main part of the Dead Sea is c. 12,000 years old with older and even more extensive lakes having been formed at least one million years ago. Water temperatures vary from 19 – 23°C (66 – 73°F) in December – January to 34 – 36°C (93 – 97°F) in July – August, with the extreme recorded maximum temperature being 38°C (100°F). The average specific gravity of the surface water is 1.206 g/cm^3 (compared with 1.0 g/cm^3 for pure water) and the average salinity is 31.5 percent. See also PALESTINE IV.

(See further G. S. Blake and M. S. Goldschmidt, *Geology and Water Resources of Palestine* [1947]; D. J. Burdon, *Handbook of the Geology of Jordan* [1959]; R. W. Fairbridge, ed., *The Encyclopedia of Geomorphology* [1968], 243 – 46; A. Issar, *Water Shall Flow from the Rock: Hydrogeology and Climate in the Lands of the Bible* [1990]; *ABD*, s.v. "Waterworks," 6:888 – 93.)

D. R. BOWES

watercourse. This English term is used variously in Bible versions to render several Hebrew words or expressions. For example, it occurs a number of times in the NRSV as the translation of, *apîq H692*, which seems to refer to a stream bed (Ps. 126:4 et al.). The NIV uses it only once to translate the phrase *palgê-mayim* (*H7104 + H4784*), literally, "channels of water" (Prov. 21:1).

water for impurity. See WATER OF CLEANSING.

Water Gate. A city gate, restored by NEHEMIAH, on the E side of Mount ZION. It lay opposite the GIHON SPRING (Neh. 3:26), or perhaps a little farther N toward the temple (cf. 12:37). An open square beside the Water Gate furnished a place of assembly for EZRA's reading of the law and for erecting booths for the Feast of Tabernacles in 444 B.C. (8:1, 3, 16). See JERUSALEM II.D.2 and III.A.

J.B. PAYNE

water hen. This term is used by the RSV and NRSV to render Hebrew *tinš;emet H9492*, a word of uncertain meaning that occurs in a list of unclean birds (Lev. 11:18; Deut. 14:16 [NIV, "white owl"; KJV, "swan"]; the same word, or a homonym, occurs in Lev. 11:30 with the apparent meaning of CHAMELEON). The rendering "water hen" apparently derives from the SEPTUAGINT at Lev. 11:18 (*porphyriōn*; at Deut. 14:16, however, the LXX has *ibis*, a different bird [but *porphyriōn* again in 14:18—it is not clear whether the terms in the Greek text correspond precisely with those in the MT]). G. R. Driver (in *PEQ* no vol. [1955]: 15) proposed "little owl," and various other species of OWL have been suggested (cf. *HALOT*, 4:1756).

water of bitterness. See BITTER WATER.

water of cleansing. This phrase is used by the NIV to render Hebrew *mê niddâ* (*H4784 + H5614*), which occurs in only a few contexts (Num. 19:9, 13, 20 – 21; 31:23). English versions translate this phrase variously: "water of separation" (KJV), "water for impurity" (RSV), "water for cleansing" (NRSV), "water of lustration" (NJPS). The word *niddâ* is used of ritual impurity (e.g., Lev. 20:21; frequently with reference to menstruation, 15:19 – 27), but its precise derivation is disputed (see summary in *NIDOTTE*, 1:925; more detail in *TDOT*, 9:232 – 35). Depending on which etymology is

followed, the combination *mê niddâ* may mean "water for [the removal of] impurity" or "water of expulsion." In either case, however, the reference is clearly to a ritually purifying agent for a person or thing that had been defiled, whether by contact with the dead or for other reasons.

The ashes of a burned red cow (see HEIFER, RED) were added to "running water," which was then applied to the defiled person. The animal used in this ceremony had to be a female of reddish-brown color, without any physical defects, and one that had never borne a yoke. The burning of the cow took place "outside the camp," and the whole animal—even the blood, with the exception of some that was used in sprinkling toward the front of the tent—was reduced to ashes. This element distinguishes the ceremony from the Levitical ritual sacrifice. A piece of cedar wood and a bunch of hyssop bound with a scarlet cloth were burned with the cow.

The ashes were kept outside the camp in a clean place until they were mixed with the spring water for the specific ceremonies of purification. This "water of impurity" was applied to the defiled person or object by being spilled over it, or sprinkled with branches of HYSSOP. The ceremony was performed on the third and seventh days of impurity, after which the person was cleansed and bathed, and the garments washed, which restored him or her to the community. The account in Num. 31:13 has to do with defiled objects taken in battle.

A.C.SCHULTZ

water shaft. This term, referring to an underground conduit for bringing water from a spring into a city, is used by the NIV and other versions to render Hebrew *sinnôr H7562* in 2 Sam. 5:8 (this Heb. word occurs in only one other passage with the probable meaning of "waterfall," Ps. 42:7). There is archaeological evidence for water shafts in various cities in Palestine from the Canaanite period onward (e.g., JERUSALEM, MEGIDDO, GIBEON, ETHAM). At Jerusalem there is a tunnel to the GIHON SPRING that brought water to the city, and some scholars think that 2 Sam. 5:8 refers to this tunnel (however, see the discussion of Warren's Shaft under JERUSALEM III.B). It is obvious that if a city had access to a reliable water supply it could hold out in time of siege, as SAMARIA did for over two years against the Assyrians in 722 B.C., and as Jerusalem did against the Babylonians for about eighteen months in 586 B.C.

Water shaft connecting to Jerusalem's Gihon Spring.

wave offering. See SACRIFICE AND OFFERINGS IV.C.2.

waw wou (possibly from ֻו *H2260*, "hook"). Also *vau, vav*. The sixth letter of the Hebrew ALPHABET (ו), with a numerical value of six. In the so-called square Hebrew alphabet, it is a vertical stroke with a leftward hook at the top, but the shape goes back to an epigraphic form resembling a capital "Y" with short diagonals and a long vertical tail. This earlier form in turn seems, on the basis of the Sinaitic inscriptions from Serabit el-Khadim, to have represented a battle mace (a short wooden staff with a pear-shaped stone head fastened on one end of it) of the type frequently represented in Egyptian bas-reliefs of the pharaohs. (For alternate explanations, see *HALOT*, 1:257.) The letter represents a bilabial semiconsonant similar to the sound of English *w*, but in later times it acquired a sound more like that of English *v*, which is the current Israeli pronunciation. Before the invention of vowel signs, the *waw* could be used also to represent the sounds *ô* and *û*, and this practice was continued even after the vocalization system was introduced.

G.L.ARCHER

wax. The Hebrew noun *dônag H1880* appears in the Bible only in poetry, where it is used as a simile of melting (Pss. 22:14; 68:2; 97:5; Mic. 1:4). In ancient times wax was used for sealing documents and for making writing tablets, but these uses of wax are not mentioned in the Bible. The English verb *to wax* occurs often in the KJV, but only in the intransitive sense "to grow, increase, become" (e.g., "I am waxed old," Gen. 18:12); the use of this verb is rare in modern versions.

S.BARABAS

way. This English term is used as the rendering of various biblical words (e.g., Heb. *derek H2006* and *,ōrah H784*; Gk. *hodos G3847* and *tropos G5573*). In addition to its use in a literal sense (a path over which or direction in which one moves), the word *way* occurs extensively in a figurative sense, denoting behavioral patterns in animal life, movements in nature, varieties of human and divine conduct, action, and intention, as well as attitudes, habits, customs, spirit, and plans in human and divine life. Specific OT examples are the following:

(a) Of natural processes: the way of lightning and thunder (Job 28:26; 38:25 [NIV, "path"]), movement of light (38:19, 24), life of the ant (Prov. 6:6), behavior of an eagle, serpent, ship, and human courting (30:19).

(b) Very frequently of moral conduct, whether good (1 Sam. 12:23; Ps. 119:1) or evil (Jdg. 2:19; Ps. 119:101 [NIV, "path"]), including positive and negative traditions (1 Sam. 8:3; 1 Ki. 15:26).

(c) Of various facets of human experience, such as a person's course of life (Job 3:23; Prov. 3:6), plan for life (Prov. 16:9 [NRSV]; Hos. 10:13 [KJV]), suffering or trial (Ps. 142:3; Job 23:10), and destiny in death (Josh. 23:14; 1 Ki. 2:2).

(d) Of God's will and command (Deut. 5:33; Isa. 2:3), judgments (Isa. 26:8 NRSV), purposes (Job 36:23; Ps. 77:13), and governing providences (2 Sam. 22:31; Ezek. 18:25).

In the NT also there are many uses referring to moral conduct (Matt. 21:32; Rom. 3:16 – 17) and to God's will and purposes (Mk. 12:14; Heb. 3:10). In addition, the book of Acts records that the term "the Way" was used specifically of the Christian faith and manner of life followed by the Lord's

disciples and held in contempt by their enemies (Acts 9:2; 19:9, 23; 22:4, 14; 24:22). Most important, the term is used of JESUS CHRIST as the final and perfect revealer: in his person and by his sacrificial death, he is the living and personal way to God, his holiness, and salvation. He teaches the way in truth (Matt. 22:16) and is himself the only "way" to God (Jn. 14:4 – 6) and the One who opens up the way into the holiest by his sacrifice (Heb. 9:8; 10:19 – 20).

G. STOB

wealth. Abundance of valuable possessions. Numerous Hebrew and Greek works can be translated with English "wealth" and such synonyms as "riches" and "prosperity." A common Hebrew noun is *hayil H2657*, which can mean "power" and the like, but which frequently refers to movable goods such as gold, silver, frankincense, garments, etc. It may be BOOTY or plunder that can be carried on donkeys and camels (Isa. 30:6). This wealth may be acquired by trading, as in the case of TYRE (Ezek. 28:4 – 5). Similarly, the word *kābôd H3883* (lit. "weight," more frequently "honor, glory") can refer to wealth in the form of silver and gold (Nah. 2:9), but also in the form of flocks and herds (Gen. 31:1). Other terms include *rekûš; H8214*, a general word for "possession(s)" (e.g., Gen. 12:5), *hôn H2104*, which is especially common in Proverbs (Prov. 1:13 et al.), and *ʿōš;er H6948*, which is used, for example, of the riches accumulated by kings such as SOLOMON, HEZEKIAH, and XERXES (1 Ki. 10:23; 2 Chr. 32:27; Esth. 1:4). In the NT, the primary Greek word for "wealth" is *ploutos G4458* with its cognates (Matt. 13:22 et al.), but other relevant terms are *ousia G4045* (Lk. 15:12 – 13), *ktēma G3228*, "possession" (Matt. 19:22 et al.), and *mamōnas G3440* (Lk. 16:9, 11; see MAMMON).

The most important item of wealth was FOOD, for in Bible times food was a matter of life and death, far more significant than it is to the average Bible reader today. "People curse the man who hoards grain, / but blessing crowns him who is willing to sell" (Prov. 11:26). According to the prophet MICAH, the withholding of food from the poor by the rich was in his day the equivalent of cannibalism (Mic. 3:2 – 3). Among food items were wheat, olives, oil (from olive and sesame), honey, wine, and figs. Lamb and goat were the meats then as today, and they were of equal economic importance. For the rich there were also all kinds of SPICES: "There had never been such spices as those the queen of Sheba gave to King Solomon" (2 Chr. 9:9).

The wealth of the rich consisted of luxury items. White WOOL finished by the fuller, as well as LINEN, dyed blue and purple and finished with embroidery, provided luxurious clothing. Saddle cloths and multicolored oriental rugs were highly valued. Precious stones of all kinds, especially emeralds, pearls, and agates, were used for jewelry (see JEWELS AND PRECIOUS STONES). Riding horses and mules, together with chariot horses, were utilized by the wealthy for transportation. Ivory and ebony were imported for inlaid furniture. The OT world knew how to use METALS almost as well as we do today. Ezekiel mentioned gold, silver, copper, and such alloys as iron, tin, and lead.

Manufacturing, which began about the time of ISAIAH, soon became the source of major wealth. Manufacturers leased the farmlands abandoned by the farmers who worked in their factories; thus the manufacturers also held a corner on a major grain market. Most tragic was the wealth accumulated through SLAVERY, although Israel had fewer than most other ancient nations.

ABRAHAM provides an example of a rich business man. His trade may have reached from HARAN to EGYPT; he himself concentrated on the area from the NEGEV to Egypt, possibly leaving ELIEZER to watch the DAMASCUS unit, and LOT to handle the Arabian trade (see ARABIA). SOLOMON is usually mentioned as the other big business man, but much of the credit for his wealth should go to DAVID. David's military conquest reached to the EUPHRATES River, and not only brought to him the booty of

these campaigns, but also enabled him to be a major member of the IRON monopoly when that metal was as revolutionary as aluminum became in modern times. Furthermore, his military lines enabled him to tax any item crossing his boundary via Anatolia (Asia Minor), the Euphrates River, the Arabian Desert, Egypt, and parts of the Mediterranean coast. It was David's wealth that built Solomon's TEMPLE and palace complex. Solomon added horse-trading, some manufacturing, and the selling of COPPER—his government monopoly—to the backward peoples of the RED SEA. Wealth could not be denied to the farmer who worked large areas of productive soil or had legal rights to large grazing areas for his flocks. After David's time the royal court gave opportunities for economic advancement. Interest could be earned on business loans and foreign deals, but not from farm land. Money could be made on the sale of city property, but farm land stayed within the immediate family.

There is an excellent description of the movable wealth of Tyre in Ezek. 27:12 – 25, and this description fits Israel as well. Another useful list is found in Rev. 18:11 – 13; the only item mentioned that was not common in OT times was SILK (it is a debatable question whether Ezek. 16:10 actually refers to silk).

Before the invention of coinage (7th cent. B.C.), money was carried in ingots, bars, or rings of silver or gold; or the metal might be weighed out in any other form. Jewelry made of these metals was always more valuable than the metals themselves. Among the things that ACHAN stole at JERICHO (Josh. 7:21) was a wedge or bar (lit., "tongue") of gold; one such "tongue" was actually found in the excavations at GEZER. Precious stones of all kinds were also used as money, even after COINS became common. Because of the great value represented in small precious stones, they were the most convenient method of carrying large sums of wealth. Embroidered garments were of such value that they were listed as war booty. The first OT mention of coinage is in reference to the Persian gold daric (Ezra 2:69). The NT refers to various gold, silver, and copper coins.

The Bible everywhere insists that God is the Creator and that all things belong to him. He alone is the Creator and Distributor of wealth. Wealth is the gift of God. In Deut. 8:18 Israel was told, "But remember the LORD your God, for it is he who gives you the ability to produce wealth." Believers are only administrators of God's wealth. In the application of the parable of the talents, however, God insists that he must have a return on his investment.

Nowhere in Scripture is wealth thought of as being sinful per se. Indeed, Israel was commanded to honor the Lord with its substance (Prov. 3:9), and the TITHE was an integral part of WORSHIP. Wealth, however, often became a temptation, and the psalmist wisely advised, "though your riches increase, / do not set your heart on them" (Ps. 62:10). JOB's attitude to the totality of life applies equally well to its economic phase: "Naked I came from my mother's womb, / and naked I will depart. / The LORD gave and the LORD has taken away; / may the name of the LORD be praised" (Job 1:21).

In NT times money and philosophy became the greatest obstacles to the worship of God. The deadly danger of money is seen in Christ's remarks, "How hard it is for the rich to enter the kingdom of God" (Mk. 10:23); and the parables of the rich fool and the rich young ruler stress the same theme. To summarize, Christ says, "You cannot serve both God and Money [lit., Mammon]" (Matt. 6:24); "where your treasure is, there your heart will be also" (Lk. 12:34).

While such OT saints as Abraham, David, and Job were men of great wealth, there is no NT believer of comparable wealth. It is interesting to note, however, that the Roman centurion of whom Christ said, "I have not found anyone in Israel with such great faith" (Matt. 8:10), was wealthy enough to have built the SYNAGOGUE at CAPERNAUM where Christ worshiped (Lk. 7:5). Although Christ was the Lord of all wealth, he saw fit to travel through life without it, trusting himself to the

mercies of his friends (cf. Lk. 8:1 – 3). (For bibliography, see POVERTY.)

J.L.KELSO

wean. In ancient times a child was not fully weaned for two or three years, and in some cases probably longer. According to 1 Sam. 1:21 – 28, HANNAH stopped going up to SHILOH to offer the annual sacrifice until she had weaned SAMUEL, at which time she left the child there in the care of ELI; but it is very unlikely that Samuel would have been left at the sanctuary if he was less than four years old. A more direct example is that of a woman who saw seven of her sons killed by ANTIOCHUS Epiphanes and then urged her last son to hold fast to his Jewish faith against the threats of the king, who tried to persuade him to repudiate his faith. She said to him, "I carried you nine months in my womb, and nursed you for three years, and have reared you and brought you up to this point in your life, and have taken care of you" (2 Macc. 7:27). The completion of weaning was sometimes celebrated by a feast (Gen. 21:8). The word is also used in a metaphorical sense (Ps. 131:2; Isa. 28:9).

S.BARABAS

weapon. See ARMOR, ARMS.

weasel. A common rendering of Hebrew *holed H2700,* which occurs only in a list of unclean "animals that move about on the ground" (Lev. 11:29; it is mentioned first in the list, followed by the MOUSE or rat). There is in fact no positive evidence to support this or any other identification (such as the MOLE; cf. NJPS and *HALOT,* 1:316). Weasels are not uncommon in Palestine, however, and it has been argued they may have been regarded as unclean because their scent glands make them unsuitable for food and because in Egypt they were sacred to the moon. In Greece and Rome they were kept to control mice before cats became available.

G.S.CANSDALE

weather. See PALESTINE IV.

weaving. The interlacing of a series of threads called the warp, with another series called the woof or weft. The warp threads are stretched in a LOOM for weaving; the weft threads are then passed over and under them. Weaving was one of the most important and well-developed crafts of biblical times. See also CLOTH; DRESS; LINEN.

It is impossible to determine when humans first learned the art of weaving, for its origin lies far back in prehistory. In Paleolithic times, 20,000 to 40,000 years ago, people were already skilled in matting and basketry, the forerunners of weaving. It must have been in Neolithic times that the loom and spinning devices were invented; weaving was quite common by the time of the Bronze Age. The oldest known paintings of looms and weavers come from EGYPT about 2000 B.C., where weaving was already a highly developed craft; in Egypt the weavers were usually men. The tomb at Beni Hasan of a government servant shows people dressed in clothes that were woven or embroidered with bright colors.

Various materials were used, depending on their availability and the geographical location. Neolithic villagers in the Fayum grew FLAX in order to make linen from it. Cotton was grown in the Indus Valley civilization before 2500 B.C. WOOL, SILK, and goats' hair were also commonly used. Families wove all their own textiles, from coarse tent cloth to warm woolen garments for the family.

Cloth that would compare favorably with today's best grades of muslin have been found among Egyptian mummy wrappings. A Babylonian ruler of c. 2320 B.C. had a factory for weaving materials.

Long before the arrival of the Hebrews, the Canaanites wove and dyed their own fabrics. The description of the curtains woven for the TABERNACLE (Exod. 26:1 – 14) and priestly garments (28:39) indicate that the Hebrews at an early stage were skillful at weaving, probably having learned it in Egypt (cf. 35:35). Weaving was common in the time of the judges, as shown in the story of DELILAH, who weaved in SAMSON's locks as strands of the weft on her loom while he slept (Jdg. 16:13 – 14). The OT has a number of incidental references to weaving. The shaft of GOLIATH's spear was compared with a weaver's beam (1 Sam. 17:7), suggesting a diameter of 2 or 2.5 in. The Mosaic law prohibited the wearing of clothes that involved weaving two fibers together (Lev. 19:19). King JOSIAH tore down the houses of those who were weaving hangings for the ASHERAH (2 Ki. 23:7). ISAIAH made figurative use of weaving (Isa. 19:9; 38:12; 59:5), as did JOB (Job 7:6).

Evidence of the weaver's art comes from UGARIT, Byblos (GEBAL, a city particularly famous for its woven materials), Tell Beit-Mirsim (which archaeological evidence shows to have been the center of a professional textile industry), and LACHISH (where a weaving establishment was in operation at the time of the destruction of the city). The Edomites also had a textile industry (Ezek. 27:16). In fact, most of the provincial sites excavated in Judah have produced evidence of textile production. Whorls and perforated loom weights in stone and clay used for spinning and weaving have been found, as well as rock-cut vats with basins and drains that were used for dyeing. Carpet looming was also common (Prov. 7:15).

Tent weaving in Turkey.

The basic structure of looms has not altered in 5,000 years. The first looms were simple; they were made of a pair of sturdy upright beams secured to the floor and united at the top with a crossbeam. Long thread was loosely guided from top to bottom over the crossbeam. In order to hold the yarn taut, small bunches of it were weighted with stones or other heavy objects (this type appears on Greek vases c. 600 B.C.). Three kinds of looms were commonly used in biblical times: the Greek vertical two-beamed loom (just described); the Egyptian vertical which required two weavers standing on either side of the loom to pass the shuttle back and forth through alternating sheds as they beat the weft down; and the horizontal groundloom, a type commonly used by nomadic peoples even

today. The latter type was made of two beams held in place by four pegs driven into the ground. The weaver sat in front of the loom. The spacing of the warp threads on the loom governed largely the texture of the fabric to be woven. The tension had to be uniform or else the fabric would be uneven.

(See further L. Blumenau, *The Art and Craft of Hand Weaving* [1955]; R. J. Forbes, *Studies in Ancient Technology*, vol. 4 [1956]; P. J. King and L. E. Stager, *Life in Biblical Israel* [2001], 152 – 58.)

F.B.HUEY,JR.

wedding. See MARRIAGE.

weeds. Plants that are considered of no worth or obnoxious and that usually grow vigorously. Although the English word occurs only once in the KJV (Jon. 2:5, with reference to seaweed) many plants mentioned in the Bible could be classified as weeds, especially THORNS and THISTLES (Gen. 3:18). In Job 31:40, one of the Hebrew words used with reference to thorns (*hôah H2560*, NIV, "briers") occurs in parallel with *bo,sâ H947*, "weeds" (NRSV, "foul weeds"; NJPS, "stinkweed"; see COCKLE). This latter term occurs nowhere else, but the cognate *bĕʾuš H946* seems to refer to sour grapes in Isa. 5:2, 4. Could this be the Palestinian nightshade, *Solanum incanum*? This nightshade is a common weed in Palestine, even today; the berries look like little grapes, though they are poisonous.

Another weed on which one can debate is the *harûl H3017* (Job 30:7; Prov. 24:31b; Zeph. 2:9), a term often translated "nettles," as is the word *qim-môś H7853* (Isa. 34:13; Hos. 9:6). See NETTLE. The term *rōš; H8032* (often translated "poison") probably refers in some cases to a poisonous weed (Hos. 10:4; cf. also NJPS at Deut. 29:18 [MT 29:17] and Amos 6:12). In the NT, the Greek word translated "tares" by the KJV, *zizanion G2429*, is usually rendered "weeds" in modern translations (Matt. 13:25 – 30, 36 – 40). See discussion under TARES.

weights and measures. It is not surprising to find that, because of the Hebrew lack of precision in mathematics, biblical metrology (the determination of distances, capacities, and weights) is far from being an exact science, and no reliable or coherent system has been fully worked out. Evidence is insufficient and often ambiguous; systems varied from city to city and from region to region. As TRADE developed beyond simple barter in primitive times, it became necessary to develop some kind of system to determine the quantity of goods involved. The earliest measurements were related to well-known objects, such as the number of grains of cereal or the eggs of a certain fowl; measurements of length were related to parts of the body, such as finger, palm, span, and the distance between the tip of the middle finger and the elbow. Distances were related to the distance a person could walk in a day, or the distance traveled by an arrow, etc. Stones came to be used very early as a standard for weighing.

The Hebrews recognized the importance of reliable weights and measurements in the commercial, ethical, and legal life of the nation (cf. Lev. 19:35 – 36; Deut. 25:13 – 16; Prov. 11:1;

20:10). The systems they developed, though not uniform, were influenced by the civilizations of the ANE that had existed long before the appearance of the Hebrews (Egyptian, Mesopotamian, and Canaanite) and in later times the Persian, Greek, and Roman systems. The Levites had official responsibility for "all measures of quantity and size" (1 Chr. 23:29). The TALMUD contains strict regulations for the business world concerning honesty of measurements. Present information concerning Israelite metrology comes from a number of sources such as the Bible itself, HERODOTUS, JOSEPHUS, the Talmud, the treatise of EPIPHANIUS on weights and measures (A.D. 392), and the archaeological evidence from Palestine and surrounding nations. (In what follows, references to modern measures are to the U.S. system.)

This bronze instrument from Nippur (15th cent. B.C.) was an official linear measure kept in the temple and used as a standard to control other measures in the city.

I. Measures of length. The universal practice of the ancients was to name the commonest measure of length from the limbs of the human body, particularly the arm and hand.

A. Cubit. The cubit (Heb. *,ammâ H564*; Gk. *pēchys G4388*; Lat. *cubitus*) is the principal unit of linear measurement used in the Bible. Hebrew linear measurements were based upon the Egyptian system. The cubit was based on the length of the forearm measured to the tip of the middle finger. Since the length of the human arm varies from person to person, however, there was no absolute cubit standard. The length was usually 17 – 18 in. This "natural" cubit is called in Deut. 3:11 "the cubit of a man" (KJV; the NRSV translates, "the common cubit"). It was used in reference to the height of a man (1 Sam. 17:4), the depth of water (Gen. 7:20), and approximate distances (Jn. 21:8).

A more precise unit would be required in the work of building, such as the ARK OF NOAH (Gen. 6:15 – 16), the TABERNACLE (Exod. 26 – 27), the TEMPLE and its furnishings (1 Ki. 6:7; Ezek. 40 – 43), and the walls of JERUSALEM (Neh. 3:13). There were longer and shorter cubits, as in Babylon and Egypt. In Mesopotamia the cubit of Khor-sabad was 4/5 the length of the "royal" cubit of 19.8 in.; the two Egyptian cubits measured 20.65 and 17.6 in. Ezekiel 40:5 specifies a unit of measurement that was "a cubit and a handbreadth," that is, of seven palms rather than six. The SILOAM inscription offers objective evidence as to the length of the cubit, as it states that the tunnel was 1,200 cubits long. By actual measurement it is 533.1 meters (1,749 ft.), making the cubit 17.49 inches. Additional confirmation of a cubit of about 17.5 in. is derived by calculation from the dimensions in cubits of the "molten sea" of Solomon's temple (1 Ki. 7:23 – 26; 2 Chr. 4:2 – 5; see SEA, MOLTEN) coupled with its capacity figured in *baths*.

There is an unverifiable rabbinical tradition that samples of the standard cubit were kept in the temple. Cubit measures are used extensively in the OT: to give the dimensions of Noah's ark (Gen. 6:15), the tabernacle and its furnishings (Exod. 25 – 27), the size of the bed of OG king of BASHAN (Deut. 3:11), the size of GOLIATH (1 Sam. 17:4), Solomon's temple and its furnishings (1 Ki. 6:2—7:38), the height of the gallows erected by HAMAN (Esth. 5:14; 7:9), the dimensions of the city, temple, and land in Ezekiel's visions (Ezek. 40:5—43:17), the image of gold erected by NEBUCHADNEZZAR on the plain of DURA (Dan. 3:1), the flying scroll of Zechariah's vision (Zech. 5:2).

B. Reed. The reed or rod (Heb. *qāneh H7866*; Gk. *kalamon G2812*) mentioned in Ezekiel's vision of the temple (Ezek. 40:3 et al.) and in John's vision of the new Jerusalem (Rev. 21:15) was an instrument for measuring rather than a unit of measurement. The measuring "line" or "cord" (*hebel H2475*, Amos 7:17 [NRSV]; Ezek. 40:3; Zech. 2:1) was also an instrument rather than a unit of measurement. It is remarkable how many ruins of large public buildings can be measured in whole numbers of cubits of about 17.5 in. and in reeds equal to 6 such cubits. A palace building at MEGIDDO comprising part of Stratum IV must have been intended to be 50 cubits sq. The platform of the citadel at LACHISH was 12 reeds sq.; the base of the gate tower at Tell en-Nasbeh was 5 reeds sq.

C. Span. The span (Heb. *zeret H2455*) was the distance from the tip of the thumb to the tip of the little finger with the hand extended and the fingers apart. It was half the common cubit (Exod. 28:16; 1 Sam. 17:4; et al.; the Vulg. mistakenly translates it as *palmus*, which has caused confusion with the following term, "handbreadth"). The EPHOD (Exod. 28:16) and the BREASTPIECE (39:9) were a span square. Goliath's height was 6 cubits and a span (1 Sam. 17:4).

D. Handbreadth or palm. The Hebrew term *tōpah H3256* (also *tepah H3255*) refers to the breadth of the hand at the base of the fingers, generally considered to be 1/6 of a common cubit (and 1/7 of a "sacred" cubit), that is, 7.404 cm. or 2.915 in. (Exod. 25:25; 1 Ki. 7:26; 2 Chr. 4:5; Ps. 39:5; Ezek. 40:5). It was the equivalent of "four fingers" (Jer. 52:21).

E. Finger. As in Egypt, the finger (Heb. ,*esba*⟨ *H720*) was the smallest subdivision of the cubit, 1/4 of a handbreadth. As a unit of measurement it occurs only in Jer. 52:21 (cf. 1 Ki. 7:15 LXX), where the thickness of two hollow pillars is given as four fingers. It is mentioned frequently in the Talmud.

F. Gomed. The Hebrew word *gōmed H1688* occurs only once (Jdg. 3:16), where it is translated "cubit" by the KJV and other versions. It is the length of a dagger rather than a sword and could not be a true "cubit." The SEPTUAGINT translates it with Greek *spithamē*, "span," which may be correct, as the context requires a short dagger. At most it could be 2/3 of a cubit or four handbreadths. Some modern scholars consider it to be a "short cubit" (cf. *HALOT*, 1:196).

Summary of OT length measures:
1 reed = 6 cubits = 8 ft. 9 in.
1 cubit = 2 spans = 17.5 in.
1 span = 3 handbreadths = 8.75 in.
1 handbreadth = 4 fingers = 2.9 in.
1 finger = 0.7 in.
Ezekiel's cubit, however, consisted of 7 handbreadths or 20.4 in.; thus the reed (6 cubits) was

10 ft. 2.4 in.

G. Greco-Roman units. (a) The Romans reckoned the cubit as 1.5 times the Roman foot (11.66 in.), so the cubit mentioned in the NT (*pēchys G4388*, Matt. 6:27; Lk. 12:25; Jn. 21:8; Rev. 21:17) was probably 17.5 in. (b) The fathom or "[arm] stretch" (*orguia G3976*, Acts 27:28) was a measure for depth of water equal to about 6 ft. (if 6 Greek ft. = 72.9 in.). (c) The *stadion G5084* (Lk. 24:13 et al.; KJV, "furlong"), a Roman measure, contained 400 cubits or about 202 yards or 1/8 of a Roman mile. (d) Finally, the Roman mile (*milion G3627*, Matt. 5:41) was 1,620 yds., although in the eastern provinces of the Roman empire a slightly longer mile was used, equal to about 1/4 of the Persian *parasang*.

H. Distance between points. Traveling distances and the distance between two points are expressed in what would be imprecise and vague terms in modern times. The Hebrew word for "step" or "pace" is mentioned but once, and that as a metaphor (*peśa(H7315*, 1 Sam. 20:3). Distances traveled were not reckoned by miles or by hours but with such inexact phrases as a day's journey (Num. 11:31; 1 Ki. 19:4; Jon. 3:4; Lk. 2:44), or three days' journey (Gen. 30:36; Exod. 3:18; Num. 10:33; Jon. 3:3), or seven days' journey (Gen. 31:23; 2 Ki. 3:9). In a few passages (Gen. 35:16; 48:7; 2 Ki. 5:19), the distance is expressed with a phrase (lit., "a stretch of land") that means only "some distance," or "a short distance."

It can be estimated that under ordinary conditions 20 – 25 mi. could be traversed in a day. A SABBATH DAY'S JOURNEY is the distance between the MOUNT OF OLIVES and JERUSALEM (Acts 1:12). According to Josephus this distance was 6 stadia or about 1,238 yards. A rabbinical rule derived from Num. 35:5 set the distance permissible for Sabbath travel at a little over 0.5 mi. Joshua 3:4 records that the distance between the ARK OF THE COVENANT and the people was 2,000 cubits (c. 3,600 ft.), and since some could go to the ark to worship on the Sabbath, it is assumed that a Sabbath day's journey was at least 2,000 cubits.

Other distances include a bowshot (Gen. 21:16) and a furrow's length (1 Sam. 14:14). For the latter, see below, section II.

II. Measures of area. It was a widely practiced custom in ancient times to state land areas in terms of what a yoke of oxen could plow in a given period of time, or the amount of seed required to sow a given area. For example, land was measured in ASSYRIA AND BABYLONIA by the area a team of oxen could plow in a day; this area was defined as 6,480 sq. cubits or about 4/10 acre. Similarly one finds such expressions as an *imeru* ("ass-load") of land. In Egypt the cubit was used for determining areas: a piece of land 1 cubit wide and 100 cubits long was considered as a cubit in area; 100 cubits (an area of 100 cubits sq.) was a *st t*, and was equal to roughly 2/3 acre.

There are no terms in Hebrew for measurement of area. Rather the lengths of the sides of a rectangle or square, or the diameter and circumference of a circular area, are given (1 Ki. 6:2 – 3; 7:23; 2 Chr. 4:1 – 2; Ezek. 40:47, 49; 41:2, 4; et al.). Bible versions use English *acre* in two passages where the Hebrew word *semed H7538*, "pair [of oxen]," occurs to indicate the amount of land that a team of oxen could plow in a day (1 Sam. 14:14 [with *ma(anâ H5103*, "furrow"]; Isa. 5:10). Land was also measured by the amount of grain required to sow it (Lev. 27:16, although this verse prob. refers to the grain to be harvested and is thus an estimate of the value of the field and not of its area). ELIJAH dug a trench around the altar on Mount Carmel large enough to contain two *seahs* of seed (1 Ki. 18:32).

Another passage describes the size of the pasture lands of the Levitical cities. According to Num. 35:4, the lands are to extend outward from the wall of the city 1,000 cubits all around, but v. 5 seems to describe a square area with sides of 2,000 cubits. If taken literally, there would be no space left for the city in the middle of the square area. The solution is that the 2,000 cubits of v. 5 represent the frontage of the specified depth of 1,000 cubits, which means that the 2,000 cubits sq. is not the area of the pasture lands, but is a square enclosing the city and making the frontage of the pastures on each of the city's four sides. From data in the MISHNAH, I. Benzinger (*Hebräische Archäologie*, 2nd ed. [1907], 191) calculated that a seah was equal to 784 square meters or .193 acres; following the same proportion, a homer would be 5.79 acres.

In Roman times, Latin *jugum* ("yoke") was used to describe the area plowed by a team. It was later defined as a *jugerum* of 28,800 sq. (Rom.) ft., or 5/8 acre. It has been calculated that 3 3/5 seahs were required to sow one jugerum of land in the Greco-Roman period, which would be .173 acres. The Roman furrow (*actus*) was 120 Roman ft. in length, and land was measured according to the square *actus*.

III. Measures of capacity.

III. Measures of capacity. Just as the linear measures of cubit, finger, and span were derived from various parts of the human body, so also the ancient units of capacity were originally nonspecific, and their names were taken from terms commonly used in the home or in commerce. These include imprecise terms such as "bowlful" (Jdg. 6:38; Amos 6:6) and "handful" (1 Ki. 20:10 et al.), and others that are a bit more definite (e.g., the *homer* is by derivation an "ass-load").

The standard measure of capacity in ancient Egypt was the *hkt* (*hekat*), considered to be 5.03 liters, or about 1.25 American gallons, and used to measure grain or metal. The "hin" jar (*hnw*), which was 1/10 of a *hkt*, was used to measure certain liquids such as beer, milk, and honey, as well as being a dry measure; it amounted to c. 0.503 liters, or slightly more than a pint. There was wide variation in Mesopotamian standards as judged by the many names for measures of capacity found in Sumerian, Assyrian, Neo-Babylonian, and Nuzi texts. The basic measure of capacity was probably the *qa*, equivalent of the Sumerian *sila*; it has been estimated to be between 1.004 liters and 1.34 liters. Another standard measure of capacity was the *sutu* of ten *qas* (c. 13.4 liters or 1.5 pecks) and the *imeru* (meaning "donkey" and representing the normal load carried by this animal), which is considered to be 134 liters or 3.8 bushels; this term is found in Middle Assyrian and Nuzi texts.

There is not sufficient evidence to determine the Canaanite units of measure, though they were probably like the Mesopotamian system. The *hmr* (homer) was a unit of dry measure, as well as the *lth* (in Heb. spelled with *kaph*, lethek). The *lg* (log) was another unit of measure encountered in Ugaritic literature. The Hebrew measures of capacity were never standardized, and occasionally different names were used to designate the same unit. They were sometimes used to determine both liquid and dry measures, as the liter today. The Roman measures of capacity were the quartarius, sextarius, congius, urna, and amphora. The major units in the Bible are the following.

A. Liquid (OT)

1. Bath. The standard Hebrew liquid measure was the *bat H1427* (to be distinguished from *bat H1426*, "daughter," which derives from a different root; Gk. *batos G1004* occurs only in Lk. 16:6). It is said to be equal to the ephah (Ezek. 45:11, 14), where both are considered to be 1/10 of a homer, but this does not imply that the homer was used as a liquid measure. See B.1 below. The bath appears in multiples up to 20,000 and was used for water, wine, and oil (1 Ki. 7:26, 38; 2 Chr. 2:10; 4:5; Isa.

5:10; Ezek. 45:14). Its capacity has been determined at c. 5 gallons based on the estimated capacity of broken jars of the 8th cent. B.C. from Tell ed-Duweir (Lachish) and Tell en-Nasbeh (with the inscription "royal bath," *bt lmlk*), and from Tell Beit Mirsim (marked simply *bt*). POTTERY of the Greco-Roman period reveals a bath of 21.5 liters. Calculations of the capacity of the "molten sea" in Solomon's temple (1 Ki. 7:23 – 26, 38; see SEA, MOLTEN) support the estimate of 5 gallons; it has also been estimated to be 6 gallons. See also below, III.C.3.

2. Hin. The *hîn H2125* was 1/6 of a bath. From Ezek. 4:11 it is inferred that 1/6 of a hin was the minimum a person needed to drink daily. The hin is approximately from 3.5 to 3.9 liters or about 1 gallon. It is usually mentioned in ritual for offerings of wine and oil, in whole amounts (Exod. 30:24; Ezek. 45:24; 46:5, 7, 11), and in fractions, such as 1/2 hin (Num. 15:9; 28:14), 1/3 hin (15:6 – 7; Ezek. 46:14), and 1/4 hin (Exod. 29:40; Lev. 23:13; Num. 15:4, 5; 28:5, 7).

3. Log. The smallest liquid measure was the *lōg H4253*, equal to 1/12 hin. It is mentioned only in Lev. 14:10 – 24 as a measure of oil used in the ritual for the purification of lepers (the LXX translates the word with *kotylē*, "cup," used as a liquid measure containing about 1/2 pint; the Vulg. has *sextarius*, i.e., 1/6 of a *congius* or about a pint). The Talmud figured the log as the amount of water displaced by six hens' eggs, roughly the equivalent of one pint. It was probably c. 0.7 pint.

Summary of OT liquid measures:
Homer (cor) = 10 baths = 58.1 gallons
Bath = 6 hins = 5.8 gallons
Hin = 12 logs = 1.1 gallons
Log = 0.7 pints

B. Dry (OT)

1. Homer. The standard unit of dry measurement in the OT was the *homer H2818* (also called the *cor* because of the assimilation of two systems; see below). It is a cognate of the word for "[male] donkey," *hamôr H2791*, and thus it indicates "ass-load." It has been estimated variously as 3.8 bushels or 6.524 bushels and by older estimates as 11 bushels. The homer contained 10 baths or ephahs (Ezek. 45:11 – 14) and was used for fairly large measurements in the OT. It was a large measure for cereals (Ezek. 45:13; Hos. 3:2), a homer of barley being worth 50 shekels of silver (Lev. 27:16). It was used, by way of exception, to measure the quails that fell in the desert: they covered the ground to a depth of two cubits for a day's march around the camp, and the people gathered the birds all day and all night, and the next day "No one gathered less than ten homers" (Num. 11:32). The most conservative estimate of the homer would make this 38 bushels and would reveal the gluttony of the people. That "a homer of seed [would produce] only an ephah of grain" (Isa. 5:10) is the expression of a curse on the land because of the sins of the people.

2. Cor. As already mentioned, the *kōr H4123* was equal to the homer. It was a large measure for flour (1 Ki. 4:22) and for grain (5:11; 2 Chr. 2:10). It was a dry measure, though Ezek. 45:14 makes the cor a liquid measure for oil, and, like the homer, it is said to contain 10 baths. The cor has been estimated to contain between 3.8 and 6.524 bushels or about 35 – 61 gallons. A half-homer of rust-colored stone used about 3,000 years ago in Jerusalem was found in an excavation.

3. Lethek. The *lētek H4390* is mentioned only in Hos. 3:2, where HOSEA is told to buy the woman for fifteen shekels of silver and a homer of barley plus a lethek of barley. The NRSV emends the Hebrew on the basis of the LXX and reads, "a homer of barley and a measure of wine." However, the Hebrew term appears to be a loanword from Akkadian (*litiktu*); and Ugaritic *lth*, though spelled differently, may suggest that the lethek was a Phoenician dry measure. The Vulgate interprets, "a cor of barley and half a cor of barley" (cf. the late Gk. versions and the KJV); many think this equivalence is correct, which means that the lethek would be between 1.9 and 3.26 bushels.

4. Ephah. Among terms of dry measure, *êpâ H406* (Egyptian *ipt*) is the one most commonly used in the OT (Exod. 16:36; Lev. 5:11; Num. 5:15; Deut. 25:14 – 15; Jdg. 6:19; Ruth 2:17; Ezek. 45:10 – 13; et al.). It was equal to 1/10 of a homer (Ezek. 45:11) and is thus estimated from 3/8 to 2/3 of a bushel. In Zech. 5:5 – 11, the ephah in the vision denotes a large receptacle closed with a lid and larger than the usual ephah, for it held a woman named "wickedness." It is mentioned many times. The ephah must be just and perfect (Lev. 19:36; Deut. 25:15); it must not be too small (Amos 8:5; Mic. 6:10); there must not be two sizes, large and small (Deut. 25:14; Prov. 20:10). Modern versions sometimes insert "ephah" for clarification (e.g., Lev. 23:17; 24:5; et al.). Fractions of an ephah are mentioned: 1/16 (Ezek. 45:13; 46:14), 1/10 (Lev. 5:11; 6:20; Num. 5:15; 28:5). It was used to measure flour, meal, barley, parched grain, but never liquids. For liquids, the equivalent was the bath.

Ancient stone measuring cups used in Jerusalem.

5. Seah. The *se â H6006* was a dry measure for flour and cereals (Gen. 18:6; 1 Sam. 25:18; 1 Ki. 18:32; 2 Ki. 7:1). It is difficult to determine its size. According to Josephus (*Ant.* 9.4.5 §85) it is equal to a modius and a half (see C.4 below), that is, approximately 12 quarts or 1.5 pecks or 0.37 bushels. However, if the *salîs H8955* of Isa. 40:12 (lit., "third," but translated "basket" in the NIV and "measure" in other versions) is the equivalent of the seah, then it is 1/3 of an ephah or 1/30 of a homer; and if so, the seah would be between approximately 0.13 and 0.28 of a bushel. According to the Talmud (*b. ʿErubin* 83a), the seah of the desert was equal to the volume of 144 eggs, while the seah of Jerusalem was equal to 173 eggs (i.e., 1/5 larger) and that of Sepphoris (a sacred measure used for religious ceremonies) was equal to 207 eggs (an additional 1/5 larger). The view that the use

of the seah in the Bible reflects late Babylonian influence is inconsistent with inscriptional evidence (see *NIDOTTE*, 1:383).

6. Omer. The word *ōmer H6685* (cf. *ōmer H6684*, "sheaf [of grain]") is found only in the story of the gathering of the manna (Exod. 16:16 – 36), where every person gathered an omer a day. It represented a day's ration; two omers were to be gathered for the sixth day and the SABBATH; one omer was to be kept as a memorial (vv. 32 – 34). It is identified as 1/10 of an ephah (v. 36) and would thus be equivalent to the *issaron* ("tenth"; see below), approximately 2.1 dry quarts or 2.3 liters. The omer should not be confused with the homer.

7. Issaron. As mentioned above, the term ʿ*issarôn H6928*, meaning "tenth," was probably another name for the omer, thus the NIV and other versions render it "a tenth of an ephah" (KJV, "a tenth deal"; NRSV, "one-tenth of a measure"). The word is used as a measure of meal in the liturgical texts (Exod. 29:40; Lev. 14:10 et al.; Num. 15:4 et al.).

8. Cab (Kab). The term *qab H7685* appears only once in the OT (2 Ki. 6:25). During the siege of SAMARIA by the Assyrians a donkey's head was sold for 80 shekels of silver, and the fourth part of a cab of DOVE'S DUNG (NIV, "seed pods"). The Hebrew text here is problematic and it is difficult to determine what the cab was. Josephus (*Ant.* 9.4.4 §62) evidently understands "one fourth of a cab" as equivalent to Greek *xestēs G3829*, approximately half a liter. The cab has been estimated as 1/18 ephah, or about 1.16 dry quarts.

> *Summary of OT dry measures:*
> Homer/cor = 10 ephahs/baths = 3.8 – 6.5 bu.
> Lethek = 5 ephahs (1/2 homer) = 1.9 – 3.3 bu.
> Ephah = 3 seahs (1/10 homer) = 0.38 – 0.65 bu.
> Seah = 3 1/3 omers (1/3 ephah) = 0.13 – 0.22 bu.
> Omer/issaron = 1 4/5 cabs (1/10 ephah) = 2.1 qts.
> Cab = 1.16 qts.

C. In the NT. The information in the writings of Josephus are sometimes inconsistent with evidence from the OT period (see above under *seah*). For example, he says (in *Ant.* 3.8.3 §197) that the hin contains two Athenian choas, that is, approximately 1.5 gallons (not 1.1 gals., as in the OT); this means in turn that the bath equalled about 9.5 gallons (not 5.8 gals.; similarly, in *Ant.* 8.2.9 §57 he says the bath contains 72 sextaries=c. 72 pints=c. 9 gals.). It is very possible that during the exile the Jews modified their system so that it would align with Babylonian standards and that subsequently the units were further increased on the basis of Hellenistic measures (cf. *NIDOTTE*, 1:385). In any case, of the units used in the OT, the only ones found in the NT are the bath (*batos G1004*, Lk. 16:6), the seah (*saton G4929*, Matt. 13:33), and the cor (*koros G3174*, Lk. 16:7). The saton was a commonly used measure of capacity throughout the Roman empire. It was the equivalent of 10.91 liters or 1/2 ephah. Other measures found in the NT are the following.

1. Choinix. The *choinix G5955* was a Greek dry measure equal to about two dry pints, and modern versions usually translate it as "quart" (Rev. 6:6).

2. Xestes. The *xestes G3829* apparently corresponded to Latin *sextarius* and was equal to just over a

pint, but in the NT it is used in the general sense of "pitcher" (Mk. 7:4).

3. Metretes. The *metrētēs G3583* was a liquid measure equal to about 39 liters or 9 gallons. The phrase *metrētas dyo ē treis* in Jn. 2:6 is rendered "two or three firkins" by the KJV (a British firkin is usually 1/4 of a barrel), but the NIV and other versions translate, "twenty to thirty gallons."

4. Modius. The term *modios G3654*, a loanword from Latin *modius*, refers to a dry measure equal to about 8.49 liters or 7.68 U.S. dry quarts. It is translated "bushel" by the KJV, but "bowl" by the NIV, because in the passages where it appears (Matt. 5:15; Mk. 4:21; Lk. 11:33) it is simply used to mean a vessel that could cover a light.

5. Litra. The Greek *litra G3354* was equivalent to the Latin *libra*, that is, the Roman pound of 11.5 oz., and was used as a measure for both capacity and weight. It was the amount of ointment MARY used to anoint the feet of Jesus (Jn. 12:3; NIV, "pint"). NICODEMUS brought a mixture of myrrh and aloes that weighed about 100 litras for the dressing of Jesus' body (19:39; NIV, "about seventy-five pounds").

IV. Measures of weight. The archaeological evidence is much more abundant for measures of weight than for those of length, area, and capacity. Large numbers of inscribed and uninscribed stone weights representing the shekel and its fractions have been found in Palestine. The fact that most of the early Hebrew weights that have been discovered were of hard stone is reflected in the general word used in the OT for weights, *,eben H74*, "stone." Even today peasants use field stones as weights, selecting one that is approximately the weight they desire. The expression *abnê-kîs* (lit., "stones of a bag") indicates that carrying weights in a bag was a well-established custom in early Israel (Prov. 16:11; cf. Mic. 6:11).

Money was not a means of exchange in the earliest period; coinage was introduced into Palestine only after the EXILE, during Persian times. Transactions were therefore handled through barter (exchange of sheep for grain, or for a given weight of gold or silver). In spite of the abundant archaeological information, a definite system of weights has not yet been determined for the ANE. There was a great deal of variation because independent systems varied from region to region and because of fluctuation according to the goods for sale. The standards varied as much as the British and American ton and pound. Hebrew standards of weight were not exact; variety exists even in weights with the same inscription.

The basic unit of weight for the ancient Egyptian was the *dbn* (*deben*), which from known examples varied from c. 13.43 to c. 91 grams (0.474 to 3.2 ounces avoirdupois). Other units were the *kdt* (*qedet, kite*), retained down to the Roman period, which was 1/10 *dbn*, and the *š;⟨ty*,which was 1/12 *dbn*. The OT does not mention any Egyptian weights.

The Hebrew system was derived from the Canaanites, who in turn had received it from the Babylonians. The word *shekel* (*š;eqel H9203*) is derived from the Hebrew verb *š;āqal H9202*, which means "to weigh." The shekel was the basic unit of weight common to all ancient Semitic metrologies. In Akkadian it was called the *š;iqlu*; in Uga-ritic, *tkl*. The Assyrian and Babylonian weights did not conform to a general standard but varied greatly through the ages; even a change in government could result in a changed standard of weights. The Mesopotamian weights were calculated on a sexagesimal basis (i.e., with the number sixty as the unit of computation); by comparison, the Egyptian had the decimal system. Our system of dividing the hour into sixty minutes

of sixty seconds each is derived from the ancient Babylonian sexagesimal system. The mina (Akk. *manû*), talent (*biltu*), and gerah (*girû*) were the other principal Mesopo-tamian measures of weight. Thus the Babylonian system may be represented as: 1 talent = 60 minas = 3,600 shekels = 86,400 gerahs; or stated differently: 1 talent = 60 minas; 1 mina = 60 shekels; 1 shekel = 24 gerahs. There also was in the Meso-potamian system a series of "royal" weights, which were double the ordinary weights. One gold shekel had the value of ten silver shekels. In the most commonly used system in Mesopotamia the shekel weighed 0.30 ounces (8.4 grams).

Some of the Assyrian weights were in the form of metal lions, with open mouth and upswung tail with a symbol on the side representing the weight. To make the weight of the cast lions more (or less?) accurate and honest, bits were chiseled off or filled into the hollow form. A bronze lion of 2/3 mina came from the palace of the Assyrian king SHALMANESER III. A weight of thirty minas in the shape of a duck and carved from black basalt was found in a different palace (Eriba-Marduk II?). An early Babylonian stone is inscribed with the words "one half mina true weight" and actually weighs 244.8 grams (which would make the mina 489.6 grams, or approximately 1.08 pounds avoirdupois). Another weight inscribed "one mina true weight" weighs 978.3 grams, c. 2.16 pounds avoirdupois. Obviously these two stone weights represent the light and the heavy mina.

As already stated, the Hebrew system was derived from the Canaanites, who in return had derived theirs from Mesopotamia, so the systems in the two areas were generally equivalent, except that the Canaanite mina contained 50 shekels. There is biblical evidence for a 50-shekel mina in Israel prior to Ezekiel. Some of the Ugaritic texts determine weights in "heavy" shekels. At UGARIT the talent was only 3,000 shekels rather than 3,600. One collection of weights at Ugarit referred to in the texts indicates a light shekel to be 0.34 ounces (9.5 grams) and reference is made to a "heavy" shekel, which may be double the weight of the other.

The Hebrew system of computation of weights followed the decimal rather than the sexagesimal system. The basic unit was the shekel; its multiples were the mina and the talent. The mina appears only rarely (1 Ki. 10:17; Neh. 7:71). There is one confirmation that the Assyrian and Hebrew units were equal in some instances. According to 2 Ki. 18:14, "The king of Assyria exacted from Hezekiah king of Judah three hundred talents of silver and thirty talents of gold." In SENNACHERIB's annals of the same incident, the same amount of gold is indicated, though the silver is said to be 800 talents; the similarity between the two accounts is interesting. The Greek weights were the stater, mina, and talent. The Roman weights were the drachma, shekel, mina, and talent.

A. Talent. In the OT, this English word (from Gk. *talanton G5419* [orig. "balance, scales"] via Lat. *talentum*) translates Hebrew *kikkār H3971* ("round [loaf], disk"; cf. Ugar. *kkr*), which derives its name from the fact that it is a weight of circular shape. It was the largest of the units and was known to the Babylonians as *biltu*. The Babylonian talent weighed 30.13 kg. and was divided into 60 minas of 8.37 grams. According to Exod. 38:25 – 27, the sanctuary poll tax of a beka (or half shekel) paid by each of 603,550 men amounted to 100 talents plus 1,775 shekels. This information makes clear that there were 3,000 shekels to the talent, suggesting probably 60 minas of 50 shekels (less likely, 50 minas of 60 shekels). A two-talent weight from Lagash in the British Museum gives a weight of 66 3/4 pounds per talent, and mina weights from various periods down to the neo-Babylonian show that the weight of the talent was maintained between 28.38 and 30.27 kg. for many centuries. It is most likely that this same talent was standard in Syria and Palestine.

Inscribed Roman bronze weight inlaid with silver (1st cent.). The inscription suggests that it was a standard weight kept at the Temple of Ops (a goddess of plenty and fertility) on the Capitol at Rome.

B. Mina (maneh). The word *maneh H4949* (usually translated "pound" in the KJV) occurs in only four OT passages (1 Ki. 10:17; Ezra 2:69; Neh. 7:71 – 72 [MT 7:70 – 71]; Ezek. 45:12 [here KJV has "maneh"]; cf. Aram. *měnē*, *H10428* in Dan. 5:25 – 26 and see MENE, MENE, TEKEL, PARSIN). The mina is often mentioned in Mesopotamian texts. In the Babylonian system one talent equaled 60 minas, and one mina equaled 60 shekels; but there is evidence from Ugarit for a mina of 50 shekels. According to Ezek. 45:12, "Twenty shekels plus twenty-five shekels plus fifteen shekels equal one mina." The total comes to 60, but the unusual manner of counting suggests that there were weights of 15, 20, and 25 shekels; the last item may have been half a mina of 50 shekels as at Ugarit. There is evidence that in preexilic Israel the commercial standard was 1 talent = 50 minas = 2,500 shekels. In Exod. 21:32 a fine of 30 shekels was imposed where the parallel regulation in the Code of Hammurabi imposed 1/2 mina. The ancient mina probably weighed between 1.213 and 1.323 pounds (550 – 600 grams); in Ezekiel's system it would weigh about 1.54 pounds (100 grams). The fluctuation was too great in different times and places to establish a precise value.

C. Shekel. The *š;eqel H9203* (from *š;āqal H9202*, "to weigh") was the basic weight used in the ancient Semitic metrologies. However, there was no uniform standard for its weight. Even weights with the same inscribed notation do not weigh the same, and there were light and heavy, common and royal weights. The shekel has been estimated by various authorities as weighing between 11.3 and 11.47 grams. According to Ezek. 45:12, the shekel weighed 20 gerahs and the mina was equal to 60 shekels. Fractions are found in the OT: 1/2 shekel (Exod. 30:13), 1/3 shekel (Neh. 10:32), 1/4 shekel (1 Sam. 9:8). ABRAHAM paid for the field of MACH-PELAH with "four hundred shekels of silver, according to the weight current among the merchants" (Gen. 23:16). The expression may have been used to distinguish this weight from "the sanctuary shekel" of 20 gerahs (cf. Exod. 30:13). This distinction may explain why Nehemiah says the temple tax was 1/3 shekel (Neh. 10:32), whereas in the law it is given as a beka or 1/2 shekel (Exod. 38:26).

The annual weighing of ABSALOM's cut hair was 200 shekels "by the stone of the king" (lit. rendering of *běeben hammelek,* 2 Sam. 14:26). This reference is evidence that even as early as the

time of DAVID there was an official "royal standard" (NIV) to which one could be referred. In establishing such a standard, David was only following the practice of other kings. A copy of a stone weight of one mina made by NEBUCHADNEZZAR (605 – 562 B.C.) was certified as being according to the standard set by Shulgi king of Ur (c. 2000 B.C.). A large unmarked weight from Tell Beit Mirsim, probably equal to 8 minas, gives a shekel weight of 11.41 grams.

The beka (see below) is the only weight whose name appears both in the OT and on recovered weights. It is equal to 1/2 shekel (Exod. 38:26). Seven stones inscribed *bq* have been found which range from 5.8 to 6.65 grams, averaging 6.04 grams. Five other uninscribed weights within the same range must also be bekas, making the average weight of the twelve weights 6.02 grams. Therefore reckoned by beka weights the shekel is 12.02 grams or 2/5 ounces. Thus it would appear that the symbol resembling a figure 8 with an open loop (◯) found on weights of about 12 grams is a symbol for the shekel. However, this amount seems too large, as the weight from Tell Beit Mirsim (mentioned above) gives a shekel of 11.41 grams, and the average weight of 17 weights inscribed with the shekel mark is 11.53 grams. The shekel mark seems to have been an ordinary representation of the *sĕrôr H7655* or tied bundle in which lump silver, a medium of exchange, was carried (cf. Gen. 42:35; Prov. 7:20). Various theories have been proposed to explain the origin of the shekel mark, none of which are satisfactory. It has been suggested as of Egyptian, Babylonian, or Persian origin.

Other weights have been found that add to the confusion in determining the weight of the shekel, as they suggest a system with a slightly larger shekel of about 13 grams which may have been used for weighing certain types of goods. At Ugarit two words were used for the shekel, *tql* and *kbd*; the latter was a "heavy" shekel used to weigh purple linen. A weight of 51.6 grams was found at el-Jib (GIBEON) inscribed as "four shekels," which would yield a shekel of 12.9 grams (J. B. Pritchard, *Gibeon: Where the Sun Stood Still* [1962], 118 – 19). A weight with five strokes was found at GEZER, weighing c. 64.5 grams, which is almost exactly 5 x 12.9 grams. Also at Gezer three uninscribed weights averaged 64.8 grams (or 5 x 12.9 grams). A weight of 13.4 grams comes from MEGIDDO, and two weights of 13.3 grams from Tell en-Nasbeh.

Thus the archaeological evidence does not enable one to determine an exact value for the shekel. Variations may be attributed to several factors: a tendency to depreciate standards with the passing of time, setting a new value by official decree, variation between official and unofficial weights, the use of different standards to weigh different kinds of goods, the influence of foreign metrological systems of weights, and occasional variation due to careless cleaning and weighing of weights found. The evidence seems to indicate, however, that the larger the weight, the smaller was the shekel unit contained in it. It can be concluded that there were three standards for the shekel: (1) the temple shekel of c. 10 grams (.351 oz.), which depreciated to c. 9.8 grams (.345 oz.; cf. *netseph* below); (2) the ordinary shekel of c. 11.7 grams (.408 oz.), which depreciated to c. 11.4 grams (.401 oz.); and (3) the heavy shekel of c. 13 grams (.457 oz.).

D. Gerah. The *gerâ H1743* was 1/20 of a shekel (Exod. 30:13; Lev. 27:25; Num. 3:47; Ezek. 45:12) and was the smallest unit of weight. The word possibly comes from a word meaning "grain." In the Babylonian system one shekel equals 24 gerahs. A weight of 2.49 grams from Sebastiyeh (Samaria) was inscribed *hms*, probably representing 5 gerahs, as another weight from the same place was inscribed "1/4 *nsp*, 1/2 *s(q)l*." This inscription tends to confirm the theory that the *nsp* is Ezekiel's shekel of 20 gerahs. The gerah has been estimated to weigh 0.571 grams.

E. Beka. The *beqa͑ H1325* (lit., "piece," from *bāqa͑ H1324*, "to split") is defined as "half a shekel, according to the sanctuary shekel" (Exod. 38:26; its only other occurrence is in Gen. 24:22, where the KJV and other translations have "half a shekel" instead of "beka"). The beka is the only weight (1) whose relationship to the shekel is given and (2) whose name both appears in the OT and is inscribed on recovered weights. It seems to have been the oldest standard in Egypt, having been found in prehistoric graves of the Amratian period; it was the usual weight for gold in Egypt. As mentioned above (under *shekel*), seven Hebrew stone weights inscribed *beqa͑* have been found, ranging from 5.8 to 6.65 grams, averaging 6.04 grams. Five other uninscribed weights that must also be beka weights make the overall average weight of the twelve 6.02 grams. This is slightly heavier than other calculations giving the average weight of the beka as 5.712 grams.

F. Netseph. The netseph (*nsp*) is a weight not mentioned in the Bible. Because of its similarity to the Arabic *nusf* ("half"), the name of a coin and a measure, it has been conjectured that the netseph was half of a heavier unit of weight. A spindle-shaped weight now at the Ashmolean Museum, Oxford, bears the inscription *rb͑ nsp*, "one-fourth of a netseph," and weighs 2.54 grams. Thus if the netseph is half of a unit, the unit in question is apparently not the Hebrew shekel. The average of a dozen weights inscribed *nsp* is 0.35 ounces (10 grams) and therefore belongs to another system. The name is found in the Ugaritic texts together with the shekel and is perhaps equal to 0.34 ounces (9.5 grams) in the weight system. In the Ugaritic system, then, the *nsp* would be a "light" shekel equal to half the "heavy" shekel. It has been suggested that perhaps the netseph weights found in Palestine were lost there by Canaanite traders.

G. Pim. The term *pîm H7088* (of unknown derivation) occurs only in 1 Sam. 13:21, a passage that was incomprehensible for a long time (cf. KJV, "they had a file for the mattocks"). Some early scholars conjectured that the *pîm* was an amount of weight paid in silver that was used in the transaction between the Israelites and the Philistines, and this interpretation was confirmed by the discovery of a pim weight. It is generally believed to represent 2/3 of a shekel. Seven weights bearing the inscription *pim* range between 7.18 and 8.59 grams with an average weight of 7.762 grams.

H. Kesitah (qesitah). The *qesîtâ H7988* (possibly from a root meaning "to measure") was used by JACOB when paying for the field of SHECHEM (Gen. 33:19; Josh. 24:32), and JOB received one *qĕśîtâ* from each of his relatives and friends (Job 42:11). It is otherwise not known as a unit of weight. The LXX, followed by other ancient versions, understood the term to mean "lamb," and some have speculated that it was a metal weight in the form of a lamb or a quantity of silver equal to the value of a lamb. The NIV renders the term, "piece of silver" (NRSV, "piece of money").

I. Peres. The Aramaic term *pĕrēs H10593* (pl. *parsîn*) occurs in only one passage (Dan. 5:25, 28). It appears to be a loanword from Akkadian *parsu,* referring to a unit of weight equivalent to half a shekel (cf. *HALOT,* 5:1958 – 59). See MENE, MENE, TEKEL, PARSIN.

Summary of OT weights:
1 talent (3,000 shekels) = 75.6 lbs.
1 mina (50 shekels) = 1.3 lbs.
1 shekel = 0.4 oz.

1 pim (2/3 shekel?) = 0.27 oz.
1 beka (1/2 shekel) = 0.2 oz.
1 gerah (1/20 shekel) = 0.02 oz. (8.7 grains)

J. In the NT. There are few references to weights in the NT. The talent (*talanton*) referred to sums of money rather than weights (Matt. 18:24; 25:15 – 28; the adj. *talantiaios G5418* occurs in Rev. 16:21, where modern versions use the rough translation, "a hundred pounds"). The mina (*mna G3641*) occurs only in the Lukan parallel to the parable of the talents and thus refers not to weight but to money (Lk. 19:13 – 25, where some versions render it as "pound"). As mentioned in section III.C.5, the *litra G3354* was used in Jn. 12:3 and 19:39 to indicate an amount of precious oil and may be a weight or a measure of capacity. It was probably the Roman *libra* (pound) of 11.5 ounces (327 grams).

V. Balances. In order to use weights, it was necessary to have BALANCES or scales (Heb. *mōzĕnayim H4404* [cf. Ugar. *mznm*]; another term, *peles H7144*, occurs only in Isa. 40:12). Foodstuffs were measured by volume, but precious metals and materials were weighed. Small items were measured on a beam-balance with two scales. The balance consisted of a beam mounted on an upright support or suspended on a cord held in the hand, not very different in design from a type still used. Ancient balances were not precision instruments. The graduated scale based on the principle of leverage did not appear before the 4th cent. B.C.

The weigh-masters were influential officials. They were known in ancient Egypt; on a cuneiform clay letter one King Burraburiah of Karaduniash to Amenhotep IV complained that the twenty manehs of gold sent to him by the Egyptian pharaoh had not stood the weight test when tried in the furnace. Egyptian judgment scenes from the *Book of the Dead* showed the heart of the deceased being weighed against the deeds of the deceased in the presence of the god OSIRIS. A similar figure is used in Dan. 5:27 when a mysterious writing appeared on the wall during BELSHAZZAR's feast.

Efforts to establish honest weights and measures are quite ancient. The law code of Ur-Nammu (founder of the 3rd dynasty of Ur, c. 2050 B.C.) contained official weights and measures as an effort to discourage dishonest merchants. An old Sumerian hymn to the goddess Nanshe (lines 142 – 43) contains a passage denouncing evildoers "who substituted a small weight for a large weight, who substituted a small measure for a large measure" (for a different trans. see *COS*, 1:529). The emphasis on honest weights and measures in the OT implies that dishonest use of balances was a common practice. The Levitical law required honest transactions (Lev. 19:35 – 36). Ezekiel stressed the importance of honest weights and measures (Ezek. 45:10). Just balances were also emphasized in Job 31:6 and Prov. 16:11. Amos denounced false and deceitful balances (Amos 8:5 – 6). There was a prohibition against "two differing weights in your bag—one heavy, one light" and "two differing measures in your house—one large, one small" (Deut. 25:13 – 14). A blessing was promised to those who used honest weights and measures (v. 15). There are other passages denouncing false balances (Prov. 11:1; 20:23; Hos. 12:7; Mic. 6:11). The Talmud contains strict laws for the regulation of the business world, as evidenced by the following: "The shopkeeper must wipe his measures twice a week, his weights once a week, and his scales after every weighing" (*b. Baba Batra* 88a).

As a part of his prophetic message, Ezekiel was told to divide his hair into three equal parts by use of a balance (Ezek. 5:1). Figurative mention of balances is found in Job 6:2; Ps. 62:9; Dan. 5:27. Job requested that his life be measured in a just balance (Job 31:6). The NT not only emphasizes a fair measure but a generous one in the words of Jesus: "A good measure, pressed down, shaken

together and running over" (Lk. 6:38).

VI. Conclusion. From the preceding study it can be seen that there were no weights or measures sufficiently fixed in biblical times to enable one to determine the exact modern equivalents. Different countries had different standards, and these varied within the country and in different periods. Often there were two standards in use at the same time, the common and royal, light and heavy. However, archaeological information is sufficient to determine approximate values.

(See further A. R. S. Kennedy in *HDB*, 4:901 – 913; J. E. Dean, *Epiphanius' Treatise on Weights and Measures* [1935]; G. A. Barton, *Archaeology and the Bible*, 7th ed. [1937], 199 – 203; D. <div align="right">F. B. HUEY, JR.</div>

well. Since the RAINS in Palestine are concentrated in the winter months, the availability of WATER is a problem through much of the year. Natural sources are springs, streams, rivers, and the Sea of Galilee. Artificial sources are wells and cisterns. The latter were a problem until after the discovery of waterproof plaster shortly before the exodus.

The usual biblical words for a spring that bubbles up out of the ground are Hebrew ⟨*ayin H6524* and Greek *pēgē G4380* (Gen. 24:13 et al.; Rev. 7:17 et al.; see FOUNTAIN). The words for a well that was dug to reach the underground water table are *bôr H1014* and *phrear G5853* (Gen. 37:20 et al.; Jn. 4:6 et al.; see CISTERN). Sometimes these terms were used interchangeably, so one must watch the context for the exact meaning.

The ownership of wells was so important that feuds over them were settled at times only by a unique covenant service, such as the arrangement between ABRAHAM and ABIMELECH (Gen. 21:25 – 31). This value placed upon wells was in part due to the expense of digging them. Rivals would fight over a well rather than dig a second one. Notice that in Deut. 6:11 wells are listed with other costly items, such as olive groves and vineyards, both of which are very slow growing. The value of wells is seen also in the fact that some bore specific names (Gen. 26:20 – 22). Cities, in turn, were sometimes known by their wells (e.g., BEERSHEBA).

Wells were of special concern in WARFARE. The ancients normally went to war in the summer, for then they could live off the crops of their enemies. Summer was also the season when there was the least water available. Therefore the defenders would stop up their wells with stones and then cover them over with soil so the enemy could not use them. HEZEKIAH had the SILOAM tunnel dug to deprive the Assyrians of a water supply at Jerusalem. If it was desired to hand out special vengeance to one's enemies, their wells were destroyed (2 Ki. 3:25).

<div align="right">H. JAMIESON</div>

wen. An abnormal but benign skin growth or cyst. The term is used by the KJV and other versions to render Hebrew *yabbelet H3301*, which occurs only in Lev. 22:22, where the Israelites are instructed not to offer to the LORD any defective sacrifices. The Hebrew term may refer to a wart (cf. NIV, *HALOT*, 1:383), but the NRSV understands it as a "discharge."

west. For any nation occupying a Palestinian homeland the W has a threefold significance. (1) It is the direction in which the sun sets, thus "west" is sometimes the translation of the Hebrew phrase *měbô, haš;š;emeš;* (*H4427 + H9087*, lit., "the entering of the sun," Josh. 1:4 et al.; cf. also *ma⟨ărāb H5115*, Isa. 43:5 et al., and Gk. *dysmē G1553*, Matt. 8:11 et al.) (2) It is the direction in which the Mediterranean Sea lies (see GREAT SEA); hence Hebrew *yām H3542*, "sea," can mean "west" (Gen. 13:14 et al.). (3) In consequence, it is also the direction from which come the rain-bearing winds; thus in Lk. 12:54 a westerly wind is commonly agreed to augur the onset of RAIN (cf. ELIJAH's experience on Mount Carmel, 1 Ki. 18:44). Ceremonially, the W was neither more nor less important than other compass points in the life of Israel, most biblical layouts being based on the "foursquare" pattern in which people or structures surrounded a focal point. However, for the Israelites the point of orientation was the EAST (not the N, as it is for us), and therefore the W can sometimes be referred to with the word *ahărôn H340*, "behind" (esp. in the expression *hayyām hāahărôn*, "the sea that is behind, the western sea," Deut. 11:24 et al.; see also EASTERN SEA).

J.H.PATERSON

western sea. Sea EASTERN SEA; GREAT SEA; WEST.

Western text. See TEXT AND MANUSCRIPTS (NT) V.

West Gate. According to the NIV, both the West Gate and the (otherwise unknown) S HALLEKETH Gate, on the upper road in the W part of the TEMPLE enclosure, were assigned to SHUPPIM and HOSAH (1 Chr. 26:16; some scholars omit "Shuppim" as a textual error). The Hebrew reads *lamma⟨ărāb ⟨îm š;a⟨ar š;alleket*, literally, "[the lots fell] for the west with the Shalleketh Gate." It is unclear whether in this passage the term *ma⟨ărāb H5115* ("west") merely indicates direction (cf. NRSV) or whether it designates a gate. If the latter, we have no evidence to determine whether it was an alternate name for the Shalleketh Gate or a different gate altogether (cf. NJPS, "the west [gate], with the Shallecheth gate on the ascending highway").

whale. A large aquatic mammal (order *Cetacea*). The term is used by the KJV in four passages. In three of them (Gen. 1:21; Job 7:12; Ezek. 32:2) the word renders Hebrew *tannîn H9490*, which the KJV elsewhere translates "dragon" (Ps. 74:13 et al.) or "serpent" (Exod. 7:9 – 12 et al.). The fourth passage is Jesus' reference to JONAH in Matt. 12:40, where the Greek word is *kētos G3063* (NRSV, "sea monster"; NIV, "huge fish"). In the book of Jonah, the Hebrew word used is *dag H1834*, "fish" (Jon. 1:17a has *dag gaddôl*, rendered "great fish" in the KJV, as well as NIV and other versions; the LXX uses *kētos*). Some have argued that several species of the toothed whales can swallow whole seals and dolphins weighing several hundred pounds and are thus physically capable of swallowing a person. The sperm whale of this group comes into the Mediterranean, but this happens rarely. Others argue that the gullet of the whale is not sufficiently wide and believe that the reference is to the great white shark (*Squalus carcharias* or *Carcharodon carcharias*), which can exceed 20 ft. in length and

is reported to have swallowed men whole. See also DRAGON; SEA MONSTER.

<div align="right">G.S.CANSDALE</div>

wheat. A cereal grain that yields a flour used in various foods, especially BREAD; the term is used also of the annual grasses from which that grain comes. The primary Hebrew word for "wheat" is *hittâ H2636,* which occurs some thirty times in the OT (Gen. 30:14 et al.; Aram. *hintâ H10272,* Ezra 6:9; 7:22); in the NT, the Greek word used is *sitos G4992* (Matt. 3:12 et al.). There are several striking passages in which wheat occurs. GIDEON was threshing wheat at the time of his call (Jdg. 6:11). RUTH arrived at the right time in BETHLEHEM so that she could glean plenty of wheat (Ruth 2:23). Ornan (ARAUNAH) was threshing wheat (1 Chr. 21:20) when he saw the angel. We also have, for example, the picture of the end of the world when the "wheat" will be gathered (Lk. 3:17), and Jesus' saying regarding the need of death to self, "I tell you the truth, unless a kernel of wheat falls to the ground and dies, it remains only a single seed. But if it dies, it produces many seeds" (Jn. 12:24).

Wheat is, of course, *Triticum aestivum,* the ordinary summer or winter wheat, or *T. compositum,* the bearded wheat, with several ears on one stalk. There is also the Egyptian wheat, *T. tungidum*; the one-grained wheat, *T. monoccum*; the wild wheat, *T . dicoccoides*; and others. The writer found only two actual varieties growing in Palestine on his last visit: *T. durum zenati x Bonterli* and *T. vulgare Florence x aurore.*

Wheat field in the hill country of Judah.

When the Israelites settled in Palestine, they became great farmers and produced vast quantities of wheat which they exported. Much went by ship to TYRE (Amos 8:5) and to other parts of the Mediterranean. However, some think that in JOTHAM's time (2 Chr. 27:5) the farmers had become lazy, because he demanded as payment from the Ammonites 100,000 bushels of wheat.

The sowing of wheat was usually done in the winter in Palestine—broadcast and lightly plowed in. Occasionally, the sowing was done in rows (Isa. 28:25 NRSV). The wheat HARVEST in Palestine is from the third week of April until the second week of June, depending on the soil, situation, and time of sowing. The THRESHING was done as a rule with a long, flexible stick known as a flail. The ears could be trodden out by oxen walking round and round over the cut wheat (Deut. 25:4), or there was always the crushing or bruising by means of a wheel of a cart running over it (Isa. 28:28). (Cf. *FFB*, 195 – 97.) See FLORA (under *Gramineae*); GRAIN.

W.E.SHEWELL-COOPER

wheel. The invention of the wheel was one of the great human advances in technology. Clay models of wheeled vehicles, and some fragments of a potter's wheel (see POTTERY) indicate that both devices were known in ANE countries as early as the 4th millennium B.C. The first wheels, here and elsewhere, were probably suggested to some inventive mind by a rolling log, and were simply slabs cut from a log. The spoked wheel seems to have come with the replacement of the donkey by the HORSE as a draught animal in the middle of the 2nd millennium B.C. Pharaoh's CHARIOT wheels, bogged in the mire of the RED SEA (Exod. 14:25 NRSV), were probably of this light and efficient variety.

In the description of Solomon's TEMPLE, the Hebrew word *ôpan H236* stands for the basins shaped in bronze after the fashion of chariot wheels and are described complete with axles, rims, and spokes (1 Ki. 7:30 – 33). Probably the model was the heavy Assyrian chariot wheel, rather than the lighter Egyptian model. The northern war chariots were heavily wheeled, and rolled noisily (Jer. 47:3; Nah. 3:2). Both EZEKIEL and DANIEL had APOCALYPTIC visions in which wheels were an image of strength and of rapid movement from place to place (Ezek. 1:15 – 21; Dan. 7:9 [Aram. *galgal H10143*]). The Hebrew term *galgal H1649* ("wheel" in Jer. 47:3 et al.) can be used as a synecdoche

for the whole war chariot or wagon (Ezek. 23:24; 26:10), which depended upon the speed and sturdiness of the wheels.

<div align="right">E.M.BLAIKLOCK</div>

whelp. The young of various carnivorous mammals; in the Bible it almost always refers to the young of a LION (of a bear in 2 Sam. 17:8). The English term occurs a number of times in the KJV (e.g., for *gûr H1594* in Gen. 49:9), but modern versions prefer *cub*. Biblical references to whelps or cubs are mainly figurative. According to ELIPHAZ, "The lion perishes for lack of prey, / and the cubs of the lioness are scattered" (Job 4:11). JEREMIAH prophesied that BABYLON would "growl like lion cubs" during her destruction (Jer. 51:38; for other references, see Deut. 33:22; Prov. 17:12; Ezek. 19:2 – 5; Hos. 13:8; Nah. 2:11 – 12).

<div align="right">R.L.MIXTER</div>

whip. See SCOURGE.

whirlwind. A rotating windstorm, usually of limited extent. Although true tornados or severe whirlwinds are rare in Palestine, several types of violent storms do occur because of the proximity of mountains and lakes to the hot deserts. Hebrew words translated "whirlwind" include *sĕʿārâ H6194* (used, e.g., of the wind that took ELIJAH up to heaven, 2 Ki. 2:1, 11) and *sûpâ H6070* (Prov. 1:27 et al.).

white. The name of this COLOR (Heb. *laban H4237*; Gk. *leukos G3328*) serves to indicate the "natural" appearance of light-colored objects, such as goats (Gen. 30:35, 37), the MANNA (Exod. 16:31), diseased skin (Lev. 13:3 – 4 et al.; 2 Ki. 5:27), hair (Matt. 5:36), and so forth. One can obtain pure white color bleaching by long exposure to the sun or by using fumes of burning sulphur (draping cloth over a rack above the flame). The washing process is alluded to in Ps. 51:7 for purification of the sinful man. Whitewash on sepulchres along the way marked them out so that the passers-by might avoid contamination (23:27; verb *koniaō G3154*); it was believed that any one who touched a sepulchre would become contaminated (Num. 19:16). White symbolizes innocency and purity (e.g., Isa. 1:18) and symbolizes the DEITY OF CHRIST (Matt. 17:2). The color is prominent in the book of Revelation, where it describes, for example, the head and hair of the one "like a son of man" (Rev. 1:4), the clothing of the saints (3:4 – 5 et al.), and the throne of God.

whore. See PROSTITUTION.

widow. A woman whose husband has died (Heb. *almānâ H530*; Gk. *chēra G5939*). In the Bible the widow was classified with the "fatherless" and the "aliens" from earliest times as one to be helped (Deut. 24:17 – 21); because these groups were often oppressed, they were sincerely to be pitied (Ps. 94:6).

I. The widow's future. The ideal future for a widow was remarriage. Until that opportunity arose she

might stay at her father's home (Gen. 38:11) or even at her mother-in-law's house (Ruth 1:16). If the daughter of a priest became a childless widow, she could return to her home and still eat of her father's food (Lev. 22:13). Under a provision known as the LEVIRATE LAW, a brother or the next of kin of a deceased man should under certain circumstances marry the widow (Deut. 25:5 – 10; Gen. 38:11). A son born to this marriage would be considered to be the deceased man's son. Concern for the widow's future seems to be mixed. At times the inheritance stands out as fundamental in the provisions set forth, and at other times the concern is for the preservation of a closely knit family.

Whereas a husband could cancel out a vow taken by his wife, the law considered a widow's OATH as binding (Num. 30:9). The widow was treated in this instance as a special legal person equal to a man. However, the high priest was forbidden to marry a widow (Lev. 21:14). In Ezekiel's vision, this prohibition was enlarged so as to apply to all priests (Ezek. 44:22).

II. The laws of mercy. In actual practice the lot of the widow seems to have been a very hard one in biblical times. She was made a special ward of the court based upon the theme that God himself is the special protector of widows (Ps. 68:5). God executes justice for the widow by supplying her with food and clothing (Deut. 10:18). On the other side, God cursed anyone who perverted the justice due a widow (27:19). Grapes, grain, and olives must be made available to the widow to glean (24:19 – 21). She also participated in the third-year TITHE along with the fatherless and the sojourner (14:29).

III. The flouting of these laws. The fact that laws were made to protect widows from cruel treatment stands as a demonstration that such acts were all too common. The wicked are described in Job 24:21 as those who "show no kindness" to the widow. JOB himself, however, "caused the widow's heart to sing for joy" (29:13 NRSV). One of the strongest indictments of the wicked is in terms of those who "slay the widow and the alien" and "murder the fatherless" (Ps. 94:6). When the prophets indict their people for injustice, a part of the evidence of the correctness of the charge is the mistreatment of widows (Isa. 1:23). In the DAY OF THE LORD those who oppressed hired laborers, the widow, and the orphan will be the objects of swift judgment (Mal. 3:5).

The widow seems to have been easily identified because she wore special garments (Gen. 38:14). The wicked tried to use these as a security for a loan, so the law had to step in and make such a practice illegal (Deut. 24:17).

IV. Widows in the Christian community. From the earliest stage, the Christian community made the care of widows their responsibility (Acts 6:1; 9:39). Systematic charity was to be given the widows when they were aged or had no relatives to support them. This may have been an obligation deduced from the fifth commandment. The widows themselves were grouped together as a body concerned with deeds of kindness to the poor. Jesus praised the widow who gave her whole income to the temple (Lk. 21:2 – 4).

By the time the PASTORAL EPISTLES were written, the Christian community had not changed its basic attitude toward widows but experience was forcing some reconsideration (1 Tim. 5:3 – 16). There was a need to distinguish between those who really needed help and those who could be left to the care of relatives. The limited resources of the church forced such a restriction. "But if a widow has children or grandchildren, these should learn first of all to put their religion into practice by caring for their own family and so repaying their parents and grandparents, for this is pleasing to God" (v. 4).

Some segments of the early church apparently developed an officially recognized order of

widows (1 Tim. 5:9 – 15). This reference is the first clear description in Christian literature of such an institution. IGNATIUS, POLYCARP, and TERTULLIAN deal with the development of the order in their time. The discussion in 1 Timothy suggests that there was considerable dissatisfaction with the way the system was operating. Several qualifications are given. The widow was to be over sixty years of age to be enrolled. She was to be "the wife of one man" (v. 9 KJV; it is unclear whether this means that she must have been married only once [cf. NRSV] or more generally that she must have been "faithful to her husband" [NIV]). A reputation for good works should have been acquired. This practical charity involved looking after children, being hospitable, washing the feet of Christians, and relieving people in distress. There was concern that the order of widows not have in its group those who were gossips, busybodies, and gadabouts. This special class of widows seems to have continued into the 2nd cent. A.D.

V. Figurative use of the term. There are a few striking figurative uses of the word "widow" in both the OT and the NT. For example, the "Virgin Daughter of Babylon" who claimed, "I will never be a widow," will be overtaken by widowhood "in a moment" (Isa. 47:9 – 9). The term is also applied by the prophet to Israel in her desolation as she is promised: "You will forget the shame of your youth / and remember no more the reproach of your widowhood" (54:4). It is difficult for Jerusalem to ignore its desolation, so the writer cries out concerning the city, "How like a widow is she / who once was great among the nations!" (Lam. 1:1). The Christian seer in the book of Revelation hears the angelic messenger speak of a fallen Babylon which was so proud that she boasted, "I sit as queen; I am not a widow, / and I will never mourn" (Rev. 18:7). See FAMILY; MARRIAGE.

H.JAMIESON

wife. See FAMILY; MARRIAGE.

wild ass. This English term (NIV, "wild donkey") is the usual translation of Hebrew *pere*, *H7230* (Gen. 16:12 et al.); the word is used in parallel with ⟨arôd H6871⟩ in the only passage where the latter occurs (Job 39:5b, rendered by the NRSV, "swift ass"; NJPS, "onager"; the NIV leaves it untranslated). The name preferred for the biblical or Asian wild ass is *onager* (*Equus onager*, sometimes included in *E. hemionus* ["kulan"], esp. *E. hemionus hemippus* [Syrian wild ass], which became extinct in the 1920s). It is rightly classed as "half-ass," belonging to a species distinct from the true wild ass of N Africa (*E. asinus*, from which the donkey is derived; see ASS, DONKEY). The onager once had a wide distribution, divided into several geographical types, extending from the borders of Europe and Palestine in the W through to India and Mongolia. JOB describes its habitat precisely: "the steppe for its home, the salt land for its dwelling place" (39:6). By the mid-19th cent., onagers had long disappeared from Palestine but were still fairly common in Iraq; today they are found from Saudi Arabia to Mongolia.

Although the onager was long considered untamable, there is now clear evidence that the Sumerians used it for drawing chariots; this is amply illustrated in the Royal Cemetery at Ur (c. 2500 B.C.) and the identification has been confirmed by a study of the bones found at Tell Asmar, though there is nothing to show whether they were ever fully domesticated or just captured when young, as elephants are. They were bridled quite differently from HORSES; this suggests that the use of onagers as draught animals may have been based on experience with oxen, rather than as an imitation of horses in nearby countries, if they were already domesticated there. Onagers were abandoned as soon as the more efficient horse became available. The onager is a pale reddish color (white underside

and flanks) with a dorsal stripe; the tail is tufted. (See F. E. Zeuner, *A History of Domesticated Animals* [1963], ch. 14.)

wilderness. See DESERT.

wilderness wanderings. See ISRAEL, HISTORY OF, III.

wild goat. Several Hebrew words have been thought to refer to the wild goat: (1) *ya⟨el H3604*, which occurs three times (1 Sam. 24:2; Job 39:1 [most versions, "mountain goats"]; Ps. 104:18); (2) *,aqqô H735*, which occurs only once in a list of animals that the Israelites were allowed to eat (Deut. 14:5); (3) *zemer H2378*, found in the same list (so *FFB*, 36, but most versions take this term as a reference to the MOUNTAIN SHEEP); (4) *sa⟨îr H8538*, a common word for "goat," but rendered by the NIV "wild goat" in two problematic verses (Isa. 13:21; 34:14; see discussion under SATYR).

It is essential to distinguish between two closely related and often confused species. The Nubian IBEX (*Capra ibex nubiana*) is still found in W Palestine. The wild goat *strictu sensu* is *C. aegagrus,* also called "bezoar," which is the main wild ancestor of domesticated GOATS, whereas the ibex has never been tamed. The wild goat at one period lived as far S as Palestine, where remains have been found in Stone Age deposits, but some authorities are doubtful that the Israelites knew it (cf. F. E. Zeuner, *A History of Domesticated Animals* [1963], ch. 6).

G.S.CANSDALE

The ibex is often referred to as a wild goat.

wild gourds. See GOURD.

wild grapes. See VINE, VINEYARD.

wild ox. There is general agreement that the Hebrew term *rĕēm H8028* (Num. 23:22 et al.) refers to the true wild ox, that is, the aurochs (*Bos primi-genius*; it is unfortunate that earlier English versions give it the mythical name UNICORN). This splendid animal, now extinct, was the wild species from which domesticated CATTLE have been derived. It was larger than most modern breeds, and the bull was blackish-brown, with long horns pointing forward and upward. In prehistoric times the aurochs ranged over much of Europe, western and central Asia, and parts of N Africa, including Egypt, where it was already becoming rare in the reign of THUTMOSE III (c. 1500 B.C.), who would travel far to hunt one. The last Egyptian documentary evidence for it is dated around 1190 B.C. (RAMSES III), but it is still common in the Gezira (central Sudan). Assyrian kings also hunted it heavily, but it survived in the less inhabited parts of Mesopotamia until a few centuries ago, possibly after the last recorded European specimen died in A.D. 1627. It disappeared from Palestine long before the Christian era, and there is no real proof of its existence there in the biblical era.

The contexts of the nine biblical occurrences of the word provide some useful information. BALAAM made reference to "the strength of a wild ox" (Num. 23:2); the aurochs was the largest and most powerful wild ungulate then known. Another passage speaks of the horns and associates them with a domestic bull (Deut. 33:17; cf. Isa. 34:6 – 7, where it is grouped with sacrificial animals). Job 39:9 – 10 clearly contrasts the wild ox with domestic cattle used for pulling the plow. These are all figurative passages, but they imply a close acquaintance with the subject and leave little doubt that the wild ox is being described; also that it was then a familiar member of the fauna of nearby lands, if not of Palestine itself. (See further F. S. Bodenheimer, *Animal and Man in Bible Lands*, 2 vols. [1960 – 72], 1:50 – 51; F. E. Zeuner, *A History of Domesticated Animals* [1963], ch. 8.)

The KJV uses "wild ox" (Deut. 14:5) and "wild bull" (Isa. 51:20) to render Hebrew *te ô H9293*, but this term probably refers to the ANTELOPE.

G.S.CANSDALE

will (testament). See TESTAMENT.

will (volition). The various terms used in Scripture to indicate acts of human will do not indicate a "faculty" of will or a specific "power" of willing. The Bible does not speak of will in such an abstract manner, nor does it present any critically or systematically developed psychology, least of all a classical faculty psychology; nor does it discuss the philosophical problem of freedom and determinism. Since Scripture is rather a literary record of God's dealings with human beings than a psychological or philosophical treatise, it speaks in simple fashion of human acts and agents, of decisions and desires, of commands and intentions. Yet what it says has implications for the more theoretical questions. See also HUMAN NATURE.

I. Biblical conceptions

A. Willing. The frequent Hebrew verb *ābâ H14* ("to want, will") is used almost always with a negative, indicating a person's refusal to concur or obey (e.g., Gen. 24:5; Exod. 10:27; 1 Sam. 26:23); according to some writers, these uses underscore "the power of contrary choice." Another common verb, *rasâ H8354* ("to delight in"), can also be used with a negative (e.g., Lev 7:18; Amos

5:22), but it occurs most frequently in positive contexts and suggests acting freely out of one's own good pleasure.

The SEPTUAGINT employs the verbs *boulomai G1089* and *thelō G2527* somewhat interchangeably to cover wants, desires, decisions, purposes, and inclinations. In the NT *thelō* is used far more often than *boulomai* (the reverse of classic Greek usage). It has been argued that *thelō* denotes emotive action or unconscious DESIRE while *boulomai* stresses rational and conscious decisions. According to other scholars, such a use presupposes a dichotomy of emotion and reason that is alien to the Hebrew view of human nature (although it is precarious to draw a direct correspondence between lexical choices and theological and psychological concepts). It may be more descriptive of biblical usage to suggest that *thelō* is the broader and encompassing term, while *boulomai* indicates more specifically deliberate acts. Certainly this is the case with the noun *boulē G1087* (e.g., Acts 27:12, 42; 1 Cor. 4:5), and *thelō* plainly denotes near-commands and natural inclinations whether or not conscious. The classic passage is in Rom. 7:15 – 21, where KJV translates *thelō* with the now archaic use of "would."

It becomes evident (1) that the two verbs have no clearly distinct meanings; (2) that they depict the human being as an agent with responsibility for his acts, rather than denoting a discrete faculty, "the will"; and (3) that it is accordingly *the person* who chooses or desires or refuses, rather than "the will." In fact, "the will" of one's enemies is a translation of *nepeš; H5883* or SOUL, that is, the person (cf. KJV and NRSV in Pss. 27:12; 41:2; Ezek. 16:27; in such passages the NIV has "desire" or "greed"). This holistic conception of personality is fundamental to any biblical characterization of human nature.

B. Moral freedom. The metaphysical problem of freedom (see LIBERTY), like a faculty psychology, is not in the biblical purview. Rather, humans are responsible agents, capable of certain self-determining acts. There are limits on this freedom, not only environmental and hereditary, but even more significantly, moral. That is to say, sinners have lost the freedom not to sin and so in measure have lost their capability of moral self-determination. What they want to do they find themselves unable to do. They are victims of temptation from without and within, unavoidably corrupt their physical and social environment, and create for themselves needlessly complex tangles of emotion, rationalization, and circumstance that shut them into hopeless despair. Human lostness is seen in the lostness of moral freedom, not (as with contemporary nihilism) in the meaninglessness of human existence. God's grace in response to sin therefore sets about restoring moral freedom. Christian liberty means that we obey God's law of our own will—that is to say, of ourselves, heartily—not that we are freed from such obligations (Jn. 8:31 – 36; Rom. 7 – 8; Gal. 4:1 – 9; 5:15 – 24).

It is not possible within this article to handle adequately the theological and philosophical problems connected with will. In what follows an attempt is made to indicate a direction for inquiry to take in the light of the biblical conceptions.

II. Theological problems

A. Is freedom of will destroyed by the fall?

At first glance outright disagreement appears on this question, but the difference is partly that writers address different questions. AUGUSTINE (354 – 430) was provoked by the Pelagian claim that human beings would have the moral freedom to obey the law fully were it not for the bad example of ADAM

and his descendants and that Jesus Christ provided a new example to reinforce the good resolve of the human will. Augustine replied (in *The Spirit and the Letter*) that human beings are no longer able not to sin, no longer morally free, but need divine grace to enable them to trust Christ and do his will. A person in SIN is drawn by concupiscence, love of this world, whereas someone in GRACE is drawn by *charitas,* a LOVE for God that affects all else. Love of either sort is the dominating attitude of a life. Augustine speaks of it as an attitude of the will, that is, an act of the whole person. A person makes one kind of love or the other his own: the one draws him away from God and the good, robbing him of his freedom in those regards, whereas the other draws him toward God and the good, freeing him to obey God and to do the good.

Aquinas (1223 – 1274) was concerned more with metaphysical than moral questions. Since humans are by their essential nature rational beings, an act of will requires purposeful deliberation as well as decision, and the will is free insofar as it is rationally guided toward its ends. Concupiscence does not destroy freedom and make an act involuntary, but it inclines the will toward the object of concupiscence just as the love of God inclines it toward good ends. Fear and ignorance, not concupiscence, damage freedom of the will.

It should be recognized that freedom of the will is an ambiguous notion, varying with its object. Augustine himself recognized this. A person may be free to choose clothing or to perform certain moral acts, but not at all free to obey God's law from the heart or to trust the grace of God in Jesus Christ. Generalizations about free will tend to gloss over such differences and to sidetrack that closer analysis which the problem requires.

B. Is freedom of will compatible with divine election? Discussions of predestination and free will frequently employ a mechanistic model for cause and effect, as if a person acts in response to efficient causes and behavioral stimuli. This hardly does justice either to human personality or to the creativity of God, and Scripture uses a more per-sonalistic model. God prepares hearts, he loves people, he calls them and draws them to himself. Here is the language not of mechanical determinism but of interpersonal relations, after the way of a man with a maid or a father with his son. The problem, then, is not *whether* the human will acts independently in coming to faith, not whether faith is determined or undetermined by God, but rather *how* in the dynamic interaction of the divine person with a human person God preserves the personal freedom of individuals while leading them to faith. The combination is possible in interpersonal relations, while it is not possible with more mechanical causes.

One clue is found in Aquinas's classic treatment of the will (*Summa theol*. II. i. Q. 6), in which he points out that we differ from animals in that while the latter attain ends nondeliberately, involuntarily, and "by nature," human beings attain ends deliberately, voluntarily, and "by choice." A person makes an end his own, is often led to do so by rational considerations, and acts to achieve that end for himself. He establishes purposes and pursues them. Even though he is powerfully influenced in the process by other people and by the providence and grace of God, both the purpose and its pursuit have become fully and freely his own. See ELECTION.

III. Philosophical problems

A. Is freedom of will compatible with behavioral science? The problem of freedom and determinism was hardly discussed in ancient or medieval philosophy, where freedom of will was

regarded as a datum to be accounted for rather than a hypothesis with which one can dispense. The problem arose following the scientific revolution, when the methods and concepts of physical science were extended to the study of human beings and their behavior. Thomas Hobbes (1588 – 1679), viewing man as totally material and matter as subject to mechanistic laws, regarded deliberation and decision as mere epiphenomena produced by physical forces at work in the BODY. Behavioristic psychology of more recent days employs similar explanations; for from an empirical point of view human acts must all be explained in terms of heredity and environment, that is, stimulus-response mechanisms. It is assumed that free acts, if they occur at all, are uncaused acts, and that all causes are of the sort which behavioral observation describes.

The problem is first epistemological, for to assume that all aspects of human existence are empirically describable by behavioral science begs the question regarding human nature. It assumes that human activity is a complex behavioral response and that the person is totally a physical being. These are precisely the points in question. If, as Descartes argued, the soul is another ingredient of human nature of a different sort than the body, then it is not necessarily subject to those causes that control bodily processes, nor are its acts empirically observable. One need not accept Descartes' problem-strewn interactionism to benefit from this insight.

The problem is secondly that a mechanistic model drawn from mechanistic physics is imposed on the discussion, so that freedom is equated with physical *indeterminism.* But freedom of will does not imply unrestrained and undirected independence; it is not uncaused activity but self-caused. Freedom is the ability to initiate action, to transcend what circumstances would otherwise produce, to be creative. Creativity, initiative, and transcendence are subject to influences of many sorts, and require both physical and psychological preconditions. When freedom is conceived in terms of the consciously purposive activity of creative individuals, it becomes evident that behavioral science only defines the conditions under which individuals operate. It cannot deny individuality to human beings. Yet it is the purposive individuality of the human being as an agent that epitomizes the biblical concept of will.

These aspects of freedom of will have been more effectively captured by recent idealism and phenomenology than by earlier indeterminism. William Temple, for instance, points out that people do not possess freedom of will from birth nor when intoxicated. They are free insofar as they are self-determining. This is a mark of maturity and of rationality; human beings are determined by the values they have made their own rather than by purely external forces. Freedom is a kind of determinism that is not amenable to either physical or behavioral science.

B. Is freedom of will possible in an ordered universe? We live in a universe of laws, one marked in the large and in every detail by rational order. Does freedom exempt human beings from cosmic law and order? Is it then possible?

This contention fits the viewpoint of the mechanistic materialist, for whom all nature can be explained by the operation of fixed forces (laws of motion). Such a conception of natural law is untenable, and philosophies of science recognize it as a product of 18th-cent. physics. The same contention, however, fits any monistic metaphysic. It was associated with the emanationist theories of both ancient Neo-Platonism and modern Spinozism. If all things are fundamentally one both numerically and in their nature, then what room is there for freedom of will and action on the part of men?

The early church properly developed the doctrine of CREATION ex nihilo in response to such contentions, for the biblical conception of the free agency of human beings presupposes biblical

theism as a whole. A monistic metaphysics admittedly subjects each individual to the necessities of the whole, but theism regards all creation, both individuals and the cosmos, as contingent being dependent on the Creator. The creation operates according to its own regularities, it is true, exhibiting a rational structure for humans to examine. Part of this rational order is the purposive activity of free human agents who exist *ad extra* with regard to God, and so are not parts of a whole whose inner necessity controls them.

Some medieval writers confused the intelligible regularity of the created order with the impersonal determinism of eternal forms, and it took some time for Christian thinkers to purify their understanding. Thomas Aquinas did so by rejecting the Greek view of God as the essence of all being or pure form, and defined him instead as the act of being on which all other beings depend. But William of Occam finally rejected the reality of forms altogether, asserting that they represent the determinism of Greek monistic metaphysics rather than the biblical theism that ascribes absolute freedom to God and free individuality to human beings. The Reformers accordingly conceived of human individuality in relation to creation ex nihilo, rather than in relation to the Greek theory of forms. Rightly so, if the theory of forms is part and parcel of a monistic metaphysical scheme. It is essential therefore to understand the biblical conception of will and of moral freedom if one is not to be confused by the pseudo-problems created by either science or nontheistic metaphysics.

(For bibliography, see HUMAN NATURE.)

A.F.HOLMES

will of God. See PURPOSE.

willow. Any of various trees and shrubs of the genus *Salix*, bearing flowers without petals arranged in the form of spikes (catkins). Two Hebrew words may refer to the willow. One of them is *sapsāpâ H7628*, which occurs only once (Ezek. 17:5); this term suggests that the reference is to the *Salix safsaf* (cf. Arab. *safsāfat*). The other Hebrew word is *ʿărābâ H6857* (Lev. 23:40; Job 40:22; Ps. 137:2; Isa. 15:7; 44:4), rendered "willow" by the KJV and other versions, but "poplar" (a related tree) by the NIV. See POPLAR. On Isa. 15:7, see WILLOWS, BROOK (WADI) OF THE; on Amos 6:14, see ARABAH, BROOK (WADI).

Did the harps of Ps. 137:2 hang on the willow known as *Salix babylonica* (cf. *HALOT*, 2:879)? Hence, "By the rivers of Babylon we sat and wept" (v. 1)—the seeming connection between weeping and the appearance of the species. The present writer has failed to prove that *S. babylonica* was ever found in Palestine, whereas botanists know over twenty other kinds of willows growing in that country, including *Salix alba, S. acmophylla, S. fragi-lis*, and *S. safsaf*, all of which grow well in Palestine, especially alongside the streams. If *ʿărābâ* refers to a tree of the *Salix* genus rather than to the poplar (genus *Populus*), the particular species is difficult to determine. See further FLORA (under *Salicaceae*).

W.E.SHEWELL-COOPER

Willows, Brook (Wadi) of the. In his oracle against MOAB, the prophet ISAIAH says that its fugitives carry their wealth *ʿal nahal hāʿărābîm*, "over the Brook of the Willows" (Isa. 5:17 RSV; NRSV, "Wadi of the Willows"; NIV, "Ravine of the Poplars"; see POPLAR and WILLOW). Some have identified this brook or ravine with Wadi Abu Gharaba, which flows into the JORDAN just N of the DEAD SEA, but the passage is usually interpreted to indicate that the Moabites are fleeing in a

southerly direction. Other possibilities include a tributary of the ARNON or, farther S, an arm of Seil el-Kerek (Karak) known as Wadi Sufsat, which in effect means "Willow Brook" (so KD, *Isaiah*, 1:328, though standard maps do not show this wadi). Most recent writers, however, identify it with Wadi el-Hesa (see ZERED) because this ravine, located at the SE end of the Dead Sea, served as the boundary between Moab and EDOM (H. Wildberger, *Isaiah 13 – 27* [1997], 118, says that the passage refers "certainly" to Wadi el-Hesa, but on p. 136 he acknowledges that "objective data to support this identification are not available"). See also ARABAH, BROOK (WADI).

wimple. This English word, referring to a type of hood worn by women in the late Middle Ages, is used by the KJV to render *mitpahat H4762* in one passage (Isa. 3:22). In the only other occurrence of this Hebrew term (Ruth 3:15), the KJV has "vail" (i.e., "veil"). Modern versions render it "cloak" or "shawl."

<div align="right">E.M.BLAIKLOCK</div>

wind. The standard word for "wind" in Hebrew is *rûah H8120* (Gen. 8:1 et al.), which can also be rendered "breeze," "breath," "spirit," "courage," and the like. The most controversial passage is in Gen. 1:2, where the phrase *rûah ĕlōhîm*, traditionally understood to mean, "the Spirit of God," is sometimes rendered "a wind from God" (NRSV) or "a mighty wind" (NEB; the use of *,elohîm H466* as a superlative is attested, e.g., in 23:6, "great/mighty prince"). The true meaning is found in the use of the similar phrase *rûah-el* in parallel with *niš;mat š;adday* in Job 33:4, "The Spirit of God has made me; / the breath of the Almighty gives me life." Thus the breath or Spirit of God in Gen. 1:2 (not an impersonal natural phenomenon) and God's breathing of the breath (*nesamâ H5972*) of life in 2:7 are properly connected and reflect personal divine activities.

The equivalent of *rûah* in Greek is *pneuma G4460*, "breath, spirit" (rendered "wind" in the wordplay at Jn. 3:8, and cf. Heb. 1:7; note also *pnoē G4466* in Acts 2:2). However, the more common word for "wind" in the NT is *anemos G449*, which occurs about thirty times (Matt. 7:25 et al.). See also the discussion of climate under PALESTINE V.

<div align="right">W.WHITE,JR.</div>

window. The most common Hebrew word for "window" is *hallôn H2707* (Gen. 8:6 et al.). In the NT, Greek *thyris G2600* occurs only twice (Acts 20:9; 2 Cor. 11:33). Archaeological evidence indicates wide variation in size, frequency, ornamentation, and closers. Numerous windows were used in JEREMIAH's time in wealthy houses for the sake of ornamentation and were the object of his scorn (Jer. 22:13 – 14). Bas-reliefs show them frequently barred, either by stone grilles or wood lattice, ornamented by projecting or recessed molds. Some windows opened onto balconies. SISERA's mother looked through the grating for him (Jdg. 5:28). SOLOMON's Palace of the Forest of Lebanon had three rows of windows (1 Ki. 7:4), probably in the Syrian style. Windows also were found in the TEMPLE, probably located in the Holy Place, high in the wall to admit light to the area. Glass windows being unknown, closers were mats, curtains, or wooden panels to protect from severe cold or wind. Gratings, much like louvered shutters, shielded the watcher from outside observers. See ARCHITECTURE; HOUSE.

<div align="right">H.G.STIGERS</div>

wine and strong drink. Alcoholic beverages of various types.

I. Terminology. The usual Hebrew word for "wine," the fermented juice of the grape, is *yayin H3516* (Gen. 9:21 et al.); the Greek equivalent is *oinos G3885* (Lk. 1:15 et al.). In certain contexts (e.g., the poetic statement in Isa. 16:10, "no one treads out wine at the presses"), the term can be used more generally without specific reference to the stage of fermentation, and proponents of total abstinence argue that both *yayin* and *oinos* may refer to either fermented or unfermented grape juice (see esp. S. Bacchiocchi, *Wine in the Bible: A Biblical Study on the Use of Alcoholic Beverages* [1989]). Several words, however, were available to the biblical writers when referring to the juice extracted from grapes (see below), and if the distinction between fermented and unfermented juice had been (morally) important to the Israelites, it is difficult to understand why different terms or phrases were not used with some consistency to discriminate between the two stages (as is almost always done in English), or why the distinction between allowing the one and forbidding the other is never made explicit (contrast the explicit differentiation between leavened and unleavened bread in Exod. 12:15 et al.).

Another Hebrew word, *tîrôs H9408*, is often translated "new wine" (Gen. 27:28 et al., also rendered with *oinos* by the LXX) and possibly refers to *must*, that is, grape juice before and during fermentation; it is clear, however, that the *tîrôs* could be intoxicating (Hos. 4:11; cf. similarly Acts 2:13, which uses the Greek word for "new wine," *gleukos G1183*). In addition, there are three poetic terms: (a) ˓*asîs H6747*, which seems to be a near synonym of *tîrôs* (Amos 9:13 et al.; it too could be intoxicating, Isa. 49:26); (b) *sōbe, H6011* (Isa. 1:22 et al., though some think this term refers to beer made from grain; see *HALOT*, 2:738); and (c) *hemer H2815*, which apparently refers to wine while it is still fermenting (only Deut. 32:14 [NIV, "foaming"]; cf. *hămar H10271*, the normal Aram. term for "wine," Ezra 6:9 et al.).

Note should also be made of the expression *kol-miš;rat* ˓*anabîm*, "all juice of grapes," one of the items forbidden to Nazirites (Num. 6:3). The word *misrâ H5489* occurs nowhere else and thus its precise meaning is uncertain; the phrase may refer in general to any grape extract (cf. NJPS, "anything in which grapes have been steeped"). Assuming that the reference is to unfermented grape juice, as most versions seem to take it, the question arises why this phrase was not used elsewhere. In particular, if the positive statements about *yayin* (see below, section III) have in view grape juice, why would the writers use a supposedly ambiguous term when *miš;rat* ˓*anābîm* or a similar phrase was available?

The Hebrew word translated "strong drink" by the KJV and other versions (NIV, "fermented drink" or "beer") is *š;ēkār H8911* (Lev. 10:9 et al., derived from the verb *š;ākar H8910*, "to be/become drunk," Gen. 9:21 et al.; Gk. *sikera G4975*, used in the LXX and Lk. 1:15, is a borrowing of the Aram. cognate *š;ikr*ā,). This word is used to denote any intoxicating drink made from any fruit or grain, and at least in the early period included wine (cf. Num. 28:7 with 28:14; in Isa. 5:11 it occurs in parallel with *yayin* referring to intoxicating beverages in general). Usually, however, the use of the term is restricted to intoxicants other than wine from grapes. It probably refers to beer made from BARLEY. Both *š;ēkār* and *yayin* were forbidden to NAZIRITES (Num. 6:3: cf. Jdg. 13:4, 7, 14; Lk. 1:15) and also to priests when they entered the Tent of Meeting (Lev. 10:9). The book of Proverbs advises, "Wine is a mocker and beer a brawler; / whoever is led astray by them is not wise" (Prov. 20:1; cf. 31:4, 6). When ELI accuses HANNAH of being intoxicated she responds, "I have not been drinking wine or beer" (1 Sam. 1:15).

II. Mixed wine. In the OT period, there is some evidence that diluting wine with water was

considered undesirable (Isa. 1:22, where the mixture is symbolical of spiritual adulteration). In the Greek and Roman periods wine was often mixed with water, and some considered this mixture to be healthier and more enjoyable: "it is harmful to drink wine alone, or, again, to drink water alone, while wine mixed with water is sweet and delicious and enhances one's enjoyment" (2 Macc. 15:39; it should be recalled that water could be unsafe to drink). Red wine was generally considered to be better and stronger than white wine (cf. Prov. 23:31). The wines of Lebanon (Hos. 14:7) and of Helbon (Ezek. 27:18) may have been white wines. The vineyards of Eshcol (prob. near Hebron) were famous for their large clusters of grapes (Num. 13:23). Samaria was the center of viticulture (Jer. 31:5; Mic. 1:6), but the Ephraimites had the reputation for being heavy wine drinkers (Isa. 28:1).

The Song of Solomon speaks of "spiced [*reqah H8380*] wine" (Cant. 8:2). This phrase represented a variety of wines referred to as mixed or mingled wine. They were prepared with different kinds of herbs after the manner of the non-Israelite peoples of the ANE and were much more intoxicating than the regular wine. This fact made it popular at banquets and festive occasions (Prov. 9:2, 5; Isa. 5:22; Heb. verb *māsak H5007*, "to mix"). The biblical injunctions against its misuse are clear (Prov. 23:29 – 30; Heb. noun *mimsāk H4932*). When wine was mixed with myrrh, it was used as a drug for its anaesthetic and stupefying effects. It was this that was offered to Jesus at the time of his crucifixion (Matt. 27:34; Mk. 15:23).

The rabbinical writers refer to several mixtures of wine that were known in Palestine and throughout the ANE. There was a mixture made of old wine with very clear water and balsam which was used especially after bathing. Use was also made of a raisin wine and a wine mixed with a sauce of oil and garum. A popular mixed wine was one mixed with honey and pepper, and recommended by the rabbis was a special emetic wine taken before a meal. There were many other mixtures of wine. Good vinegar was made by mixing barley in the wine.

III. Biblical attitudes to the use of wine. The attitude reflected throughout the Bible to the use of wine as a beverage is accurately expressed by Jesus the Son of Sirach, "Wine drunk at the proper time and in moderation / is rejoicing of heart and gladness of soul. / Wine drunk to excess leads to bitterness of spirit, / to quarrels and stumbling" (Sir. 31:28 – 29). Its use was universal except in the case of the priest when ministering in the sanctuary, the Nazirites, and the Recabites, in which instances its use was prohibited. There is also, however, a constant awareness of the danger of incontinence in the use of wine, and this is denounced as sinful (Prov. 20:1; 23:29 – 35; Isa. 5:11, 22; 28:7 – 8; Hos. 4:11). Apparently the principle to be followed in the use of wine is that of moderation, consonant with Paul's rule of conduct as formulated in 1 Cor. 8:8 – 13 and Rom. 14:13 – 21.

Wine receives special commendation in the Bible. There is reference to the "wine that gladdens the heart of man" (Ps. 104:15; cf. Jdg. 9:13; Eccl. 10:19). Used metaphorically wine represents the essence of goodness. The drinking of wine was sometimes accompanied by singing (Isa. 24:9). The desirable wife is compared to "a fruitful vine within your house" (Ps. 128:3). The blessing of wine is illustrated by the figure in which Israel is compared to a vine God brought from Egypt and planted in Canaan, where "it took root and filled the land," sending its boughs as far W as the Mediterranean and as far E as the Euphrates (Ps. 80:8 – 11).

Prosperity was sometimes symbolized by an abundance of wine, as when Jacob blessed Judah saying that "he will wash his garments in wine / his robes in the blood of grapes" (Gen. 49:11). A time of peace and affluence is described as a situation in which every person dwells "under his vine and under his fig tree" (1 Ki. 4:25). Isaiah uses wine as a symbol of spiritual blessing (Isa. 55:1 – 2), and it is extolled in such passages as Eccl. 10:19. It appears that a temperate use of wine is not

reprehensible (Zech. 10:7). References to wine in the Bible make it clear that its use was a common affair and a part of the regular diet (Jdg. 19:19; 1 Sam. 16:20; 2 Chr. 11:11).

On the other hand, there are repeated warnings in the Scriptures against the intemperate use of wine. See DRUNKENNESS. Isaiah warns "those who rise early in the morning / to run after their drinks, / who stay up late at night / till they are inflamed with wine" (Isa. 5:11; cf. v. 22). He condemns the priests and the prophets who "stagger from beer and are befuddled with wine" (28:7) and the shepherds who "lack understanding" because they say, "Come…let me get wine! / Let us drink our fill of beer" (56:11 – 12). Some of the strongest warnings against intemperance are in the book of Proverbs: "Wine is a mocker and beer a brawler" (Prov. 20:1); "whoever loves wine and oil will never be rich" (21:17; cf. 23:20 – 21); "Do not gaze at wine when it is red, / when it sparkles in the cup, / when it goes down smoothly" (23:31). This is followed by a description of the hallucinations that follow immoderate drinking (23:32 – 34). MICAH chides the people of his time for preferring a preacher who claims, "I will prophesy for you plenty of wine and beer" (Mic. 2:11). HABAKKUK says that wine is treacherous and suggests that its intemperate use is characteristic of a person who has other character weaknesses (Hab. 2:5). The real undesirable possibilities in the abuse of wine led to the prohibitions against its use by Nazirites and also by priests when performing their duties (Lev. 10:9; Num. 6:3; Ezek. 44:21).

There is no direct or absolute prohibition of the use of wine in the NT. The moderate and appropriate use of wine is recommended to TIMOTHY by Paul, "Stop drinking only water, and use a little wine because of your stomach and your frequent illnesses" (1 Tim. 5:23). The intemperate use of wine is condemned in the NT just as it is in the OT. The Christian should "not get drunk on wine, which leads to debauchery" (Eph. 5:18). Christians should avoid living like non-Christians who are characterized as practicing drunkenness among their other vices (1 Pet. 4:3). Leaders in the church are exhorted to practice temperance (1 Tim. 3:3, 8). On one occasion Paul suggests total abstinence if the use of wine (or meat) is a stumbling block to another (Rom. 14:21; cf. 1 Cor. 8:13).

The view that total abstinence is required by Scripture is difficult to reconcile with the fact that the biblical warnings focus on the *excessive use* (or misuse) of wine. For example, Prov. 23:20 (referring obviously to fermented juice) puts wine in the same category as meat, "Do not join those who drink too much wine / or gorge themselves on meat" (cf. Rom. 14:21). Priests were forbidden to drink wine or strong drink specifically when ministering in the sanctuary (Lev. 10:9), clearly implying that alcoholic drinks were used on other occasions. Similarly, the requirement that deacons should not indulge in or be attached to "much wine" (o*inō pollō*, 1 Tim. 3:8) makes little sense if in fact Christians are not allowed to drink wine at all.

A winepress at Masada.

IV. Viticulture in Palestine. Viticulture and the production of wine was important in the ANE and is described in the Bible (see VINE, VINEYARD). There are many references to the process of making wine in the Bible (Gen. 40:11; Deut. 18:4; Josh. 9:4; 1 Chr. 27:27; Ezek. 17:5 – 10). The vineyards were carefully cultivated and protected against vandalism by watchmen located in observation towers. No other plants were permitted to grow between the vines. An owner of a vineyard was exempt from military service at the time of the grape harvest in September, which was the season apparently for great festivity (Jer. 25:30; 48:33). The vintage is referred to in connection with the Feast of Booths (Deut. 16:13). Travelers were permitted to help themselves to the new wine and the poor could take what grapes remained on the ground, as they could with the harvest of all the crops. In the SABBATICAL YEAR the vineyards, as in the case of all farmlands, were to lie fallow.

The grapes were brought from the vineyards in baskets and were usually spread out for a few days in the sun, the effect of which was to increase their sugar content. The grapes were then placed in wine vats and trodden with bare feet. It seems to have been usual for several people to tread out the grapes together, which is the point of Isaiah's statement about the Messiah treading the winepress alone (Isa. 63:3). The usual wine vat consisted of three sections, two rectangular or circular rock-hewn pits at different levels connected with a channel. The upper pit was the larger one and here the grapes were trodden, the juice accumulating in the lower vat. The upper vat was usually twice the size in area as the lower, but only about half as deep. The wine vats varied in size. Even after the appearance of mechanical winepresses, the wine from trodden grapes was preferred and continued to be produced.

After the grapes were trodden, the husks that remained were pressed by means of a wooden plank, one end of which was secured to a socket in the side of the vat and the other end weighted with stones. Numbers of winepresses from Bible times have been discovered in the Holy Land and they vary in size and the number of vats. A winepress might have as many as four vats. The additional vats would allow for the settling of the must in the intermediate levels before the wine entered the final one. Usually the new wine was left in the vat to undergo the first fermentation, which took from four

to seven days. It was then drawn or skimmed off (Hag. 2:16). If the vat had a spout, the wine was run off into jars or wineskins to complete the process of fermentation (Matt. 9:17). The whole period of fermentation would last from two to four months, at which time the wine would be ready for use. It would then be placed in smaller jars and skins. At this time the wine was strained through an earthenware, metal, or linen strainer to eliminate such things as grit and insects. Isaiah refers to this straining process when he mentions "wine on the lees well refined" (Isa. 25:6 KJV [Heb., *š;ĕmārîm mĕzuqqāqîm*; NRSV, "well-aged wines strained clear"]; cf. Matt. 23:24).

To aid in further maturing the wine and to guard against undesirable thickening on the lees, it was periodically poured from one vessel to another. Jeremiah has an allusion to this practice, "Moab has been at rest from youth, / like wine left on its dregs, / not poured from one jar to another—/ she has not gone into exile. / So she tastes as she did, / and her aroma is unchanged" (Jer. 48:11; cf. Zeph. 1:12). When the wine was refined and ready to be stored for long periods of time, it was poured in jars lined with pitch that were sealed and placed in the "wine cellars" (1 Chr. 27:27 NRSV). There apparently were no attempts made to preserve wine in an unfermented state. The MISHNAH, for example, does not refer to any such preservation. Some scholars are of the opinion that preserving unfermented grape juice was virtually impossible in ancient times in Palestine (however, see the contrary arguments by Bacchiocchi, *Wine in the Bible*, ch. 4).

V. Uses of wine in the biblical world. Wine was universally used in the ANE in libation offerings to the gods of paganism. The Hebrews were constantly warned against becoming involved in these SACRIFICES to foreign gods (Deut. 32:37 – 38; Isa. 57:6; 65:11; Jer. 7:18; 19:13). The "drink offerings" which sometimes were a part of the Levitical sacrifices were of wine (Exod. 29:40; Lev. 23:13; Num. 15:7, 10; 28:14). Worshipers customarily brought wine among other requirements when they went to offer sacrifice (1 Sam. 1:24; 10:3, 8). A supply of wine was kept in the TEMPLE for sacrificial purposes (1 Chr. 9:29).

Besides its customary use, wine was important in various special occasions and for particular reasons. It was used for medicinal purposes, for example, to revive the faint (2 Sam. 16:2), and as a sedative "to those who are in anguish" (Prov. 31:6). It was the custom in Talmudic times to give ten cups of wine to mourners (*b. Ketubbot* 8b; later this quantity of wine was reduced). Paul's prescription of "a little wine" for various ailments (1 Tim. 5:23) was widely practiced. The rabbis used a saying, "At the head of all medicine am I, Wine; only where there is no wine are drugs required" (*b. Baba Batra* 58b). It was used with oil in the dressing of wounds of the man who had fallen among robbers (Lk. 10:34).

Wine was also used at special occasions such as BANQUETS. At the great banquet given by King Ahasuerus (XERXES, Esth. 1:3, 7 – 8), the wine given to each guest was, according to Jewish tradition, from the king's home province and of the vintage of the year of his birth. The Hebrew word for "feast" or "banquet" is *miš;teh H5492*, literally, "a drinking" (from the verb *satâ H9272*, "to drink"). Wine also figures prominently as a desirable gift for important people, as when DAVID received "skins of wine" from ABIGAIL (1 Sam. 25:18) and ZIBA (2 Sam. 16:1). Because of its importance in every area of the life of Palestine, it was inevitable that wine should become an important commodity in business and commerce. When SOLOMON built the TEMPLE in Jerusalem, he paid HIRAM king of TYRE, among other things, 20,000 baths (1 bath equaled almost 6 gallons) for his help.

The use of wine has been a part of religious ceremonies and festive occasions in the Jewish home and in the SYNAGOGUE throughout Hebrew history. Viticulture soon became the most important

agricultural activity in Palestine in the colonies established by Zionism. The cellars of the Rothchilds at Rishon le-Ziyyon controlled almost the entire produce of the Zionist colonies and was distributed through the Carmel Wine Company in all parts of Europe, Russia, and the United States. The 1904 vintage in the Rothchild cellars was more than 7,000,000 bottles, of which 200,000 went to Warsaw. The income of this trade in wine was of primary importance for the early economy of the Jewish homeland. During the period of prohibition in the United States (1920 – 33) the production and sale of wine for sacramental purposes was permitted by the federal government. Orthodox rabbis insisted upon the use of wine, although Conservative and Reform rabbis in the country held, on the basis of Talmudic law, that for Jewish ritual grape juice could be used instead of wine.

(See further M. Jastrow, Jr., in *JAOS* 33 [1913]: 180 – 92; H. F. Lutz, *Viticulture and Brewing in the Ancient Orient* [1922]; A. C. Haddad, *Palestine Speaks* [1936], 60 – 67; C. T. wineskins. See SKIN.

wing. The common word for "wing" in Hebrew is *kānāp H4053*, but *,ēber H88* occurs a few times (Ps. 55:6; Isa. 40:31; in Ezek. 17:3 it may mean "pinion" or "feather"). Aramaic uses *gap H10149* (only Dan. 7:4, 6), and the standard Greek term is *pteryx G4763* (Matt. 23:37 et al.). Although anatomically wings are to the created birds (Gen. 1:21) what arms are to human beings, they are used for covering and locomotion rather than for manual dexterity, so that the symbolic use of wing differs decidedly from the symbolic use of arms.

The desire of hope is expressed in the psalmist's words, "Oh, that I had the wings of a dove! / I would fly away and be at rest" (Ps. 55:6), and such relief is promised in ISAIAH's statement, "They will soar on wings like eagles" (Isa. 40:31). MOSES assured the Israelites that the Lord cared for them "like an eagle…that spreads out its wings" (Deut. 32:11). RUTH found refuge under the wings of the Lord (Ruth 2:12), and Jesus would have gathered Jerusalem to himself "as a hen gathers her chicks under her wings" (Matt. 23:37).

Riches have their picture in doves' wings covered with silver (Ps. 68:13), but their fleeting nature was compared to wings of eagles (Prov. 23:5). HOSEA likens the speed with which the Israelites engage in IDOLATRY to someone whom the wind has wrapped in its wings (Hos. 4:19 NRSV). Eagles have a wing spread of 7 to 9 ft., making for great speed. Both the wind and the morning are said to have wings (Pss. 18:10; 139:9), which portray the swift arrival of the Lord's help and accessibility everywhere. "The sun of righteousness will rise with healing in its wings" (Mal. 4:2). Even the shadow of a wing suggested a refuge from the wicked for DAVID (Ps. 17:8).

Several symbolic creatures are given wings, such as the two women in Zechariah (Zech. 5:9), the lion with eagles' wings in Daniel (Dan. 7:4), and the woman in Revelation (Rev. 12:14). In ancient monuments wings were added to bulls and lions. Isaiah's SERAPHS covered their face with

wings in worship, their feet also, but flew with the remaining two (Isa. 6:2). Ezekiel's CHERUBIM, winged living creatures, ascended with glory to God (Ezek. 10:5). Because JOB could not by his own wisdom cause the hawk to soar or migrate toward the S, nor make the eagle climb to its nest on high, he learned HUMILITY and acceptance of the discipline of the Lord (Job 39:26 – 27). See FAUNA and articles on specific birds.

<div align="right">R.L.MIXTER</div>

winnowing. The process of blowing the CHAFF from GRAIN by wind or by a forced current of air (the Heb. verb is *zarâ H2430*, Ruth 3:2 et al.). This was done in the open on a flat surface of rock or ground, about 40 – 50 ft. in diameter, preferably on the top of a hill. The winnowing was done after the THRESHING was completed. The threshed grain was usually winnowed in the evening, when there was likely to be a wind. It was thrown into the air by means of a six-pronged fork, called in KJV a "fan" (Isa. 30:24; Jer. 15:7; Heb. *mizreh H4665*; cf. Gk. *ptyon G4768*, Matt. 3:12; Lk. 3:17). The chaff would be blown away, while the grain, being heavier, would fall to the ground. If there was no wind, one man waved a large fan, while another tossed the grain into the air with a fork. After the winnowing was completed, the owner of the grain and his family would generally spend the night with the grain to prevent stealing. The grain was finally passed through a sieve to remove the dirt, and then placed in jars for future use.

Winnowing at dusk.

wisdom. The common Hebrew word for "wisdom" is *hokmâ H2683*, which can also be rendered "skill, experience, shrewdness, prudence" (cognate verb *hākam H2681*, "to be wise, act wisely"). Other relevant terms are *bînâ H1069*, "understanding" (verb *bîn H1067*) and *śekel H8507*, "insight" (the verb *śākal H8505* can mean both "to understand" and "to have success"). Greek uses *sophia G5053*, "wisdom," and *phronēsis G5860* (with various cognates).

1. Possessors of wisdom
    1. Nonreligious
    2. Kings and rulers
    3. Counselors
    4. Prophets
    5. Scribes
    6. Magi
    7. Messiah
2. Sources of wisdom
    1. Naturally acquired
    2. Learning
    3. Revelation
    4. Wisdom literature
    5. Proverbs
    6. Ecclesiastes
    7. Job
    8. Psalms
    9. Ecclesiasticus
    10. Wisdom of Solomon
    11. James
3. Christian concept
    1. Jesus
    2. Paul
    3. James

I. Possessors of wisdom. It has always been assumed that some individuals possess wisdom above that of ordinary people. In OT times, wisdom became the collected account of the experiences and observations of such "wise men"; and in whatever respect wisdom brought power, these were also men of influence.

A. Nonreligious persons. People of no particular religious description were frequently said to possess wisdom. Artisans and craftsmen could be described as wise in the sense that they were skilled and able, ingenuity and manual dexterity being the dominant consideration (Exod. 28:3; 31:3; et al.). Also the crafty and subtle could be called wise without necessary connotation of either good or evil (Exod. 1:10; 2 Sam. 13:3; Prov. 14:8). Even the cunning of the lower animals could be described as their wisdom (Prov. 30:24). There was also the thought that wisdom was the special possession of the old simply because they had lived long. "Is not wisdom found among the aged? / Does not long life bring understanding?" (Job 12:12; cf. 15:10; Prov. 16:31). PAUL could describe the pagan philosophers of his day as having a wisdom of this world (1 Cor. 1:20; 2:5; 3:19; 2 Cor. 1:12). Thus the relevant biblical words by themselves do not necessarily indicate that a wise person is religious.

B. Kings and rulers. Royal persons were especially thought to be possessors of wisdom, and that

usually because of their relation to some divine source of understanding. SOLOMON is remembered as the wisest of men, and his father, DAVID, possessed wisdom even as a youth (1 Sam. 16:18), which continued with him to his last days (2 Sam. 14:20). David apparently was aware of Solomon's possession of wisdom and advised him at the time of his succession to the throne to act "according to your wisdom" (1 Ki. 2:6). Solomon was confirmed and heightened in his possession of wisdom by the appearance of God to him in a dream (2 Chr. 1:7 – 13). God offered to grant him whatever he asked. In response Solomon said, "Give me wisdom and knowledge" (v. 10).

Solomon's wisdom was soon displayed in the famous decision concerning the two women who claimed the same child, for he ruled in favor of the woman who was willing to give up the boy rather than having to witness his death (1 Ki. 3:16 – 27). "When all Israel heard the verdict the king had given, they held the king in awe, because they saw that he had wisdom from God to administer justice" (v. 28). Not only was Solomon held in awe by his own people, but also people came from many nations to test his wisdom, no one of whom is more memorable than the QUEEN OF SHEBA (10:1 – 13), and the note was added, "King Solomon was greater in riches and wisdom than all other kings of the earth" (10:23). He is said to have pronounced 3,000 proverbs and composed over 1,000 songs (4:32). His great wisdom has been preserved in the book of PROVERBS, most of which is attributed to him. The SONG OF SOLOMON and (indirectly) the book of ECCLESIASTES are also ascribed to him, as is the noncanonical work, WISDOM OF SOLOMON.

The kings of heathen nations were supposed to possess wisdom, but their wisdom was mocked and ridiculed by the prophets. ISAIAH announced that God would punish the king of ASSYRIA, who in his haughty pride boasted that it was by his own wisdom that he had triumphed (Isa. 10:12 – 13). Likewise he declared, "the wise counselors of Pharaoh give senseless advice" (19:11; cf. v. 13). EZEKIEL denounced the king of TYRE in the name of the Lord because, said the prophet, "you think you are as wise as a god" (Ezek. 28:2).

C. Counselors. Advisers to kings, as well as others who stood in the royal courts, were judged to be wise men, and this not alone among the Jews. Homer's *Iliad* is filled with references to wise men such as Odysseus and Gerenian Nestor who spoke with a god or goddess standing by their sides, becoming the mouthpieces of deity to counsel the king, often interpreting signs and dreams.

POTIPHAR knew that his slave JOSEPH possessed unusual gifts (Gen. 39:1 – 6). Later, when Joseph was imprisoned on false charges by his master's wife, he was acknowledged as an interpreter of DREAMS. Pharaoh's butler and baker were likewise in prison, and they both dreamed. Joseph interpreted their dreams, one favorably and the other unfavorably. When the butler had been restored to Pharaoh's service as Joseph had foretold, after a long time of more than two years, he became the point of contact through whom Joseph was brought even into Pharaoh's presence to interpret a dream that troubled the monarch, which no wise man of Egypt could interpret (chs. 40 – 41). Being acknowledged as wise beyond all of Pharaoh's counselors, Joseph became second only to the king himself (41:33 – 44).

Later MOSES was to stand in another pharaoh's court to give counsel, and likewise he would be in competition with the wise men of Egypt, the "sorcerers" and "magicians" of the land. When Moses sought the release of the Israelites from captivity, he wrought miracles before Pharaoh, but the latter countered by commanding the magicians of Egypt to do the same things (Exod. 7:11, 22; 8:7). Eventually Moses stood down the wise men of Egypt and even they confessed his superior power, saying, "This is the finger of God" (8:19).

In still later times DANIEL and the young Jewish princes were counted among the wise men who

attended NEBUCHADNEZZAR, the king of Babylon. They are described as "young men without any physical defect, handsome, showing aptitude for every kind of learning, well informed, quick to understand, and qualified to serve in the king's palace" (Dan. 1:4). Once again God's wise men were brought into conflict with the wise men of the king's court. It was a royal dream that needed interpreting which became the issue. Nebuchadnezzar commanded the magicians, the enchanters, the sorcerers, and the Chaldeans of his court to interpret his dream. When they failed, the king became "so angry and furious that he ordered the execution of all the wise men of Babylon" (2:12). Then Daniel, God's man, was enabled through divine help to interpret the dream.

Wisdom was not restricted to men among royal counselors. SISERA, DEBORAH's opponent, was evidently attended by wise women. After his death at the hands of JAEL wife of HEBER, Deborah, who was Israel's wise woman, sang a taunt song against those "wisest ladies" who were speculating on Sisera's delay in returning from battle, insisting that their dead leader was late because he was "finding and dividing the spoils" (Jdg. 5:29 – 30). JOAB, David's servant, enlisted the services of a wise woman whom he brought from TEKOA to help him gain David's permission to bring young ABSALOM back to Jerusalem (2 Sam. 14:1 – 27). Joab was also influenced by a wise woman who lived at ABEL BETH MAACAH, gaining the deliverance of her people and city (20:16 – 20).

There appears to have been a remarkable restraint among the wise men of Israel. They were not magicians, sorcerers, or astrologers. Those who attended Israel's kings were thought of especially as spokesmen for God, giving the wisest of advice because it had the sanction of divinity. Of AHITHOPHEL it was said that the counsel he gave "was as if one consulted the oracle of God; so all the counsel of Ahithophel was esteemed, both by David and by Absalom" (2 Sam. 16:23 NRSV); but not all lived up to that reputation. In fact, when Ahithophel himself proved a traitor to David, the king prayed that the counsel of Ahithophel be turned to foolishness (15:31).

D. Prophets. The PROPHETS were especially spokesmen for God, but they seem to have distinguished between themselves and those whom they identified as counselors of the kings. Most frequently the prophets were in conflict with those counselors who gave the kings political advice that ran contrary to that of the prophets. Isaiah strongly condemned those counselors who advised HEZE-KIAH to make an alliance with Egypt contrary to his insistence that the protection of Pharaoh would turn to the nation's shame (Isa. 30:1 – 5). Jeremiah advised submission to the king of Babylon and was considered a traitor by those who counseled the king to resist. The prophet, after speaking of the terrible trials toward which the nation was headed because of false counsel, cried out, "Let not the wise man boast of his wisdom'" (Jer. 9:23). Ezekiel likewise found the counselors to be deficient, with terrible consequences for the nation: "Calamity upon calamity will come, and rumor upon rumor. They will try to get a vision from the prophet; the teaching of the law by the priest will be lost, as will the counsel of the elders" (Ezek. 7:26). The spirit of the prophets was the spirit of Isaiah, who wrote, "Woe to those who are wise in their own eyes / and clever in their own sight" (Isa. 5:21).

E. Scribes. The SCRIBES arose as a class of professional exponents of the law following the pattern of EZRA. The result inevitably was that the scribes who interpreted the law tended to produce a wisdom of their own. Prophecy had about come to an end, and messianism was a remote hope at best. The life of the nation was turned to the law, thus the men of influence were especially the interpreters of that law. The difference in viewpoint between the scribal movement and Wisdom Literature (see below, section III) is seen in that the wisdom books of Ecclesiastes, Job, and Proverbs scarcely mention the law at all; instead, they bring the considerations of religion under observation through an evaluation

of human nature and of the universe that men and women inhabited. The Wisdom of Solomon does have a high regard for the law, but gives little attention to it. The Wisdom of Sirach (ECCLESIASTICUS) has not only the highest regard for the law among the wisdom writings but also the most extensive treatment of that subject. The writer of Sirach identified the law with wisdom (Sir. 24:23 – 25), but such has been judged to be less than an accurate representation of the attitude of the wisdom writers toward the law.

F. Magi. The term MAGI originally referred to the Median priests from Persia who were both religious leaders and teachers of wisdom. Eventually the word came to refer to anyone who possessed supernatural knowledge and power. In the rabbinical writings the term was applied to magicians. PHILO JUDAEUS used the term in a derogatory fashion to describe men who were not genuinely religious or even philosophical.

This clay tablet (c. 659 B.C.), discovered at the library in Nineveh, contains a cuneiform text known as "Rituals for the Substitute King," describing how a king was to be protected with a human scapegoat when omens predicted he was in danger. The ritual included the use of magical figurines; in the ANE, wisdom was often equated with skills in magic.

Magi (KJV, "wise men") sought Jesus, being led to the newborn MESSIAH by the heavenly sign, the star that went before them. Matthew records that they sought the king of the Jews, and this comment probably indicates that they were pagan (Matt. 2:1 – 12). In Matthew's gospel they are described in order to show that such men, with very slight knowledge of the facts, were nonetheless filled with enthusiasm by the sign God had given, made the long journey to Jerusalem, and sought the Messiah, when the leaders of the Jewish nation did not even seek to verify their report that he had

been born. ORIGEN was perhaps the first to give a mystical interpretation to the gifts the Magi brought; he and other church fathers understood this event to portray the overthrow of magic by the coming of Christ, the adoration of Jesus by the Magi being taken as an admission of their defeat.

A man encountered by PHILIP in SAMARIA who has been called SIMON MAGUS was described as practicing MAGIC (Acts 8:9). This man played an important role in early Christian traditions; for example, he was judged by some to have been the founder of GNOSTICISM. There is little substance to such traditions. Simon Magus seems to have been representative of a class of charlatans who practiced magic for personal gain. They sold charms for healing and divination. Their magical formulae were derived from both eastern theosophy and mystic cults that thrived in the Hellenistic world. Such a man was excluded from the Christian community and clearly had no place in the early church.

G. Messiah. The Coming One, or MESSIAH, was associated with wisdom even prior to the Wisdom Literature; this seems especially to have been true because the Messiah was the grandest figure in a family distinguished by men of wisdom, David and Solomon. Isaiah identified him as the "Wonderful Counselor" and as one upon whom would rest "the Spirit of wisdom and of understanding, / the Spirit of counsel and of power, / the Spirit of knowledge and of the fear of the LORD" (Isa. 9:6; 11:2).

The book of Proverbs took a most important step when it personified Wisdom: "Wisdom calls aloud in the street, / she raises her voice in the public squares" (Prov. 1:20). In the most famous passage of all, Wisdom is identified as having existed before man was created, even before the creation of the world (8:22 – 31). The APOCRYPHA advanced even beyond the OT in the personification of Wisdom, who was declared to be the only begotten of God, living with God and sharing his throne. Wisdom was declared to be the very effulgence of eternal light. Wisdom was thought of as a heavenly being.

Many have professed to find a relationship between the LOGOS of Jn. 1:1 – 18 and the personification of Wisdom (esp. Prov. 8) as names of God. Yet others have professed to find a relationship between God's speaking through the Son, who according to Heb. 1:1 – 4 reflects the very glory of God, and the personification of Wisdom. Still others see Lk. 11:49—"Because of this, God in his wisdom said, 'I will send them prophets and apostles, some of whom they will kill and others they will persecute'"—as a self-designation by Jesus as the Wisdom of God. Several of the church fathers held this view on the basis of the parallel passage in Matthew, which begins, "Therefore I am sending you prophets" (Matt. 23:34).

II. Sources of wisdom. Where could a person obtain wisdom was a question of vast importance to the writers of the books of the Bible and nonbiblical literature as well.

A. Naturally acquired. Human ability to acquire wisdom is acknowledged; but such wisdom, according to the Bible, comes only from "the fear of the LORD" (Prov. 1:7). To the Hebrew, wisdom was the application of divine truth to human experience, and only "fools despise wisdom and discipline." Young men were especially encouraged to apply themselves to the quest for wisdom, making their ear attentive to wisdom and inclining their heart to understanding (2:2). The author of Ps. 49 gives the wisdom of his years of experience when he announces, "My mouth will speak words of wisdom; / the utterance from my heart will give understanding" (v. 3). That which followed was the author's observations about life and death. Especially in Ps. 73 there is a union of human thought and divine truth, the two combining to result in wisdom: "When I tried to understand all this, / it was oppressive to me / till I entered the sanctuary of God" (vv. 16 – 17a). The author of the Wisdom of

Solomon makes his appeal for men to seek wisdom: "Wisdom is radiant and unfading, / and she is easily discerned by those who love her, / and is found by those who seek her" (Wisd. 6:12).

B. Learning. The writings of the rabbis concerned with the interpretation of the law became eventually the depository of wisdom, and those who studied the law gained the treasure of wisdom. Proverbs gave the practical advice that led to a happy and successful life, and because wisdom in this book had such an ethical and moral quality, it was a short step to equating wisdom and law. In the Apocrypha, the book of Ecclesiasticus gave a moral and religious interpretation to law which likewise foreshadowed that identification of wisdom with law. It is incorrect to say that wisdom was equivalent to law in Ecclesiasticus, but the identification of the two was definitely in prospect. By NT times so definitive of wisdom was the knowledge of the rabbis and their interpretation of the law that those who were untutored in rabbinics could be described as accursed (Jn. 7:49).

C. Revelation. Wisdom is not often ascribed to deity in the OT (1 Ki. 3:28; Isa. 10:13; 31:2; Jer. 10:12; 51:15; Dan. 5:11). Even in the books of wisdom it is rare that God is described as wise (Job 9:4; Ps. 104:24; Prov. 3:19). Probably it is so because in the judgment of OT writers God's wisdom so transcended human wisdom that his knowledge and understanding were not appropriately described by the same term that pointed out human capacities. In the Apocrypha, later writers were more willing to speak of God's wisdom (Sir. 42:21; Bar. 3:32). In the NT there are several references to the wisdom of God (Rom. 11:33; 1 Cor. 1:24; Rev. 7:12).

The biblical point of view seems to be that wisdom comes from God and is to be found with him, rather than that God is wise. After asking where is the place of understanding, Job answers by saying, "God understands the way to it, / and he alone knows where it dwells" (Job 28:23). Human wisdom then is given by God. It is given in answer to prayer, as previously noted, when we seek his counsel. In the NT God's wisdom is especially associated with his Spirit. In the last analysis human beings possess wisdom only as a gift from God; it comes by divine revelation. This is especially the view of the NT (Acts 6:10; 1 Cor. 2:6; 12:8; Eph. 1:17; Col. 1:9; 3:16; Jas. 1:5; 3:15 – 17), but it is indicated in the OT also (1 Ki. 3:11 – 12; Eccl. 2:26; Isa. 11:2; Dan. 1:17).

III. Wisdom literature. The Hebrew *māšāl H5442*, "proverb," is the most primitive as well as the most common expression of Hebrew wisdom. It is not possible, however, to speak of any particular proverb or collection of proverbs in the Bible as being especially ancient. One portion of the book of Proverbs (Prov. 22:17—23:14) has been judged by many scholars to have affinities with the Egyptian material known as *The Wisdom of Amenemope*, which would indicate a considerable antiquity, for the earliest form of such literature existed in Egypt as far back as the 3rd millennium B.C. Not all the proverbs in the Bible are contained in the book of Proverbs. The last seven verses of Ecclesiastes are proverbial and to an extent offer the best explanation of the presence of proverbs in the Bible. God desired to teach his people the right way to live, to preserve them from heartbreaking experiences and aimless wanderings in life. A natural concomitant of this was a special interest in proverbial material in advising the young, so that Proverbs has often been called "The Young Man's Book."

A. Proverbs. As mentioned above, the book of Proverbs preserves much ancient material, but it did not attain its present form until late, no earlier than the time of HEZEKIAH (see Prov. 25). The first nine chapters are a contrast of wisdom with folly. The appeal is for people to behave wisely in every relationship of life. Chapters 10 – 24 are a collection of proverbs reported to have been written by

wise Solomon himself. Chapters 25 – 29 are reported also to have been proverbs of Solomon which "the men [LXX, friends] of Hezekiah king of Judah" copied and arranged; whether these were transmitted orally or by writing (as "copied" would seem to imply) is not certain. Chapter 30 is an oracle of an otherwise unknown sage named AGUR son of Jakeh. The last chapter is an acrostic poem, arranged on the order of the letters in the Hebrew alphabet, which attempts to identify a virtuous woman; it is described as the instruction given to King LEMUEL by his mother (tradition has said that "Lemuel" was a name given to Solomon as a child by BATHSHEBA, his mother). See PROVERBS, BOOK OF.

B. Ecclesiastes. This book has been all things to all men. JEROME thought it was a manual enjoining renunciation of the world. Comenius spoke of it as an appealing book of consolation. Heine referred to it as a "Hymn of Skepticism." Delitzsch called it a "Hymn of Godly Fear." Johannes Pedersen gave it the title "Israelite Skepticism," and Morris Jastrow called its author "a gentle cynic."

The author of Ecclesiastes called himself *qōhelet H7738*, a Hebrew term derived from the verb meaning "to assemble," but usually translated "the Preacher" or "the Teacher" (the name Ecclesiastes comes from the LXX, *Ekklēsiastēs*, "a member of the assembly"). Tradition has said that Koheleth was Solomon, David's son (cf. Eccl. 1:1), though many modern scholars hold that he was simply a sage, one of the wisdom teachers of that day (12:8).

Koheleth felt bound by no tradition; he possessed an inquiring spirit, but with little interest in dogma. His range of knowledge did not equal Job's, but he was a cultured, well-informed man who had much insight into the affairs of his day. He was possibly acquainted to some degree with Greek philosophy. Three great loves possessed him. He had a love for life; his emotions were tempered, but to be alive was good indeed. His second love was justice. He was not indifferent to human suffering and was deeply sensitive to the cruelty and folly of the human race. The charge of cynicism grew out of his seeming resignation to an inevitable fate about which men could do nothing. His third love was truth. He tried to solve the puzzle of the universe, but concluded that all was vanity. Man was powerless and could do nothing for himself to solve the riddle of human existence. Koheleth loved life, but his search for justice and wisdom brought him only sorrow and disillusionment. See ECCLESIASTES, BOOK OF.

C. Job. Job has been commonly believed to be the greatest of all the Wisdom Literature. It is certainly the greatest drama in the OT and was called by Carlyle "the world's greatest book." At first it seems that the author is simply telling the story of Job's trials, but in actuality he is using those experiences to impress his readers with the truths he has received from God. The problem of suffering, the greatest enigma of the human mind, is that which the author faces. The Hebrew had been taught that the righteous always prosper and the wicked always suffer. If, therefore, a person suffers it is conclusive evidence of his wickedness. Because there was no view of immortality, it had to be that way for the Jew to maintain a moral universe. In SHEOL distinctions were nonexistent. The grave was no friend to any man. Because God was righteous, it was necessary for him to reward people in this life. The author of Job found two serious errors in this: (1) people would be led to do right in order to be rewarded with earthly benefits; (2) the poor, the hurt, the wretched were abandoned to their suffering (it was what they deserved). To Job it was not possible to identify suffering and sin. To Job the unfortunate man in life could none the less be God's man, well-pleasing to him. The author could have simply declared these truths, but he chose to present them in a matchless dramatic form: Job accused of wrongdoing by friends because he had come upon hard times. See JOB, BOOK OF.

D. Psalms. Several of the psalms belong to the Wisdom Literature of the OT. Three of them (Pss. 19; 104; 147) are often referred to as nature psalms. To the wise the natural world was something more than rocks and hills. The wonders of the natural universe were testimonies to the glory of the God who created it. The heavens are constantly preaching and teaching (Ps. 19). Psalm 37 reflects the author's perplexity over the character and seeming prosperity of the wicked. The wicked may prosper to the end, but that end will be obliteration. The righteous may have little of this world's goods, but in the end they possess peace. Likewise Ps. 107 sings of the graciousness of God's providence for the redeemed. The material and temporal become types of the eternal and spiritual. The righteous are like a lost caravan in the desert; they are like distressed captives in a dungeon; they are like sick men on their deathbeds; they are like seamen foundering in a storm. In all of these circumstances they have been driven to God. They cry out for help, and he answers them. Psalm 148 calls upon all the universe to render its praise to God: the sun, the moon, the stars, the fire, the hail, the snow, the vapors, the young men, the maidens, the old men, and the children. Beginning with the heavens the psalmist moves from that great height to the lowest deeps and back to earth. Everything is to praise God. See PSALMS, BOOK OF.

E. Ecclesiasticus. Attributed to Jesus the Son of Sirach (Jeshua ben Sira), this book is also known as the Wisdom of Sirach. It has a proverbial nature, and some have supposed that Sirach took the book of Proverbs as his model. It has been thought that the book itself contains all that is known of its author (Sir. 39:1 – 11). It is not only like Proverbs in form, but in content as well. The ideal of life is presented as a synthesis of religion: fear of God and observance of the law, which was the better part of wisdom. He was especially familiar with the PENTATEUCH as well as rules and regulations of the oral law that were later codified in the MISHNAH. Sirach's task as a teacher, as he understood it, was to help his students to meet the problems of life by living righteously. He was a Jew of sincere piety and sought to bring his people to a similar devotion to God. See ECCLESIASTICUS, BOOK OF.

F. Wisdom of Solomon. This title comes from the SEPTUAGINT, but in the VULGATE it is called *Liber sapientiae* (Book of Wisdom). It is an exhortation to seek wisdom because that brings salvation, whereas damnation is the fate of unrighteous Jews who disregard wisdom (Wisd. 1 – 5). Wisdom is to be sought also because there is a divine essence about it. The understanding which this author reveals of the nature of wisdom differs considerably from the earlier Wisdom Literature, drawing much more heavily upon concepts found in Greek philosophy (chs. 6 – 9). Wisdom shows itself to have been the means by which blessings came to Israel in times past, even as judgment came upon the heathen without it (chs. 10 – 19). It should also be noted that there are differences between chs. 11 – 19 and the earlier section, raising a question concerning the unity of the work (e.g., the author no longer speaks in the first person, nor is the term *wisdom* to be found after 11:1). See WISDOM OF SOLOMON.

G. James. In the NT James comes closest to being Wisdom Literature. Like OT materials of this kind, it is made up of many short sections, even single sentences, on independent themes, though sometimes several paragraphs will be grouped around a single topic. It has many sayings that are similar to the apocryphal Ecclesiasticus. A close similarity in structure, if not in content, has been discovered by some between James and TOBIT (Tob. 4:5 – 19; 12:6 – 10), but probably the book most similar to it is Proverbs. Five, more or less general, divisions of the book can be identified: (1) Jas. 1:2 – 18, a

discussion of the problems of trials that come in life; (2) 1:19—2:26, the nature of true religion; (3) 3:1 – 12, the responsibilities of a spokesman for God; (4) 3:13—5:6, a protest against prevalent evils in life; (5) 5:7 – 20, an appeal for the development of Christian virtues. See JAMES, EPISTLE OF.

IV. Christian concept. Wisdom for some of the prophets became a word that was heathen in its connotation. The NT finds something of the same problem, and wherever wisdom has become identified with legalism on one hand, or pagan philosophy on the other, it is rejected. Yet there is an appreciation of a certain kind of wisdom to be found in Christian teaching.

A. Jesus. There is in the SERMON ON THE MOUNT the clearest and fullest approach to the wisdom method to be found in the teachings of Jesus, though there are other briefer passages that possess this character (Lk. 14:8 – 10 is a quotation of Prov. 25:6 – 7). The love of life and the learning of large lessons with spiritual import from nature, both of which characterize the sages of the OT, are much in evidence in Jesus' longest sermon of record. Even the method of the wisdom writers seems to have been employed by Jesus, using as he did the short, pithy, and sometimes antithetical statement designed to live in the memory. There were, however, two kinds of wisdom recognized by him, the one accepted and the other rejected. There was a true wisdom, fully justified of her children, which brought sinners to God (Lk. 7:35), but there were also the falsely wise from whom he hid his teaching's meaning, while revealing it to the simple (Lk. 10:21; Matt. 11:25). Some have thought that Jesus was actually attacking the teaching of Wisdom Literature in Lk. 6:27 when he commanded "Love your enemies, do good to those who hate you" (cf. 28 – 38) for Sirach had taught, "Give to the devout man, but do not help the sinner. / Do good to the humble, but do not give to the ungodly" (Sir. 12:4 – 5a; cf. vv. 5b – 7).

B. Paul. Paul's discussion in 1 Cor. 1 – 4 is a passage especially concerned with wisdom. In fact it is primarily a denunciation of wisdom. It is important to know that the wisdom against which Paul wrote was not of Jewish parentage, but Greek. It was the vain speculations of philosophy expressed in the empty, high-flown phrases of meaningless rhetoric that brought the apostle's wrath. This philosophy was a trusting of human thought processes rather than a reception of God's revelation. It was especially at the point of the meaninglessness and futility of the cross of Christ in the judgment of human beings that Paul took his stand. Such an attitude toward the cross was clearly a testimony to the perversity of the wisdom against which he wrote.

Positively Paul taught a wisdom of his own which was for mature Christians, those morally strong. It was probably not a reference to doctrine that Paul made when he said, "We…speak a message of wisdom among the mature" (1 Cor. 2:6), though some have believed it to refer to the depth of Paul's teachings. It seems more likely to be associated with the presence and activity of the HOLY SPIRIT in the lives of God's people in a full and meaningful way, for Paul wrote, "God has revealed it to us by his Spirit. The Spirit searches all things, even the deep things of God" (2:10).

C. James. As pointed out above, the epistle of James is the only book in the NT that can be accurately described in its entirety as gnomic or as Wisdom Literature. The writing most similar to James in early Christian literature is known by the Latin title, *De doctrina apostolorum* (*Concerning the Doctrine of the Apostles*). The epistle of James could, with a very few Christian notations removed, pass quite appropriately as a synagogue exhortation. James contemplates the danger to Christianity not so much as a perversion of doctrine from a heretical teaching but as a violation in the realm of

practical living. The interest of the book is dominantly ethical, an emphasis on a godly life. The wisdom of James is the wisdom of living a life acceptable to God which is the same emphasis that Jesus gave as recorded in the synoptics. See JAMES, EPISTLE OF.

Wisdom, Book of. See WISDOM OF SOLOMON.

Wisdom of Jesus. See ECCLESIASTICUS.

Wisdom of Solomon. An important pseudonymous book contained in the SEPTUAGINT and the VULGATE, but never accepted in the Hebrew canon; among Protestants it is regarded as part of the APOCRYPHA. This work finds a place among the *deuterocanonical* Scriptures of the Roman Catholic Church, where it is not known by the title given in copies of the LXX, but simply as the Book of Wisdom (its title in the Old Latin and Vulgate translations). The book was very popular in the early church, where it came to bear other titles, such as Divine Wisdom (CLEMENT OF ALEXANDRIA, ORIGEN) and Book of Christian Wisdom (AUGUSTINE). It is regarded by many as the highest achievement among the writings of the Apocrypha.

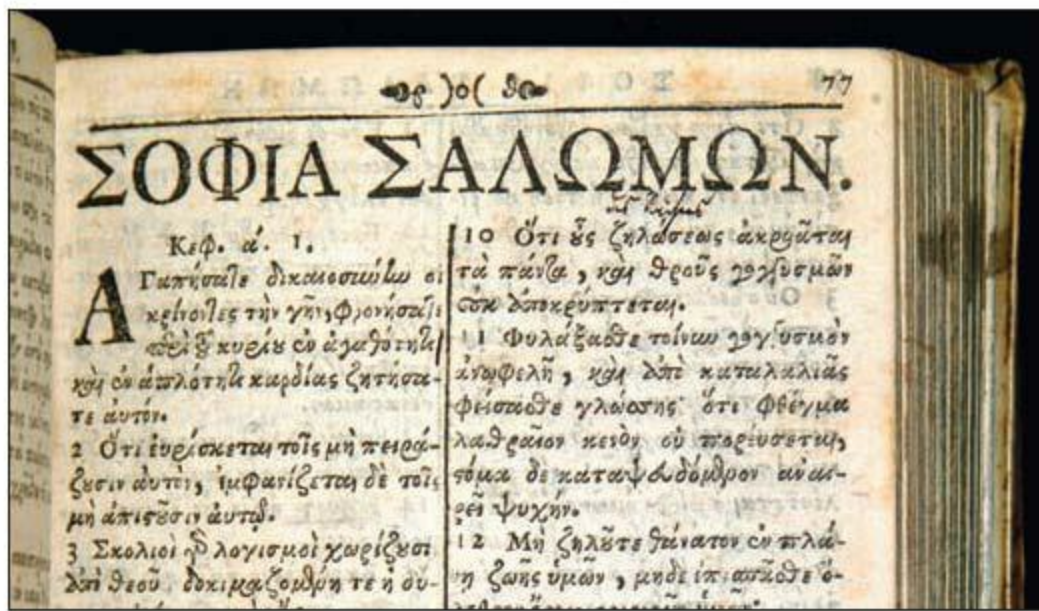
I. Content. Wisdom of Solomon stands as the apex of the so-called Wisdom Literature, the culmination of centuries of tradition on the subject of WISDOM. While there is a decided affinity between Wisdom of Solomon and the earlier wisdom writings (JOB, ECCLESIASTES, PROVERBS), comparison with its near contemporary and companion volume in the Apocrypha, ECCLESIASTICUS, springs to mind. In both, Wisdom is the focus of attention, is spoken of as personified, and is extolled in the most glowing phraseology. If Wisdom of Solomon outdoes Ecclesiasticus here, it is because of its employment of Hellenistic concepts and terminology in the setting forth of its argument (see HELLENISM). There are a number of additional, but more superficial, similarities between the two, such as a concern with perplexing problems, the repeated contrasting of righteous and wicked, and a survey of the history of the righteous. A striking difference between the two writings, however, is found in the literary style. Ecclesiasticus consists largely of collections of aphorisms—short pithy sayings gathered in a random fashion on the order of Proverbs. Wisdom of Solomon, in contrast, consists more of extended passages on selected themes. As a result of this difference, Wisdom of Solomon may be much more readily outlined than Ecclesiasticus, as follows.

1. Wisdom: The righteous and wicked contrasted (Wisd. 1:1—5:23)
    1. The virtuous, not the ungodly, will find wisdom (1:1–15)
    2. The argument of the godless (1:16—2:24)

3. Adverse experiences of the righteous are deceptive (3:1—4:19)
    1. Suffering (3:1 – 12)
    2. Barrenness (3:13—4:6)
    3. Early death (4:7 – 19)
4. The contrast of the righteous and wicked at the judgment (4:20—5:23)
2. Wisdom: Solomon's personal appeal (6:1—9:18)
    1. Exhortation (6:1 – 25)
    2. Personal reminiscence (7:1 – 21)
    3. Panegyric on wisdom (7:22—8:1)
    4. Personal reminiscence (cont.) (8:2 – 21)
    5. Solomon's prayer for wisdom (9:1 – 18)
3. The experience of Israel and Egypt juxtaposed (10:1—19:22)
    1. The role of Wisdom in history, from Adam to the exodus (10:1 – 21)
    2. Israel and Egypt: God's antithetical action (11:1 – 14)
    3. God's measured punishment upon Egypt (11:15—12:2)
    4. God's measured punishment upon Canaan (12:3 – 18)
    5. Concluding remarks on God's forbearance (12:19 – 27)
    6. Excursus on the futility of idolatry (13:1—15:19)
    7. Israel and Egypt: God's antithetical action (cont.) (16:1—19:22)

In the first main section the author has drawn with bold strokes the contrast between the righteous and the wicked. As in Ecclesiasticus, wisdom has to do not with knowledge, but with righteousness. That is, the person who possesses wisdom is the one whose life is righteous. In his introductory exhortation, our author turns this around, arguing that wisdom cannot be attained by the evil or the godless. Such people indeed attain only unto death. An example of the unsound reasoning of the ungodly (given in the first person plural) is thereupon provided for the reader (Wisd. 2). Since this present life is all that a person has, they argue, let us give ourselves to revelry before we die, and let us oppress and abuse the righteous who are such a reproach to us.

Continuing his argument, the author points out that the adverse experiences of the righteous—suffering, barrenness, and premature death—must not be misinterpreted. They are better than the apparent blessings which the wicked enjoy. For the vindication of a person's righteousness comes ultimately at the judgment and in the immortality that awaits the righteous. It is the final judgment that will expose the misery of the ungodly. This latter point is vividly communicated by the author in the poignant lament he puts upon the lips of the wicked at the last judgment (Wisd. 5:1 – 13). The righteous will live forever, he concludes, receiving "a glorious crown" from the Lord (5:16). They will be kept by the Lord, but the end of the wicked will be disastrous.

In the second main section of the book, the author resumes the exhortation with which the book begins. Here one encounters the climax of all Jewish writing on wisdom. SOLOMON, the wisest of Israel's kings, is made to speak to his fellow kings and rulers. It is their duty, he says, to seek wisdom in their actions. Wisdom will come to the ruler who seeks her, and he who honors her will rule forever. Solomon then reviews his own birth and childhood, which on every account was ordinary. His life, however, was marked by a singular zeal for wisdom before which all else paled into insignificance.


First page of the Wisdom of Solomon, from a 1715 edition of the OT Apocrypha.

At this point the personal reminiscence is interrupted by an incomparable passage in praise of wisdom (Wisd. 7:22—8:1). The author continues to speak of wisdom as personified or, to put it more strongly, hypostatized. Wisdom is described in the most exalted language—language which, strictly speaking, can apply only to God. She is, indeed, nothing other than the vehicle of God's action: "For she is a breath of the power of God, / and a pure emanation of the glory of the Almighty" (7:25). The passage begins by enumerating twenty-one characteristics (3 x 7) of Wisdom, a number of these terms being taken from Greek philosophy. Wisdom is said to pervade and penetrate all things (7:24); to be "a reflection of eternal light, / a spotless mirror of the working of God, / and an image of his goodness" (7:26); able to do all things and renew all things (7:27), and to order all things well (8:1).

Thereupon, Solomon proceeds with his account of his own pilgrimage to wisdom. Not only is wisdom desirable for its own sake, providing a person with true wealth, but it is indispensable for the effective ruling of one's subjects. With all of this in mind, Solomon prayed to God for wisdom. The prayer given (Wisd. 9) is a considerable expansion of the prayer as found in the canonical Scriptures (1 Ki. 3:7 – 9; 2 Chr. 1:8 – 10).

The third main section of the book, regarded by many as somewhat anticlimactic, begins with a brief survey of biblical history from ADAM to the exodus (Wisd. 10). It is shown how the heroes of Israel—who are not named, but in each instance referred to simply as the "righteous one" (*ho dikaios*)—were each kept by Wisdom, whereas those who neglected her brought ruin upon themselves. From ch. 11 onward, the writer concerns himself almost exclusively with the events connected with the exodus (see EXODUS, THE). In particular, he is intent on showing how one and the same thing (or similar things) worked ill for Egypt and good for Israel. While this passage must have been regarded by its author as the outworking of wisdom in the concrete events of Israel's past history, it is striking that the word *wisdom* occurs only twice in the remaining chapters. The first antithetical example given is that of water; the water given to the Israelites in the wilderness is contrasted with the water of the NILE, which the Egyptians could not drink. At this point, the author pauses to elaborate the carefully measured character of God's judgment upon EGYPT and CANAAN. These enemies of God could have been annihilated in an instant by his will, yet he brought judgment gradually to provide opportunity for REPENTANCE.

Apparently sidetracked by the need for an explanation of their plight, the author attacks what was at the heart of their folly—IDOLATRY (Wisd. 13 – 15). Whereas the author at least finds the worship of the beauties of nature intelligible—though, of course, he does not sanction it—he has nothing but ridicule for those who worship things made by human hands. He gives an account of the origin of idolatry (representation of those absent, whether by distance or death), tabulates the fruit of idolatry (ch. 14), and provides a concluding statement on the folly of idolatry (ch. 15).

His digression concluded, the author resumes his discussion of God's antithetical action among the Israelites and Egyptians. In addition to God's use of water, God provided repulsive animals (frogs) to plague Egypt, but quails for Israel to feast upon; the Israelites were saved from the bite of the serpents, but the Egyptians could find no cure for the bites of the locusts and flies. The elements of fire, rain, and hail worked toward Israel's advantage, but to Egypt's harm. Perhaps the most interesting of the contrasts, however, occurs in chs. 17 and 18, where the author, making extensive use of Jewish legendary materials (rabbinic MIDRASH), tells of a mysterious darkness that overtook the Egyptians while the Israelites knew only the blessings of light. Death, it is true, came upon both Egypt and Israel, but in the case of the latter, it could have no enduring work. Finally, the Red Sea proved a blessing to Israel, but only destruction to the Egyptians. The book ends rather abruptly, with a single verse asserting that the Lord has glorified his people and helped them at all times (19:22).

II. Unity, author, and date. In the summary just given, it can be seen that the third major section of the book is quite different from the first two. This fact has led a number of scholars to the conclusion that it is from the hand of a second author. Wisdom is scarcely mentioned in these later chapters, and the doctrine of the immortality of the soul, so important for the early chapters of the book, finds no place in the third section. There are stylistic and linguistic differences between these parts of the book as well (detailed evidence available in *APOT*, 1:522ff.).

There is, however, no unanimity concerning exactly where the first author left off and the second began (e.g., some make the division between Wisd. 9 and 10; some at 11:2 or 11:5). Moreover, the arguments against unity, though not without plausibility, are by no means compelling. For despite the notable differences, there are similarities in the different sections too, and most conspicuously in the use of unusual words (*metaleuein* is misused in the same way in 4:12 and 16:25) and expressions (see J. Reider, *The Book of Wisdom* [1957], 21). The two sections may well be from the same author, but perhaps derive from different times and/or were written for different purposes. There is no question but that the later chapters are inferior in quality (at least to the modern mind) in comparison with the early chapters, but it is a rare author indeed whose every line remains equally inspiring centuries afterward.

Assuming one author and not two, it must be admitted that his identity remains unknown. The book, of course, purports to be the literary product of Solomon, although his name is not explicitly mentioned (cf. the unmistakable indications in Wisd. 9:7 – 8, 12, as well as 8:2 – 19). The author, however, writes under the guise of a pseudonym well chosen to increase the authority of the book's assertions concerning wisdom. It is impossible that Solomon could have authored the book, for the conceptual and linguistic milieu it reflects is decidedly Hellenistic.

Unlike Ecclesiasticus, the style and vocabulary of Wisdom of Solomon indicates that it was originally written in Greek and not Hebrew (including the earlier chapters, for which a Hebrew original has occasionally been unsuccessfully argued). Further evidence that the book was originally written in Greek and dates well into the Hellenistic period is found in its dependence upon the LXX in OT quotations and allusions (see *APOT*, 1:524 – 25). It is known, then, that the author was acquainted

with and highly influenced by Greek thought, terminology, and stylistic literary devices, and that he used the Greek translation of the OT. A Jew writing in Greek and steeped in Hellenistic culture, using the LXX, readily suggests ALEXANDRIA as the most likely place of origin for our book.

The date of the book is difficult to place with any precision. Generally, however, since it postdates the Greek translation of the OT Prophets and Writings, it therefore can be no earlier than the second half of the 2nd cent. B.C. If the author knew Ecclesiasticus (in Greek dress), as seems likely, one may place the earliest date around 100 B.C. On the other hand, the work predates the earlier writings of the NT (which reflect some knowledge of it) and probably also predates PHILO JUDAEUS, with whom our author appears unacquainted. Generally, then, a date within the 1st cent. B.C. seems most probable. Attempts to determine the date more precisely (whether within this period or not) on the basis of internal data in the book have, owing to their intrinsic uncertainty, produced no conclusions calling forth common assent.

III. Background and purpose. It has already been pointed out that the background of the book is unmistakably that of Hellenistic Judaism. See HELLENISM. The author appears to have been well educated in Greek literature and philosophy. His literary style has been acknowledged as exquisite, and the near equal of the best Hellenistic writings. The book is patterned to a large extent on the CYNIC and STOIC diatribe, an eloquent oration intended (ostensibly, in the present instance) to be delivered as a public address. The style is decidedly artistic, employing a rich vocabulary and many turns of phrase that reflect the influence of the Greek poets. The author is fond of the standard Greek rhetorical devices, such as alliteration, assonance, chiasmus, sorites, syncrisis, and catalogues. However, not only his style, but also his content reveals the influence of Greek literature. He can list for his readers the four cardinal virtues of the Greek philosophers: temperance, prudence, justice, and fortitude, adding "nothing in life is more profitable for mortals than these" (Wisd. 8:7). The description of wisdom (7:22 – 23) makes use of several philosophical terms, and the reference to wisdom as that which in her pureness "pervades and penetrates all things" (7:24) is clearly reminiscent of the Stoic notion of *logos*. Like the Greek philosophers the author conceives of a kind of "world-soul" (cf. 1:7; 7:24; 8:1). Platonic doctrine may well account for the author's assertion that the world was created from a preexisting, formless matter (11:17). Wisdom is regarded as an emanation from God (7:25) rather than a creation of God, and can be referred to as a *pneuma G4460*, a "breath" or "spirit" of God, much in the same manner as among the Stoic philosophers. But perhaps most important of all, so far as the argument of the book goes, is the use of the Platonic idea of the IMMORTALITY of the soul (1:12 – 15; 3:1 – 4). Indeed, the author seems to accept the Platonic teaching of the preexistence of the SOUL (8:19 – 20; cf. 15:8, 11). The immortality expected by the author is that of the soul, in accord with the Greek philosophers, rather than that of the BODY, concerning which there is nothing in the book.

These are the more significant parallels between our book and the philosophy of the Hellenistic world. With these in mind, however, one may approach the question of the author's purpose. He seems obviously to be formulating the faith of his fathers in the thought categories of the educated society of his day. One may read behind this a desire on his part to speak to his Jewish brethren who were particularly attracted to the various fascinations of Hellenistic culture. He is saying that the Jewish religion is no less satisfying than Greek philosophy, and that the concepts of the latter can be most helpful in revealing the true depth of the former. He writes to the Jewish apostate and to those Jews in danger of apostasy. Additionally, however, he may well have hoped that the pagans might cast a glance upon his work. He spends no little effort in demonstrating the utter foolishness of

idolatry. The references to the folly of Egypt throughout the latter half of the book could without difficulty be paralleled in the society of the contemporary Alexandrian, and the darkness that lay over the Egypt of the exodus may be seen, with not much imagination, to lie over the land of the reader.

IV. Theological significance. For all his borrowing of Hellenistic thought and idiom, the author remains truly a Jew. He knows and makes use of the OT Scriptures. His teaching concerning the transcendent God and the place of his chosen people Israel is orthodox. He freely employs midrashic exegesis in his discussion of the events of the exodus. The author, however, is also a Jew who feels quite free to advance the traditional theological formulations of his day. Unquestionably, one of the most important advances is the author's contention that retribution and reward are not necessarily received in the present life, but are to be realized in the afterlife of the immortal soul.

Anticipations of this doctrine, it is true, can be found already in the canonical Scriptures (e.g., Ps. 73:1; Isa. 26:19; Dan. 12:12). Yet the fact that the present life is all that the Jew looked upon is attested to by the continual wrestling with the problem of the apparent injustice of the present life found in the wisdom writings of Israel. Our author is bold to affirm that the solution to this perennial problem is to be found in the future. He counters the despair of the canonical Ecclesiastes. (It has frequently been argued that one of the author's main purposes was to refute the argument of Ecclesiastes.) Immortality, not material abundance, is the goal of the righteous, and one of the author's contributions has been designated the inauguration of an "other-worldly" perspective hitherto lacking in JUDAISM. An adjunct to this emphasis is found in the author's insistence upon individual RIGHTEOUSNESS as requisite for the enjoyment of blessing in the afterlife of the soul.

Another significant teaching of the book is, of course, found in the way wisdom is expounded, particularly in the personification or hypostatization of wisdom. To be sure, wisdom is personified already in Job 28 and Prov. 8, as well as in Bar. 3 and Sir. 24. But this author goes much further in ascribing to wisdom not merely a rhetorical existence, but very much a real existence—on the order of a separate heavenly being, existing with God (Wisd. 8:3), "an associate in his works" (8:4), who was present at the CREATION of the world (9:9). She is "allpowerful, overseeing all" (7:22), "a pure emanation of the glory of the Almighty" (7:25). Wisdom is further identified with *pneuma*, "spirit" (1:6; 7:22; 9:17), and performs the work of an intermediary between God and the righteous (7:27).

Thus whereas Ecclesiasticus identifies wisdom with the LAW (something this author does not do), here wisdom becomes the dynamic coworker of God. While the early Christians found this treatment of wisdom helpful in formulating the doctrine of the TRINITY, it seems unlikely that the author actually meant wisdom to be taken as a person distinct from Yahweh. It may certainly be said, however, that the early Christian formulations of the doctrine of the Trinity often bear, in language and concept, a great resemblance to our author's discussion of wisdom and her relationship to God, and that the latter not only anticipated but also to some extent prepared the way for those formulations.

V. Influence. The influence of the book on the early Christian church appears to have been remarkable, and far surpasses all other OT apocryphal books in importance. It probably appealed to the Christians because of its clear teaching on immortality, and especially because the language with which the author described wisdom was deemed particularly suitable and applicable to Christ. Although there are no direct quotations of the book in the NT (the earliest direct quotation is found in Clement of Rome), there are several significant allusions, especially in the writings of PAUL and John (see JOHN THE APOSTLE).

The epistle to the Romans appears to reveal the influence of our book in several places. Paul's description of idolatry and its effects (Rom. 1:18 – 23) is quite similar to the same line of argument in Wisd. 11 – 14 (cf. also the passages on natural theology, Rom. 1:19 – 20 with Wisd. 13:1 – 9); Rom. 9:19 – 23 seems to echo passages concerning the sovereignty of God in Wisd. 12:12 and 15:7, where the analogy of the potter and the clay is used in the same manner. The parallels here seem more striking than does Isa. 29:16, where the same metaphor is employed. The theme of the forbearance of God in giving opportunity for repentance found in the latter half of the book (e.g., Wisd. 11:23; 12:10, 19) is also to be found in Romans (e.g., Rom. 2:4). One may also compare Rom. 5:12 with Wisd. 2:24, where it is stated that through the devil's work death entered the world. Among other of Paul's epistles, Eph. 6:11 – 17 is similar to Wisd. 5:18 – 20, but here the Pauline imagery is equally well explained on the basis of Isa. 59:17. The Christological language of several other NT passages (Col. 1:15; Heb. 1:2 – 3; Jn. 1:9) seems to betray a knowledge of Wisd. 7:25 – 26 (cf. also Jn. 1:1 with Wisd. 9:1 – 2).

In addition to the large number of parallels in the NT writings that have been detected, the early church fathers found the book useful in their apologetic endeavors, pointing for example to such passages as Wisd. 14:7 and 2:12 – 20 as prophecies of the CRUCIFIXION of Christ, and 18:15 as a prophecy of the INCARNATION.

VI. Text and canonicity. The text of the original Greek has come down to us in a good state of preservation in the major uncial MSS of the LXX (B, A, and ℵ; also C which is, however, incomplete). It is readily available in the standard published editions of the LXX. Vulgate, Old Latin, Syriac, and Armenian are among the versions of the book that have been handed down, and these give evidence of having been translated directly from the Greek.

As with the other books of the OT Apocrypha, the book was accorded official recognition by the Roman Catholic Church only in the 16th cent. It was, however, highly venerated in the early church, as we have seen. Some accepted the book as canonical on the basis of its claim to Solomonic authorship. Others, fully cognizant that the book was pseudonymous, nevertheless also regarded it as canonical (e.g., Origen, Eusebius, Augustine). The list of the MURATORIAN CANON (prob. late 2nd cent.) surprisingly includes the book among the NT writings (!), noting that it was written by friends of Solomon in his honor. In the Protestant church the book holds an honored position among the books of the OT Apocrypha.

Wise Men. See MAGI.

witch, witchcraft. See DIVINATION; FAMILIAR SPIRIT; MAGIC.

withe (withs). The English term *withe* refers to a flexible twig used as a band. In the plural spelling *withs*, it is used by the KJV to render *yeter H3857* in one passage (Jdg. 16:7 – 9), referring to the "seven fresh bowstrings" (NRSV, NIV mg.) with which DELILAH bound SAMSON. The Hebrew word is clearly used of bowstrings in at least one passage (Ps. 11:2; prob. also in Job 30:1); in its only other reference it apparently refers to a tent-cord (Job 4:21). Some believe that the objects used by Delilah were animal tendons still wet (cf. NJPS; *HALOT*, 2:452); others suggest that they were simply leather strips (cf. NIV, "thongs").

witness. See MARTYR; TESTIMONY.

witness, altar of. See ED.

witness of the Spirit. A witness presupposes a person, object, content, or event concerning which TESTIMONY is given. The NT makes it clear that the primary witness of the HOLY SPIRIT is to Christ, and not to himself or initially to a body of doctrine (Jn. 14:26; 15:26; 16:7 – 15; cf. Matt. 16:16 – 17; 1 Jn. 2:20 – 22). Though the Spirit's witness focuses upon the person and work of Christ, it moves out from that central point to incorporate (a) the totality of God's saving acts for sinners, (b) the intrinsic and instrumental authority of Scripture, (c) the nature of fallen human beings and their response to God, and (d) a ministry of ASSURANCE and instruction to God's own.

The center of the NT REVELATION is that Jesus is LORD and MESSIAH (Acts 2:36). It is this truth which the ANTICHRIST denies but which the Christian affirms, having received "an anointing from the Holy One" (1 Jn. 2:20 – 22; cf. Matt. 16:16 – 17; Rom. 10:9 – 10). In such a confession, the Spirit witnesses to the significance of the total redemptive program of God, and believers' eyes are opened to understand (1 Cor. 2:10 – 16; 2 Cor. 3:12 – 18). Having inspired selected individuals to write the truth of God (2 Tim. 2:16; 2 Pet. 1:21), the Spirit gives an accompanying inward illumination enabling us to appreciate the objective revelation as God's truth and to apprehend its meaning (1 Cor. 2:10 – 16; 2 Cor. 3:12 – 18). The Spirit also convicts people of their sin and of righteousness, warning of coming judgment (Jn. 16:8 – 11), and ministers to believers, assuring them of their relationship with God (Rom. 8:15 – 16; Gal. 4:6) and granting them spiritual discernment (1 Cor. 2:15, 16; cf. Rom. 12:2; Phil. 1:10; Col. 1:9).

R. N. LONGENECKER

wizard. See DIVINATION.

wolf. A large wild and predatory canine. The wolf (Heb. *zĕʾēb H2269*; Gk. *lykos G3380*) is mentioned a number of times in the OT or NT, and it must have been a familiar member of the Palestine FAUNA throughout the biblical period (cf. Jer. 5:6; Hab. 1:8). As the wild ancestor of the

domestic dog, and a close relative of the oriental JACKAL, the wolf is by nature a hunter; its large size—up to 48 in. long with a tail of 15 in., and weighing 100 pounds—makes it formidable; so it is not surprising that the Lord spoke of it as a danger to flocks (Matt. 7:15; 10:16; Lk. 10:3; Jn. 10:12; cf. Ezek. 22:7; Zeph. 3:3; Acts 20:29). In JACOB's testament, BENJAMIN is compared to "a ravenous wolf" that "devours the prey" and "divides the plunder" (Gen. 49:27). In ISAIAH's eschatological visions, however, the wolf is pictured as a docile creature, living alongside the lamb (Isa. 11:6; 65:25).

The gray wolf (*Canis lupus*) was once found over much of N America, Europe, and Asia; now it has been exterminated from most settled areas and is plentiful only in large tracts of undisturbed forests and steppes. It still lives in Palestine in small numbers, but is no longer a danger to livestock. Because of their greater size, wolves can take much larger prey than foxes and jackals. They also hunt in packs that can overcome even large deer or cattle, but for most of their time they are content with smaller animals, including mice, insects, crabs, and even fish. (See E. P. Walker, *Mammals of the World*, 5th ed. [1991], 2:1065 – 76.)

G. S. CANSDALE

woman. The standard biblical terms for "woman" are Hebrew *ʾiš;š;â H851* and Greek *gynē G1222*. Both of these terms are frequently used with the meaning of "wife." Several other words may be regarded as partial synonyms (e.g., Heb. *gĕbîrâ H1485*, "mistress [of the house], lady [of the king]," Gk. *presbytis G4567*, "old woman").

I. In the OT

A. Status and rights. The primary focus must be upon the Genesis account of CREATION and the description of woman's origin. The initial narrative (Gen. 1:26 – 27) seems to imply that woman as the female counterpart to man is an essential component in the IMAGE OF GOD. Following the structure of Hebrew poetic parallelism, "the image of God" in v. 27b corresponds to "male and female" in v. 27c. The theological implications of this fact are not even hinted at in the Genesis account; however, woman's unique and distinctive role arises from her participation in the *imago Dei*.

The more detailed anthropocentric account of creation in Gen. 2:18 – 25 raises several questions. One is the question of etymology, for ADAM is reported as saying, "she shall be called 'woman,' [ʾiš;š;â] / for she was taken out of man [ʾiš;]" (v. 23). Comparative linguistics, however, makes clear that the noun ʾiš;š;â must have derived from a Semitic root such as ʾnt; the consonant t becomes š; in Hebrew, and the doubling or gemination of the š; in the Hebrew word betrays the dissimilation of an earlier *n*, which is preserved in the plural form, *nāš;îm*. In the word for "man," by contrast, the consonant š; does correspond to an original Semitic š;. In the case of both nouns, however, it is uncertain what the meaning of the original root may have been (cf. *NIDOTTE*, 1:388 and 537 – 38). Thus the statement in Genesis, like comparable passages (e.g., CAIN in 4:1; JACOB in 25:26; MOSES in Exod. 2:10) rests more on a verbal resemblance (popular etymology) than on an exact etymological relationship. Whatever the derivation, the point of the Genesis account is the essential humanity, equality, and oneness of woman with man.

The account of the FALL assigns an influential role to woman, but even earlier she is regarded as "a helper suitable for [man]" (Gen. 2:18), indicating man's incompleteness and perhaps weakness apart from woman. Equally important for understanding the status and role of woman in the structure of OT thought is the proper name EVE (ḥawwâ H2558, by popular etymology, "life"), given to her

"because she would become the mother of all the living" (3:20). It is a matter of some debate whether the subordinate role of woman is a result of creation or of the fall, but the latter seems supported by the text (cf. 3:16). Woman's rights were protected under the authority of the divine law: "Honor your father and mother" (Exod. 20:12; cf. Lev. 20:9; Deut. 5:16; 27:16).

B. Family and domestic roles. In the OT the primary position of the woman was within the structure of the FAMILY. She did, in fact, move from one family unit to another. Not only in patriarchal times but also throughout the OT history, the father exercised primary responsibility for the female members of the family, whether daughters or servants, until that responsibility was transferred to the husband or new master. (Cf. ABRAHAM and HAGAR, Gen. 16:2; LABAN and his daughters LEAH and RACHEL, Gen. 28 – 31; DAVID and MICHAL, 1 Sam. 18:20, 27; 19:11 – 17.) It is important to note here the concept of the kinsman-redeemer and its relationship to the widow. See GOEL.

Probably most important is the role of childbearing as the fulfillment of a woman's position in OT society. BARRENNESS was considered a curse from God and a diminishing of a woman's divinely assigned station in life. (Cf. SARAH, Gen. 17:15; RACHEL, Gen. 30; and HANNAH, 1 Sam. 1:2.) The biblical text also calls attention to the domestic duties of the wife, such as making bread, sewing, carrying water, and generally providing for her husband and family. (Cf. Gen. 24:11, 13 – 16, 19, 20; 27:9; Prov. 31:10 – 31; Gen. 29:6; Exod. 2:16; 35:26; 1 Sam. 2:19; Gen. 18:6; 2 Sam. 13:8; Jdg. 4:18; 1 Sam. 9:11; 2 Ki. 4:8 – 10.) The woman's unique status in the home is indicated by the separate mention of her in the tenth commandment (Exod. 20:17).

The domestic tasks of women living near ancient Laodicea include processing pomegranates.

Within the structure of the family a daughter might become the heir of the father's estate provided there were no sons. The inheritance could not, however, be transferred from the tribe through marriage, and interestingly enough a daughter could marry outside of her tribe only if the husband took the wife's family name (Num. 27:1 – 8; 36:6 – 9; Neh. 7:63). Unmarried daughters were to be provided for by the eldest brother (Gen. 31:14 – 15). Similarly, the childless widow is to be cared for also by the eldest brother, and a widowed sister-in-law may bear children by the brother-in-law; this latter situation came under the law of the kinsman-redeemer. Care is also exercised that the rights of the woman may be protected when a DIVORCE is required; however, the husband does seem to have the favored position in the divorce arrangements. But the OT minimizes the possibilities for divorce and is careful to indicate God's disfavor with the practice generally. (Cf. Deut. 22:13 – 19; 24:1 – 4; Isa. 50:1; Jer. 3:8; Mal. 2:16.)

The question of morality will be discussed below, but it is essential to note here that one of the primary roles of the woman within marriage was sexual fulfillment. This much is implied in the early account of creation (Gen. 1:26 – 28; 2:18 – 25), but the book of Deuteronomy repeatedly calls attention to the sexual dimension of husband-wife relationships. Even a captive woman may be married if the Israelite is attracted to her physical beauty; and once having been married to an

Israelite she assumes a new social status in the community (cf. Deut. 21:10 – 14). "If a man has recently married, he must not be sent to war or have any other duty laid on him. For one year he is to be free to stay at home and bring happiness to the wife he has married" (24:5). Undergirding this same idea is the sexual emphasis of the SONG OF SOLOMON. This love poem has been the subject of much misunderstanding and misinterpretation, but its stress upon the physical pleasures of human love are presented without shame or embarrassment. Finally, it should be noted that her respect within the home is a legal condition of OT morality. Supported by the Mosaic code of Exod. 20:12, the writers of the book of Proverbs repeatedly mention the mother as well as the father in the admonitions of respect (cf. Prov. 1:8; 6:20; 10:1; 15:20; 20:20; 23:22).

C. As leaders in society. That women actively may participate in the political life of the nation is obvious, particularly during the monarchy. BATHSHEBA, the mother of SOLOMON, maneuvered the events toward the end of David's reign to assure Solomon the throne (1 Ki. 1 – 3). The political and spiritual reforms of King ASA included the removal of his mother, Queen MAACAH (1 Ki. 15:13). In 2 Ki. 11 is the record of Queen ATHALIAH and a former king's sister, JEHOSHEBA, both struggling to control the throne. But it is DEBORAH and JEZEBEL who are best remembered for their military and political exploits. Although the 2nd-cent. writer of the book of ECCLESIASTICUS mentions only outstanding male leaders of Israel's history, the biblical text is careful to acknowledge the positive and negative effects women have had upon Israel's history. The song of Deborah further acknowledges the role of JAEL, the wife of HEBER, who slew JABIN, king of Canaan (Jdg. 4:2, 17, 23, 24). For her part, Jezebel in her wickedness typifies the idolatrous woman in the church at THYATIRA (Rev. 2:20).

D. Morality and spiritual idealism. The relationship of the image of God to female sexuality (see above) implies the highest appreciation of her nature. The addition of "suitable for him" (*kĕnegdô*) to "helper" in the text of Gen. 2:18 suggests not only a spiritual but also an anatomical complement of woman to man. Basically the woman's morality from the sexual standpoint involved her faithfulness to this divinely created role. Perhaps for this reason the effect of the fall is most seriously demonstrated in the pain of childbearing and the misuse of her sexuality (3:16).

Against this background, the Levitical statutes provide the severest penalties for violations of such a high standard of sexuality. Woman's equal status under the law is underlined by the fact that the sin of adultery or fornication calls for the death penalty for both the man and the woman (Lev. 20:10). It is in the prophetic literature and especially the book of HOSEA that the full implications of sexuality for spiritual adultery are most vividly set forth. The hermeneutical problem of this book must not blind one to the serious nature of IDOLATRY as spiritual adultery. As idolatry robs human beings of their relationship with Yahweh, so sexual immorality robs them of realizing their highest human potential. But Hosea is not alone in this emphasis. The accusation of harlotry is a familiar theme describing Israel's unfaithfulness (cf. Isa. 1:21; 23:15 – 17; Jer. 3:1 – 8; Ezek. 16:15 – 41). A woman's failure in this area, however, was certainly not beyond forgiveness, and the OT presents one of the greatest illustrations of divine grace in the case of RAHAB, who not only was forgiven but was later exemplified as a pattern of faith (cf. Josh. 6:17 – 25; Hab. 11:31; Jas. 2:25). In this connection, the woman Jezebel becomes the antithesis of Rahab (1 Ki. 16:21; 2 Ki. 9:7 – 37; Rev. 2:20).

The OT is faithful to call attention to the breach of these high standards of morality, whether it be Judah and Tamar (Gen. 38:1 – 26) or David and Bathsheba (2 Sam. 11:3) or Amnon and Tamar (13:10). The practice of PROSTITUTION, which in OT times was so closely related to religion,

particularly Baalism, is strictly forbidden (Lev. 19:29; 20:6 – 9; Deut. 23:17). The influence of Baalism always posed a threat to these standards, and Israel never seems to have been very successful in freeing herself from these degrading forms of pagan cult life (1 Ki. 14:24; 15:12; 22:46; 2 Ki. 23:7; Hos. 4:14).

Although women could portray the highest of spiritual ideals, as is illustrated by Hannah (1 Sam. 1; 2), the "lesser" vices of jealousy, selfish ambition, and pride, as well as the ultimate sin of idolatry, are all represented in Israel's history. Note for example Sarah's jealousy (Gen. 16:1 – 6), Rebekah's schemes to favor Jacob (27:5 – 46), and the paganizing influence of Solomon's wives (1 Ki. 11:1 – 8). A woman could be the cause of one's spiritual fall, as in the case of Samson (Jdg. 13 – 16), or she could be a great spiritual asset, as illustrated in the political influence of an Esther or by the practical assistance of someone like the widow of Zarephath in Elijah's ministry (1 Ki. 17).

But it is primarily the book of Proverbs that calls attention to the high ideals of womanhood. The descriptive term is *zārâ* (fem. of *zār H2424*, lit., "strange, unauthorized"), indicating an adulteress or prostitute (Prov. 2:16 et al.), but other terms are used to describe the antithesis of the virtuous woman: evil (immoral), loud, quarrelsome (6:24; 9:13; 21:19). Such a person is contrasted with the "kindhearted woman" in 11:16, but the classical text on the woman of virtue is 31:10 – 31. A careful examination of this passage will indicate the uniqueness of a godly woman in OT life and thought.

E. As members of the covenant community.

Nothing illustrates the high place of woman in the OT teaching more clearly than her role in the religious life of Israel. On the one hand, her spirituality is sometimes far superior to her male counterpart, as is seen in a Deborah, a Hannah, a Jochebed, or a Ruth. Miriam and other women participated in the dance celebrating God's deliverance from Egypt (Exod. 15:20). Since there are references to women as weavers (Prov. 31:19), we might assume that this art, so essential to the construction of the tent or tabernacle (cf. Exod. 35 – 40), may have been practiced by women, although explicit reference is made only to men. In the later history of Israel, women are specifically mentioned among the "singers" who lamented the death of Josiah (2 Chr. 35:25). After the exile, the total number of "singers" was 245 and included both men and women (Neh. 7:67). It may be assumed that the inclusive phrase "all the congregation of Israel" would include women at such great festivals as the Passover, Pentecost, and the Feast of Tabernacles.

But above all is the OT designation of PROPHETESS for Huldah (2 Ki. 22:14; 2 Chr. 34:22), Miriam (Exod. 15:20), Deborah (Jdg. 4:4), and the wife of Isaiah (Isa. 8:3; cf. also the false prophetess Noadiah, Neh. 6:14). Although the Levite priesthood was closed to women, the other offices of royalty and prophecy seem on occasion to have fallen to unusual women. When the OT picture of women is presented in contrast to Israel's neighbors, it is not difficult to see the advantages and advancement of Hebrew religion. D. M. Pratt's observation is worth noting: "Under the Hebrew system the position of woman was in marked contrast with her status in surrounding heathen nations. Her liberties were greater, her employments more varied and important, her social standing more respectful and commanding" (*ISBE* [1929], 5:3100).

II. In the NT. The NT builds upon the OT tradition; in some ways it is clearer, but in some respects more problematic.

A. Life and ministry of Jesus. The Gospels are replete with references to women who were directly involved in the ministry of Jesus. But the most important woman in the NT is MARY, MOTHER OF

JESUS. Her importance does not derive from her active role in the ministry of Jesus, but from her maternal relationship to the Son of God. The angelic words in Lk. 1:28 describe Mary as "highly favored," so her unique role is affirmed. During the earthly ministry of Jesus, Mary remains in the background, and it is to be assumed that Jesus always remained close to his mother (Jesus' apparently terse reply recorded in Jn. 2:4 and his stress upon the will of God as the condition for familial ties in Matt. 12:46 – 50 do not invalidate this point). Thus it is understandable why he made special preparations for her while still on the cross (Jn. 19:25 – 27). In a somewhat similar relationship, ELIZABETH the mother of JOHN THE BAPTIST is portrayed as an agent of God's power (Lk. 1:5 – 25, 39 – 66).

In the ministry of Jesus, specific women play an important role. Mention is made of Mary Magdalene, Mary the mother of James and Joseph, "the other Mary," the mother of the sons of Zebedee, as well as Mary and Martha. Much of Jesus' ministry was centered upon the needs and requests of women. One of Jesus' earliest acts of healing was the mother of Peter (Mk. 1:29 – 31). In addition to the healing of the woman with the hemorrhage (Lk. 8:43 – 48), there is recorded the raising from the dead of the son of the widow of Nain (7:11 – 17), the healing of the daughter of the woman from Syro-Phoenicia (Mk. 7:24 – 30), and the raising of Lazarus in response to the pleas of Mary and Martha (Jn. 11:1 – 43).

At the same time, Jesus often addressed his teaching to women and used them as illustrations of spiritual truths: a woman loses a coin (Lk. 15:8); two women are pictured as grinding at the mill prior to the PAROUSIA (17:35); at the well in Sychar it is a woman of questionable reputation who meets Jesus (Jn. 4); and the textually uncertain passage of Jn. 7:53—8:11 centers upon a woman charged with the capital offense of adultery. Observe also that it is women who are specifically mentioned as following Jesus on his last journey to Jerusalem and his crucifixion (Matt. 27:55 – 56); they were present at the scene of the crucifixion (Lk. 23:49); they prepared the body with spices and ointments for burial and followed the body to the grave site (Matt. 27:61; Lk. 23:55 – 56); on the morning of the resurrection they were first at the tomb (Matt. 28:1; Mk. 16:1; Lk. 24:1; Jn. 20:1); and they were the first to witness the risen Lord in his triumph over death (Matt. 28:9; Mk. 16:9; Jn. 20:14). Although it has been conjectured that perhaps Jesus might have been married, there is no substantial evidence to support this claim (cf. W. E. Phipps, *Was Jesus Married? The Distortion of Sexuality in the Christian Tradition* [1970]).

B. In the early church. The post-ascension narrative of the church describes a band of 120, but special notice is given to Mary the mother of Jesus and "the women" (Acts 1:14). The church at PHILIPPI owes its origin to the conversion of Lydia (16:14, 40). The apostolic history records how the church that met in the home of Mary, the mother of John Mark, prayerfully executed the release of Peter from prison (12:6 – 17). PRISCILLA's importance is underscored by the fact that she is often mentioned first in conjunction with her husband Aquila (cf. Acts 18:2, 18, 26; Rom. 16:3; 1 Cor. 16:19; 2 Tim. 4:19).

The NT admonitions of submissiveness and quietness on the part of women in the church (1 Cor. 14:33 – 36; 1 Tim. 2:11 – 12; 1 Pet. 3:1) have been interpreted by some to mean that Peter and Paul were biased against women. Yet it should be observed that in the closing greetings of Rom. 16 no less than eight different Christian women are mentioned by name: Phoebe, Prisca (Priscilla), Mary, Tryphaena, Tryphosa, Persis, Julia, and the sister of Nereus (16:1, 3, 6, 12, 15). Lois and Eunice, mother and grandmother of TIMOTHY, were highly regarded by the apostle (2 Tim. 1:5; 3:14 – 15). Although Paul's instructions regarding women, on the surface, seem harsh, it should always be

remembered that it is the female analogy that he uses to describe the church as a bride or wife, and certainly the church occupies a central place in Paul's theology (Eph. 4:21 – 32; cf. Rev. 19:1 – 10).

C. The offices of prophetess and deaconess in the early church. The word *office* may be too formal, but in Acts 21:8 – 9 the daughters of Philip are described as "prophesying," and in Rom. 16:1 Paul describes Phoebe as a *diakonos G1356* of the church in Cenchrea (for discussion of this passage see PHOEBE). It is difficult to ascertain the reasons for the restrictive roles implied in some passages (1 Cor. 14:33 – 35; 1 Tim. 2:11 – 12) when all other evidence points to dramatic participation on the part of women in the early church.

It is possible that the "list" of WIDOWS in 1 Tim. 5:9 – 10 was an indication of a distinct order within the church, and some have thought that it was these widows who were deaconesses (cf. Rom. 16:1; Phil. 4:2 – 3; 1 Tim. 3:8 – 13). CHRYSOSTOM, TERTULLIAN, and other church fathers recognize such an office with regular duties as prayer, fasting, visiting the sick, instruction of women, assisting in baptism, and aiding in the preparation of communion. In the light of these facts, it might be best to interpret the restrictions on women in public worship in 1 Cor. 14:33 – 35 as applying more specifically to the charismatic experience of the Corinthian church and to suggest that 1 Tim. 2:11 – 12 refers to the governing responsibilities of administration. This would still leave the opportunities of service open to women as deaconesses without contradicting these other statements by Paul and Peter.

Icon of Mary, mother of Jesus, from the entrance of her traditional tomb on the Mount of Olives.

D. Pattern of life. The teachings of Christ regarding divorce are intended to protect the rights of women, and the NT reinforces the OT emphasis on woman's primary domestic role. According to some, Matt. 5:32 implies that divorce forces a woman into a life of prostitution simply to survive. Paul's description of the sexual relationship in 1 Cor. 7:1 – 7 is unparalleled in ancient thought and literature (cf. v. 4, "the husband's body does not belong to him alone but also to his wife"). Paul is equally insistent that the Christian wife must not dress or act in any way that might bring shame to her

husband. This may have been the motivation behind Paul's statements about the length of a woman's hair in 11:2 – 16. In this same connection, the husband and wife relationship is founded upon the highest ideal: Christ's love for the church and the church's submission and obedience to her Lord (Eph. 5:21 – 33; cf. Tit. 2:1 – 10; 1 Pet. 3:1 – 7).

E. Sexual perversion and the symbol of evil. Christ's ministry seems to have attracted social outcasts including prostitutes (cf. Lk. 7:36 – 50; Jn. 7:53—8:11; 4:1 – 42), but the discipline of the church is specifically directed toward those who violate the seventh commandment (1 Cor. 5 and 6). The act of sexual intercourse is not simply a physical act, but a symbol of marital commitment; therefore, no Christian can join himself to a prostitute without becoming one with her (1 Cor. 6:12 – 20; Eph. 5:21 – 33). The increase of female promiscuity is one mark of the "last days" according to Paul (2 Tim. 3:7). The church at Thyatira (Rev. 2:18, 24) was rebuked for allowing "the woman Jezebel" to practice immorality and to eat food sacrificed to idols. This may be a reference to a female cult within the church or simply a heretical prophetess in the church.

D. M. LAKE

wood. See FLORA; FOREST.

wool. In the Bible, the terms for "wool" (Heb. *ṣemer H7547*; Gk. *erion G2250*) always refer to the thick undercoat of SHEEP. The sheep in Palestine were sometimes black or brown, a recessive trait providentially appearing more frequently in JACOB's flocks than would be expected by normal Mendelian heredity (Gen. 31:10). The wool was occasionally dyed scarlet (Heb. 9:19). Shearing in one piece gave a desirable FLEECE, which was washed first in the brook and later with soap to make it nearly snow white. Following the cleansing, the usual carding, spinning, and weaving occurred. Some wool from the tanneries was stuffed into mattresses and quilts instead after being removed by slaked lime (cf. *ISBE* [1929], 5:3104).

The wool was woven into outer garments, never mixed with LINEN (Deut. 22:11); this was especially true of the clothing worn by priests (Lev. 19:19). A good wife "selects wool and flax" (Prov. 31:13). Wool was a symbol of riches (Ezek. 27:19). The king of MOAB gave Israel annually "the wool of a hundred thousand rams" (2 Ki. 3:4). God's liberality is poetically phrased, "He spreads the snow like wool" (Ps. 147:16). Israel's sin was condemned by saying the nation was like a harlot who receives wool from her lovers (Hos. 2:5), but God warns, "I will take back my wool and my linen" (v. 9).

For the purification of the TABERNACLE and its vessels, in addition to blood and water, scarlet wool and HYSSOP were used in the sprinkling during the covenant ceremony (Heb. 9:19). Probably this wool was scarlet yarn (Num. 19:6), burned with the heifer and used in cleansing lepers (Lev. 19:6). Part of the first wool was offered to the priests as their due (Deut. 18:4). GIDEON is famous for putting out the fleece (Jdg. 6:37). Those who revile against the righteous will be eaten like the worm devours wool (Isa. 51:8).

The whiteness of wool as a symbol of purity is contrasted with the crimson of sins (Isa. 1:18) and compared to snow (Ps. 147:16) or the hair of the Ancient of Days (Dan. 7:9) who reappears in John's vision (Rev. 1:14).

R. L. MIXTER

word. This English term has a wide variety of senses, including (1) a small and meaningful linguistic unit, whether spoken or written; (2) a comment or conversation; (3) a saying or proverb; (4) an order or command. These and other meanings are reflected also in biblical usage. In the phrase "the word of God/the Lord," or in contexts where "the/ his word" refers to a divine communication, this term indicates a supernatural REVELATION and may allude to portions of SCRIPTURE. Thus in modern usage the BIBLE as a whole is often referred to as the Word of God.

I. Terms

A. Hebrew. The primary Hebrew term for "word" is *dābār H1821* (cf. the verb *dābar H1819*, usually in the piel stem, "to speak"). Its derivation is uncertain. Some have connected it with a root meaning "to be behind" and suggested that it points to the background of a matter (i.e., the conceptual content or meaning), but this etymology appears fanciful. Because the term can often be translated "thing" or "matter," it has also been suggested that the Hebrew word has both a noetic element (the thought) and a dynamic element (the power). According to this view, "act" or "deed" can be the meaning, and even when words are in view, the acts behind the words have also to be taken into account (cf. Ps. 35:20). Although there is indeed in the Bible a relation between word and thing or power (as will be apparent in the discussion of the word of God in both the OT and the NT), it is doubtful that this theological concept derived from (or gave rise to) the twofold lexical meaning.

B. Greek. The SEPTUAGINT usually renders Hebrew *dābār* with one of two Greek terms, *logos G3364* ("word, saying, speech, reason, account," etc.) and *rhēma G4839* ("word, statement," and under the influence of the Heb., "thing, matter, event"). Their distribution is not without interest. The term *rhēma* is almost three times as common as *logos* in the PENTATEUCH. The two are almost equally frequent in Judges-Ruth, but then *logos* begins to predominate: it is twice as common in 1 Samuel to Canticles, and eight times as common in the Prophets. Both terms are used also in the NT, where *logos* occurs more than 300 times, and *rhēma* fewer than 70. Although in certain contexts their semantic differences are obvious (cf. the use of both terms in Matt. 12:36), the distinction between them is frequently neutralized, and in many passages they become basically interchangeable (e.g., Jn. 12:48).

II. The word in the OT

A. The word and revelation. In the OT the word is the supreme means by which God the Creator makes known both himself and his will to his creatures. Thus one might say that biblical religion is primarily the religion of the ear rather than the eye (cf. the importance of "hearing" in the Bible). This does not mean, however, that biblical religion is intrinsically verbal or abstract. The divine word, in distinction from many human words, is coextensive with that which it says or represents. Its most important attribute, then, is TRUTH (2 Sam. 7:28; cf Jn. 17:11). Truth in this sense is not abstract. It carries with it the sense of faithfulness, reliability. What God says is true. If the reference is future, then it will surely come to pass. This, in turn, implies the force or power of the word. It accomplishes what it signifies. The OT speaks also of deceitful or empty words.

The word, as such, is powerful. This is especially true of the word of God. By it God intervenes actively in the affairs of human beings. The word is historical, not merely in the sense that it records

history, but in the dynamic sense that it makes history. This is revealed already in the fact that CREATION is by the word of God ("God said," Gen. 1:3 et al.; Ps. 33:6 – 9; cf. Isa. 40:26). The whole history of Israel offers further demonstration. An important point in this connection is that through the LXX translation the force of the Hebrew *dābār* impresses itself upon the corresponding Greek terms.

B. The word in the early prophets. Since God's revelation is primarily through the word, there develops in Israel the unique office of the prophet, the divine spokesman. See PROPHETS AND PROPHECY. The prophet is someone to whom the word of the Lord (Yahweh) comes and who then declares this word to the people. Attempts have sometimes been made to find a stronger ecstatic and visionary element in early prophecy. That it has a visionary side is incontestable, for right down to the great prophets Isaiah, Jeremiah, and Ezekiel, the word often comes in visions. There is also a formative side to prophecy, for signs and images often accompany the spoken word as a guarantee that the word itself will be "seen" in its fulfillment.

On the other hand, it is highly significant that from a very early period the oral aspect is predominant. The heart of prophecy is that God speaks to the prophet and through the prophet. The PATRIARCHS already are addressed by God (Gen. 22:1; 46:2). MOSES is the prototype of all the succeeding prophets (cf. Exod. 3:4 et al.). SAMUEL is called by Yahweh (1 Sam. 3:1 – 14), and when he expresses his readiness to hear, a message is given to him which he is then to pass on to the people. The process is exactly the same in 15:10 – 26, where the word of judgment on SAUL is first given to Samuel and then delivered by him to the king. Saul, in turn, is rejected because he has rejected the word of the Lord.

The tradition of Samuel is magnificently maintained by NATHAN, ELIJAH, and MICAIAH. Throughout this period the word of the Lord comes to the prophets, is declared by them, and then, as the word of truth and power, comes infallibly to fulfillment in forgiveness, salvation, or judgment. The difference between the true prophet and the false prophet is that the latter has no real word from God, so that he can speak only human words that will inevitably be discovered to be false by events. The true word of the Lord comes to pass—it cannot be withstood (cf. 2 Ki. 1:17 et al.).

C. The word and prophecy. What may be seen in earlier prophecy finds classical statement and illustration in the great writing prophets from AMOS and HOSEA onward. In some cases these prophets actually use the formula "The word of the Lord [that] came…" as an introduction to their words (e.g., Hos. 1:1). This formula epitomizes the prophetic understanding. What the prophets say or write is what God has spoken to them and is saying through them. The prophet is called to his work (Isa. 6; Jer. 1; Ezek. 1). The word of the Lord is laid upon him, so that it can even be called a burden. It is put upon his lips so that he has to declare it. He has swallowed it like a book, so that it is part of his inner being. Even though it brings him derision and suffering, so that he longs to be silent, it is like a fire in his bones and he has to speak (Jer. 20:9). He knows that whether the people listen or not, the word has to be proclaimed, and when it infallibly comes to pass they will know that a prophet has been among them (Ezek. 2:3 – 8).

This message is not the prophet's own word. It has irresistible force. As the word of the God who sees the end from the beginning, what it says is true and what it proclaims will be done. The prophet does not produce the word from within himself. It is no mere matter of religious insights; the word is from God. What the *prophet* says is true because it is what *God* says. It has force because it is the word of the Creator of the world and the Ruler of history. It can take the form of foretelling—the prediction of deliverance or judgment—because God is the Lord of time. It confronts sinners with

a sure promise, a solemn warning, or an unconditional command because it is the word of the God of grace and righteousness from whom all blessing comes and to whom an account must be rendered.

D. The word and the law. A contrast is sometimes drawn between prophecy and the LAW (cf. Jer. 18:18). In the light of the biblical teaching, however, this is more fanciful than real. The prophets declare the will and word of God to their own age, but they do so in the context and on the basis of the will and word of God for his people in every age, that is, the revelation of the law. If the word of prophecy comes to both prophet and people with all the force, certainty, and claim of God himself, this is no less true of the law. Moses, after all, was the first and greatest of the prophets. The law, imparted by God to Moses and through Moses to the people, is also the word of God.

This fact may be seen in the description of the TEN COMMANDMENTS as "the words of the covenant" (Exod. 34:28). They are the ten sayings (Decalogue) which lie at the heart of the divine covenant with Israel. The same applies to the words Moses addressed to the people and then wrote in a book (24:3 – 4). These were the words of the Lord which the people promised to obey. Deuteronomy brings out this aspect of the law even more clearly. It embodies the words of Moses (Deut. 1:1), which he received from God and then declared to the people. It is here that Moses calls himself a prophet (18:15). The word or commandment he proclaims is a prophetic word. It is not distant, so that it has to be sought in heaven or beyond the sea. It is in the mouth and in the heart (30:11 – 14). In other words, it is a true prophetic word declared and received. The law, genuinely understood, is no mere code of external regulations for outward acceptance and performance. It is the preached word of the divine promise and command which may be performed because it carries its own call and promise with it. If technically the law belongs to the priest and the word to the prophet, this is no final antithesis. JEREMIAH himself was priest as well as prophet. The law, too, is word, just as the word can also be law.

E. The word in the Psalms. The Psalter adds little new to our understanding of the word, but it does bring certain things into focus and it also contains a magnificent characterization of the word. The relationship of the word to creation (Ps. 33) and to the law (Ps. 119) are especially emphasized. In Ps. 119 "word" is significantly used as an alternative of "law," "commandments," "statutes," etc. The psalm is drastically misunderstood, however, if this is taken to imply a legalization of the word. The very reverse is true. Like Deuteronomy, this psalm brings out the ultimate prophetic quality of the law. In so doing, it gives perhaps the best single description of the word in the whole of the Bible—a description that may be applied not merely to the law but to all Scripture with equal appropriateness and truth. The word stands in heaven (v. 89). It is a light on the path (v. 105). It gives life (v. 25 et al.). It also gives understanding (v. 169). Its sum is truth (v. 160). It may be trusted (v. 42). Hope may also be reposed in it (v. 74). It demands obedience (v. 57). It is hidden in the heart (v. 11). It is sweet to the taste of the righteous (v. 103). It brings as much delight as the finding of great spoil (v. 162). The tongue of the righteous will speak of it (v. 172). In the last resort it is the object, not only of faith and hope, but also of love, for it is because God's law is God's word that the psalmist, at the very opposite pole from legalism, can break out and say: "Oh how I love your law!" (v. 97).

Possible site of Tishbe (el-Istib), hometown of the prophet Elijah, who proclaimed the word of God boldly.

III. The word in Greek philosophy

A. Introduction. Simultaneously with the devel opment of the doctrine of the word of God in the OT there took place a very different development of the Logos in Greek philosophy. Since the NT had to use the term against a Hellenistic background, it is necessary to take a brief glance at the significance the word acquired in the Greek world. It should be noted that the Greek development is along two main lines: (1) the noetic power of estimating things, or the rational content of things; (2) a metaphysical reality gradually expanding into the concept of a cosmological being, almost a second god.

B. Heraclitus. The main contribution of Heraclitus was to see in the Logos the interconnection of human beings to one another, to the world, and to God. The Logos here is both word and the content of word. Both speech and action follow from it. It is the eternal order behind things, a cosmic law, the basis of the psyche. In the last resort, it is not a word from without, but the word immanent in human beings. The eye rather than the ear is the main instrument through which it is received.

C. The Sophists. Among the Sophists the word is more closely associated with the mind. It is the rational faculty which underlies speech and thought. As such it is indispensable to political and cultural life. It also plays an important role in pedagogy. The closer relation to the human faculty carries with it a radical departure from the earlier conception of the Logos as a principle of cosmic proportions.

D. Plato. Plato follows the same line of thought as the Sophists, but not with the same degree of individualism. The Logos is more than the individual faculty. There is a common Logos based ultimately on the agreement between words and things. The Logos derives from, and also interprets, things. It is not just an opinion, a private view. Combining thought, word, and thing, it is larger and has a fuller reality than the individual faculty of thought.

E. Aristotle. In Aristotle there is an awareness of the twofold nature of the Logos as word and understanding on the one side, the result of word and understanding on the other. People speak the word, but in some sense their actions are also controlled by it. Since the Logos leads to action, it may be regarded as the source of the virtue peculiar to human beings.

F. Stoicism. The STOICS returned to the idea of the Logos as a cosmic principle. In the Logos is expressed the rational order of the world, the cosmic reason. Hence the Logos may be equated directly with God or ZEUS. It is the germ (*logos spermatikos*) unfolded alike in the organic and the inorganic world. It is also the law which gives knowledge (*logos orthos*). All things come from it and all return to it. The general Logos takes conscious form in the particular Logos of each person. In later Stoicism the Logos is increasingly identified with nature. This interfusion of rational order and vital power produces a pantheistic understanding.

G. Hellenism. The concept of Logos finds a special religious use in the MYSTERY RELIGIONS. The holy Logos is revelation or sacred doctrine. Through it there is union with deity. In some instances it is equivalent to the mystery, and the initiate is called the Logos of God. Logos may also be used for prayer as the way to God. The Logos teaches people both to pray and to worship aright.

In the HERMETIC WRITINGS the god HERMES personifies the Logos. This is genuine personification, not INCARNATION. The principle behind all things is identified with a popular god. The choice of Hermes is based on the fact that he is the divine messenger, the mediator who makes known the will of the gods. A rational element is present, for secret knowledge is disclosed by Hermes. At root, however, Hermes personifies the larger principle of life. This moves inevitably in the direction of pantheism. The relation of the Logos to God is the theme of much speculation. It is the Logos of God, who is also called the father of the Logos. Another line of thought is that the Logos is the image of God and man the image of the Logos. In spite of verbal similarities, however, these ideas bear little relation to the NT doctrine of Jesus Christ as the Word of God.

H. Philo. The concept is an important one for PHILO JUDAEUS. He uses the term in a bewildering number of ways, so that one can hardly speak of a unified Philonic doctrine of the Logos. His basic difficulty here as always is to hold together his Hellenic and his Jewish convictions. Scholars are divided as to whether the Logos is for Philo predominantly a Greek or a Jewish concept. So far as the divine Logos is concerned, it would seem that the roots are Jewish but that the development is greatly influenced by Greek thought.

The Logos of God, or divine Logos, is not God himself. It is a work of God. But it is also God's image and the agent of creation. It can be identified with the noetic cosmos. It serves as an intermediary between the transcendent God and human beings. In it are comprised the *logoi*, the individual ideas. Yet it is more than a mere concept. Philo personifies the Logos: it is the son of God. Philo's Jewish heritage protects him against a genuine deification of the Logos and also against an ultimate immanentism. In fact, the Logos seems to be a convenient link between the Creator God and the world he has made.

I. Conclusion. Since the NT presents Jesus Christ as the incarnate Word of God, it is tempting to look for parallels in the Greek or Hellenistic world, and to see in these the sources of the Johannine understanding. To do so, however, is to ignore the decisive differences to which H. Kleinknecht has

drawn attention in a valuable and comprehensive essay (in *TDNT*, vol. 4, esp. pp. 90 – 91). As he states them, these differences are: (1) that the Greek understanding is rational and intellectual, while the biblical is theological; (2) that the Greek world can divide the one Logos into many *logoi*, whereas the NT knows only one Logos as Mediator between God and man; (3) that the Greek Logos is timeless, while Christ the eternal Word takes on historical singularity as the Word incarnate; and (4) that the Greek Logos has a tendency to merge into the world, so that the world as such is generally son of God, but the biblical Logos is the only-begotten of the Father who, when he takes flesh, is the one Man, Jesus of Nazareth. In the light of these fundamental distinctions the obvious parallels are of little material significance.

IV. The word in the NT

A. General use. In some instances the general sense of *logos* (or *rhēma*) can have theological significance in its own right, but in others it is purely neutral in character. Thus the singular or plural can denote simply what has gone before (e.g., Mk. 7:29). Speech can also be distinguished from a letter (2 Cor. 10:10); worth noting, however, is that the letter also conveys the word (v. 11). The term can also be used for a report or rumor, or for the account in a book (Acts 1:1). It does not have to be intelligible speech; words can be uttered in a tongue as well as with the understanding (1 Cor. 14:19). Anything said is *logos* or *rhēma*.

An interesting use of *logos* is with reference to the empty word as distinct from the reality or the deed. This is theologically impossible when the reference is to the divine word, but human speech may be only speech, that is, without substance. The vaunting speech of human wisdom, which has neither truth nor power, falls into this category (1 Cor. 1 – 4). So too does the profession of love without demonstration (1 Jn. 3:18; cf. Jas. 2:14 – 26). Moreover, words can be bad as well as empty: Paul mentions "unwholesome talk" (Eph. 4:29) and "words of flattery" (1 Thess. 2:5 NRSV; cf. 2 Pet. 2:3), and he compares the words of heretics to a malignant growth (2 Tim. 2:17). James implies that most of us will "stumble" in what we say (Jas. 3:2 ESV).

B. The word as the OT. In a whole group of NT verses, the relevant terms refer either to the word of revelation in the OT or to the OT itself as the written word of God. An interesting point to note in these references is that the word is described sometimes as that of the human author, sometimes as that of the preexistent Christ, and sometimes as that of God, while the usage is indefinite ("it is said") in other instances. Even when the emphasis falls on the human speaker or writer, however, there can be no doubt that he is God's spokesman, so that for all the genuine humanity of the utterance, God is he who truly speaks in the OT. The word, whether it be an individual saying or a whole book, is God's word as well as man's.

Underlying the NT view of the OT, as also of its own message, is the basic biblical and prophetic concept of the word of the Lord. If the phrase "the word of the Lord" (*ho logos tou kyriou*) is not actually used by the NT with reference to the OT, there seems to be a special reason. In the NT, *kyrios G3261* is a title for Christ himself (see LORD), so that "word(s) of the Lord" is more naturally construed as dominical sayings preserved in the Gospels or in tradition (see below IV.D). Even when OT quotations are given, this phrase is not used as an introductory formula, though *kyrios* with the verb can be used within the quotations themselves (cf. Rom. 12:19). The general way in which the NT speaks of the OT as God's word makes it plain beyond all possible doubt that both the message of the OT and also the individual verses are regarded as divinely given and divinely authoritative. The

fullness of this endorsement may be seen from the fact that in a few passages it is hard to say whether the reference is to the OT word or the NT message (cf. Heb. 4:12; Eph. 6:17).

C. The word to individuals. In the NT, as in the OT, there are examples of the word of God coming to special persons, such as SIMEON (Lk. 2:29) and JOHN THE BAPTIST (3:2). It is significant, however, that although the apostles are specifically charged with the ministry of the word, this common OT formula does not occur again after the ministry of John the Baptist. As the NT itself says, the Law and the Prophets were until John (Matt. 11:13). If the word does not come to others, this does not mean, of course, that the word of God is withdrawn, or that the whole mode of revelation has been drastically altered. The word of God no longer comes to specific individuals because it has now come in fullness in Jesus Christ. To speak of a word of God coming to, say, Peter or Paul, would appear inconsistent with the message of the NT as a whole. The definitive word has now been spoken (Heb. 1:1 – 2). All others are commissioned to preach this word, and any special directions they are given come by vision, or an angel, or the Spirit, or the Lord himself.

The absence of the prophetic formula applies to Jesus also. Though he speaks the word in fullness, the NT does not say that the word came to him as it came to John. A voice spoke at his baptism and at the transfiguration, but this was addressed to the people, not to the Lord. It was an accreditation rather than a commission. Since Jesus is undoubtedly the supreme Prophet, greater even than Moses, one can only conclude that the avoidance of the formula was intentional. His relationship to God, and also to God's word, so completely transcends that of the prophets that to speak of the word coming to him would be inadequate and even misleading. As will be seen later, the heart of the NT message is that the word comes in him rather than to him or through him. His identity with God and with the revelation of God sets the whole concept of the word of God in a new and all-transforming light.

D. The word(s) of Jesus. Though one does not read of the word coming to Jesus, the NT frequently refers to the preaching or sayings of Jesus as the word or words of God. Jesus is a preacher of the word (Mk. 2:2). He mentions those who hear the word of God and do it (Lk. 8:21). In the parable of the sower the seed is the word (Matt. 13:18 – 23). Far more frequently the NT writes of what Jesus said or of a saying or sayings of Jesus (cf. Mk. 10:22). Both *rhēma* and *logos* are used in this connection, and when one moves into Acts and the Epistles, such formulae occur as "the word [*rhēma*] of the Lord" (Acts 11:16 NRSV), "the word [*logos*] of the Lord" (8:25), "the words [*logoi*] of the Lord Jesus" (20:35).
Entrance into the chapel of the Cave of St. John on the island of Patmos. According to tradition, it was here that the words of Jesus, as recorded in the book of Revelation, were revealed to the apostle.

Worth noting is that when PAUL appeals to a saying as from the Lord in 1 Cor. 7:10, it obviously has conclusive authority. The primitive church felt free to quote these sayings without adhering to a single form of words, but, in spite of all the variations, there is confidence that the sayings are authentic and that they have been transmitted faithfully (Lk. 1:1 – 4; Acts 1:21 – 22). Indeed, in some instances the original ARAMAIC form has been preserved even in a document written in Greek for Greek-speaking readers (Mk. 5:41; 7:34). When a saying of the Lord bears on a situation in the early church, it thus comes with all the force and authority of a prophetic "Thus saith the Lord."

The authority of the word or words of Jesus was felt also by their original hearers. If many were offended, or thought him mad, or tried to trip him up, it was because they were disturbed by the threat of his word (cf. Matt. 15:12; Jn. 10:20). All his hearers seem to have recognized with astonishment that he spoke with authority and not as the SCRIBES (Matt. 7:28). His words confronted people with the same decision as his person, so that to be ashamed of them was to be ashamed of him (and vice versa; Mk. 8:38). Their power is the power which is dynamic as well as authoritative. Like the OT word, they are efficacious. By the word of Jesus the sick are healed, the sinful are forgiven, and the dead are raised to life. The word accomplishes what it says (cf. Gen. 1). Like the OT word (Isa. 40:8), the word or words of Jesus are eternal. Though heaven and earth pass away, his words do not pass away (Mk. 13:31).

John makes the same points in his own distinctive way. The words of Jesus are words of eternal life (Jn. 6:68). They are spirit and life (6:63). They have the same authority as Scripture (2:22; 5:47). If sinners are to be saved, they must accept them (12:48), keep them (8:51), and abide in them (8:31). They are not simply the words of Jesus, for he has a commandment from the Father in regard to what he should say and what he should speak. The rejection of Jesus, and of his words, brings

people under condemnation; it is the word itself which judges the unbeliever in the last day (12:47 – 50).

E. The word as the gospel. The terms *logos* and *rhēma* are applied not only to the word or words Jesus himself speaks, but also to the whole message of the GOSPEL, that is, *all* that Jesus spoke and did. Several passages in Acts, for example, make it apparent that "the word" is not a saying of Jesus but the message concerning him (cf. Acts 6:4). If the OT can also be mentioned in this connection, it is because the word and work of Jesus are a fulfillment of the OT (cf. 17:11). The task of the apostles as ministers of the word is to speak, proclaim, teach, or magnify the word of God/the Lord (4:29; 13:5, 48; 18:11). The Pauline letters offer ample evidence of the same usage (cf. 1 Thess. 1:6; 2 Thess. 3:1; 1 Cor. 14:36; 2 Tim. 2:9; Col. 1:25 – 27; Eph. 1:13). The word in 1 Pet. 1:23 and Jas. 1:21 bears a similar meaning. A noteworthy point is that *rhēma* seldom occurs in this sense, though there are good instances in Heb. 6:5; 1 Pet. 1:25; and Eph. 5:26.

As the gospel, the word has the attributes and authority of a definitive word of God. It is the word of the cross, of reconciliation, of grace, of life, and of truth. It is God's word. If the apostles speak it, they do so only as ministers. This is why Paul dare not corrupt it. This is the guarantee of authenticity. It is also the source of authority and power. People may contest the words of their fellow human beings; they cannot contradict God's word. The word, as God's word, has its own vital power. It is the power of God (1 Cor. 1:18). It is not bound (2 Tim. 2:9). It does its own work, cutting like a sword (Heb. 4:12; cf. Eph. 6:17), regenerating (1 Pet. 1:23), and reconciling (2 Cor. 5:19). The word, as the word of life or salvation, does not merely speak about these things; it also imparts them.

Part of the efficacy of the word is to call for the necessary response in those who hear. For the word may be accepted or rejected. It may be kept or not kept. The verb "to receive" is a common one in combination with *logos* (Acts 8:14; 1 Thess. 1:6; Jas. 1:21). This is more than intellectual apprehension or assent. It is a hearing and receiving in faith (Acts 4:4). Hence, the word works in believers (1 Thess. 2:13). OBEDIENCE is also part of receiving (cf. Jas. 1:22; 1 Pet. 2:7 – 8). By obedience or disobedience a person either glorifies (Acts 13:48) or blasphemes (Tit. 2:5) the word of the Lord. The role of the HOLY SPIRIT is of supreme importance in this ministry and work of the word, but this leads into a different field that is impossible to cover in the present context.

F. Jesus as the Word of God. The word is God's word. It includes the word or words of Jesus. It is also the message about Jesus. As such, it is God's speaking to human beings by the Spirit. It is the word from Jesus and about Jesus continually preached. The point upon which all these different lines converge, and the climax of the biblical doctrine of the word of God, is that the Word is God himself. Jesus Christ, God's Son, is the eternal and incarnate Word. The Word is Jesus, and Jesus is the Word.

This equation is made in Rev. 19:13, where "The Word of God" is the title borne by the exalted Christ. This is the name that is not known and yet also known. This is the basis of the exercise of the sword. If the exalted Christ bears the title here, it is the same Christ who was dead and is alive again. Nor does the title "Word of God" stand isolated from the gospel, for earlier in the book the word is connected with the witness, and Jesus himself is the faithful and true Witness. No particular explanation is given of the title, but in the general context this is hardly more necessary than, for example, in the case of the designation of Christ as Lamb. The glory and eternity and deity of the Word are implied (cf. 19:16).

There is a similar equation in 1 Jn. 1:1, though here with the incarnate Jesus. The Word of life has been seen, heard, and handled by the apostles. Intrinsically the reference might be to the message,

but the verbs suggest the living person of Jesus Christ, the Word incarnate. This is supported by the "from the beginning" of v. 1, the "with the Father" of v. 2, and the general similarity of this verse to the opening of John's gospel. Encounter with the Word is encounter with the Person of Jesus Christ.

The full and definitive equation is made in Jn. 1:1 – 5. This equation leads into the whole sphere of CHRISTOLOGY, so that only a few observations must suffice. First, John expresses the common NT conviction that Jesus is the heart of the word, but he carries it a stage further. Not only is Jesus the Word; the Word itself is eternal and preexistent with God. Jesus, then, is the eternal Word in history, incarnate. Hence, what is said about Jesus is said about the Word. This explains why "the Logos" does not occur again in John after the prologue. It also explains why Jesus is not said to speak the word. Jesus is the Word, and the Word is Jesus. Second, the statement in John is not abstract or speculative personification. The author does not begin with a theoretical concept of the Logos which he then transfers to Jesus. On the contrary, he begins with Jesus, hears the word of God in all its fullness in him, apprehends his glory, and is thus impelled to say that Jesus is the Word, the only-begotten Son, God, and that in him the Word was made flesh. Third, the opening verse seems to be an intentional allusion to Gen. 1:1. The point is that the statement "God said" is there at the very beginning with God as the Word by which all things were made. John is also able in this way to suggest at least the thought of the new creation by the Word. The emphasis on the personal and historical aspect of the Word goes beyond Genesis, but an interrelation of the word of God throughout both Testaments, and an ultimate basis for the authority and power of the word as God's word, are hereby achieved. Fourth, the statement of John is unique in spite of all the suggested connections and influences which have been sought in, for example, the Hellenistic Logos, Jewish wisdom, or the rabbinic law. The real concern of John is the presentation of the word. But for him, and in the last analysis for all the apostles, this is the presentation of the incarnate and risen Jesus himself in all his grace and truth. Jesus Christ is the eternal incarnate Word of God who is himself God.

G. W. BROMILEY

work. See LABOR. For *works* in the sense of "moral or religious acts," see FAITH, FAITHFULNESS IV; JUSTIFICATION III.

works of God. This phrase and similar expressions attributing wondrous works to God (or to Jesus) denote both the things made by him and also the acts performed by him. Various Hebrew and Greek words are used in these contexts.

I. The OT

A. The divine works

1. Creation. With its strong doctrine of CREATION, the Bible naturally uses the term *work* to describe the totality of God's creative act. It does this in an active sense for the actual work of God (e.g., Gen. 2:2 – 3; Heb. *mĕlÙ⟩kâ H4856*). It also uses the term in a passive sense for the thing made (cf. Ps. 8:6; here the Heb. is *ma⟨ăśeh H5126*). The active and passive merge into one another; God's work of creating has resulted in the work of creation. (In both of the passages mentioned, the LXX uses Gk. *ergon G2240*.)

The passive is more common and much clearer in the plural with reference to the individual phenomena of nature. The heavens are the works of God's fingers (Ps. 8:3). All creatures are works

of his hands. This is especially true of human beings; with this plea they seek the divine protection and mercy (138:8 et al.). Believers, or the descendants of JACOB, are specifically described as the works of God's hands (Isa. 29:23). God's historical works are also in their own way creative.

2. History. The OT speaks also of God's acts in history. These are in the first instance acts of deliverance. The events of the exodus are the basic works of God for Israel. These works are often MIRACLES, that is, mighty acts transcending the normal course of history. Nor do the works cease with the entry into Canaan. The basic acts of redemption are a constant guarantee of new works of God. One finds these, for example, in the deliverance from the Assyrians or the restoration from exile.

If God's works are predominantly works of deliverance, they have a reverse side. The deliverance of the Israelites at the RED SEA meant the overthrow of the Egyptians. The people delivered by the judges were also delivered up to their enemies when they sinned. The prophets in particular proclaim works of judgment on a rebellious and obdurate people (Isa. 28:21). The individual knows the works of God (cf. the Psalms). God's works have also an eschatological dimension (cf. Isa. 60:21).

B. The human response. God's works demand responsive action on our part. First, we are to *consider* these works. Various words are used in this regard. We are not to forget the great things that God has done (Ps. 77:11), but rather meditate upon them (77:12). This will give us assurance in the day of trouble.

Second, we are to be thankful to God for his works (Ps. 107:15, 21, 31). We are to praise and bless the God who does them (Ps. 145). They are mighty acts, great and terrible (66:3). They are done in faithfulness (33:4). They manifest the rule of God (90:16). Even though seen, they are unfathomable (Eccl. 8:17). They are studied by all who have pleasure in them (Ps. 111:2). The very works themselves join in the praise of him who does them (145:10).

Finally, we are to declare God's mighty works. We teach them to our children (Ps. 78:4) and set them forth to others. Making known to all people the mighty acts of God is the basic task that gives unity to the whole life of ministry and worship (145:12).

II. The NT

A. Creation. What the NT has to say about God's works is essentially the same as that which is found in the OT. The new thing is that the works now bear a common reference to JESUS CHRIST. It is by him that they are done. The works of God are thus in a very real sense the works of Jesus. God the Father works in and through the Son.

This may be seen already in creation. All things were created by Christ (Col. 1:16). God made the worlds by him (Heb. 1:2). Hence, the works of creation are his works. John brings this out more explicitly when he says that all things were made through the LOGOS: "without him nothing was made that has been made" (Jn. 1:3).

B. Salvation. The main emphasis in the NT, however, is on the saving works of God performed in Jesus Christ. Rather oddly, there is little reference to these in the Synoptic Gospels, who simply record the works with their culmination in the crucifixion and resurrection. The acts are their own witnesses. Only in relation to JOHN THE BAPTIST's question is there mention of the works of Christ (Matt. 11:2).

In the primitive preaching of Acts, however, the picture changes. Empowered by the Spirit, the apostles declare the wonderful works of God (Acts 2:11). Jesus is approved of God by the miracles, wonders, and signs which God has done by him (2:22). Wonders will still be done in his name (4:30). If healing is a work of God, so, too, is the missionary activity for which Barnabas and Saul are separated (13:2). Jesus continues to do mighty works through the Spirit.

In John's gospel the works of Jesus are highly significant. They bear witness to him (Jn. 5:36). They are good works (10:32). They are the works of God (9:3). They are given to Jesus by the Father (5:37). They are done by the Father (14:10 – 11), or in his name (10:25). They are unique (15:24). The disciples will do greater works (14:12). For the one great work of Jesus, the singular is also used. Christ's food is to finish the work of the Father (4:34). Human beings share in the works by believing in Jesus. The works are to the salvation of believers and to the judgment of those who reject their testimony.

Paul, too, emphasizes the work of God. Unlike John, however, he is primarily concerned with this work as the present ministry of the WORD. The Corinthians are his work in the Lord (1 Cor. 9:1). The work of God is edification (Rom. 15:2). All Christians take part in this (1 Cor. 15:58). Yet there is no real synergism, for God begins and performs the work in them (Phil. 1:6). In the last resort, the Christians who work are themselves God's workmanship created in Christ Jesus for good works (Eph. 2:10). The work of Christians is still the work of God and redounds to his glory and praise. (For bibliography, see BIBLE; CHRISTOLOGY; LOGOS.)

G. W. BROMILEY

world. This English term can be used not only of the earth in a physical sense, but also of its inhabitants or human existence, of its concerns and affairs, of human society, and so forth.

The primary Hebrew word for "world" is *ʾeres H824*, which more frequently is rendered "ground, earth, country." Another term, *tēbēl H9315*, is used as a synonym in some contexts (notice the parallelism in 1 Sam. 2:8; Ps. 24:1; Isa. 24:4; et al.), but it appears to have the distinct sense of "the inhabited and cultivated areas of the mainland" (*HALOT*, 4:1682 [meaning 2.b]; cf. Job 18:8 et al.). A less common word, *ḥeled H2698* ("duration, lifespan") can sometimes be rendered "world" (Ps. 17:14 et al.; cf. *ʿôlām H6409*, which is used in the sense of "world" in postbiblical Hebrew).

In the NT, the most common term is *kosmos G3180* ("adornment, order, world, universe"), but two other words are relevant. The form *oikoumenē G3876* (passive ptc. of *oikeō G3861*, "to live, dwell") means literally "inhabited," but because it was often combined with *gē G1178* ("land, earth"), *hē oikoumenē* by itself came to mean "the inhabited world." Finally, the noun *aiōn G172*, which has primarily a temporal reference ("a [long] period of existence, an age"), sometimes by metonymy takes on the spatial meaning "world" (Heb. 1:2; 11:3; cf. also the expressions "the present age" and "this age," where the rendering "world" is just as appropriate).

    3. Cosmos

I. The world in the OT. It should be noted that Hebrew has no single term for "universe," a concept denoted rather by such familiar phrases as "the heavens and the earth" (Gen. 1:1) or "the heavens and the earth, the sea, and all that is in them" (Exod. 20:11). In the prophets one also finds *kōl H3972*, "all things" (Isa. 44:24; Jer. 10:16 [*hakkōl*]; cf. also Eccl. 1:8, 13). Nevertheless, the OT has a fully developed sense of the unity of the universe. This is based on the doctrine of CREATION (Gen. 1:1). God made all things. They are all equally the works of his hand. One divine plan lies behind everything. The one divine purpose directs the course of all creatures. In nature and history alike God rules in all things. The world does not constitute an autonomous unity. It is constituted a unity by its divine origin and subjection.

Within creation a prominent place is occupied by the earth, especially in the sense of the land as distinct from the sea (Gen. 1:10). The earth is important primarily because of its inhabitants, the nations or peoples (cf. Isa. 34:1 – 2). Since God is Creator and Ruler of the whole universe, he bears a special relation to human beings, and consequently to the inhabited earth. The historical nature of human life, and of God's dealings with his creatures, seems to provide the link between the concept of world and that of duration. It is during his stay on earth, in the world of space and time, that we experience God's acts in providence, judgment, and grace.

This giant emission nebula, more than 1,000 light-years across, is part of the irregular neighboring galaxy known as the Large Magellanic Cloud. "In the beginning God created the heavens and the earth" (Gen. 1:1).

II. Greek ideas of the cosmos

A. Basic concept. In contrast to the OT, the Greeks had a highly developed sense of the universe as a single entity quite apart from any reference to the Creator (see GREEK RELIGION AND PHILOSOPHY). This is implied in the word *kosmos,* which carries the basic meanings of (1) structure, (2) order between men, (3) order in general, and (4) adornment. These senses merge into that of the world as an ordered, harmonious, and beautiful structure. Predominant in the early days of Greek philosophy is the thought of the order or system: that which holds the world together. At some point not later than the 6th cent. B.C., the word came to be used of the totality held together by the order, that is, the cosmos in the sense of universe. According to Heraclitus, the universe in this sense is eternal, having neither beginning nor end. It is interesting that even those who suggested an origin for the universe always accepted the eternity of matter. The only beginning was that of form or order.

B. Plato and Aristotle. Plato took over the view of an integrated cosmos based on a universal order. The cosmos in this sense might be described as a body with a soul, a rational creature. It was a spatial manifestation of the idea, a sensual reflection of the eternal. In a famous passage (*Timaeus* 28ff.), Plato can speak of the making of the world by a *theos G2536* or *dēmiourgos G1321.* This was done in accordance with the perfect idea. It should be noted, of course, that Plato, though he finds a cosmological demonstration of God, does not really believe in creation. The Demiurge's function is simply to shape what is formless into a cosmos. He also works according to the idea already present in the so-called noetic cosmos. In the last resort, God is simply the highest idea in the cosmos. Even the created cosmos may also be called God. This is *theos aisthētos,* God apprehensible to the senses. The very modest approach of Plato toward a genesis of the cosmos was abandoned by Aristotle, who accepted the eternity of the world and regarded God, not as the world's architect, but as pure mind or form. Later, on the other hand, GNOSTICISM developed the distinction between the noetic and the aesthetic worlds into a thoroughgoing DUALISM in which the material world, created by an inferior demiurge, is the prison of the soul, and redemption is a liberation from this, a return to the realm of pure mind or the true God.

C. The Stoics. Stoicism, like Platonism, has a doctrine of the genesis of the cosmos (see STOIC). It incorporates this concept, however, into an eternal recurrence, a process of constant becoming and dissolving. Hence, the Stoic beginning is no true creation, nor is the Stoic destruction a true end. Furthermore, there is no need of an architect. God is the world soul which permeates the whole cosmos, the reason (*logos G3364*) which rules it. Indeed, so pantheistic is the Stoic understanding that a direct equation can even be made between God and the world. Each human being, as a participant in the soul of the world, is a part of God.

D. The inhabited world. Since the earth is included in the *kosmos,* this term can be used by the Greeks for the earth as distinct from heaven on the one side and from the underworld on the other. It is then only a step to the use of the word for the creatures that inhabit the earth, and a further step leads to the special sense of the human race, mankind. Indeed, in the later Koine there is a very general use of *kosmos* for "people," "everybody."

E. Philo. A bridge between the Greek view of the cosmos and the OT is to be found in the writings of PHILO JUDAEUS, who makes considerable use of the term. Distinguishing in Platonic fashion between

the noetic and the aesthetic cosmos, Philo argues from Gen. 1 that God first created the world of ideas, which then served as a prototype for the material world. The cosmos is characterized by order and beauty. But it stands under the divine transcendence. God as father and architect created the world. He did this by the Logos, the mediator between the world and God. Thus Platonic and Stoic ideas are here combined with the fundamental OT belief that the cosmos is the creature of God. There is, however, a certain imprecision in Philo's thought and language which leaves some doubt as to whether he is speaking of a real creation of the world by God, or of an ordering of existing formless matter in the Greek sense. He certainly avoids any identification of the world and God; at this point he is faithful beyond question to his Jewish heritage.

III. The world in the NT

A. Ecumene. The term *oikoumenē* (from which derives English *ecumenical* via Latin *oecumenicus*) is of little theological account in the NT. As mentioned above, it is a participle used as a noun, and denotes from very early times the inhabited earth (cf. *TDNT*, 5:157). The primary sense is geographical, but this quickly merges into the religious, cultural, and political, so that the *oikoumenē* is the civilized (Hellenic) world, or, after the Roman conquests, the ROMAN EMPIRE as a political and cultural unit.

Used in the SEPTUAGINT, Philo, and the rabbis (as a loanword), *oikoumenē* is fairly common in the NT, especially in the Gospels and Acts. In the prophecy of Matt. 24:14 the reference is to all inhabited parts of the globe, and the word imparts a certain solemnity to the statement. In Lk. 2:1, however, the Roman empire seems to be in view, though elsewhere in Luke (cf. 4:5; 21:26; Acts 11:28; 17:31) there is a fuller reference to the whole inhabited world. The Matthean parallel to Lk. 4:5 (Matt. 4:8) has *kosmos*.

It is worth noting that Paul uses *oikoumenē* only in the quotation of Rom. 10:18. In Heb. 1:6, "inhabited world" is the meaning, but the future *oikoumenē* of 2:5 bears more of the sense of *aiōn* or *kosmos*. Ancient apocalyptic tradition might well underlie both this use and also the two instances in Rev. 12:9 and 16:14. In general, however, the NT attaches no particular significance to the term. It uses it either for the inhabited earth in general or for the politico-cultural unit constituted by the empire.

B. Aeon. From its early use in Homer for "vital force," the term *aiōn* quickly came to signify "lifetime," "generation," "space of time," "time" with a past, present, or future reference, and finally "eternity." It played a considerable role in the Greek discussion of time, and in the Hellenistic age it was personified as the god Aeon. The temporal sense of the term is preserved in the NT in various phrases used to signify eternity (esp. in the pl.). The cognate adjective *aiōnios G173* also is used to denote the ETERNITY of God (e.g., "King of the ages," 1 Tim. 1:17 NRSV). On an OT basis this seems to imply, not that he exists so long as the aeons last, but that he is before and after all times or time. A decisive feature in the NT is that similar statements are made with reference to Christ, implying both his preexistence and also his essential deity.

1. Aeon as world. How could a word referring to time come to be used for the world? The answer seems to lie in its use for "time of the world," that is, time limited by the creation and end of the world. As H. Sasse notes (*TDNT*, 1:202), it is striking that "in the Bible the same word is used to indicate two things which are really profoundly antithetical, namely, the eternity of God and the

duration of the world." Nevertheless, this is true. The end of the aeon in Matt. 13:39 is undoubtedly the end of the time of the world. Even in the plural, the word has the same sense (Heb. 9:12; 1 Cor. 10:11), though with a suggestion that the one time of the world is made up of two or more periods.

If, however, aeon is the time of the world, it is no more difficult to equate the world's *duration* with the world as it is to equate the world's *order* with the world. Later Hebrew had done this (with the term ʿôlām), and it is natural enough to find the same usage in the NT. The clearest instances of equation are in 1 Cor. 1 – 3, where one finds as equivalents "wisdom of the cosmos" (1:20), "wisdom of this aeon" (2:6), "wisdom of this cosmos" (3:19), and in Mk. 4:19 and Matt. 13:22, where "the cares of this aeon" are undoubtedly worldly affairs (cf. cosmos in 1 Cor. 7:33). DEMAS's love of this present aeon would seem to demand a similar understanding, and the aeons of Heb. 1:2 are surely worlds or spheres rather than epochs.

2. The two aeons. As noted already, the plural of this term, though often equivalent to the singular, can also suggest more than one stretch of time. This can be worked out in different ways. Eternal recurrence, for example, postulates an infinite series of aeons. The biblical view, however, is incompatible with successive aeons in this sense. The world begins and ends. Nevertheless, a break has been made in the world by SIN. This means that the creation-to-conclusion understanding yields to the more complicated concept in terms of creation, fall, destruction, new creation, and consummation. Directly related to this is the NT doctrine of the two aeons.

The background of this doctrine is incontestably Jewish. In later Jewish APOCALYPTIC writings there are constant references to the two aeons, both spatial and temporal (cf. *1 Enoch*; see ENOCH, BOOKS OF). These aeons are the time of this world on the one side and eternity on the other, with an accompanying antithesis between the visible or present world on the one side and the invisible or future world on the other. Between the aeons stands the resurrection and the judgment. The rabbis apparently followed up the same idea, for there are examples (mostly post-Christian) of the distinction between this aeon and the aeon to come.

In the NT the contrast occurs in the Synoptic Gospels. In Mk. 10:30, Jesus distinguishes this time (Gk. *kairos G2789*) from the coming aeon. In Lk. 16:8, he contrasts the people of this aeon with the people of light (cf. 20:34 – 35, with its reference also to the RESURRECTION). In Matt. 12:32, the Lord says that the sin against the HOLY SPIRIT can be forgiven neither in this nor the future aeon. If the present aeon is not expressly described as sinful, its sinfulness seems to be a fairly clear implication in some of these passages.

PAUL speaks expressly of the aeon to come only in Ephesians. Nevertheless, his many references to *this* aeon (Rom. 12:2; 1 Cor. 1:20; 2:6, 8; 3:18; 2 Cor. 4:4) leave no doubt as to the contrast with a *future* aeon. Paul also says plainly that the present aeon is evil (Gal. 1:4). This shows clearly why the biblical doctrine of creation can still allow for a doctrine of two aeons. The aeon of revolt against God is to be replaced by the aeon of salvation and fulfillment.

Hebrews contains only one direct reference to the future aeon (Heb. 6:5), but this passage is very important, for it says that even now, in this world, believers have tasted of the powers of the future aeon. Similarly, Gal. 1:4 speaks of redemption from the present aeon. While Jewish apocalyptic writing is still looking toward the future aeon, the Christian message is that this aeon has already come in with Jesus Christ, so that Christians live in the new aeon. This is not, of course, a fully realized ESCHATOLOGY. Only with the SECOND COMING and the resurrection will the old aeon be destroyed and the new aeon completely manifested.

The coexistence of the new aeon with the old is a salutary warning that *aiōn* in these contexts

does not simply mean "world." At the same time, one must not distinguish too sharply. The Bible also speaks of a new heaven and a new earth. Hence the relationship between time and space is maintained even though the nature of the new creation is beyond our powers of apprehension. Even in the new aeon, at least when it is consummated, there is to be some kind of world. The new aeon is also the new world. See HEAVENS, NEW.

C. Cosmos. If *aiōn* is important, *kosmos* is perhaps the most significant of all the NT terms for "world." In the LXX it had been used first for the HOST OF HEAVEN (Heb. ṣābā̄ʾ, *H7372*, Gen. 2:1; also Deut. 4:19; 17:3), then for "ornament" (Exod. 33:5 – 6; 2 Sam. 1:24). Only in the Greek books of the APOCRYPHA did it become a prominent word for the universe created and overruled by God. It could also be used for the world of human beings, the human race. Hellenistic Judaism probably adopted it instead of older terms, not as a philosophical concept, but simply as a term in current use. In this sphere it even found its way into the vocabulary of liturgy. In the NT the word occurs over 180 times. It never has the sense of "order," and it means "adornment" or "beauty" only in 1 Pet. 3:3; elsewhere the meaning is always "world." Over half the references are in the Johannine writings, especially the Gospel of John. The word is also common in Paul, but comparatively rare in the Synoptic Gospels and Acts. The use of "heaven and earth" in the sayings of Jesus explains this paucity in part. On the other hand, the usage seems to stand in fairly clear relation to the theological importance of the word in the different books.

1. Universe. In the NT, as elsewhere, the cosmos is primarily the sum of all things, the universe (Acts 17:24). In this sense it is equivalent to "heaven and earth" or to "all things" (cf. Jn. 1:3, 10). Sometimes the cosmos is simply space, with a possible distinction from that which fills it, but in the main it represents, in this sense, the totality of things.

2. The transitory cosmos. The fundamental connection between space and time is reflected in the NT assumption that the cosmos is of limited duration. The cosmos has an aeon (Eph. 2:2): this is possibly the time between its creation and its end, although the expression in this passage (*kata ton aiōna tou kosmou*) has been variously understood. In any case, the expression "from the foundation [*katabolē G2856*] of the cosmos" is common in the NT (Matt. 25:34 et al.; cf. also "from the beginning of the cosmos," Matt. 24:21, and "from the creation of the cosmos," Rom. 1:20). With this idea one may link the reference to the end of the aeon in Matt. 13:40. If the cosmos as a whole is marked by duration, everything in it is also transitory. The world

Babylonian cuneiform planisphere that includes drawings of the constellations.

passes away (1 Jn. 2:17; 1 Cor. 7:31). The present cosmos is thus set in eschatological antithesis to the future aeon. The same antithesis is expressed by John when he speaks of the coming of Christ into the cosmos. An important point in this regard is that the NT does not speak of the future cosmos. There is an aeon to come and there will be a new creation. There is no new cosmos. The reason for this will appear later. God himself has created the cosmos (Acts 17:24) and he obviously overrules it. But he is not described as the Lord of the cosmos. One finds only the eschatological hope that the kingdoms of this cosmos will become the kingdom of our Lord and of his Christ (Rev. 11:15).

3. NT cosmology. A question that has assumed some importance in modern theology is that of NT cosmology (see COSMOGONY). Rudolf Bultmann seemed to base his call for demythologization on the need to correct the supposedly outdated NT concept of the universe as a three-decked structure (see MYTH III). Is this picture correct? Certainly the Bible does speak of heaven and earth as two distinct areas. The sea or underworld can also be a third division. One should note, however, that heaven is also a system of worlds or spheres (aeons) in Heb. 1:2, and that there are references to the ELEMENTS of the world (Gal. 4:3 and Col. 2:8, but the meaning of this phrase is disputed). Sasse (in *TDNT*, 3:87) has some sober observations on this whole matter when, from a survey of the evidence, he points out (1) that the NT does not deliver express cosmological teaching as part of its message, (2) that the NT simply alludes to current ideas which make sense only against the background of the time, and (3) that one can hardly piece together a coherent system and say, This is NT cosmology. If Sasse is right, it is just as pointless to demythologize the NT here as it would be to demand the demythologization of a meteorological report which mentions sunrise and sunset.

4. The theater of history. The predominant concern of the NT, as of the OT, is not with the cosmos as a whole but with human beings in the cosmos. God made the whole world, but he made man in his image, and his main dealings are with the human race. Hence, to use the familiar phrase, "the cosmos is the theater of human history," and more specifically of the history of God and man. In many

instances, then, the word *kosmos* will bear the special sense of the inhabited world, the earth, the dwelling-place of humanity (cf. Matt. 4:8; Rom. 1:8). This could well be the meaning in the saying about gaining the whole cosmos (Mk. 8:36). We find it again, with a tendency to shade off into "nations," in Rom. 4:13.

It is because the world is the theater of human life that the NT can speak of entries and exits. "To come into the world" is a common idea in John, whether with reference to everybody, to Christ, or to "that prophet." Sin and death come into the world (Rom. 5:12 – 13). So, too, do false prophets (1 Jn. 4:1). As there is a coming into the world, so there is a going out of it. Christ goes out of the world (Jn. 13:1). Christians would have to do so to avoid all contact with fornicators (1 Cor. 5:10). Between coming into and going out of the world, there is a being in the world. The Logos is in the world (Jn. 1:10), as also are the disciples (17:11), and other Christians (1 Jn. 4:17; 2 Cor. 1:12; et al.). An important principle is involved here. Christians are not to be *of* the cosmos. Yet during the period of their present pilgrimage they have no option but to pursue their life *in* the cosmos.

5. Humanity. In a passage like Rom. 4:13, the sense of "world" as the dwelling place of the race merges into that of the race which dwells in it. This use is found already in the Hebrew terms and in the Greek Koine generally. In the NT it may be seen plainly in Mk. 16:15 (cf. 14:9), where the disciples are charged to go to the whole world, that is, not just to every place, but to all people. Obviously, one cannot always mark off this sense with precision, but it would seem to be the most apposite meaning when the Lord says that Christians are the light of the world (Matt. 5:14) or that the field is the world (13:38). Peter, too, seems to have human beings in view when he refers to the cosmos of the ungodly (2 Pet. 2:5), and this is also the meaning when Paul calls the apostles the scum of the cosmos (1 Cor. 4:13). Angels can be included as well (4:9; see ANGEL), but in the main the reference in such cases is to humanity.

6. The evil cosmos. The human race is a fallen race. This means that the cosmos, too, is presented as alienated from God, especially by Paul and John. Paul in 1 Corinthians uses a whole series of contrasts to make it plain beyond all possibility of doubt that there is this alienation. The WISDOM of this cosmos (or aeon) contrasts with the wisdom of God, the spirit of the cosmos with the Spirit of God, the sorrow of the cosmos with the sorrow that is godly (1 Cor. 1:20 – 21; 2:12; 2 Cor. 7:10). An even darker picture is painted in Romans. Since sin has entered the cosmos, the whole cosmos is guilty, and it is judged and condemned by God (Rom. 3:6, 19; cf. 1 Cor. 6:2). The ultimate and definitive nature of this sin is manifested in the fact that the rulers of this cosmos crucified the Lord of glory. Cosmos here is obviously the human race. Yet it is more, for angelic powers rule the sinful cosmos (cf. 1 Cor. 2:6; Eph. 2:2). This explains why God is not called Lord of the cosmos, and also why there is no cosmos to come. So fully is the cosmos identified with sin and the fall that the cosmos can only be condemned and destroyed in the judgment. It comes to represent the world of evil which is in irreconcilable conflict with the world of God.

JOHN THE APOSTLE uses different language, but the thought is materially the same. Christ is not of the cosmos; he has come to it from God. He is in the cosmos but the cosmos does not know him (Jn. 1:10); nor does it believe in him (7:7). Though he comes to save, not to condemn, his coming does in fact bring JUDGMENT on the sinful, unbelieving cosmos. The prince of this cosmos is judged first (12:31). The first epistle of John has contrasts reminiscent of Paul: he that is in you and he that is in the world (1 Jn. 4:4), those who are of the world and those who are of God (4:5, 6), we who are in Christ and the world which is in wickedness or the wicked one (5:19). Here again is final conflict.

The world has not escaped God's control, but it is in revolt against him. By a new birth from God sinners may be saved. The cosmos itself, as sinful cosmos, cannot be saved.

7. The object of salvation. The evil cosmos is condemned and lost. Yet the cosmos is still the theater of God's saving action and the object of his saving love. Paul and John are again as one in stating this fundamental truth. Thus Paul says plainly that Christ Jesus came into the world to save sinners (1 Tim. 1:15). The cosmos is not just that from which sinners are saved; it is the place where they are saved. John made the same point with even greater cogency. Christ has not merely come into the cosmos. He has come as the Savior of the cosmos (Jn. 4:42) or the light of the cosmos (8:12). He has come into the cosmos in order that in it, as the abode of men and women, he might be the Savior of it, that is, of the human race.

The impulse behind this mission is that the world is the object of God's reconciling LOVE. Two of the most basic and comprehensive verses in the whole of the NT state this fact: Jn. 3:16, "God so loved the world," and 2 Cor. 5:19, "God was reconciling the world to himself in Christ" (cf. also Rom. 11:15). Predominantly the cosmos here is, of course, humankind, but there are hints that it might have a wider reference, namely, to the cosmos as God's creation.

Though the cosmos is thus the sphere and object of God's gracious work, it is still true that there is no cosmos to come. The reconciled cosmos is the KINGDOM OF GOD, the future aeon, the new creation. As Sasse observes, it seems as if the term *kosmos*, which comes from Greek philosophy, is ultimately "reserved for the world which lies under sin and death." Though the world is reconciled, believers are saved out of the world. A deep ambivalence lies over the word. "When the cosmos is redeemed, it ceases to be the cosmos" (*TDNT*, 3:893).

8. Christians and the world. The theological understanding of the cosmos determines the relation of Christians to it. This may be summed up in three theses. Christians continue to live in the cosmos, they are not of the cosmos, and they are sent, or are to preach, to the cosmos.

(a) They continue to live in the cosmos. The cosmos is still the setting both of human life and also of Christian life and ministry. As Paul says, Christians cannot leave it (1 Cor. 5:10). They have to care for its affairs (7:32 – 35). They cannot avoid dealings with it (7:31). John gives the same teaching. Christians are in the cosmos as Christ was (Jn. 17:11). They cannot try to remove themselves from it. It is here that they war and conquer (cf. 16:33).

(b) They are in the world, but not of it. Paul puts this in many ways. Christians are dead with Christ from the rudiments of the world (Col. 2:20). The world is crucified to them and they to the world (Gal. 6:14). They are not to be conformed to it (Rom. 12:2). James adds a similar testimony: love of the world is enmity against God (Jas. 4:4). Christians must keep themselves from the world. John is no less explicit: believers are chosen from the world (Jn. 15:19); by the new birth they belong to God (1:12 – 13); the world hates them, and they themselves are not to love the world or the things that are in it (15:18 – 19; 1 Jn. 2:15). This is why the world is a place of affliction (Jn. 16:33). But they may be of good courage, for Christ has overcome the world, and in him they have their own victory, even their FAITH. Faith enables them to see beyond the world's enticements and sufferings to the new aeon (1 Jn. 2:17; cf. 1 Cor. 7:33).

(c) Finally, Christians preach to the world. As God loved the world and Christ came into it, so Christians are to go into the world as the ambassadors of reconciliation. The great commission enjoins this. Paul states it in his own way (2 Cor. 5). Christ says plainly that he sends his disciples into the cosmos (Jn. 17:18). The cosmos is to see in them the love of the Father (17:21, 23). While

the church is not of the cosmos (the evil world), it is set in the cosmos (the theater of history) to minister to the cosmos (humanity). In this sense it is true that, though the church is not of the world, its life here is for the sake of the world. If believers know that to gain the world and lose the soul is folly, they have also to remember that saving the soul is an unavoidable concomitant to the winning of the world.

World, On the Origin of the. See ORIGIN OF THE WORLD, ON THE.

worm. Several Hebrew terms and one Greek word are properly rendered "worm" in the English versions. An attempt will be made to identify the words in some contexts, but this is not easy, for the word in most languages is a vague one, applied, even in a semitechnical sense, to a wide range of animals. In English, for instance, it is given to members of four whole phyla (including flatworms, round worms, etc.) as well as to beetle grubs, caterpillars, and even to a species of lizard—the blind worm. In addition, the word has some nonspecific, figurative uses, as when it is applied to people who are objects of contempt or pity (e.g., Isa. 41:14).

The Hebrew word *rimmâ H8231* occurs seven times, five of them in JOB alone (Job 7:5 et al.). The figurative contexts are so varied that this must be considered a term as general as the English word *worm*. In Job 25:6 and Isa. 14:11, where the NIV renders it "maggot," it is used in synonymous parallelism with *tôlē⟨â H9357*. The latter term is applied to an insect that can destroy grapes and castor oil trees (Deut. 28:39; Jon. 4:7; see GOURD), possibly referring to the *Cochylis (Eupoecilia) ambiguella* (see *HALOT*, 4:1702). Both terms are used with reference to the maggots that appeared in the MANNA kept for longer than a day (Exod. 16:20 and 24).

A possible explanation is that *tôlē⟨â* in Exod. 16:20 describes a specific infestation, perhaps by one of the blow flies whose maggots would quickly turn it into a seething mass in the high temperatures of the desert; while *rimmâ* in v. 24 is a more general term, including both the former and also other potential invaders. It should be noted that *tôlē⟨â* (often in the fem. form *tôla⟨at*) is a cognate of *tôlā⟨ H9355*, translated "crimson" or "purple" in its two occurrences (Isa. 1:18; Lam. 4:5), but alluding to a very small insect from which the red DYE was derived (the crimson worm, *Coccus ilicis*; see SCARLET). Thus *tôlē⟩â* is regularly used of scarlet or crimson yarn, especially in Exodus, regarding the construction of the TABERNACLE (Exod. 25:4 and frequently).

An additional Hebrew word, *sās H6182*, occurs only in Isa. 51:8, "For the moth [⟨āš; H6931] will eat them up like a garment; / and the worm will devour them like wool." The context at first might suggest that *sās* is the grub of the clothes moth (cf. *HALOT*, 2:761). However, it is usual in OT and NT and in current English to speak of the MOTH as the actual destroyer, while the grub is in fact the larva. Further, the latter lives in a small felted case, with only the head exposed, and it is not at all worm-like. It is therefore possible that *sās* can be identified with the cockroach or some other insect that destroys fibers. (The KJV also uses "worm" to render the participle of the verb *zāḥal H2323* in Mic. 7:17, but most modern versions understand this term as "crawling [thing]"; it is used also in Deut. 32:24 with reference to a venomous creature, probably a viper.)

In the NT, the Greek noun *skōlēx G5038* occurs twice. The figurative usage in Mk. 9:48 is a quotation of Isa. 66:24. The second occurrence is in Acts 12:23, which states that Herod Agrippa (see HEROD VII) was struck down by an angel "and he was eaten by worms and died" (cf. A. Rendle Short, *The Bible and Modern Medicine* [1953], 66ff.). There are several ways in which intestinal

worms could cause fairly sudden death even today, and a further suggestion is that he had a hydatid cyst; this is the alternate host stage of the dog tapeworm. See DISEASE (under *worms*).

G. S. CANSDALE

wormwood. A herbaceous perennial (*Artemisia absinthium*, but see below) with silky leaves that bears masses of small yellow flowers; it yields a bitter dark oil that is one of the ingredients used to produce a green liqueur known as *absinthe*. This drink has a most objectionable taste to the uninitiated. The oil is sometimes used medicinally to kill intestinal worms. The wormwood has come to be used symbolically to describe sorrow, calamity, and even cruelty.

The Greek word *apsinthos G952* occurs twice in Rev. 8:11, "The name of the star is Wormwood. A third of the waters became wormwood, and many died from the water, because it was made bitter" (NRSV). The Hebrew word *laʿănâ H4360* is used eight times in the OT (always figuratively and usually in combination with *rōʿš H8032*, which evidently refers to some other poisonous plant), and most versions translate it "wormwood." The NIV, however, uses more generic renderings, such as "gall" (Prov. 5:4 et al.) and "bitterness" (Amos 5:7; 6:12).

The term *laʿănâ* may refer to one of two other species grown in Palestine: *Artemisia herba-alba*, which has a camphor scent and is extremely bitter, and *Artemisia judaica*. This latter plant was used, and still is in some places, to keep the maggots or moths away from woolen garments; the dried plants are laid in between them. (See *FFB*, 198.)

W. E. SHEWELL-COOPER

worship. This word derives from Old English *weorthscipe* ("worth-ship"), that is, worthiness, dignity, or merit, thus the recognition accorded or due to someone, the paying of homage or respect. In the religious world the term is used for the reverent devotion, service, or honor paid to God, whether public or individual. The church building is a place of worship and the forms of divine service followed by various Christian groups or congregations are forms of worship. The verb *to worship* may be used both transitively (to pay homage to God) and intransitively (to attend or to participate in worship). Since worship includes all its constituent parts (e.g., praise, prayer, preaching), and since it also embraces various associated features (e.g., temple, music, hymns), the number of Hebrew and Greek words that might be mentioned in this connection is extraordinarily large and diverse. Rather than attempting to list these, or to seek a single comprehensive term, we shall devote special attention in the body of the article to some of the more significant words.

    2. Aspects of synagogue worship
    3. Individual worship

I. Worship in the OT

A. Important terms. As a verb, "worship" often renders the unusual Hebrew form *hištaḥăwâ* (interpreted traditionally as the hithpalpel of *šāḥâ H8817,* "to stoop down," but now more usually understood as the shaphel stem of *ḥāwâ H2556*). It clearly means "to bow down, prostrate oneself " in deference to someone else (Gen. 18:2 et al.), but in a religious context it just as clearly indicates "to reverence [God]" (22:5; 24:48; et al.). It is frequently used in combination with other verbs that also indicate prostration (e.g., *qādad H7702* in 24:48), but also with the very common verb ⟨*ābad H6268,* "to serve," which can be used by itself with the meaning "to worship" (Exod. 9:1 et al.). The noun ⟨*ăbōdâ H6275,* "work, service," can similarly indicate worship (12:25 et al.). There are of course numerous other terms that refer to various aspects of worship.

B. Basic principles. A study of the words associated with worship shows that, while certain concepts like bowing the knee or obeisance are concerned with the human aspect, the roots of biblical worship are to be found not in human emotions but in the divinely established relationship of God to his creatures. Thus the basis of worship is theological rather than anthropological. The common question as to whether the origin of worship is to be found in such emotions as fear, awe, or the sense of the numinous, is thus beside the point from a biblical standpoint. Such a question presupposes that worship is subjective, that it arises from within the person, that even as a reaction it takes its substance from the reacting person, that there is not necessarily any external object corresponding to the inner emotion.

That human emotions and reactions are involved in worship is, of course, undeniable. Awe, fear, gratitude, and love may all be experienced in worship. The point is, however, that these are not the controlling factors; they do not constitute the true essence of worship. In the Bible the beginning lies in the object of worship rather than the subject. Nor is this an indefinite object. It is not the mystery behind the universe. It is not the universe itself. It is not an unknown factor. It is not a person's own potentiality. The object of worship, which is both its starting-point and controlling factor, is not a human projection. It is God.

God is self-declared in the Bible as the living God who is from eternity to eternity, who made the world, who created human beings in his image, and who set himself in relation to them (see IMAGE OF GOD). In all divine-human dealings the initiative is with God. He is subject as well as object. He tells men and women what to do and what not to do. He controls their destiny. He judges their shortcomings and saves them from their sins. It is God, this God, whose Person and acts are both the theme and the formative principle of genuine worship. If there is awe in worship, it is awe of God; if there is love, it is love of God; if there is praise, it is the praise of God; if worship is response, it is a human response to the living God who has made himself known in his words and works.

Terra-cotta figurine of a kneeling Babylonian worshiper (early 2nd millennium B.C.).

The response of worship is not just any response. Worship is controlled by its object, who is also subject. Hence, it is worship in specific forms. There is first the form of confessional praise of God, the declaration of his grace and mighty acts. This confession combines the recitation of what God has done and the praising of God for it. In practice these may be separated into reading and proclamation on the one side and the singing of psalms and hymns on the other. Nevertheless, when worship is genuinely biblical, there is an indissoluble relation between the two. Genuine proclamation is praise, and genuine praise is also proclamation.

There is, secondly, the form of service, which is capable of broad expansion, but which also has its narrower aspect, namely, the rendering of service to God by the performance of cultic acts. In this respect the Bible preserves an admirable balance. Religious exercises cannot be a substitute for total service of life. On the other hand, total service of life must not squeeze out the specific service toward God expressed in religious exercises. Within this Godward service the sacrificial ministry plays an important role in the OT. This ministry is not discarded in the NT; it is consummated in and by the high-priestly ministry of Jesus Christ. Already in the OT it brings to light a decisive aspect of worship. The divine-human relation is one which the sinner has disrupted by his revolt. ATONEMENT must be made for the restoration of this relation.

The priestly ministry of the OT prefigures the greatest of all God's acts of deliverance, namely, the act by which, incarnate in his Son, he graciously bore the penalty of sin and thus provided for its remission and for the restoration of the sinner to fellowship with himself. The priestly ministry is no erratic block in the total structure of worship. In its fulfilled NT form, it is both the supreme theme of worship and also that which enables us to offer acceptable service and praise. In its OT form it is a part of service to God, a summons to penitence and dedication of life, and a prefiguring of the divine work which is the heart and substance of the confession of praise. Without it, there would be no true worship, only misguided idolatry and a fearful expectation of judgment.

Finally, there is the form of prayer. This is itself another aspect of God-oriented worship because (a) it includes confession of sins and (b) it is a confession of the name of God, a confident calling upon the God who intervenes, inclines graciously to the petitioner, and meets his needs. The very fact that God has the initiative means that prayer as well as praise is of the very essence of worship, for prayer is also proclamation and praise. The prayer offered to God is a recalling of the great things that he has done. It is a magnifying of God for them. Far from being a despairing cry in the dark, it is a confident asking directed to the self-revealed God on the basis of what he has revealed about himself. Even the urgency of crisis or complaint cannot wholly conceal this underlying confidence, which is sustained, not by self-righteousness, but by the divine truth and faithfulness.

An additional point is that biblical worship is not left to human caprice. It is not controlled by arbitrary desires or contingent needs. It does not ask what things will be most helpful or what will best express the impulse to worship from a human standpoint. It learns how to worship from the God who is the object of worship. This is especially clear in the OT, where God tells Moses in minute detail how his people, redeemed by him out of Egypt, are now to worship and serve him both in the desert and later in the Promised Land. Many of these things the people had no great desire or instinct to obey. They found the rituals of alien gods far more congenial.

The biblical lesson is surely plain. In worship, as in all else, believers are not to trust their own instincts, for they do not know at all what is best for them. They have to learn how to worship God. This will be according to the way that God himself has appointed. The rigid detail is no longer to be found, of course, in the NT. But the same principle applies even if in a different way. All Christian action is subject to the overruling of the Spirit and the normativeness of the word of God. If detailed regulations are no longer given, the basic constituents of worship are plainly presented in OT and NT alike. The forms used by Christians, even though they vary widely in detail, must be so fashioned as to express and embody these essential elements in proportion, purity, and power.

C. Family worship. The oldest form of worship in the OT is that of the FAMILY. Even before Israel became a people, it was already a worshiping family, the family of Abraham, Isaac, and Jacob. After the exodus, when the children of Israel became a nation and national forms of worship were established, the family continued to play an important part in worship. The rise of the synagogue later made possible a more continuous form of congregational life and offered new opportunities for instruction. Even this did not oust the family as a unit of worship.

1. Praise and prayer. A difficulty in the patriarchal age is to distinguish between domestic and personal prayer. Nevertheless, it would appear that when ABRAHAM called on the name of the Lord in various places (e.g., Gen. 12), his whole household participated in this worship. The substance of this calling is not given, yet there can be little doubt but that it contains the basic elements of prayer and thanksgiving. This is expressed in the prayer of Abraham's servant (ch. 24). This prayer brings

out very well the family nature of worship, for the servant invokes in v. 12 the Lord God of his master Abraham. In the days of national worship the centrality of sacrifices at the sanctuary removed from the home one of the great occasions for prayer and praise, but there is no reason to suppose that family prayer perished in consequence. Grace at meals had become a fixed habit by the end of the OT period, and probably long before. How soon and to what extent psalms might have been used in the home it is hardly possible to say. The hymn at the Last Supper is an indication that by the time of Jesus the psalter was in use in the home. The singing of the HALLEL at the PASSOVER is in fact attested by other sources, though information is scanty as to the wider use of the psalter, and practice undoubtedly varied considerably from family to family.

2. Sacrifices. The patriarchal sacrifices were domestic or personal. Thus Abraham built altars at the places where he called on God. JACOB at BETHEL set up a pillar and poured oil on it. Incidentally, it is worth noting that this use of what was probably a familiar practice does not mean that the patriarchs derived their religion from surrounding peoples; they simply used common forms to worship the true God. By institution the Passover was a family sacrifice, a lamb for a house. When the institution of a central tent or temple put an end to family offerings, this rule was still observed even though the offering had to be made at the central site. Centralization by no means destroyed the family aspect, for households made the journey to Jerusalem and rendered their offerings together (just as family worship may be maintained in congregational worship through the family pew). Like the sign of deliverance, the great COVENANT sign of CIRCUMCISION was also a family matter. It was first given to Abraham as an ordinance for his whole house (Gen. 17:9 – 14). Even when Israel's worship was set on a national basis, the family character of circumcision persisted (cf. Lk. 2:21). In the last resort, of course, the nation as a whole made its offerings as the family of Abraham, Isaac, and Jacob.
Franciscan liturgy at the Church of the Holy Sepulchre in Jerusalem.

3. Instruction. A part of religious life, which was very clearly committed to the family in OT days, was that of instruction both in the faith of Israel and also in its worship. In patriarchal times this may be presupposed. After the exodus it was plainly enjoined upon the people in the exhortations of Deuteronomy. The "Hear, O Israel" was to be taught diligently to the children (Deut. 6:4 – 9). The commandments were also to be explained to them (6:20 – 25). Explanation of the commandments entailed a rehearsal of the great acts of God. The duty of not hiding these things from children and grandchildren underlies a great historical psalm (Ps. 78; cf. vv. 3 – 4). The witness of Exod. 12:26 and 13:14 is to the same effect, for an explanation is here to be given, not only of the Passover ritual, but also of the great act of divine deliverance which it commemorates. As noted, much of the duty of instruction could later be delegated to the synagogue, but the family had to insure that this instruction was in fact given. At this level the family basis was to stand Israel in good stead in the days of dispersion which commenced with the exile, and the synagogue itself might not have been possible without a prior tradition of instruction in faith and worship in the home.

D. Public worship. The public worship of Israel might be said to have commenced with the observance of the Passover in Egypt. This was rapidly followed by the institution of a whole system of worship laid down by God himself through revelation to Moses.

1. The tabernacle. The new system of worship was centralized for the whole people in the

TABERNACLE or Tent of Meeting. A tent was obviously the only practical structure during the desert march, but it also seems to have embodied an important principle, namely, that the living God is not to be tied, as it were, to a permanent structure (Acts 7). The details of the worship prescribed for the tabernacle are so multifarious that it is hardly possible to cover them all in the present context. Attention may be drawn, however, to certain features that seem to have particular significance.

(a) *The festivals.* The worship of God in Israel is to a large degree concentrated on the great festivals of Passover, Pentecost, and Tabernacles. See FEASTS. The people had a duty to be present at them and to make the appropriate offerings in the tabernacle. These festivals were essentially the occasions of joyful and grateful remembrance, so that they embodied the declaratory or confessional aspect of worship. Passover was the festival of liberation; Pentecost, the festival of God's constant provision; and Tabernacles, the festival of God's guidance of the pilgrim people through the wilderness.

(b) *The sacrifices.* SACRIFICE had had a place in biblical worship from the very first. With the Sinaitic revelation it was given a more organized national form and various offerings were instituted (listed in the first seven chapters of the book of LEVITICUS). The sacrifices serve different purposes, so that some support can no doubt be found for the various explanations that have been advanced, for example, sacrifice as an offering of life or as an occasion of fellowship with God. Nevertheless, at the heart of the sacrificial system is the truth that God thereby makes provision for the atonement without which no true worship is possible. This truth is particularly expressed in the great annual ritual of the day of atonement when shrine, priesthood, and people are all purified (Lev. 16). The proleptic form of atonement in the OT required not only a sanctuary with sacrifices but also a ministry consisting of high priest, priests, and Levites. The ritual aspect of Israel's worship should not obscure the fact that confession of sin has its place here (Lev. 4:23 – 24). During the later days of the monarchy it is possible that psalms of penitence (Ps. 51 et al.) were used on the occasion of propitiatory offerings.

(c) *The ark.* Within the tabernacle a prominent place was occupied by the ARK OF THE COVENANT. This container was a reminder (i) that God himself is not to be represented in wood or stone, (ii) that the basis of the whole worship of the tabernacle was the covenant which God made with his people, and (iii) that the worship of the sanctuary did not exclude, replace, or weaken the requirement of a broader service of God in fulfillment of the ethical imperatives of the law. The setting of the ark of the testimony within the tent is important, because it shows that any rift between the priestly and the prophetic ministry arises only through departure from the basic understanding of worship in Israel. The service of the sanctuary is not an autonomous sphere. Its purpose is to set forth the God of Israel, to bring the people to living fellowship with him, and to keep before them the demand for a life consecrated to the divine service. The absence of a visible representation of God is by no means a failure in objectivity. On the contrary, God is not identified with the things he has made. His true objectivity as the God of creation who is also the God of the covenant is thus safeguarded. God is confessed as the God he truly is. His praise is set forth, his salvation typified, and his law made known.

Remains of this altar at Arad are roughly contemporary with the Solomonic temple in Jerusalem. (View to the W.)

(d) *The Sabbath.* An institution apart is the SABBATH. This is not a ceremony, nor is it centralized in the sanctuary. One might almost group it under family or individual worship. Nevertheless, it is an observance of the whole people. By origin it is more a day of rest than a day of worship, characterized by what is not done rather than by what is done. On the other hand, the Sabbath has a positive side from the standpoint of worship. It is a standing memorial of (i) creation (Exod. 19:11) and (ii) the deliverance from Egypt (Deut. 5:15). The sanctifying of the day to God also brings out a fundamental aspect of worship, namely, that of the sanctifying of God's name and of all life and activity in this name. Through the centuries the Sabbath served to stamp Israel as the people set apart for the service of the true and living God, and at a later stage it provided a natural day for synagogue worship.

2. The temple. Entry into the Promised Land brought with it a localizing of the place of worship. In the first instance SHILOH was the worship center, and it would appear that the Tent of Meeting, perhaps by now a semipermanent structure, served as the house of God during the age of the judges. The ark came to be detached from this site as a result of the disaster at APHEK, and Shiloh was then apparently forsaken (Ps. 78:60), so that the way was cleared for a more lasting centralization in JERUSALEM. The ark was brought there as a first step. DAVID then conceived the purpose of building the temple as a new center of worship. NATHAN's opposition to this plan had a double ground: (a) that God is not to be indebted to human beings for a house, and (b) that God had intentionally chosen a tent rather than a temple, possibly as a symbol that he is not confined to any place and that his eternal dwelling is in the heavens (2 Sam. 7:5 – 7). In spite of the objection, however, David received permission to begin assembling materials, and SOLOMON finally built and consecrated a TEMPLE which was to be the home of OT worship during the days of the monarchy.

In essentials the temple worship is the same as that of the tabernacle. There the festivals are held, the sacrifices are offered, the ark is given a new setting. If the priesthood is now especially invested in the Zadokites, the sacrificial ministry of high priest, priests, and Levites continues on a more highly organized basis. The Day of Atonement still occupies a prominent place. Evidence in the Psalms suggests that the Feast of the New Year acquires increased importance, though the thesis of a

divine enthronement involves a reading of pagan rituals into the OT doctrine (not always clearly understood in practice) concerning the relation of the earthly king to the divine Ruler of Israel. The new feasts added after the exile (e.g., PURIM) are hardly of sufficient importance to merit individual treatment here.

The great new contribution made by temple worship is the development of the poetic and musical side on a scale hitherto unparalleled. Psalms had been used in worship before, but they would seem to have been compositions for individual occasions (cf. the songs of Moses and Deborah). How far they had been regularly sung in tabernacle worship one cannot determine. David, however, gave a new place to music, as may be seen already in the procession which brought up the ark (2 Sam. 6:5). When plans were made for the temple, he set up the orders of singers and musicians that should be responsible for the praise of God in the sanctuary (1 Chr. 25). Above all, he composed many of the psalms for the great collection which became the hymnbook of Israel and which is still the heart and nucleus of all biblical praise.

The psalms, though varied in character, are peculiarly adapted for public worship, whether at the regular sacrifices, during the annual festivals, or on special occasions. In the later days of the postexilic period, particular psalms or groups of psalm came to be associated with particular services. Thus the songs of ascents (Ps. 120 – 134) were sung at the feast of tabernacles, and the Hallel psalms (113 – 118) at Passover. In greater detail Ps. 7 was a psalm for the feast of lots, Ps. 29 for the feast of weeks, Ps. 148 for the beginning of Passover, and Ps. 136 for the end of the Passover. The instruments used in accompaniment were harps, cymbals, cornets, and trumpets. Individual psalms had their own settings, though these probably underwent considerable development during the long period from the building of the first temple to the destruction of the last.

As in the case of the tabernacle, the divine indwelling of the temple was symbolized by the SHEKINAH, which filled the house when the ark was brought up into it (1 Ki. 8:10 – 11) and which Ezekiel saw departing when the temple was so defiled by idolatry that judgment could no longer be averted (Ezek. 10:18; cf. 1 Sam. 4:22). The presence of the divine glory imparts peculiar sanctity to the temple, yet not at the expense of a localization of God or a rigid distinction between the holy and the profane. God is worshiped in the sanctuary because he has set his name there. He is the God whom heaven and the heaven of heavens cannot contain (1 Ki. 8:27). He will hear in heaven the prayer that is offered toward the temple as well as the prayer and praise in the temple itself. Thus the worship of Israel maintains a freedom from cultic restriction even while it is given a specific focus according to the divine command.

3. The synagogue. The overthrow of the first temple created a new situation. This was even more serious than the temporary dislocation caused by the capture of the ark and the destruction of Shiloh. For the greater part of a century the people had no temple. Many of them were in an exile from which they and their descendants did not return. Even when the second temple was built, the Jews of the dispersion could not possibly use it as a place of regular offering and festal rejoicing. It was thus inevitable that a form of extraterritorial worship should develop, and since the building of a temple outside Jerusalem was prohibited (that at ELEPHANTINE was prob. regarded only as a proto-temple, and it seems to have been the only one of its type), this form could not be a duplication of the worship of Jerusalem. It had to be a new form adapted to the new circumstances.

Whether or not the new form of SYNAGOGUE worship appeared in the OT period is a matter of conjecture. On the other hand, the word *synagogue* itself simply means "congregation" (Gk. *synagōgē G5252* is an alternative of *ekklēsia G1711* ["assembly, church"], in the LXX), and it is more than

likely that even prior to the more specific organization of the synagogue, meetings were held by the dispersed Jews for functions that later came to characterize developed synagogue worship.

Thus the return of EZRA to Jerusalem brought a new stress both on the reading and also on the exposition and teaching of the law. This seems to imply (a) that the exiles came to see a need for instruction beyond the rudiments provided in the home, and (b) that groups in the DIASPORA had already met for study of the law which would help preserve the integrity of their faith in an alien setting. The recitation of the Shema ("Hear, O Israel") might well have served as another integrative factor, and it is difficult to suppose that common prayers did not develop on the basis of existing OT prayers (cf. the individual prayers of Daniel, Nehemiah, and Ezra). In spite of Ps. 137, one can hardly believe that there was any real or permanent refusal to make use of the poetic treasures of the psalter among the exiles. While remembrance of the great festal songs of Jerusalem would bring almost intolerable nostalgia, the expression of religion in psalm could hardly be neglected or set aside when the traditional practice of temple worship was no longer possible.

How and when such developments took place is not recorded. What is known is that prayer, the reading (and exposition) of the OT (esp. the law), the recitation of the Shema, and the singing of psalms did become the constituent elements of synagogue worship, and that impulses in this direction are to be seen from the exilic or early postexilic period onward. Synagogues as such are known from the 3rd cent. B.C., even though it is unlikely that a fixed form of worship had as yet established itself. The requirements of the situation and the restriction of the priestly ministry to Jerusalem were already forcing the movement in the direction actually taken, and it is significant that authentic forms of biblical worship resulted.

E. Individual worship. Family worship on the one side and public worship on the other did not exclude a very rich practice of personal religion in Israel. The patriarchs are early examples, for many of the prayers and acts of devotion recorded in Genesis are at the individual level. Moses, too, was a man who enjoyed a deep personal relation with God. The enactments of the law provide for many individual acts of religion even within the context of public worship. In the days of the later judges, HANNAH offers an outstanding example of personal supplication and thanksgiving offered on the occasion of a visit to the shrine at Shiloh (1 Sam. 2:1 – 10). The age of the monarchy and the exilic and postexilic periods present a whole series of people of prayer, confession, praise, and consecration, from David, through kings like Hezekiah and prophets like Jeremiah, to the great figures of Daniel and Nehemiah. How far the intense personal devotion of these believers is representative of the whole people one can no more say than in the case of outstanding Christians, but the general presentation of the OT gives no grounds for supposing that, for all their eminence, these were isolated individuals.

In this sphere, as in the worship in the temple and later in the synagogue, the psalms played a highly important role. Many of the psalms are written in "I" form. Attempts have been made to make out that this form is a collective "I," but, while there are instances that might support this view, recent scholarship has veered to the view that such psalms are genuinely personal. They express the individual piety of the authors, whether in prayer, complaint, confession of sins, confession of faith and hope, or confession of praise. They also provide expression for the personal piety of those who use them. As noted, it is possible that they were sometimes used by individuals on occasions of confession and thanksgiving in the temple. In addition, when committed to memory they were an inexhaustible treasury of devotion and guidance for everyday life. Other material learned from infancy, such as the Shema, could contribute to the same end; and later the instruction of the people in

the whole law, and to some degree in the prophets as well, offered supplementary sources. Even so, the extraordinary range, variety, and poignancy of the psalms adapted them uniquely for service in the field of individual worship.

F. Idolatry. The Greek word *eidōlolatria G1630* is built up from *eidōlon G1631*, "idol," and *latreia G3301*, "service, worship." It denotes the serving of false gods. All worship not directed to the true God is ipso facto IDOLATRY.

1. General. Some forms of worship used in alien cults may have been incorporated into the worship of Israel according to the law without falling into the evil of idolatry. On the other hand, idolatry can include the use of the prescribed forms of Yahweh worship if idols or other gods are made the objects of veneration. The question of idolatry arises in Israel, not because the true worship of Yahweh develops out of surrounding cults by a process of religious evolution, but because the people resisted the knowledge and worship of God and inclined to the religious ways of those around them. Already at Sinai one can see this tendency, for even before the worship of God was properly established, the people demanded a visible image, fashioned the golden calf, and made this the center of what was apparently an orgiastic cult. See CALF, GOLDEN.

On the human side, the story of especially preexilic worship in Israel is a story of conflict between the prescribed worship, which was never wholly abandoned, and the idolatrous cults that constantly intruded into the life of the people. If there is development, it is not the development of a pure concept or form of worship. God himself provided this model at the very outset. The development, if any, is in the understanding and practice of the form and concept already given. Nor is there any steady advance either in individuals or in the people as a whole. The pure practice of worship comes into conflict with the impure, and this conflict rages continually, so that a Solomon, for example, is probably farther from God in later life than in his young days, while periods of declension and reformation alternate in the ongoing life of Judah.

2. Canaanite cults. Although idolatry appeared already in the desert, the settlement in Canaan provided the first major impulse toward corruption. The people came into a land that had its settled sanctuaries, priesthoods, and religious practices. There is abundant evidence that not only in the days of the judges, but also in the period of the monarchy, shrines like Dan, Gilgal, Shechem, and Bethel continued to be centers of worship in addition to Shiloh and Jerusalem. Subsidiary forms of Yahweh worship were set up there, but fundamentally the cults were cults of BAAL, the fertility god (cf. Jdg. 10:6). At these centers, then, God was abandoned for Baal, perhaps in some cases identified with Baal, or subjected to an attempted syncretism with the alien god and his alien worship. Even at Shiloh, although there was fulfillment of the law in many respects, one may detect the acceptance of alien beliefs and degrading practices. Thus the immorality of the sons of ELI in the Tent of Meeting (1 Sam. 2:22) carries an echo of temple prostitution, and the value attached to the ark (4:3) suggests more of fetish or magic than of genuine faith in God.

Quite apart from the great shrines, however, there were also the groves or HIGH PLACES that were taken over from the Canaanites and served as sites for town or village worship. Instead of following the planned order, which involved complete abolition of the pagan system, the people attempted to practice their Yahweh worship within the context of the existing structure. This disobedience necessarily entailed both compromise of the faith and corruption of the practice, though the oscillations in the days of the judges and the example of the family of ELKANAH (1 Sam. 1) remind

one that the true worship was never wholly submerged.

A final point is that in N Israel in particular the fashioning of images (1 Ki. 12:28) represented a further relapse into pagan ways even after the establishment of Jerusalem as the cultic center under David and Solomon. Political considerations had a hand in this. The unfortunate civil disruption led JEROBOAM to destroy "ecclesiastical" unity as well. Not content with a rival shrine and priesthood, however, he established two golden calves as the objects of worship at Dan and Bethel. In so doing, he set a pattern that was followed only too readily by the northern kingdom throughout the period of its independent history.

Canaanite terra-cotta relief of the mother-goddess Astarte/ Ashtoreth discovered at Taanak (Late Bronze Age).

Nor did Judah in the S lag far behind in spite of the reforming reigns of Hezekiah and Josiah. The constant refrain in 2 Kings is that the people offered sacrifice and burnt incense in the HIGH PLACES (2 Ki. 14:4; 15:4, 35; 16:4; 17:10; et al.). Nor should it be imagined that the battle against high places was simply a struggle for priestly power. Quite apart from the absence of serious ethical content from the native cults, these did not merely provide opportunity for agricultural jollification. Human sacrifice constitutes the darker side of the picture (16:4; 21:6). The intrusion of these forms of worship into Jerusalem itself is the final desecration that shows how far the pure worship of Yahweh was in fact abandoned or corrupted prior to the judgment of the exile (21:7).

3. Foreign influences. The worship of Yahweh suffered attack from without as well as from within. The foreign invasion began in strength in the days of Solomon, whose attraction to alien wives was

accompanied by an equal attraction to their alien forms of worship (1 Ki. 11:1 – 8). Matters of civil policy, such as the advantageousness of foreign alliances, were allowed to control religious practice.

The example thus set was followed with no less abandon by both the divided kingdoms. In Israel the reign of AHAB constituted a climax, for he allowed himself to be dominated by his Sidonian wife, JEZEBEL. He began his reign inauspiciously by building a temple and setting up an altar to Baal in Samaria (1 Ki. 16:32). Jezebel, however, went further, extirpating the prophets of God, teaching the ways of foreign despotism, and fostering an idolatry that through intermarriage affected Judah as well (2 Ki. 8:18). The penetration of alien cults into the S continued steadily during the final days of the monarchy. AHAZ, for example, had a copy made of the altar he saw in Damascus (16:10 – 14). MANASSEH worshiped "all the starry host" (21:3). JOSIAH's attempt to end the forms of worship established by Solomon (23:13) enjoyed only temporary success, for Ezekiel paints a dark picture of vile religious practices in secret chambers in the temple (Ezek. 8:7 – 13), and Jeremiah tells how those who escaped to Egypt turned naturally to the worship of the QUEEN OF HEAVEN as their fathers, kings, and princes had done in the cities of Judah and the streets of Jerusalem (Jer. 44:17 – 19).

A survey of the actual history of worship in Israel suggests indeed that prior to the exile the conflict did not go in favor of Yahweh worship. There was, if anything, decline rather than positive development in the final stages of the monarchy. It needed the sharp judgment of the destruction of kingdom, city, and temple to bring the remnant to a realization of their loss and a clear understanding of the issues. It needed contact with alien cults in their own setting to bring home to the exiles the truth and worth of the divine revelation and the divinely instituted worship. It needed the reconcentration on essentials—the word of God, prayer, and praise—to give insight into the inner meaning of that which externally, perhaps, had seemed to be only one liturgical form among many others. It needed the throwing back wholly upon God's grace, and hence upon faith in him, to commit the people of God to true belief in the one God, and to obedience to his will, with a fullness and intensity hardly ever displayed even after previous deliverances.

G. The prophetic witness. Not without reason the PROPHETS are mostly depicted as champions of true theology and pure ethics. The truth of this understanding, however, means that the prophets had also to be champions of genuine worship. Contending for a true theology, they had to oppose the cults of false gods. Contending for a pure ethics, they had both to condemn immoral religious practices and also to oppose the error of a divorce between worship and righteousness. One of the major tasks of the prophets was to recall the people from the worship of idols, or the false worship of the true God, to genuine worship. In this sense the prophets have a powerful witness to give in the field of worship no less than in the spheres of ethics and theology.

1. Idolatry. Consistently from the earlier prophets to the great writing prophets, these servants of God oppose and condemn the Canaanite and alien cults. Thus a man of God comes from Judah to Bethel to cry against the altar of Jeroboam (1 Ki. 13:1 – 10). AHIJAH the prophet pronounces judgment on Jeroboam for going after other gods and molten images (14:7 – 16). ELIJAH stages the great contest on Carmel with a view to bringing the people back to the allegiance and worship of Yahweh alone (ch. 18). AMOS cries against the royal sanctuaries at Bethel and Gilgal (Amos 4:4; 5:5). HOSEA declares judgment on Ephraim because it has made many altars to sin (Hos. 8:11). MICAH warns the people that graven images will be cut off and the groves plucked up (Mic. 5:13 – 15). JEREMIAH, as noted, condemns the worship of the Queen of Heaven (Jer. 44:17 – 19), and EZEKIEL, in his horrifying depiction of the worship of the sun and of weeping for TAMMUZ within the very precincts of the

temple, prophesies ineluctable judgment and destruction because of these abominations.

2. Formalism. Increasingly, however, the witness of the prophets is directed against a pure externalism of worship that emphasizes the performance rather than the inner spirit. This theme is clearly enunciated by SAMUEL in his famous dictum that to obey is better than sacrifice (1 Sam. 15:22). This principle underlies the condemnation of David by Nathan, for the great contribution made by David to the worship of God gives him no right to play fast and loose with the divine commandments. Amos sounds the same note. Quite apart from the idolatry of Bethel, Israel's worship is futile because it goes hand in hand with manifest injustices committed against the people. Even when the great religious festivals are held in honor of Yahweh, he hates and despises them, nor will he accept the offerings nor hear the praise. What he wants to see is righteousness and judgment (Amos 5:21 – 24).

This line of thought is powerfully pursued by the prophets of Judah, where the worship of Jerusalem was ostensibly offered in accordance with the divine precepts. Yet, as ISAIAH puts it, the sacrifices are to no purpose, attendance at the temple is futile, God finds the solemn feasts wearisome, and he closes his eyes to the worshipers. Why? Because they make only an external show of devotion. Their conduct is blatantly at variance with their religious practice. The great essentials of true service of Yahweh—the seeking of judgment, the helping of the oppressed, the championing of widows and orphans—are all neglected. Nowhere, perhaps, is there a more graphic depiction of religious formalism, of external acts of worship divorced from true faith and active obedience, than in the later passage in Isaiah that speaks of the fasting for pleasure or contention in which a person bows down the head like a reed and spreads out sackcloth and ashes, but gives no evidence of a true fast of the heart (Isa. 58:3 – 5).

From a different perspective MALACHI pours similar scorn upon the observances of the postexilic temple. The point here is that no true worship of God lies behind the external practice, for even the practice itself is careless and slipshod. The people worship at the least expense to themselves, neglecting to pay tithes (Mal. 3:10) and bringing only torn and lame beasts as sacrifices (1:8, 13). In Malachi, too, disobedience to the ethical precepts of the law (3:5) is still a fundamental reason why the worship, even though based on the law, cannot be acceptable to God.

3. True worship. It has been argued sometimes that because of these attacks on formal worship the prophets are to be viewed as opponents of the temple system. This conclusion has even been broadened out into the thesis of a rift between prophet and priest, between prophetic and priestly concepts of religion. The prophets supposedly contend for pure faith issuing in righteous action, whereas the priests regard the cultus, and especially the sacrificial ministry, as the heart of religion. The existence of tensions and conflicts is not to be denied. Nevertheless, these surely arose out of corruptions rather than out of fundamental incompatibility. After all, the prophets were also against false prophets, that is, the abuse of prophecy. Two of the great OT prophets, Jeremiah and Ezekiel, were themselves priests. The destruction of the temple and cultus is proclaimed as a judgment, not as healthy surgery that will make possible the replacement of false religion by true religion. Toward the close of the exile one of the main functions of the prophets HAGGAI and ZECHARIAH is to promise success in the rebuilding of the temple and to summon the people to take part in this work, which will make possible the reinstitution of cultic worship. The priest Joshua (JESHUA) is called upon to play a special role in this venture, so that it is idle to think in terms of hostility between priest and prophet.

The prophetic witness against sacrifices, fasts, assemblies, and even prayer has to be set in

perspective. The prophets naturally condemn these altogether when offered to idols. They also scorn and judge them when offered by those who simply engage in the action but are not truly committed to faith in God and obedience to his command. This does not mean, however, that the prophets are calling for the complete cessation of all religious practices. They seek a purification of worship, not by its curtailment or reconstruction, but by concentration on the basic essentials.

If worship is to be what it was meant to be, then there has to be knowledge of God, true faith in him, a humble walk before him, a recognition of his gracious acts, a commitment to his will and ways. When these are present, and only when they are present, true worship is possible and has its proper place. Worship by its very nature is confession and service. On the other hand, the forms of worship cannot be substitutes for the inner core of faith and obedience. To put it simply, offering and festival are of no value without a penitent, faithful, and obedient heart. Where the heart is right, however, it is right and proper, by divine appointment, that there should also be festival and sacrifice (carefully note the change from Ps. 51:16 to v. 19, because of v. 17). The prophets are thus the champions, not of prophetic religion against priestly religion, but of genuine worship against an unworthy and useless counterfeit.

II. Worship in Judaism

A. The development of the synagogue. Reference has been made already to incipient stages of SYNAGOGUE development during the later OT period. It has been shown that at least the elements of synagogue worship almost certainly found a place in the religious life of the exiles. So far as the organized synagogue is concerned, however, the subject is wrapped in obscurity, for, apart from a possible reference in Ps. 74:8, there are no data until the 3rd cent. B.C., and the first assured allusion to a synagogue as a place of worship dates only from the 1st cent. A.D. In the main, scholars incline to the view that the organized synagogue is the product of the measures taken by the dispersed Jews to fill the gaps caused by their isolation from the temple, and that the movement of synagogical worship is from the dispersion to Palestinian Judaism, especially through the ministry of EZRA.

Opposing theories espousing a Palestinian origin are (1) that the synagogue was a Mosaic institution, (2) that what was originally a civil assembly was given religious significance by the prophets when they made their speeches there, and (3) that the synagogue is a resuscitation of the ancient cultic shrines under the influences of Josiah's reforms. Another suggestion is that the first synagogues were temples after the pattern of ELEPHANTINE but that these gradually became spiritual rather than realistic representations of the temple at Jerusalem. In the absence of solid evidence the field is obviously wide open for speculation and it could well be that diverse forces contributed to the emergence of the organized synagogue of later times. On the whole, however, a specific origin in the dispersion along the lines already indicated seems to be most in accord with the situation.

B. Aspects of synagogue worship. The theme of developed synagogical worship is complicated both by the lack of early data and also by the wealth of detail available in the later rabbinic writings. Though many of the details are of no great significance, synagogue worship as a whole is highly important because of its evident similarity of structure to early Christian services.

Since the law of central sacrifice did not permit either temple or offerings outside Jerusalem, the synagogue does not provide sacrificial worship. Perhaps the chief article of furniture is the chest or ark for the scrolls of the law (and prophets). Closely associated with this is the platform or pulpit for the reading of the lessons and the recitation of the prayers. The ministers of the synagogue are not priests, nor do they discharge priestly functions, though a priest, if present, would give the

benediction. The chief office bearer was the RULER OF THE SYNAGOGUE, who presided over the assembly, chose the prophetic lesson, and originally did the reading. The servant or officer of the synagogue acted as the ruler's assistant both in the detailed arrangement of services and also in administration. A messenger of the congregation was also selected from among the people to lead in the recitation of prayer or to pray on the congregation's behalf. Originally the messenger was chosen for each service, but his tasks later came to devolve on the servant. The herald of the Shema was another minister who either promulgated this prayer (originally from a written scroll) or led an antiphonal recitation of it. Incidentally, the reading of the Scriptures in Hebrew meant that a translation was needed to put them into the familiar Aramaic (also Greek), though many Palestinian Jews could still follow the original.

Synagogue worship at the Western Wall of the temple mount.

Ten males at least had to be present for a service. Whether or not women were originally allowed to attend is debated. Early absence of the separate gallery suggests that they might have been excluded, but among Hellenistic Jews women played no inconsiderable role, so that separation might have been by movable screen. The later gallery testifies to admission on a basis of separation by sex.

The chief element in synagogue worship is undoubtedly the reading of Scripture. From the 1st cent. B.C. readings from the law seem to have followed a triennial cycle. The prophetic readings did not conform to a settled pattern. The ruler of the synagogue usually selected the passage. The sermon, when delivered, was closely related to Scripture, for it took the form of an exposition of the prophetic reading (cf. Lk. 4:16 – 21). This exposition would normally be given only if a competent person was present. Visiting strangers could be invited to deliver the address (Acts 13:14 – 15).

Next to the reading (and exposition) of Scripture the recitation of the Shema and common prayer were the two most important features. The Shema, preceded and followed by brief prayers, consisted of three passages: Deut. 6:4 – 9; 11:13 – 21; and Num. 15:37 – 41. It served both as a confession of faith and as a constant summons to obedience and faithfulness. In fulfillment of the injunction to instruct children in faith and practice, the synagogue also undertook an educational role, not as a primary school in the strict sense, but as a school for primary studies in the law. The common prayer of the synagogue consisted of the *Eighteen (Nineteen) Benedictions*, which every Jew was supposed

to know by heart and to repeat daily. In the NT period the number of petitions was probably much smaller, and there was considerable variation in wording from place to place and even from synagogue to synagogue. This gave enhanced importance to the messenger who led the prayer. The benedictions include praise of God and prayer for the needy and afflicted. They receive their name from the blessing ("Blessed be thou…") at the close of each individual section.

Liturgical forms enjoyed a place of some importance in synagogue worship. The reading of the OT and recitation of the Shema provided a basis. The prayer of the *Eighteen Benedictions* gradually came to have a more settled form; earlier differences were due more to local variation than to extemporaneousness, though considerable latitude was probably allowed to the leader within the general content. Extemporary prayer was by no means unknown in Israel. The rabbis often prayed freely or made free additions to given forms. In public worship, however, Israel tended to develop a rich set of liturgical forms which owed a great deal to the legacy of the past. The very centrality of biblical reading helped to cast the prayers and petitions in a biblical mold. Incidentally, the congregational "Amen" became an established feature in synagogical prayer.

A final aspect of synagogue worship was psalmody. There is no certainty as to the date when psalms first began to be used in the synagogue. The probability seems to be that in later centuries at least the synagogue took over the usage of the temple. The place for the psalm was perhaps between the reading from the law and the reading from the prophets, and a cantor would sing the verses while the congregation responded with a refrain. In Palestine at least the use of psalms in the temple might well have been a retarding factor in the synagogical development, but once Jerusalem was destroyed the psalms could hardly be allowed to go out of public use, even if the synagogues did not have the musical resources of the national shrine.

A final point worth noting is that with the rise of the synagogue the Sabbath, as the natural day for assembly, became much more specifically a day of worship and contemplation as well as a day of rest. The sanctification of the day to God acquired a new positive content.

C. Individual worship. Along with the development of the synagogue, JUDAISM saw a continuation and probably an intensification of individual piety to which closer acquaintance with the OT made no little contribution. Grace was said before and after meals. The prayer of the *Eighteen Benedictions* was to be recited thrice daily. Prayers were also prescribed for specific events and occasions. Extemporary prayers might also be used. Recitation of the Shema was also enjoined. Silent meditation is recorded of some of the earlier saints, though one can hardly know how widespread this was. Personal reading of Scripture was hardly possible for most Jews, but whole passages were committed to memory and could be recalled or recited as needed. How rich a source of piety and devotion the OT could be is amply manifested in the canticles that well up from Zechariah, Mary, and Simeon at the beginning of the NT story (Lk. 1 – 2).

In both congregational and individual worship, Judaism realized clearly enough that the recitation of fixed passages and prayers raised many problems of greater or lesser magnitude. Questions of audibility or fluency need not detain us, but the problem of careless or mechanical recitation is crucial. Certain rabbis were prepared to argue that minute attention to the wording is not essential. There is objective value in the act of worship quite apart from inner concentration. Others, however, insisted that fervor and involvement are at least necessary for true prayer, if not so necessary in the rehearsal of the Shema. This would apply in congregational as well as individual practice, though it was more important in the latter. In general, one may say that Judaism, in spite of a tendency toward legalistic understanding and practice, retained a keen awareness of the danger of

formalism and made some plea for the inner devotion that is the only safeguard of individual piety, whether structured or unstructured.

III. Worship in the NT

A. Important terms. There is much to be gained by a careful examination of some of the Greek words related to worship.

1. Gonypeteō. The verb *gonypeteō G1206*, "to kneel down," and various phrases that include the noun *gony G1205*, "knee," are significant because they describe a gesture of worship which also symbolizes the inner attitude. In the Greco-Roman world the terms could have a secular reference too, for the slave would genuflect before his master. Bowing the knee did not occur in the official cult, but it had an established place in the worship of the chthonic deities, especially in cults which had stood under oriental influence.

Genuflection is common in the OT. It may sometimes be practiced before human beings, such as "the man of God" (2 Ki. 1:13) and the king (1 Chr. 29:20). On the other hand, even though standing is the normal attitude in prayer (Gen. 18:22; 1 Sam. 1:26), there is also kneeling before God (1 Ki. 8:54; Dan. 6:10). Bending the knee or kneeling is a sign of humility, self-abasement, and homage (Isa. 45:23). The rabbis later made a distinction between brief genuflection and full prostration with outstretched hands and feet.

In the NT the reference is almost exclusively to bowing the knee. The main uses are in connection with prayer to God (Lk. 22:41), petitions to the Lord (Matt. 17:14), greeting of the teacher (Mk. 10:17), and homage, whether to the king (cf. Matt. 27:29), to Baal (Rom. 11:4), to the divine Judge (Rom. 14:10 – 11), or to Jesus at the full manifestation of his Lordship (Phil. 2:10). The gesture is expressive of humility, need, respect, submission, and adoration. It passed into the early church as an established practice in both individual and common prayer.

2. Proskyneō. Related to *gony* and *gonypeteō* is the more general verb *proskyneō G4686*, which is in some ways the closest general expression to the English *worship*. The early history of this term is obscure, though it evidently derives from *kyneō*, "to kiss." It is conjectured that in the ancient Greek world kissing the earth was practiced as a means of honoring the earth deities; this in turn involved an element of bending or prostration which was originally alien to the Greeks in other spheres. More likely, the term reflects the practice of kissing the feet, or the hem of the garments, of kings who were regarded as gods. In any case, *proskyneō* came to mean, "to prostrate oneself in token of reverence, to do obeisance." Since worship seems to have been implied by the act or gesture from the very first, it was natural that the word should also be used quite early for the inner attitude of worship.

Since obeisance was already a common gesture in OT worship, it is not surprising that *proskyneō* occurs frequently in the Septuagint. It can still carry with it the thought of kissing (cf. the parallelism in Exod. 18:7), but the predominant sense is that of bowing (to the earth) in obeisance, that is, doing reverence, honoring, worshiping. In some instances obeisance is done to human beings, for example, to the prophet or to the king. This may be a courtly gesture (cf. Abraham in Gen. 23:7, 12), but in other cases the obeisance seems to be paid to a man as the representative of God (cf. 1 Sam. 20:41). Protest against obeisance to a man is expressed by Mordecai, who refused to bow down to Haman (Esth. 3:2). Angels, as the messengers of God, may be the object of obeisance (see Angel). In the main, however, the lxx reserves the word for the worship of deity, whether it be the

false idol (Exod. 20:5 et al.) or the true God (Gen. 22:5 et al.). Hence, the term carries with it the same sense as the English *worship*. The predominant use is for the worship of God, though a subsidiary generalized sense remains. The main difference is that the Greek word is by origin more closely connected with the gesture of prostration or obeisance.

In the NT the use of *proskyneō* is almost completely confined to the Gospels, Acts, and Revelation. Apart from two OT quotations in Hebrews, the only instance in the Epistles is in 1 Cor. 12:45 (applied to a person who comes into the Christian assembly as an unbeliever). In Acts the term is never used for Christian worship apart from the earliest worship in the temple (Acts 8:27; 24:11). When believers are said to bow the knees in prayer, a phrase with *gony* is used. The implication seems to be that *proskyneō* was deliberately avoided as a term for primitive Christian worship, possibly because of its pronounced association with the visible worship of a visible god in paganism.

In the Synoptic Gospels the word is reserved for obeisance to God or to Jesus. The apparent exception (Matt. 18:26) is controlled by the fact that God obviously stands behind the lord of the parable. Perhaps the most interesting feature in Matthew and Mark is that obeisance is done to Jesus. This is especially true in Matthew (e.g., the leper in 8:2; Jairus in 9:18). In the light of the worship of the Magi (2:2, 11) and the rejection of the devil's claim to worship (4:9 – 10), there can be little doubt that Matthew is not using the term merely to denote a conventional gesture of respect paid to Jesus. Wittingly or unwittingly, those who worship Jesus are recognizing his deity. This is the irony behind the mocking obeisance of the soldiers in Mk. 15:19. The disciples do obeisance only when they begin to apprehend his divine sonship (Matt. 14:33) or when they are in the presence of the risen Lord (28:9, 17). In Acts, Peter refuses to let Cornelius worship him (Acts 10:25 – 26), and the angel issues a similar prohibition in Revelation (Rev. 19:10).

In Jn. 4:20 – 24 there is an important use of *proskyneō*. In contrast to the localized worship that underlay the woman's question, Jesus refers here to the worship which is in spirit (or Spirit) and in truth. The restriction of worship to a single locality is thus set aside. Whether or not worship itself is to be a purely inward matter with no outward expression is, however, much more doubtful in view of the use of the verb. True worship is certainly an inner act of the spirit (although the statement may allude to the fact that true worship can take place only through the Holy Spirit, who is the Spirit of truth, 14:17 et al.). External obeisance is neither a prerequisite nor a guarantee. Nevertheless, there is the same ambivalence as in the prophetic message, for inner worship is by no means incompatible with outward expression, and can even demand such an expression.

The verb is an important term in Revelation. A distinction is here made between worship of the beast on the one side and the worship of God in the heavenly sanctuary on the other. The act is obviously in view, though it surely has symbolical significance in the great scenes depicted in Rev. 4 – 5. The point is that behind *proskyneō* lies the ultimate acknowledgement of conflicting total claims. In the end, however, the nations of the world will all worship God (15:4).

The fact that the verb can be used again for the final homage at the Parousia lends support to the thesis of H. Greeven (in *TDNT*, 6:765) that *proskyneō* in the NT demands in the main a visible act or concrete gesture of obeisance to visible deity. This is possible during the Incarnation and during the forty days between Easter and the Ascension of Christ; hence the synoptic use. It will be possible again at the Second Coming; hence the use in Rev. 15:4. In the intervening period, however, *proskyneō* is not the proper term for Christian worship; hence its avoidance in Acts (apart from temple worship) and the Epistles (apart from the unbeliever of 1 Cor. 14). On the other hand, it should be noted that the verb is rarely used in the Gospel of Luke (Lk. 4:7 – 8; 24:52). Moreover, it is unclear why *proskyneō,* as indicating a visible act, should be more objectionable than phrases that

use *gony* (Acts 7:60; 9:40; et al.).

3. Latreuō. The verb *latreuoμ G3302* and its cognate noun *latreia G3301* introduce us to a different sphere from that of the terms we have already considered. The basic meaning here is that of wages, or more generally service, eventually with no necessary thought of reward and in a far more comprehensive sense than that of slavery. Bodily service is first denoted, such as working on the land or functioning in a specific sense (e.g., cupbearer). The word can also be used for care of the body, the cherishing of life. In the classical world it is not a highly significant religious term, but there are instances of its use in connection with the worship or service of the gods. The performance of acts associated with the cultus seems to be the main connotation (for example, the making of the necessary preparations).

In the ʟxx the verb occurs predominantly in Exodus, Deuteronomy, Joshua, and Judges. It has the sense of "service," but in these books, and indeed throughout the OT, the reference is always religious. In each case, however, the service denoted consists not merely in the general serving of God but in the cultic act of sacrifice. The word is freely used for the service of other gods (Exod. 20:5 et al.), but the consistent demand of the OT is that Israel should serve the true and living God. This imparts a deeper element to the cultic act. Serving the Lord in offerings is based on an ultimate decision or committal of the heart. This is magnificently brought out in Deut. 10:12 – 13, which speaks of loving and serving God with the whole heart and soul. This service requires an ethical as well as a cultic outlet, for the person who loves and serves God in this way will keep God's commandments and statutes. The call of Joshua for a choice between serving other gods and serving the Lord has the same emphasis (Josh. 24:14 – 28), especially with its stringent insistence that keeping the commandments is an essential part of the required service (v. 19).

The noun *latreia* is much less common than the verb. It is used almost exclusively for cultic worship, whether general or specific (e.g., the Passover in Exod. 12:25 – 26). A remarkable feature in contrast to general Greek usage is that the nonreligious use has been virtually abandoned. This noun, however, is neither a very general term on the one side (serving God) nor a very specific one on the other (the priestly ministry). It simply denotes the cultic worship of God. As is learned from the verb, this rests ultimately on a profound self-commitment to God in love and fear.

As in the ʟxx, so also in the NT the verb is more common than the noun. The verb occurs most frequently in Luke/Acts and, as one might expect, Hebrews. Under OT influence it always bears a religious reference. The service denoted by it is the service of God (or the gods). In Hebrews the sacrificial ministry of the OT (as distinct from that of false gods) is in view. An important difference from OT usage is that in Heb. 8:5 and 13:10 the author seems to break down the ʟxx distinction between *latreuō* for cultic service and *leitourgeō* (see below) for the specific ministry of the priests (cf. also 9:9). Nevertheless, the general impulse of the NT is to extend rather than to narrow down the range of religious meaning. Apart from the use in Matt. 4:10, where *latreuō* denotes the worship one must offer God in contrast to the obeisance demanded by the devil, this extension takes place in the three main areas of prayer, work, and life.

(a) The use for the ministry of prayer occurs in Luke's writings. When Anna is said to serve God with fasting and prayers night and day (Lk. 2:37), the fasting and prayers seem to constitute an important part of the service rather than adjuncts to it. There is a similar reference in Acts 26:7, for here the service which the tribes render in hope of fulfillment of the promise surely includes prayer. This is important, for while prayer was undoubtedly implied in the cultic offerings of the OT, it did not originally constitute the true content of *latreia*.

(b) Even more significant is the use of *latreuō* for the work of the NT ministry. This is the specific contribution of Paul in Rom. 1:9, where he speaks of serving God "with my spirit in the gospel of his Son" (KJV). If he had merely said "with my spirit," one might have seen a reference to worship in spirit and in truth. The phrase "in the gospel," however, indicates preaching the gospel, as in 2 Cor. 8:18. It need not be supposed that Paul is simply saying that preaching is a constituent part of the worship in the congregation, though this is a reasonable implication and it might indeed underlie the thought of the apostle (cf. the place of exposition in the structure of synagogue worship). What Paul is doing is rather describing the ministry of the word itself in cultic terms (cf. his use of "sacrifice"). This ministry is not just service in general; it is worship. Paul does not, of course, mention preaching as such. Hence it is possible to see a broader reference. All his committal and endeavor on behalf of the gospel is a service of God in this sense. Possibly there is even a hint of prayer as well as the outward activity of ministry, though at the deepest level *latreuō* here surely indicates Paul's whole dedication to God—his underlying motivation was total commitment after the manner of Deut. 10:12 – 13.

(c) The whole life of the believer can also form the content of *latreuō*. This may be seen already in the Benedictus, which speaks of serving God "in holiness and righteousness" (Lk. 1:74 – 75). A similar use is to be found in Acts 24:14, where Paul claims that he serves the God of his fathers in fidelity to the Law and the Prophets (cf. also the reference to the conscience in v. 16 and in 2 Tim. 1:3). Similarly, Heb. 12:28 speaks of serving God with reverence and godly fear; the reference is surely to manner of life (ch. 13) rather than a pious sense of the numinous. The term is even broader, perhaps, in Phil. 3:3, where the true circumcision, service in the Spirit, is contrasted with legal circumcision, life after the flesh. It is possible, of course, that the thought here might be that of spiritual worship as compared with worship according to ritual enactment, but the general context supports a contrast between two wholly different ways of life, the joyous way of the Spirit and the painful way of legal blamelessness.

The noun *latreia* occurs only five times in the NT, and in three instances it refers to the sacrificial cultus of the OT (Rom. 9:4; Heb. 9:1, 6). In Jn. 16:2 also there is perhaps a hint of the sacrificial background when Jesus says that the killing of the disciples will be regarded as a doing of service to God. Similarly the *logikē latreia* of Rom. 12:1 is set in the context of presenting the body as a living sacrifice to God. Here, however, the sacrifice is a self-consecration that embraces the renewal and transformation of life. It is also "logical," which means that it is a reasonable thing to do, but also that it follows a logical pattern and has its ultimate basis in the Logos (the adj. *logikos G3358* here and in 1 Pet. 2:2 is sometimes rendered "spiritual"). Thus *latreia* bursts the bounds of the cultic and acquires a total reference both inward and outward. Yet in so doing it preserves the cultic association, for the very heart of this service is self-offering to God on the basis of God's self-offering for us. Orientation and content are thus given to the life of service. For service is truly rendered to God only if it is in its very essence the worship that finds legitimate and necessary expression in acts of prayer and praise.

4. Leitourgeō. The verb *leitourgeō G3310* and its cognate noun *leitourgia G3311* are related etymologically to *laos G3295*, "people," and originally indicated service rendered on behalf of a people or nation, that is, the body politic. From the very earliest examples the words have a technical sense in the Greek world. They are used for specific services which the wealthy, either voluntarily or compulsorily, render for the city or community at their own expense. Some of these "liturgies," both general and special, could be extremely costly. In the imperial period the word took on a rather wider

range of meaning, embracing all compulsory official service rendered in state or community. The papyri have many references to the assignment and limitation of such services, and especially to the burden they imposed. Then the word acquired a very extended and loose sense from which the official element disappeared. Thus slaves rendered *leitourgia* to their masters, mothers to their babes, friends to friends, fathers to sons, even courtesans to their clients. In the MYSTERY RELIGIONS the term found a cultic use which tended to give it a new technical sense. Temple employees were said to perform "liturgies," and cultic acts could be described as liturgies performed to the god.

The cultic use is predominant in the LXX. Of the hundred or so instances of the verb, only a very few are nonreligious, and the same is true of the forty examples of the noun. No trace remains of the original classical sense, and even the general meaning has more or less disappeared. The object of *lei-tourgia* is either God in person or his tabernacle, temple, altar, or name. In particular, both verb and noun are used for the particular services rendered by the priests and Levites. The priestly functions are *leitourgia*. The verb occurs either in the absolute, with "to the Lord," or with an accusative, "to render the liturgy [or liturgies] of the tabernacle." The use is almost always literal. Only in the APOCRYPHA (Ecclesiasticus and Wisdom of Solomon) does one find a tendency to spiritualize the concept. Incidentally, it is highly improbable that the LXX translators used these terms because they were already cultic terms in the mysteries. H. Strathmann (in *TDNT*, 4:22) is surely on the right track when he suggests that the official and solemn aspects determined the selection of these words for priestly functions. Though rendered primarily to God, liturgy was a national institution of benefit to the whole people. In distinction from the other word groups, *leitourgia* has the dignity associated with public service, and this is probably the decisive factor.

The words do not have the same importance in the NT as they do in the LXX. In fact, the verb occurs only three times and the noun six times. Three of the nine instances are in Hebrews, and the other six are restricted to Luke/Acts and Paul. The noun *leitourgos G3313*, "minister," and the adjective *leito-urgikos G3312*, "engaged in service," yield another six instances, but three of these are in Hebrews and the other three in Paul. In spite of its abiding influence through the English word *liturgy*, these terms can hardly be regarded as significant in the NT.

In Hebrews and also in Lk. 1:23 the usage falls within the framework of the OT. Thus ZECHARIAH is said, quite naturally, to fulfill the days of his *lei-tourgia*. Hebrews again finds a perfectly natural use for the concept with reference to ceremonial vessels and sacrifices (Heb. 9:21; 10:11). More interesting is the transfer of the term to Christ himself, who is said to have offered a better *leitourgia* when he gave himself definitively upon the cross (8:6). The sacrificial reference of the term explains its usage in relation to the high-priestly ministry of our Lord.

Thus far it might appear as if *leitourgia* were an improper term for Christian worship. Its sacrificial associations would surely imply an extension of sacerdotal ideas to the services of the church. In Acts 13:2, however, the service of the prophets and teachers suggests prayer and fasting along the lines of the spiritualizing of the word in the inter-testamental period (cf. Philo). Paul goes even further and applies the word both to the collection he organized for the church in Jerusalem (2 Cor. 9:12) and also to the gift the Philippians made to him (Phil. 2:30; cf. Rom. 15:27). Three explanations are possible here: (1) that the word is used quite generally for service; (2) that it echoes the thought of the official liturgies of classical times; and (3) that it identifies the collection or gift as a sacral act. In view of the role which the collection seems to have assumed in later worship, it is perhaps not overfan-ciful to catch a cultic note in Paul's use.

This understanding is hardly contradicted by Phil. 2:17 (cf. the association with sacrifice), though the precise meaning of the verse is hard to determine. If Paul is offering both the faith of the

Philippians and also himself, then his ministry and martyrdom are the liturgy. On the other hand, if it is the faith of the Philippians which renders the service, their Christian life would seem to be the liturgy. Either way, one finds a certain approximation to the development already noted in respect of *latreia*. The term is certainly not used for official functions performed by the apostles, prophets, teachers, or presbyters of the infant church. Hence, if the word is to be used in the church, it must not be given the sacerdotalist implications of, for example, a special application to the LORD'S SUPPER.

The noun *leitourgos* is used of Christ himself (Heb. 8:2). In Heb. 1:7 (cf. 1:14) it denotes the angels as the instruments of God's will. This also seems to be the bearing in Rom. 13:6, where rulers are called God's servants. EPAPHRODITUS is a "minister" when he brings the gift of the Philippians (Phil. 2:25); he is either the agent of service, the executor of a public benefaction, or the servant of a cultic act (cf. 2:30). Finally, in a passage with more priestly overtones, Paul himself is a "minister" of Jesus Christ to the Gentiles (Rom. 15:16). This ministry is explicitly connected with the preaching of the gospel and also with the offering up of the faith of the Gentiles (cf. Phil. 2:17). It seems, then, that Paul is again using a sacrificial metaphor for the evangelical ministry. In so doing, he characterizes this ministry as the supreme worship which, on the basis of Christ's own liturgy, the Christian can render to God.

5. Homologia. The noun *homologia G3934* and the verbal form *homologeō G3933* (from *homos*, "the same, common," and *logos*, "word, saying") bear the basic sense of "assent" or "agreement." This leads to a varied use of the verb in law and commerce, such as "to admit what is said, to confess a charge, to confirm the receipt of money, to agree or submit to a proposal, to promise." The noun can imply agreement in a discussion, the agreement of practice with theory or principle, or an agreement or compact. The concept of living harmoniously (with nature) is an important one in STOIC thought. In a religious sense, which is acquired rather than original, the concept denotes either the acceptance of vows or, more commonly, the CONFESSION of sins. Under oriental influences the confession could be made to a priest with a view to the placation of deity in a time of affliction.

If confession of sins is basic in the OT, it seems to be associated here with a very different type of confession, namely, the confessing or praising of God in his mighty acts. Various psalms bring out the connection (e.g., Pss. 22; 30). Acknowledging his sin, the psalmist finds salvation, and his penitence becomes praise and thanksgiving. Thus the confession changes its character. Admission of sin becomes acknowledgment of the grace and power of God. The confession of wrongdoing yields to confession of God, not so much in the sense of a confession of faith, but rather in the sense of a confession of praise, a magnifying of God.

For this confession both of sin and of praise the LXX prefers compound forms, especially *exomologeō G2018*. The underlying Hebrew, which has the force of praise as well as confession of sin, influences the LXX at this point (cf. 1 Ki. 8:33, 35; Neh. 9:3). The presupposition in both Hebrew and Greek is that the confession and praise take place publicly in the congregation. This means that the praise also carries with it an element of proclamation. To confess God's gracious work is to declare it (Ps. 118:17 – 21). Nor should the element of prayer be overlooked, for confessing the name of the Lord can be an act of prayer corresponding to calling on the name of the Lord. The single word *confession* can thus bind together in a unique way the fundamental constituents of true worship, namely, confession of sin, praise of God, the declaration of his acts, and prayer to him. All this presupposes, of course, the confession of faith as well.

In the NT the first sense to call for notice is that of solemn declaration. This may be very general in character (cf. the promise of Herod Antipas in Matt. 14:7). It can also merge into the more specific

biblical act of confession of faith. Thus the OT saints who, according to Heb. 11:13, confessed that they were strangers and pilgrims were not merely confirming or admitting this; they were making a declaration of faith. From this it is an easy step to the sense of witness (see TESTIMONY), which has obvious roots in the classical legal use, but which takes on a distinctive character in the NT. Witness is predominantly witness to Jesus Christ.

Confession or nonconfession of Jesus has eschatological significance (Matt. 10:32), for to a person's confession of the Lord corresponds the Lord's confession of that person. Denial itself can take the form of a confession of ignorance (7:23). Confession of Jesus as Messiah may bring about expulsion from the synagogue (Jn. 9:22). Confession of Jesus also carries with it confession of a belief (Rom. 10:9 – 10). Paul links the faith of the heart, namely, that God has raised Jesus from the dead, with the confession of the lips, namely, that Jesus is Lord. This combination gives assurance of salvation. The specific doctrine of the resurrection is the theme of confession (Acts 23:8, referring to the Pharisees). John uses *homologeō* for the Christological confession which he seeks to protect against false teachers (cf. 1 Jn. 4:2 – 3; 2 Jn. 7). True teachers can be distinguished from false by confession.

Jesus himself witnessed a good confession before PILATE. In so doing, he set an example for all Christians to follow (1 Tim. 6:13). Baptism provides an opportunity for the basic confession, which may take an interrogatory form (cf. Matt. 16:13 – 16; Jn. 1:19 – 27; Acts 8:37). If all Christians are to confess, those called to the work of the ministry have a special task of confession. The emphasis here is not so much on testimony to faith as on proclamation, witness, evangelism, or even personal teaching. Confession is the confession of Jesus, of what God has done in him. This apostolic confession lays upon the hearers an obligation to confess their sins and join in the confession of Jesus as Savior and Lord. Since the theme of confession is the gracious reconciliation God has wrought in Christ, confession still redounds to God's honor and glory, and lends itself admirably to praise and thanksgiving.

The noun *homologia* is seldom used in the NT. It has a fluidity of sense which shows how rich the concept is. The author denotes the fixed confession of faith from which the church is not to turn aside; this possibly had a hymnic form. The confession of Timothy (1 Tim. 6:12 – 13) might also refer to a fixed body of doctrine accepted at baptism or ordination, but the emphasis seems to be more on the element of public avowal. Paul uses the word quite freely in 2 Cor. 9:13. The collection gives evidence of the response and obedience of the Corinthians and in this way redounds to God's further glory. Hints of the declaration of the gospel and the confession of faith lie behind the term here. The fact that confession and obedience go hand in hand shows that there is no fundamental rift with James, who states that words without works are hollow and worthless (Jas. 2:14 – 26).

Of the compound forms, *exomologeō* is the most important. Used with "sins" as the direct object, it denotes public confession (Rom. 14:11; Acts 19:18; Jas. 5:16). More commonly, however, it is a word of praise. Paul uses the term in this sense in Rom. 15:9. Christ is confessed as Lord to the glory of God the Father (Phil. 2:11). This ultimate "homology" of creation is anticipated already in the worship of the Christian church. The magnificent songs of Revelation might be described as "homological" in form and content, though the word itself does not occur.

"Homology" is not a direct equivalent of worship. Nevertheless, it is in many ways the most comprehensive and significant of all the Greek words the Bible uses for the veneration of God. This is because it is able, as no other term, to combine the most important features in genuine Christian worship. In the NT especially, the new stress on the declaration and attestation of Christ, and of God's saving work in him, adds substance and depth to what is included already in the LXX use.

Confession of sins is still an indispensable part of worship. The confession or praise of God in prayer also retains its role.

Confession of faith, however, emerges as a central act of worship. This is twofold in content; it is confession of Jesus and it is also confession of the facts and doctrines relating to him. It is also twofold in form; it is public profession in the congregation and it is also the declaration of the gospel in apostolic witness and evangelism. Preaching, far from being an alternative to worship, is an intrinsic aspect of it. Confession of Jesus Christ, whether in the congregation or to the world, is to the praise of God's glory. As in the OT, "homology" is this praise of God which culminates in the heavenly anthems and in creation's acknowledgment of Jesus Christ as Lord. An understanding of biblical "homology" is perhaps the most important single key to an understanding of biblical worship.

B. Forms of worship

1. In the Gospels. The Gospels presuppose the forms of worship native to Palestinian Judaism in the early 1st cent. A.D. This means that the temple still occupied an important place in primitive NT worship. ZECHARIAH, father of the Baptist, was a priest, and God's revelation came to him as he fulfilled his ritual ministry in the temple (Lk. 1:5 – 20). Joseph and Mary were careful to keep the law of circumcision and the law of purification (2:21 – 24). When Jesus reached the appropriate age, he went up to the temple for the Passover; it is significant that his proleptic ministry on this occasion took place among the doctors of Israel in the temple, and that he gave to his parents a reply which at least carries the suggestion that the temple, the house of God, was his proper place (2:42 – 50). A noteworthy feature in Luke is that the beginnings of the gospel are thus set very plainly in the framework of the life and practice of Israel.

The temple maintains its importance throughout the incarnate life and ministry of Jesus. He attends the feasts: Passover, Tabernacles, Dedication. He also weaves the feasts into the pattern of his ministry. Teaching in the temple court, he shows at the Feast of Tabernacles that he is the true water of life. The Passover is the setting of the institution of the Lord's Supper and also of the accomplishment of the new exodus by his self-offering on the cross as the Lamb which takes away the world's sin. The promised outpouring of the Holy Spirit takes place significantly at Pentecost.

If Jesus has words of criticism for temple worship, they are directed against those who corrupt and defile it rather than against the worship as such. His driving out of the merchants and overturning of the tables for money is an act of defense of the temple (cf. Jn. 2:17) which arouses the hostility only of ecclesiastics and profiteers. Jesus foresees the overthrow of the temple, but he does so with the sadness of the true worshiper, not with the crazy zeal of the revolutionary.

Nevertheless, Jesus recognized that the temple had to be knocked down and that it could not be replaced in its familiar form. God never really agreed to have a permanent dwelling built for him, and the various temples had to perish. The true promise was that God would build a house for himself of the lineage of David. This promise had now come to fulfillment in Jesus, the One in whom God tabernacled among men and women in living presence. Hence the temple had reached its end and goal in the Person of the incarnate Son. Jesus could appreciate it because it had served as a type and figure of the true and final presence which God was to manifest in him. But he could not preserve it in its existing form. He could only "fulfill" it (Jn. 1:14; 2:19 – 22).

The same applies to the sacrifices and sacrificial ministry of the temple. One may assume that as Joseph and Mary made their offerings, and as Jesus himself attended the feasts, so he and his

disciples continued to participate in sacrificial worship. The life of Jesus, however, was oriented to the making of one sacrifice for sins forever (Heb. 10:12), which would fulfill the Passover, the regular offerings, and also the special ritual of the Day of Atonement. Hence, when the temple sacrifices ceased with the destruction of the sanctuary, there would be no need to restore them. They had already reached their consummation. The types had given way to the reality in the self-offering of the Lord. Similarly, Jesus accepted the ministry of the Aaronic priesthood during his incarnate life. Yet he came to fulfill the ministry of the eternal high priest after the order of Melchizedek (Heb. 7). He was concerned neither to restore nor to replace the sacerdotal service of the destroyed temple. If a newer form of Passover was set up when the Last Supper became the Lord's Supper, it should be noted that here, as in the Jewish modification, the core and center of the ancient ritual was removed with the necessary abandonment of the slaying of the Passover lamb. Jesus had offered himself as the final Passover (1 Cor. 5:7) of the new and definitive redemption.

The synagogue is no less prominent than the temple in the gospel records. The custom of Jesus was to attend the synagogue on the Sabbath day (Lk. 4:16). In the synagogue at Nazareth he read the prophetic passage and in answer to the people's expectation gave an (astonishing) exposition of it. In the first period of his ministry he went about all Galilee, teaching in the synagogues (Matt. 4:23; 9:35). He cast out the unclean spirit in the synagogue at Capernaum (Mk. 1:21 – 17). He also faced the challenge of his opponents in the synagogue by healing the man with a withered arm on the Sabbath (Mk. 3:1 – 5), and he warned his disciples that they would be scourged in the synagogues (Matt. 10:17). It seems that in the later stages of his ministry, even though crowds still followed him (19:2), he was no longer so welcome in the synagogues (cf. Jn. 9:22; 12:42). Nevertheless, there was no definitive break with this institution prior to the crucifixion, and even then the first Christian missionaries were apparently still received in synagogues of the dispersion.

The Gospels give evidence of individual as well as public piety. One may refer again to saintly figures like Anna and Simeon, whose lives were devoted to prayer and praise and expectation. John the Baptist continues an earlier stream; he is the dedicated prophet of the desert pursuing a life of asceticism. The Lord himself, for all the contrast he draws between himself and John (Matt. 11:16 – 19), both enjoins and practices an assiduous life of prayer. He wants no outward show (6:1 – 8), but his disciples are told to engage in secret almsgiving, prayer, and fasting. He warns them that prayer (and fasting) are needed to perform certain works (17:21). He insists that the disciple must live in an attitude of watchfulness (24:42). He asks Peter, James, and John to watch with him in Gethsemane (26:38). He tells them to watch and pray lest they enter into temptation (v. 41). He himself engages in a forty-day fast in the desert (4:1 – 2). Time and again the Gospels record that he spent the early morning (Mk. 1:35) or the evening (6:47) in solitary meditation and prayer.

Before the final crisis Jesus retired to the garden to find strength for obedience to the Father's will, which now meant such cruel pain and loss for himself. The prayers on the cross, from the cry of dereliction to the petition for his tormentors and the final committal, are a culminating testimony to the Savior's personal walk with God. This is reflected also in his longer prayers that have been preserved, the cry of jubilation and thanksgiving (Lk. 10:21), the beautiful high-priestly prayer (Jn. 17), and, of course, the prayer he taught his disciples (Matt. 6:9 – 13). There is perhaps an incidental reference to his use of the Shema when he bases the first and great commandment on the familiar passage from the law (Mk. 12:28 – 30).

In the true prophetic tradition, Jesus has no time for the perverting of true piety into empty formalism. He censures not only the display of prayer but also the prayer which is merely vain repetition (Matt. 6:7). He also condemns severely the exaggerated emphasis on ritual practice that

makes it a substitute for genuine righteousness (Mk. 7:6 – 8). Nevertheless, he does not reject either form (cf. the Lord's Prayer and the new ritual of the Lord's Supper) or ritual observances (Matt. 23:23) as such. His call is the prophetic call for the inner walk, the true consecration, and the right conduct which will naturally find expression in religious exercises and which alone give substance, reality, and power to the external motions.

2. In Acts and the Epistles. The witness of Acts and the Epistles is similar to that of the Gospels. The only important difference is that—as a result of the Gentile mission and increasing separation from the temple and synagogues—the churches have to develop their own forms of common worship. Even Jewish Christians obviously come under increasing pressure as persistent evangelism arouses the hostility of the ecclesiastical authorities.

The temple still figures prominently in the worship of the infant church. After the ascension the disciples were continually in the temple praising and blessing God (Lk. 24:51 – 53). Part of the fellowship of the Jerusalem church was daily attendance in the temple (Acts 2:46). Peter and John healed the lame man when on their way to the temple at the hour of prayer (3:1 – 8). Like Jesus, the apostles stood in the temple and taught the people (5:25). At a later date Paul was anxious to be at Jerusalem for the day of Pentecost (20:16). One of his first acts on reaching the city was to make his way to the temple and undergo ritual purification (21:21 – 26).

Model of the Jerusalem temple during the NT period. (View to the NW.)

When arrested and accused, Paul protested strongly that he had not offended in any way either against the law or against the temple.

The witness of Stephen shows that the early church had a strong sense of the transitoriness of the earthly temple (Acts 7:47 – 50). The pressure to Judaize was an important factor in dealing with this issue, for those who attached greater importance to the temple naturally wanted the Gentiles to become Jews so that they could worship there. The church, led by Stephen and Paul, came to see that this was neither possible nor right. Nevertheless, so long as the temple remained, it was for Jewish Christians a proper center of the true divine worship which is in faith, obedience, sincerity, and truth.

The relation to the synagogue is equally strong, though the opportunity of exposition soon made

the synagogue a place of contention and separation. Stephen seems to have engaged in synagogue evangelism (Acts 6:8 – 10). Paul makes the synagogue the starting point of his missionary work in the various cities. He preaches in the synagogues at Pisidian Antioch and Iconium. He finds a house of prayer at Philippi. It was Paul's custom to attend the synagogue, and he reasoned for three Sabbaths in the synagogue at Thessalonica (17:1 – 2). Even as late as Acts 28:16 he calls the Jewish leaders of Rome together—his detention probably prevents his worshiping at the synagogue—and seeks to win them for the gospel. In most of the Pauline churches the first converts came from the synagogues, though in no instance does a whole synagogue seem to have become a Christian congregation.

The division that took place in the synagogues through the preaching of the gospel meant that Christians were forced to hold their own gatherings. They had been prepared for this by the special times of fellowship that the first disciples had enjoyed with their Lord, whether informally by the way or more formally at meals. Already the first church in Jerusalem met together in the upper room for prayer (Acts 1:14; 4:23; 12:12). The breaking of bread, whether in the form of common meals, the Lord's Supper, or both, played some part in the movement toward the church's independent worship. Outside Jerusalem, Paul (and Barnabas) apparently took steps to bring believers together for their own gatherings, which in some instances might have been supplementary to synagogue services, though there was a definite separation at Ephesus (19:9). The comparative ease with which synagogues could be formed, the pattern of worship already provided, and the conversion of leading members (cf. Crispus, the ruler of the synagogue, at Corinth, 18:8) helped to make the formation of Christian congregations a smooth and simple process. It was probably through meeting in private homes, due to the absence of church buildings, that one reads of house-churches (cf. Phlm. 2). The apostles made provision for the supervision of the new assemblies (Acts 14:22). Somewhat after the pattern of the synagogue, the two chief ministers were the elder (bishop) and deacon, though it is perhaps a mistake to see too close an assimilation to synagogical forms.

What form of worship was pursued in the Christian assemblies? The NT gives little detailed information. From the first chapters of Acts it may be gathered that prayer and the breaking of bread were primary. The only other detailed sources are in Acts 20 and 1 Cor. 11 and 14. Acts 20:7 records a meeting on the first day of the week at which the disciples broke bread and Paul preached; the meeting seems to have been in the evening. Similarly, 1 Cor. 11 speaks of a common meal that is plainly the Lord's Supper (vv. 23 – 34), though probably in combination with an ordinary supper. In 1 Cor. 14 Paul mentions a gathering at which members might contribute a psalm, a doctrine, a tongue, a revelation, or an interpretation, though with an emphasis on (a) edification and (b) order. The injunction in 16:2 is perhaps a further hint that these assemblies were held on the first day of the week. Whether or not Corinth was typical cannot be decided, nor indeed whether the procedure in ch. 14 is supplementary to more organized worship (e.g., at the Lord's Supper). Perhaps the Corinthian emphasis on tongues carried with it a more than customary drive for freedom.

Certainly a recognized structure had not emerged at this period so far as can be seen from the sources. Nevertheless, even at Corinth the constituent features of worship—prayer, praise, exposition (and reading?), and the Lord's Supper—are plain to see. The materials of liturgy are also present. The psalms would be the OT psalter, and readings involve a fixed form of words. Paul gives a simple order for the Lord's Supper. Part of the general content of prayer is enjoined in 1 Tim. 2:1 – 4. The prayer of Acts 4:24, though extemporaneous, uses liturgical phrases obviously drawn from the OT. Even the sermons recorded in Acts are not without patent similarities of wording and structure. Since the primitive church was heir to the rich tradition of the OT and Judaism, it would be strange if things were otherwise. The new spirit and power lie in the new understanding of the old forms, the

fashioning of new forms out of the old, rather than in mere formlessness.

Individual piety finds no less expression in the life and teaching of the apostles than in that of the Lord. Paul is a good example. He practices and enjoins unceasing prayer (1 Thess. 3:10; 5:17). He calls for prayer in support of his ministry (Eph. 6:18). In many verses he indicates the content of his own prayers, which in the epistles at least are very largely intercessory in character (Phil. 1:4 – 11; Col. 1:9 – 12); though a passage like Phil. 3:8 – 11 becomes almost a prayer of aspiration, and his first Christian prayer (Acts 9:11) was almost certainly a prayer for forgiveness and enlightenment. The indication of content is even more extended in Eph. 3:14 – 21, which seems to have been dictated by the apostle quite literally on his knees in the gesture of individual prayer (Dan. 6:10). This prayer of petition characteristically moves to a doxologi-cal climax which expresses the confidence of faith and sees in all God's work a fulfillment of the first request of the Lord's Prayer. Steeped as he is in OT and Jewish forms, Paul adopts quite naturally a liturgical language that is a free adaptation of existing phrases. The intensity of his personal faith and devotion, allied to extensive biblical knowledge, produces a perfect blend of dignity and fervor.

In addition to prayer, Paul commends a diligent study of the Scriptures, whether by reading or by committing to memory (cf. 2 Tim. 3:14 – 17; Eph. 6:17). He also calls for a life of self-discipline, which may even include celibacy if this is the divine gift (1 Cor. 7:1 – 9), but which certainly includes bringing one's body into subjection for the sake of better service (9:24). The discipline of fasting is not neglected (2 Cor. 11:27). Thanksgiving is also to be the constant attitude and exercise of the believer (1 Thess. 5:9). The grave and sober conduct expected of bishops and deacons (1 Tim. 3) does not specify a personal exercise of piety, but this is surely implied. Timothy as a man of God is exhorted to pursue godliness (6:11). While the worship of the individual merges into that of the fellowship, and also into general uprightness of life and conduct, the personal exercise of religion is no unimportant aspect of worship in the NT.

C. Elements of worship. Though the NT does not give any detailed information on the structure of the first Christian services, it leaves little room for doubt concerning the basic elements in primitive worship. These are, of course, the elements already learned from the principles of worship and from OT practice. Their embodiment in synagogue worship might well have led to their immediate use in the infant church, since an early description like that in JUSTIN MARTYR's *Apology* (1.65 – 67; c. A.D. 150) reveals a close similarity to the practice of the synagogue. Nevertheless, even without this model, the fundamental elements would surely have found a place, and distinctive Christian features have, of course, their own origin.

1. Prayer. PRAYER in the more specific sense of petition is naturally a first constituent element. The very first duty of the church between the ascension and the outpouring of the Spirit was to wait in prayerful expectancy. Persecution quickly forced the Jerusalem church to its knees in common prayer. The needs of Christians, the needs of apostles and teachers, the needs of the world—all provided constant material for intercession. Common concern produced common petition. One cannot say how exactly the church prayed. Perhaps a leader prayed for the whole, perhaps individuals prayed in course, perhaps there was recitation of a form or forms of prayer. Rather surprisingly, there is no immediate reference to a congregational use of the Lord's Prayer (even the use in *Didache* 8 is individual), but this was later found to be natural enough.

The AMEN, having acquired a new and even deeper meaning from its use by Jesus (cf. also 2 Cor. 1:20), occurs frequently in the NT and probably served as a congregational response, as in

synagogue worship (cf. Justin). Stock phrases like MARANATHA might well have been used also (1 Cor. 16:22; cf. Rev. 22:20; *Didache* 10.7); otherwise it is hard to see why they should be preserved in ARAMAIC. BLESSINGS, whether from the OT or in the new Christian form of 2 Cor. 13:14 or Rev. 22:21, probably came into rapid use. The Epistles especially seem to testify to the emergence of distinctive vocabulary of Christian worship even in the NT period. Whatever the forms, however, the essential element of prayer itself belongs to worship from the very outset, and a genuine Christian service without it is almost unthinkable.

2. Praise. Closely related to prayer is PRAISE, the confession of God's nature and works. Indeed, prayer in the form of thanksgiving is itself praise. Almost all the prayers recorded in the NT contain an element of DOXOLOGY. They recall God's acts and thus sound a note of assurance and triumph. Quite apart from prayer, however, the praise of God has its own place in NT worship. The infancy stories show how the life of Christ began with angelic and human canticles that ultimately served as new songs in the congregation. The cry of jubilation uttered by the Lord took quasi-hymnic form. Jesus and the disciples sang a hymn—probably the customary HALLEL—at the Last Supper. Paul refers to a psalm at worship in Corinth, and to hymns and spiritual songs in Eph. 5:19. Scholars have discerned possible fragments of early Christian hymns in such passages as Phil. 2:6 – 11 and 1 Tim. 3:16. The hymns of Revelation show that songs are sung in heavenly as well as earthly worship, though some expositors think Rev. 4 – 5 might be based on the worship of the congregation. In the earliest period the psalter was probably the hymnbook of the church, but if the reference in PLINY the Younger's letter to TRAJAN (*Ep.* 10.96) is to Christological hymns, it seems that quite early new and more specifically Christian hymns found a place in the confession of praise.

3. Confession of sin. The CONFESSION of sin is at the heart of worship, for, as the worthiness of God is exalted, the unworthiness of sinners demands acknowledgment. The prayers and psalms of the OT are full of the recognition of guilt, which obviously goes hand in hand with a plea for FORGIVENESS and restitution, and with praise and thanks for the divine MERCY and pardon. In the NT the gospel is by its very nature a divine word to sinners. The baptism of John stands at the entry with its summons to repentance and conversion. Jesus takes up the same call, followed by his apostles in the first preaching of Acts. Peter, confronted by Jesus, confesses that he is a sinful man (Lk. 5:8). The prayer God hears in the temple is the penitent prayer of the publican rather than the self-congratulatory prayer of the Pharisee (18:9 – 14).

In the church's worship, the great occasion for the confession of sin is at BAPTISM, when the old life of sin is renounced and the new life of faith and obedience is begun. In postapostolic days the public confession of specific faults was required when the excommunicated sought readmittance. It may be seen from 1 Jn. 1:8 – 9, however, that confession of sins to God, whether individually or in concert, played a continuing role in the life of believers. Paul in his letters refers again and again to the utter dependence of himself and all believers on the divine mercy. Thus, even though there is no great evidence of specific prayers of confession in NT worship, this element must be presupposed as the basis of all prayer and praise. Prayer itself has to be in the name of Jesus, since there is nothing in oneself or in one's own name which could constitute a valid ground of either access or answer (cf. the role of Jesus as High Priest and Intercessor in Heb. 7).

4. Confession of faith (baptism). In the OT the Shema, though primarily commandment, served also as confession of faith: The Lord our God is one Lord. As such it had found its way into the worship of

the synagogue. Though the Lord gave it added point, it was not adopted by the early church. The main reason is not that this basic confession was abandoned, but rather that there had now been added the distinctive Christian confession: Jesus is Lord. The faith of the primitive church is faith in Jesus as Savior and God. Peter makes this primary affirmation in Matt. 16:16. It may be seen again in THOMAS's confession (Jn. 20:28). John's gospel was written with a view to it (20:31). The work of the Spirit is to induce in Christians the affirmation that Jesus is Lord (1 Cor. 12:3). All tongues will finally confess this truth (Phil. 2:11). On this belief rests the full confession of the triune God (Matt. 28:19).

The point at which this confession is specifically made in the church is at baptism. This is given in the name of Jesus (Acts 2:38). The ETHIOPIAN EUNUCH professes belief in the Lord (8:37). CORNELIUS is baptized in his name (10:48). The Philippian jailer is baptized when he believes on the Lord and is saved (16:30 – 33). The evidence of the later church (Justin, *Apology* 1.61 et al.) is to the same effect. The baptismal confession was often made in interrogatory form, and it was followed by baptism in the triune name (triune immersion from *Didache* 7.1 onward). Whether or not there was also a specific confession of faith in ordinary worship is open to question. Certainly the NT offers no instance. Baptism itself, however, was also a normal part of the worship of the church. Taken over from John and continued and commanded by Jesus, it was required for admission to the church, and it included at its heart a confession of faith as well as repentance. Administered in various circumstances and with wide variations of wording, it retained its essential features through every change.

The first service for the convert was of common concern to the whole congregation. Like the Lord's Supper, it had, of course, a primary declarative aspect, for the ultimate baptismal confession is confession of the saving act of God in the death and resurrection of Christ. Nevertheless, it also provided opportunity for the affirmation of faith, which was quickly seen to be a reaffirmation by existing believers. The later weekly confession is a fairly natural and not unbiblical development that finds a regular place for this essential aspect of worship.

5. Reading of Scripture. Rather strangely, the NT does not refer to the reading of the OT in the common worship of the church. Paul's letters are publicly read (1 Thess. 5:27), and this might well have formed the beginning of the later NT readings (cf. Justin's reference to "Memoirs of the Apostles," *Apology* 1.66). The traditional texts relating to the Lord's Supper also seem to have been rehearsed (1 Cor. 11). In the light of synagogue practice, the extensive use of the OT in the NT, the later knowledge of the OT displayed in the postapostolic period, and the early patristic references to OT reading, it is virtually impossible to suppose that the NT church did not include OT readings in common worship. The fact that there were sermons (e.g., Paul at Troas) supports this. A sermon in the synagogue was primarily exposition. Early Christian preaching was especially concerned to show the fulfillment of the OT in Christ. Furthermore, the mention of an interpretation seems to presuppose reference to the OT. The high estimation of Scripture (cf. 2 Tim. 3:14 – 17) is a further consideration. Great freedom was no doubt exercised—even the synagogue had as yet no prophetic lectionary. But the reading of God's written word, first in the OT and then increasingly in the NT, was surely a constituent part of worship from the very first, as it patently was in both temple and synagogue, and then again in the church of the 2nd cent.

6. Preaching. In contrast to reading, PREACHING is solidly attested. Paul preached at Troas. The prophesyings at Corinth also seem to be forms of Christian exhortation. The needs of evangelism and

education as well as edification made it essential that the ministry of the word be included in the early services. The synagogue provided a partial parallel, while the teaching of Jesus furnished an example. The apostles were specifically called to the ministry of the word (Acts 6). At a later time bishops were to be apt to teach (2 Tim. 3:2). Preaching combined several aspects of worship: declaration of God's work, confession of faith, underlying prayer, the climax of praise.

Early preaching was particularly related to the OT on the one side and to the life and work of Christ (later the NT) on the other. While not restricted to formal exposition, it had a strong expository content if one may judge from the sermons in Acts. Among Gentile Christians in particular a good deal of information would have to be passed on in preaching, for the same level of biblical knowledge could not always be assumed as among Jewish Christians or the early "god-fearers." APOLLOS, a man mighty in the Scriptures, exercised an important ministry in this field (Acts 18:24 – 25). In the postapostolic period Justin gives evidence of the secure position of preaching in the normal Christian service.

7. The Lord's Supper. If baptism was an addition to synagogue worship (though not without some parallel in proselyte baptism), this is even more true of the LORD'S SUPPER. Both biblical and patristic evidence supports the view that this was from the very first a constitutive part of weekly worship. Certainly in Justin's time there is no disjunction between ministry of word and ministry of SACRAMENT, and the examples of Troas and Corinth suggest that, with variations of time and structure, the same applies in the NT period as well. The one gathering embraces not only prayer, praise, reading, and preaching, but also the holy meal, which was probably accompanied by blessings (cf. *Didache* 9 – 10) after the manner of the Passover. The Lord's Supper took the place, not only of the Passover, but also of the temple offerings. This is why sacrificial language soon came to be used in respect of it (cf. Mal. 1:11).

Yet, it was not strictly a replacement. The Lord's Supper shows forth the one sacrifice for sins for ever. Christ as High Priest has made a sacerdotal ministry redundant. Hence the ministers of the Supper, whether apostles, bishops, presbyters, or deacons, are truly ministers, not priests. The focal point is declaration of the death and resurrection of Jesus Christ for mankind. This is the ground of the fellowship here enjoyed with God and with fellow believers. Ultimately, then, the Lord's Supper, like all else, is Christological rather than, in the narrower OT sense, liturgical. To describe it as quintessentially liturgy is in the last resort misleading. It is also to do despite to its very real place and significance within the church's worship as a perpetual reminder that worship is possible only on the basis of the atonement God himself has made by his self-offering in the Son.

8. The collection? The reference to a weekly allocation in 1 Cor. 16, the liturgical significance ascribed to alms in Phil. 4:18, and mention of an offering in patristic writings, have led to the view that a collection formed a basic element in Christian worship. Difficulties in the way of this conclusion are the following: Paul does not speak of a church collection; the Philippians' gift, like the Jerusalem collection, was probably a special project (though rapidly succeeded by extensive poor relief); and TERTULLIAN refers only to a chest for spontaneous gifts (*Apology* 39.1 – 6). Furthermore, some scholars argue that Justin's offertory is that of bread and wine for communion, though this was no obvious part of the original institution. On the other side, one should consider that almsgiving had a long OT history, and that the importance of liberality as part of serving God is beyond dispute. Thus, if it is too much to say that the collection is a constitutive part of the service, there are good grounds for its later inclusion. The "kiss of peace" falls into something of the same category.

9. Occasional services? It has often been noted that there are no marriage or funeral services in the NT. It should be remembered, however, that such services are only an application of the basic elements of worship—prayer, praise, reading, exposition, and the Lord's Supper where appropriate —to specific situations. In fact, the NT itself mentions certain occasions—e.g., confirming by the apostles, ordaining, and perhaps the anointing of the sick—when biblical signs (laying on of hands, anointing) were used along with other liturgical elements. This does not mean that there were developed services of confirmation, etc. It simply shows that there can be rapid adaptation of the basic elements to particular needs, sometimes with a particular sign. The consecration of Paul and Barnabas to missionary service at Antioch offers an instructive example (Acts 13:2 – 3). Whether or not any given service can find a precedent in the NT, the NT certainly offers the materials from which a genuinely biblical service may be constructed, and the injunction that all things are to be done in the Lord means that the introduction of elements of worship is never a misplaced or unwarranted intrusion.

D. Essence of worship. Though the elements of Christian worship are the same as those found already in the OT, there are two new factors at the very heart of the NT which bring about a decisive reorientation.

1. Christ. The first of these is that Christian worship is in its very core and essence the worship of God the Father through God the Son. The elements remain; the Christological orientation is new. If space allowed, one might easily work through the data afresh. In this brief climax and conclusion, a few indications must suffice. The worshiper now stands in a personal relation of sonship to God on the basis of ADOPTION in Christ. He prays in the name of the Son (Jn. 16:23). The works of God in the Son are the theme of his praise (Eph. 1:3 – 14). His plea for forgiveness is that Christ gave himself as a perfect sacrifice for sin (1 Jn. 1:7 – 10). His confession is confession of Jesus as Lord (1 Cor. 12:3).

Armenian worship processional at the Church of the Holy Sepulchre in Jerusalem.

The Scriptures, both OT and NT, testify of Christ (Jn. 5:39). Preaching is the setting forth of

Christ in his revealing and reconciling work (2 Cor. 5:18 – 21). The Lord's Supper is the Passover of the new and final exodus, the showing forth of the one sacrifice for sin (1 Cor. 11:26). Christian almsgiving acquires a new ground and basis in the light of God's gift in Christ (2 Cor. 9:15) and of the giving of all gifts to him (Matt. 25:31 – 46). The suitability of worship at various points in life rests in the fact that all Christian life is life in the Lord (Rom. 14:8). The decisive point, then, is not that new forms are provided or new levels of devotion insured, but that God in Christ has come in person and fulfilled his work of grace. With this focus worship is given a depth and content that it could hardly achieve in the time of OT and Jewish expectation.

2. The Holy Spirit. The second of the new factors in Christian worship is that in its very core and essence it is worship of God the Father through God the Son, and in and by God the HOLY SPIRIT. True worship has always been both spiritual and in the Spirit, but, as Jesus himself showed, his own ministry brought with it a specific coming of the Spirit that makes possible in fullness the worship in spirit and in truth. Prayer comes with the assistance of the Spirit (Rom. 8:26 – 27). Praise is rejoicing in the Spirit (Eph. 5:18 – 19). Confession of sins is under conviction of the Spirit (Jn. 16:8). Confession of faith is confession by the Spirit (1 Cor. 12:3). Holy Scripture, given by the Spirit, is illumined by the Spirit (cf. 2 Cor. 3:6). True preaching takes place "with a demonstration of the Spirit's power" (1 Cor. 2:4). The fellowship of the Lord's Table is a fellowship of the Spirit (cf. Acts 2). Liberality flows from the love which is a fruit of the Spirit (Gal. 5:22). The living of life in a context of prayer and praise and proclamation is a walking in the Spirit (cf. Rom. 8:1 – 17). It is a question, not of spiritual worship as distinct from liturgical worship, but rather of the inner ministry of the Spirit in regenerating and sanctifying power. The person who is born of the Spirit and led by the Spirit is one who even in outward expression offers to God, through Christ, fitting and acceptable worship.

G. W. BROMILEY

wrath. The concept of anger is used in the Scripture in regard to both God and human beings. It is a major doctrine of both the Jewish and Christian religions.

1. Divine wrath
   1. Divine wrath in the OT
   2. Divine wrath in the Apocrypha and the Pseudepigrapha

I. Divine wrath. It is a biblical principle that the wrath of God is of a totally different order and definition than human wrath. The difference in kind between human and divine anger is so great as to be incalculable, and human wrath is creaturely and subject to the creation ordinances of God.

A. Divine wrath in the OT. The wrath of God is frequently presented in the OT, both in principle and in historical examples. It has a fundamental place in the presentation of the biblical ground-motive of creation-fall-redemption-restoration. The absolute necessity and consequence of redemption after the FALL is centered in the nature of iniquity and the demands and finality of the divine wrath.

1. OT terminology. Historical events and natural calamities in the OT are frequently understood as displays of the divine wrath. Often the principle of God's anger is presented in anthropopathic terms; thus the terms indicating the range of human emotions from irritation to fuming rage are applied to the motivations of God. The common noun *)ap H678*, literally meaning "nose," is often used figuratively with the meaning "anger, wrath" (prob. by metonymy from the fact that anger may be accompanied by heavy breathing or snorting; cf. the verbal form *)anap H647*, "to be angry"). This term frequently occurs with other nouns, especially ḥārôn H3019, and the resulting combination, meaning literally "the heat/burning of the nose," may be rendered "fierce anger" or the like (e.g., Num. 25:4; cf. the verb ḥārâ H3013). It has been proposed that in Hebrew psychology the nose was the center or organ of such emotions, but the usage is best explained as a simple idiom (cf. English *heartache* or *cold feet*, which by no means indicate either a physiologic condition or any essential psychologic assumption).

Other relevant terms include ḥēmâ H2779, "heat, venom, rage" (Gen. 27:44 et al.), ⟨ebrâ H6301, "crossing, outburst, rage" (49:7 et al.), and qeṣep H7912 (Num 1:53 et al.; cf. the verb qāṣap H7911). In addition, there are any number of words that are used figuratively to indicate anger or angry behavior, such as "plowing" (Jer. 33:18), "reaping" (Isa. 17:5), "refining" (Mal. 3:2 – 3). Especially important are those words descriptive of battle and combat, for the armies of Israel and the nations are often described as the means of God's vengeance and wrath (e.g., Isa. 10:5 – 6). Most frequently are found the terms for defeating the enemy. It is important to note that nowhere in the OT is Yahweh mentioned as himself fighting, nor are any supreme weapons mentioned, as is common in the Babylonian and Egyptian annals. The victories won by Israel are won by the might of Yahweh's will and the onslaught of his messengers. This demonstrates itself very clearly in the fact that many indirect associations are made between God's anger and Israel's victories.

2. Means and ends of the divine wrath. The means of the divine wrath are always some created agency of God's will, his angelic hosts (2 Sam. 24:17), his people of Israel (Ezek. 32:9 – 31), Gentile nations (Isa. 10:5 – 6), and forces of nature at God's command (Jdg. 5:20). Through the valid agency of these forces God brings about his just cause in human history and in the course of nations. The ends like the means of his wrath are just and right. The end of God's wrath is twofold: (1) the

maintenance of the creation law order which demands justice; (2) retribution to those who act wickedly. Throughout the activation in history of the divine wrath, the objectivity and responsibility of the means are held strictly intact. The wrath of Yahweh is never unleashed for no purpose or for some mysterious outcome; the acts of God in justice are always clearly visible. The divine wrath is equally incensed at all evildoers, whether among the covenant people or among the Gentile and pagan nations. The kings, priests, prophets, tribes, and people of Israel are judged and punished as well as the leaders and rulers of the nations (Ps. 2:1 – 3).

In the 19th cent., it was characteristic of the scholastic systematics of the time to draw too sharp a distinction between the sinner and his sinful act, and then to assume that the very real wrath of God was vented only upon the abstract notion of the sinner's sin. The OT is clear, however, that iniquity does not exist apart from the iniquitous acts of the wicked. The judgment is therefore leveled upon the wicked creature. This is why the means and ends of God's wrath often take the form of war and carnage. These distinctly human forms of violence and bloodshed are used for God's glory. The general evolutionary humanism of modern times has found this biblical concept cruel and unacceptable, but its essential truth is seen in the course not only of biblical but also postbiblical history.

Of primary importance is the fact that God holds the objects of his wrath responsible for their sins and therefore justly delivers them up for destruction. Because of this last fact, many commentators reject the portrayal of God in the OT as cruel and capricious. In such judgments, they lose sight of the ends of God's wrath, namely, the restitution of the structures that have been violated by the design of the wicked. In this sense the COVENANT operates without question: the usurpation of God's authority by men or angels brings about their swift and sure destruction in the face of God's wrath. The very holiness and transcendence of God are such that they must be approached with fear and awe. To blaspheme his sovereignty through resistance to his revealed will, the law, and Scripture, is to invite and demand his wrath.

One central consideration is that the apostasy of Israel in accepting the worldviews of the Gentile nations and worshiping their pagan idols is a direct cause of social inequity and political disruption. Against both of these God's wrath is ignited. The law of the prophet Moses and the warnings of the great prophetic voices are binding alike upon Israel and the Gentiles. Since the OT declares the promise of God's people to be the source of his blessing to all mankind, it is obvious that the wrath of God is to be kindled against those both within and without Israel who attempt to frustrate the divine plan (Num. 11:1; Deut. 1:26 – 36; 13:2, 6, 13, et al.; Josh. 7:1; 1 Sam. 28:18; Pss. 2:1 – 6; 78:21 – 22).

3. The divine wrath and the atonement. The wrath of God works in two ways simultaneously, in that it delivers the oppressed (1 Sam. 15:2 et al.) and condemns the wicked (Deut. 7:4 – 5). However, a basic part of the biblical teaching concerning the wrath of God is that an ATONEMENT is offered to remove the wrath and justify the ungodly. This atonement in the OT is appropriated by the keeping of the law and trust in God's promises (Ezek. 36:22 – 32). Since the nations of the world are required to come to the covenant people of Israel for grace, the OT demands that Gentiles follow the law of Israel for mercy. The wrath of God then acts as a warning and encouragement to human obedience. One special factor of the atonement in the OT is that it is consistently future in character. It presents the final removal of God's wrath and the preservation of the atoned in terms of the great final day or days of God's judgment. This eschatological aspect is associated with the OT teaching about the culmination of history in the DAY OF THE LORD . The time of the divine visitation is primarily a day

of wrath (Isa. 2:12), but the same divine proclamation that shall bring damnation to the wicked will bring salvation upon his people in "the last days" (vv. 2 – 5).

The removal of the divine wrath upon satisfactory REPENTANCE or OBEDIENCE is usually associated with the calamity of natural catastrophes, the common method of God's judgment in history. It has been assumed by recent writers that the rituals of the TABERNACLE and TEMPLE in some magical way turned away the wrath of Yahweh, but this is not supported by the text. All of the rituals and cul-tic practices of Israel were confirmed in the eschatological expectation of the great and final "blessing." This would be brought to fulfillment by the SERVANT OF THE LORD (Isa. 49:7 – 8; 53:10 – 12). The love of Yahweh was shown in his supplying free, unmerited grace sufficient for the needs of Israel's atonement.

A common mistake is to interpret the EXPIATION of Israel's guilt by some suffering or activity undertaken by Israel and with which the demands of Yahweh's justice were satisfied; but there is nothing of this in the OT. The people of Israel were not redeemed from Egypt because of their faithfulness, but by the sustaining of the covenant by God. It is God who sets forth and provides the keeping of his covenant in spite of the sins of his people. In fact, the special elective place of Israel among the nations of the world carries with it a vastly increased responsibility before the face of God (Amos 3:2). The demands of God's law are rooted in his justice, the provision for its keeping in his LOVE. In the end it is the motive of love which the OT seeks (Ps. 1:2 et al.) and which brings all of Yahweh's blessings upon his people. This blessing and the promise of its certainty are based upon the appearance of the heavenly exemplar of the blessing, the MESSIAH. The final completion of both the wrath and the mercy of the old covenant came to pass in the advent of the Lord Christ, in whose person both Judge and Saviour are one (Mk. 1:14). In his coming all the promises and prophecies of the OT were fulfilled.

B. Divine wrath in the Apocrypha and the Pseudepigrapha. The APOCRYPHA and PSEUDEPIGRAPHA continue the theme of destruction upon the Gentile nations which have persecuted Israel. Some of the documents look forward to a political messiahship and a restoration of the Davidic state. The Lord is the protector and victor for Israel (2 Macc. 15:17 – 36). Other writings are more eclectic and reflect certain syncretistic characteristics, so much so that ARISTEAS says: "It is necessary to acknowledge that God rules the whole world in the spirit of kindness and without anger of any sort" (*Aristeas* 254). But this is not typical of the older more traditional records, where the wrath of God is more often than not directed in an almost mechanistic sense against some human oppressor (*Jub.* 36.10), although in some passages the older prophetic message of God's judgment upon an iniquitous Israel lingers on (4 Macc. 4:21). An interest in the possible return of famous biblical personalities is a feature of these writings generally, and the mediatorship of Moses, Elijah, or an angel in diverting the wrath of God is noted (Wisd. 18:21).

C. Divine wrath in the DSS. The same pattern of interpretation found in the Apocrypha and Pseudepigrapha is carried through in the DEAD SEA SCROLLS with some minor extensions, the main one being the cursing of the nations by the Jews and the expectation of an outpouring of divine wrath. The "day of wrath" is seen as the day of the ultimate triumph of the armies of Israel. In effect, the whole of the *War Scroll* (1QM) is concerned with the ordering of the Lord's army for the outpouring of wrath. In such scenes the Romans replace the Hellenistic kings as the accursed objects of God's anger. The division between the blessed, the Jews, and the damned, the Gentile nations, is complete in the DSS with none of the redemptive promise of the OT, and little of the threats against the

apostasy within the covenant. In fact, the institutional temple is also castigated because of its fealty to Rome. The wrath of God has become political retribution. This warlike pervasive nationalism utilizes the imagery of the crafts more than the emotional terminology. Terms for smelting, refining, and dividing predominate (1QS I, 16; IV, 20; VIII, 4; et al.).

D. Divine wrath in the NT. The NT assumes from its very beginning the end and fulfillment of the OT covenant. Therefore the wrath of God is understood with the ancient doctrines, but with a wholly new emphasis. The emphasis is that of obedience or submission to Christ. The anger of the final judgment is the anger of Christ. The nationalistic protection of the Jewish commonwealth by threats of divine wrath is totally absent from the gospel narratives. The reason is that God's promise has been kept and the Messiah of Israel is at hand. In this role Jesus Christ takes on the titles and many of the images of the OT.

1. NT terminology. The common Greek word for "wrath" is *orgē G3973*, used in the SEPTUAGINT to represent a number of Hebrew terms. It is used without distinction for all aspects of wrath as defined by the OT. The cognate verb *orgizō G3974* (always in the passive form) also occurs, but much less frequently than the noun. The cognate adjective, *orgilos G3975*, is found a few times in the LXX and only once in the NT (Tit. 1:7). Anger is attributed explicitly to Jesus only once, in his confrontation with the PHARISEES at the synagogue of CAPERNAUM (Mk. 3:6; but cf. such passages as 1:43 and 10:14).

However, the threat of God's wrath resulting in eternal damnation is so central that the common dichotomy between the "loving heavenly Father" of Jesus' discourse and the wrathful Yahweh of the OT is without warrant. The use of the notion of the wrath of God is terrible in the NT because it is not applied to the political sphere in the sense of the victory or defeat of an alien power but has in view the destruction of the soul and the eternal punishment of the wicked (Mk. 9:43 – 48 et al.). There are no terms in the NT describing the wrath of God in anthropopathic form. Of the OT images used, the most frequent are those common to Isaiah and the Psalms. Many of Christ's parables deal directly with the wrath of God and portray it as the recompense, not alone for thwarting the nation of Israel and its destiny, but also for rejection of the Messiah (Matt. 7:13 – 27). Only in a few contexts are the judgments of God's wrath associated with physical or natural calamity as is common in the OT. In Lk. 13:4 – 5, the suddenness of the fall of the tower of SILOAM appears to be more important than the death of the eighteen victims. In fact, the teaching of our Lord is explicit in warning not of physical calamity, but of the punishment of the soul (Matt. 5:21 – 22; 10:28).

2. Christ and the divine wrath. Christ plays a double role in the operation of the divine wrath. He is at one and the same time the heavenly judge and the primal sinner under judgment. No king, prophet, or priest in the OT is ever mentioned as having the divine authority of judgment except as a messenger or servant of God. It is in this office that he is introduced by JOHN THE BAPTIST (Matt. 3:11 – 12; Lk. 3:16 – 17). The image of the supernal gleaner with his flail separating the righteous and the impious is repeated throughout the OT (Ps. 1:4 et al.). In his parables Jesus repeats the description of the Lord of heaven as a judge (Matt. 13:24 – 30). The specific threat of this future violence culminating in the coming of the SON OF MAN (24:29 – 39) he applies to himself.

The very title Son of Man alludes to fulfillment of the OT expectations of the "latter days" and the "day of the Lord." The vicarious assumption of the guilt of sin by Christ so that he could receive the judgment of death is the most profound mystery of the Christian faith. The picture given us in the

trial and crucifixion of the Messiah, the Servant of God suffering before the human tribunals the outpouring of the wrath of God, defies all description and silences speculation. The gospel narratives rely upon the terminology of wrath displayed in the OT: the "outpouring of the cup," "drinking from the cup," and other such phrases. In the explanatory epistles the full meaning of Christ's sacrifice in the atonement for sin and the expiation of the divine wrath is made clear (Rom. 5:9; 8:1; 2 Cor. 5:21; Gal. 3:13; and many other passages).

One final expansion of the wrath of God remains in the NT, and that is the apocalyptic usage in Jude and Revelation. Although the OT "day of the Lord" is complete with the coming of the Messiah, the terminology and meaning of the prophetic visions are carried over to apply to the PAROUSIA, the culmination of history in the final wrath of God at the return of Christ. The most complex and involved prophecy of the end time is that in the book of Revelation. The complete possibilities of the OT language are repeated. A brief list of some repetitions indicates the extent of dependence: burning (Rev. 18:9); fire (8:7); fight (12:7); reaping (14:15); breaking (2:27). In the APOCALYPTIC passages of the NT another aspect of the execution of the divine wrath is introduced. This is the judgment of bondage with unceasing torment (Jude 13; Rev. 20:1 – 3; et al.). Over the whole scene of horror thus recorded in the Revelation, the once slain Messiah rules over the final culmination of God's wrath (5:6 et al.).

II. Human wrath

A. Human wrath in the OT. Although on restricted occasions human beings are commanded to carry out the requirements of God's wrath in the OT (Josh. 9:20), unbridled fits of rage are judged by God as presumptuous of the divine authority (Ps. 37:8 – 9). The commands of God's design were to be carried out without irritation (Num. 20:11), and the fury of passionate anger is forbidden and rejected from Israel (Gen. 49:5 – 7). Cruel and barbaric punishments are a sure subject of godly anger, and the cunning of certain Gentile nations in inventing suffering brings upon them God's destruction (Nah. 3:1 – 4). Even the execution of criminals was to be without anger or malice (Deut. 21:22), and an immediate burial was to follow. Often the heathen nations are used by God to bring about the suffering of wicked Israel in the times of her idolatry (Isa. 10:5 – 6), but the raging of the barbarous Gentiles was itself judged.

The OT makes a clear distinction between warfare, the commitment of the state, and assault or murder, the fury of human anger. The command in the Decalogue (Exod. 20:13) is directly applied to murder by an individual. In the narratives of the OT the acts of anger mentioned are frequently the basis of judgment by God (Gen. 4:5 – 6; 34:13). Even the wrath of God is recognized as unfavorable (Num. 18:5), but absolutely necessary, and nowhere does God take joy from the misery of the wicked, only joy at the triumph of his righteousness (Ps. 2:4), which saves his covenant people. The OT principle is very clear that God alone has the authority to take vengeance (Deut. 32:35; Ps. 94:1).

Unlike the other documents of antiquity, the spokesmen of the OT take no joy in human agony. The deprivation of the wicked and the captivity of the conqueror are lauded, and the IMPRECATORY PSALMS and poems are frequent enough, but the bloodthirsty recitations of the kingly conquests and the details of the tormenting of the captives, so much a feature of Assyro-Babylonian annals, are totally lacking. The wrath of the OT is satisfied with the deprivation of life and the removal of the body to a place of burial; the ultimate vindication of righteous wrath lies beyond the grave and out of the realm of human realization (Job 13:15).

B. Human wrath in the NT. If anything, the prohibitions against human anger and its exercise are even stronger in the NT. The central teaching is Christ's discourse on the mountain (Matt. 5:9, 21 – 22), where Jesus warns against even the pronunciation of wrath upon another person. This warning is repeated in most of the NT letters (Rom. 12:19; 2 Cor. 12:10; Gal. 5:19 – 20; Eph. 4:26 – 31; Col. 3:8; Jas. 1:19 – 20).

The ultimate goal of the atonement is the glorification of the believer, but an essential part of its application is SANCTIFICATION. Certain passages in the NT make it clear that lack of sanctification is the subject of divine wrath (Rom. 6:1; Heb. 10:29). The need for sanctification is put in terms of salvation from the wrath of God itself (Jude 23), and the position of the Christian is often likened to that of the people of Israel, who in their travels in Sinai often turned their backs upon Yahweh and so fell under his wrath (Heb. 3:14—4:1). It is made equally clear that sanctification is accomplished in the atonement and is applied by God's grace through faith in Christ (Rom. 7:13 – 25). It is in this latter regard that the few references to "justifiable anger" are made in Scripture. In the effort to obey the law of God and emulate the love of Christ, anger must be immediately reconciled. To be sure, anger generated in a genuine hatred of evil is approved (Ps. 97:10 et al.), and this theme is apparent in the NT writers (Gal. 1:8 et al.).

Human wrath is often displayed through destruction, as illustrated by this pile of stones from the temple mount walls, demolished by the Roman army in A.D. 70 during the first Jewish revolt.

C. The concept of wrath in the early church. One of the major documents to survive from the period of the Ante-Nicene church fathers is the treatise of Lactantius (A.D. 260 – 320?) entitled, *De ira Dei,* "The Anger of God." The argument of this small work deals with the problem of whether God can properly be "angry," in the light of the truth that human emotions cannot be attributed to the Creator. He answers this with a discussion of the creatorship of God and the fact that to allow sin without retribution would be unthinkable. His works are scholastic and prolix and the general judgment of the ages has been contrary to his method, but approving of his motives and goals. The question was reasserted in the writings of the medieval scholastics but fell again into a lesser interest in the post-Reformation period. Like other similar doctrines of the Christian faith, it has been a center

of attention in times of political turmoil and religious persecution and largely ignored in seasons of tranquility and relative well being.

(See further R. V. G. Tasker, *The Biblical Doctrine of the Wrath of God* [1951]; A. T. Hanson, *The Wrath of the Lamb* [1957]; H. M. Haney, *The Wrath of God in the Former Prophets* [1960]; E. Zenger, *A God of Vengeance? Understanding the Psalms of Divine Wrath* [1996]; *ABD*, 6:989 – 98.)

wreath. This English term can refer to an object that is intertwined or that has been arranged in a circular shape. The NIV uses it to render (1) Hebrew *lōyâ H4324*, an architectural term that occurs in only one passage (1 Ki. 7:29 – 30, 36), where it may refer to a spiral design; (2) Hebrew ʿ*ăṭārâ H6498* (Isa. 28:1, 3, 5), a common term usually rendered "crown"; and (3) Greek *stemma G5098* (Acts 14:13). The KJV uses it also in a number of other passages; for example, in Exod. 28:14, 22 – 25, and 39:15 – 18 it translates Hebrew ʿ*ăbōt H6310*, which properly means "rope, cord." See also CROWN; GARLAND.

wrestling. A contest in which two unarmed individuals seek to subdue each other. Wrestling is a very ancient sport, well illustrated from Egypt and evidenced from Mesopotamia. In the Egyptian Old Kingdom, wrestling was depicted in the tomb reliefs of Ptahhotep at Saqqara. More than 400 wrestling groups are shown among wall paintings in Middle Kingdom tombs at Beni Hasan. Scenes showing wrestling appear in the 20th-dynasty temple of RAMSES III at Medinet Habu (cf. H. Wilsdorf, *Ringkampf im alten Ägypten* [1939]). In the OT a serious wrestling bout of JACOB is described (Gen. 32:24 – 25; Heb. ʾ*abaq H84*). Wrestling was a popular competition among the Greeks and thus provided NT illustration of spiritual principle (see ATHLETE). The Greek verb *agōnizomai G76*, "to fight, struggle," is rendered "wrestle" by the NIV and NRSV in a passage that speaks about struggling in PRAYER (Col. 4:12). The KJV uses "wrestle" to translate the noun *palē G4097*, which occurs only once with reference to the intensity and personal nature of spiritual conflict (Eph. 6:12).

    5. Ugaritic
    6. Urartian
    7. Hurrian
    8. Persian

I. Expression and communication. The task of ultimately defining what exactly is the nature of expression and communication seems to be a metaphysical rather than an exact scientific pursuit. Therefore the subject of writing is better studied as a historical process of the invention of one of humanity's most useful tools based upon the central faculty of expression. Just as one cannot speculate about a person who is unable to think, so we cannot conceive of a person who lacks expression or communication.

A. Aspects of communication. The transfer of data from one source to one or more receivers in the same time and place is sometimes referred to as "horizontal" communication. The outside limit of effectiveness of this system would be from great-grandfather to great-grandchild, a maximum of about ninety years. To lengthen this span and thus achieve "vertical" communication, some mechanical transfer—a record, tape, or reenactment—must intervene to bridge the gap of time. Obviously the plastic arts are most suitable for this, and pictures or statues of ancient historical figures can carry us back to at least the 5th millennium B.C., while mechanical recording techniques allow us to recover sounds and voices since the Crimean War (A.D. 1854). Any tradition based on oral communication is then only continuous restatement of horizontal communication. Songs, stories, poems, narratives, sagas, and even statistics can be and have been preserved in this way. Often, however, the material is molded and suffused by some mnemonic form into which it is cast so that the original information may be effaced by its later literary or artistic form. The MYTHS of classical antiquity are probably prime examples of such a digression (G. De Santillana, *The Origins of Scientific Thought: From Anaximander to Proclus, 600 B.C. – 500 A.D.* [1961]). Care must be taken that horizontal communication media of modern primitive social groups are not extrapolated back into prehistory to explain some long-lost origin.

    Since sight-thought was more easily communicated vertically, it was apparent that speech-thought would ultimately have to be attached to sight-thought to gain the same vertical continuity. In effect, this was done by symbols, or semiotic systems. All ancient writing systems seem to have originated in settled urban food-producing areas. Such social patterns bring about the need for another aspect of communication beyond the horizontal and vertical: they demand display. Display in this sense is the record of the community's actions set forth for all to see, as for example, law codes, declarative prayers, incantations, annals of the past, and building inscriptions. Actually all three of these forces—horizontal communication, vertical communication, and display—combined with the emerging urban society and its institutions to produce first the need and then the answer in the

technique of writing.

This terra-cotta foundation peg, mentioning a treaty between the Sumerian king Entemena and the king of Uruk, is a very ancient example of cuneiform writing (c. 2400 B.C.).

B. Types of semiotic systems. Sets of integrated symbols of various sorts were produced in the first germinal era of writing. In the history of writing the first to appear were not necessarily related to the sound or form of the languages of those who invented them. Such nonphonetic systems are termed *semasiographic*, and these fall into three categories: (1) *Pictographs* are simple cartoon-like illustrations of universal recognizance value, such as a picture of an animal or structure with its unique characteristics made obvious (cf. fig. 1.a). (2) *Phraseographs* consist usually of several pictographs arranged to indicate an action but sufficiently interrelated that in time they become one effective unit (cf. fig. 1.b). (3) *Logographs* (or *logograms*) are word symbols where one word in one-to-one correspondence with one sign is understood, although it is neither drawn visually nor indicated phonetically (cf. fig. 1.c). Like the other two types, often it is totally separate from the languages of the writer or reader. Livestock brands, ownership marks, certain ligatured

abbreviations, and even trade marks fall into this category. Ancient writing systems often contain so many logograms that the meaning of a text is utterly unintelligible to us. Moreover, logograms tend to become so conventionalized and stylized that, like some pictographs, the original meaning is lost. In some ancient documents the word meant by the symbol is never written out, and thus the actual word in the language is unknown (as if all "ands" in the English language should be replaced by "&," and in time the full spelling of "and" became lost).

Along with and slightly after the rise of the semasiographic systems, the language-based *phonographic* systems appeared. Ultimately these tend toward pure symbolic representation of speech, but they fall short due to the necessity to economize the number of signs. This economy usually leads to *polyphony* where one sign has more than one phonetic sound attached to it. It is this difficulty which so aggravates English spelling. Three phonographic systems arose. (1) *Syllabic*, in which every sign represents not simply a unitary sound but also a combination of vowel, or vowel plus consonant, or consonant plus vowel, or consonant plus vowel plus consonant. Such a system works quite well with certain types of languages that have monosyllabic words. (2) *Phonemic* systems have one sign for one sound, either a vowel or a consonant. Most syllabaries have phonetic alphabets dispersed within them. (3) *Subphonemic* (or *prosodic*) systems are made up of elaborate diacriticals which, like musical notations, seek to indicate all nuances of the spoken word.

II. Prehistoric writing systems. Ancient W Asia was the cradle not only of Western civilization but also of the earliest writing systems, and in that geographic and ethnographic region all stages of the semasiographic and phonographic systems have taken place. As with so many other complex social relationships, government, finance, building, and trading, so writing suddenly appears with no records or predecessors to indicate its sources. With village settlement and the organization of social institutions requiring vertical communication and display, writing was invented (A. J. Jawad, *The Advent of the Era of Townships in Northern Mesopotamia* [1965]).

Prehistoric writing systems must be projected from the later known to the earlier unknown. The oldest known written documents were excavated at the site of ancient Uruk (biblical ERECH, Gen. 10:10), and were produced about 3000 B.C. These are tablets inscribed with economic texts in the non-Semitic, non-Indo-European Sumerian language (see LANGUAGES OF THE ANE I; SUMER). Subsequent investigation has demonstrated that the writing system of the Uruk and all later Sumerian texts was probably not the invention of the Sumerians, although they undoubtedly modified and expanded it to fit their essentially monosyllabic language.

These unknown literary predecessors of the Sumerians have been called *Proto-Euphrateans*, from their apparent place of settlement (B. Lands-berger, "Mezopotamya 'da Mendeniyetin Dogusu," in *Ankara Universitesi Dil ve Tarih-Coğrafya Fakül-tesi Dergisi* [1943 – 45]). Some debate has ensued as to who these people were and from where they had come, but until an identifiable Proto-Euphratean settlement is excavated the problems will remain unsolved. However, the discovery in Rumanian Transylvania of an early neolithic village, Tartaria, with a cache of several tablets, all dated by stratigraphy to earlier than 3000 B.C., has enhanced the possibility that the elusive Proto-Euphrateans will be found. A comparison of Uruk and Tartaria signs is shown in fig. 2. Perhaps the best solution is simply to denote the Tartaria texts as *Proto-Balkan-Danubian*. There is little question but that still older and more dispersed written materials will be discovered, since the Proto-Balkan-Danubian signs appear to be at least logographic if not already syllabic.

The Uruk and Tartaria systems were soon followed by a number of scripts of equally unknown origin and as yet quite resistant to decipherment. These all arose in W Asia and are more

hieroglyphic in the sense that the pictographic character of their execution is more obvious. Unlike either of the older systems, they seem to be closer to simplified drawings of objects. Also the multiplicity of signs seems to indicate more than a syllabic system, although such a judgment is speculative. Sometime after 3000, the people of SW Iran known as Elamites (see ELAM) produced an elaborate writing system called by scholars *Proto-Elamite*. The Elamite language is non-Semitic and non-Indo-European. It is not related to any other known language, and so the texts as yet defy decipherment. From the placement of what appears to be numerical signs it is judged that they, like the Uruk texts, are economic in content. Dating from a slightly later time, there is a set of symbols on seals and inscribed pottery and metallic sheets. These were fabricated about 2300 at a group of towns on the Indus River, located at Harappa, Mohenjodaro, and Chanhudaro. Specimens of the Proto-Elamite and Proto-Indic signs are seen in fig. 3.

Hieroglyphics are usually associated with EGYPT, for it was with reference to the Egyptian writing system that the name was coined. In the oldest glyptic representations an early, almost pictographic, form of sign is found (fig. 10). These are on the slate plates excavated at Hieraconpolis in Upper Egypt. These palettes yield scenes of the campaigns of ancient prehistoric Egyptian rulers. Although attempts have been made to associate them with known historical figures, there is little to base final conclusions upon other than the obvious interpretation of the pictographs (fig. 3). Just what the stages in the later development of the elaborate hieroglyphic system were is now lost, but some relationships can be deduced. Before the full-blown Egyptian system was completed and, in fact, prior to its founding, the Proto-Euphratean, later Sumerian syllabary had been established and was to be the dominant writing of the ANE from 3000 to 500 B.C.

III. Cuneiform. In time the Uruk signs became stylized, and the streamlined and uniform strokes became known as "nail-shaped" or "wedge-shaped"; it is called *Keilschrift* in German, but the French name (derived from Latin *cuneus*, "wedge") has stuck in English as CUNEIFORM.

A. Sumerian. The predecessor to the classical cuneiform script first appeared in recognizable form on economic documents from the temple area of Uruk, in the stratigraphic layer of the Jemdet Nasr period. Although the majority of the more than 1,000 tablets are small business memoranda, there are some which contain the complex lexica used to teach the Sumerian language and writing system for the next two millennia. The signs on these tablets are more pictographic than cuneifor-mic, but they have the same phonetic values as the later simplified script. Most of the economic texts consist of little more than names, numbers, and commodities, marking a specific period of time and the total business conducted during it. Since many of these tablets were tags attached to the articles involved, and from which they were long ago separated, it is now impossible to decipher their meaning. In all,

there are over 700 discernible signs used on the Uruk tablets as compared to 1,100 signs used in classical Sumerian literature.
This Old Assyrian cuneiform text is a commemorative tablet (from Asshur, c. 1350 B.C.).

The Sumerian script may be divided into four chronological periods of development: Archaic-pictographic (3100 – 2700); Ur I & II (2700 – 2370); Gudea of Lagash (2370 – 2100); and Ur III (2100 – 1950). It is probable that the pictographic signs may have originated from the use of stamp and cylinder seals impressed on CLAY or wax to mark ownership of commodities. The early ledger tablets from Uruk, Jemdet Nasr, and Fara show small grids or registers in which names and numbers are written showing the amounts exchanged from the central agency to or from each individual, and on the reverse is the total (fig. 4). In these texts there is very little in the way of speech formulation; they are almost completely semasiographic. However, there is a surprisingly effective mixed sexagesimal (to the base sixty) and decimal (to the base ten) arithmetical system. The most impressive fact of all is the vital and complicated mercantile economy that produced the texts. After extensive simplification of the signs the very effective syllabary of Ur III was finally reached. With this system metaphysical thought of surprising sophistication could be framed in parallelistic poetry, such as the song cycle, *Lamentation over the Destruction of Ur* (S. N. Kramer in *Assyriological Studies* 12 [1940]).

The Sumerian system that served as the pattern for all the subsequent cuneiform syllabaries contained more than just simple syllabic signs.

The Development of the Cuneiform Script.

Four types of signs were invented. The most common are the simple syllabic signs, but because of a unique characteristic of the Sumerian language many signs came to have the identical phonetic value. It seems that the Sumerian spoken tongue was tonal as are many modern Afro-Asian languages, that is, words and meanings are distinguished from one another not merely by the difference in sound units but also by a musical pitch. To distinguish these similar sounds the Sumerians provided the different syllables with separate signs. The result is a confusing polyphony of many signs to one sound and many sounds to one sign. For example, a particular sign indicates usually the syllable *be*, but it can also represent the following: *pè, pì, bad, baṭ, baṭ, pád, pát, pát, bít, pít, mid, mit, miṭ, til, tel, tíl, ṭél, ziz, sun, qìt, mát, mút, ti, úš, ṣiṣ, gam, me, bi, š;umma, zaz.* Some of the items on this list would be the correct reading in only .001 percent of all occurrences.

The second most common set of cuneiform signs in Sumerian are the logograms. These are single pictographs representing a whole word usually totally removed from the pictograph itself. If the first signs were names of economic institutions and merchants, then it is logical that their trademarks would pass into the logographic stage. Less common than the logographs are the determinative signs which indicate the class of objects or persons to which the following word belongs; thus all objects of wood were preceded by the sign for *GIŠ*, which simply meant, "next word a wooden object." The

least common, but possibly the most difficult, were numerical and grammatical signs that were not pronounced at all but were simply diacriticals, such as the often superfluous plural sign *MEŠ*. All four types appear in fig. 5.

Since Sumerian is agglutinative—i.e., it adds grammatical and phonetic particles together in long complex chains of words and phrases—in time certain sets of signs became associated with each other in standardized patterns, giving much of the literature a stereotyped quality and forming idioms and figures of speech that are still commonplace. At no time in the long history of cuneiform writing were all the possible syllables of any one language set down in signs. If a grid or table is formulated of all the possible vowel-consonant and consonant-vowel combinations, it will be found that a twofold principle of economy was in effect: (1) syllables of one specific vowel and similar consonants tended to be clustered in one sign (e.g., the KAB sign represented *kab, kap, qáb, qáp, qáb, qáp*); (2) one consonant and its full potential set of vowels tended to be clustered in one sign (e.g., the sign *A*Ḫ stood for *a*ḫ, *e*ḫ *i*ḫ, *u*ḫ). Generally the former cluster maintaining the vowel is more common than the latter, and when the consonant is maintained it is divided into two sets of vowels, *a/u* versus *e/i*, which is a general phonemic distribution in the Sumerian language.

By the period of Sumer's greatness, Ur III, the writing system was almost purely phonographic and many of the complex logograms had been reduced to syllabic signs. It is widely accepted upon reasonable evidence that the wedge-shaped characters came about through the use of the reed stylus, which, when cut obliquely, would leave an exposed triangular surface culminating in a sharp point. When impressed in damp clay, the familiar pyramidial indentation resulted. As with other complex sign systems, the Mayan and Chinese for example, differences in scribal schools and traditions developed, and even variations in individual hands are present.

In time, the Sumerian civilization came to depend upon writing and to a degree equated literacy with culture and civilization, a notion that still persists in the Western world. In the scribal schools (*É.DUB.BA*, "tablet house"), the scribes learned by copying the ancient literature, hymns, epics, laments, and lexical texts. These last are of very great interest. The Sumerians seem to have had some notion of organizing the phenomenal world in terms of their precious craft of writing. In order to do this they set down long lists of words, usually names of objects and functions that in turn grew into immense lexical series, commonly described as *Listenwissenschaft* (B. Landsberger and W. von Soden, *Die Eigenbegrifflichkeit der babylonischen Welt: Leistung und Grenze sumerischer und babylonischer Wissenschaft* [1965]). These bear strange enigmatic names taken from their first lines (e.g., *HAR.RA*=ḫubullu; *IZI*=išatu), although strictly these two are from a much later time when Sumerian lists were equated with their E Semitic synonyms.

Figure 5. Types of signs in Sumerian cuneiform syllabary.

Syllabic sign	logograph	determinatives	grammatical signs
Ka = mouth	Da = direction	Dingir = before a name of a deity	Ush = 1
Lal = honey	Geme = slave girl	Gish = before a wooden object	Mesh = plural sign
Dag = room	Alim = buffalo	Sig = woolen objects	Shar = 3600

Figure 6. Translation of part of an inscription of Darius, in ancient Persian (after C. F. Pfeiffer).

As part of the scribal collections of learning in inscribed form—a sort of encyclopedia editing —all other forms of learning were brought together and extended by the scribes; biological nomenclature, grammatical flexion, dosage forms, and mathematical tables are all found on the school tablets. This unification of learning around the practice of the scribal craft is a keystone to the understanding of the urbane Sumerians and their writing system. With the advent of the E Semitic

peoples that culminated with the founding of the first dynasty of Akkad, Sumerian civilization passed into the hands of the Semites, who, in turn, studied and treasured this heritage passing it on for some 2,000 years. The assimilation of Sumerian culture into Akkadian culture brought about the use of the Sumerian language as a literary medium and of the Sumerian cuneiform system to write the Akkadian, a very different language. The two languages interchanged loanwords in the process, the preponderance going from Sumerian to Akkadian.

B. Akkadian. It was only after the conquests of Šarruken of Agade (Sargon of Akkad), the first great world conqueror who overran central Mesopotamia in 2371 B.C., that Akkadian came into use as a written language. Because it is polysyllabic and has difficult consonant clusters and complex vowel variations, however, the Akkadian language fits poorly into the Sumerian syllabary. The result was that Akkadian cuneiform inscriptions followed closely the forms and conventions of the older Sumerian inscriptions. Akkadian cuneiform may be divided into the following phases: Old Akkadian, roughly equivalent to Ur III Sumerian; Old, Middle, and Neo-Babylonian; Old, Middle, and Neo-Assyrian. The Old Akkadian is quite difficult, as it utilizes many Sumerian logograms (Sumerograms) and writes out in full detail refinements and nuances of E Semitic speech that were later dropped from use. The Akkadian syllabary underwent the same paring and economizing processes as Sumerian so that more and more it approached a phonographic system.

The next stage in the script, the *Old Babylonian*, like its contemporary, the *Old Assyrian* of the Cap-padocian merchant colonies, used few logograms and determinatives and wrote out most words syllabically. Still the script did not completely fit the language, as some fractions of the syllables had to be elided to obtain the correct pronunciation. In many instances the same word could be broken up several different ways to yield assimilable syllables. For example, to write the word *Pittsburgh* it would be necessary to disassociate the consonant cluster *ttsb* so that it can be written with vowel-consonant or consonant-vowel signs: *Pi-it-te-es-bu-ur-rg-eh*, where all the *e*'s are silent and all the double vowels are elided; if consonant-vowel-consonant signs are used, it could be written *Pit-tes-bur-geh*. Analogous situations occur in all stages of the cuneiform syllabary and many words do appear spelled in a variety of ways. Over the centuries, of course, certain standard forms became conventional. Unlike some other ancient systems, no alphabetic system was ever involved at the base of the cuneiform signs. The classical Babylonian syllabary, as used by the Kassites (1600 – 1174) after they had overthrown and absorbed Babylonian culture, emphasizes the sounds and spellings of the Babylonian dialect of Akkad.

With the resurgence of Assyria under Ashur-uballiṭ (1365 – 1330), a predominance of signs favoring the *Assyrian* dialect takes place. The kings of the last half millennium of Akkadian culture down to the time of the Persian ruler Cyrus greatly honored the study of cuneiform and preserved the ancient literature wherever they found it. During the reigns of the Neo-Assyrian rulers, especially Ashurbanipal (668 – 631), extensive libraries of texts representative of all periods were collected, and scribes were employed in making new editions of the ancient literature. It is a monument to the genius of its inventors that the kings of the 6th cent. B.C. could decipher tablets then already 2,500 years old and written in cuneiform.

Not only was cuneiform used in Mesopotamia proper but it also became the international vehicle of the common *lingua franca,* Akkadian. Scribes in the court of the pharaoh, the palace of the Indo-European ruler of Mitanni, and the chieftains of Syria-Palestine all corresponded in cuneiform script. The iron-clad fixation of the vowels in the system has allowed the restoration of the native speech in several of the geographic localities outside Mesopotamia. Of special importance in this regard is the

language of ancient Palestine before the conquest as represented in portions of the TELL EL-AMARNA letters, which passed between the pharaohs of the 18th dynasty and their vassal princes in the ANE. In these and other cuneiform texts occur the phenomenon of "glosses": the scribe has written a word in Akkadian, and then after an oblique wedge used as word divider added the cuneiform transcription of the word in his own language to make doubly sure that the scribe who was to receive and read it before its addressee would know his intention.

The script in these peripheral Akkadian texts is usually poorly executed and the grammar and syntax of the language completely at the mercy of the scribe's mother tongue. From the peripheral Akkadian, the script spread further out to other non-Semitic and non-Akkadian language groups who modified it radically to better transcribe their own tongues. In most cases these alterations were definitely advantageous in the direction of a phonographic system. They also resulted in the inclusion of a new set of logographic signs which are best termed "Akkadograms." Like the Neo-Assyrian scribes, these provincial inscribers tended to use the system of writing the Sumerian root or logogram if one existed and then follow it with a phonetic complement, giving the form and pronunciation of the native word to be substituted in the context for the Sumerogram. To illustrate, suppose that instead of writing the English word *willing* one puts down the Latin root of the same meaning, *vol-*and then adds the same ending as if it were an English word so that *voling* is the result, but it is read as *willing*; likewise, the late cuneiform *GIG-iṣ* stands for Akkadian *mahiṣ*, "has been smitten," and *ERÍN-am* represents *ṣabam*, "contingent (direct object)." A comparison of the forms of several representative signs from Uruk through Neo-Assyrian is shown in fig. 7. The supremacy of the cuneiform system and the availability of the vast Mesopotamian literature spurred on the adoption of cuneiform by many other peoples. A Sumerian and Akkadian bilingual is shown in fig. 8. See further LANGUAGES OF THE ANE II.A.

C. Elamite. The Elamite language, which is of uncertain origin, was written in its own peculiar pictographs up until 2500 B.C., when a phonographic system based on Akkadian cuneiform was introduced. In all the new system had only 131 syllabic signs, 25 logograms, and 7 determinatives. Elamite became one of the official languages of the Persian empire and is represented in the great trilingual inscription of the rock of BEHISTUN. In the later period the syllabary was reduced to 102 syllabic signs, 8 logograms, and 3 determinatives.

D. Hittite. This language, also known as *Nesite*, is the oldest known Indo-European tongue. Strange as it may seem, cuneiform HITTITE was used simultaneously with another similar language, hieroglyphic Hittite, each written in its respective sign system. The signs, although based on the Sumero-Akkadian system, are quite distinct even though large numbers of Akkadian texts have been excavated from Hittite sites. One peculiarity of the Hittite usage is the writing of unvoiced consonants (*t, p, k*) doubled so as to distinguish them from the corresponding voiced consonants (*d, b, g*). As with any syllabic system used for writing an Indo-European language with its consonant clusters, many vowels are written just to indicate the enclosed consonant and not for pronunciation. The results are long strings of syllables that defy pronunciation and must be carefully reduced to their actual phonetic transcription (e.g., *har-š;a-na-al-la-an-da-an* = *xarsanallantan*, "take [accusative participle]"; *an-tu-uh-š;a-an-na-an-za* = *antuxsanats*, "mankind [inflected]"). The more formal Hittite literature, such as royal inscriptions, was based on Sumero-Akkadian models. In such a text words from three different languages will be mixed to produce one thought; for example, *SAG-du-an*, which consists of the Sumerogram *SAG*, "head," plus the Akkadian phonetic complement (showing

that the *SAG* is to be read as its Akkadian equivalent, *qaqqadu*), plus the Hittite inflection *an*. The Hittites also continued the work of the ancient Sumerian scribal schools and added a Hittite column to the lexical series.

Since the Hittite empire was a confederacy of a number of petty states and related ethnic groups, other lesser languages appear in the archives. One of them, *Proto-Hattian* (also *Proto-Hittite* or simply *Hattian*), seems to have been used as a sacred cultic tongue and occurs only in certain ritual texts where inclusions in the language are preceded by the indicator *hattili*, "Hattian." It is not related to Hittite and is written out fully in the syllabic script with no logograms.

Clay tablet with envelope from S Mesopotamia (late 2nd millennium B.C.). Some differences in cuneiform signs distinguished northern and southern forms of writing in ancient Mesopotamia.

"hieroglyphic" Hittite. Passages in the language are always preceded by the indicator *luwili*, "Luwian." As with Hattian, it is written exclusively with the syllabic signs. A subdialect of Luwian developed into the language of the kingdom of LYCIA in SW ASIA MINOR. The Lycians called their language *Treknemli*.

The least known of the Hittite empire's polyglot dialects is *Palaic*, introduced by the indicator *palaumnili*, "Palaian." It is Indo-European in structure and was written exclusively with the syllabary (cf. fig. 9).

E. Ugaritic. The oldest known W Semitic language is *Ugaritic* (see UGARIT), which predates biblical Hebrew by nearly 1,000 years (see LANGUAGES OF THE ANE II.F). It was the first Semitic language to be set down in a purely alphabetic and phonographic script. The signs are based undoubtedly upon the mode and system involved in cuneiform, and like cuneiform it was read from left to right. As far as can be determined, however, no one sign in Ugaritic is equivalent to any Akkadian sign. The alphabetic principle allows a still further reduction in the number of signs from the more than one hundred in the best syllabaries to only thirty. Moreover, it leads to an innovation. In the Semitic languages, the various parts of speech (verbs, nouns, adjectives) can be interrelated through the use of roots that usually consist of three consonants. The vowels follow the consonantal patterns and are raised, dropped, heightened, or muted in relation to their position and stress in the word. The result is

that the spoken and written Semitic languages have many more cognates connected together than in the Indo-European languages. Thus the English sentence, *The smiter smote the smitten*, is possible but unlikely, whereas the OT is filled with comparable examples. Because of this characteristic the vowels may be excluded in the semiotic system (note that a reduction of the phonographic transcription to strictly consonants is the basic factor underlying shorthand systems both ancient and modern).

One difficulty in the Ugaritic system was the use and form of the ʾ*aleph,* which represents a glottal stop (cf. the obstruction of air flow between the two parts of the English interjection *uh-oh*). In Proto-Semitic three glottal sounds are predominant. These appear often at the initial position in words, as Semitic languages reject beginning words with vowels (e.g., the Greek *Platōn,* "Plato," became *Aflatn* in medieval Judeo-Arabic, and the new first letter was ʾ*aleph*). On the other hand, Ugaritic like Akkadian and its dialects had the three long vowels, *ā, ū,* and *ι,* and so it produced three different syllabic signs (ʾ*a,* ʾ*u,* ʾ*i*) while reducing all the other signs to an alphabet. Upon close inspection it will be found that certain letters tend to come into frequent proximity with certain vowels so that in effect there is a sense in which the Ugaritic alphabet operates much like a syllabary, and here and there throughout the body of Ugaritic literature the consonantal signs occur in locations where they indicate vowels and vowel quantities. A word divider and spacing for punctuation are regularly used. The habit of writing consonants and not vowels may have been an Egyptian innovation borrowed by the scribes of Ugarit, as there was much political and cultural influence from Egypt in Ugaritic affairs. It is likely that Ugaritic combined the best of the two writing systems, the consonantal economy of the Egyptian and the simplicity of signs found in the cuneiform. The Ugaritic sign list is seen in fig. 9.

F. Urartian. The Urartian civilization flourished in the area of Lake Van in northern Anatolia (Asia Minor) from about 1100 to 600 B.C. See ARARAT. Its language, which is related to the Caucasian tongues, is called Urartian or Vannic. The Urartian inscriptions are written in Neo-Assyrian cuneiform script with a large percentage of logographic writings. There are several important bilinguals.

G. Hurrian. A very old language, HURRIAN was spoken by the inhabitants of the upper reaches of the TIGRIS and EUPHRATES as well as northern Syria-Palestine as early as the 2nd millennium B.C. It is this linguistic group which is suspected of being the cultural transmitters of Akkadian civilization to Syria-Palestine and Anatolia. Hurrian texts written in largely syllabic cuneiform with few logograms have been excavated from Hittite, Ugaritic, and Mesopotamian sites. The Hurrians were known in the OT as Horites (Gen. 14:6 et al.; but see the article HORITE). Their tongue, which is agglutinative, non-Indo-European, and non-Semitic, is written with a syllabic spelling and script that contains very few logograms. The actual form of the cuneiform signs conforms to the peripheral Akkadian mentioned above. The central Hurrian kingdom was established in the region of the Middle and Upper Tigris and called Mitanni. The Mitannian state consisted of Hurrian commoners and Indo-European nobles that made it, like the Hittite, a polyglot confederacy of different ethnic and linguistic groups.

H. Persian. An Indo-European tongue, Persian was the dominant language of the Medo-Persian empire, which came to dominate the ANE and Egypt in the 6th cent. B.C. See MEDIA; PERSIA. The Persian empire had three official court languages, Old Persian, Elamite, and Akkadian, and it utilized

ARAMAIC for administrative communications. However, the Persian cuneiform bears little resemblance to Akkadian. It is a syllabary with less than a dozen logograms and determinatives added (see fig. 6). After the eclipse of Persia cuneiform declined rapidly, although a brief renaissance of the script took place under the SELEUCIDS. Even then it was not used for economic or business documents, but only by the conservative pagan temple administrations. There are extant a few fragments of Sumero-Akkadian lexical texts that had been transliterated into uncial Greek characters. In the cultural struggles which resulted from the advent of Christianity upon the scene, again the pagan priesthood turned to cuneiform, but by A.D. 75 the last documents on clay had been written and the knowledge of the script, which went back in a direct tradition for 3,200 years, was forgotten. Probably no other event has so enlarged and altered our historical horizon than the decipherment and study of cuneiform texts.

IV. Hieroglyphic. Strictly speaking, the term *hieroglyphic* as coined by the Greek historians (Gk. *hieroglyphikos*) refers only to the pictographic form of the Egyptian signs. Yet, in usage it has developed the added connotation of a mixed pictographic-logographic and syllabic script. The monumental carvings in which hieroglyphic inscriptions were often executed were never used except for functions of the religious state. Since the pharaonic office was divine, its speech and proclamations were set in an otherworldly genre. If, as is alleged, the slate palettes from Hieraconpolis do contain fully developed syllabic writing and not simply pictographs, then the origin of the Egyptian hieroglyphic must be put back to at least 3000 B.C. If not, which seems rather to be the case, then the Egyptian system must be dated back no earlier than 2900.

It is generally assumed that the impetus for the invention of the Egyptian system came from Sumer. Many features are held in common. Essentially, the hieroglyphic system is a syllabary of the type mentioned above as a development from Sumerian, that is, one in which the consonants are rigid but the vowels are only vaguely expressed. For example, in the Sumero-Akkadian syllabary the *A*Ḫ sign also may be read *eḫ, iḫ,* or *uḫ*; in the Egyptian syllabary no specific vowel is understood and a sign *ka* is actually k^x, with the *x* representing any vowel, so that the *ka* sign can be read as *ka, ku, ko, ke*, or *ki,* as long as some vowel is pronounced. As with the Sumero-Akkadian syllabary, there are not only consonant-vowel and vowel-consonant signs, but also combinations. In fact, there are monoconsonantal, biconsonantal, and triconsonantal signs. All of those above one element could have been reduced, thus yielding an alphabet, but in the long history of hieroglyphic writing this never occurred. Buried under the expanse of hundreds of signs there was a set of simple consonants. The triconsonantal signs are little different from logograms.
This Egyptian funerary stela from Thebes (limestone, c. 1800 B.C.) illustrates hieroglyphic writing.

In one feature, the Egyptian system far outstripped the Sumerian, and that was in the thousands of determinatives. These little pictographs are added to many words which have been spelled out syllabically so that there is in effect a redundance of both phonographic and semasiographic signs. Specimens of all types in the Middle Egyptian orthography are shown in fig. 9. On close account all four sign types—syllabic, logographic, determinative, and grammatical-diacriticals—can be demonstrated in both the Sumerian and Egyptian writing systems. The theory of the two systems is identical. In the Old Kingdom period (2900 – 2160) the epigraphic inscriptions are elaborately engraved and often colored attractively. The Pyramid Texts from this period have their own slightly variant dialect and signs.

Unlike Akkadian, Egyptian changed internally over the centuries so that new grammatical and syntactical features were added and old ones eliminated. Middle Kingdom Egyptian developed from the Old Kingdom system with same popular speech modifications. During the early part of this period (2000 B.C.) an inked form of the letters came into vogue. This sign system, which could be more easily written on PAPYRUS sheets and clay OSTRACA, is called *hieratic* script. Late Egyptian, a successor to the Middle Kingdom Egyptian, incorporated many new linguistic and syntactic features, radically altering the future development of the language. By 700 B.C. a still more simplified form of hieratic had appeared which was not merely a semiotic variation but marked a new grammar, vocabulary, and writing system.

The last phase of this development was *Coptic*, which appeared some time after the Persian

conquest, and eventually it was written in a modified Greek alphabet. Coptic is divided into four major dialects: Sahidic, Bohairic, Fayumic, and Akhmimic. These utilize the same sign system, but show divergences in vocabulary and transcription due to colloquial variations in speech. However, on the basis of the demotic, and contemporary with the Coptic, another script arose in the former Ethiopian dominions at the island of Meroē. There a double set of signs emerged: the one, much like simplified hieroglyphic, was used for epigraphic monumental inscriptions; the other, far less complex, was used on papyri and ostraca. Specimens of all the Egyptian scripts and their development are shown in fig. 11.

After the advent of Ptolemaic government (323 B.C.; see PTOLEMY), hieroglyphic usage declined rapidly. Unlike cuneiform, the hieroglyphic system was not borrowed directly by any other linguistic group. Only the Meroitic language, as yet undeciphered, was written in it. Egypto-Meroitic reduced the system below the number of signs until (prob. copying Greek) it developed a straightforward alphabetic script of only twenty-three signs, some of which were pure vowels. All the other derivative systems from hieroglyphic were indirect, and only the W Semitic and Afro-Semitic have survived.

Figure 9. Hieroglyphic Hittite and Ugaritic syllabary (after P. Meriggi, *Hieroglyphischhethitisches Gossar* [1962], 182ff.).
Figure 10. Types of signs in Egyptian hieroglyphic syllabary (after A. H. Gardiner, *Egyptian Grammar* [1957], passim).

Hittite, although usually written in its modified cuneiform, was in its dialectal variations written in a hieroglyphic script invented totally independently. Although the impetus may have come from Egyptian, the forms of none of the signs are distinctly Egyptian. The hieroglyphic Hittite flourished between 1500 and 700 B.C. It developed several styles, an earlier pictographic and a later stylized cursive system. It is a syllabary with some sixty signs. All of the signs are invariably of the consonant-vowel type, which necessitated the writing of redundant and unpronounced sounds.

Phoenician-hieroglyphic bilinguals have been found at Karatepe and other Turkish sites of former petty kingdoms of the 12th to 8th centuries B.C. The syllabary is shown in fig. 9. The origins of the Hittite syllabary are more than likely to be found in the Aegean area, where still a third ancient writing system had appeared. Toward the end of the 3rd millennium B.C., the same migrations that had brought the Indo-Europeans into Anatolia and Iran caused a sweep of new peoples into the N shores of the Mediterranean Sea. In later centuries these epic voyages would be remembered in the Homeric poems. The civilization thus founded is known as Minoan and flourished from 2400 to 1400 B.C. Attempts have been made to associate these Minoan inhabitants with the Ugaritic and Canaanite civilizations of the Syrian coast (cf. C. H. Gordon, *Evidence for the Minoan Language* [1966]; M. C. Astour, *Hellenosemitica* [1965]), but the evidence is still highly controversial.

V. West Semitic and Greek. Although the NW Semitic language family (e.g., Ugaritic, Phoenician, Hebrew) is quite distinct from the GREEK LANGUAGE (Indo-European family), the writing systems they employed over the millennia are dependent upon each other. In regard to the semiotic systems involved they must be considered as a unit.

A. Cretan pictographic. Also known as *Cretan hieroglyphic*, this system is known from tablets discovered in CRETE (at Knossos, Hagia Triada, and elsewhere) and at various sites on the Greek peninsula proper. The characters may have developed from stamp seals and other ownership marks. Such seal impressions date back to about 2500 B.C., while the initial pictographic system of writing appears about 2000 in the early part of the cultural phase known as "Middle Minoan I." There were two variations of this pictographic syllabary introduced, "A" in use from 2000 to 1875 and "B" from 1875 to 1700.

The Cretan people were merchant adventurers who established maritime city states on the rocky shores of the islands and peninsulas of the E Mediterranean Sea. In time their commerce grew sufficiently to force a simplification of the elaborate pictographs. By 1700 B.C. the cultural phase known as "Middle Minoan III," a simplified cursive script, had come into use and was, in turn, superseded by a still more abstract one. They are known as Linear "A" and "B" respectively. Only the Linear "B" has successfully been deciphered. In all forms the Cretan system is a syllabary with a large number of logograms which double as determinatives. However, there are some interesting peculiarities in Linear "B" that may also apply to the older forms. In certain diphthongs the vowel *i* is expressed, in others it is not, while final-position *l, m, n, r,* and *s* in vowel-consonant syllables are omitted. In all, there are less than a hundred signs that fit into a neat grid or table of vowels versus consonants. The Linear "A" contains somewhat over eighty signs and what appear to be the logographic-determinatives.

M. Ventris, a young British architect, proved in 1956 that the language of Linear "B" was Greek, strangely spelled, archaically written in syllabic forms which like Hittite cuneiform contained many redundancies and unpronounced vowels. The language of Linear "A" is most certainly not Greek and there is little likelihood that it is any other Indo-European language. The four classes of Cretan scripts are shown in fig. 12. While Egyptian and hieroglyphic Hittite retained the full form of the individual pictographs except for certain cursive adaptations, Cretan passed rapidly into a linear phase. On the other hand, Late Egyptian, especially Meroitic, abstracted the signs according to an alphabetic principle. There is no indication that Cretan ever did. Later offshoots did develop from the Cretan system, the chief ones being Cypriote, a late Cypro-Minoan, Eteo-Cretan, and the script of Phaistos and Byblos. Specimens of some of these are shown in fig. 12. The overall importance of the Cretan system in the history of writing is its rigid consonant-vowel syllabary and its reduction to simple linear signs that could be used alike for epigraphic inscriptions or inked on the more perishable papyrus and parchment.

B. Proto-Phoenician syllabic. This term is applied to the theoretical construction of a system which

served as intermediate between cuneiform on one hand and Egyptian hieroglyphic on the other. The earliest texts in Palestine known are problematic fragmentary inscriptions on potsherds dated by some to the late 18th and early 17th cent. B.C. and discovered at GEZER, SHECHEM, and LACHISH. They vary in form of characters from cursive pictographic reminiscent of the Aegean syllabaries to stark linear flowing cursives. It is important to note that this series of syllabic "experiments" took place during the HYKSOS period, when the nomadic tribes of the ANE and the settled petty kingdoms of the river valley civilizations were in constant conflict.

The connection between these undeciphered Palestinian texts and the Paleo-Sinaitic fragments is only speculative. The latter were inscribed by the pharaonic expeditions sent to work the copper and turquoise mines of Serabit el-Khadim in the Sinai Peninsula. The principle upon which they are written is to use the initial sound of an Egyptian logogram as an independent letter. This is a great advance toward an ALPHABET, but it is not a full and complete step. A few samples of this writing appear in fig. 13. It is evident that they are abstracted from the hieratic or late Egyptian hieroglyphic. A set of remotely similar texts has been found in the Egyptian Fayum, the date of which is still under debate. The important fact is that a number of writing systems were in practice in Palestine 500 years before David was crowned and that any or all had been or could have been used for the Hebrew language.

C. Phoenician alphabetic. From one of these inscriptional systems, or a derivative of them, the oldest fully represented system, Old Phoenician, developed. The earliest complete and decipherable example is the Byblian inscription from the tomb of Ahiram, dated about the 12th cent. B.C. The writing is generally considered an alphabet, though some argue that the thin line between a syllabary (such as Ugaritic) and alphabetic writing is never crossed by the Phoenician system. The subject of North and South Semitic epigraphy is the study of the two great divisions of the scripts that developed from the Phoenician writing.

D. Old Hebrew. A small number of complete Hebrew inscriptions are known which are written in characters much like the Phoenician. The earliest of these is the Gezer Calendar, a short seven-line poetic composition relating the months of the agricultural year (see AGRICULTURE V) and dated to the 9th cent. B.C. There is little doubt that the oldest copies of the biblical books were written in similar characters. After the EXILE, Hebrew adopted the so-called square script from Aramaic (see below, section F).

E. South Arabian and Ethiopic. The S Semitic system developed along different lines and soon became quite distinct. Its roots may go back to the Paleo-Sinaitic script as it is contained for a considerable period in the Arabian Peninsula. In the N part of the area there developed the Safaitic, Lihya-nitic, Dedanitic, Thamudenic, and other lesser known scripts, while in the S of the Arabian area there developed the Minean, Sabean, Himyaritic, Qatabanean, and Ḥaḍramautian scripts. However, it was in ETHIOPIA that these developments came into their own. By A.D. 300 these Arabian scripts had died out, ultimately to be replaced by the classical Arabic writing system dispersed through the world by the rise and spread of Islam.

Like Old Hebrew and Phoenician, the S Arabian scripts may be viewed as syllabaries (where the consonants contained an element of indeterminate vocalic value); indeed, when exported by the Arab merchants to the E coast of the Red Sea and the E coast of central Africa, these same scripts developed into full-fledged syllabaries with clearly identified vocalic signs. Ethiopic, the official

language of the Christian kingdom of Axum in the early medieval period, is better known as Ge ͑ ez, the ritual tongue of the Ethiopian Coptic Church. It was developed from a S Arabian dialect with an E African substrate. The writing system is a derivative of the Sabean script, which contained twenty-nine characters. It is basically the modern script in which the manifold Semitic languages of Ethiopia are written. The official one is Amharic but the same applies to Tigré, Tigriña, Harari, Gafat, Guragé, and Argobba, as well as a host of lesser dialects (see LANGUAGES OF THE ANE II.D). The Sabean script and the Ge ͑ ez appear in fig. 14.

F. Aramaic. The NW Semitic family of languages is usually thought to consist of two branches: Canaanite (including Ugaritic, Phoenician, Hebrew) and ARAMAIC. It was apparently Aramaic that introduced the familiar *square script*, which has been called "the Persian chancellery hand" (F. M. Cross in *The Bible and the Ancient Near East: Essays in Honor of William Foxwell Albright*, ed. G. E. Wright [1961], 136ff.). The evidence of the DEAD SEA SCROLLS and the ELEPHANTINE Papyri shows the rapid spread of this script throughout the area of the W Semitic languages. Since Syria-Palestine was under a series of foreign administrations from the Hellenistic age until the brief revolts that brought about the Roman conquest, it stands to reason that not only the speech but also the writing would be affected. One of the most important of these effects was the addition of vowel indicators. This process began before the Christian era and continued rapidly afterward until the Aramaic and Hebrew script was in fact a full ALPHABET. The various systems of signs called "pointings" or "vowel signs" came together in the medieval renaissance of Jewish learning.

The Aramaic square script developed into different forms among the various Aramaic dialects, such as Nabatean, Syriac, and Mandean. It is thought that the Arabic alphabet had its origins in the Nabatean script, though other influences were probably at work. See ALPHABET IV.D. Later, when Islamic culture rose to be the dominant power in the ANE, it adopted the practice of adding diacritical markings to indicate vowel sounds. Since both the Hebrew Bible and the Arabic Koran contained prohibitions against the making of "graven images," the script itself became an artistic and ornamental device. The carved wooden screens and lattices of much of the Islamic golden age are covered with hundreds of running scrolls of Arabic script. In the same fashion the Hebrew alphabet was made an end in itself and covered in rich symmetry the silver and gold vessels of the medieval synagogue. (Contemporary to this fanciful artistic usage of the script there arose an interpretation of the alphabet as a message in and of itself. This notion of the Hebrew script as the subject of magical and mystical interpretation produced a vast folklore of the OT text and even of the vowel pointings.)

G. Greek. As noted above, Greek was first set down in an elaborate and uneconomical syllabary that later developed into a highly cursive and abstract form. Interestingly enough, the classical authors of Athens and Ionia never mention this early nearly hieroglyphic phase of the writing of Greek. The Hellenic traditions are unanimous in presenting the Greek script as derived from the Phoenician. However, just when and where this great cultural transmission took place is not at all clear. Between the syllabic script of Linear "B" on the Pylos tablets and the earliest full-fledged alphabetic inscriptions from Greece proper there is only about 450 – 500 years (from 1200 to about 750 B.C.). In this period there is little evidence extant and none showing the stages of development. In the oldest Greek alphabetic inscriptions the forms for *b, g, d, l, m, n*, and *r* are the same as in some types of Phoenician and no doubt represent sounds that are very similar or even identical in the Semitic languages.

The direction of all the derivatives of the W Semitic writing systems is from right to left and

indeed the oldest known Greek inscriptions such as the Athenian Dipylon vase inscription use this approach. By the end of the 9th cent. B.C. the Phoenician characters had been adopted by Greek speaking cities on the Attic peninsula and the islands off W Anatolia. These individual adoptions caused the proliferation of a variety of forms of the script. Texts from the 6th cent. B.C. are often written in a peculiar left-to-right then right-to-left manner known in Greek as *boustrophēdon* ("turning as an ox [plows]"; cf. fig. 16).

Figure 13. Protosinaitic signs (after W. F. Albright, "The Proto-Sinaitic Inscriptions and Their Decipherment," *Harvard Theological Studies* XXII [1966], plates 4-9 passim).

Figure 16. Boustrophedon.

The sounds of the Greek language that did not occur in Semitic were indicated by newly invented signs, and among these were the full set of vowels. For example, the initial sign of the Semitic systems,)*aleph,* was utilized as the sound of the vowel *a* and the name of the letter was retained in the form *alpha G270.* The difficult consonant clusters were at first written out (e.g., PS, but later Y). In time the different forms of the letters became unified and standardized by commerce and association between the Greek states. Some more difficult letters used to transcribe dialectic differences dropped out completely (e.g., *digamma,* formed much like the modern capital *F* and pronounced *w*); however, since all the Semitic and Greek characters doubled as integers in the number system, these old signs were kept as numbers.

Athens formally accepted the Ionian script of Miletus in 403 B.C., and it is probable that other members of the leagues and organizations of the time did likewise. The final classical script of twenty-four signs, the world's first full and complete alphabet, had thus been formed. All modern characters of the Romance, Slavonic, and Germanic types are derived from this source. In the centuries up to the rise of the Roman empire the Greek alphabet took several forms and it was one of the first to be actually designed in an artistic sense. The result was a fine reserved epigraphic style for monuments and staid formal use called *uncial,* as well as a free-flowing cursive or running hand called *minuscule* (cf. fig. 15). The three classical accent marks—acute, grave, and circumflex—were added in the 2nd and 3rd Christian centuries by the scholars of Byzantium. So completely did the Greek of the Hellenistic age become the communication medium of the common people that its use in the Gospels and subsequent NT writings was both providential and natural, and so well fitting to the cosmopolitanism of the evangel that John could without qualification summarize the omnipresence and eternality of the glorified Christ with the simple words ALPHA AND OMEGA (Rev. 1:8 et al.).

VI. Writing in the Scriptures

A. In the OT. Even ABRAHAM, who lived in the first half of the 2nd millennium B.C., would have been aware of five distinct and complete writing systems commonly in use in the cultural milieu about him. The OT contains oral statements, sermons, conversations, and other direct utterances, but it is primarily a written record. Several Hebrew words are used for the concept of writing, the most common being the verb *kātab H4180* ("to write," Exod. 17:14 et al.; less frequent is the cognate noun *kĕtāb H4181*, "document, record, writing," 1 Chr. 28:19 et al.). It apparently can indicate both engraved epigraphic writing and inked penmanship. Its use is not restricted to one area of the OT nor to the people of Israel alone. The training and organization of the scribal trade is not mentioned in the OT, but by analogy to the other peoples of the time it is safe to assume that there were specific individuals who made their living as "public stenographers" and who held a position of authority and prominence in Israel. Frequently in the historical books SCRIBES are summoned, called, ordered or dismissed so they must have been a common adjunct to the royal and religious offices.
This papyrus from 1st-cent. Hawara, Egypt, probably a Latin writing exercise, repeats seven times a line from Virgil's *Aeneid* (2.601).

B. In the NT. The writers of the NT presuppose that the OT is essentially a written document and also that the gospel is the fulfillment of the OT. This simple concept runs through and enlightens many points in the NT. For example, Jesus alluded to the Hebrew/Aramaic square script when he said that "not a dot" would pass from the law until everything should be accomplished (Matt. 5:18 RSV; cf. Lk. 16:17); the reference is probably to a very small stroke that distinguishes certain letters (see DOT). The common Greek expression *gegraptai*, "it has been written" (pass. ptc. of *graphō G1211*), conveys a special authoritative sense, with the supposition understood, "and not to be altered." This is a straightforward extension of the standard NT usage in regard to the divine authority and finality of the OT and its proper and consummate explanation in the INCARNATION of Christ and the gospel witness of him. See also INSPIRATION.

W. White, Jr.

Wycliffe wik'lif. See versions of the Bible, English.
Inscribed titles of Xerxes on calcite jar fragments from Susa (5th cent. B.C.).

Xanthicus zan'thi-kuhs (Ξανθικός, spelled ΞΑΝ- ΔΙΚΟΣ in some inscriptions and papyri). The name for the first month in the Macedonian calendar (2 Macc. 11:30, 33, 38). According to JOSEPHUS *(Ant.* 1.3.3 §81 et al.), Xanthicus corresponds to NISAN (March-April) in the Jewish calendar, but J. A. Goldstein *(II Maccabees,* AB 41A [1983], 418 – 19) argues for ADAR (February-March).

Xerxes zuhrk'seez (אֲחַשְׁוֵרוֹשׁ *H347,* from Pers. ḫšayāršā, possibly "mighty man"; called Ξέρξης by Gk. writers). KJV and other versions transliterate the Hebrew and read AHASUERUS. (1) Father of DARIUS THE MEDE (Dan. 9:1).

(2) Son of DARIUS I (Hystaspes) the Great, and ruler of PERSIA (c. 486 – 465 B.C.; Ezra 4:6 and frequently in the book of Esther). His mother was Atossa, daughter of CYRUS the Great, the builder of the Persian empire. Xerxes was designated as his father's successor by Darius himself, whose reign had ended as rebellions were breaking out throughout his vast empire.

Xerxes was a man of weak abilities and given to unfortunate reliance upon the advice and

opinions of courtiers and harem eunuchs. After suppressing the revolt in EGYPT with great violence and destruction, he levied a navy from Egypt and his Greek allies, and began to formulate plans to invade Attica. His Phoenician subjects ferried his army across the Hellespont on a double bridge of boats and from there the Persian forces, made up of contingents from nearly fifty nations, marched S and captured ATHENS. However, the tide of war turned swiftly when Xerxes' great fleet was annihilated at the subsequent naval battle of Salamis in 480 B.C., and Xerxes again exhibited his insecurity of character by putting his Phoenician admiral to death and causing the desertion of his naval forces. His commander in Greece, Mar-donius, negotiated with Athens to no avail. The war was resumed and Persia was finally defeated at the battle of Plataea in 479/8. The Athenians and many newly won deserters from Persia followed up their success by invading the area of the Eurymedon River, thus ending Persia's hopes for European conquest.

The Persian king retired to his palaces at PERSEPOLIS and SUSA, which he expanded and decorated in colossal and ornate style. Of great interest is his religious enthusiasm, for unlike his predecessors he did not accept the validity of the archaic religious cults of Egypt and Babylon but destroyed them both. His inscriptions from Persepolis proclaim his destruction of the temples of the false gods in his dominions and his faithfulness to the deity Ahuramazda. It may well be that the religious inflexibility of his Jewish subjects and his wife, ESTHER, confirmed his stalwart adherence to Mazdaism. No mention of Esther or her people is made outside of the biblical book, but the exclusive and propagandistic character of ancient annals and records is well established, and so one would be indeed surprised if the inner workings of the HAREM were recorded upon royal documents of the period. The essential personality of Xerxes as presented by HERODOTUS and his own inscriptions is very similar to that demonstrated in the Bible (see ESTHER, BOOK OF). The career of Xerxes was the preliminary to the collapse of the Achaemenid house under ALEXANDER THE GREAT's conquest. (See further E. M. Yamauchi, *Persia and the Bible* [1990], ch. 5; P. Briant, *From Cyrus to Alexander: A History of the Persian Empire* [2002], ch. 13.)

W. WHITE, JR.
The Yarmuk River is partly visible in this aerial photograph, just right of center. (View to the S.)

Yahweh yah'weh. See GOD, NAMES OF, II.

Yahweh, day of. See DAY OF THE LORD.

Yahwist yah'wist. Name applied to one of the putative sources of the Pentateuch, often referred to by the designation *J*. See PENTATEUCH III.

yard. For the sense "courtyard," see TEMPLE, JERUSALEM IV.B. As a unit of measurement, the term is used sometimes in modern versions as the approximate equivalent of two cubits (cf. NIV, Josh. 3:4; Neh. 3:13; Jn. 21:8). See WEIGHTS AND MEASURES I.A.
F. B. HUEY, JR.

Yarmuk yahr'muhk. Although not mentioned in the Bible, the Yarmuk has played an important role as

the northernmost of the four main rivers in TRANSJORDAN (the others being the JABBOK, the ARNON, and farthest S the ZERED). Sometimes referred to as Canaan's "second river" (after the JORDAN), the Yarmuk is about 50 mi. long, intermittently draining the BASHAN plateau and cutting a canyon to the Jordan, which it resembles at their confluence some 4 mi. S of the Sea of Galilee. Though the scene of a major Muslim triumph against the Byzantine empire in A.D. 636, as well as a current boundary for Israel, Syria, and Jordan, the Yarmuk rarely formed a cultural-historical divide, being renowned rather for therapeutic springs and irrigation.

G. R. LEWTHWAITE

yarn. A strand of fibers used mainly in weaving and knitting. The term is used by modern English versions (esp. in Exod. 25 – 28 and 35 – 39) not as the rendering of a Hebrew word but as an aid in translation. Thus, in the description of the curtains of the TABERNACLE, where the KJV says that they should be made of "fine twined linen, and blue, and purple, and scarlet," the NIV has, "of finely twisted linen and blue, purple and scarlet yarn" (26:1). (The KJV, following Rashi and other interpreters, has "linen yarn" as the translation *of miqwēh* in 1 Ki. 10:28 and 2 Chr. 1:16; however, this form is now analyzed as the preposition *min H4946,* "from," plus the place name *qěwēh H7750.* See KUE.)

S. BARABAS

Yavneh yav'neh. See JABNEEL #2.

yeast. See LEAVEN.

yellow. This English term is used in most Bible versions to render Hebrew *ṣāhōb H7411,* which occurs in only one passage with reference to the color of hair in a sore (Lev. 11:29 – 39; the cognate verb *ṣāhab H7410,* meaning "to gleam [like bright, reddish gold]," occurs once with reference to bronze and is usually translated "polished" or "shining," Ezra 8:27). The KJV uses it in an additional passage as the translation *of yěraqraq H3768,* applied to gold (Ps. 68:13; NIV, "shining"; NRSV "green"); the reference is possibly to "gold with much silver additive" *(HALOT,* 2:441; the Heb. word occurs also with reference to the "greenish" color of a skin disease or of mildew, Lev. 13:49 and 14:37). In the NT, the NIV has "yellow as sulfur" for the Greek adjective *theiōdēs G2523,* "sulphurous" (Rev. 9:17). Yellow as a dye is not mentioned in the Bible; such a dye in antiquity was produced from safflower petals, saffron from the crocus flower, turmeric, unripe pomegranate, and other herbs. See also COLOR.

Yerushalmi. See TALMUD IV; TARGUM II.

YHWH. See GOD, NAMES OF, II.

Yiron yihr'uhn. See IRON (PLACE).

yod, yodh yohd (יוֹד , alternate form of יָד H3338, "hand"). KJV *jod.* The tenth letter of the Hebrew ALPHABET (י), with a numerical value of ten. It is named for the shape of the letter, which in its older

form resembled the outline of a hand. Its sound corresponds to that of English *y*; in addition, it was used to represent vocalic sounds (*î*, *ê*) prior to the introduction of vowel signs, and this practice was later continued.

yoke. A piece of timber or a heavy wooden pole, shaped to fit over the neck with curved pieces of wood around the neck fastened to the pole, and used to hitch together a team of oxen (or other draft animals) so that they could pull heavy loads evenly. The common Hebrew term for "yoke" is *ʿōl H6585* (Gen. 27:40 et al.), although *môṭâ H4574* is used a number of times (Lev. 26:13 et al.). Another term, *ṣemed H7538*, can also be translated "yoke," but only in the related sense of "a team of animals yoked together" (Job 1:3 et al.). In the NT, the Greek noun *zygos G2433* is used (Matt. 11:29 et al.; *zeugos G2414*, "a pair [of animals]," can be applied to doves and to oxen, Lk. 2:24; 14:19). Because a scale or pair of balances was constructed with a crossbar reminding one of a yoke, *zygos* can also mean, "a pair of scales" (Rev. 6:5).

In the Bible, these terms are most often used metaphorically to designate a burden, obligation, or slavery (Gen. 27:40; 1 Sam. 11:7; Isa. 58:6, 9; Nah. 1:13; Matt. 11:29; Lk. 14:19; Acts 15:10). When Yahweh delivered Israel from Egyptian slavery, he said, "I broke the bars of your yoke and enabled you to walk with heads held high" (Lev. 26:13). Severe bondage can be termed "an iron yoke on your neck" (Deut. 28:48). The term is used of affliction in Lam. 3:27: "It is good for a man to bear the yoke while he is young." Isaiah states that people rejoice because God shatters "the yoke that burdens them, / the bar across their shoulders, / the rod of their oppressor" (Isa. 9:4; cf. 10:27). Sometimes the term is used to describe the burden of a person's transgression and its punishment: "My sins have been bound into a yoke; / by his hands they were woven together. / They have come upon my neck / and the Lord has sapped my strength" (Lam. 1:14).

Donkey with yoke and plow.

In the NT the term can also refer to slavery (1 Tim. 6:1); Roman conquerors compelled prisoners of war to march under an archway to symbolize defeat and slavery. More significant is the application of the metaphor to the OT law, especially CIRCUMCISION: "Now then, why do you try to

test God by putting on the necks of the disciples a yoke that neither we nor our fathers have been able to bear?" (Acts 15:10; cf. Gal. 5:1). Probably alluding to the use of this figure in Judaism with reference to WISDOM (Sir. 51:26), Jesus said: "Take my yoke upon you and learn from me, for I am gentle and humble in heart, and you will find rest for your souls. For my yoke is easy and my burden is light" (Matt. 11:29 – 30). It is significant that Clement of Rome describes Christians as those who come under the yoke of grace (*1 Clem.* 16.17).

Various kinds of draft animals were hitched or yoked together, but generally it was oxen or cattle. It is interesting that the Mosaic law forbade the yoking of an ox and a donkey together (Deut. 22:10) because of the inequality of the work. This rubric no doubt is the source of the familiar mandate of the apostle that Christians should not be "unequally yoked together [verb *heterozygeō G2282*] with unbelievers" (2 Cor. 6:14 KJV). Yoked animals were used for pulling plows, stones, carts, and other types of road or field work. Archaeologists have discovered that yokes of many kinds were used throughout the ancient world and very early, and that yokes were crude and simple or more complex in design, depending upon the period of history. See also YOKEFELLOW.

L. M. PETERSEN

yokefellow. After pleading with EUODIA and SYNTICHE "to agree with each other in the Lord," PAUL adds, "Yes, and I ask you, loyal yokefellow, help these women…" (Phil. 4:3). The Greek word is *syzygos G5187*, an adjective that literally means "yoked, paired together," but that can also be used, as here, substantively and figuratively, "a person that is joined to another one." In classical literature it is at times equivalent to "wife," and thus some have suggested that the apostle was referring to his own spouse. Others have thought that here the word is a proper name, Syzygus, but evidence is lacking. Most interpreters understand the term in its common figurative sense of "companion" or "comrade," and numerous suggestions have been made in regard to the identity of the person (Luke, Lydia, Epaphroditus, Barnabas, Silas, Timothy). Perhaps it was a way of describing the leader of the church at PHILIPPI.

S. BARABAS

Yom Kippur yom kip'uhr. See ATONEMENT, DAY OF.

youth. The ancient concepts of childhood and youth were imprecise. No term exists in Hebrew or Greek for adolescence or puberty as such. Generally a woman is styled a "maiden" (see MAID, MAIDEN) until marriage, regardless of age, and a man is a youth from infancy to manhood (sometime in his twenties). A variety of Hebrew terms are rendered "youth" or the like in the various English versions, the most common being *na⁽ar H5853* (Gen. 14:24 et al.), feminine *na⁽ărâ H5855* (24:14 et al.). Also worthy of note is the pairing of *bāḥûr H1033*, "young man," with *bĕtûlâ H1435*, "virgin, maiden" (Deut. 32:25 et al.; see VIRGIN). In the NT such Greek terms are used as *neotēs G3744*, "youth" (e.g., 1 Tim. 4:12), *neanias G3733*, "young man" (e.g., Acts 7:58), and *neaniskos G3734*, also "young man" (e.g., Matt. 19:20); the feminine *neanis* occurs with some frequency in the SEPTUAGINT (e.g., Exod. 2:8), but not at all in the NT. Neither in the OT nor in the NT can chronological limits be assigned. Generally children were weaned at about two to three years and became responsible at thirteen years. See also BOY; GIRL; CHILD.

W. WHITE, JR.

Z
This elevation in SW Jerusalem is often referred to as Mount Zion (view to the NE), but the name was originally applied to the City of David, just S of the temple mount.

Zaanaim zay'uh-nay'im. KJV alternate form of ZAANANNIM.

Zaanan zay'uh-nan (צַאֲנָן *H7367,* possibly "place of flocks"). A town against which MICAH prophesied (Mic. 1:11). The imprecation refers to various locations mostly in the SHEPHELAH, and therefore Zaanan is generally considered to be the same as ZENAN (Josh. 15:37).

Zaanannim zay'uh-na'nim (צַעֲנַנִּים *H7588* [in Jdg. 4:11 the *Ketib* can be understood as בְּצַעֲנַנִּים or בַּצְעַנִּים], meaning unknown). A place near HELEPH on the S border of the tribe of NAPHTALI known for being the site of a large tree (Josh. 19:33); it was here, not far from KEDESH, that HEBER the Kenite pitched his tent (Jdg. 4:11 [KJV, "Zaanaim"]; his wife, JAEL, killed SISERA in this tent, vv. 17 – 21). According to Z. Kallai, "Elon-in-Zaanannim" was probably not a settlement but "a conspicuous geographic feature in the region under consideration, close to Heleph" (Z. Kallai, *Historical*

Geography of the Bible [1986], 232). Following the SEPTUAGINT reading in Joshua *(Besemin* or *Besenanim),* some have identified Zaanannim with Khirbet Bessum, 3 mi. NE of TABOR. Other proposals include Lejjun (between MEGIDDO and Tell Abu Qudeis), Khan et-Tujjar (on the road from BETH-SHAN to DAMASCUS, about 4 mi. SE of ADAMI NEKEB; cf. F.-M. Abel, *Géographie de la Palestine* [1933], 2:439), and Shajarat el-Kalb (3 mi. SW of the S tip of the Sea of Galilee). The NRSV apparently interprets the two biblical references as indicating different places, for in Joshua it reads, "the oak in Zaanannim," but in Judges, "Elon-bezaanannim" (the latter is the rendering of NJPS in both passages).

A. K. HELMBOLD **Zaavan** zay'uh-vuhn (זַעֲוָן *H2401,* perhaps related to זַעֲוָה *H2400,* "trembling, terror"). Son of EZER and grandson of SEIR the HORITE; he probably became the progenitor of a clan in EDOM (Gen. 36:27; 1 Chr. 1:42 [KJV, "Zavan"]).

One proposal for the location of Zaanannim is on the plain just SW of the Sea of Galilee. (View to the N.)

Zabad zay'bad (זָבָד *H2274,* "gift" or "[God/Yah-weh] has bestowed"; cf. ZABDI, ZABDIEL, ZABUD, ZEBADIAH, ZEBEDEE, ZEBIDAH). (1) Son of Nathan and descendant of JUDAH through JERAHMEEL and ATTAI (1 Chr. 2:36 – 37); perhaps the same as ZABUD (1 Ki. 4:5).

(2) Son of Tahath and descendant of EPHRAIM (1 Chr. 7:21). Some believe that the genealogy in this passage is textually corrupt. See BERED (PERSON).

(3) Son of AHLAI; he is included among DAVID's mighty warriors (1 Chr. 11:41).

(4) Son of an Ammonite woman named SHIME-ATH; he was one of two men who assassinated King JOASH (2 Chr. 24:26). The parallel passage (2 Ki. 12:21) reads differently. See JEHOZABAD.

(5 – 7) The name of three Israelites—respectively descendants of Zattu, Hashum, and Nebo— who agreed to put away their foreign wives (Ezra 10:27, 33, 43; 1 Esd. 9:28 [KJV, "Sabatus"], 33 [KJV, "Baanaia"], 35 [KJV, "Zabadaias"]).

Zabadaias zab'uh-day'yuhs. KJV Apoc. form of ZABAD (1 Esd. 9:35).

Zabadeans zab'uh-dee'uhnz (Ζαβαδαῖοι). An ARABIAN tribe that was attacked and plundered by

Jonathan MACCABEE in the course of the war with DEMETRIUS (1 Macc. 12:31). JOSEPHUS, narrating the incident *(Ant.* 13.5.10 §179), calls the conquered people NABATEANS, the powerful tribe whose headquarters were at PETRA, but this identification is evidently an error, for the Zabadeans lived in a region somewhere E of the ELEUTHERUS River and thus between HAMATH and DAMASCUS (cf. 1 Macc. 12:25, 30, 32). Perhaps there was a connection between them and ZABDIEL the Arab (11:17; see *ABD,* 6:1030 – 31). Alternatively (or in addition?), they may have lived in an area or town called Zabad, though the identification of such a place is problematic. The site could scarcely be identical with a town of similar name said to be situated NW of Hamath (*CIG,* no. 9893). A more likely proposal is modern Zebdani, about halfway between the Eleutherus and Damascus.

W. J. CAMERON

Zabbai zab'i (זַבַּי *H2287*, possibly short form of זְבִידָה *H2288*, "given, bestowed"; see ZEBIDAH). (1) One of the descendants of Bebai who agreed to put away their foreign wives (Ezra 10:28; 1 Esd. 9:29 [KJV, "Josabad"]).

(2) Father of a certain BARUCH who helped to repair the wall of Jerusalem (Neh. 3:20; here the *Qere* has ZACCAI).

J. ARTHUR THOMPSON

Zabbud zab'-uhd. KJV variant of ZACCUR.

Zabdeus zab'dee-uhs. KJV Apoc. form of ZEBA-DIAH (1 Esd. 9:21).

Zabdi zab'di (זַבְדִי *H2275*, "my gift" or short form of a name such as זַבְדִיאֵל *H2276*, "gift of God"; see ZABDIEL, ZEBEDEE). (1) Son of Zerah, descendant of JUDAH, and grandfather of ACHAN (Josh. 7:1, 17 – 18, KJV and other versions). On the basis of the SEPTUAGINT (which has *Zambri*) and of 1 Chr. 2:6 – 7, some scholars read ZIMRI (cf. NIV).

(2) Son of Shimei and descendant of BENJAMIN (1 Chr. 8:19). He is included among the heads of families who lived in Jerusalem (v. 28).

(3) A SHIPHMITE who "was in charge of the produce of the vineyards for the wine vats" during the reign of DAVID (1 Chr. 27:27).

(4) Son of ASAPH and ancestor of MATTANIAH; the latter was a postexilic Levite who led in worship (Neh. 11:17; apparently called ZACCUR in 1 Chr. 25:2 et al., and ZICRI in 1 Chr. 9:15).

J. ARTHUR THOMPSON

Zabdiel zab'dee-uhl (זַבְדִיאֵל *H2276*, "gift of God" or "my gift is God"; see ZABAD, ZEBEDIAH, etc., and cf. Akk. *Zabdilu*; Gk. Apoc. זַבְדִיאֵל). (1) Father of JASHOBEAM; the latter was a military officer under DAVID in charge of the first division (1 Chr. 27:2).

(2) Son of HAGGEDOLIM; he was chief officer of the priests in the days of NEHEMIAH (Neh. 11:14).

(3) An Arab who assassinated ALEXANDER Balas when the latter fled to ARABIA; Zabdiel beheaded Alexander and sent his head to PTOLEMY Philopator (1 Macc. 11:17; cf. Jos. *Ant.* 13.4.8 §118 [*Zabdeilos*]).

J. ARTHUR THOMPSON

Zabud zay'buhd (זָבוּד *H2280*, "bestowed"). Son of NATHAN; he is described as "a priest and personal adviser to the king [SOLOMON]" (1 Ki. 4:5). Some identify Zabud with ZABAD #1; see discussion under NATHAN #4.

Zabulon zab'yuh-luhn. KJV NT form of ZEBULUN.

Zaccai zak'i (זַכָּי *H2347*, "pure, innocent"; cf. ZAC-CHAEUS). TNIV Zakkai. (1) Ancestor of a family of 760 members who returned from the EXILE (Ezra 2:9; Neh. 7:14; called Chorbe [KJV, "Corbe"] in 1 Esd. 5:12).
　　(2) See ZABBAI #2.

Zacchaeus za-kee'uhs (Ζακχαῖος *G2405*, from Heb. זַכָּי *H2347*, "pure, innocent"; see ZACCAI). Also Zaccheus. (1) A military officer under Judas MACCABEE (2 Macc. 10:19).
　　(2) A wealthy Jewish TAX COLLECTOR of JERICHO, known for his short stature, who became a disciple of Jesus under most unusual circumstances (Lk. 19:1 – 10). Luke is the only evangelist who preserves the exciting Zacchaeus pericope. One is amazed that the story is not included in the Gospel according to Matthew (who himself was a tax collector), but the episode fits the dominant note of Luke's "Gospel for the Gentiles" very well and no doubt Luke included it to show that the gospel is for all those estranged from God. The passage has a climactic function, since it records the last event in Jesus' ministry prior to his final week in Jerusalem.
　　Luke makes a special point that Zacchaeus was a "chief tax collector" (*architelōnēs G803*) and that he "was wealthy" (Lk. 19:2). No doubt he was a sort of district tax commissioner who had purchased the Jericho tax franchise from the Roman or provincial government; he then probably farmed it out to subordinate tax agents who did the actual tax collecting, all of them reaping huge commissions and getting rich off poor and wealthy alike. Jericho was known for its palm groves and balsam (Jos., *Ant.* 15.4.2) and was on the main load of traffic between major commercial centers W of the Jordan (JOPPA, JERUSALEM) and in TRANSJORDAN. It was easy to amass a fortune there. It is possible he was one of the most hated men in Jericho, and it was natural that the people who witnessed the incident murmured against Jesus: "He has gone to be the guest of a 'sinner'" (v. 7).
　　When Jesus, his disciples, and a crowd of followers—the sick and the curious—came through Jericho on the way to the PASSOVER in Jerusalem, it must have formed quite a commotion. Perhaps on that day Zacchaeus happened to be walking in the street or his place of business nearby, and he wondered who could be attracting such a crowd during the middle of the day. Evidently he had never met Jesus before, for Luke states, "He wanted to see who Jesus was" (Lk. 19:3). Because of his short build he could not see over the multitude. He anticipated that Jesus, who was moving slowly along with the crowd, would pass along his street, so he ran ahead and climbed a sycamore-fig tree (a common plant in the Jordan Valley; see SYCAMORE). Zacchaeus certainly must have been surprised— and, one should comment, a bit embarrassed with the whole crowd looking up in amazement at the chief tax collector of Jericho up in a tree—when Jesus stopped, looked up, and called out to him over the noise of the crowd. What he said is part of the divine prerogative of knowledge and purpose that permeates the entire story: "Zacchaeus, come down immediately. I must stay at your house today" (v. 5). The Lord knew the heart of Zacchaeus as he had earlier known NATHANAEL'S (Jn. 1:48).

Remains of Herod's northern palace at NT Jericho, hometown of Zacchaeus. The road to Jerusalem was located on the southern side (left) of the wadi.

The conversion which followed must have caused quite a stir in Jericho. A hated tax collector, a collaborator with the oppressive Romans, had become a disciple of Jesus. Thousands of conversions during Jesus' ministry are not recorded, but that of Zacchaeus will always be remembered. Here great opposites met, the chief of sinners and the Chief of Love, and love is triumphant. This is the message and thrust of the gospel: "For the Son of Man came to seek and to save what was lost" (Lk. 19:10). The conversion of the small Jewish man is exemplary of all true Christian rebirth; he scrambled with haste down the tree and stood before Jesus with great joy of faith, and immediately began to show tangible evidence of his faith and repentance.

Zacchaeus's life was completely transformed through Christ. Spontaneously he openly confessed the sins of his evil life. His words reveal what his sin was: "Look, Lord! Here and now I give half of my possessions to the poor" (Lk. 19:8). Now he would do the opposite of what he once did, showing that all believers rich and poor are one in Christ. Jewish custom was that one fifth of a person's annual income should be given for works of love, but Zac-chaeus went far beyond this. Moreover, because he knew that he had not gotten all his wealth through just means—and how much had not his henchmen stolen from the people through misrepresentation, pressure, and extortion?—he added, "and if I have cheated anybody out of anything, I will pay back four times the amount." Thus Zacchaeus offered twice the restitution thieves must make under Jewish law (Exod. 22:1; Num. 5:6).

Jesus' pronouncement of remission, "Today salvation has come to this house" (Lk. 19:9), included not only Zacchaeus himself but all the members of his household. The expression finds its meaning in the Jewish concept of the family under the old covenant. Now Zacchaeus was a true son of ABRAHAM, a child of the promise, and the blessings of Abraham were fulfilled in the forgiving Christ even for those who by their profession were considered heathen (Matt. 18:17). (*Clementine Homilies* 3.63 states that Zacchaeus later became a companion of PETER and bishop at CAESAREA, but the remark does not appear to be based upon fact. See further P. Kariamadam, *The Zacchaeus Story, Lk. 19, 1 – 10: A Redaction-Critical Investigation* [1986]; *ABD*, 6:1032 – 33.)

L. M. PETERSEN

Zacchur zak'uhr. KJV alternate form of ZACCUR (only 1 Chr. 4:26).

Zaccur zak'uhr (זַכּוּר *H2346*, possibly "[God is] mindful"). KJV also Zacchur (1 Chr. 4:26); TNIV Zakkur. (1) Father of SHAMMUA; the latter was one of the spies sent out by MOSES (Num. 13:4).

(2) Son of Hammuel and descendant of SIMEON (1 Chr. 4:26). Some interpret the Hebrew to mean that Zaccur, Hammuel, and Shimei were all sons of MISHMA.

(3) Son of Jaaziah and descendant of LEVI through MERARI (1 Chr. 24:27).

(4) One of the sons of ASAPH who assisted their father in the prophetic ministry of MUSIC; he was the head of the third company of temple musicians appointed by lot under DAVID (1 Chr. 25:2, 10). This Zaccur is apparently the same as ZABDI #4 and ZICRI #5. A descendant of his named Zecha-riah played the trumpet at the dedication of the wall in postexilic Jerusalem (Neh. 12:35).

(5) A descendant of BIGVAI, part of the company that traveled with EZRA from Babylon to Jerusalem (Ezra 8:14; KJV has ZABBUD following the *Ketib*). See also UTHAI.

(6) Son of Imri; he was one of those who helped NEHEMIAH rebuild the wall of Jerusalem (Neh. 3:2).

(7) A Levite who signed Nehemiah's covenant (Neh. 10:12).

(8) Son of Mattaniah and father of Hanan; the latter was appointed by Nehemiah as assistant to those who were in charge of the temple storerooms (Neh. 13:13).

(9) One of the postexilic temple singers who agreed to put away their foreign wives during Ezra's reform (1 Esd. 9:24; not mentioned in the parallel, Ezra 10:24).

J. ARTHUR THOMPSON

Zachariah, Zacharias, Zachary zak'uh-r*i*'uh, zak'uh-r*i*'uhs, zak'uh-ree. KJV alternate forms of ZECHARIAH.

Zacher zay'kuhr. KJV form of ZEKER.

Zadok zay'dok (צָדוֹק *H7401*, prob. "righteous" [perhaps a shortened theophoric name; see *HALOT*, 3:1001]; Σαδώκ *G4882*). The name of several individuals mentioned in the OT, the most prominent of whom will be discussed first.

(1) Son of AHITUB, descendant of LEVI (through KOHATH, AARON, and ELEAZAR), and father of AHIMAAZ (1 Chr. 6:8 [MT 5:34]); he was a leading priest during the reigns of DAVID and SOLOMON. He is first mentioned—along with another priest, AHIMELECH son of ABIATHAR—in a list of David's officers (2 Sam. 8:17; cf. 20:25). When David fled from ABSALOM, Zadok started to accompany him, taking along the ARK OF THE COVENANT, but David ordered him to return to Jerusalem (15:24 – 29). Zadok always showed unswerving loyalty to David, and his son Ahimaaz served as a courier in the time of conflict (15:36; 17:17 – 20; 18:19, 22, 27).

After the defeat of Absalom, Zadok and Abi-athar were bearers of a message encouraging the elders of Judah to bring David back to Jerusalem (2 Sam. 19:11 – 14). These two priests served jointly until the end of David's reign, with Zadok for a time having special responsibility for the worship at the tabernacle in GIBEON (1 Chr. 16:39). When David was close to death, however, Abiathar lent his support to ADONIJAH, whereas Zadok refused to do so (1 Ki. 1:7 – 8). David then instructed Zadok and other leaders to crown Solomon as king (vv. 32 – 35), and Zadok himself anointed David's successor (v. 39). As Solomon proceeded to secure his throne, he deposed Abiathar from the priesthood (1 Ki. 2:26 – 27, 35), thus fulfilling the dire prediction about the house of ELI (1 Sam. 2:27 – 36).

In 1 Chronicles, this Zadok appears in various lists and parallel statements (1 Chr. 6:8, 53; 15:11; 16:39; 18:16; 24:3, 6, 31; 29:22). A passage without any parallel in Samuel or Kings is found in 12:26 – 28, which reports that the forces that accompanied David to HEBRON when he became king included 3,700 Aaronites under JEHOIADA, "and Zadok, a brave young warrior, with 22 officers from his family" (in 27:17, Zadok is listed as leader of the Aaronites). On the strength of this statement Wellhausen declared that Zadok was not a descendant of Aaron, but a military adventurer who had been given the priesthood by David as a reward for his services; and that because he thus displaced the descendants of Eli, an alleged prediction that the priesthood would be removed from Eli's family was inserted in 1 Sam. 2:27 – 36, and a priestly descent from Aaron and Eleazar was invented for Zadok.

This theory, like so many others, is entirely imaginary. There is no reason why a young man of priestly family should not have been active in military operations while his father was still living and performing the work of the priesthood (though some think that the Zadok mentioned in 1 Chr. 12:28 is a different individual altogether). There is also no reason for denying the possibility that the change in the priesthood should have been predicted in the time of Eli, unless, of course, one adopts the presupposition that predictive prophecy is impossible. (Many scholars, arguing that the relevant genealogies in Chronicles are fictional, have proposed various theories to account for Zadok's origins. See the summaries in *ABD*, 6:1034 – 36; G. N. Knoppers, *I Chronicles 1 – 9*, AB 12 [2004], 405 – 6.)

Because of Zadok's prominence during the reign of Solomon, subsequent high priests were chosen only from the Zadokite line. It is significant that in Ezekiel the term "sons of Zadok" is used four times as a designation for the priests (Ezek. 40:46; 43:19; 44:15; 48:11). See PRIESTS AND LEVITES III. During the Maccabean and later period, the legitimacy of the Zadokite priesthood played a major role in politics and religion (but note A. Hunt, *Missing Priests: The Zadokites in Tradition and History* [2006]). See further ESSENE; HASMONEAN; MAC-CABEE; SADDUCEE; ZADOKITE FRAGMENTS.

(2) Son of Ahitub II, descendant of #1 above, and father of SHALLUM (1 Chr. 6:12 [MT 5:38]; cf. Ezra 7:2). Because the father and grandfather of this second Zadok bear the same names as those of the first Zadok, some propose that a scribe might at some time have inadvertently copied the same line twice. Elsewhere a Zadok is identified as son of MERAIOTH, grandson of Ahitub, and father of MESHULLAM (1 Chr. 9:11; Neh. 11:11); since Meshullam is likely a variant of Shallum, this lineage probably refers to Zadok II, but some argue that it refers to Zadok I (in which case Ahitub I was his grandfather, not his father; see the discussions in KD, *Chronicles*, 112 – 20; Knoppers, *1 Chronicles 1 – 9*, 407 – 10).

(3) Father of Jerusha; the latter was the wife of King UZZIAH and mother of King JOTHAM (2 Ki. 15:33; 2 Chr. 27:1).

(4) Son of Baana; he made repairs to a portion of the wall of Jerusalem (Neh. 3:4). He should probably be identified with the Israelite who signed the covenant of NEHEMIAH (10:21; a certain MESHEZABEL is mentioned next to Zadok in both passages).

(5) Son of Immer; he made repairs to the wall of Jerusalem opposite his house (Neh. 3:29).

(6) A scribe whom Nehemiah appointed as one of three men in charge of the storerooms of the temple (Neh. 13:13). Perhaps he should be identified with #4 or #5 above.

(7) Son of Azor, included in Matthew's GENEALOGY OF JESUS CHRIST (Matt. 1:14; KJV, "Sadoc").

<div align="right">A. A. MACRAE</div>

Zadokite Fragments zay'duh-k*i*t. Name given to two fragmentary medieval MSS discovered in the Cairo GENIZAH at the end of the 19th cent. and containing an ancient Jewish sectarian treatise. Several copies of the same document were subsequently discovered among the DEAD SEA SCROLLS (esp. 4Q266). The text is now known as the *Damascus Document* (or *Damascus Rule*) and abbreviated *CD* (for *Cairo: Damascus*).

1. Discovery
2. Contents
    1. Exhortation
    2. Rules of conduct
3. Provenience
4. Date
5. Relationship to the DSS

I. Discovery. The two MSS were recovered by the American Jewish scholar Solomon Schechter (1847 – 1915) from the genizah high in the wall of the Ibn Ezra Synagogue located in the old Jewish quarter of Cairo. The stained PARCHMENT sheets were among the thousands of scattered documents removed by Schechter to the Cambridge University Library in the years after 1896. Thirty sacks of material were incorporated into the library as the Taylor-Schechter collection, and the *Zadokite Fragments* were published in 1910 (*Documents of Jewish Sectaries*, vol. 1). Schechter's dating of the work to the 1st cent. B.C. became the center of keen debate, but he was correct in his judgment that the source of the fragments was of intertestamental origin and that it represented a nonrabbinical collection of writings known to the early Middle Ages but subsequently lost.

II. Contents. The longer fragment consists of eight leaves of a mediocre parchment approximately 8.5 x 7.5 in. (215 x 190 mm.), stained and worn with a few small holes. The sixteen pages contain from twenty-one to twenty-three lines of text. The letters are large and black in a medieval rabbinic hand with some separation between words and all initial and final forms of the characters. The *lamed* extends up into the lower limit of the line above, while the final ṣ*ade* extends down to the upper limit of the next lower line. The margins on both sides are unjustified, and the size of the letters is not wholly uniform. The shorter fragment consists of two pages on one large leaf containing thirty-five lines on the obverse and thirty-four on the reverse. The text is smeared, stained, and mutilated at many points but without the lacunae of the longer fragment. The calligraphy is later than the other fragment and is smaller and less distinct. The longer portion, assigned to the 10th cent. by Schechter, is known as *A*, and the single leaf, assigned to the 12th cent., is known as *B*.

A. Exhortation. The *A* fragment opens with a general admonition and gives a paraphrase of Isa. 51:7 ("Hear me, you who know what is right"); the remainder seems to be some type of parallelistic hymn or chant used for public or group worship. The Hebrew is poorly preserved but has definite traces of archaic vocabulary and syntax. In the course of the exhortation there are hundreds of allusions to various OT passages, the largest number being to Isaiah, Ezekiel, and the Psalms. Most of the other books quoted or mentioned by allusion are also poetical.

The sanctuary is mentioned as abandoned by God. This theme is followed in all the extant sectarian documents: God had given up the temple in Jerusalem and its reprobate hierarchy, and was

about to do a new act of redemption through a faithful remnant. The fact that the descendants of ZADOK are mentioned as true to the covenant ("the sons of Zadok are the elect of Israel," CD IV, 3 – 4) demonstrates the probable source of the book. The mention of "the new covenant in the land of Damascus" (VIII, 21) to describe the community out of which the document arose was seized upon by some, and so the fragments became known as the *Damascus Document*, but the Zadokite intent of the work appears to take precedence.

The text attempts a retelling of the history of the Jews not unlike the defense of STEPHEN (Acts 7:2 – 53). The events are out of any order, however, and so many allusions are made to sources and special meanings of terms that interpretation is very difficult. Frequently euphemisms and indirect references occur that would have been clear to no one but initiates of the sect. Of special importance is the mention of a "Teacher of Righteousness" or "Righteous Teacher" (Heb. *mwrh ṣdq*) who is raised up by God to lead the sect. The chief motive of history is to obey the COVENANT, and the REMNANT alone is preserved by God to this end. Every age of biblical history is seen to have had its righteousness and its righteous remnant, and some of these are mentioned: Noah, Moses, and Joshua and their immediate followers. The larger population, the sons of Noah, and others are described as reprobate and fallen. The true knowledge of the Torah is the possession of those who are faithful to the covenant. In this the sect appears secretive and almost gnostic in its references to this restricted truth.

The admonition contains an elaborate theory of history drawn from the OT but modified to fit the circumstances of the times. History is cyclical in so far as there has always been the constant warfare between the righteous led by the "prince of lights" and the wicked led by BELIAL (CD V, 18). This will culminate in the final triumph of the righteous and a state of perfection in the Torah. It seems that the ultimate purity was the stringent keeping of the laws of the Levitical code and the attention to certain interpretations of the code peculiar to the sect. This would accord well with the Talmu-dic and sectarian usage known from other sources. The descriptions of the final state appear to be both sabbatical and eschatological. The most interesting feature of the epochs described is their similarity to certain passages in 2 Peter and Jude (cf. CD III, 11 – 12 to Jude 16).

The assumption of the fragments is that a body of sacred law was passed down from NOAH through ABRAHAM and the PATRIARCHS and that in each age there were masses of the people of Israel who were untrue to it and did not obey it, thereby insuring and displaying that they were not part of the covenant. This notion is also present in the NT documents. It is unclear precisely who is meant by the oblique references to the Teacher of Righteousness. There is some evidence that it may have been the biblical character, Zadok. However, the connection of this personage with a special appearance "in the last of days" (cf. Gen. 49:1; Isa. 2:2; Mic. 4:1), a phrase that has been understood in a messianic sense by both Jews and Christians, may mean that all such references are to messianic figures. There is no reason to assume that only one personage was in view. The mission of the Teacher will be to guide the faithful to the full appreciation of the Torah, "the house of the law" (CD XX, 10 – 13).

The notion that the true remnant will be led by the true law and their teacher into exile in DAMASCUS (perhaps a code word for QUMRAN) is a central theme of the admonition. The historic situation behind this assertion is not yet clear. It was in the Damascus refuge that the sect was to find its "tabernacle of David" (CD VII, 16). All other Jews are apostate. The purity and uniqueness of the sect's keeping of the law is stressed in many ways, especially in regard to marriage and the keeping of a "true" calendar rather than the lunar year of the temple in Jerusalem. The similarity between the expectations of the fragments and those of the *War Scroll* (1QM) is quite striking. The organization

and mission of the sect is to be the same as that of the Israelites in their sojourn in the desert after the exodus but prior to the conquest. JOSHUA plays an equal if not greater part than MOSES in the quotations from the OT.

In the manner and form of its biblical material, the text source is much closer to that represented by the DSS than the MT. Undoubtedly the original was a version brought from Palestine to the Jewish community of Egypt. The question as to what meaning such unique documents had for the Jews of the DIASPORA may only be speculated. It is clear that after the collapse of the second commonwealth and the final destruction of the Jerusalem rite, the somber views of the sectaries must have gained popularity only to be subsequently lost in the ages after the fixation of the MT and the formation of the TALMUD.

B. Rules of conduct. The rules of obedience to the Torah are strict, but without the long additions and midrashic interpretations familiar from the Talmud. In some respects they are similar to the way of life taught by the PHARISEES. It is a mistake, however, to assume that the rule of the sect was identical to the later HALAKAH ("walk, behavior, way of life") of the medieval rabbis. If for no other reason, the sect was strongly and centrally eschatological and this was the purpose for which the Torah was strictly observed.

The *Zadokite Fragments* continually refer to the period of wickedness in which they were written and against which they warned. The attitude toward the Torah is set over against the particular evils and iniquities widespread in their times. Of special interest is the position regarding the sacrifices of the temple. Since they believed that the temple service of their day was not true to the OT instruction and that the PRIESTS AND LEVITES were not those legitimately appointed, the sect was to shun the worship in Jerusalem.

The key rearrangement was necessitated by the fact that the temple was no longer fit for sacrifice, while no other location would fulfill the demands of the Torah. The sect thus proposed a spiritual-figurative interpretation of the Torah requirements demanding sacrifices. The prayers and possibly other spiritual exercises of the sectaries were to be equivalent to the required sacrifices. "The sacrifice of the wicked is an abomination, but the prayer of the righteous is like an offering of delight" (CD XI, 20 – 21, a statement based on Prov. 15:9, 29, and other similar texts). Y. Yadin proposes that the sect held their communal meal in a sacrificial sense. "There seems to be some foundation for the assumption that this sect, which calls the altar 'table' as well as sanctifying its dining-table with a special ceremony, including the priestly benediction, regarded this ceremony and prayer as a substitute for sacrifices" (*The Scroll of the War of the Sons of Light* [1962], 200).

The sins proscribed in the rules of conduct are mostly concerned with the temple service and the keeping of the SABBATH. There is included a long list of regulations regarding individual purity and ceremonial cleanliness. Although concerned with the moral aspects of the Jewish religion, the system of salvation taught in the document may be regarded as both legalistic and autosoteristic, and so varies widely from the discourses of Jesus Christ and the writings of the NT. There is every reason to suspect that the *Zadokite Fragments* represent the latter portion of the first section of the original. Some introductory material undoubtedly preceded the present text, while a much longer catalogue of rules must have followed the rules contained therein. The problems arising from the document are even larger than the questions answered.

Some attempts have been made to divide the text into sources and to try to identify the unknown author or authors with one of the sources defined by the documentary or fragmentary hypotheses (e.g., "priests" or "royalists"), but such attempts have added little but confusion to the problem. The text

does present the views of the antiestablishment minority in the late Hellenistic age of Judaism. Its teachings may have been the religious interpretation not merely of the sectarians alone, but also of the common people in Judea and Galilee. The unanimity of opinion among the fragments, the DSS, and certain of the Talmudic sources lends credence to the argument that the messianism, eschatology, and pietism of this document was not limited to an esoteric sect. The mass of Jews was probably opposed to both Greek and Roman intervention in Jewish affairs and thus despised the royal and religious hierarchy, who quickly came to terms with the conquerors. The paganism and immorality of the Roman imperial administration is apparent in the many proscriptions and commands reiterated in the fragments. The expectation was for a supernatural activity of God which would bring forth one or more political messiahs who would reestablish the house and sovereignty of David. The career of the Lord Christ was thus a fulfillment and a denial of that expectation.

III. Provenience. The fragments are in the standard folio or book form (see CODEX), while the originals were undoubtedly in the SCROLL or roll form of all ancient Hebrew parchments. The state of corruption in which both texts are extant is probably due to their being recopied in Egypt. Because of probable textual error and the obscure references of the scroll to the later era, such difficulties were certain to arise. The detractors of Schechter's enthusiasm are correct in insisting that the fragments were (1) not originally from Palestine and (2) written in the high Middle Ages.

But why should they have been preserved that long if only to be ultimately cast into the de facto censorship of the genizah? The answer is that for many centuries after the collapse of the second commonwealth and the rise of Christianity the popular notions of the sectaries were kept alive by small E European sects such as the Karaites. Sectarian Jewish scholars like Abraham Firkowich, following this line of descent in the 19th cent., recovered many exciting MSS. The Old Synagogue in Cairo, like those in Bukhara and the Crimea, had been centers of sectarian Judaism for nearly a millennium before the fragments were found. Solomon Zeitlin (*The Zadokite Fragments* [1952]) has demonstrated that themes and phrases from this literature are found in various medieval Jewish documents, thus showing that the views of the 1st-cent. sects were never totally lost.

IV. Date. The original composition can be dated only by indirect means, but the discovery of certain fragments of the same text from Qumran has placed it in the last century before the Christian era. Thus any chronological considerations applicable to the DSS are also applicable to the fragments. Although the terminus a quo cannot be stated any more precisely than the second half of the 1st cent. B.C., it certainly was a time when the Roman legions were fighting in Palestine and the full iniquity of the temple administration was clear. The terminus ad quem must be understood as the date when the scrolls were hidden in the caves, and this can be no later than the end of the Jewish rebellion (A.D. 73/74). There are references in both patristic and rabbinic literature to hidden scrolls in the Dead Sea area, and it is recorded that at several junctures in history scrolls were taken from the caves and distributed to Jewish communities. There is a high degree of probability that some of the sectarian texts were carried off to the Jewish communities of the DIASPORA, of which the Egyptian was by far the oldest. A definite resurgence of Jewish literature took place after the era of Constantine and before the rise of Islam.

V. Relationship to the DSS. Since small fragments of the Zadokite document have turned up among the DSS, they were obviously part of the sectarian library, and it is probable that the text was one of the ESSENES' own publications. The mention of Damascus, however, is still mysterious. It is apparent

that not enough of the text is known to make more than educated guesses. Of all the DSS it is the *Manual of Discipline* (1QS) which is most closely parallel, second is the *War Scroll* (1QM), and third is the *Habakkuk Commentary* (1QpHab), while other allusions do exist to a lesser degree. All the references in the Karaite and other later Jewish sectarian literatures to the DSS can be found in the Zadokite document, and those not readily identifiable may have come from portions now lost. The quotation and comment on OT texts, the messianic expectation, and the antagonism to the temple hierarchy are all paralleled in the practical thought of the Essenes.

The fact that the Zadokite document was once part of the Essene library and was studied and recopied in the Middle Ages means that it survived the fate of the other DSS and found its way into sectarian Jewish communities of the oriental world. It thus formed one of the few links between the second commonwealth and the golden age of post-Islamic Judaism. It also has the unique value of being one of the early witnesses to the practice of a minority opinion within the Jewish state. Its relationship to the world of JOHN THE BAPTIST and the early ministry of Christ is very problematic but of major importance. The light shed on the OT is more oblique but nonetheless important. The fragments indicate a lost mode of exegesis and indicate a system of biblical theology that never gained favor but derived its content from works and traditions now lost.

W. WHITE, JR.

Zahab zay'hab. See WAHEB.

Zaham zay'ham (זַחַם *H2300,* perhaps derived from זָחַם *H2299,* "to be repulsive"). Son of King REHOBOAM by Mahalath (2 Chr. 11:19).

zain. See ZAYIN.

Zair zay'uhr (צָעִיר *H7583,* possibly "small" or "narrow [path]"). The name of a place where King JEHORAM (Joram) confronted an army from EDOM, which had rebelled against JUDAH (2 Ki. 8:21). The Hebrew text is ambiguous: the clause *wayyakkeh ʾet-ʾedôm* (lit., "he smote Edom") suggests that Judah won the battle, and the words *wayyānos hāʿām lĕʾōhālāyw* (lit., "the people fled to their tents") could be interpreted as referring to the reaction of the Edomites; on the other hand, we read that the Judean army was surrounded and that subsequently Edom continued in rebellion (v. 22). Modern versions usually understand the text to mean that Jehoram was in straits and attempted an attack, but that his own army fled. Instead of *ṣāʿîrâ,* "to Zair," the parallel passage reads *ʿim-śārāyw,* "with his commanders" (2 Chr. 21:9). If the reference to Zair is authentic, the place has never been identified.

Proposals include Z<small>IOR</small> (cf. <small>LXX</small> *Siōr* and see Josh. 15:14), Z<small>OAR</small> (Gen. 13:10 et al.), and S<small>EIR</small> (Gen. 14:6 et al.). It seems likely that the scene of the battle was SE of the D<small>EAD</small> S<small>EA</small>, which makes Zoar the most likely suggestion (cf. *ABD,* 6:1038 – 39).

Zakkai zak'*i*. TNIV form of Z<small>ACCAI</small>.

Zakkur zak'uhr. TNIV form of Z<small>ACCUR</small>.

Zalaph zay'laf (צֶלַף *H7523,* "caper" [a prickly shrub]). Father of H<small>ANUN</small>; the latter assisted N<small>EHEMIAH</small> in repairing the wall of J<small>ERUSALEM</small> (Neh. 3:30).

Zalmon (person) zal'muhn (צַלְמוֹן *H7514,* possibly "[little] dark one" or "[little] likeness" [cf. *HALOT,* 3:1029]). An A<small>HOHITE</small>, included among D<small>AVID'S</small> mighty warriors (2 Sam. 23:28; called I<small>LAI</small> in 1 Chr. 11:29).

Zalmon (place) zal'muhn (צַלְמוֹן *H7515,* "black [mountain]"). (1) A mountain near S<small>HECHEM</small> where A<small>BIMELECH</small> and his men cut wood to burn down the stronghold of B<small>AAL</small>-B<small>ERITH</small> (Jdg. 9:48). It has not been identified, but many scholars think the name may refer to one of the shoulders of either E<small>BAL</small> or G<small>ERIZIM</small>; another possibility is Jebel el-Kabir (NE of Schechem).

(2) A region or mountain mentioned in a poetic passage: "When the Almighty scattered the kings there, / snow fell on Zalmon" (Ps. 68:14 NRSV; KJV, "it was *white* as snow in Salmon"). The figure is difficult, and the NIV renders, "it was like snow fallen on Zalmon" (similarly NJPS, "it seemed like a snowstorm in Zalmon"), suggesting that the enemy and their weapons lie scattered like snowflakes. This Zalmon may be the same as #1 above, but the context (v. 15) suggests that the reference is to a peak in or near B<small>ASHAN</small>, and some commentators identify it with Jebel Druze (c. 60 mi. SE of D<small>AMASCUS</small>); the mountains in this area are composed of dark volcanic rock and thus may account for the name.

Zalmonah zal-moh'nuh (צַלְמֹנָה *H7517,* perhaps "dark, gloomy"). The first encampment of the Israelites after leaving Mount H<small>OR</small> (Num. 33:41 – 42). Its location is unknown, though one possible suggestion is es-Salmaneh, some 22 mi. S of the D<small>EAD</small> S<small>EA</small>.

Zalmunna zal-muhn'uh. See Z<small>EBAH AND</small> Z<small>AL-MUNNA</small>.

Zambri zam'br*i*. KJV Apoc. form of Z<small>IMRI</small> (1 Macc. 2:26).

Zamoth zay'moth (Ζαμοθ). The ancestor of some Israelites who agreed to put away their foreign wives (1 Esd. 9:28; the parallel in Ezra 10:27 has Z<small>ATTU</small>).

Zamzummim zam-zuh'mim. See Z<small>AMZUM</small>-<small>MITES</small>.

Zamzummites zam-zuh'm*i*ts (זַמְזֻמִּים *H2368,* possibly from זָמַם *H2372,* "to murmur, plan," but see *ABD,* 6:1176 [s.v. "Zuzim"]). Also Zamzummim. The Ammonite name for the people otherwise called R<small>EPHAITES</small> (Deut. 2:20). There is no consensus regarding the meaning or origin of this term, but

it may be related to ZUZITES.

Zanoah zuh-noh'uh (צָנוֹחַ *H2391 [H2392* in 1 Chr. 4:18], derivation uncertain). (1) A town in the N area of the SHEPHELAH, allotted to the tribe of JUDAH (Josh. 15:34). After the EXILE it was one of the centers where returning exiles settled (Neh. 11:30). When NEHEMIAH rebuilt the walls of Jerusalem, the men of Zanoah under the leadership of one HANUN were responsible for the VALLEY GATE (3:13). It is generally identified with modern Khir-bet Zanuʿ (Zanuḥ), some 14.5 mi. WSW of JERUSALEM and 3 mi. SSE of BETH SHEMESH. It lies on a hill which is cut off to the E, W, and N by valleys. Pottery remains point to occupation from the days of the kings through to Arabic times (cf. W. F. Albright in *BASOR* 18 [April 1925]: 10 – 11). In the genealogy of Judah, there is mention of "Jekuthiel the father of Zanoah" (1 Chr. 4:18), usually interpreted to be a geographical reference ("father" meaning "founder" or the like). Some scholars believe that this Zanoah is the town in the N Shephelah (cf. *HALOT,* 1:275), but the context (esp. the reference to SOCO in the same verse) suggests a different locale; see #2 below.

(2) A town in the hill country of Judah, listed with a group of towns that were S of HEBRON (Josh. 15:56). Some have identified this Zanoah with Khirbet Zanuta (c. 10 mi. SW of Hebron, prob. too far W), and others with Khirbet Beit ʿAmra in the Wadi Abu Zennakh (c. 1 mi. NW of JUTTAH), but neither site can be confirmed. It is likely that 1 Chr. 4:18 refers to this town.

J. ARTHUR THOMPSON

Zaphenath-Paneah zaf'uh-nath-puh-nee'uh (צָפְנַת פַּעְנֵחַ *H7624,* meaning disputed). Also Zaphenath-paaneah. The hebraized form of the Egyptian name given to JOSEPH by PHARAOH (Gen. 41:45). Though the Hebrew must represent some transliterated Egyptian name, there is no certainty as to what that name may have been. The earliest known attempt to translate the name is that of JOSEPHUS, who stated that it meant "the revealer of secrets" *(Ant.* 2.6.1). The most widely accepted explanation of the name is that advanced by G. Steindorff (in *Zeitschrift für ägyptische Sprache und Altertumskunde* 27 [1889]: 41 – 42; and 30 [1892]: 50 – 52): "the god speaks and he lives" or "the god said: he will live" (cf. J. Vergote, *Joseph en Égypte: Genèse chap. 37 – 50 à la lumière des études égyptologiques récentes* [1959], 141 – 46). E. Naville suggested that Zaphenath-Paneah is a title, not a name: "the head of the sacred college of magicians" (in *JEA* 12 [1926]: 16 – 18). Other interpretations, largely rejected, include that of A. S. Yahuda, who proposed "food, sustenance, of the land is the living" *(The Language of the Pentateuch in Its Relation to Egyptian* [1933], 33).

C. E. DE VRIES

Zaphon zay'fon (צָפוֹן *H7601,* "north"). (1) A town lying to the E of the JORDAN in the tribal territory of GAD (Josh. 13:27). It was the place where the Ephraimites gathered to meet with JEPHTHAH after he defeated the Ammonites (Jdg. 12:1; KJV, "northward"). Zaphon is known in Egyptian records of the 19th dynasty as *Dapuna,* and in one of the TELL EL-ARMANA letters as ṣapuna. Its location is uncertain. Proposals include Tell el-Qos (c. 2 mi. N of SUCCOTH; cf. N. Glueck, *Explorations in Eastern Palestine,* 4 vols., AASOR [1934 – 51], 4:297 – 300, 334 – 55), Tell el-Mazar (just W of el-Qos), and perhaps most likely, Tell es-Saʿidiyeh (c. 6 mi. NW of Succoth and only about 1 mi. E of the Jordan; cf. F.-M. Abel, *Géographie de la Palestine*, 2 vols. [1938], 2:448; S. Mittmann, *Beiträge zur Siedlungs und Territorialge-schichte des nördlichen Ostjordanlandes* [1970], 219; *NEAEHL,* 4:1295 – 1300, s.v. "Saʿidiyeh, Tell es-").

(2) A mountain near the mouth of the ORONTES River associated with the Canaanite god BAAL and mentioned frequently in Ugaritic literature (cf. *ANET,* 133b, 136b, et al.; see CONGREGATION, MOUNT OF THE). Known to the Romans as Mons Casius, Mount Zaphon is identified with modern Jebel el-ʿAqra. In several poetic passages in the Bible, it is unclear whether the word should be interpreted as a reference to this mountain or as the noun ṣāpôn H7600, "north." For example, the NIV renders Ps. 48:2, "Like the utmost heights of Zaphon is Mount Zion" (similarly, NJPS, "Mount Zion, summit of Zaphon"; but NRSV, "Mount Zion, in the far north"; cf. also Job 26:7 and Isa. 14:13 in NJPS and NRSV). (See discussion in *ABD*, 6:1040.)

Zara, Zarah zair'uh. KJV alternate forms of ZERAH.

Zaraces zair'uh-seez. KJV Apoc. variant of ZARIUS (1 Esd. 1:38).

Zaraias zuh-ray'yuhs. KJV Apoc. form of ZERA-HIAH (1 Esd. 8:2 [NRSV omits], 31) and ZERAIAH (v. 34).

Zareah zair'ee-uh. KJV form of ZORAH.

Zared zay'rid. KJV alternate form of ZERED.

Zarephath zair'uh-fath (צָרְפַת H7673, possibly from ṣārap H7671, "to refine"; Σάρεπτα G4919). A Phoenician town to which God instructed ELIJAH to go during a time of drought (1 Ki. 17:9 – 10). While there, the prophet miraculously provided food for himself and for a widow and her son, and later he raised the son from the dead (vv. 11 – 24). Jesus referred to that incident as an illustration that "no prophet is accepted in his hometown" (Lk. 4:23 – 26). The prophet OBADIAH predicted that Israelite exiles would "possess the land as far as Zarephath" (Obad. 20).

The city is mentioned in an Egyptian document of the 13th cent. B.C. (Papyrus Anastasi I; cf. *ANET*, 477a, "Sarepta"); it occurs in Akkadian texts as Ṣariptu. The Bible refers to it as belonging to SIDON (1 Ki. 17:9), and SENNACHERIB in 701 B.C. lists it among the "strong cities" that he took from Luli, king of Sidon (*ANET*, 287b, "Zaribtu"). Some time later ESARHADDON put Zarephath under the control of TYRE (see J. B. Pritchard in *Understanding the Sacred Text*, ed. J. Reumann [1972], 101 – 14). In antiquity it was a large commercial center, famous for fine glassware, ceramics, textiles, and purple DYE (the latter may account for the city's name, since the Akk. cognate ṣarāpu can mean "to dye red"). Zarephath is identified with the modern Arab village of Sarafand, which lies on a coastal promontory about 8 mi. SSW of Sidon and 13 mi. NNE of Tyre. (See further J. B. Pritchard, *Recovering Sarepta, a Phoenician city: Excavations at Sarafand, Lebanon, 1969 – 1974, by the University Museum of the University of Pennsylvania* [1978]; W. P. Anderson et al., *Sarepta: Excavations at Sarafand, Lebanon,* 4 vols. [1985 – 88].)

J. ARTHUR THOMPSON

Zaretan zair'uh-tan. KJV alternate form of ZARE-THAN (only Josh. 3:16).

Zarethan zair'uh-than (צָרְתָן H7681, derivation uncertain). A town near Adam; in this vicinity the waters of the JORDAN stopped flowing so that the Israelites could cross the river (Josh. 3:16). See

ADAM (PLACE). During the reign of SOLOMON, Zarethan was part of the fourth administrative district under BAANA son of Ahilud (1 Ki. 4:12). It was in this area, between Zarethan and SUCCOTH, that the bronze objects for the TEMPLE were cast (1 Ki. 7:46; in the parallel passage, 2 Chr. 4:17, the Hebrew form is ṣĕrēdātâ [with locative ending] and thus most English versions read ZEREDAH [KJV, "Zeredathah"], but this is probably a scribal error or an alternate form).

The precise location of Zarethan is disputed, and numerous sites have been proposed on both sides of the Jordan (see the extensive summary in *ABD,* 6:1041 – 43). Because 1 Ki. 4:12 states that the town was "next to" (Heb. *ʾēṣel H725*) BETH SHAN, some have looked for a location toward the N, such as Tell es-Saʿidiyeh, which lies on the E side of the Jordan, some 6 mi. NW of SUCCOTH, and where excavations have produced numerous copper objects belonging to the 13th – 12th centuries B. C., suggesting that the town was a bronze working center (cf. *NEAEHL,* 4:1295). This site, however, is almost 12 mi. from Adam, which seems too far (es-Saʿidiyeh perhaps should be linked with a different biblical town, ZAPHON). Others prefer to identify Zarethan with Tell Umm Hamad, which is only about 3 mi. NE of Adam; if so, it is likely that Zarethan was not part of the Beth Shan district but was mentioned in 1 Ki. 4:12 only to help demarcate the area (cf. Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 313; M. Cogan, *1 Kings,* AB 10 [2001], 208).

Zareth-shahar zair'ith-shay'hahr. KJV form of ZERETH SHAHAR.

Zarhite zahr'h*i*t. KJV form of Zerahite. See ZERAH.

Zarius zair'ee-uhs (Zarioß). According to 1 Esd. 1:38, JEHOIAKIM, after being made king of Judea, "seized his brother Zarius and brought him back from Egypt" (KJV, "Zaraces"). This statement seems to be a misreading of the corresponding passage in 2 Chr. 36:4.

Zartanah, Zarthan zahr'tuh-nuh, zahr'than. KJV alternate forms of ZARETHAN (1 Ki. 4:12; 7:46).

Zathoe, Zathui zath'oh-ee, zath'*oo*-ee. KJV Apoc. forms of ZATTU (1 Esd. 8:32 and 5:12 respectively).

Zatthu zat'th*oo*. KJV alternate form of ZATTU (only Neh. 10:14).

Zattu zat'*oo* (נטּוא *H2456,* derivation unknown). Ancestor of a family that returned to Jerusalem from Babylon with ZERUBBABEL (Ezra 2:8; 8:5; Neh. 7:13; 1 Esd. 5:12 [KJV, "Zathui"]; 8:32 [KJV, "Zathoe"]). Some members of this family had married foreign women and agreed to put them away (Ezra 10:27; 1 Esd. 9:28 [KJV, "Zamoth"]). One of the leaders of the people who signed the covenant of NEHEMIAH was named Zattu (Neh. 10:14 [KJV, "Zatthu"]), but it seems probable that here the head of the clan is being referred to by the family name.

Zavan zay'vuhn. KJV alternate form of ZAAVAN.

zayin zah'yin (ז, meaning uncertain; this name is not used in the Bible). The seventh letter of the Hebrew ALPHABET (ז), with a numerical value of seven. Its sound corresponds to that of English *z*.

Zaza zay'zuh (⬛ *H2321,* derivation uncertain). Son of Jonathan and descendant of JUDAH through JERAHMEEL (1 Chr. 2:33).

zealot. A person characterized by much zeal, enthusiasm, or partisanship. When capitalized, the term refers to a violent Jewish sect in NT times that opposed Roman domination. The Greek noun *zēlōtēs G2421* means "enthusiastic adherent," a person that is "eager" about something or someone. The cognates *zēlos G2419* and *zēloō G2420* can be used both in a good sense ("ardor"; "to be deeply concerned about") and negatively ("jealousy, factionalism"; "to be filled with envy").

The NIV usually renders the word *zēlōtēs* with "zealous" or "eager." For example, PAUL was told of believing Jews who "are zealous for the law" (Acts 21:20). The apostle himself states that before his conversion he was "zealous for God" (22:3) and "zealous for the traditions of my fathers" (Gal. 1:14). The Corinthian Christians were "eager to have spiritual gifts" (1 Cor. 14:12). Because of the redeeming and purifying work of Christ, TITUS was told to be "eager to do what is good" (Tit. 2:14), and PETER says, "Who is going to harm you if you are eager to do good?" (1 Pet. 3:13). The word is rendered more literally in two passages with reference to one of the twelve disciples, "Simon who was called the Zealot" (Lk. 6:15; simply "Simon the Zealot" in Acts 1:13 [KJV, "Zelotes"]; regarding Matt. 10:4 and Mk. 3:18, see below).

This summary of the object of zeal illustrates the usual OT ways of using the Hebrew verb *qānā⁾ H7861* (and its cognates) to refer to fervor or complete commitment to a cause, task, or a character trait. Most often zeal describes a pious life before the Lord or the way one addresses service for him. The phrase "zeal of the LORD" occurs a few times (2 Ki. 19:31; Isa. 9:7; 37:32; cf. Ezek. 5:13, "I the LORD have spoken in my zeal").

There is, however, another use of the concept, and that is when zeal for the Lord is taken to the extreme and is combined with violence. There are a few obvious OT examples of this. The book of Numbers relates an incident when Israelite men committed "sexual immorality with Moabite women who invited them to the sacrifices of their gods" (Num. 25:1 – 2). The Lord's wrath burned against this sacrilege; he ordered that leaders of the Hebrews be killed, and a plague began to sweep through the camp of Israel. In the midst of all this, an Israelite man openly took a Moabite woman into his tent. PHINEHAS, a priest, followed them and killed both. God told MOSES that Phinehas had turned away the divine anger, "for he was as zealous as I am for my honor" (v. 11). Phinehas was honored with "God's covenant of peace…a covenant of a lasting priesthood, because he was zealous for the honor of his God" (vv. 12 – 13). Phinehas's zeal is praised in the apocryphal book of ECCLESIASTICUS (Sir. 45:23 – 24).

Much later, as the newly anointed King JEHU set out on his campaign to slaughter the worshipers of BAAL, he invited the righteous JEHONADAB to "Come with me and see my zeal for the Lord" (2 Ki. 10:16). Also, although the word "zeal" is not used, it is certainly implied when we read that "Samuel put Agag to death before the Lord" (1 Sam. 15:33) because King SAUL, in spite of God's command, had spared the Amalekite king.

During the intertestamental period MATTATHIAS, the father of the future Maccabean leaders and rulers, slew a SELEUCID official and an apostatizing Jew and cried, "Let every one who is zealous [*pas ho zēlōn*] for the law and supports the covenant come out with me!" (1 Macc. 2:27). Such incidents, uniting zeal and violence, are relatively rare in the OT. Nevertheless, they demonstrate an element present in some Jewish groups in Israel prior to the 1st cent. Martin Hengel (*The Zealots: Investigations into the Jewish Freedom Movement in the Period from Herod I Until 70 A.D.* [1989]) develops an important theme. It is beyond doubt that the Hebrews were convinced that God

was their king (cf. Jdg. 8:23). Yet, until late in the intertestamental period, although the Jews had frequently languished under foreign, pagan conquerors, their grief and restiveness does not seem to be related to a conviction that their foreign overlords were usurping the place of the God of Israel.

The Jewish historian JOSEPHUS lists four sects or parties among the Jews: PHARISEES, SADDUCEES, ESSENES, and a "fourth philosophy" (*Ant.* 18.1.2 – 6 §§11 – 25). His description of this "fourth philosophy" is imprecise, but he attributes it to Judas the Galilean (cf. Acts 5:37 and see JUDAS #4). Accompanied by a certain Pharisee named Saddok (Jos. *Ant.* 18.1.1 §4), Judas led a rebellion in A.D. 6 in response to a Roman-ordered census in the land of Israel. Josephus, from whom we gain virtually all of our information about Judas (as well as about the Zealots in general), says Judas assumed the census was the equivalent of slavery (ibid.); he was driven by a "passion for liberty…convinced that God alone is…leader and master" (18.1.6 §23). Josephus blames Judas for sowing "seeds of every kind of misery," wars, murders, and robberies (18.1.1 §§6 – 8).

Hengel believed that the fullest exposition of Judas's philosophy is found in the mouth of his grandson, Eleazar ben Yar, leader of the Jewish fighters (Zealots) at MASADA. Knowing that the next day they would fall to the Romans, he appealed to his followers to kill their families and then themselves rather than surrender: "A long time ago, brave comrades, we firmly resolved to subject ourselves neither to the Romans nor any other person, but only to God, for only he is the true and lawful lord of men" (*War* 7.8.6 §323). Hengel's point is that about the time of Judas, if not with Judas himself, a biblical interpretation arose that focused upon a new, particularistic, emphasis on the KINGDOM OF GOD as concentrated upon Israel and Israel's encounter with the Roman emperor cult (a situation that was certainly intensified when, in A.D. 40 – 41, the emperor Gaius CALIGULA attempted to have his image placed in the Jerusalem temple). Judas and his followers insisted that no Gentile king could reign over Israel. It was the privilege of God alone to rule over his people. Anyone else who assumed that position was guilty of blasphemy. Violent resistance was the only proper response to foreign overlords. This was at the heart of pure Zealotism.

Two corollary groups should also be noted. The taking of a census in Israel, which sparked Judas's rebellion, was no inconsequential matter. For many Jews a census was an administrative measure that only God could instigate, and Num. 1 and 26 indicate God did so in the wilderness. Even DAVID, the prototypical Hebrew ruler, incurred divine anger when he counted his people (2 Sam. 24). The assumption behind Judas's cries seems to be that any human being ordering a census of Israel placed himself in a position of authority that must be reserved for God alone—it was a blasphemous act. If David incurred divine disfavor for so doing, how much more should Israel rise up in righteous rebellion when a foreigner sought to number God's people. Second, Judas's claim of divine help may well have implied that he believed war with Rome would force God to intervene on Israel's side, either directly or by immediately sending the MESSIAH.

Two elements of 1st-cent. Jewish society are often associated with the Zealots: bandits and *Sicarii*. The NT writers and Josephus distinguish between (1) evil-doers or common criminals (*kakourgos G2806*) and (2) bandits, robbers, highwaymen, or revolutionary insurrectionists (*lēstēs G3334*). The latter were forced to steal to support self and family or stole from the rich to give to the poor (like the English "Robin Hood"). Such groups, having lost their land and livelihoods by oppressive taxes and exorbitant interest on debts and taxes, thus sprang from both socioeconomic and political and military concerns. Because of their guerrilla-like tactics, they are often counted within the freedom movement, and some appear to have joined the Zealots or one of the other paramilitary revolutionary groups as hostilities began. In such a situation the ruling authorities, upper classes, and the wealthy tend to view the "bandits" as thieves and thugs; whereas the common people might hail

them as heroes and saviors.

The name *Sicarii* comes from Latin *sica*, a curved-shaped dagger (sickle), the weapon favored by these "terrorists" (the NIV rendering of *sikarios G4974* in Acts 21:38; see ASSASSINS). They conducted a campaign of terror—kidnapping, extortion, robbery, and murder, especially against Romans and their sympathizers. However, Josephus claims collaboration between bandits and Sicarii on socioeconomic grievances as well as in political-military areas. He records uprisings in which he seems to imply both groups were involved and in which the insurgents burned the public records of debts (*War* 2.17.6 §§425 – 27).

The relation between the Sicarii and the Zealots is unclear. Just as there was a connection between the Zealots and Judas's fourth philosophy, the same is true for the Sicarii. Associated with the question is the death of Menahem, a revolutionary leader who set himself up as virtually a king in Jerusalem. Although Josephus blames the Sicarii with beginning the disturbance in which Manahem asserted himself and was killed, he refrains from identifying him with the Sicarii. Menahem was attacked and killed by other insurgents with affinities with the Zealots (*War* 2.17.8 – 9 § §433 – 48).

With the exception of the battles at Masada after the fall of Jerusalem, the Sicarii are never depicted as participating in open conflict. It is possible that as long as this group operated as an undercover force they were designated as Sicarii, but then as Zealots when they joined in pitch battle. If this is true, then we have an aspect of the nature and activity of the Zealots not usually recognized.

Josephus clearly associates the origin of the Zealots with Judas of Galilee and classifies them as the whole or a part of the fourth philosophy. Nevertheless, he mentions the Zealots as a distinct revolutionary group only after the outbreak of the war against Rome, A.D. 66 – 70. It appears that prior to that time he uses the terms "fourth philosophy" and "zealots" (in a general sense) to refer to the widespread anti-Roman ferment that was awash in the land. Josephus is well aware of the difference between these groups, but it appears that he sometimes lumps them together under the "zealots" (cf. *War* 4.3.9 §§160 – 61).

In Josephus's writings the Zealots clearly become a discernible group under the leadership of John of Gischala, first in Galilee, and then in Jerusalem. Thus they, along with the followers of Simon ben Giora, the Idumeans, Eleazar son of Simon (who broke with John's Zealot party to form his own), and other minor groups were the primary Jewish revolutionary factions in Jerusalem when TITUS began the siege of Jerusalem. These bands or gangs constantly fought each other, even when the Romans were literally at the gates. The common people suffered greatly at their hands. Eventually the Idumeans withdrew from Jerusalem, apparently in disgust. Eleazar and his faction fell victim to the trickery of John's men and were defeated. This left John's Zealots and the partisans of Simon ben Giora in control of the city. Until almost the very last days of the Roman siege of Jerusalem they continually fought each other as much as they did the Romans.

Certainly there were simple folk who were devoted to God with ardent passion and practiced their religion with zeal. They quietly longed for the liberation of the people and the land. Even from the time of Judas of Galilee onward there were certainly pious folk who assumed that at times, in extreme circumstances, true zeal for God and his law required violence. These represented zealotism at its best. Those depicted by Josephus as participants in the war of A.D. 66 – 70 represent zealotism as its worst. These were the fanatical, head-strong, jealous, envious, factional groups, given to party strife.

With the temple burned, Jerusalem destroyed, and the entire area in the hands of the Romans, the two surviving factional leaders, Simon and John, and some of their followers cowered in the cisterns and sewers beneath what had been Jerusalem. Eventually they were discovered and captured. Zealot

soldiers, as well as many of the followers of Simon bar Giora, were crucified, or made to entertain their captors by fighting to the death in games, or sold as slaves. Simon was displayed and then executed in the victors' triumphant procession in Rome. The Zealot chieftain, John of Gischala, was imprisoned for life. Other than the continuing three-year struggle at Masada, extreme, military zealotism was dead. In order to rescue something of the reputation of his countrymen, Josephus, in his writings, sought to lay the blame for the rebellion and the disastrous defeat of the Jews largely upon the Zealots. See WARS, JEWISH.

Two final points must be considered. Some scholars (e.g., S. G. F. Brandon, *Jesus and the Zealots* [1967]) have sought to make Jesus and his followers into a Zealot band. The title over the cross, "This is the King of the Jews," may indicate that PILATE, although he knew better, condemned Jesus as a violent nationalist to insult the Jews as a whole and their leaders in particular. The whole of Jesus' teaching and actions indicate the contrary. He affirmed that his "kingdom is not of this world" (Jn. 18:36). A true Zealot revolutionary would never advocate, "Love your enemies" (Matt. 5:44), paying Caesar his tax (Matt. 22:21; Mk. 12:17; Lk. 20:25), and satisfaction with only two swords (Lk. 22:38).

Finally, in what sense was the apostle Simon called "the Zealot"? Although he is so called in Luke and Acts, in Matt. 10:4 and Mk. 6:18 he is designated as the CANANAEAN (NRSV; the NIV translates "Zealot"). This may be an Aramaic word for "zealot" when it was not yet the technical term for the revolutionary party. Matthew and Mark thus avoid the term *zēlōtēs* to avoid confusion with the later revolutionaries. There is no indication that any of the gospel writers imply that Simon was a "Zealot" in the negative sense of the term. He may well have been a "pre-Zealot" who had a strong loyalty to his country. It is more likely, however, that even before his association with Jesus, Simon, like Paul, was "zealous" for the law and for God.

(See further W. R. Farmer, *Maccabees, Zealots and Josephus* [1957]; *HJP*, rev. ed. [1973 – 87], 2:598 – 606; R. A. Horsley and J. S. Hanson, *Bandits, Prophets, and Messiahs* [1985]; J. J. Scott, *Jewish Backgrounds of the New Testament* [2000], 209 – 15; *ABD*, 6:1043 – 55.)

J. J. SCOTT, JR.

Zebadiah zeb'uh-d*i*'uh (זְבַדְיָהוּ *H2278* [1 Chr. 26:2; 2 Chr. 17:8; 19:11] and זְבַדְיָה *H2277*, "Yahweh has bestowed"; cf. ZABAD, ZABDIEL, etc.). (1) Son of Beriah and descendant of BENJAMIN (1 Chr. 8:15).

(2) Son of Elpaal and descendant of Benjamin (1 Chr. 18:17).

(3) Son of Jehoram from GEDOR; he and his brother Joelah were among the ambidextrous warriors who joined DAVID at ZIKLAG (1 Chr. 12:7).

(4) Son of MESHELEMIAH and descendant of LEVI through KORAH and ASAPH; like his father, he and his brothers were Levitical gatekeepers in the time of DAVID (1 Chr. 26:2).

(5) Son of ASAHEL and nephew of JOAB; he succeeded his father as commander in charge of the division for the fourth month under David (1 Chr. 27:7).

(6) One of six Levites whom King JEHOSHAPHAT sent to teach the law in the cities of Judah (2 Chr. 17:8). Appointed to the same mission were a number of princes and priests.

(7) Son of a certain Ishmael and head of the tribe of Judah during the reign of Jehoshaphat (2 Chr. 19:11).

(8) Son of Michael and descendant of Shepha-tiah; listed among those who returned from the EXILE in Babylon to Jerusalem with EZRA (Ezra 8:8; called "Zeraiah" [KJV, "Zaraias"] in 1 Esd. 8:34).

(9) One of the two descendants of Immer who agreed to put away their foreign wives (Ezra 10:20; 1 Esd. 9:21 [KJV, "Zabdeus"]).

Zebah and Zalmunna zee'buh, zal-muhn'uh (זֶבַח *H2286*, "[born at the time of] sacrifice," and צַלְמֻנָּע *H7518*, derivation uncertain, but perhaps understood to mean, "The Image [*or* the god Salm] protects"). Two Midianite kings defeated by GIDEON (Jdg. 8:4 – 21; Ps. 83:11). The BEDOUIN Midianites from areas E of the JORDAN (see MIDIAN) had been plundering the Israelites and their crops with their camel raids (Jdg. 6:1 – 6), when the Lord raised up Gideon as a deliverer for Israel. Well known is the military blow which Gideon and his 300 men dealt the Midianite enemy (7:1 – 22). In the ensuing rout the Midianite princes OREB AND ZEEB were captured and killed by the Ephraimites (7:24 – 25). Gideon, in his pursuit of the Midianites and their two kings, Zebah and Zalmunna, crossed the Jordan near the JABBOK River, but was refused help by the people of the E MANASSEH areas in SUCCOTH and PENUEL (PLACE).

The two kings and their remnant army of 15,000 were resting at KARKOR, while Gideon and his men pursued up the Jabbok River by the caravan route E of NOBAH and JOGBEHAH (the latter possibly being the modern el-Jubeihat NW of Amman and about 15 mi. SE of Penuel, the place where JACOB had wrestled with the angel, Gen. 32:30). Then the Israelite leader, having conquered the enemy, took the two kings back with him by way of the Pass of HERES (Jdg. 8:13), evidently a place not far from Succoth (8:11 – 14). After punishing the people of Succoth and Penuel for failing to help him (8:14 – 17), Gideon put Zebah and Zalmunna to death on the principle of blood revenge because they had killed his brothers at TABOR (either the mount or possibly a city). In the process he removed the crescent-shaped jewelry of silver or gold counted as important (see Isa. 3:18) and possibly indicative of royalty, worn by the camels and the two kings (Jdg. 8:18 – 21; cf. Philostratus, *Life of Apollonius* 2.1, which says that Apollonius of Tyana used a Persian camel with a gold ornament on its face as its symbol of royal ownership). Psalm 83:11 indicates that both sets of officials, Oreb and Zeeb as well as Zebah and Zalmunna, were important in the conquest of Midian, the former pair possibly being chieftains subordinate to the two kings (cf. Jdg. 7:25 with 8:12).

W. H. MARE

Zebaim zuh-bay'im. See POKERETH-HAZZE-BAIM.

Zebedee zeb'uh-dee (Ζεβεδαῖος *G2411*, from זְבַדְיָהוּ *H2278*, "Yahweh has bestowed"; see ZEBA-DIAH). A Galilean fisherman, husband of SALOME, and father of the apostles James and John (Matt. 4:21; 10:2). See JAMES I and JOHN THE APOSTLE. Zebedee appears in all four Gospels as the father of two of Jesus' most prominent disciples, who with PETER stood at the center of the Twelve. The three were privileged to witness the TRANSFIGURATION (Matt. 17:1 – 8), the raising of JAIRUS's daughter (Lk. 8:51), and the private sorrow in GETHSEMANE (Matt. 26:37). Zebedee, therefore, became known not because of his deeds (at least, none are recorded), but because he was the father of two famous sons who were among the Lord's disciples, one of whom wrote the beloved Gospel according to John.

Zebedee and his two sons operated a thriving fishing business on the Sea of Galilee in partnership with another set of renowned brothers, ANDREW and Peter (Lk. 5:7 – 10). It must have been one of the larger public establishments of CAPERNAUM, because it included hired men (Mk. 1:20). No doubt Zebedee was a man of means and influence, so much so that some believe he

marketed his choice produce among the elite in Jerusalem (cf. Jn. 18:16, where "the other disciple" is prob. a reference to John).

The fishing business was radically changed the day that the call came to the two brothers. The picture we have from the Gospels portrays Zebedee in a boat with his two sons and hired men mending their nets on the shore of the Sea of Galilee when Jesus came by. "Jesus called them, and immediately they left the boat and their father and followed him" (Matt. 4:21 – 22; cf. Mk. 1:19 – 20). Although it must have harmed the fishing business somewhat, there is no record that he protested their forsaking a profitable business which one day would have been theirs. On the contrary, there is reason to believe he continued the enterprise (cf. Jn. 21:3). It is even possible that the business furnished much financial support for Jesus and his disciples during the years of our Lord's ministry.

Dragnet fishing on the Sea of Galilee—a reminder of the fishing industry of Zebedee and his sons.

Zebedee's wife was Salome (Matt. 27:56; Mk. 15:40; 16:1), who also basked in the light of her sons ("the mother of Zebedee's sons," Matt. 20:20; 27:56). The whole family must have been avid supporters of Jesus, for we read that Salome accompanied Jesus during his ministry in Galilee to serve him (Mk. 15:40). She was later present at the CRUCIFIXION (Matt. 27:55) and was among the women who went to the tomb to anoint the Lord (Mk. 16:1). Yet she and her sons revealed private ambitions when she asked the Master for special favors for her two sons in the kingdom: "Grant that one of these two sons of mine may sit at your right and the other at your left in your kingdom" (Matt. 20:21; cf. Mk. 10:35 – 37). The Lord's refusal and patient teaching must have brought spiritual understanding, for the entire family of Zebedee remained loyal to the end.

L. M. PETERSEN

Zebidah zuh-b*i*'duh (זְבִידָה *H2288 [Qere* זְבוּדָה*]*, fem. of זָבוּד *H2280,* "bestowed"; see ZABUD). Daughter of a certain Pedaiah (from the town of RUMAH), and mother of King JEHOIAKIM (2 Ki. 23:36; KJV and other versions, "Zebudah," following the *Qere).*

Zebina zuh-b*i*'nuh (זְבִינָא *H2289,* "bought"). One of the descendants of Nebo who agreed to put away their foreign wives (Ezra 10:43; the name is not found in the parallel, 1 Esd. 9:35).

Zeboiim zuh-boi'im (צְבֹאִים *H7375* [צְבֹיִם, *Qere* צְבוֹיִם, in Gen. 14:2, 8; צְבוֹיִם in Deut. 29:23], perhaps "[place of] hyenas" [cf. *HALOT,* 3:997, and see ZEBOIM]). KJV also Zeboim (Gen. 14:2, 8); TNIV Zeboyim. One of the CITIES OF THE PLAIN destroyed by God. It is first mentioned in the OT in reference to the southern border of the Canaan-ites that ran from the coast inland toward this city as well as SODOM, GOMORRAH, and ADMAH (Gen. 10:19). KEDORLAOMER king of Elam and his three allies attacked these towns during their raid along the ancient KING'S HIGHWAY (14:2). SHEMEBER king of Zeboiim and his allies met the invaders in the Valley of SIDDIM but were defeated (14:8, 10).

Presumably Zeboiim was destroyed with Sodom and Gomorrah (Gen. 19:24 – 29). MOSES later referred to the destruction of Zeboiim and its neighbors (Deut. 29:23). HOSEA used Zeboiim as an example of judgment on evil cities (Hos. 11:8). Its exact location is unknown, but presumably it lay at the S end of the DEAD SEA in the area now covered by water.

J. ARTHUR THOMPSON

Zeboim zuh-boh'im (צְבֹעִים *H7391,* "[place of] hyenas"). (1) A valley within the tribal territory of BENJAMIN, apparently SE of MICMASH (1 Sam. 13:18). PHILISTINE raiders from Micmash traveled the hill road overlooking the Valley of Zeboim with the JORDAN Valley beyond. In that general region there are some wadis that may preserve the meaning of the ancient name (e.g., Abu Dabaʿ, Arab. for "father of hyenas," which runs into the Wadi Qelt), but the identification of the Valley of Zeboim itself remains uncertain.

(2) A town overlooking the Plain of SHARON; along with HADID, NEBALLAT, LOD, and ONO, Zeboim was settled by Benjamites after the EXILE (Neh. 11:34). The name apparently occurs in TELL EL-AMARNA (letter no. 274) as *Sabuma.* The exact site is not known, though some have suggested Khir-bet Sabiyeh, N of Lod.

J. ARTHUR THOMPSON

Zeboyim zuh-boh'yim. TNIV form of ZEBOIIM.

Zebudah zuh-by*oo*'duh. KJV form of ZEBIDAH.

Zebul zee'buhl (זְבֻל *H2291,* "elevation," possibly short form of a theophoric name such as "Baal's lofty dwelling"; some think that Baal-Zebul was the original form of the name BAAL-ZEBUB). Governor of SHECHEM in the days of ABIMELECH son of JERUB-BAAL (i.e., GIDEON). Abimelech had been chosen king by a group of Canaanites in the city (Jdg. 9:1 – 6), and Zebul is referred to as his *pāqîd H7224* (v. 28; NIV, "deputy"; NRSV, "officer"; NJPS, "lieutenant") and as *śar H8569* ("leader, ruler") of the city (v. 30). According to the narrative, there was local opposition to Abimelech, and a certain GAAL uttered seditious words during a vintage festival saying that he would get rid of Abimelech (vv. 27 – 29). Zebul informed Abi-melech (who was at ARUMAH, v. 41) and advised him to surround Shechem by night (vv. 30 – 33). In the morning Gaal saw the troops and Zebul taunted him, "Aren't these the men you ridiculed? Go out and fight them!" (v. 38). Gaal sallied forth but was quickly routed, and Zebul kept him out of the city (vv. 39 – 41).

J. ARTHUR THOMPSON

Zebulun zeb'yuh-luhn (זְבוּלוּן *H2282* [also זְבֻלוּן and זְבוּלֻן], possibly by popular etymology, "honor,

exaltation" [see ZEBUL]; gentilic זְבוּלֹנִי H2283, "Zebulunite"; Ζαβουλών G2404). KJV NT Zabu-lon. Tenth son of JACOB and sixth of LEAH (Gen. 30:19; 35:23), and ancestor of the tribe that bears his name. Zebulun was conceived in the context of the rivalry between Leah and RACHEL. When he was born, "Leah said, 'God has presented me with a precious gift *[zĕbādanî ĕlōhîm zēbed ṭôb]*. This time my husband will treat me with honor *[yizbĕlēnî;* NJPS, will exalt me], because I have borne him six sons.' So she named him Zebulun *[zĕbulûn]* " (Gen. 30:20; the verb *zābal H2290* occurs only here and its precise meaning is uncertain). The multiple wordplay in this verse suggests that the name Zebulun was intended to reflect both the notion of "gift" and the acknowledgment of Leah as a full wife, but the actual etymology of this name is disputed. Little else is recorded of Zebulun, though we read that his three sons were born before he left Canaan for Egypt (Gen. 46:14), where JOSEPH presented his brothers to Pharaoh (47:2). Jacob, in his final blessing, stated that Zebulun (through his descendants) would "live by the seashore / and become a haven for ships," and that the the border of the tribe would "extend toward Sidon" (49:13).

The tribe of Zebulun was subdivided into clans named after his sons—Sered, Elon, and Jahleel —- and encamped with Judah's standard to the E of the TABERNACLE (Num. 2:7). GADDIEL son of Sodi was the representative from Zebulun named to help spy out Canaan (13:10), and ELIAB son of Helon was selected to assist MOSES in census-taking (1:9). The two counts, showing that there were 57,400 and 60,500 warriors at the beginning and end of the wanderings (1:31; 26:27), indicate that Zebulun was numerically fourth among the tribes. A lowlier place is intimated in the selection of Zebulun—descended from Leah's last son—to share the lot of shamed REUBEN and the handmaid's sons in pronouncing the curses from Mount EBAL (Deut. 27:13).

After Israel conquered Canaan, the tribe of Zeb-ulun received the third allotment (Josh. 19:10 – 16). The Zebulunites received a northern region that was small, but fruitful and strategically located. However, the uncertainty of some place names, a hint of textual corruption, and the cryptic nature of some passages blur the territorial limits. The anomaly of TABOR'S inclusion (1 Chr. 6:77) apparently results from a textual flaw, while KISLOTH TABOR (KESULLOTH) and DABERATH may, without incompatibility, have marked the boundaries of Zebulun and belonged to ISSACHAR (cf. Josh. 19:12 – 13, 18, 20; 21:28).

More puzzling is the seeming incompatibility of these boundaries and ASHER' coastal inheritance with Jacob's prediction that Zebulun would dwell on the coast, become a haven for ships, and extend to SIDON (Gen. 49:13). Various solutions have been mooted. Some, noting JOSEPHUS'S intimation that Zebulun extended from GENNESARET to the land belonging "to Carmel and the sea" *(Ant.* 5.1.22), suggest an otherwise unrecorded extension to the Mediterranean; others suggest that a sharing of the Galilean shore with NAPHTALI was intended; while still others read the text as implying no more than proximity to the "coastlands" and to PHOENICIA, with a profitable and intermediate location for traffic of land and sea. Certainly Zebulun commanded the "way of the sea" (Isa. 9:1; see VIA MARIS) and sucked the treasures of sea and sand (Deut. 33:18 – 19). From the latter passage (also Jdg. 1:30), some infer the existence of commercial covenants with neighbors and believe that the tribal economy and bounds were later expanded by fusion with Asher or Issachar.

Zebulun.

The prophet Jonah came from Gath Hepher (Khirbet ez-Zurra(, top of hill) in the tribal territory of Zebulun.

Such hypotheses apart, the boundaries of Josh. 19, though undeciphered in detail, are clear in general. Zebulun's S limit extended from an undetermined stream E of JOKNEAM across the N fringe of ESDRAELON and along the limestone scarp of NAZARETH to the slopes of Tabor. From there it turned irregularly northward, approximately following the Galilean-Mediterranean watershed before bending westward to the Iphtahel—either the broad Sahl el-Baṭṭof or the narrow zigzag of the Wadi Malik. At least major portions of the basins of Tur ʿan and Battof (or Asochis) were encompassed before the boundary headed southward across the natural "marchland" of infertile and forested Cenomanian limestone and the margins of the ACCO (or Zebulun) and Esdraelon plains. See also TRIBES, LOCATION OF, V.A.

Thus Zebulun, favored by a generally westward slope toward rain-bearing winds and an E-to-W pattern of fault and fold, presented a varied succession of limestone ridge and rich alluvial valley and yielded olives, grapes, and wheat in particular abundance. Tribal contributions to DAVID'S coronation festivities were generous (1 Chr. 12:40) and characteristically patriotic. Though only ELON among the judges was recorded as a Zebulunite (Jdg. 12:11 – 12), the tribe played a major role in the defeat of SISERA and MIDIAN (4:6, 10; 5:14, 18; 6:35), and sent 50,000 warriors to David at HEBRON (1 Chr. 12:33). Some, accepted for their transparent zeal, attended the PASSOVER under HEZEKIAH (2 Chr. 30:10 – 19). If the tribe as such seems to have disappeared before or during TIGLATH-PILESER'S invasion (2 Ki. 15:29), its sturdy remnants, mingled with later immigrants, played a noble role in the Maccabean and Roman eras. Nor did Zebulun fade from eschatological vision (Ezek. 48:26 – 27, 33; Rev. 7:8), while Matthew, recalling Isa. 9:1, saw the Messiah from the Zebulunite city of Nazareth flooding Zebulun and Naphtali with light (Matt. 4:13 – 16).

Baly, *Geography of the Bible* [1957]; id., *Geographical Companion to the Bible* [1963]; Y. Aha-roni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979]; Z. Kallai, *Historical Geography of the Bible* [1986].)

G. R. LEWTHWAITE

Zebulunite zeb'yuh-luh-n*it*. See ZEBULUN.

Zechariah zek'uh-ri'uh (זְכַרְיָהוּ H2358 and זְכַרְיָה H2357, "Yahweh has remembered" [cf. ZICRI]; Ζαχ- G2408). KJV also Zachariah (2 Ki. 14:29; 15:8, 11; 18:2), Zacharias (Apoc. and NT), and Zachary (2 Esd. 1:40). A very common Hebrew name.

(1) Son of JEROBOAM II and last king of JEHU'S dynasty. After ruling in SAMARIA for only six months, Zechariah was murdered at IBLEAM by SHALLUM, who succeeded to the throne (2 Ki. 14:29; 15:8 – 11). His reign fulfilled the prediction that Jehu's dynasty would rule for four generations (10:30; 15:12).

(2) Father of ABI (ABIKAH), who was the mother of King HEZEKIAH (2 Ki. 18:1 – 2; 2 Chr. 29:1). Some have thought that this Zechariah may be the same as #29 below.

(3) An important figure from the tribe of REUBEN (1 Chr. 5:7). His genealogical connection as well as the period in which he lived are unclear.

(4) Firstborn son of MESHELEMIAH (= SHELE-MIAH) and descendant of LEVI through KORAH and ASAPH; described as "the gatekeeper at the entrance to the Tent of Meeting" (1 Chr. 9:21; 26:2). Elsewhere, in connection with the development of a more permanent organization anticipating the

system in the TEMPLE, he is called "a wise counselor" to whom fell "the lot for the North Gate" (26:14).

(5) Son of JEIEL and descendant of BENJAMIN; his brother NER was the grandfather of SAUL (1 Chr. 9:37 [cf. v. 39]; called ZEKER in 8:31).

(6) A Levite and one of the gatekeepers assigned to be a musician when DAVID made preparation to transfer the ARK OF THE COVENANT to Jerusalem (1 Chr. 15:18). He is called one of the brothers of the "second order" (NRSV; NIV, "next in rank") who followed HEMAN, ASAPH, and ETHAN. Zechariah, with others, played the lyre "according to *alamoth*" (v. 20; see MUSIC VI.C). Later, he was one of the Levites appointed "to minister before the ark of the LORD, to make petition, to give thanks, and to praise the LORD, the God of Israel" (16:4 – 5).

(7) One of the priests who blew trumpets before the ark (1 Chr. 15:24).

(8) Son of Isshiah and descendant of Levi through KOHATH (1 Chr. 24:25; cf. v. 24 [UZZIEL was son of Kohath]).

(9) Son of Hosah and descendant of Levi through MERARI; he was a gatekeeper in David's reign (1 Chr. 26:11).

(10) Father of Iddo; the latter was an officer appointed by David over the half-tribe of MANASSEH in GILEAD (1 Chr. 27:21).

(11) One of five officials sent by King JEHOSHAPHAT "to teach in the towns of Judah" (2 Chr. 17:7).

(12) Son of Benaiah, descendant of Levi through Asaph, and father of Jahaziel (2 Chr. 20:14); the latter gave King JEHOSHAPHAT a message from the Lord regarding the Moabite and Ammonite invaders (vv. 14 – 17).

(13) Son of Jehoshaphat (2 Chr. 21:2).

(14) Son of JEHOIADA, who was the high priest during the reign of JOASH of Judah. A godly man, Zechariah denounced the apostasy of the people from the Lord after his father's death, and Joash ordered him stoned to death in the temple court (2 Chr. 24:20 – 21). As Zechariah was dying, he uttered a curse on Joash that was soon fulfilled (vv. 22 – 25). It is often held that this is the Zechariah meant by the Lord's reference in Lk. 11:51, since Scripture mentions no other as slain in this way. Matthew, however, calls the same individual "Zechariah son of Bekariah" (Matt. 23:35), which evidently refers to the writing prophet (#30, below). Various solutions have been proposed (cf. D. L. Bock, *Luke*, BECNT, 2 vols. [1994 – 96], 2:1122 – 24), among which is the view that Matthew has deliberately blended the two OT figures for literary and theological reasons. See also #15, below.

(15) A man who instructed King UZZIAH in the ways of God (2 Chr. 26:5). This Zechariah has sometimes been identified with #14 above and with #29 below.

(16) A descendant of Asaph who was among the Levites involved in cleansing the temple during Hezekiah's reign (2 Chr. 29:13).

(17) A descendant of Kohath who oversaw the workmen who repaired the temple in JOSIAH's reign (2 Chr. 34:12).

(18) One of the administrators of the temple in the days of Josiah; he, along with HILKIAH and JEHIEL, contributed "twenty-six hundred Passover offerings and three hundred cattle" (2 Chr. 35:8; cf. 1 Esd. 1:8).

(19) A descendant of Parosh who returned from Babylon with others under EZRA (Ezra 8:3; 1 Esd. 8:30).

(20) Son of Bebai, also listed among those who returned with Ezra (Ezra 8:11; 1 Esd. 8:37).

(21) One of a group of leaders sent by Ezra to Iddo to get attendants for the house of God (Ezra

8:16; 1 Esd. 8:44).

(22) One of the descendants of Elam who agreed to put away their foreign wives (Ezra 10:26; 1 Esd. 9:27).

(23) One of the prominent men (not identified as priests) who stood near Ezra when the law was read at the great assembly (Neh. 8:4; 1 Esd. 9:44).

(24) Son of Amariah, descendant of PEREZ, and grandfather of Athaiah; the latter was one of the Judahites who after the return from the Babylonian captivity lived in Jerusalem (Neh. 11:4).

(25) Descendant of SHELAH and ancestor of Maaseiah; the latter was another postexilic Judahite who lived in Jerusalem (Neh. 11:5).

(26) Son of Passhur and ancestor of Adaiah; the latter was one of the priests who settled in Jerusalem after the exile (Neh. 11:12).

(27) Son of Jonathan and descendant of Asaph; he led the Levitical musicians at the dedication of the wall of Jerusalem (Neh. 12:35). Probably the same as #28, below.

(28) A priest trumpeter at the dedication of the wall of Jerusalem (Neh. 12:41).

(29) Son of Jeberekiah; he and URIAH the priest were chosen "as reliable witnesses" of the prophecy concerning MAHER-SHALAL-HASH-BAZ (Isa. 8:2). See also #2 above.

(30) Son of Berekiah, grandson of Iddo, descendant of Levi, and one of the writing prophets (Zech. 1:1). His first prophecy was delivered in the second year of DARIUS Hystaspes in 520 B.C. (Ezra 4:24—5:1; Zech. 1:1). He was a contemporary of HAGGAI the prophet, ZERUBBABEL the governor, and Joshua (JESHUA) the high priest (Ezra 5:2; Zech. 3:1; 4:6; 6:11). Born in Babylon, he was a priest as well as a prophet (Neh. 12:16). Ezra calls him the son of Iddo, probably because his father Berekiah died early, and he attained to the position of head of the household and successor to his grandfather. It has been thought by many from Zech. 2:4 that he was a young man at the beginning of his prophetic ministry. See ZECHARIAH, BOOK OF.

(31) According to 1 Esd. 1:15, "Asaph, Zech-ariah, and Eddinus" were three musicians who represented King Josiah; the parallel passage in 2 Chr. 35:15 gives the names as Asaph, Heman, and Jeduthun. The difference may have been consciously or unconsciously motivated by 1 Esd. 1:8.

(32) Father of a certain Joseph; the latter was a military commander under Judas MACCABEE (1 Macc. 5:18, 56).

(33) Father of JOHN THE BAPTIST (Lk. 3:2) and priest within the division of Abijah during the time of HEROD the Great (Lk. 1:5; cf. 1 Chr. 24:10). Both he and his wife ELIZABETH are described as "upright in the sight of God, observing all the Lord's commandments and regulations blamelessly" (v. 6). They had no children, and when they were aged Zechariah received a vision in the temple at the time of the offering of INCENSE, a ritual that symbolized the prayers of God's people. The angel GABRIEL assured him that Elizabeth would have a child who was to be called John and who would live the separated life of a NAZIRITE, preparing the way of the Lord "in the spirit and power of Elijah" (vv. 7 – 17). Because Zechariah did not believe the promise, he became mute (vv. 18 – 22). After the birth of the child, Zechariah confirmed in writing that his name was John, and at that moment "his mouth was opened and his tongue was loosed, and he began to speak, praising God" (vv. 59 – 64). Filled with the HOLY SPIRIT, Zechariah uttered a prophecy known as the BENEDICTUS (vv. 67 – 79).

(34) An OT figure who, according to Jesus, was murdered "between the temple and the altar" (Matt. 23:35; similarly Lk. 11:51). See above, #14.

Zechariah, Book of. The eleventh book in the collection known as the twelve Minor Prophets,

coming at the end of the second division of the Hebrew CANON of Scripture. The book of Zecha-riah emerged from the immediate postexilic period and is therefore a valuable source of information about a phase of Jewish history for which extrabib-lical documentation is slight.

I. Background. The historical situation underlying the book of Zechariah is identical with that which gave rise to the oracles of HAGGAI. Both men were contemporaries and are mentioned together in Ezra 5:1 and 6:14. Although they were the first two prophets to be named as living and working in Judea after the return from EXILE in Babylonia in 537 B.C., they are not actually mentioned until the year 520. Consequently it has sometimes been supposed that they had returned to Palestine with a fresh group of repatriates about that time, and were provoked by the demoralized condition of the populace into the kind of prophetic activity recorded in their books. However, there appears to be no evidence for this supposition, and it is far more probable that both Haggai and Zechariah were still children when their parents returned to the homeland in 537. If so, Zechariah must have grown to manhood amidst the spirit of apathy, indifference, and neglect of spiritual priorities that characterized the period of the return between 537 and 520. Zechariah thus may have been a young adult when he began to prophesy, and it is quite probable that he himself was the individual referred to as "that young man" (Zech. 2:4). See ZECHARIAH #30.

The proclamation of the edict of CYRUS in 538 B.C. permitted expatriate groups held captive in Mesopotamia during the neo-Babylonian regime (612 – 539) to return to their ancestral homes and pick up the threads of their former life. This event must have raised high hopes in the minds of the faithful Jewish remnant in Babylonia. Inspired by the utterances and personal example of EZEKIEL, the prospect of renewing a COVENANT relationship with God in the land of their fathers can hardly have failed to stimulate great interest in the future of a restored community. What the exiles had apparently reckoned without, however, was the sense of despair and disillusionment that quickly ensued when they saw the way in which Jerusalem had been desolated. Little that was of any value was intact, and the ruined walls made it possible for those elements of the Samaritans, Edomites, and Arab tribes living in the vicinity to wander in and out of the city at will.

It seems highly probable that the exiles who returned to Judea were far from wealthy, their more affluent countrymen having elected for the most part to remain behind in Babylonia when the summons to return to Palestine was proclaimed. Since there were almost no capital resources upon which the repatriates could draw, they were forced to eke out a scanty existence, living precariously from day

to day on the products of a ruined and inhospitable terrain, and open always to the depredations of their enemies. Not unnaturally, the first concern of the repatriates was for shelter for their families, but by the time that they had built their houses among the ruins their enthusiasm for such ambitious constructional projects as a new temple or a defensive wall around Jerusalem had been dissipated.

The most immediate need was for inspired leadership, which would place the emphasis upon spiritual priorities and lead to a revival of community life in the theocracy. It was to this forbidding task that Haggai and Zechariah were called in 520 B.C. While the former furnished the initial impetus for laying the foundation of the second temple, the latter helped materially toward the completion of the project by giving a larger spiritual dimension to the restored theocracy through his prophetic oracles. While Zechariah was concerned with the immediacy of the social and spiritual situation in Judea at the end of the 6th cent., his oracles and visions made it clear that the community of repatriated exiles would exercise an influence of untold importance still further in the future— provided always that spiritual priorities were observed. His message was one of hope and promise at a time when the situation in Judea could hardly have appeared worse.

II. Unity. There has been a good deal of scholarly discussion relating to the unity and homogeneity of the book of Zechariah. The fourteen chapters of the extant work fall quite naturally into two main divisions, consisting of Zech. 1 – 8 and 9 – 14. It would appear that the visions contained in the first section had been put together in some definite arrangement; the first and the last are independent in nature, but the remainder seem to have been grouped in pairs intentionally. It is possible that Zechariah was following the bifid style of composition popularly used in antiquity, in which a work was compiled in two balanced halves, both of which reproduced faithfully the thought of the author, and which could therefore be circulated independently of one another if the need arose. Whether that was actually the case or not, the first division gives the undoubted impression of being a self-contained and homogeneous literary unit, proceeding from Zechariah as the author.

With regard to Zech. 9 – 14, most critical scholars have taken the view that they are not the work of the prophet Zechariah and may not even be a unity in themselves. The principal arguments include (1) the complete absence of any reference to the recent rebuilding of the second temple; (2) an evident difference of atmosphere between the first and second portions of the prophecy; (3) a hint from Zech. 9:13 that Greece was the dominant political power instead of Persia, as had been the case in the days of Zechariah; and (4) the apocalyptic material in ch. 14, which in some scholarly circles is commonly held to be an indication of a late date of composition. On the other hand, there are similarities between both sections of the prophecy, including such theological emphases as the necessity for repentance, the exaltation of Jerusalem, and the conversion of the enemies of Israel. In addition, both portions of Zechariah make it evident that the true ruler of the kingdom is the MESSIAH (6:12 – 13; 9:9), whose personage and functions were presented from a uniform standpoint. Again, marked similarities of style and diction occur in both sections, and these would hardly be surprising if the book of Zechariah is to be considered as a literary bifid.

Some writers have also depreciated the unity of the prophecy by pointing out that the second section, Zech. 9 – 14, is closely associated in form with the book of MALACHI, which followed it immediately in the Hebrew canon, through the use of superscriptions (Zech. 9:1; 12:1; Mal. 1:1) in which the technical Hebrew term for "oracle" (*maśśāʾ* H5363) occurs. Because of the relationship of these passages it has been assumed by certain scholars that the three sections thus introduced by the term "oracle" originally belonged together, but that the editor of the twelve Minor Prophets destroyed their unity by separating the book of Malachi in its extant form in order to enlarge the number of

prophets to twelve. Against this general view is the fact that other prophets, especially Isaiah, used the term "oracle" in precisely the manner of Zechariah in passages of undisputed authenticity (Isa. 13:1 et al.; Nah. 1:1; Hab. 1:1). Furthermore, it would be difficult to see why Malachi should have been separated from the prophetic material in the manner suggested and attributed to an individual composer, whereas the other oracles were not. While it may be thought that there are cogent reasons for supposing that the prophecy was compiled by more than one author, there are equally compelling ones for accepting the unity of composition by Zechariah himself.

III. Authorship. The attributive author of the prophecy was Zechariah son of Berekiah (named "Zacharias" in the LXX and Vulgate), a contemporary of the prophet Haggai. The name Zechariah was quite common in Hebrew society, and in the OT over thirty individuals were given this cognomen. The author was the grandson of IDDO, the latter being one of the heads of priestly families which returned to Judea after the exile (the phrase "son of Iddo" in Ezra 5:1 and 6:14 is properly translated "a descendant of Iddo" by the NIV). Hence, Zechariah himself was most probably a priest, and may even have functioned as a prophet in the cultus. The beginning of his prophetic work can be dated quite accurately from the superscription (Zech. 1:1) in October-November of 520 B.C. He seems to have prophesied for a longer period than Haggai, functioning for as long as two years according to the dates in Zech. 1:1 and 7:1, and possibly longer. The first section of the prophecy named Zechariah as the author and furnished specific dates for his activity (the period covered by Ezra 5:1—6:22). If Zech. 9 – 14 was written by someone other than Zechariah, the identity of this individual cannot be determined either by internal or external evidence.

IV. Date. From the superscription ("eighth month of the second year of Darius") it is possible to date the beginning of the prophetic activity of Zechariah at the end of 520 B.C., shortly after Haggai began his work in Jerusalem (cf. Hag. 2:1, "twenty-first day of the seventh month"). If the prophecy is a unity, the oracles were delivered between 520 and 518 and perhaps even later. Precisely how soon the prophecy appeared in its extant form is hard to say, but there was probably only a short interval between the oral and written versions. The position of the work as an integral part of the Minor Prophets in the second section of the Hebrew canon would suggest that the written form appeared within the lifetime of the prophet, and was accepted as canonical before the days of Malachi (c. 450).

If diversity of authorship is entertained, the date of Zech. 9 – 14 becomes a matter of pure speculation, since these chapters cannot be dated accurately from internal evidence. The reference to JAVAN or GREECE (9:14) has been used by some scholars to date the work in the 4th cent B.C., but such a late period is not required for the composition. Greek influence in the ANE was noticeable as early as the 7th cent., and Javan was mentioned both as a mission field for Israel (Isa. 66:19) and as a center of trade (Ezek. 27:13). Any reasonably astute political observer in the time of Zechariah knew that for many years Greek mercenary troops had formed the bulk of the Persian military forces. Furthermore, the periodic raids by the Greeks upon the Palestinian coastline, beginning about 500, may well have given rise to the prophecies against Javan. Since Zech. 9 deals with other great peoples, it seems unwarranted to single out the claims of Greece at the expense of states such as Tyre, Ash-kelon, Damascus, and the like.

Attempts to identify the three shepherds (Zech. 11:4 – 17) with personages of the Maccabean era (see MACCABEE) have led some scholars to assign a 2nd-cent. B.C. date to the later oracles. This can now be regarded as impossibly late, since the DEAD SEA SCROLLS included copies of Zechariah. Because the Qumran MSS were themselves of Mac-cabean provenance, the situation would demand a

date in the Persian period for the original autograph of Zechariah. In any event the identification of the three shepherds is a precarious matter, since as many as thirty individuals have already been suggested on the basis of a literal interpretation of the passage. Even liberal scholars have placed the latest date for the supposed additions to the "original oracles" of chs. 1 – 8 at about 350 B.C., which in the light of the Qumran evidence seems at least a century too late.

V. Place of origin. As with the prophecy of Hag-gai, the oracles of Zechariah originated in Jerusalem in connection with the social and religious situation with which the prophet was confronted in 520 B.C. If it is assumed that Zech. 9 – 14 was the work of a "deutero-Zechariah," it might be possible to posit some other place than Jerusalem as the point of origin of at least certain of these utterances. A location outside Judea would be unlikely because of the concerns of the author for the messianic kingdom. In the light of the proposed unity of authorship it seems best to regard Jerusalem as the place where the whole prophecy originated.

VI. Destination. The oracles of Zechariah were meant for the inhabitants of Jerusalem and Judea. In the earlier chapters his utterances were concerned with the temple and the priesthood as well as with the civil government, though throughout the book his concern was with the nature and development of the theocracy. Whatever view is adopted about the authorship of the later chapters, there can be no doubt about the destination of the material as a whole.

VII. Occasion. The conditions of apathy, neglect, and despair that Zechariah encountered among the repatriated exiles in 520 B.C. furnished the occasion of the prophecy. With his contemporary Haggai he was called to give that kind of spiritual leadership which would regenerate the theocracy, recall it to its true vocation, and guide it toward its destiny as the living witness of God in the world. If the prophetic ministry of Zechariah extended over many years, the original occasion would be subsumed under the larger purpose of the spiritual and social development of the theocracy in Judea.

VIII. Purpose. As was the case with Haggai, the primary concern of Zechariah was the establishing of spiritual priorities in the life of the returned community. The lax attitude which the priests manifested toward their duties was matched among the laity by an indifference to the claims of the covenant relationship upon their lives, and even more seriously by a flagrant disregard for the moral prescriptions of the Mosaic Torah. Zechariah saw that the prosperity of the theocracy depended upon a proper relationship between the covenant people and their God. However keenly the repatriates felt about the injustices of life, it was evident that submission, penitence, and cleansing from sin must precede the outpouring of divine blessing. It was the avowed aim of Zechariah to establish the fundamental importance of this principle in the minds of the returned exiles, and to see that it operated at both religious and civil levels. Once this had been achieved satisfactorily it would be possible for the larger messianic purposes of the theocracy to be satisfied.

IX. Canonicity. At no time in the history of later Judaism or in the early Christian period were doubts ever raised as to the canonicity of the book of Zechariah. It was valued in the primitive church because of its messianic teachings and the way in which the work was used by NT authors (cf. Matt. 21:1 – 11 with Zech. 9:9 – 10, and Matt. 26:14 – 16 with Zech. 11:12).

X. Text. During the course of transmission the Hebrew text became somewhat corrupt, as can be

illustrated by reference to such passages as Zech. 5:6; 7:1, 8, 9; 8:13; 9:15 – 17; 11:7, 8, 13; 14:5, 6, 10. What appears to be a textual dislocation can be seen in 4:6b – 10a, which could be more readily placed after v. 14. Possible instances of marginal notes being incorporated into the text appear in 2:8 (MT v. 12); 4:12; 6:6; 11:6. The use of the SEPTUAGINT in restoring the text presents more problems for this book than for others, since the Greek version has preserved corruptions already present in the archetype. These include such verses as 4:12; 5:3; 7:2 (along with the dislocation of 4:6b – 10a). There are also places where the LXX witnesses to a better form of the text, as in 2:3 (MT v. 7), 6 (MT v. 10); 3:4, 5; 8:9; 9:15 – 17; 11:7, 8; 14:5, 6. In any attempt at restoration of the Hebrew text, the LXX needs to be used with considerable caution.

XI. Content. As noted above, the extant prophecy falls readily into two principal sections:

A. Dated prophecies

Zech. 1:1 – 6. Introduction and call to repentance, in which the prophet establishes his identity and pleads with the repatriated Jews to return to the Lord. In particular he begs them to learn the lessons of past experience and avoid the misdeeds of their forebears.

1:7 – 17. The first vision, consisting of four horsemen whose task it was to traverse the earth and report on existing conditions to the angel of the Lord. In this instance they stated that there were no political disturbances anywhere in the empire; whereupon the angel interceded with God on behalf of desolated Jerusalem, and received a promise that he would soon "comfort Zion" and restore the city of Jerusalem.

1:18 – 21 (MT 2:1 – 4). This short section contains the second vision, in which Zechariah saw four horns, symbolizing the foreign powers that had destroyed the Israelites. Four blacksmiths were also present in the vision, and to them was given the task of breaking the horns into pieces, indicating that those nations which had oppressed the Hebrews in former times would themselves be humbled.

2:1 – 13 (MT 2:5 – 17). In the third vision the prophet was given a promise of great future prosperity for Jerusalem. The repatriates would be exalted above their former enemies, and life in the theocracy would be characterized by the divine presence in the midst of the people. This would be so notable a feature that it would attract many Gentile peoples to the service of the Lord.

3:1 – 7. The fourth vision of Zechariah revealed Joshua (JESHUA) the high priest clothed in dirty attire and subjected to temptation by Satan. Because Jerusalem had been chosen by God for future blessing, it was imperative for Joshua, as the representative of the people, to be cleansed ceremonially and fitted for his new spiritual responsibilities. Accordingly he was decked out in clean garments and a turban, and was then assured that he had been cleansed.

3:8 – 10. An oracle addressed subsequently to Joshua concerning the Branch (Messiah) and the engraved stone. Having been given the oversight of the civil and religious life in the theocracy, he was promised special access to God.

4:1 – 14. The fifth vision, in which the angel showed Zechariah a seven-branched lampstand fed by living branches from two olive trees, was accompanied by an interpretation. The seven lamps were the "eyes of God," while the two olive trees symbolized an unfailing source of divine grace. Here the promise of God extended beyond Joshua to ZERUBBABEL, and assured him that the obstacles which hindered the building of the kingdom of God would be removed only by the divine spirit through grace. Zerubbabel would be privileged to see the completion of the temple in all its splendor, even though at the time the oracle was uttered the people were passing through a day of small things.

In Zechariah's fifth vision the angel showed him a seven-branched lampstand representing the seven "eyes of the LORD, which range through the whole earth" (Zech. 4:2, 10).

5:1 – 4. In his sixth vision Zechariah saw a flying roll containing judgment upon thieves and perjurers. It would traverse the land and bring the punishment of God upon all the evildoers in the community.

5:5 – 11. The seventh vision of Zechariah showed the ephah, a container for measuring dry goods and equal to four gallons in liquid capacity, in which a woman was seated. Symbolic of wickedness, she was sealed inside the ephah by means of a lead stopper and was transported to Shinar. This vision symbolized the eradication of iniquity from the theocracy and its banishment to Babylonia, the place of all evil as far as the repatriates were concerned.

6:1 – 8. In his eighth vision Zechariah saw four horse-drawn chariots, which as agents of God kept the world under surveillance. These four celestial spirits reported that all was quiet within the bounds of the empire, indicating that the world was once more at peace and under the direct control of God (cf. 1:7 – 17).

6:9 – 15. A historical section that narrates the consecration of Joshua as symbolic of the Branch (Messiah), who built the temple and who ruled as king and priest in the theocracy. Unlike their ancestors, the members of the restored community would live in obedience to their God and at peace with each other.

7:1—8:23. Another historical section containing an oracle of Zechariah relating to the question of whether there should be fasting to commemorate the fall of Jerusalem in 597 B.C. The people were informed that a special quality of life rather than indulgence in mechanical actions is what God desires of the repatriates. If they will observe high moral, ethical, and spiritual standards, they can expect the blessing of God upon their community life. Jerusalem will experience a degree of prosperity unknown in her long history, and so conspicuous will the theocracy become in contemporary society that other nations will be attracted in a powerful manner to the Jewish way of life.

B. Undated prophecies

9:1 – 17. The first of two sections whose superscription contains the word *oracle*. It deals with the impending judgment of God upon the cities of SYRIA, PHOENICIA, and PHILISTIA. Great devastation would be wrought against these neighbors of the house of Israel, and in particular the remnants of Philistia would be incorporated into the province of Judea. Becoming Jewish by adoption, they would present no further threat to the security of the Jews. The temple would then be enfolded in the protecting presence of God, and the messianic prince would enter Jerusalem in triumphal procession to institute a reign of peace and prosperity, quelling in the meantime any threats to the well-being of the theocracy from such invaders as the Greeks.

10:1 – 12. This section comprises an oracle denouncing the foreign rulers of Judah, described as "shepherds," who will be forced to yield to the superior strength of the divine leader as he gathers in his flock. The oracle foretold the downfall of the foreign overlords at the hands of the Jews, and predicted that the latter would be restored to their own land from the countries to which they had been scattered. The reference to the cornerstone (v. 4), tent peg, and battle bow may perhaps be a threefold allusion to the Messiah.

11:1 – 17. This oracle distinguishes between the good and foolish shepherds, and describes the way in which the flock of God have suffered at their hands. The good shepherd confounds the schemes of the evil shepherds, but is rejected by the flock. As a result, the flock endures affliction under yet another evil shepherd. In this utterance the prophet Zechariah foresees that the much hoped-for theocratic relationship between God and his people would be marked by serious blemishes. With the breaking of the two staffs, named Favor and Union, would ultimately come the end of national unity. Unfaithfulness to the covenant obligations would result in the rule of a "worthless shepherd" in the theocracy, for which the people would have to shoulder the blame.

12:1—13:6. This section comprises an oracle of an eschatological nature which in general terms depicted the Israelites returning to God at some time in the future. The city of Jerusalem had been beset on all sides by powerful armies of Gentile origin, but suddenly the inhabitants of the city saw the hand of God operating against their foes, and they joined in the defense of Jerusalem with new vigor. Victory would be followed by national mourning, and this in turn would give rise to repentance and purification. Prophets would be repudiated because they had been unfaithful to their vocation, and rigid standards of morality would finally produce a people acceptable to God.

13:7—14:21. This section continues the theme of purification for the nation of Israel, with equally strong eschatological emphases. In the last great assault of heathen armies upon Jerusalem, half of the city would be taken captive. When all seemed lost the Lord would intervene to secure victory for his people and establish his rule on earth. The Jews would have learned through these events to acknowledge the overlordship of God, and the concluding section of the oracle outlines the blessings of the newly-established divine kingdom. The Jews would make an annual pilgrimage to Jerusalem at the Feast of Tabernacles, and the covenantal ideal of holiness to the Lord would be the hallmark of life in the community.

XII. Theology. The thought of Zechariah, like that of his contemporary Haggai, depended to a large extent upon that of his predecessors. However, it is incorrect on that account to dismiss the writings of Zechariah as being either obscure apocalypticism (see APOCALYPTIC LITERATURE) or unoriginal prophetism. He began to prophesy at a time when zeal for the ideals of the theocracy had reached a very low ebb and was being revived by the vigorous teachings of Haggai. Since his prophetic vocation began as a continuation of his contemporary's efforts, it is hardly to be expected that there

would be significant theological differences between the two men as far as the immediate task of reconstructing the theocratic community was concerned. For Haggai and Zecha-riah the situation resolved itself into a question of priorities, and in their thought a reconstructed and functioning temple was by far the most important material consideration. They were also firmly convinced that the returned community could continue to exist only in so far as it exemplified the ideals of the covenant relationship, and a proper form of worship was for them the outward expression of that state of inward holiness which God demanded of his people. Zechariah, however, had a clearer vision of the dangers involved in cultic formalism, for he was concerned more than Haggai about the great need for the individual to commit himself consciously to the claims of God upon his life, and to foster the ideals of the covenant in the community through strict obedience to the divine will.

Zechariah's wide outlook over the world of his day can be seen in his ESCHATOLOGY, which has pronounced messianic overtones. There are distinctly nationalistic aspects in his thought, of course, with its expectation of the triumph of his people over the Gentile nations, but his broader prophetic vision contemplated a time when Jew and Gentile would gather together in a spirit of faith and devotion to worship God in the temple at Jerusalem. Like Isaiah and the other prophets, Zechariah placed the scene of the final redemption of humanity in this world. While it would be continuous with the present historical order, it would differ, for such factors as evil, wrongdoing, and suffering would not exist. This state of grace would be ushered in through the personage of the Messiah, who would in fact establish and rule over the new kingdom. As with other prophets, Zechariah saw the final stage in the process as the cleansing of Jerusalem from sin and the restoration of the community to continuing peace and prosperity. This kind of prophetic apocalyptic is well attested in the OT, and contains nothing that is illegitimate or particularly unusual.

The later chapters of the prophecy need to be seen in the light of such a theological outlook, especially those sections that point to a messianic figure. It has been popular in some quarters to interpret several verses (Zech. 9:8, 15; 12:10) as allusions to some historical personage, whether in the time of Zechariah or in some other period up to and including the Maccabean age. This approach fails to appreciate the messianic concepts inherent in the thought of Zechariah, and in the end becomes in itself merely an exercise in subjectivity. The peaceful prince of the concluding chapters who would usher in the blessings of the kingdom is already present in the eschatology of such prophets as Isaiah, who entertained similar sequences for the future of his people. Finally, it was precisely because the members of the early christian Church were awaiting the "consolation of Israel" that they were able to assign with such confidence a messianic interpretation to passages such as Zech. 9:9; 11:12, 13; 12:10; and 13:7.

Even though Zechariah was concerned for the well-being and prosperity of the theocracy, his very apocalypticism cast a shadow of doubt upon the future. The prophetic oracle of Zech. 11:4 – 14, which presents considerable difficulties of interpretation, seems to imply that God knew that his flock was doomed to almost complete extinction at the hands of their enemies. The fact that such a fate would be nothing less than they deserved did not alter the ultimate state of affairs for the prophet. The symbolic breaking of the two pastoral staffs had an awesome eschatological ring about it, pointing as it would appear to do to the end of the relationship between God and his people. Even this prospect did not dismay the prophet entirely, for he was sufficiently grounded in the theology of the covenant to realize that if the holiness of the theocracy began to approximate to that of its Lord, the prospect of destruction would be averted and the blessings of peace and prosperity would be secured for all time.

R. K. HARRISON

Zecher zee'kuhr. See ZEKER.

Zedad zee'dad (צְדָד [or צְדָד] H7398, meaning uncertain). A town between LEBO HAMATH and ZIPHRON, used to mark the ideal N border of Israel (Num. 34:8; Ezek. 47:15). It is usually identified with modern Ṣadad, some 67 mi. NE of DAMASCUS and 25 mi. SE of RIBLAH (see discussion in *ABD*, 6:1068).

Zedekiah zed'uh-ki'uh (צִדְקִיָּהוּ H7409 and צִדְקִיָּה H7408, "Yahweh is my justice/righteousness"). (1) Son of Kenaanah; he was one of 400 false prophets who, in opposition to MICAIAH, the true prophet, encouraged AHAB king of Judah and JEHOSHAPHAT king of Israel to go to war against the king of ARAM in order to recapture RAMOTH GILEAD (1 Ki. 22:1 – 38; 2 Chr. 18:1—19:3). The incident is of interest in part for the historical reason that it illuminates group prophecy in ancient Israel. As the 400 false prophets predicted in unison Israel's victory, Zedekiah made himself iron horns, an act of prophetic symbolism probably intended to reinforce the ancient tribal oracle regarding Joseph (Deut. 33:17).

The incident is also of theological interest for several reasons. (a) Chronicles, which ignores the history of the northern kingdom, records this event because of the role played by Jehoshaphat and to teach the spiritual truth proclaimed by JEHU the son of Hananai the seer ("Should you [Jehoshaphat] help the wicked and love those who hate the LORD?" 2 Chr. 19:2), a sequel to the story found only in Chronicles. (b) The story demonstrates the attitudes toward prophecy in ancient Israel. Ahab regarded the prophets as instruments of propaganda to serve the interests of the state, using their words and actions to influence the deity. There was a whole corps of prophets willing to give him the moral support he required (1 Ki. 22:5 – 6, 13, 26 – 27). Jehoshaphat, on the other hand, regarded the prophet not as an agent of the community to influence the deity by magic, but as the instrument of revelation of the will of God to the community (22:7 – 8). (c) Finally, through the vision granted

Micaiah, Yahweh makes it clear that these false prophets receive their charismatic quality from lying spirits sent forth by the one God to achieve the divine will (22:19 – 23).

(2) Son of Maaseiah; he was a false prophet whom JEREMIAH predicted would be executed, along with Ahab the son of Kolaiah, by NEBUCHADNEZZAR for immorality and false teaching (Jer. 29:21 – 23).

(3) Son of Hananiah; he was one of the officials in the court of JEHOIAKIM who heard BARUCH read Jeremiah's scroll (Jer. 36:12).

(4) Third son of JOSIAH (1 Chr. 3:15) and king of Judah from 597 to 586 B.C. His given name was MATTANIAH ("gift of Yahweh"), but it was changed to Zedekiah by Nebuchadnezzar as a mark of vassalage when he made Zedekiah king in place of his eighteen-year-old nephew JEHOIACHIN, who was taken captive to Babylon along with the cream of the country's leadership (2 Ki. 24:8 – 17; Jer. 29:2). He was twenty-one when he began to reign, and he reigned until the fall of Jerusalem, eleven years of continual agitation and sedition (2 Ki. 24:18).

Although the prophet-historian of Kings largely bypasses the events of Zedekiah's reign (cf. 2 Ki. 24:18—25:2), they can be traced through the book of Jeremiah, where he is portrayed as indecisive, torn asunder by conflicting emotions—recognizing Jeremiah as a true prophet, but unable to act in faith on his words. Unable to choose the good by faith he acts perfidiously (cf. Jer. 34; Ezek. 17). This man who feared the Jews (Jer. 38:19) rather than God, Ezekiel described as the "profane and wicked prince of Israel" (Ezek. 21:25). Because he could not act in faith on the word of God through Jeremiah (cf. Jer. 33:17 – 23), he brought death upon himself and his people instead of the life offered him.

In the beginning of Zedekiah's reign (Jer. 27:1, clarified as the fifth month of his fourth year, 28:1), Jeremiah warned the king not to join in the revolt with EDOM, MOAB, AMMON, TYRE, and SIDON against BABYLON (27:1 – 12). The fire of insurrection was fanned at this time by false prophets among the Jews, both in Jerusalem and Babylon, who were predicting the defeat of Nebuchadnezzar and the liberation of Jehoiachin (chs. 28 – 29). The plot in fact came to nothing. Possibly, however, it was these activities which brought him under suspicion and necessitated his visit to Babylon in 593 B.C. (51:59).

In the ninth year of his reign (589 B.C.), Zedekiah openly rebelled under the influence of the pro-Egyptian party. J. C. J. Waite properly observed: "This was not merely an act of political suicide, it was a flagrant violation of the oath of loyalty to Nebuchadrezzar which the king had sworn in the name of Yahweh (Ezk. xvii)" (*NBD* [1962], 1357). Most scholars think he had an understanding with two Egyptian pharaohs, Psammetichus II (593 – 588) and his son HOPHRA (Apries, 588 – 569), who had resumed a policy of intervention in Asia. Judging from Zedekiah's repeated consultations with Jeremiah, he himself was indecisive in this act, and with weak leadership allowed the decision to be made by the "hawks" under him (cf. Jer. 38:5).

In response to Zedekiah's inquiry about the outcome of Babylon's retaliatory siege of Jerusalem begun in 589, Jeremiah predicted death, pestilence, the sword, and the execution of the city's survivors (Jer. 21:1 – 3). They would be treated like bad figs, unfit to be eaten (24:8). Zedekiah himself, however, was not to die by the sword but to die in peace with an honorable burial (34:5).

The advance of an Egyptian army in the summer of 588 forced the Babylonians to lift the siege of Jerusalem temporarily (Jer. 37:5). Probably against this background Jeremiah denounced the ruler and people for breach of faith. During the siege King Zedekiah had made a covenant with the people in Jerusalem that all should set free their Hebrew slaves, male and female. But when the Babylonians withdrew from the city to meet the Egyptian army, those who had been set free were enslaved again

(34:8 – 11).

At this same time, lacking decisive leadership ability, he allowed the princes to beat Jeremiah and imprison him in the house of Jonathan the secretary, which had been made into a prison (Jer. 37:15). Upon Jeremiah's plea, however, Zedekiah had him transported to the court of the guard (37:21). But once again Zedekiah appeared impotent and irresolute as he allowed the princes to cast Jeremiah into the cistern of MALKIJAH, "the king's son" (38:4 – 6; the description is prob. an official title; cf. J. Gray, *I and II Kings* [1970], 453). This time, upon the plea of EBED-MELECH, Zedekiah had Jeremiah transported again to the court of the guard (38:7 – 13).

The following summer, July 587, the Babylonians breached the wall and poured in. By this time the food supply was exhausted. Zedekiah with his men of war fled the city by night toward the Jordan. The Babylonians overtook Zedekiah, whose army had become separated from one another. He was brought before Nebuchadnezzar at his headquarters at RIBLAH in central Syria. He was shown no mercy. His sons were slain before his eyes; he himself was blinded, bound in fetters, and brought to Babylon (2 Ki. 25:1 – 7; Jer. 39:1 – 7; 52:1 – 11). The prophecies of Jeremiah predicting death if he lacked faith to act resolutely on the word of God's prophet was fulfilled.

(See further D. N. Freedman, "The Babylonian Chronicle," *BA* 19 [1956]: 50 – 60; J. P. Hyatt, "New Light on Nebuchadrezzar and Judean History," *JBL* 75 [1956]: 277 – 84; D. J. Wiseman, *Chronicles of Chaldean Kings* [1956]; J. Bright, *A History of Israel*, 4th ed. [2000], 327 – 30; M. Roncace, *Jeremiah, Zedekiah, and the Fall of Jerusalem* [2005].)

(5) Son of Jeconiah/JEHOIACHIN (1 Chr. 3:16). Some have interpreted the text to mean that this Zedekiah is the same as #4 and that he is called "son of Jeconiah" only because he was Jeconiah's successor on the throne.

(6) One of the signatories of the covenant of Nehemiah (Neh. 10:1 [MT 10:2]; KJV, "Zidkijah"). Although otherwise unknown, he must have been a prominent individual, but probably not a priest. (The list of priest signatories appears to begin with Seraiah in v. 2 [MT 10:3].)

(7) Ancestor of BARUCH (Bar. 1:1).

B. K. WALTKE

Zeeb zee'uhb. See OREB AND ZEEB.

Zeker zee'kuhr (זֶכֶר H2353, short form of זְכַרְיָהוּ H2358, "Yahweh has remembered"). Also Zecher. Son of JEIEL and descendant of BENJAMIN; his brother NER was the grandfather of SAUL (1 Chr. 8:31 [cf. v. 33]; called ZECHARIAH in 9:37).

Zela zee'luh (צֵלַע H7521, prob. "side" [cf. צֵלַע הָהָר , "hillside," 2 Sam. 16:13]). A city within the tribal territory of BENJAMIN; here, in the tomb of KISH, the bones of SAUL and JONATHAN were buried (2 Sam. 21:14). P. K. McCarter, Jr. (*II Samuel*, AB 9 [1984], 437), without explanation, but evidently interpreting the word as the common noun ṣēlā(H7521 (which can mean "side room," as in 1 Ki. 6:5), translates, "in a chamber of the tomb of Kish." In Josh. 18:28, Zela (KJV and NIV, "Zelah") is mentioned as a part of a group of fourteen Benjamite cities that in general lay a few miles to the NW of JERUSALEM (because LXX^A reads *Sēlaleph*, some understand the Heb. to mean "Zela-Haeleph" rather than two different cities, Zela and HAELEPH, but that reading changes the total to thirteen towns). Zela's exact location is unknown, though some have suggested Khirbet Salah, between Jerusalem and GIBEON, as a possible site. See also ZELZAH.

Zelah zee'luh. See Zela.

Zelek zee'lik (צֶלֶק *H7530*, meaning uncertain [cf. *HALOT*, 4:1031]). An Ammonite, included among David's mighty warriors (2 Sam. 23:37; 1 Chr. 11:39). According to the Ketib in the Samuel passage (pl. *nōśĕʾê rather than nōśēʾ*, "bearer"), Zelek as well as Naharai were armor-bearers of Joab.

Zelophehad zuh-loh'fuh-had (צְלָפְחָד *H7524*, prob. from צֵל *H7498*, "shadow," and פַּחַד *H7065*, "dread," meaning perhaps "refuge from terror" [see *HALOT,* 3:1031]). Son of Hepher, grandson of Gilead, and descendant of Manasseh who died in the wilderness without male descendants (Num. 26:33; 27:1, 7; 36:2, 6, 10 – 11; Josh. 17:3; 1 Chr. 7:15). His five daughters—Mahlah, Noah, Hoglah, Milcah, and Tirzah—came to Moses and Eleazar to plead for the recognition of women in such cases. As a result it was decided that when a man died without male heirs the inheritance would pass to his daughters. This law was later emended to prevent Israelite lands passing into non-Israelite hands through marriage. Women who inherited lands were required to marry within their own tribe. (See J. Pedersen, *Israel: Its Life and Culture, 2* vols. [1926 – 40], 1:94 – 96; J. Weingreen in *VT 16* [1966]: 518 – 22.)

<div align="right">J. Arthur Thompson</div>

Zelotes zuh-loh'teez. KJV form of Zealot.

Zelzah zel'zuh (צֶלְצַח *H7525,* derivation unknown). A town or landmark on the border (NRSV, "territory"; Heb. *gĕbûl H1473)* of Benjamin near the tomb where Rachel was buried (1 Sam. 10:2). Samuel informed Saul that two men would providentially meet him here with news about his father's lost donkeys. Aside from this passage, nothing is known of Zelzah (unless it should be equated with Zela, as some have suggested). According to Gen. 35:16 – 20, Rachel died and was buried on the way from Bethel to Ephrath, "while they were still some distance" from the latter; but that information is of little help in locating Zelzah (see Rachel's tomb). It is reasonable to infer that Zelzah was not far from Ramah, where Samuel lived. Many scholars, however, believe that the text is suspect, and numerous alternate interpretations have been proposed. Most of these involve conjectural emendations, such as *bĕṣēl ṣāḥîaḥ,* meaning possibly "in the shadow of a rock" (see *HALOT,* 3:1030 – 31; *ABD,* 6:1073 – 74).

Zemaraim zem'uh-ray'im (צְמָרַיִם *H7549,* possibly "double peak"). (1) A city allotted to the tribe of Benjamin (Josh. 18:22). Zemaraim is listed between Betharabah (thought to be in the extreme E of Benjamin's territory and SE of Jericho) and Bethel (N central area), so this information is not much help in locating the town. According to some, one should look for Zemaraim in the eastern section and possibly identify it with Khirbet es-Samra (c. 4 mi. NE of Jericho). Others prefer a location near Bethel, such as Ras ez-Zemara (c. 5 mi. NE of Bethel), Khirbet el-Mazariʿa (1 mi. W of ez-Zemara), or Ras et-Ṭaḥune (c. 9 mi. N of Jerusalem and only 2 mi. SW of Bethel; this last site is preferred by Z. Kal-lai, *Historical Geography of the Bible* [1986], 401). If Zemaraim was indeed in the vicinity of Bethel, the town should probably be associated with Mount Zemaraim (see #2, below). Such a location is consonant with the inclusion of the town in Shishak's topographical list (Egyptian *d̠mrm,*

cf. Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 325 – 27).

(2) A mountain in the hill country of Ephraim (see EPHRAIM, HILL COUNTRY OF) from which ABIJAH of Judah addressed JEROBOAM of Israel before a major battle between the two kingdoms (2 Chr. 13:4). Abijah was victorious and captured "the towns of Bethel, Jeshanah and Ephron, with their surrounding villages" (v. 19). It is quite possible that Mount Zemaraim received its name from the town of Zemaraim or vice versa (see #1, above).

Zemarite zem'uh-r*it* (צְמָרִי H7548, gentilic of the assumed place name צְמָר). The Zemarites were a people group descended from CANAAN (Gen. 10:18; 1 Chr. 1:16). They are usually associated with the city of ZEMER. See NATIONS II.A.

Zemer zee'muhr (conjecture צְמָר). In Ezek. 27:8, according to some scholars, the words ḥăkāmayikṣôr, "your skilled men, O Tyre," should be emended to ḥakmê ṣemer, "skilled men of Zemer" (cf. NRSV). The city of Zemer is mentioned in extrabiblical sources (e.g., Ṣumur in the TELL EL-AMARNA tablets) and is generally identified with modern Ṣumra in Syria (c. 11 mi. SE of ARVAD, just N of the Syria-Lebanon border). Although the name of this city does not otherwise occur in the Bible, the ZEMARITES included in the Table of NATIONS were probably inhabitants of Zemer.

Zemira zuh-m*i*'ruh. KJV form of ZEMIRAH.

Zemirah zuh-m*i*'ruh (זְמִירָה H2371, possibly "song"). KJV Zemira. Son of BEKER and grandson of BENJAMIN (1 Chr. 7:8).

Zenan zee'nuhn (צְנָן H7569, meaning uncertain). A town in the SHEPHELAH, within the tribal territory of JUDAH (Josh. 15:37; prob. the same as ZAANAN, Mic. 1:11). It was in the same district as LACHISH and EGLON, but its precise location is unknown.

Zenas zee'nuhs (Ζηνᾶς G2424, prob. short form of Zr|vo8copo^, "gift of Zeus"). A lawyer whom PAUL asked TITUS to assist in his journey (Tit. 3:13). He may have been a Christian missionary who worked with Titus on the island of CRETE, or who with APOLLOS was on a mission for Paul that took him to the island. According to some, Titus was being directed to send Zenas and Apollos on to Paul in NICOPOLIS with full provisions, possibly because the apostle had a special need for Zenas's particular expertise as a lawyer (but this view was influenced by the KJV's incorrect rendering, "Bring"). It is unclear, moreover, whether his legal skills had to do with Roman or with Jewish law. Because the verses just preceding (vv. 9 – 11) speak of religious legal disputes, it may be that Zenas was an expert in the TORAH. If so, he was probably a Jewish scholar and legal authority turned Hellenist who took a Greek name when he was converted to Christianity. Others believe that, in view of the anti-Jewish sentiments expressed in the PASTORAL EPISTLES (1 Tim. 1:7 – 11; Tit. 1:10 – 14), he was a secular jurist.

Some infer that Paul had received much assistance in his mission endeavors from Zenas and others like him. This could explain why Titus was to see that Zenas and Apollos were fitted and equipped for the journey in every way (cf. Rom. 15:24; 1 Cor. 16:6). It is possible they were carrying this very letter to Titus in Crete. The passage illustrates vividly the Christian hospitality and obvious support the early churches gave to brethren and workers traveling from one church to another. The closing verses of Titus indicate the variety and mobility of the early missionaries in the Pauline

group. The 5th-cent. *work Acts of Titus* purports to have been written by Zenas, and late tradition says that he became a bishop in Palestine in LYDDA.

<div align="right">L. M. PETERSEN</div>

Zephaniah zef'uh-n*i*'uh (צְפַנְיָהוּ *H7623* [only 2 Ki. 25:18; Jer. 37:3] צְפַנְיָה *H7622,* "Yahweh has hidden [*or* treasured *or* protected]"; cf. ELIZAPHAN). (1) Son of Tahath, descendant of LEVI through KOHATH, and ancestor of SAMUEL and HEMAN (1 Chr. 6:36).

(2) Son of Cushi (or Cushite); a prophet during the early part of the reign of JOSIAH whose prophecy is preserved in the book bearing his name (Zeph. 1:1; see ZEPHANIAH, BOOK OF). He is the only prophet whose ancestry is traced back four generations, and this unique feature may indicate that his great-grandfather HEZEKIAH was the famous king bearing that name. If so he was the only prophet of royal blood, a cousin of Josiah and of the princes to whom he directed much of his prophecy. Apparently he lived in Jerusalem, for he referred to it as "this place" (1:4) and described its topography with intimate knowledge (1:10 – 13).

(3) Son of Maaseiah; a priest second in rank during the reign of ZEDEKIAH (Jer. 21:1; 52:24). Some think this Zephaniah may have been JEREMIAH's cousin (cf. 32:7 with 35:4). The false prophet Shemaiah of Nehelam, in a letter from Babylon, appointed Zephaniah priest instead of JEHOIADA with responsibility to punish pretenders to the gift of prophecy, one of whom, he alleged, was Jeremiah (29:24 – 28). Zedekiah sent him twice to Jeremiah; once to inquire of Yahweh about the Babylonian siege and once to ask him to pray for the people (21:1 – 2; 37:3). After the capture of Jerusalem, NEBUZARADAN brought him along with other leaders before the king of Babylon, who had them killed at RIBLAH (2 Ki. 25:18, 21; Jer. 52:24, 27).

(4) Father of a postexilic Israelite named JOSIAH in whose house the priest Joshua (JESHUA) was crowned (Zech. 6:10). The subsequent reference to HEN son of Zechariah (v. 14) may be an alternate name or title of Josiah.

<div align="right">B. K. WALTKE</div>

Zephaniah, Apocalypse of. A Jewish pseudepigraphical book known primarily through references to it by CLEMENT OF ALEXANDRIA *(Stromata* 5.11.77; the work is also mentioned in some later writings, e.g., by Nicephorus, c. A.D. 820). Clement describes Zephaniah's journey into the fifth heaven escorted by the Spirit; there the prophet saw angels in glory on thrones, singing the praises of the most high God. This work is quite similar to the ASCENSION OF ISAIAH 7 – 9. It may have been composed by a Jewish author in the 1st cent. A.D. or perhaps a little earlier.

There is a Christian *Apocalypse of Sophoniah* preserved in two pages of a Sahidic Coptic MS (early 5th-cent. A.D.). Sophoniah saw a soul being flogged in the nether world for his unrepented sins. Transported to a new locality, Sophoniah witnessed a multitude of angels of horrifying appearance. The text then becomes illegible. Its relation to the work mentioned by Clement is uncertain, although the flogging scene resembles a similar scene in the *Apocalypse of Paul* (see PPAUL, APOCALYPSE OF) from NAG HAMMADI, which has passages in common with the material in Clement. In addition, an Achmimic Coptic MS of the 4th cent. has a part of an apocalypse (eighteen pages) believed to be part of the work mentioned above. Its title is not preserved, so it is sometimes called the *Anonymous Apocalypse.* It describes the punishment in hell of the wicked as in the 2nd-cent. *Apocalypse of Peter* (see PETER, APOCALYPSE OF). (English trans. of surviving material in *OTP,* 497 – 515; see also the summary in *ABD,* 6:1075 – 77.)

<div align="right">A. K. HELMBOLD</div>

Zephaniah, Book of. The ninth book in the collection known as the twelve Minor Prophets, coming at the end of the second division of the Hebrew CANON of Scripture.

1. Unity
2. Date
3. Historical background
4. Purpose
5. Content

I. Unity. Most critics allow the first chapter of this book as the genuine work of ZEPHANIAH, but consider that parts of Zeph. 2 and 3 contain either late poems or postexilic amplifications to authentic oracles of Zephaniah. There is little consensus on details (cf. R. K. Harrison, *Introduction to the Old Testament* [1969], 941). The extent of disagreement among those who postulate several sources indicates the basic weakness of their position. Moreover, their views often arise from the assumption that there is no genuine predictive prophecy and that the theology of hope in the history of Israel's religion evolved in the postexilic period. The first presupposition is inconsistent with the explicit testimony of Holy Scripture and the second is inconsistent with the form of parallel prophecies in the ANE. Almost a century ago H. Gressmann wrote: "The numerous old Egyptian oracles attest to the formal unity of threat and promise as the original form...Now that we are acquainted with the Egyptian oracle, it is no longer doubtful that the literary-critical school was on the wrong path" (*Der Messias* [1929], 73). The same phenomenon is attested in the MARI letters (cf. C. Westermann, *Basic Forms of Prophetic Speech* [1967], 121).

II. Date. According to the book's introduction, Zephaniah prophesied during the reign of JOSIAH (640 – 609 B.C.). More precisely it can be inferred from his allusions to the state of morality and religion (Zeph. 1:4 – 12; 3:1 – 3, 7) that his activities took place before the great reformation in the year 621 (cf. 2 Ki. 23). The notices that are supposed by some critics to indicate a somewhat later date are satisfactorily explained: (1) The king's children mentioned in Zeph. 1:8 as addicted to foreign habits could not have been Josiah's sons (he himself was too young to have adult children), but were rather his brothers or near relatives. (2) The reference to the remnant of BAAL in the same verse designates the completeness of their destruction (i.e., Yahweh will efface every remnant of Baal). Moreover, critics have generally accepted an early date for the "genuine portions" of the book because they assume that the irruption of the SCYTHIANS who attacked ASSYRIA in 632 (cf. J. Lewy in *Mitteilungen der vorderasiatischen Gesellschaft* 29 [1925]: 1ff.; E. H. Minns in *CAH*, 3 [1925], 188 – 89) incited Zephaniah's prediction of the great Day of Yahweh. Zephaniah probably finished his course at about the same time that JEREMIAH was called to his office in Josiah's thirteenth year.

In order to avoid the onus of regarding the predictions against the nations as secondary according to the critical presuppositions, J. P. Hyatt (in *JNES* 7 [1948]: 25 – 33) rejected the accuracy of the superscription and moved Zephaniah to the time of JEHOIAKIM (609 – 598). However, his position ill accords with the internal evidence of the book. For example, NINEVEH is represented as in a state of peace and prosperity (Zeph. 2:15), and there is no suggestion that Josiah's reform has taken place.

III. Historical background. The religious state of the kingdom of Judah deteriorated markedly following the death of HEZEKIAH. The trend toward things Assyrian became increasingly conspicuous. The degenerate religious practice of the period before Josiah's great reform are indicated in detail in 2 Ki. 23:4 – 20.

A considerable debate exists on the political background of the book. Whereas several prophets specified the Babylonians as the rod Yahweh would use to destroy the kingdom of Judah (Isa. 39:6; Hab. 1:6; Jer. 20:4), Zephaniah brought before the people Yahweh himself as the person behind the judgment without specifying the instrument. Because of this silence two interpretations prevail regarding the identification of the instrument of judgment: either the Scythians or the Babylonians.

The majority of critics reason that the authentic oracles of Zephaniah have the invasion of the Scythians in view. F. Hitzig (*Die zwölf kleinen Propheten*, 4th ed. [1881], 297 – 98) wrote: "The Chaldeans come still less (than the Egyptians) into account, because they did not found an independent kingdom until 625 B.C., nor threaten Judea until after Josiah's death. On the other hand, an unsuspicious and well-accredited account has been preserved to us that somewhere about this time the Scythians overflowed Palestine too with their hosts. Herodotus (1.105) relates that the Scythians after they had disturbed Cyaxares at the siege of Nineveh, turned toward Egypt; and when they had already arrived in Palestine, were persuaded by Psammetichus to return, and in their return plundered a temple in Ashkelon." In contradiction to Zephaniah's prophesies, however, the Scythians destroyed neither Assyria nor Egypt but, on the contrary, temporarily saved Nineveh. Critics explain the difference in one of two ways: (1) the prophet made a mistake (J. M. P. Smith, *A Critical and Exegetical Commentary on the Books of Micah, Zephaniah and Nahum*, ICC [1911], 170); or (2) these oracles are secondary (Hyatt, *JNES* 7 [1948]: 25).

The present writer rejects this interpretation in favor of regarding the Babylonians as the divine agent of judgment in view for these four reasons: (1) The rationalistic and antisupernaturalistic presuppositions informing the above views are contrary to the spirit of prophecy found in all of Scripture. (2) The OT, which normally supplies sufficient historical background for the interpretation of the prophets, nowhere makes reference to an invasion by Scythians. (3) The account in HERODOTUS that the Scythians marched through Palestine to invade Egypt before being bought off by Psammetichus has no objective historical support (cf. F. Wilke in *Altestamentliche Studien: R. Kittel zum 60. Geburts-tag dargebracht* [1913], 222ff.; J. P. Hyatt in *JBL* 59 [1940]: 501; id. in *JNES* 7 [1948]: 25ff.). (4) Hero-dotus's statement about the Scythian invasion does not comport with Zephaniah's predictions. Having recorded the intervention of Psammetichus, Herodotus (1.105) adds that when the Scythians reached Ashkelon, most of them passed the city doing no harm, though some remained behind and robbed the temple of Heavenly Aphrodite. Zephaniah, however, speaks not of a marauding band, but of the utter havoc upon Jerusalem, of the permanent desolation of Philistia, Moab, and Ammon, and of destructive war on Ethiopia.

Philistine pottery (12th cent. B.C.). Zephaniah speaks about God's judgment upon the Philistines.

Pusey stated well the case against the Scythian interpretation and in favor of the Babylonian: "But it is an intense paradox, when men, 2500 years after his date assert, not only that Zephaniah's prophecies had no relation to the Chaldees, in whom his words were fulfilled…but that they know what must have been, and (as they assert) what *was* in the prophet's mind; and that he had in mind, *not* those in whom his words were fulfilled, but others in whom they were *not* fulfilled" (E. B. Pusey, *The Minor Prophets*: *A Commentary*, 2 vols. [1869 – 75], 2:230). This obvious lack of correspondence now forces the critic to suppose that these oracles are either inaccurate or secondary. (It is a mute and insignificant point whether a Scythian invasion into Palestine awakened Zephaniah to his prophetic call, as some conservative writers contend; see G. L. Archer, *Survey of Old Testament Introduction*, rev. ed. [1994], 394.)

IV. Purpose. Because of Judah's degenerate religious situation, Zephaniah predicted the fall of Judah and Jerusalem as inevitable (Zeph. 1:4 – 13; 3:1 – 7). This judgment in his view was a part of the wider judgment to fall on all the world in the DAY OF THE LORD (1:14 – 18; 2:4 – 15). Accordingly, his mission was not to all the people whose sentence was fixed, but to the meek who by turning to Yahweh could possibly escape the coming day of judgment (2:1 – 3) and become a part of the remnant who would enjoy the blessings of the kingdom (3:8 – 20).

V. Content

A. Universal judgment. This heading covers most of the book, Zeph. 1:1—3:7.
    1. *Upon the entire creation* (1:2 – 3). (The destruction described is even more sweeping in its

effects than the flood; total destruction is the ultimate end of this fallen cosmos [cf. 2 Pet. 3:10; Rev. 21:1]. The collapse of civilizations in the meanwhile serves as a herald announcing the final judgment of all the earth.)

2. *Upon Judah* (1:4—2:3).

a. The cause of its judgment (1:4 – 6). (Five false religions are condemned: worship of Baal, worship of astral deities introduced by MANASSEH [2 Ki. 21:3, 5], syncretistic worship of Yahweh and MILCOM, apostasy from Yahweh, and secularism. The same mighty outstretched hand that brought them out of Egypt and into Canaan will be turned against them.)

b. The proximity of judgment (v. 7). (The command to "be silent" is a call to cease opposition to the divine will. By surrendering unconditionally it may be they would be hidden in the time of Yahweh's anger [2:3]. Judah is now likened implicitly to a sacrificial animal. The priests already invited to the joyous meal are the nations. The peace sacrifice, the only one eaten, had to be consumed completely within two days; whatever remained after that must be burned with fire [Lev. 7:15 – 17].)

c. The extent of the judgment (vv. 8 – 13). (The listed objects of judgment are: royalty, priests, the entire city of Jerusalem, merchants, and practical atheists and their property. Regarding the reference to "all who avoid stepping on the threshold," see THRESHOLD.)

d. The proximity and horror of the Day of Yahweh (vv. 14 – 18). (The impending fall of Jerusalem merges in the prophet's view with the judgment on Israel and all the earth in connection with the return of Christ in power and glory.)

e. The call to repentance (2:1 – 3). (The punitive decree, announced long ago [Deut. 28:15 – 68], is now rushing to its enactment.)

3. *Upon the Gentile nations* (2:4 – 15).

a. In the W: PHILISTIA (vv. 4 – 7). (The KKER-ETHITES may have come from CRETE and were apparently related to the PHILISTINES.)

b. In the E: MOAB and AMMON (vv. 8 – 11).

c. In the S: ETHIOPIA (v. 12).

d. In the N: ASSYRIA (vv. 13 – 15).

4. *Upon Jerusalem* (3:1 – 7).

a. Her moral depravity (v. 1).

b. Her intractability (v. 2).

c. Her immoral leaders: civic (v. 3) and religious (v. 4).

d. Her inexcusability (v. 5).

e. Her stupidity (vv. 6 – 7).

B. The establishment of the kingdom. This heading covers the last section of the book, Zeph. 3:8 – 20.

1. *The destruction of the Gentile opposition* (3:8).

2. *The purified remnant* (3:9 – 13).

3. *The kingdom blessings* (3:14 – 20).

B. K. WALTKE

Zephath zee'fath (צְפַת *H7634*, prob. "watchtower"; cf. MIZPAH). Apparently the earlier, Canaanite name of the city of HORMAH (Jdg. 1:17).

Zephathah zef'uh-thuh (צְפָתָה *H7635*, prob. from צָפָה *H7595*, "to keep watch"; cf. ZEPHATH). A valley near Mareshah (on the edge of the lowlands NE of LACHISH), where King ASA defeated ZERAH the Cushite (2 Chr. 14:10). See MARESHAH (PLACE). The SEPTUAGINT rendering ("in the valley to the north of Marisa," evidently reading the Heb. as ṣapôn *H7600*) suggests the Valley of Elah (see ELAH, VALLEY OF), but the whole region has such a complex topography of gently sloping foothills that the exact valley cannot now be identified with certainty.

J. ARTHUR THOMPSON

Zephi zee'fi. See ZEPHO.

Zepho zee'foh (צְפוֹ *H7598* [in 1 Chr. 1:36, צְפִי], derivation uncertain). Son of ELIPHAZ, grandson of ESAU, and head of an Edomite clan (Gen. 36:11, 15; 1 Chr. 1:36 [KJV and other versions, "Zephi"]).

Zephon zee'fon (צְפוֹן *H7602* [in Gen. 46:16, צְפִיוֹן], derivation uncertain; gentilic צְפוֹנִי *H7604,* "Zephonite"). Son of GAD, grandson of JACOB, and eponymous ancestor of the Zephonite clan (Gen. 46:16 [KJV and other versions, "Ziphion"]; Num. 26:15).

Zer zuhr (צֵר *H7643,* perhaps "narrow, restricted"). One of the fortified cities allotted to the tribe of NAPHTALI (Josh. 19:35). Many scholars, however, suspect corruption in textual transmission. The SSEPTUAGINT *(tōn Tyriōn Tyros,* "of the Tyrians, Tyre") may reflect a Hebrew variant (vocalized *haṣṣorîm ṣōr* instead of *haṣṣiddîm ṣēr),* and the apparatus *of BHS,* following an earlier proposal, suggests that the first four words of the verse are an erroneous scribal repetition of previous material (in vv. 28 – 29; see also R. D. *Nelson, Joshua,* OTL [1997], 218).

Zerah zihr'uh (זֶרַח *H2438,* "shining, dawning"; later prob. used as the short form of זְרַחְיָה *H2440,* "Yahweh has shed light" [cf. ZERAHIAH]; gentilic Z זַרְחִי *H2439,* "Zerahite" [KJV, "Zarhite"]; Ζάρα *G2406).* KJV also Zarah (Gen. 38:30) and Zara (Matt. 1:3). (1) Son of Reuel and grandson of ESAU; a chief in EDOM (Gen. 36:13, 17; 1 Chr. 1:37). Some think this is the same Zerah whose son (or descendant) JOBAB from BOZRAH became an Edomite king (Gen. 36:33; 1 Chr. 1:44).

(2) Son of JUDAH by his daughter-in-law TAMAR; his twin brother was PEREZ (Gen. 38:30;

46:12; 1 Chr. 2:4). His name arose from the peculiar nature of his birth. His hand came out first and was tied with a scarlet thread to indicate that he was the firstborn, but through unusual circumstances his brother was born before he was (Gen. 38:28 – 29). He was called Zerah possibly because he appeared first or as an allusion to the bright (scarlet) thread. Later he became the eponymous ancestor of the Zerahite clan (Num. 26:20; 1 Chr. 9:6; Neh. 11:24; prob. 1 Chr. 27:11, 13 should be included here; see also IZRAHITE). One of his descendants was ACHAN (Josh. 7:1, 17 – 18, 24; 22:20); another one was PETHAHIAH, a royal official after the EXILE (Neh. 11:24). His name is included in Matthew's GENEALOGY OF JESUS CHRIST, which however makes clear that it was his brother Perez who was an ancestor of Jesus (Matt. 1:3).

(3) Son of SIMEON, grandson of JACOB, and eponymous ancestor of the Zerahite clan among the Simeonites (Num. 26:13; 1 Chr. 4:24). In the parallel passages (Gen. 46:10; Exod. 6:15) he is called ZOHAR.

(4) Son of Iddo and descendant of LEVI through GERSHON (1 Chr. 6:21 [MT 6:6]).

(5) Son of Adaiah, descendant of LEVI through GERSHON, and ancestor of the musician ASAPH (1 Chr. 6:41 [MT 6:26]).

(6) A Cushite (i.e., from ETHIOPIA, but perhaps the leader of a S Arabian tribe, since the name *ʾdrḥ* appears in Old S Arabian inscriptions) who attacked King ASA of Judah (2 Chr. 14:9). Zerah was defeated in battle at MARESHAH (PLACE) and pursued to GERAR, where he was completely routed (vv. 10 – 15). The phrase "an host of a thousand thousand" (KJV) could be taken literally (cf. NRSV, "an army of a million men") or figuratively (NIV, "a vast army"). Some have argued that the presence of tents, flocks, and camels among the booty suggests BEDOUIN raiders. (See discussion of this passage by R. B. Dillard, *2 Chronicles*, WBC 15 [1987], 119 – 20.)

J. ARTHUR THOMPSON

Zerahiah zer'uh-hi'uh (זְרַחְיָה H2440, "Yahweh has shed light [*or* shone forth *or* risen]"). (1) Son of Uzzi, descendant of LEVI through KOHATH, AARON, and ELEAZAR, and ancestor of ZADOK and EZRA (1 Chr. 6:6, 51 [MT 5:32; 6:36]; Ezra 7:4; 1 Esd. 8:2 [KJV, "Zaraias," but omitted in NRSV, following some MSS]; called "Arna" in 2 Esd. 1:2).

The Zered River.(View to the E.)

(2) Descendant of Pahath-Moab and father of Eliehoenai; the latter was a family head who who returned from Babylon with EZRA (Ezra 8:4; 1 Esd. 8:31 [KJV, "Zaraias"]).

Zerahite zihr'uh-h*i*t. See ZERAH.

Zeraiah zuh-ray'yuh (Zaraiaß). A descendant of Shephatiah who returned from Babylon with EZRA (1 Esd. 8:34; KJV, "Zaraias"; the parallel passage has ZEBADIAH, Ezra 8:8).

Zerdaiah zuhr-day'yuh. See AZIZA.

Zered zihr'id (זֶרֶד *H2429*, meaning uncertain). KJV also Zared (Num. 21:12). A valley or wadi in TRANSJORDAN where the Israelites, terminating their wanderings and bypassing EDOM, encamped and crossed into MOAB (Num. 21:12; Deut. 2:13). It is often identified with the wadi(s) mentioned in Isa. 15:7 and Amos 6:14; see ARABAH, BROOK (WADI) OF THE, and WILLOWS, BROOK (WADI) OF THE. The Zered may also have been the scene of the flash flood in 2 Ki. 3:16 – 23.

Because Israel penetrated the wilderness E of Moab before crossing the Zered, some identify it with the Wadi Kerak or some tributary of the Kerak or the ARNON (the Ferranj or Seil Sa‹ideh perhaps). Others, postulating a journey eastward up the valley before the crossing, accept identification (here favored) with Wadi el-Ḥesa. Like the Kerak and Arnon, the Ḥesa flows intermittently in a shallow valley across the plateau; but replenished by rainfall, tributaries, and especially springs, it flows perennially to its terminal oasis through a canyon that cleaves the fault-weakened escarpment. Steep-walled but broad-floored and flanked with cultivable terraces, this wadi formed both the historic divide between Edom and Moab and a difficult but practicable route to the plateau.

G. R. LEWTHWAITE

Zeredah zer'uh-duh (צְרֵדָה *H7649*, derivation uncertain). (1) A town in the Ephraimite hills (see EPHRAIM, HILL COUNTRY OF) that was the home of JEROBOAM before he rebelled against SOLOMON (1 Ki. 11:26; KJV, "Zereda"). The SEPTUAGINT, in its long addition to 1 Ki. 12:24, has several other references to the town (the name is transcribed as *Sarira*), including the comment that he built Zeredah for Solomon. The location of Zeredah is uncertain, but it is often identified with Deir Ghassaneh, some 15 mi. SW of SHECHEM; the ancient name may be preserved in nearby ‹Ain Ṣereda. See also ZERERAH.

(2) A Transjordanian town near which the bronze objects for the TEMPLE were cast (2 Chr. 4:17 MT, followed by NRSV and other versions [KJV, "Zeredathah"]). The name here is a variant for ZARETHAN (1 Ki. 7:46).

Zeredathah zer'uh-day'thuh. KJV form of ZERE-DAH #2.

Zererah zer'uh-rah (צְרֵרָה *H7678*, perhaps "narrow, restricted"). KJV Zererath. A town toward which the Midianite army fled after GIDEON and his men blew their trumpets (Jdg. 7:22). The identity and location of Zererah is problematic. The Midianite camp was in the Valley of JEZREEL, near the hill of MOREH (6:33; 7:2), and the soldiers are said to have fled "as far as" (Heb. ‹ad *H6330*) BETH SHITTAH, "toward Zererah" (ṣĕrērātâ), "as far as" (‹ad) the "border/river bank" (śāpâ *H8557*) of

ABEL MEHOLAH, "on/by/near/opposite" (*'al H6584*) TAB-BATH (7:22). Unfortunately, none of these places can be located with certainty. The Midianites must have fled SE, eventually crossing the JORDAN, and Tabbath almost certainly was in TRANSJORDAN, but it is impossible to determine whether Zererah itself was on the W or E side of the river (although Abel Meholah is often identified with a site on the W bank). Some have thought that Zererah is a mistake for (or a variant of) ZARETHAN, which was probably in Transjordan. Others, following a number of Hebrew MSS (see *BHS* apparatus), read ZEREDAH, but this town appears to have been SW of SHECHEM and thus not on the path suggested by the text.

Zererath zer'uh-rath. KJV form of ZERERAH.

Zeresh zihr'ish (זֶרֶשׁ *H2454*, meaning uncertain [cf. *ABD*, 6:1083]). Wife of HAMAN, mentioned in two passages in the story of ESTHER. When Haman boasted that Queen Esther had invited him to a banquet with King XERXES, Zeresh and some friends encouraged him to build a gallows so that MORDECAI could be hanged (Esth. 5:10 – 14). Subsequently, Haman was told by his wife and "advisers" that he would not be able to prevail because Mordecai was a Jew (6:13).

Zereth zihr'ith (צֶרֶת *H7679*, derivation unknown). Son of Asshur (by his wife Helah) and descendant of JUDAH (1 Chr. 4:7; cf. v. 5).

Zereth Shahar zihr'ith-shay'hahr (צֶרֶת הַשַּׁחַר *H7680* ; cf. SHAHAR). Also Zereth-shahar. One of the towns in the territory given to the tribe of REUBEN (Josh. 13:19). The town—mentioned in conjunction with others in MOAB that had formerly belonged to SIHON the Amorite—is described as being "on the hill in the valley," but the precise location is uncertain. Some scholars tentatively identify it with modern ez-Zarat, on the E shore of the DEAD SEA (c. 12 mi. S of its NE tip and 6 mi. WNW of ATAROTH). Located about 2 mi. below the point where the Wadi Nahaliel flows into the Dead Sea from the E, this was the site of Hellenistic Callirrhoe, known for its hot springs, which the ailing HEROD the Great used (Jos. *Ant.* 17.6.5 §171; *War* 1.33.5 §657).

Zeri zihr'*i* (צְרִי *H7662*, "balm"). Son of JEDUTHUN; he and his brothers "prophesied, using the harp in thanking and praising the LORD" (1 Chr. 25:3); the name is probably a variant of IZRI (v. 11).

Zeror zihr'or (צְרוֹר *H7657*, "stone"). Son of Bec-orath, descendant of BENJAMIN, and great-grandfather (or more distant ancestor) of King SAUL (1 Sam. 9:1; cf. v. 2). His name is missing from the other genealogies of Saul (1 Chr. 8:33 – 40; 9:39 – 44), though some have suggested that Zeror is to be equated with ZUR, who appears there as Saul's uncle (8:30; 9:36).

Zeruah zuh-r*oo*'uh (צְרוּעָה *H7654*, "leprous," perhaps a deliberate scribal distortion of צְרוּיָה *H7653*; see ZERUIAH). The widowed mother of King JEROBOAM (1 Ki. 11:26). It is possible that her Hebrew name was given to her because she had a skin ailment or discoloration, but since the mothers of the kings of Israel (in contrast to those of the kings of Judah) are not otherwise mentioned, some scholars interpret the identification as a way of denigrating Jeroboam. Indeed, the SEPTUAGINT, which does not include her name here, has a long addition to 1 Ki. 12:24 that calls her *Sarira gynē pornē*,

"Sarira a prostitute" (Sarira is also used as the name of Jeroboam's hometown, ZEREDAH). Others suggest that Zeruah is mentioned simply to point out that she was a widow, for some extrabiblical texts use the epithet "a widow's son" with reference to "an unfit person who seizes the throne" (M. Cogan, *1 Kings*, AB 10 [2001], 337).

Zerubbabel zuh-ruhb'uh-buhl (זְרֻבָּבֶל *H2428*, from Akk. *Zēr-Babili*, "offspring of Babylon"; Ζοροβαβέλ *G2431*). KJV Apoc. and NT, Zoroba-bel. A prominent Israelite who returned to Palestine after the EXILE and functioned as the governor of JERUSALEM under the Persian ruler DARIUS Hystaspes I (522 – 486 B.C.).

1. Name
2. Historical background
3. Work of Zerubbabel

I. Name. There are certain difficulties connected with the identification of Zerubbabel, partly because he has sometimes been regarded as identical with SHESHBAZZAR (Ezra 1:8 et al.), and also because of an apparent discrepancy in the genealogical lists of Ezra and Chronicles. Zerubbabel is usually identified as the son of SHEALTIEL (or Salathiel) and the grandson of King JEHOIACHIN (Ezra 3:2; Hag. 1:1; Matt. 1:12 – 13; Lk. 3:27), but in one passage the MT describes him as the son of PEDAIAH, who was Shealtiel's brother (1 Chr. 3:19; the LXX here has *Salathiēl* rather than *Phadaias*).

There are several ways of explaining this discrepancy, the most common of which is the supposition that Shealtiel died without offspring and that his brother Pedaiah married the widow according to ancient Hebrew LEVIRATE LAW (Deut. 25:5 – 10). Were Zerubbabel to have been born of such a union he could legally claim to be the son of Shealtiel. Perhaps the Chronicler had information to this effect, but preferred to list him as the lineal son of Pedaiah. Again, if Shealtiel had died without issue, he could well have named his nephew as his legal heir before dying, thus making Zerubbabel his son. It is highly improbable, despite the assertions of some scholars, that Zerubbabel is to be identified with Sheshbazzar, a prince of Judah whom CYRUS made governor of the land (Ezra 1:8) and to whom he entrusted the temple vessels, captured by NEBUCHADNEZZAR, for return to Jerusalem (5:14 – 15). The most telling argument against such a position is that the account given in the letter addressed to Darius I (5:6, 17) would hardly be intelligible unless Sheshbazzar was dead at the time of the incident which it recorded, whereas Zerubbabel was actively engaged in the construction of the second temple. It is possible that Sheshbazzar was the same as SHENAZZAR, the uncle of Zerubbabel (1 Chr. 3:18), but this is uncertain. The apparent discrepancy in the ancestry of Zerubbabel may have been caused by a copyist's error in Chronicles, or perhaps the reference was to another person named Zerubba-bel, who may have been a cousin of his illustrious namesake. CUNEIFORM inscriptions from Babylonia dating from the early Persian period (539 – 331 B.C.) show that the name Zerubbabel was of common occurrence, thus making for difficulty in exact identification. At all events, the Zerubbabel of Ezra and Haggai was heir to the throne of Judah, and because of his position in the Davidic line he was included by two evangelists (Matt. 1:12; Lk. 3:27) in the GENEALOGY OF JESUS CHRIST.

II. Historical background. Subsequent to the decree of Cyrus in 538 B.C., which allowed the captive peoples of Babylonia to return to their own homes, Zerubbabel was appointed governor (Heb. *peḥâ*

H7068) in postexilic Jerusalem (Hag. 1:1 et al.). The biblical narratives reflect accurately the policy of Cyrus toward those minority groups made captive and expatriated under the neo-Babylonian regime. By urging such peoples to return home and rebuild their religious shrines, Cyrus was at once promoting good will for his own regime in all parts of his newly won empire and at the same time relieving himself of responsibility for maintaining dissident captive groups in continued servitude. By about 530 some of the Hebrews, having returned to Judea under the leadership of Zerubbabel, began work on the reconstruction of the temple. From the time of Darius the Great (522 – 486) the Persian regime was stable in nature, and the Judean state was encouraged to function as a religious rather than a political entity, supported by Persian rule.

III. Work of Zerubbabel. This man was the active political leader in Jerusalem under the aegis of TATTENAI, the military governor of Judea (Ezra 6:13), with Joshua (JESHUA) the high priest serving as the principal religious figure. The work of rebuilding the TEMPLE, which had been hindered until 520 B.C., was resumed when Darius found the decree authorizing the project (6:1 – 12) and forbade further interference with it. This support, along with a large subsidy for the completion of the temple, provided official sanction for the task that had all but defeated the resolve of the returned exiles. At this point the prophets HAG-GAI and ZECHARIAH furnished the necessary moral and spiritual impetus for the work of rebuilding. Haggai castigated the Jews for their selfishness, indifference, and neglect, spurring Zerubbabel on to give proper oversight to the work in hand. In the same year Zechariah urged completion of the temple, and promised that earlier opposition would be removed. See RESTORATION.

Some scholars have assumed that both prophets encouraged Zerubbabel to look forward to a time when Judea would be free from foreign domination and be governed by a descendant of the house of DAVID. Thus it is held that the crowning of Joshua (Zech. 6:9 – 15) was actually the coronation of Zerubbabel, but MS evidence for this position is nonexistent, and in any event, it is Joshua who is the type of the messianic Branch (3:8). Consequently there is no ground whatever for taking the crowning and the promise of protection in Hag. 2:20 – 23 as a theoretical basis for the coronation of Zerubbabel as king of Judea, and supposing in addition that this act of rebellion was quickly crushed, along with others of a similar kind in the empire, by Darius I. In fact, the political circumstances of Zerubbabel's rule are unknown, as are those of his death.

Zerubbabel was honored in Jewish tradition, mentioned as a man of renown (Sir. 49:11). A 6th-cent. A.D. Jewish chronicle preserved the tradition that Zerubbabel returned to Babylonia after 515 B.C. and succeeded his father Shealtiel as a prince of the exiled remnant there, but this is historically improbable. Another familiar legend was the forensic contest of the three young warriors of Darius (1 Esd. 3:1—5:6), which was adopted by the Jewish historian JOSEPHUS. The story recounted how the wisdom of Zerubbabel prevailed, and has elements reminiscent of the narrative of Daniel and his three companions (Dan. 1:1 – 21).

R. K. HARRISON

Zeruiah zuh-r*oo*'uh (צְרוּיָה H7653 [also צְרֻיָה], "fragrant" or "balm of Yahweh"; cf. Zeri). Sister (or step-sister) of David (1 Chr. 2:16; she may have been the daughter of Jesse's wife by a former marriage to Nahash, 2 Sam. 17:25) and mother of Abishai, Joab, and Asahel, who were chief officers in David's kingdom (2:18; 3:39; et al.). Although Zeruiah is mentioned at least twenty-five times in the historical records of Samuel, Kings, and Chronicles, no mention is ever made of her husband. The fact that Joab (commander of the army) and his brothers are repeatedly identified as sons of Zeruiah makes it apparent that she was a well-known individual. Numerous explanations have been given concerning the Scripture's silence in identifying Zeruiah's husband: he may have died young; he may have been a foreigner and she retained her identity with her clan; he may have been rather insignificant and obscured by her personality; the biblical writers may have followed the custom of tracing kinship through the female line. The fact remains, however, that she must have been well known and recognized to be repeatedly identified as the mother of Joab, the general of David's army.

S. J. Schultz

Zetham zee'thuhm (זֵתָם H2457, derivation uncertain). Son of Ladan and descendant of Levi through Gershon (1 Chr. 23:8; in 26:22 the Heb. can be understood to mean that Zetham was son of Jehieli).

Zethan zee'thuhn (זֵיתָן H2340, possibly "[keeper of] olive trees"). Son of Bilhan and great-grandson of Benjamin (1 Chr. 7:10).

Zethar zee'thahr (זֵתַר H2458, possibly from Pers. *zaitar,* "conqueror"). One of "the seven nobles of Persia and Media who had special access to the king and were highest in the kingdom" (Esth. 1:14). Queen Vashti was banished by Ahasuerus (Xerxes) on their advice.

Zeus zoos (Ζεύς G2416 [gen. Διός, acc. Δία]). The chief god of the Greeks. The word comes from an Indo-European root meaning "sky," and its form appears in other Indo-European languages, such as Latin *Jupiter,* the old form of which is *Diespiter* (i.e., *diei pater,* "father of day"), Sanskrit *Dyaús pita,* and Teutonic *Ziu* (from which derives *Tuesday).* As the god of the bright sky, Zeus was the lord of thunder and the giver of weather, the "cloud-gatherer" of the Homeric phrase. Since mountain peaks give weather signs, Zeus was enthroned on heights, preeminently on Olympus.

In the Mycenean age, during the 2nd millennium B.C., the society of heaven was pictured on the model of the regal courts of that era. Note the banquet scene on Olympus at the end of the first book of the *Iliad.* Zeus, at the same time, serving the needs of a royal and patriarchal age, became the protector and ruler of the family. As Zeus Herkeios ("of the household") he ruled the hearth; as Zeus Xenios ("hospitable, defender of strangers") he protected the guest. (According to 2 Macc. 6:2, Antiochus Epiphanes determined that the temples in Jerusalem and Gerizim would be called, respectively, the temple of Olympian Zeus and the temple of Zeus Xenios. In a more detailed narrative, Josephus *[Ant.* 12.5.5 §§257 – 64] says Antiochus granted to the Samaritans the petition that their temple be called Zeus Hellenios.)

It may be said, therefore, that Zeus acquired moral functions related to the customs and laws which maintained and established the family and its life. But since the state is the larger family and

Statue fo Zeus from Perga (Roman, 2nd cent. A.D.)

requires a moral framework and foundation similar to that of the smaller unit, Zeus became the protector of law and justice, the supreme god, father of gods and men. Homer, whose epics became a sort of "Bible" in the earlier Greek centuries, impressed this concept of Zeus on the Greek mind, and it survived the passing of the forms of kingship that had provided its first imagery. The myths and legends that grew up around Zeus, compounded of material from many quarters, became the material, variously used, of poet and dramatist, but better and more spiritually perceptive minds began to look upon Zeus as the supreme if not the only God. In the theological dramas of Aeschylus there are concepts of Zeus almost biblical in their loftiness. The hymn of the STOIC poet CCEANTHES, one of the possible sources for PAUL'S quotation in ATHENS (Acts 17:28), addresses Zeus in exquisite language as father and creator. (See further A. B. Cook, *Zeus: A Study in Ancient Religion,* 2 vols. [1914 – 40]; C. Seltman, *The Twelve Olympians and their Guests,* rev. ed. [1956]; K. W. Arafat, *Classical Zeus: A Study in Art and Literature* [1990]; *DDD, 934 – 41.)*

Zia zi'uh (זִיעַ *H2333,* possibly "one who trembles"). Son of Abihail; he was one of seven relatives from the tribe of GAD who occupied the region E of GILEAD (1 Chr. 5:13; cf. vv. 10, 14).

Ziba zi'buh (צִיבָא *H7471,* prob. "twig"). A servant or steward of SAUL whose life and activities are known in the biblical record only during the reign of DAVID. In response to David's request, Ziba introduced to him MEPHIBOSHETH, a crippled son of JONATHAN. By royal provision the land that formerly belonged to King Saul was given to Mephibosheth and placed under the management of Ziba. Even though Mephibosheth received personal provisions from the king's table, the produce of the land was allotted to Mephibosheth's family. This may have been an estate of considerable size, since Ziba employed his fifteen sons and twenty servants to cultivate the land (2 Sam. 9:2 – 12).

When David fled during ABSALOM'S rebellion, Ziba brought supplies to him and reported that Mephibosheth was disloyal (2 Sam. 16:1 – 4). The king responded by assigning Mephibosheth's estate to Ziba. Subsequently, as David was returning to Jerusalem, Ziba was among those who met the royal retinue (19:17), but Mephibosheth went to meet them too and revealed that he had been betrayed by Ziba. By royal decree half of the estate was returned to Mephibosheth while Ziba retained the remainder (19:24 – 30).

S. J. SCHULTZ

Zibeon zib'ee-uhn (צִבְעוֹן *H7390,* "[little] hyena"). (1) A HIVITE whose granddaughter OHOLIBAMAH was married to ESAU (Gen. 36:2, 14). If the gentilic Hivite is equivalent (or should be emended) to HORITE, then this Zibeon is the same as #2 below.

(2) Son of SEIR the Horite; he was a clan chief of EDOM whose son Anah is credited for discovering certain hot springs in the desert (Gen. 36:20, 24, 29; 1 Chr. 1:38, 40). See discussion under AANAH.

Zibia zib'ee-uh (צִבְיָא *H7384,* "gazelle"). Son of SHAHARAIM, descendant of BENJAMIN, and family head; he was one of seven children that were born to Shaharaim in MOAB by his wife HODESH after he had divorced Hushim and Baara (1 Chr. 8:8 – 10).

Zibiah zib'ee-uh (צִבְיָה *H7385,* "[female] gazelle"). A woman of BEERSHEBA who became the wife of King AHAZIAH of Judah and mother of King Jehoash (JOASH; 2 Ki. 12:1; 2 Chr. 24:1).

Zichri zik'ri. See ZICRI.

Zicri zik'ri (זִכְרִי *H2356,* prob. short form of זְכַרְיָהוּ *H2358,* "Yahweh has remembered"; see ZECHARIAH). Also Zichri (KJV and other versions); TNIV Zikri. (1) Son of Izhar, grandson of KOHATH, and great-grandson of LEVI (Exod. 6:21); he was MOSES' cousin and the brother of KORAH #3.

(2) Son of Shimei and descendant of BENJAMIN (1 Chr. 8:19). He, as well as #3 and #4 below, is included among the heads of families who lived in Jerusalem (v. 28).

(3) Son of Shashak and descendant of Benjamin (1 Chr. 8:23).

(4) Son of Jehoram and descendant of Benjamin (1 Chr. 8:27).

(5) Son of ASAPH, descendant of Levi, and ancestor of MATTANIAH; the latter was a prominent Levite after the EXILE (1 Chr. 9:15). This Zicri is apparently the same as ZABDI #4 and ZACCUR #4.

(6) Son of Joram and descendant of MOSES through ELIEZER (1 Chr. 26:25).

(7) Father of Eliezer; the latter was an officer over the tribe of REUBEN during the reign of DAVID (1 Chr. 27:16).

(8) Descendant of JUDAH and father of Amasiah; the latter was a commander in the days of JEHOSHAPHAT (2 Chr. 17:16).

(9) Father of Elishaphat; the latter was a commander under JEHOIADA the high priest (2 Chr. 23:1).

(10) A warrior from EPHRAIM in the army of King PEKAH of Israel who assassinated Maaseiah son of King AAHAZ of Judah and two royal officers (2 Chr. 28:7).

(11) Descendant of Benjamin and father of Joel; the latter was chief officer in the days of NEHEMIAH (Neh. 11:9).

(12) Head of the priestly family of ABIJAH in the days of the high priest JOIAKIM (Neh. 12:17).

J. ARTHUR THOMPSON

Ziddim zid'im (צִדִּים *H7403*, "sides," possibly referring to a location on the slopes of a hill). One of the fortified cities allotted to the tribe of NAPHTALI (Josh. 19:35). According to the Palestinian TALMUD (*y. Meg.* 1:1:70a), the rabbis identified Ziddim with Kephar Ḥittayya, apparently a location just N of the Horns of Hattin (Qarn Ḥaṭṭin), some 6 mi. W of the Sea of Galilee. Few scholars, however, accept this identification, and many believe that the biblical text here has suffered corruption. See ZER

Zidkijah zid-ki'juh. See ZEDEKIAH #6.

Zidon zi'duhn. KJV alternate form of SIDON.

Zif zif. KJV form of ZIV.

ziggurat zig'oo-rat (from Akk. *ziqqurratu,* "temple tower"). A staged or stepped temple tower. This architectural form was developed in the 3rd millennium B.C. in Babylonia from a low temenos (a platform supporting a shrine, as at ERECH and ʿUqair) to some massive, multiple-story brick towers. The Tower of BABEL (Gen. 11:1 – 5) might have been a ziggurat, since such buildings are to be found in all principal Mesopotamian cities. The sanctuary of MARDUK at BABYLON was called *Esagil(a)* ("the house whose head is raised up"), and the lofty tower was called *Etemenanki* ("the house of the foundation of heaven and earth"). The chief sources of information for this building are an Akkadian description (not altogether clear, preserved in a text copied in the 3rd cent. B.C. from a much older tablet) and a portrayal by HERODOTUS c. 460 B.C. (cf. O. E. Raven, *Herodotus' Description of Babylon* [1932]). The ziggurat Herodotus claims to have seen had been built by NABOPOLASSAR (625 – 605) and NEBUCHADNEZZAR II (605 – 562), and these kings had built upon a previous structure that had fallen into a bad state of ruin. The original construction of a ziggurat on this site cannot be dated. It is known that King Šar-kali-šarri of AKKAD built a temple at Babylon about 2225 B.C. In the course of centuries, the temple and tower were destroyed and rebuilt. SENNACHERIB destroyed it about 689 B.C., but it was restored by ESARHAD-DON (680 – 669). The tower was severely damaged in the war

of 652 – 648, but it was restored again. The interpretation of the technical data presented in a CUNEIFORM record of the 3rd cent., which describes this building, varies somewhat with different scholars. Of the high tower only the merest fragment, a portion of the lowest story, remains, and it was buried under debris until excavated at the end of the 19th cent. Everything considered, the structure was at least seven stories high, with the dwelling of Marduk erected on the seventh story. The height has been variously estimated up to 300 ft.

The cities of NIPPUR, Larsa, and Sippar each called their ziggurat by the name *Eduranki* ("the house of the bond between heaven and earth"). The one at Babylon had inscribed in its foundation, by Nabopolassar, "Marduk had me lay its foundation in the heart of the earth and lift its pinnacle in the sky." One of the best preserved of the ziggurats is that in UR of the Chaldees, with a base 200 by 141 ft. and a bottom terrace 50 ft. high (cf. D. S. DeWitt in *JETS 22* [1979]: 15 – 26). Jewish and Arab tradition identified the Tower of Babel with the great temple of NEBO in the city of Borsippa, now called Birs-Nimrod. The ruins of this ziggurat, originally seven stories high, still rise over 150 ft. from the plain. The highest preserved ziggurat ruins are those of Dur-kurigalzu (modern ʿAqar Quf, 20 mi. W of Baghdad), which still towers to a height of 187 ft.

Stone in *The Oxford Encyclopedia of Archaeology in the Ancient Near East,* ed. E. M. Meyers [1997], 5:390 – 91; M. Roaf in *CANE,* 1:429 – 31.)

L. L. WALKER

Ziha *zi*'huh (𐤑𐤉𐤇𐤀 *H7484,* derivation uncertain [but see *HALOT,* 3:1021]). Ancestor of a family of temple servants (NETHINIM) who returned from the Babylonian captivity (Ezra 2:43; Neh. 7:46; called "Esau" in 1 Esd. 5:29). One of two supervisors of the temple servants living on the hill of OPHEL was called Ziha (Neh. 11:21). He was undoubtedly a member of this family, but it is unclear whether Ziha was his own name or whether he is referred to by the clan eponym.

Ziklag *zik*'lag (𐤑𐤉𐤊𐤋𐤂 *H7637,* derivation unknown). One of the "southernmost towns of the tribe of Judah in the Negev toward the boundary of Edom" (Josh. 15:31; cf. v. 21); it was subsequently allotted to the tribe of SIMEON (Josh. 19:5; 1 Chr. 4:30). In SAUL's time it was under the PHILISTINES (1 Sam. 27:6). King ACHISH of GATH gave Ziklag to DAVID when he was pursued by Saul (1 Sam. 27:6; 1 Chr. 12:1, 20), and David used the town as a base for raids against various groups (1 Sam. 27:8 – 11; cf. *SacBr*, 148 – 49). At the time of the last Philistine attack on Saul, David was sent back to Ziklag because the Philistine princes feared he might betray them. On returning there, David found that it had been raided by the Ama-lekites, on whom he took quick vengeance. He recovered his wives and children as well as those of his men and the men of Ziklag. The booty was divided with the people in the NEGEV area who had assisted him during his campaigns (1 Sam. 30:1 – 3; 1 Chr. 12:1 – 20).

It was to Ziklag that a messenger came to announce Saul's death at the battle of Mount GIL-BOA (2 Sam. 1:1; 4:10). When David finally became king he included the area of Ziklag in his kingdom. Later still it is listed as one of the places occupied by the Jews after the exile (Neh. 11:28).

The location of Ziklag is uncertain. Proposed identifications include modern Tell el-Khuweilifeh (c. 9.5 mi. NE of BEERSHEBA) and, more likely, Tell esh-Shari<ah (Heb. Tel Seraʿ, c. 14 mi. NW of Beersheba and 16 mi. ESE of GAZA; for a summary of the excavations there, see *ABD*,

6:1090 – 93; more detail in *NEAEHL*, s.v. "Sera⟨, Tel," 4:1329 – 35).

J. ARTHUR THOMPSON

Zikri zik'r*i*. TNIV form of ZICRI.

Zillah zil'uh (צִלָּה *H7500*, possibly "shade, protection" [see *HALOT*, 3:1025; *ABD*, 6:1093 – 94]). A wife of LAMECH and the mother of TUBALCAIN and NAAMAH (Gen. 4:19, 22 – 23).

Zillethai zil'uh-th*i* (צִלְּתַי *H7531*, possibly "shade [of Yahweh]"). KJV Zilthai. Son of SHIMEI (#9) and descendant of BENJAMIN (1 Chr. 8:20).

(2) One of several warriors from the tribe of MANASSEH who joined DAVID at ZIKLAG; they are described as "leaders of units of a thousand" (1 Chr. 12:20).

Zilpah zil'puh (זִלְפָּה *H2364*, possibly "small nose"). A maidservant given by LABAN to LEAH on the occasion of her marriage to JACOB. At the request of Leah, Zilpah became Jacob's concubine, bearing to him GAD and ASHER (Gen. 29:24; 30:9 – 13; 35:26; 37:2; 46:18). See also BILHAH(PERSON).

Zilthai zil'th*i*. KJV form of ZILLETHAI.

Zimmah zim'uh (זִמָּה *H2366*, possibly "plan"). Son or grandson of JAHATH and descendant of LEVI through GERSHON (1 Chr. 6:20, 42; 2 Chr. 29:12).

Zimran zim'ran (זִמְרָן *H2383*, derivation uncertain). Son of ABRAHAM and KETURAH (Gen. 25:2; 1 Chr. 1:32). The name Zimran is thought by some to be preserved in Zabram, a site W of Mecca, mentioned by Ptolemy *(Geogr.* 6.7.5), but this connection is uncertain.

J. ARTHUR THOMPSON

Zimri (person) zim'r*i* (זִמְרִי *H2381*, possibly "[Yahweh is] my protection"; cf. the fuller form זמריהו on a seal from Jerusalem, published by D. Diringer, *Le iscrizioni antico-ebraiche palestinesi* [1934], 25, 43 n. 17, 211). (1) Son of Salu and descendant of SIMEON; he was a tribal leader who was killed by PHINEHAS for his open adultery with a Moabite princess (Num. 25:14; the incident is recalled in 1 Macc. 2:26 [KJV, "Zambri"]).

(2) Son of Zerah, descendant of JUDAH, and grandfather of ACHAN (Josh. 7:1, 17 – 18 [NIV]; 1 Chr. 2:6). In the Joshua references, most English versions, following the MT, read ZABDI instead of Zimri.

(3) Son of Jehoaddah (Jadah) and descendant of King SAUL through JONATHAN (1 Chr. 8:36; 9:42).

(4) A military official under ELAH of Israel who killed this king and briefly usurped the royal power in 885 B.C. (1 Ki. 16:9 – 20). Elah had been carousing at TIRZAH while the main army, under OMRI's leadership, was besieging GIBBETHON. When news of the assassination reached the camp, the reaction was so swift that Zimri had only seven days to live. Raising the siege, Omri brought the army to the capital; Zimri, who had perhaps relied on his chariot force, could not hold it. As the troops entered, he retired to the palace and burned it over his own head. Despite his very short reign, Zimri "was seated on the throne" (16:11), implying a form of valid recognition without the national

assembly; this must have depended on his being in the capital. The note of his contribution to Israel's apostasy (16:19) may mean that he formally affirmed his adherence to the religious policy of JEROBOAM. His treachery was alluded to by JEZEBEL when she referred to JEHU as "Zimri" (2 Ki. 9:31).

J. LILLEY

Zimri (place) zim'r*i* (זִמְרִי *H2382,* derivation uncertain). An unknown country mentioned with ELAM and MEDIA as coming under the judgment of God (Jer. 25:25). Some identify this place with ZIMRAN (also unknown); others believe the text is corrupt (the LXX omits this name).

Zin zin (צִן *H7554,* derivation uncertain). A desert that provided the setting for some critical events of biblical history (not to be confused with the Desert of Sin; see SIN, WILDERNESS OF). Possibly named after an unidentified settlement or region (Num. 34:4; Josh. 15:3), the Desert or Wilderness of Zin included KADESH BARNEA, where the Israelites camped (Num. 33:36) and whence they spied out the land (13:21; cf. v. 26). It was here that a disaffected and rebellious generation was sentenced to finish its life span (27:14); here too MIRIAM died and MOSES smote the rock to release the waters of MERIBAH (Num. 20:1 – 13; 27:14; Deut. 32:51). The S border of the Promised Land included a portion of the Desert of Zin (Num. 34:3 – 4), which was allotted to the tribe of JUDAH (Josh. 15:1 – 3).

The Desert of Zin must have extended from somewhere near Kadesh—perhaps from the Brook of Egypt, modern Wadi el-ʿArish (see EGYPT, BROOK OF)—eastward toward the ascent of AKRABBIM and along the Fiqra or Wadi Zin to the border of EDOM. More precise definition is hardly warranted: even in biblical times the Desert of PARAN overlapped (or perchance included) that of Zin (Num. 13:26). However defined, Zin was included in "that vast and dreadful desert" the Israelites experienced (Deut. 1:19; 8:15). See DESERT. With a fickle few inches of rain even in the slightly less arid N, with its soil bestrewn with rock, flint, and sand, with its surface corrugated by fault-scarps and breached by the elongated erosional "craters" of the Khurashe and Kurnub mountains, Zin was mostly barren. Yet investigation is disclosing an ancient ebb and flow of settlement—patriarchal and Israelite, Nabatean and Byzantine—based on meticulous utilization of soil and water and the strategy of trade and defense: a complex of fortresses, apparently following the biblical frontier, marked Judah's borders in the Desert of Zin.

(See further C. L. Woolley and T. E. Lawrence, *The Wilderness of Zin* [1936]; N. Glueck, *Rivers in the Desert: A History of the Negev* [1959]; B. Rothen-berg, *God's Wilderness* [1962]; E. Orni and E. Efrat, *Geography of Israel [1966];* G. I. Davies, *The Way of the Wilderness: A Geographical Study of the Wilderness Itineraries in the Old Testament* [1979].)

G. R. LEWTHWAITE

Zina zi'nuh. See ZIZA #3.

Zion zi'uhn (צִיּוֹן *H7482,* possibly "fortress" or "barren [hill]"; Σιών *G4994).* KJV also Sion (Ps. 65:1 and NT). The SE hill of JERUSALEM; by extension, the name is applied to the entire city, to its inhabitants, and to the people of God generally.

I. Name. The term Zion occurs over 150 times in the OT. It appears primarily in the Psalms (almost 40 times), the pictorial personifications of Lamentations (15 times), and the Prophets, especially Isaiah (almost 50 times). As G. Vos explains, "Isaiah's vision of Yahweh's glory centers in the sanctuary and the city [of Zion], whereas to Amos and Hosea, and even Micah, it rested upon the land," Israel as a whole (*Biblical Theology: Old and New Testament* [1948], 316). The derivation of the name remains uncertain, despite numerous proposals (e.g., Heb. ṣiyyâ *H7480*, "dry"; Arab. ṣahweh, "ridge"; Arab. ṣāna, "to protect").

II. Geographical application. The first OT occurrence of ṣiyyôn is found in the context of DAVID's attack on JEBUS (the old Canaanite name for Jerusalem). The narrative states that "David captured the fortress [*mĕṣûdâ H5181*] of Zion, the City of David" (2 Sam. 5:7). On that basis, it has been suggested that Zion may designate the whole walled town that covered the SE hill of Jerusalem, presumably the Jebusite city as it existed at the time of its capture by David in 1003 B.C. (cf. P. J. Leithart in *TynBul* 53 [2002]: 161 – 75). Some decades later SOLOMON, after expanding Jerusalem northward to include Mount MORIAH, brought up the ARK OF THE COVENANT "out of the city of David, which is Zion" (1 Ki. 8:1; 2 Chr. 5:2 NRSV). Only in postbiblical times did the name Zion become erroneously transferred to the SW hill of Jerusalem.

The presence of the ark of Yahweh in the old SE city (cf. 2 Sam. 6:17) gave to Zion rich religious connotations (see below, section III). It came to signify the city of God, the city of the great King (Pss. 46:4; 48:2); a holy hill (Ps. 2:6; cf. Joel 2:1; Zech. 8:3); the chosen place of God's abode (Pss. 9:11; 132:13); his sanctuary (20:2); the goal of pilgrimage (84:5, 7); the place of deliverance and salvation (20:2; 69:35) and of praise and worship (9:14; 65:1). Then with the transfer of the ark to Moriah, the TEMPLE mount too came to be called Zion (78:68 – 69; cf. the association between Zion and the temple in Jer. 50:28; 51:10).

It was only a short step until Zion was employed for the whole multi-hilled metropolis, in simple synonymous parallelism with the name Jerusalem (Isa. 40:9; Mic. 3:12; cf. Ps. 133:3 NRSV, "the mountains [pl.] of Zion"). Among the later poets and prophets, "Zion" (Zech. 1:17) or the "sons of Zion" (Lam. 4:2) and "daughters of Zion" (Cant. 3:11; Isa. 10:32) come therefore to connote the inhabitants of Jerusalem (Jer. 51:35), whatever their precise geographical hill or quarter. Zion is the whole city, cited in parallel with the other fortified cities of JUDAH as a place of safety (Jer. 4:5 – 6; cf. Lam. 5:11); and people of other cities are thus said to be brought to Zion (Jer. 3:14). The phrase "Daughter of Zion" may then be used in personification of the entire city, which is like a young beautiful woman of "splendor" (Lam. 1:6; cf. 2:1) or in need of comfort (1:17).

Finally, in EXILE, the name was applied to the whole deported Israelite nation (those "who live in the Daughter of Babylon," Zech. 2:7). By the time of the postexilic restoration in 537 B.C., the joyful returnees are described as "those that returned to Zion" (Ps. 126:1 ASV and RSV mg.; cf. Jer.

50:5). Whatever may have been their actual villages of settlement in Judah, to "rejoice in the bounty of the Lord" was to "come and shout for joy on the heights of Zion" (Jer. 31:12). The "Daughter of Zion" comes to personify the entire people of Israel (6:23), "gasping for breath, stretching out her hands," and crying out (4:31). Elsewhere the sons of Zion are mentioned in parallel, equally national, with the sons of GREECE (Zech. 9:13).

III. Theological connotations. It is particularly in the broader context that the religious significance of the name comes to the fore.

A. Positive. Only Yahweh could have brought back the Zion returnees of 537 B.C., for from the human viewpoint it seemed unbelievable: they "were like those who dreamed" (Ps. 126:1 TNIV). God himself addressed redeemed Israel as "my people who live in Zion" (Isa. 10:24; cf. 51:16) and predicted that the watchmen in Ephraim would cry out, "Come, let us go up to Zion, / to the LORD our God" (Jer. 31:6). The sons and daughters of Zion are those who stand in a special relationship to God; and the repeated phrase "Virgin Daughter of Zion" (2 Ki. 19:21; Isa. 23:12; 37:22; cf. Jer. 14:17; 18:13; 31:4, 21; Lam. 1:15; Amos 5:2) signifies the city's inviolability—or former inviolability (Lam. 2:13)—because of divine care (KD, *Kings*, 449; cf. a similar protection regarding Babylon and Egypt, Isa. 47:1; Jer. 46:11).

Among specific positive characteristics, the "daughters of Judah" possess joy because of God's providential judgments (Pss. 48:11; 97:8 KJV); and "Mount Zion, which cannot be shaken but endures forever," serves as a point of comparison for those who trust in Yahweh (125:1). Even further, the city with its towers, bulwarks, and palaces stood as proof of their eternal reconciliation with God (48:12 – 14); hence its description as "perfect in beauty" (50:2), the chosen object of God's love (78:68), "more than all the [other] dwellings of Jacob" (87:2). Yahweh is great in Zion (99:2); he blesses his own from Zion (128:5; 134:3). Mount Zion thus became a basis of appeal for God's remembrance (74:2) and for his mercy and pity (102:13), and, when he answered, the place for declaring his name in praise (102:20 – 21; 135:21), in song (137:3; 149:2), and at the set feasts (Isa. 33:20).

At the time of King AHAZ's death in 726 B.C. ISAIAH proclaimed that since Yahweh had founded Zion, his people in their affliction could anticipate refuge within her gates (Isa. 14:32). Specifically, as the onslaught of SENNACHERIB in 701 drew near (cf. 64:10), the prophet spoke of God's defense of Zion (31:4; 33:1 – 9) and fearlessly proclaimed its inviolability (37:22, 32 – 35). Even the Moabites, whom God is willing graciously to receive as his outcasts, are admonished to flee to Zion, a refuge from the Assyrian destroyer (16:1 – 4 KJV; cf. H. C. Leupold, *Exposition of Isaiah*, 2 vols. [1968 – 71], 1:282 – 84, though contrast E. J. Young, *The Book of Isaiah*, 3 vols., NICOT [1965 – 72], 1:463). The prophet anticipated the gifts of congratulation that would be sent to Zion by the Cushite rulers of Egypt's 25th dynasty (18:7; cf. their actual presence under TIRHAKAH at the time of Sennacherib's destruction in 701, 37:9). As Isaiah's own summarization immediately after the event puts it, God said, "I will grant salvation to Zion, / my splendor to Israel" (46:13; cf. 52:1 – 2, 7 – 8, and see *WTJ* 30 [1967 – 68]: 56).

B. Negative. The special relationship to God that was connoted by the name Zion might be destroyed by failure on the part of God's chosen people (Isa. 3:17; 49:14; Jer. 6:2; 9:19). Hence come the prophetic statements of woe to Zion (Jer. 4:21; 6:23) or the question, "Is the LORD not in Zion?" (8:19). MICAH in particular seemingly preached the exact opposite of the Isaianic doctrine of the

"inviolability of Zion" (see above), for Jerusalem's compounded iniquities necessitated its total overthrow (Mic. 3:10 – 12; cf. Lam. 2:4). It could represent only religious perversity when "the daughters of Zion" became characterized by haughtiness and wantonness (Isa. 3:16), "complacent in Zion" in their iniquities (Amos 6:1; Lam. 4:22). They fell into the category of those who "hate Zion" and so must surely be put to shame (Ps. 129:5). As even Isaiah could say, "The sinners in Zion are terrified; / trembling grips the godless" (Isa. 33:14). God had come to loathe Zion (Jer. 14:19; cf. 30:17).

Micah's original 8th-cent. threats were averted by the timely repentance of King HEZEKIAH (Isa. 36; cf. a few years previously the fasting and solemn assembly in Zion that had averted God's wrath, Joel 2:15 – 18). Jeremiah's 7th-cent. "temple sermon" renewed the divine proclamation that assurances of safety, based upon the mere physical existence of the temple on Mount Moriah, were "lying words" (Jer. 7:4, 8; cf. v. 12) and that sin would lead to the ruin of Zion (9:19). This became in fact the result in 586 B.C., when the Daughter of Zion went forth out of the city to dwell in the field and came even unto Babylon (Mic. 4:10). The exiles could only weep when they remembered Zion (Ps. 137:1).

C. Eschatological. Neither 586 B.C. nor A.D. 70 marks the end of biblical Zion: the city, with all its prophetic associations, assumes a prominent place in biblical ESCHATOLOGY. As early as 1000 B.C. David had anticipated that era when Yahweh would send forth his Son, his Anointed One (Ps. 2:2, 7, 12; see MESSIAH), and thus set his King upon his holy hill of Zion (v. 6), who should rule in the midst of his enemies (110:2). He prayed for the day when salvation would come out of Zion and Yahweh would restore prosperity and joy to his people (14:7; 53:6; cf. Zeph. 3:14).

Thus Isaiah foretold both the security of those who would believe in Christ at his first coming, fulfilling God's promise that he would "lay a stone in Zion, / a tested stone, / a precious cornerstone for a sure foundation; / the one who trusts will never be dismayed" (Isa. 28:16; cf. J. A. Alexander, *The Prophecies of Isaiah*, 2 vols., rev. ed. [1870], 1:454, and J. H. Raven, *The History of the Religion of Israel: An Old Testament Theology* [1933], 411), and the joyful shouts of the inhabitants of Zion when the Holy One of Israel will appear in their midst at his SECOND COMING (12:6; 59:20) and when sorrow and weeping will be no more (30:19; 35:10).

Yahweh will roar as a lion from Zion (Joel 3:17) and regather his ransomed people (Isa. 35:9, 10). Then at last the remnant of Zion will attain true holiness through God's cleansing Spirit (4:3 – 4) and be overspread with glory (v. 5). The appearing of this divine glory in Zion will lead all nations, first, to a futile attack upon the city (29:7 – 8; cf. Zech. 12:2 – 3; 14:1 – 2), part of the battle of ARMAGEDDON (Rev. 16:16). God's actual purpose, however, is to demonstrate his deliverance for the faithful (Joel 2:32; Obad. 17) and to achieve his "day of vengeance, a year of retribution, to uphold Zion's cause" (Isa. 34:8; cf. Joel 3:16 – 17). It will lead them, in the second place, to a fear (reverence) for the name of Yahweh (Ps. 105:15 – 16). The former enemies will come to this "mountain of the LORD's temple" seeking his word and his law (Isa. 2:2 – 3; 60:14; Mic. 4:2); for here his kingdom will have its center (Mic. 4:8) in vindication (Isa. 62:1, 11) and in joy (61:3).

The God of Zion will, moreover, reign *forever* (Ps. 146:10; Mic. 4:7), in his city which will *never* be removed (Isa. 33:20). Zion has here received its final association, namely, with that ultimate kingdom of God's new heaven and new earth: the NEW JERUSALEM appears after the close of the "many days" of the earthly millennial kingdom and after the final judgment (24:22); and its glory marks the termination of history's whole present cycle of sun and moon, day and night (v. 23; cf. Rev. 20:11—21:5; 22:5). See HEAVENS, NEW.

D. Universalistic. But since Zion is thus "the joy of all the earth" (Ps. 48:2; cf. Isa. 18:7), the name became synonymous with REDEMPTION as occurring in any nation; accordingly, to know God and to be written in his book is equated in the Psalms with being "born in Zion" (Ps. 87:4 – 6). It suggests Isaiah's description of the elect of God as "all who are recorded among the living in Jerusalem" (Isa. 4:3; cf. Young, *Isaiah*, 1:180 – 81).

E. In the NT. In apostolic usage Mount Zion comes to represent "the heavenly Jerusalem, the city of the living God" (Heb. 12:22). Yet Zion may also refer to the people of Israel (primarily in quotations from the OT, as Rom. 9:33 and 1 Pet. 2:6) and of Jerusalem (Matt. 21:5; Jn. 12:15); or it may identify that literal mountain on which Christ and his followers will stand in triumph at his second coming (Rev. 14:1; cf. Obad. 21) and from which he will go forth to rule forever (Rom. 11:26; cf. Ps. 132:13 – 14).

Payne, *Theology of the Older Testament* [1962], 482 – 504; B. C. Ollenburger, *Zion, the City of the Great King: A Theological Symbol of the Jerusalem Cult* [1987]; R. S. Hess and G. J. Wenham, eds., *Zion, City of Our God* [1999]; B. F. Batto and K. L. Roberts, eds., *David and Zion: Biblical Studies in Honor of J. J. M. Roberts* [2004]; W. H. Mare ["Zion"] and J. D. Levenson ["Zion Traditions"] in *ABD*, 6:1096 – 91 and 1098 – 1102; J. T. Strong in *NIDOTTE*, 4:1314 – 21.)

J. B. PAYNE

Zion, Daughter of. A figurative expression used in the OT, especially in the Prophets, for JERUSALEM and its inhabitants. The expression "elders of the Daughter of Zion" (Lam. 2:10) clearly shows that the whole population of Jerusalem is thus personified. Such a figurative use of Hebrew *bat H1426*, "daughter," is not confined to "Daughter of Zion" (cf. "Daughter of Babylon" in Ps. 137:8; "Virgin Daughter of Sidon" in Isa. 23:12; et al.). In several passages (e.g., 2 Ki. 19:21; Isa. 37:22; Lam. 2:13), "Daughter of Zion" is paralleled by "Daughter of Jerusalem," showing their essential equivalence. In contrast to this usage, the plural "daughters of" generally refers to individual women (e.g., Isa. 3:16 NRSV), but the form *běnôtêhā*, "its daughters," is used a number of times to indicate the suburbs or villages belonging to a city (Num. 21:25 et al.). In the NT "Daughter of Zion" appears only twice in OT quotations (Matt. 21:5 and Jn. 12:15). See also ZION.

A. A. MACRAE

Zior zi'or (צִיעֹר H7486, prob. "small"). A town in the hill country within the tribal territory of JUDAH (Josh. 15:54). It was apparently near HEBRON (prob. to its S), but the precise location is unknown. The earlier identification of Zior with modern Siʿir, a village 5 mi. NE of Hebron sustained by a spring and encompassed by farm land, is problematic (cf. *ISBE*, rev. ed. [1979 – 88], 4:1200). See also ZAIR.

Ziph (person) zif (זִיף H2334, derivation unknown). (1) Son of Mesha, grandson of CALEB, and descendant of JUDAH (1 Chr. 2:42). The Hebrew text is difficult; see MARESHAH (PERSON) #1. Moreover, Ziph here may be the name of a town whose "father" (i.e., founder) was Mesha; see ZIPH (PLACE) #2.

(2) Son of Jehallelel and descendant of JUDAH (1 Chr. 4:16). Perhaps his name was associated

with Ziph (place) #1.

Ziph (place) zif (זִיף *H2335,* derivation unknown; gentilic זִיפִי *H2337,* "Ziphite"). (1) One of the "southernmost towns of the tribe of Judah in the Negev toward the boundary of Edom" (Josh. 15:24). Possibly this town was named after Ziph (person) #2 or Ziphah (1 Chr. 4:16). Its precise location is uncertain, but some scholars have tentatively identified it with modern Khirbet ez-Zeifeh, some 19 mi. SE of Beersheba and 10 mi. SE of Aroer.

(2) A town in the hill country within the tribal territory of Judah (Josh. 15:55). The open area E of this town was known as the Desert of Ziph, and it was here that David hid from Saul twice (1 Sam. 23:14 – 15, 24; 26:2); on both of those occasions the inhabitants of the town, the Ziphites, alerted the king regarding David's whereabouts (2 Sam. 23:19; 26:1; Ps. 54 title [KJV, "Ziphims"]). Ziph was one of the cities fortified by Rehoboam after the secession of the northern kingdom (2 Chr. 11:8). It is generally identified with modern Tell Zif, 4 mi. SE of Hebron on a hill some 2,890 ft. above sea level commanding the open country around. Because the Calebites were associated with Hebron, it seems probable that this Ziph was named after Ziph (person) #1.

J. Arthur Thompson

Ziph, Desert (Wilderness) of. See Ziph (place) #2.

Ziphah zi'fuh (זִיפָה *H2336,* prob. "small"). Son of Jehallelel and descendant of Judah (1 Chr. 4:16). Some have thought that Ziphah is an inadvertent scribal repetition of Ziph, which immediately precedes it. Others suggest that Ziphah should be identified with Ziph (place) #1.

Ziphims zif'ims. KJV alternate form of Ziphites. See Ziph (place) #2.
Ziphion zif'ee-uhn. See Zzephon.

Ziphite zif'*i*t. See Ziph (place) #2.

Ziphron zif'ron (זִפְרֹן *H2412,* derivation unknown). A town between Zedad and Hazar Enan, used to mark the ideal NE border of Israel (Num. 34:9). Its precise location is uncertain, but some scholars identify it with modern Hawwarin, about 75 mi. NE of Damascus.

Zippor zip'or (צִפּוֹר *H7607,* "bird"). Father of King Balak of Moab (Num. 22:2, 4, 10, 16; 23:18; Josh. 24:9; Jdg. 11:25).

Zipporah zi-por'uh (צִפֹּרָה *H7631,* "bird"). Daughter of Jethro (Reuel), wife of Moses, and mother of Gershom and Eliezer (Exod. 2:21 – 22; 18:2 – 4). After Moses' time in Midian, upon his return to Egypt, the Lord met "him" (Moses? Moses' son?) and "was about to kill him" (4:24), but Zipporah averted disaster by circumcising the child (vv. 25 – 26). The text is obscure (see discussion under Moses III.D; cf. also C. Houtman in *JNSL* 11 [1983]: 81 – 105; B. P. Robinson in *VT 36* [1986]: 447 – 61; K. S. Winslow, *Early Jewish and Christian Memories of Moses' Wives: Exogamist Marriage and Ethnic Identity* [2005]).

J. Arthur Thompson

Zithri zith'r*i*. KJV form of SITHRI.

Ziv ziv (𐤉𐤆 *H2304,* "blossom"). KJV Zif. The second month in the Jewish religious CALENDAR (corresponding to April-May). The term occurs in only one biblical passage to mark the beginning of SOLOMON's construction of the TEMPLE (1 Ki. 6:1, 37).

Ziz, Pass (Ascent) of ziz (צִיץ *H7489,* prob. "flowers"). When a vast army from EDOM, MOAB, and AMMON came against JUDAH during the reign of JEHOSHAPHAT, a prophet by the name of JAHAZIEL revealed that the enemy would be "climbing up by the Pass of Ziz" and that Jehoshaphat's men would "find them at the end of the gorge in the Desert of Jeruel" (2 Chr. 20:16). Evidently the place was near TEKOA, for on the next morning the people of Judah went into the Desert of Tekoa and saw the enemy defeated (vv. 20 – 23). The attacking enemy must have crossed the DEAD SEA from Moab via a shallow ford at the Lisan and then made their ascent up Ziz near EN GEDI (see Y. Aharoni, *The Land of the Bible: A Historical Geography,* rev. ed. [1979], 60). Although the exact location of the Pass of Ziz is uncertain, it is often identified with Wadi Ḥaṣaṣa, some 6 mi. N of En Gedi and 8 mi. SE of Tekoa (some scholars emend *haṣṣîs* to ḥăṣîṣ; cf. ḥaṣṣôn in v. 2). Alternatively, the pass may have been on a more direct route from Tekoa to En Gedi (see R. B. Dil-lard, *2 Chronicles, WBC* 15 [1987], 158).

The Pass of Ziz. (View to the W.)

Ziza zi'zuh (זִיזָא *H2330* and זִיזָה *H2331* [only 1 Chr. 23:11], meaning uncertain). (1) Son of Shiphi and descendant of Shemaiah; he was a clan leader in the tribe of SIMEON (1 Chr. 4:37). Ziza is listed among those whose families increased greatly during the days of King HEZEKIAH and who dispossessed the Hamites and Meunites near GEDOR (vv. 38 – 41).

(2) Son of REHOBOAM (by his favorite wife MMAA-CAH) and descendant of DAVID (2 Chr. 11:20).

(3) Son of Shimei and descendant of LEVI through GERSHON (1 Chr. 23:10 – 11 NIV). The KJV

and other versions, following the MT, have "Zina" (Heb. *zînā(*, v. 10) and "Zizah" *(zîzâ,* v. 11); the LXX reads *Ziza* in both verses.

Zizah *zi'*zuh. See ZIZA #3.

Zoan zoh'uhn (צֹעַן H7586, from Egyptian *ḏ(nt,* "storm"). An ancient Egyptian city, known to classical writers as Tanis, and now represented by the ruins of Ṣan el-Ḥagar el-Qibliya (San al-Hajar) in the NE delta of the NILE, just S of Lake Menzaleh. Before the Ramesside age (c. 1300 B.C.; see RAMSES), the history of Zoan remains obscure, especially as the commonly proposed identification of Zoan-Tanis with the HYKSOS settlement of Avaris and later city of RAMESES is perhaps erroneous (cf. J. van Seters, *The Hyksos* [1966], 128ff., 140ff.). In that case, the era of 400 years on a stela of Ramses II found at Tanis could not so easily be correlated with Num. 13:22 if the stela was originally erected elsewhere.

The geographical term "fields of Tanis" *(sḫt-ḏ()* occurs from Ramses II's day onward (A. H. Gardiner in *JEA 5* [1918]: 246 – 47), while *ḏ(n(t)*, Tanis-Zoan itself, is attested from c. 1100 B.C. *(Onomasticon of Amenemope; Story of Wenamun).* The Egyptian term "fields of Tanis" corresponds closely to the OT "fields of Zoan" (Ps. 78:12, 43 NRSV), which witnessed the miracles of the exodus. From the 21st to late 22nd dynasties (c. 1085 – 715), Tanis-Zoan was the capital of the PHARAOHS, several royal tombs of this period and the ruins of important temples having been discovered there. During the Nubian 25th dynasty (c. 715 – 664), Tanis was still used as an occasional royal residence and as a northern base, with MEMPHIS as the main center. This background lends point to references by Isaiah to the "officials of Zoan" as "the wise counselors of Pharaoh" (Isa. 19:11, 13)—that is, his court and government, officials and envoys there (30:4). In the 26th dynasty (664 – 525), Zoan was still a major city, and this is reflected in Ezekiel's denunciation of it with other Egyptian centers (Ezek. 30:14). (See further P. Brissaud and C. Zivie-Coche, *Tanis: travaux récents sur le Tell Sân el-Hagar* [1998]; C. Ziegler, *Les trésors de Tanis: capitale oubliée des pharaons de l'an mille* [2001].)

K. A. KITCHEN

Zoar zoh'ahr (צֹעַר H7593, possibly "small"). One of the five CITIES OF THE PLAIN, the others being SODOM, GOMORRAH, ADMAH, and ZZBOIIM. Known biblical facts about Zoar derive from ten references (Gen. 13:10; 14:2, 8; 19:22 – 23, 30; Deut. 34:3; Isa. 15:5; Jer. 48:34), all quite barren of definite geographical information. Sodom is the best known of this *Pentapolis* (the term used in Wisd. 10:6), and the problem of its location is inextricably united with that of Sodom. Scholarly industry has shown that throughout postbiblical times travelers—-Christian, Jewish, and Muslim—have been aware of Zoar and its connection with Sodom. Most of the references in these surviving notices indicate that current opinion located the Pentapolis at the S end of the DEAD SEA. This postbiblical historical evidence, indecisive as it is, has strongly influenced most modern scholars, who locate Zoar at the SE corner of the Dead Sea near the edge of the barren saline plain called the Sebkha, 4 – 5 mi. up the River ZERED from where it empties into the Sea (Denis Baly, *The Geography of the Bible* [1957], 263). In particular, it is common to identify ancient Zoar with modern eṣ-Ṣafi, some 5 mi. S of the Dead Sea.

The survival of certain place names in the district, such as Jebel Usdum (= Mount Sodom), supports this theory. The presence of extensive mineral salt deposits is thought to be connected with the story of LOT's wife who turned to a "pillar of salt" as she walked toward Zoar (Gen. 19:26).

Further, there is a widely accepted theory that the area has been changed in historical times by some natural catastrophe somewhat like that described in Gen. 19:22 – 30. Finegan is typical: "It must also have been in the Middle Bronze Age that the catastrophic destruction of Sodom and Gomorrah…took place. A careful survey of the literary, geological, and archaeological evidence points to the conclusion that the infamous 'cities of the valley' (Genesis 19:29) were in the area which is now submerged beneath the slowly rising waters of the southern part of the Dead Sea, and that their ruin was accomplished by a great earthquake, probably accompanied by explosions, lightning, ignition of natural gas, and general conflagration" (J. Finegan, *Light from the Ancient Past: The Archaeological Background of Judaism and Christianity*, 2nd ed. [1959], 147).

There are, however, serious objections to this view. The Bible locates Zoar specifically at an extremity of the "Plain…the valley of Jericho" in the recital of the dimension of the Promised Land (Deut. 34:3 NRSV). This most naturally would be on the E edge of the Jordan Valley near the N end of the Dead Sea, the opposite end from the "traditional" site, especially considering that Mount NEBO (or PISGAH), from which MOSES espied the place, is directly overlooking a plain that has Jericho in plain view at its western edge. Further, it is difficult to understand the purpose of the expedition to invade cities so remote and inaccessible as the S end of the Dead Sea by armies from MESOPOTAMIA (Gen. 14). How would Moses have seen the area at the S end of the Dead Sea from Mount Nebo in MOAB opposite JERICHO (Deut. 34:1, cf. v. 3), for it is cut off from view by heights intervening? The geographical notations in connection with Lot's choice of a city of the "plain of the Jordan" (Gen. 13:10 – 12; cf. vv. 3 – 4) seem to indicate the Valley of Jordan opposite BETHEL and AI, that is, 50 – 60 mi. N of the southern end of the Dead Sea. Against ancient traditions and current scholarship, the present writer prefers this northern area as the location of Zoar and the rest of the Pentapolis.

R. D. CULVER

Zoba zoh'buh. KJV alternate form of ZOBAH (only 2 Sam. 10:6, 8).

Zobah zoh'buh (צוֹבָא *H7419* [2 Sam. 10:6, 8] and צוֹבָה *H7420*, meaning uncertain). An Aramean kingdom that flourished during the early Hebrew monarchy. See ARAM (COUNTRY). Its exact location is not known, but in 2 Sam. 8:8 reference is made to a city in the kingdom of Zobah named BEROTHAI from which DAVID obtained COPPER. This town may be the later Bereitan in the BEQAʿ region between the LEBANON ranges, and identical with BEROTHAH of Ezek. 47:16 at the ideal northern frontier of Israel between DAMASCUS and HAMATH. See HAMATH ZOBAH.

SAUL fought against Zobah (1 Sam. 14:47), and subsequently DAVID, when he sought to establish his northern border, clashed with HADADEZER of Zobah and defeated him (2 Sam. 8:3, 5, 12; 1 Chr. 18:3, 5, 9; Ps. 60 title ["Aram Zobah"]). Later, when AMMON fought David, there were contingents of Arameans from BETH REHOB, ZOBAH, MAACAH, and TOB in the Ammonite forces (2 Sam. 10:6 – 8; cf. 1 Chr. 19:6). David's general JOAB overwhelmed these allies (2 Sam. 10:9 – 19; 1 Chr. 19:8 – 19). In SOLOMON's time, REZON, a fugitive from the king of Zobah, established himself in Damascus and became "Isarel's adversary as long as Solomon lived" (1 Ki. 11:23 – 25).

J. ARTHUR THOMPSON

Zobebah zoh-bee'buh. See HAZZOBEBAH.

Zohar zoh'hahr (צֹחַר *H7468*, possibly "reddish" or "radiant"). (1) Father of EPHRON the HITTITE

(Gen. 23:8; 25:9).

(2) Son of SIMEON and grandson of JACOB (Gen. 46:10; Exod. 6:15); also called ZERAH (Num. 26:13; 1 Chr. 4:24).

(3) Son of Asshur (by his wife Helah) and descendant of JUDAH (1 Chr. 4:7). See discussion under IZHAR #2.

Zoheleth, Stone of zoh'huh-lith (זֹחֶלֶת *H2325*, "creeping thing"). A stone or boulder near EN ROGEL (a spring just S of JERUSALEM); at this site ADONIJAH offered sacrifices in his abortive attempt to become king (1 Ki. 1:9; RSV, "Serpent's Stone"). The name may indicate either that there was a "crawling" or "sliding" rock (from the overhanging cliffs to the spring) or, more likely, that the stone was associated with the cultic emblem of the SERPENT. Some have seen a connection between the Zoheleth Stone and the Dragon's Spring (Neh. 2:13; see JACKAL WELL).

F. G. CARVER

Zoheth zoh'heth (זוֹחֵת *H2311*, derivation uncertain). Son of Ishi, included in the genealogy of JUDAH (1 Chr. 4:20).

zoology. See FAUNA.

Zophah zoh'fuh (צוֹפָח *H7432*, meaning uncertain). Son of Helem; listed among the brave warriors who were heads of families of the tribe of ASHER (1 Chr. 7:35 – 36; cf. v. 40).

Zophai zoh'fi. Alternate form of ZUPH (PERSON).

Zophar zoh'fahr (צוֹפַר *H7436*, meaning uncertain). The third of the three friends of JOB who came to commiserate him (Job 2:11; 11:1; 20:1; 42:9). He came from Naamah, probably a city or region outside Palestine (see NAAMATHITE). He was harsh in accusing Job of wickedness and in telling him that he deserved to suffer even more than he had.

Zophim zoh'fim (צֹפִים *H7614*, "watchers" or "lookout"). A field on the top of the PISGAH slopes, at the NE end of the Dead Sea, to which BALAK took BALAAM to see Israel (Num. 23:14). It is uncertain whether the term is a proper name or a common noun (thus possibly "field of watchers" or "lookout field"). Some have speculated that Zophim may be the same as modern Tal'at ṣṣ-Ṣafa.

Zorah zor'uh (צָרְעָה *H7666*, meaning uncertain; gentilic צָרְעָתִי *H7670*, "Zorathite," and צָרְעִי *H7668*, "Zorite"). KJV also Zoreah (Josh. 15:33), Zareah (Neh. 11:29), Zareathite (1 Chr. 2:53). A city in the SHEPHELAH of the tribe of JUDAH (Josh. 15:33) which formerly belonged to DAN (Josh. 19:41; Jdg. 13:2; 18:2). The town was the home of MANOAH the father of SAMSON (Jdg. 13:2). It was in MAHANEH-DAN, between Zorah and ESHTAOL, that Samson first experienced the constraint of the Spirit of the Lord (13:25); and after his death, he was buried in the same region (16:31). When the Danites decided to vacate their territory due to PHILISTINE pressure, some of the five men sent out to reconnoiter farther N for a new home came from Zorah and Eshtaol (18:2). On their recommendation 600 warriors from those two towns took LAISH in the N (18:8 – 11). It was while passing through Ephraim that they laid hold of the Levite whom MICAH had appointed as his priest and took him and

Micah's golden image with them (18:14 – 31).

SOLOMON'S son REHOBOAM strengthened the fortifications of Zorah on his southern flank (2 Chr. 11:10). After the EXILE the town was reoccupied by returning exiles (Neh. 11:29). The inhabitants of Zorah are referred to as Zorathites in two passages: in one of them they are identified as descendants of SHOBAL son of HUR through a clan of KIRIATH JEARIM (1 Chr. 2:53, associated with the inhabitants of ESHTAOL), and in the other as descendants of Shobal through Reaiah (4:2). A variation of the name, Zorites, is applied to a related line, the descendants of SALMA son of Hur (2:54). These differences may reflect distinct historical migrations. See also MANAHETHITE.

This tell or mound is identified as biblical Zorah.

Zorah is confidently identified with modern Ṣar⁽ah, some 14 mi. W of JJERUSALEM (2 mi. NNE of biblical BETH SHEMESH and about the same distance WSW of Eshtaol); the town sits on a hill overlooking the Wadi eṣ-Ṣarar (SOREK) to its S.

J. ARTHUR THOMPSON

Zorathite zor'uh-th*it*. See ZORAH.

Zoreah zoh-ree'uh. KJV alternate form of ZORAH.

Zorite zor'*i*t. See ZORAH.

Zoroastrianism zoh'roh-as'tree-uhn-iz'uhm. The religious system taught by the Iranian sage Zoroaster (Zarathustra, Zarathushtra); more properly known as Mazdaism. The early history of the movement is obscure and no firm historical or chronological information is extant. It is likely that Zarathustra lived in the 6th cent. B.C.; he may have been born and raised in NW Iran, later migrating to the more southerly center of the country. He preached the worship of the high god, Ahura Mazda ("wise god"), as the true and unique deity and bade his followers seek goodness through ethical actions and good

works.

Undoubtedly there were political and economic factors involved with the feudalistic organization of the ancient pantheistic religion. The concept of Zarathustra never totally escaped the older ideas but was much more mystical and theoretical. Most of what is known of his teaching is derived from much later sources and traditions. His teachings were embodied in the elaborate versified songs of the Avestan *Gāthās*, which were set down in written form sometime in the Sassanid era c. 4th cent. A.D. These songs contain personal reflections upon the joys and frustrations of Zarathustra's career, which finally triumphed when his daughter Pouruchistā married the vizier of the ruler Vishtaspā.

The basic motive of Mazdaism is an unrelieved DUALISM in which Virtue, Love, Life, and Light are represented by Ahura Mazda, who is eternally opposed by Wickedness, Hate, Death, and Darkness, represented by the archdemon Angra Mainyav. The whole of the universe and its innumerable aspects is divided between these two cosmic forces. A vast hierarchy of spirits and demiurges was proposed by the later Zoroastrian philosophers, who sought to a large degree to unite the conceptions of Zarathustra with the more ancient religion. The eclectic result—with incrustations of myth, legend, and ritual—is in effect the Zoroas-trian religion. It is still practiced in its Parsee form in India and includes such ancient customs as the sacred and unquenchable fire, the elaborate mystical temple rituals, and the exposure of dead bodies on the *dakhma* ("towers of silence"). The literature of Zoroastrianism is extensive and includes primarily the Avesta and many subsidiary texts in PAHLAVI. Much of the thrust of Zoroastrianism passed into GNOSTICISM, MITHRAISM, and Persian Islam.

Malandra, *An Introduction to Ancient Iranian Religion: Readings from the Avesta and Achaemenid Inscriptions* [1983]; M. Boyce and F. Grenet, *A History of Zoroastrian-ism: Zoroastrianism under Macedonian and Roman Rule* [1991]; E. M. Yamauchi, *Persia and the Bible* [1990], ch.12; M. Boyce, *Zoroastrians: Their Religious Beliefs and Practices* [2001].)

W. WHITE, JR.

Zorobabel zoh-rob'uh-buhl. KJV Apoc. and NT forms of ZERUBBABEL.

Zostrianos zohs'tree-ah'nuhs. A long but poorly preserved tractate included in the NAG HAMMADI LIBRARY (NHC VIII, 1). Being the product of non-Christian (philosophical) GNOSTICISM, this document records a number of revelations given to Zostrianos regarding the heavenly aeons. The tractate concludes with an exhortation to "flee from the madness and the bondage of femininity" by choosing "the salvation of masculinity." (English trans. in *NHL, 402 – 30*.)

A. K. HELMBOLD

Zuar *zoo*'uhr (צוּעָר H7428, "small"). Father of NETHANEL, who was the leader of the tribe of ISSACHAR during the wilderness wanderings (Num. 1:8; 2:5; 7:18, 23; 10:15).

Zugoth. See TALMUD II.B.

Zuph zuhf (צוּף H7431 and צוֹפי H7433 [1 Chr. 6:26, MT v. 11], possibly "flowing honey"). (1) Son of ELKANAH, descendant of LEVI through KOHATH, and ancestor of SAMUEL (1 Sam. 1:1; 1 Chr. 6:26 ["Zophai"], 35). See also #2, below.

(2) A region to which SAUL came when he was searching for his father's donkeys (1 Sam. 9:5); the prophet SAMUEL lived in this place (v. 6), so evidently it was near RAMAH, though the precise location is unknown. It is very likely that the name of this area was derived from Samuel's ancestor (see #1, above). Samuel's father Elkanah is described as being a native of Ramathaim Zuphim (1:1 NIV mg.), and modern translations usually render the Hebrew phrase "from Ramathaim, a Zuphite" (NJPS, "from Ramathaim of the Zuphites"). See discussion under RAMAH #3.

Zuphim, Zuphite zoo'fim, zoo'fit. See ZUPH #2.

Zur zuhr (צוּרִיאל H7448, "rock"). (1) A tribal chief from MIDIAN and father of COZBI (Num. 25:15); the latter and her Israelite husband ZIMRI were put to death by PHINEHAS for their part in pagan and immoral behavior (cf. vv. 1–9). In a subsequent battle, the Israelites killed Zur and other Midian-ite rulers (31:8 [here called "kings"]; Josh. 13:21 ["princes allied with Sihon"]).

(2) Son of JEIEL and descendant of BENJAMIN; his brother NER was the grandfather of SAUL (1 Chr. 8:30 [cf. v. 33]; 9:36).

Zuriel zoor'ee-uhl (צוּרִיאל H7452, "God is my rock"). Son of Abihail and descendant of KEVI through MERARI; he was leader of the Merarites in the wilderness (Num. 3:35).

Zurishaddai zoor'i-shad'i (צוּרִישַׁדָּי H7453, "Shad-dai is my rock"; see EL SHADDAI). Father of SHE-LUMIEL; the latter was the leader of the tribe of SIMEON in the wilderness (Num. 1:6; 2:12; 7:36, 41; 10:19). See also SARASADAI.

Zuzim zoo'zim. See ZUZITES.

Zuzites zoo'zits (זוּזִים H2309, derivation uncertain [cf. ABD, 6:1176]). Also Zuzim (KJV Zuzims, a superfluous English pl. form). A pre-Israelite tribe of Syria-Palestine mentioned in Gen. 14:5 as one of the nations overthrown by the Elamite king KEDORLAOMER. They are said to have lived in Ham, apparently a site located in the N of what is today the country of Jordan. See HAM (PLACE). Most authorities equate the Zuzites with the ZAM-ZUMMITES of Deut. 2:20, although some object that in the former passage the Zuzites are distinguished from the REPHAITES, while in the latter the Rephaites seem to be identified with the Zam-zummites.
