INTRODUCTION

Since its initial publication in 1975, the *Zondervan Pictorial Encyclopedia of the Bible* has provided a treasury of knowledge for anyone interested in the biblical text and the historical context of Scripture. With its breadth of coverage, detailed treatments, reverent approach to the text, and profuse illustrations, this work has met the needs of scholars, pastors, and serious students of the Bible for over three decades. The present revised edition seeks to preserve the original contributions as much as possible while at the same time updating the material to serve a new generation.

Accordingly, hundreds of brief new articles have been added, making it easier for the user now to obtain quick information on a broad range of relevant topics, including Judaism (e.g. “Akiba, Rabbi”; “Mishnah”; “Tosefta”), the ANE (“Aleppo”; “Lagash”; “Parthians”), Greco-Roman culture (“Acropolis”; “Epictetus”; “Marcus Aurelius”), extrabiblical documents (“Adam, Testament of”; “Execration Texts”; “Shem, Treatise of”), early Christianity (“Epiphanius”; “Irenaeus”; “Nag Hammadi Library”), and assorted items (“amanuensis”; “linguistics”; “rhetorical criticism”).

Moreover, some twenty new in-depth articles have been commissioned, including “Apologetics” (William Edgar), “Cartography, Biblical” (Barry J. Beitzel), “Ebla” (Richard S. Hess), “Deuteronomistic History” (J. Alan Groves), “Ethics in the Old Testament” (Esteban Voth), “Ethics of Paul” (Alexander Cheung), “God, Biblical Doctrine of” (John M. Frame), “Land, Theology of” (Carl G. Rasmussen), “Pseudonymity” (Stanley Porter), “Type, Typology” (Grant R. Osborne), “Union with Christ” (Richard B. Gaffin, Jr.), “Warrior, Divine” (Tremper Longman III), “Wars, Jewish” (J. Julius Scott, Jr.).

Various existing articles have been totally rewritten (e.g., “Greek Language,” “Septuagint”). Others have received substantive updating, such as “Archaeology” (Richard S. Hess), “Biblical Criticism” (Grant R. Osborne), “Dead Sea Scrolls” (Martin G. Abegg, Jr.), “Versions of the Bible, English” (Mark L. Strauss). All other articles have been carefully reviewed and, when necessary, corrected; frequently, new material has been added alerting the reader to developments in the field.

Special effort has been expended to make bibliographical references more current. Many hundreds of new titles have been included, with emphasis on publications from 1990 through 2007; works published in 2008 have been added less systematically. To aid the user in finding relevant material, thousands of new cross-references have been added (indicated with small caps). A large proportion of them are new entries that guide the reader to the relevant article(s). Within the body of the articles, cross-references are normally marked only upon first mention.

The original edition of *ZPEB* was based primarily on the KJV and the RSV (with frequent reference to the ASV). Because of the historical significance and continued use of the KJV, some of the attention given to this translation has been preserved; for example, all of its distinct name forms (including those in the Apocrypha) still receive a separate entry, with a cross-reference to the form used in the NIV (or in the NRSV Apocrypha). On the other hand, articles that summarized the biblical data on the basis of renderings from the KJV (and RSV) have been rewritten. All biblical quotations, unless otherwise noted, come from the NIV (with selective references to changes in the TNIV, which appeared after most of the revisions had been completed). Frequently, however, alternate NRSV renderings are included; other translations, such as the NJPS, are referred to on a more selective basis. Quotations of the Apocrypha are taken from the NRSV.

Although scholars will continue to find the *ZEB* a useful resource, this new edition seeks to

make the material more accessible to a broad readership. Accordingly, the use of Hebrew and Greek script is, with few exceptions, reserved for the initial parenthetical information in articles dealing with names (see also below, “Proper Names”); elsewhere, standard transliteration is employed. For the benefit of readers who are not proficient in the biblical languages, the Goodrick-Kohlenberger numbers are included with individual Hebrew, Aramaic, and Greek words. For several reasons (including constraints associated with the use of electronic files), Hebrew verbs in their basic form are vocalized as qal perfect 3rd person masc. sing., even when that particular form is not attested.

Instead of including at the end of each article a list of works cited, bibliographical information is whenever possible incorporated into the article itself at the appropriate points. Many entries, however, still include at the end a substantial list of titles (mainly in English), guiding the user to further reading. While these titles occasionally refer to articles in scholarly journals, the focus is on books that either survey the field broadly or offer in-depth treatment of selected topics. Because commentaries are a major source of information for most of the material covered in this work, articles dealing with books of the Bible include more extensive bibliographies, with emphasis on commentaries that treat the biblical text in the original languages.

A special effort has been made to bring about greater consistency among the articles. Some of this revision applies simply to matters of format (e.g., the use of a standard outline system within the articles). Content is also involved, however. For example, the brief descriptions of less significant persons and places now follow a regular pattern, making it easier to compare the material. Again, when articles appear to give discrepant information, the data have been double-checked to ensure that no factual error is involved; if the discrepancy reflects a difference of opinion, the user is often alerted to the alternative view.

Except in the case of articles that bear a new signature, all differences between the original and revised editions of this work are the responsibility of the revising editor. In many instances, the differences are substantial, yet insufficient to justify removing the name of the original contributor, and readers should not assume that the person whose name appears in the signature is fully responsible for the contents of the article. On the other hand, the revising editor, out of respect for the integrity of individual contributions, has retained many comments and opinions that were more persuasive thirty years ago than they are today. As a result, certain articles may come across as somewhat dated in their concerns or in their manner of expression, but most users of the encyclopedia will appreciate hearing the authentic voice of the contributors. Moreover, the new material that appears in these articles, including recent bibliographical titles, should adequately alert readers to changes in biblical scholarship during the past several decades.

Alphabetization

The entries in this encyclopedia are alphabetized according to the so-called letter-by-letter system: a parenthesis or a comma interrupts the alphabetizing, but all other punctuation marks and word spaces are ignored (cf. *The Chicago Manual of Style*, 15th ed. [2003], sect. 18.51–59). Note the order in the following example:

Bethany
Beth Ashbea
Bethasmoth
Beth Aven

Some dictionaries and encyclopedias follow the word-by-word method, according to which any punctuation mark or word space also interrupts the alphabetizing. For example, the *Anchor Bible Dictionary* places “Beth Aven” (spelled “Beth-aven”) and many other “Beth-” compounds before “Bethany” and “Bethasmoth.” Usually these differences do not create obstacles, but in certain cases—when a large number of items or a long article separates similar entries—the user may on first try be unable to find a particular entry where expected. Note the potential confusion in the following example:

sea
sea, bronze
Sea, Great
sea, molten
sea cow
sea gull
seah
seal [a long article]
sea monster
sea of glass
Sea of Kinneret
Sea of the Arabah
Sea of Tiberias
Sea Peoples

Because the article on “seal” extends several pages—so that the entry “sea monster” is not immediately visible—the reader may infer that “sea gull” is the last “sea” entry. In short, users should not assume that an article is missing if they do not find it on first try.

The only exception to strict alphabetical order is in the case of dual articles that treat the same topic focusing respectively on the OT and the NT. For example, “chronology (OT)” comes before “chronology (NT).”

Proper Names

The representation of Middle Eastern names in English is fraught with difficulties, resulting in a bewildering diversity of spellings (except in the case of widely used names whose English orthography has become conventional). Some writers adopt a precise transliteration, using numerous diacritical markings that distinguish between fairly subtle sound differences; others prefer a greatly simplified system that ignores even important distinctions. The present work seeks a middle ground. For example, in the representation of Arabic names (used for most archaeological sites and modern villages in the Holy Land), vowel length is ignored, but differences in the consonants have been carefully preserved (e.g., h / ḥ / ḫ; the last consonant is sometimes by convention represented with *kh*). An effort has been made to attain regularity (e.g., the Arabic article is consistently represented by *el-* rather than *al-*), but several factors, such as the preferences of contributors or the semiconventional status of some forms, makes total consistency impossible. In many instances alternate forms have been given that alert the reader to the possibility that the name may be spelled

differently in other reference works.

With regard to biblical names specifically, the spelling follows the NIV, but alternate forms are also included (primarily from the TNIV, KJV, and NRSV). The articles begin with initial parenthetical information that gives the original form in Hebrew, Aramaic, or Greek characters, followed by the meaning of the name, if known. In the case of Hebrew and Aramaic names that occur in the Greek Septuagint, some editions (including the widely used work of A. Rahlfs) usually do not attempt to indicate breathing marks or accents; that practice is followed here, unless the name in question occurs also in the Greek NT.

In determining the meaning of Hebrew and Aramaic names, attention has been paid to the latest available information, especially from such sources as *HALOT* and J. D. Fowler's *Theophoric Personal Names in Ancient Hebrew* (1988). To maintain some consistency, names that preserve a verbal form in the so-called perfect(ive) tense are translated with English past, while the imperfect(ive) is translated as a present. These renderings are only approximate, however, and in the case of the imperfect, a jussive idea ("May God do such and such") is often intended. It is also important to note that most of these meanings cannot be confirmed definitively, and that even when there is a reasonable degree of certainty, one cannot be sure what may have motivated the parents to choose a particular name (a characteristic of the child? an event at the time of birth? a parental hope? the desire to honor an ancestor or an important figure by using that person's name? an ascription of praise to God not specifically related to the child? merely the perception that the name had a pleasant sound?).

Pronunciation guides have been provided for all biblical names as well as for selected names found outside the Bible. With relatively few exceptions, the information is taken from W. O. Walker, Jr., et al., *The HarperCollins Bible Pronunciation Guide* (1989), which uses a simple system for indicating English sounds, as shown below. There exists of course a standard pronunciation for a large number of well-known biblical names. Numerous other names, however, are not in common use and thus there is no "accepted" or conventional pronunciation for them. The approach used by Walker and his associate editors gives preference to what would likely be considered a natural English pronunciation (i.e., consistent with how similarly spelled words in English are usually pronounced). Biblical scholars, however, frequently favor a pronunciation that comes closer to that of the original languages, particularly in the case of Hebrew names. Thus for the name Hazor, Walker gives the pronunciation hay'zor, but many biblical students prefer hah-tsor'. In short, then, the pronunciation guides included in this encyclopedia are not presented as authoritative prescriptions; many of them should be regarded only as reasonable suggestions.

PREFACE TO THE FIRST EDITION

The cordial reception given to the publication of *The Zondervan Pictorial Bible Dictionary* in 1963 revealed the need for a more extensive work that would deal in greater detail with the technical aspects of biblical backgrounds and interpretation. The previous volume, as stated in its introduction, “was gauged for the use of pastors, Sunday-school teachers, Bible class leaders, and students who desire concise and accurate information on questions raised by ordinary reading.” Because of the necessity of restricting its contents to one volume, it was not possible to include much information that would have been useful and illuminating.

The *Zondervan Pictorial Encyclopedia of the Bible* is intended to include a larger body of material, and to supply more detail for scholarly study. Many of the articles are highly specialized and more exhaustive than those appearing in the *Dictionary*. None of these is, however, merely an expansion of the articles in the *Dictionary*; each of them has been specially composed for this immediate publication. All of them are written by experts in their respective fields, and some of the articles are monographs written exclusively for the *Encyclopedia*. From cover to cover the work is new; it is not reedited from its predecessor.

The scope of this *Encyclopedia* is intended to cover directly or indirectly all persons, places, objects, customs, and historical events and major teachings of the Bible. Not all are treated separately; some will necessarily be subsumed under larger topics. It is, however, designed to be a comprehensive survey of general biblical and theological knowledge.

The critical and theological position of this work is conservative. All viewpoints of biblical scholarship are mentioned and are given fair representation, but the emphasis is that of historic Christianity. Allowance has been made for varying opinions within this framework, and in some cases more than one article on a given theme has been included in order to represent fairly differing doctrinal interpretations. Occasionally one may find discrepancies between articles on historical and chronological topics. These are often indicative of ambiguity in the original records, on which no final judgment is easily attainable. Authors of articles have been accorded liberty to state their conclusions, provided these conclusions are founded on a fundamental conviction of the veracity of the biblical record.

The Bible translations generally used as the basis for study include the Revised Standard Version, the King James Version of 1611, and the American Standard Version of 1901. Authors of some articles have provided original translations where they deemed such renderings to be helpful. Such changes or comparisons have been noted in the respective articles.

Special thanks are offered to Dr. Steven Barabas, Associate Editor, who aided greatly in the formulation of plans for the *Encyclopedia* and who contributed a large number of the articles; to Drs. Gleason Archer and R. Laird Harris, who assisted in the editing of contributions to the Old Testament field; to Drs. Harold B. Kuhn and the late Addison H. Leitch, who reviewed theological articles; and to Dr. E. M. Blaiklock, who contributed so greatly to the historical and archaeological content. Grateful acknowledgment is due also to Mrs. Helen J. Tenney for orthographical and rhetorical correction of the typescript, and to Mrs. Dorothy Shaw for competent secretarial assistance. To Dr. Robert K. DeVries, Executive Vice-President, Book Division; Mr. T. A. Bryant, Managing Editor; Mr. Edward Viening, Project Editor; and the other members of the staff of Zondervan Publishing House, the editor wishes to express his appreciation for their constant support and courteous

cooperation, as well as to all the scholars who have lent their effort, time, and learning to the production of this work.

MERRILL C. TENNEY, PH.D.

CONTRIBUTORS

An asterisk indicates contributors to the revised edition. The original contributors, many of whom are deceased, did not have an opportunity to revise their articles for this new edition of *ZEB*. (Unless otherwise noted, all changes in the material are the responsibility of the revising editor.) For this reason, these scholars are identified as they were in the first edition, that is, according to the position they held at the time.

*** Abegg, Martin G., Jr.**

Ben Zion Wacholder Professor of Dead Sea Scroll Studies, Trinity Western University, Langley, BC

Ackley, Ernest L.

Emeritus Professor of Religion, Eastern Baptist College

Professor of Old Testament, Bethel University

Rea, John

Dean of Students and Associate Professor of Old Testament, Melodyland School of Theology

Reid, W. Stanford

Professor of Department of History, Faculty of Arts, University of Guelph

Ridall, R. Clyde

Pastor of Trinity United Methodist Church, Paris, Illinois

Ross, Arthur M.

Dean of College-Credit Instruction, Correspondence School, Moody Bible Institute

Rosscup, James E.

Professor of Bible, Talbot Theological Seminary

Roth, Robert P.

Dean of the Faculty, Northwestern Lutheran Theological Seminary

Rowdon, Harold H.

Lecturer in Church History, London Bible College

Rupprecht, Arthur A.

Professor of Classical Languages, Wheaton College

Russell, Emmet

Retired Pastor; Writer

Schep, J. A.

Former Professor of New Testament Studies and Pastoral Theology, Reformed Theological Seminary, Geelong, Australia

Schultz, Arnold

Lecturer in the History of the Middle East, Roosevelt University, Chicago

Schultz, Samuel J.

Coordinator, Division of Biblical Studies, Wheaton College and Wheaton Graduate School

***Scott, J. Julius, Jr.**

Professor Emeritus of Biblical and Historical Studies, Wheaton College Graduate School

Scott, Jack B.

Professor of Old Testament; Registrar, Reformed Theological Seminary

Shepherd, Norman

Associate Professor of Systematic Theology, Westminster Theological Seminary

Shewell-Cooper, W. E.

Director of the International Horticultural Advisory Bureau and Principal, The Missionary Horticultural College, Arkley, England

Skilton, John H.

Former Professor of New Testament, Westminster Theological Seminary

Smick, Elmer B.

Professor of Old Testament Languages and Literature, Gordon-Conwell Theological Seminary

Smith, Wilbur M.

Former Professor of English Bible, Trinity Evangelical Divinity School

Stam, John

Professor of Evangelical Thought; Director of Department of Christian Thought, Seminario Biblico Latinoamericano, San Jose, Costa Rica

Stark, Bruce C.

Former Professor of Hebrew and Old Testament, Ashland Theological Seminary; Professor of Philosophy, Ashland College

Stern, Ephraim

Senior Lecturer in the Institute of Archaeology, Hebrew University

Stewart, David

Principal, Bible College of New Zealand

Stigers, Harold G.

Lecturer and Writer on Old Testament and New Testament Archaeology

Stob, George

Former minister of the Christian Reformed Church, Washington, D.C.

Stob, Henry

Professor of Philosophical and Moral Theology, Calvin Theological Seminary

Stoesz, Samuel J.

Managing Editor of Christian Publications, Inc.

Stone, Robert C.

Former Professor of Classics, North Park College

***Strauss, Mark L.**

Professor of New Testament, Bethel Seminary (San Diego)

Strothotte, Guenter

Librarian, Vancouver School of Theology

Swaim, Gerald G.

Vice President for Academic Affairs; Dean and Professor of History and Religion, Lander College, Greenwood, South Carolina

Taylor, Willard H.

Dean and Professor of Biblical Theology, Nazarene Theological Seminary

Tenney, Merrill C.

J. P. Williston Professor of Bible and Theology, Wheaton College

Thiselton, Anthony Charles

Lecturer in Biblical Studies, University of Sheffield, England

Thomas, Robert L.

Professor of New Testament Language and Literature, Talbot Theological Seminary

Thompson, John Alexander

Research Consultant for the American Bible Society

Thompson, John Arthur

Senior Lecturer in the Department of Middle Eastern Studies, University of Melbourne

Thompson, W. Ralph

Professor of Religion, Spring Arbor College, Michigan

Trutza, Peter

Founder and President, Radio Minister of the Romanian Missionary Society; Editor of *The View*

Turner, George

Professor of Biblical Literature, Asbury Theological Seminary

Van Elderen, Bastiaan

Professor of New Testament Studies, Calvin Theological Seminary

Verhoef, Pieter A.

Professor of Old Testament, University of Stellenbosch, South Africa

Vos, Johannes G.

Professor Emeritus of Biblical Literature, Geneva College

***Voth, Esteban**

Translation Consultant, United Bible Societies, Buenos Aires, Argentina

Walker, Larry L.

Associate Professor of Old Testament, Southwestern Baptist Theological Seminary

Wallis, Wilber B.

Professor of New Testament, Covenant Theological Seminary

Walls, Andrew F.

Head of the Department of Religious Studies, University of Aberdeen, Scotland

Waltke, Bruce

Professor of Old Testament, Regent College

Walvoord, John F.

President and Professor of Systematic Theology, Dallas Theological Seminary

Waterman, G. Henry

Former Professor of New Testament Interpretation, Wheaton College

Weber, Carl Philip

Instructor, Letcher High School, Letcher, Kentucky

Whaley, Howard A.

Chairman of Department of Missions, Moody Bible Institute

Whitcomb, John C., Jr.

Professor of Theology and Old Testament; Director of Postgraduate Studies, Grace Theological Seminary

White, William, Jr.

Editorial Consultant and Writer on Life Sciences and Biblical Languages

Wilson, Charles

Head of Department of Religion, Taylor University

Wilson, Marvin R.

Professor of Biblical and Theological Studies, Gordon College

Wilson, Robert Mc L.

Professor of New Testament Language and Literature; St. Mary's College, University of St. Andrews, Scotland

Wiseman, Donald J.

Professor of Assyriology, University of London; Chairman, British School of Archaeology in Iraq

Wolf, Herbert M.

Assistant Professor of Old Testament, Wheaton Graduate School

Wood, A. Skevington

Senior Lecturer in Theology, Cliff College, Derbyshire, England

Wood, Leon J.

Former Professor of Old Testament and Dean, Grand Rapids Baptist Bible Seminary

Woolley, Paul

Professor Emeritus of Church History, Westminster Theological Seminary

Woudstra, Sierd

Professor of Systematic Theology, Reformed Theological Seminary, Geelong, Australia

Wright, John Stafford

Former Principal, Tyndale Hall, Bristol; Canon Emeritus of Bristol Cathedral

Yamauchi, Edwin

Professor of History Department, Miami University (Ohio)

Young, Fred E.

Dean and Professor of Old Testament, Central Baptist Theological Seminary

T. 12 Pair. Testaments of the Twelve Patriarchs

Zad. Frag. Zadokite Fragments

Other Christian, Jewish, and Greco-Roman texts are referred to by their standard abbreviations. See, e.g., *The SBL Handbook of Style* (1999), ch. 8, appendix F, and appendix H.

Reconstruction of the tabernacle located in Israel's northern Sinai at the Timna Nature Reserve (view to the W). The role of the Aaronic priesthood was to present offerings and sacrifices on behalf of the people at the portable tabernacle that God instructed the Israelites to carry throughout their journey to the Promised Land.

A. The symbol used to designate CODEX ALEXAN-DRINUS. See also SEPTUAGINT; TEXT AND MANUSCRIPTS (NT).

Aalar ay'uh-luhr. KJV Apoc. variant of IMMER (1 Esd. 5:36).

Aaron air'uhn (אֲהֹרֹן *HI95*, derivation uncertain, possibly an Egyp. name; Ἄαρών *G2*). Son of AMRAM and JOCHEBED, and descendant of LEVI; brother of MOSES and MIRIAM. The meaning of the

name is unknown, as is the case with many biblical names, and various suggested etymologies, such as ^ʾārôn H778, “ark,” are quite improbable (with regard to proper names ending in -ōn, cf. GKC §85v). No explanation or interpretation of it is given in Scripture, which may indicate that, unlike Moses (Exod. 2:10), the name Aaron had no special significance.

I. The family. Aaron was the elder son of Amram and Jochebed. Amram belonged to the tribal family of KOHATH son of Levi (Exod. 6:16). The genealogy given suggests that Amram was a son of Kohath and consequently a grandson of Levi. The fact that at the time of the exodus the Kohathites numbered 8,600 (Num. 3:28) makes it probable that Amram, Izhar, and Uzziel in Exod. 6:21–22 were descendants of the men of like name mentioned in v. 18, with a considerable, though unindicated, interval of time between them (cf. Lev. 10:4). On the other hand, the remarkable longevity attributed to Levi (137 years), to Kohath (133 years), and to Amram (137 years) may have a significant bearing on this problem. The name of Aaron’s mother was Jochebed (“Yahweh is glorious”), which may be significant, since names combined with Yahweh were rare in this early period. Aaron’s wife was ELISHEBA, sister of NAHSHON, apparently the prince of Judah who was an ancestor of David (Exod. 6:23; Ruth 4:20; 1 Chr. 2:10). He had four sons, NADAB, ABIHU, ELEAZAR, and ITHAMAR (Exod. 6:23), the first two of whom were slain for an act of sacrilege (Lev. 10:1–2).

II. Moses’ spokesman. The subordinate role of Aaron, as compared with Moses, is indicated clearly. He was completely ignored until Moses showed almost insuperable unwillingness to obey God’s call to be the deliverer of Israel: “Is there not Aaron your brother, the Levite?” (Exod. 4:14, following the word order of the Heb.). The phrasing of the question is remarkable. “Your brother” indicates that Aaron owed his position primarily to his relationship to Moses. Kinship and descent played a prominent role in Bible history. Aaron was called Moses’ brother eleven times. He was eighty-three years old at this time (Exod. 7:7), and the designation “the Levite” suggests that he occupied a prominent position in this particular tribe of the enslaved Israelites. What this position was is unknown; the text simply says that his ready tongue (Heb., “he can certainly talk,” Exod. 4:14) would make up for Moses’ slowness of speech (Heb., “heavy of mouth and heavy of tongue,” v. 10).

Aaron was constantly associated with Moses in performing the mighty acts that brought about the deliverance (Exod. 1–13). The rod as the symbol of authority was sometimes wielded by Aaron (see AARON’S ROD, STAFF). God frequently spoke to both Moses and Aaron, rarely to Aaron alone. Aaron had no part in the giving of the law, but he and his two elder sons, with the seventy elders, witnessed the divine self-manifestation and ate and drank in God’s presence (Exod. 24:1–11).

Aaron had nothing to do with the construction of the TABERNACLE or the making of the ARK OF THE COVENANT and the sacred vessels. Everything was made, including the vestments of Aaron and his sons, by BEZALEL of Judah and OHOLIAB of Dan (Exod. 31:1–6) and by the willing-hearted among the people (35:21–35), “just as the LORD had commanded” (39:43).

III. Aaron’s investiture. The priests, and especially Aaron, wore a special garb. Much is said about the garments that were made for Aaron “to give him dignity and honor” (Exod. 28:2), especially the breastplate on which were engraved the names of the twelve tribes (vv. 1–10, 21, 29) and the URIM AND THUMMIM. The “plate of gold” with the engraving “HOLY TO THE LORD” (v. 36), which was placed on the front of the miter, was symbolic of his office. Aaron was in a preeminent sense both the representative of the people and

According to Islamic tradition, the tomb of Aaron lies atop Jebel Harun (Mount Hor) located a few miles S of Petra.
(View to the NW.)

their mediator with God. The hereditary character of his office is stressed by the fact that his garments were to be worn by his successors in office (Exod. 29:21–30; Num. 20:21–28). In contrast, nothing is said about Moses' garb; and Moses had no successors. His office as lawgiver was unique, and the law he gave was of perpetual validity (Mal. 4:4). All the priests were anointed with oil (Exod. 40:11–15; Lev. 8:12), yet apparently the anointing of Aaron and his successor was different from that of the ordinary priests. Hence, the high priest was, in a special sense, the “anointed priest” (Lev. 4:3, 5; 6:20, 22; 21:10).

IV. Aaron and the priesthood. The book of LEVITICUS is the manual for the priests. The name (taken from the LXX) was perhaps a misnomer, since the Levites are mentioned only in one passage in the entire book (Lev. 25:31–33); and yet it does contain a manual of instruction for the Levitical priests to follow (see PRIESTS AND LEVITES). The first seven chapters deal with the elaborate sacrificial ritual that was to be performed by Aaron and his sons. To make ATONEMENT for sin was the great mediatorial duty of the priests. Their duties also included the removal of all forms of UNCLEANNES from the people of God as a holy community (Exod. 29:41–46). Accordingly, Leviticus gives instructions regarding clean and unclean animals (Lev. 11), the purification of women after childbirth (ch. 12), leprosy (chs. 11–14), bodily secretions of men and women (ch. 15), prohibited relationships in marriage (ch. 18), miscellaneous ritual laws (chs. 11–22), the Sabbath and the annual feasts (ch. 23), the sabbatical years, tithes, blessings and cursings, vows, etc. (chs. 21–27). The fact that the enforcement of these laws was entrusted to the priests made them in a preeminent sense the teachers of the people (Deut. 31:1–11).

The rite in which Aaron as high priest and the high priests who followed him played a distinctive role was the ceremony of the Day of Atonement, when the high priest made atonement “once a year for all the sins of the Israelites” (Lev. 16:34). The “all” refers principally to sins of ignorance or inadvertence (Num. 15:21–29), since for defiant sins, the sins of the “high hand,” the penalty was death (vv. 31–36). See ATONEMENT, DAY OF.

Aaron vigorously opposed the people at KADESH BARNEA when they refused to go forward to possess the land (Num. 14:5), and the Levites had no representative among the twelve spies, from which one may infer that the priests and the Levites were not included in “the generation of wrath” that was condemned to perish in the wilderness for its disobedience and unbelief (vv. 21–38). The

rebellion of a Levite named KORAH (Num. 16) was directed against the exclusive authority of Moses and Aaron, and Aaron was instrumental in the staying of the plague that followed (vv. 41–50). The ritual of the red heifer providing for the purification from uncleanness was the last of the ritual ordinances instituted in the lifetime of Aaron (Num. 19).

V. Meribah and Aaron's death. Aaron's life had a tragic ending, related to the incident at MERIBAH. The sojourn in the wilderness of ZIN (Num. 20:1) led to one more of the many murmurings of the Israelites—no water! Moses and Aaron were encouraged by the sight of the glory of God (v. 6). They were then commanded to take the staff, to assemble the people, and to “speak” to the rock. Instead “he” (prob. Aaron rather than Moses, but the Hebrew is ambiguous) said to the people, “Listen, you rebels, must we bring you water out of this rock?” Then Moses raised his arm and struck the rock twice with his staff. Water gushed out, and the community and their livestock drank. But the LORD said to Moses and Aaron, ‘Because you did not trust in me enough to honor me as holy in the sight of the Israelites, you will not bring this community into the land I give them’” (vv. 11–12). The chapter closes with a brief account of Eleazar's investiture and Aaron's death: “Moses removed Aaron's garments and put them on his son Eleazar. And Aaron died there on top of the mountain” (v. 28). The narrative makes it quite plain that both Moses and Aaron were involved in this sin of presumption or self-assertion, and this incident serves as a solemn warning to all servants of God, lest they take to themselves the credit for the “mighty works” that God accomplishes through them.

VI. Aaron the man. Aaron owed his exalted position to two things, his eloquence and his kinship to Moses. Aaron's character must be estimated by two incidents, the first of which was the supreme test of his life, namely, the construction of the golden calf (see CALF, GOLDEN). Aaron had heard the Decalogue with its “shalt nots” proclaimed by the voice of God (see TEN COMMANDMENTS). He had “seen God” and had taken part in a sacramental feast (Exod. 24:1–14). His brother had gone up into the mountain to commune with God; Aaron and Hur were left in charge. The people, impatient at Moses' long absence of forty days, demanded gods. Aaron asked for the gold needed to make them. He made an idol of a calf and built an altar for it. Then he announced a feast in honor of Yahweh, who had prohibited IDOLATRY. When confronted by the fiery wrath of Moses, he laid the blame on the people and disclaimed all responsibility for the shape assumed by the molten image (32:21–24). He expressed no remorse for the “great sin” (vv. 31–31) into which he had led the people; it was only Moses' intercession (Deut. 9:12, 16, 20), not his own repentance, that saved him from the death penalty, which he perhaps deserved more than did the three thousand who perished in their iniquity.

The second incident involved Aaron's disloyalty to Moses. Aaron was apparently fully aware that he owed his exalted position to the fact that he was Moses' brother. He even called Moses “lord” (Exod. 32:22; Num. 12:11). Yet he could not entirely forget that he and Miriam were both older than Moses. Hence, on one occasion they followed the example set by the people who murmured against Moses (Num. 12). The occasion was a personal or family matter, Moses' marrying a CUSHITE WOMAN. AS in many other instances, the Bible states the fact without explanation or argument. Who the woman was, why Moses married her, what had become of ZIPPORAH, we are not told. Miriam and Aaron found in this circumstance an occasion or pretext for challenging Moses' unique authority. The Lord intervened directly and summarily, rebuked Miriam and Aaron, and even smote Miriam with leprosy, the removal of which was granted only in response to Moses' prayer, at Aaron's plea. Aaron was not a true leader. He owed his position to his kinship to Moses, and he needed the support of that wonderful brother to qualify him as high priest.

VII. Aaron and the critics. Aaron has received remarkable treatment at the hands of some OT critics. His name appears in the Hebrew Scriptures nearly 350 times, of which almost 300 are in the books of Exodus, Leviticus, and Numbers. Often his name is coupled with that of Moses, which means that at the time of the exodus he was second only to Moses in prominence. According to the hypothesis of Wellhausen, however, Aaron was an artificial concoction of late biblical tradition. One writer avows that “Aaron is missing from J; and is only incidental in E” (E. S. Brightman, *The Sources of the Hexateuch* [1918], 208). See PENTATEUCH.

It is illuminating to examine the basis for this statement. In the J document Aaron’s name is coupled with that of Moses (“Moses and Aaron”) ten times, describing their dealings with Pharaoh. How then can it be asserted that Aaron is missing from J? Brightman points out that many critics following the lead of Wellhausen regard “and Aaron” as an insertion of a late redactor of the Pentateuch; in other words, Aaron’s name was not originally in the earliest document of the Pentateuch. Aaron is declared to be “incidental in E” (the next earliest source), although E mentions him twenty-one times, of which more than half are in the incident of the golden calf (Exod. 32), and in the challenging of Moses’ authority (Num. 12), both of which were important events in Israel’s history. This leaves the vast majority of the occurrences of his name to P (the document dealing mostly with the ritual), which is claimed by the critics to be postexilic. Consequently, the Aaronic priesthood and Aaron as high priest can be regarded as a late invention in Israel; and Aaron becomes largely a figment of the imagination of the priests of the exilic period.

How arbitrary this reconstruction may be is indicated by the fact that the words “then Pharaoh called for Moses and Aaron” (Exod. 8:8, 25; 9:27; 10:16; 12:31), which are assigned to J, require in each instance the deletion of the phrase “and Aaron.” On the other hand, the words “the LORD said to Moses and Aaron” (Exod. 7:8 and fifteen other occurrences introduced by similar words) are assigned to P and regarded as properly belonging there, and therefore not subject to deletion. This handling of the text requires a remarkable disregard of consistency, to say the least.

More recent criticism recognizes that the priestly system as a whole cannot be regarded as a postexilic, degenerative phenomenon, but some skepticism about the historicity of Aaron is still common. According to one mediating view, negative statements about him in the Bible may be quite early, but positive assessments are relatively late in origin. (See further *ABD*, 1:1–6; *DOTP*, 1–3.)

O. T. ALLIS

Aaronites air’uh-nits. This term is used by the KJV in two passages where the Hebrew simply has AARON, but where the reference is clearly to his descendants (1 Chr. 12:27 [NIV, “the family of Aaron”; NJPS, “the Aaronides”]; 27:17).

Aaron’s rod, staff. This expression is used specifically of the staff (Heb. *matteḥ* H4751; Gk. *rhabdos* G4811) that budded to vindicate the divine authority of AARON as high priest (Num. 17:8). When KORAH and his confederates challenged the leadership of MOSES and Aaron (chs. 11–17, possibly the most important event during the thirty-seven years of wandering described in chs. 11–19), Moses demanded that the staffs of each of the princes of the tribes be given him; and he placed their staffs with Aaron’s “before the LORD in the Tent of the Testimony” (17:7). The next day Aaron’s staff was found to have budded; and it was then placed before the ARK OF THE COVENANT in the Holy of Holies to be preserved as a witness against all who might rebel against his authority (17:1–10). (It is possible that the staff was subsequently placed inside the ark, as Heb. 9:4 suggests; see the

discussion by P. E. Hughes, *A Commentary on the Epistle to the Hebrews* [1977], 315).

The staff referred to is very likely the same shepherd's staff Moses was carrying at the time of his call (Exod. 4:2). When turned into a serpent, it became a sign to Moses and Aaron, to Israel, and to Pharaoh of the divine mission and authority of Moses (v. 17). It is twice called "the staff of God" (4:20; 17:9). Sometimes the command was to stretch forth the hand with the staff (8:5). Sometimes it was simply to stretch forth the hand (9:22), with the implication that the staff would be in the hand (v. 23). In the battle with AMALEK the staff was in Moses' hand; and Aaron and Hur supported his arms when he was weary. Moses was commanded to take the staff, and he and Aaron were told to "speak to the rock" (Num. 20:8). Instead of following these instructions implicitly, Moses (evidently with Aaron's support) spoke arrogantly to the people, and Moses lifted up his hand with his staff and smote the rock twice (v. 11), acts of presumption for which he and Aaron were severely punished.

All of the expressions used are natural in view of the significance of the staff. It was called "the staff of God," for it was the symbol of God's authority; it was Moses' staff, because it belonged to him and was carried by him; it was also Aaron's staff, because Aaron at times spoke and acted for Moses. It is to be noted, however, that these "staff passages," because of the variety of expression found in them, have been used to support the documentary hypothesis regarding the origin of the PENTATEUCH. Some passages (Exod. 4:24; 7:15, 17; 9:23; 10:13; 14:16; 21:20) are split in two and divided in the main between documents J and E. This is a striking example of the extremes to which the advocates of this theory are obliged to go in order to work out their analysis. Yet the variety of expression is in entire harmony with the situation as it is represented in the biblical narrative.

O. T. ALLIS

Ab ab (Mishnaic Heb. אב from Akk. *Abu*). The fifth month (July-August) in the Babylonian CALENDAR used by postexilic Israel. This name is not found in the Bible.

Abacuc ab'uh-kuhk. KJV Apoc. form of HABAKKUK (2 Esd. 1:40).

Abaddon uh-bad'uhn (אבדון *H11*, "[place of] destruction, ruin"; Αβδδών *G3*). In the OT the term *ʾābaddōn* (from the verb *ʾābad* *H6*, "to perish") is used almost as a proper noun to connote the place or condition of utter ruin reserved for the wicked in SHEOL (the realm or abode of the dead). It is used only in WISDOM literature (Job 26:6; 28:22; 31:12; Ps. 88:11 [Heb. v. 12]; Prov. 15:11; 27:20 [variant form]) and occurs parallel to "Sheol," "death" (*māwet*), and "grave" (*qeber*). In rabbinic literature the word is sometimes used as a proper noun, equivalent to GEHENNA (*TDNT*, 1:4 n. 1). In Rev. 9:11 destruction is personified when the satanic angel and king of the ABYSS is given this name, translated into Greek as *Apollyōn* *G661*, "destroyer." Abaddon (Apollyon) was manifested after the fifth angel had sounded his trumpet. (See *DDD*, 1.)

K. L. BARKER

Abdias ab'uh-dz'uhs. KJV Apoc. form of OBADIAH (1 Esd. 8:35).

Abagarus. See ABGAR.

Abagtha uh-bag'thuh (אבגתא *H5*, meaning and source of name uncertain, although "happy, fortunate one" has been suggested from an Iranian source). One of the seven eunuchs sent by Ahasuerus, king of

Persia (i.e., XERXES, who reigned 486 –465 B.C.), to bring Queen VASHTI to a royal feast (Esth. 1:10). The name appears in various forms in the ancient versions.

E. S. KALLAND

Abana ab'uh-nuh (אֲבָנָה H76, “stony” [Qere אֲמָנָה H592]). Also Abanah. One of two rivers in DAMASCUS that NAAMAN considered superior to the JORDAN (2 Ki. 5:12; variant reading AMANA). Rising in the Antilebanons near Zebdany, Syria, at c. 1,150 ft., the Abana flows through Damascus, over 20 mi. to the SE, before it fans out and disappears in the salt marsh of Bahret el-Kibliyeh, some 18 mi. farther E. Now called Nahr (River) el-Barada, it was known to the Greeks as *Chrysorroas*, “the golden stream,” for its waters transform arid Damascus into a veritable oasis. See also PHARPAR.

J. B. PAYNE

Abarim ab'uh-rim (עֲבָרִים H6305, “the regions beyond”). The region of TRANSJORDAN, lands E of the JORDAN River; the term is used specifically of the mountain ranges in that region. Mount Nebo was part of the mountains of Abarim (Num. 27:12; Deut. 32:49; see NEBO, MOUNT). Jeremiah

© Dr. James C. Martin

Looking E across the Dead Sea from Israel towards the mountains of Moab (Abarim) in Jordan.

mentions three regions in sequence from N to S: LEBANON, BASHAN, and Abarim (Jer. 22:20). The Abarim mountain ranges are 600 ft. above the plateau of MOAB. They overlook the DEAD SEA, 4,000 ft. below. Some scholars associate these mountains with IYE ABARIM. See also TRAVELERS, VALLEY OF THE.

C. F. PFEIFFER

abase. This English term (meaning “to lower in esteem, to make humble”) occurs a number of times in the KJV, less often in the NRSV, and not at all in the NIV. God was especially determined to

exercise himself against the proud. JOB was told, “Look on everyone that is proud and abase him” (Job 40:12 KJV; NIV, “bring him low”; Heb. *š āpēl* H9164, hiph.). Even NEBUCHADNEZZAR, the pagan, recognized this truth and declared that “those who walk in pride he is able to abase” (Dan. 4:37 KJV; NIV, “to humble”). The NT insists that whoever exalts himself will be humbled (Matt. 23:12; Lk. 14:11; 18:14; Gk. *tapeinoō* G5427), and Paul emphasized the spiritual lesson of knowing how to be abased (NIV, “to be in need”) and yet abound (Phil 4:12). See HUMILITY.

H. L. DRUMWRIGHT, JR.

abate. This English term (meaning “to reduce, lessen”) is used six times in the KJV to render various Hebrew words. When MOSES died at the age of 120 years, his natural force was not abated (Deut. 34:7; Heb. *nūs* H5674, “to flee”). The dedication of a field after the Year of JUBILEE caused its value to be abated (NIV, “reduced”) by the years that had passed (Lev. 27:18; Heb. *gādra* H1757, “to cut off, diminish”). The waters abated (NIV, “receded”) after the flood (Gen. 8:3, 8; Heb. *ḥāser* H2893, “to lack, decrease”). The anger of the men of Ephraim was abated (NIV, “subsided”) against GIDEON (Jdg. 8:3; Heb. *rāpā* H8332, “to be feeble, to desist”).

H. L. DRUMWRIGHT, JR.

Abba ah’buh, ab’uh (Aram. אבא “[the] father”; ἄββᾶ G5). An ARAMAIC term (prob. determinative form of *’āb*, “father”), transliterated into Greek in the NT and then into English. The word does not occur in either the Hebrew OT or the SEPTUAGINT. It occurs in three NT prayers (Mk. 14:36; Rom. 8:15; Gal. 4:6) together with its Greek equivalent as *Abba ho patēr*.

According to Mk. 14:36, Jesus used the term when he prayed in GETHSEMANE. Jesus might also have used this Aramaic term where his words are reported in Greek. Especially is this likely in Jesus’ prayers, where various expressions occur: *ho patēr*, “father” (Matt. 11:26), *tou patros mou*, “my father” (v. 27), and in the vocative form, *pater*, “father” (v. 25), *pater mou*, “my father” (26:39, 42), and *pater hēmōn*, “our father” (6:9).

Paul’s use of the term seems to reflect a common NT practice or even an early liturgical formula. Such a practice most probably would have stemmed from Jesus’ use of the word, making it fraught with his reverent intimacy with his Father, a reverence and intimacy that he tried to teach his disciples. Dalman’s assertion, “The usage of family life is transferred to God: it is the language of the child to its father,” fits well with this idea (G. Dalman, *The Words of Jesus* [1902], 192; however, see J. Barr, JTS 39 [1988]: 21–47). It is possible that *Abba* was used in addressing God in the Lord’s prayer (Matt. 6:9). In both Rom. 8:15 and Gal. 4:6, Paul related the use of the term to the expression of the consciousness of the intimate relationship of the Christian to God as his Father, a relationship based upon its actuality through and in Christ.

In the MISHNAH the term may mean “my/our father” and is used as a title or even as a proper name. It is almost never used of God in post-NT Jewish writings. It is evident from this later Jewish usage, as well as from the almost complete silence of the OT in regard to the use of such words in personal relationship with God, that the NT use of “Abba, Father” was highly significant of a relationship between Jesus and his Father, and then between the Christian and God as Father, which greatly transcended OT concepts. See FATHERHOOD OF GOD.

E. S. KALLAND

Abda ab’duh (עבדא H6272, “servant, worshiper”; possibly a short form of עבדא H6282 [see

OBADIAH)]. (1) Father of ADONIRAM, who was a high official of SOLOMON in charge of forced labor (1 Ki. 4:6; LXX has Ephra instead of Abda).

(2) Son of Shammua and a postexilic chief Levite in Jerusalem (Neh. 11:17), also called Obadiah son of Shemaiah (1 Chr. 9:16).

E. S. KALLAND

Abdeel ab'dee-uhl (עבדאל H6274, “servant of God”; cf. OBADIAH). Father of an official named SHELEMIAH; the latter, with two other officials, was instructed by King JEHOIAKIM to arrest BARUCH the scribe and JEREMIAH the prophet (Jer. 36:26).

Abdi ab'di (עבדי H6279, conjectured to be an abbreviation of עבדיה H6281, “servant of Yah” [see OBADIAH]; cf. LXX Ezra 10:26, βδία). (1) A Levite of the family of MERARI whose grandson ETHAN was made a songmaster by DAVID (1 Chr. 6:44 [Heb. v. 29]).

(2) Father of Kish, a Levite of the family of MERARI; Kish took part in the cleansing and consecration of the temple under King HEZEKIAH (2 Chr. 29:12).

(3) A descendant of Elam, included in a list of men who had married foreign women during the EXILE contrary to the law of Moses, but who put away their wives and children in obedience to Ezra (Ezra 10:26).

E. S. KALLAND

Abdias ab-dz'uhs. KJV Apoc. form of OBADIAH (2 Esd. 1:39).

Abdias, Apostolic History of ab-di'uhs. A Latin collection of legends about the twelve apostles, including PAUL, compiled from various sources (the canonical Gospels and Acts, the CLEMENTINE LITERATURE, the earlier apocryphal Acts, etc.) not earlier than the end of the 6th cent. According to the preface it was written in Hebrew by Abdias, bishop of Babylon, companion of the apostles Simon and Jude, and himself said to have seen the Lord; his disciple Eutropius allegedly translated it into Greek, and Julius Africanus into Latin. This claim has no historical foundation. The book's importance lies in its preservation of material from older sources, and is reduced when these sources are themselves available. In its present form the work is divided into ten books, one for James the Less, Simon, and Jude, and one for each of the other apostles.

R. McL. WILSON

Abdiel ab'dee-uhl (עבדיאל H6280, “servant [*i.e.*, worshiper] of God”; cf. ABDA, ABDEEL, ABDI, OBADIAH). Son of Guni and father of Ahi; the latter was head of a clan in the tribe of GAD that lived in GILEAD and BASHAN (1 Chr. 5:15).

Abdon (person) ab'duhn (עבדון H6277, “servant” or “servile”). (1) Son of Hillel and the eleventh mentioned judge of Israel in the book of Judges. Abdon “judged” Israel eight years, probably from PIRATHON in the hill country of EPHRAIM. The reference to his “forty sons and thirty grandsons, who rode on seventy donkeys” probably signifies the wealth and prominence of his family. Abdon was buried in Pirathon (Jdg. 12:11–15). Nothing is said about his rule. JOSEPHUS suggests that his reign was a peaceful one, and therefore “he had no occasion to perform glorious actions” (*Ant.* 5.7.15 §273).

(2) Oldest son of Jeiel (KJV, Jehiel) and Maacah of GIBEON, included in the two lists of SAUL'S genealogy (1 Chr. 8:30; 9:36). See also ABIEL.

(3) Son of Micah, sent by King JOSIAH with other officials to inquire of HULDAH the prophetess, after the book of the law of the Lord was read before him (2 Chr. 34:20; called Acbor son of Micaiah in 2 Ki. 22:12, 14; Jer. 26:22).

(4) Son of Shashak (1 Chr. 8:23, cf. v. 25), a Benjamite living in Jerusalem, probably in NEHEMIAH'S time (see vv. 1, 28).

E. S. KALLAND

Abdon (place) ab'duhn (עבדון H6278, possibly "service"). One of the four Levitical towns in the territory of ASHER (Josh. 21:30; 1 Chr. 6:74), probably located at modern Khirbet (Abdah about 15 mi. S of TYRE; perhaps to be identified with the EBRON of Josh. 19:28 (where some Heb. MSS read "Abdon" instead of "Ebron").

Abednego. See SHADRACH, MESHACH, ABEDNEGO.

Abel (person) ay'buhl (הבל H2040, "breath, vanity" [if from the Heb. root *hbl*] or "son, heir" [if from the Akk. root *ablu/aplu*, Sumer. *ibila*]; "Αβελ G6, also "Αβελ). The second son of ADAM and EVE and the brother (some think the twin) of his jealous murderer, CAIN. Abel was a shepherd while Cain his brother "worked the soil" (Gen. 4:2). Many point to the ANE literary motif of a traditional rivalry between the nomad and the farmer. This could hardly be the interpretation of the Cain and Abel story since: (1) farming is not disparaged in this account but rather is assumed as the natural occupation of Adam in the Garden of EDEN; (2) the punishment is not upon the occupation but upon Cain himself; and (3) the comparative evaluation of the two brothers focuses not on their vocations, but rather on the men themselves and their offerings (cf. N. M. Sarna, *Understanding Genesis* [1966], 28).

The SACRIFICE of Abel is accepted because God first inspected the man and then regarded the offering (note how emphatic the order and repetition of the words is in the Hebrew text). According to Heb. 11:4, it was "by faith" that Abel offered a better sacrifice. The object or content of that faith is variously understood: T. J. Crawford (*The Doctrine of Holy Scripture Respecting the Atonement* [1874], 280) holds that it had reference to the previously revealed promise of a redeemer for our fallen race; H. C. Leupold (*Exposition of Genesis* [1942], 1:196) points to the words "fat portions" and "the firstborn of his flock" (Gen. 4:4); others hold the merit was in the blood. Abel's blood is contrasted with Christ's in Heb. 12:24. (See also Matt. 23:35; 1 Jn. 3:12.)

W. C. KAISER, JR.

Abel (place) ay'buhl (אבל H64, "meadow"). A name frequently found in compounds and used to describe the nature of a site or its surroundings. In 2 Sam. 20:18 Abel is the shortened form of ABEL BETH MAACAH. In 1 Sam. 6:18 the Hebrew text reads "the great meadow," whereas the NIV translates "the large rock," following the SEPTUAGINT (which has *lithou*, evidently reading Heb. ^l*bn* rather than ^l*bl*); the KJV harmonizes by conflating the two readings and translating, "the great *stone of* Abel."

W. C. KAISER, JR.

Excavated area of Abel Beth Maacah. (View to the NE.)

Abel, the great (stone of). See ABEL (PLACE).

Abel Beth Maacah ay'buhl-beth-may'uh-kuh (אָבֵל בֵּית מַעֲכָה H68 [with spelling variations], “meadow of the house of oppression”). Sometimes translated “Abel of Beth-maacah,” and also known as Abel Maim (2 Chr. 16:4). A city in the tribal territory of NAPHTALI, in northern Palestine, about 5 mi. W of DAN (PLACE), and 9 mi. S of IJON. JOAB pursued SHEBNA to this city (2 Sam. 20:11–22). Under BEN-HADAD (1 Ki. 15:20), and later under TIGLATH-PILESER (2 Ki. 15:29), the city was captured. The modern name for the site is Abil el-Qamh.

A collection of 19th-cent. B.C. Egyptian texts of curses, called the EXECRATION TEXTS, possibly includes a reference to Abel along with Ijon, Laish, and Hazor. It appears in THUTMOSE III's roster of 119 Canaanite towns as number 92 (spelled *ibr*). This town is to be distinguished from number 99 in Thutmose's list, which refers to modern Ayn Ibl (En-bul in the TALMUD). Tiglath-Pileser has left a fragmentary text in the Nimrod Tablet (see D. J. Wiseman, *Iraq* 18 [1956]: 111–29), giving an account of the same invasion mentioned by the biblical writer in 2 Ki. 15:29. After conquering various towns in northern Syria and on the Phoenician coast, he went on to Gal^aza (Gilead) and

Abil [ma]akka (Abel Beth Maacah) on the border of the land of Beth-Omri (Israel) and Beth-Hazael (Aram-Damascus).

W. C. KAISER, JR.

Abel-cheramim ay'buhl-ker'uh-mim. See ABEL KERAMIM.

Abel Keramim ay'buhl-ker'uh-mim (אָבֵל כְּרָמִים H70, “meadow of vineyards”). Also Abel-cheramim, Abel-keramim. Along with Atoer, Minnith, and “twenty cities,” Abel Keramim is listed as one taken in JEPHTHAH'S military campaign against the Ammonites (Jdg. 11:33; KJV, “the plain of the vineyards”). The forces of Jephthah gathered at MIZPAH (Jdg. 10:17; cf. 11:29). None of these locations has been identified with certainty, but if Mizpah is the same as Ramath Mizpah (listed as one of the cities of Gilead between Heshbon and Betonim, Josh. 13:26), then Abel Keramim must be sought in an area S of the JABBOK River. Proposed identifications include modern Na^ur and ancient

Sahab, both of them near Amman (for the latter, see E. A. Knauf in *ZDPV* 100 [1984]: 111–21). Cf. also Eusebius, *Onom.* 32.11–16.

W. C. KAISER, JR.

Abel Maim ay'buhl-may'im (אָבֵל מַיִם H72, “meadow of water”). Also Abel-maim. An alternate name for ABEL BETH MAACAH; it occurs only in 2 Chr. 16:4.

Abel Meholah ay'buhl-mi-hoh'luh (אָבֵל מְחֹלָה H71, “meadow of dancing”). Also Abel-meholah. The hometown of ELISHA the prophet (1 Ki. 19:16). This is where ELIJAH, returning from HOREB on his way to DAMASCUS, found Elisha and his servants plowing with twelve yoke of oxen. During SOLOMON'S reign, Abel Meholah was included in the same district as BETH SHAN (4:12). Previously, this site had figured in GIDEON'S smashing victory over the Midianite camp in the JEZREEL Valley (Jdg. 7:22). The identification of Abel Meholah is debated (for the various proposals, see *ABD*, 1:11–12). S. Cohen (in *IDB*, 1:5) believes that the Midianites, in their flight southeastward, crossed the JORDAN; he identifies the site with Tell el-Maqlub on the Wadi el-Yabis (as proposed by N. Glueck, *Explorations in Eastern Palestine*, 4 vols., AASOR [1931–51], 4:216; but see JABESH GILEAD). Most scholars, however, prefer to look for a site W of the Jordan. EUSEBIUS pointed to a location about 9 mi. (10 Roman mi.) SSE of Beth Shan; on that basis and other evidence, many scholars identify Abel Meholah with a site known as Tell Abu Sus, on the W bank of the river (cf. Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 313). See also ZERERAH.

During the Solomonic reign, Abel Meholah is mentioned as part of the area governed by Baana (1 Ki. 4:12), one of the twelve administrative officers for Solomon's governmental districts. The man to whom Saul's eldest daughter, Merab, was given (instead of to David) was one named ADRIEL the MEHOLATHITE (1 Sam. 18:19; 2 Sam. 21:8; NIV, “Adriel of Meholah”). On the meaning and etymology of Meholah, see W. F. Albright's interesting and convincing discussion (*Archaeology and the Religion of Israel*, 4th ed. [1956], 121–29, 210 n. 96).

W. C. KAISER, JR.

Abel Mizraim ay'buhl-miz'ray-im (אָבֵל מִצְרַיִם H73, “meadow [or mourning] of Egypt”). Also Abel-mizraim. An unidentified site where the funeral cortège of JACOB stopped on its way to HEBRON for a special seven days of mourning according to Gen. 50:11–11. Obviously there is a pun here between *ʿēbel* H65, “mourning,” and *ʿābēl* H64, “meadow” (the latter found only in place names). The other name for this place is “the threshing floor of Atad.” The location is not necessarily on the E side of the Jordan as the majority view states, but is probably on the W side. The phrase “beyond the Jordan” (NRSV) need not always refer to TRANSJORDAN, as now shown by the SABEAN word (*brt*, “the neighborhood of a stream” (cf. B. Gemser's suggested rendering “the region of Jordan,” *VT* 2 [1952]: 351–53). Accordingly, the NIV translates, “near the Jordan.”

W. C. KAISER, JR.

Abel Shittim ay'buhl-shit'im (אָבֵל הַשִּׁטִּים H69, “meadow of the acacias”). Also Abel-shittim. This full form occurs only in Num. 33:49; the place is probably to be identified with SHITTIM.

Abez ay'bez. KJV form of EBEZ (Josh. 19:20).

Abgar; Epistles of Christ and ab'gahr. Also Abgarus or Abagarus. Two short apocryphal letters preserved in EUSEBIUS (*Eccl. Hist.* 1.13, in the context of a legend which he claims to have translated himself from Syriac documents in the archives of EDESSA). Abgar V, king of Edessa (d. A.D. 50), afflicted with a terrible disease, writes to Jesus to ask for healing, in terms suspiciously reminiscent of the Gospels. Having heard of the hostility of the Jews, he offers Jesus his own city as a safe place of refuge. Jesus replies in markedly Johannine language, declining the invitation because he has a mission to fulfill in Palestine, but promising, “when I am lifted up,” to send one of his disciples. The sequel tells how the promise was fulfilled after the ASCENSION OF CHRIST when Judas Thomas sent Thaddaeus (= Addai) to Edessa. (See also THADDAEUS, ACTS OF.)

The legend enjoyed wide currency in several languages. In the expanded version found in a Syriac work written c. 400, *The Doctrine of Addai, the Apostle* (ed. G. Phillips [1876]; English trans. G. Howard, *The Teaching of Addai* [1981]), Abgar's messenger takes back not a letter but a portrait of Jesus (in the *Acts of Thaddaeus*, it is a handkerchief). About the same period the pilgrim Aetheria testifies that the story was known in the West. AUGUSTINE (*Faust.* 28.4) and JEROME (*Ezech.* at 44:29) both affirm that Jesus left nothing in writing, and the correspondence is later declared apocryphal by the *Decretum Gelasianum* in the 6th cent. Abgar V of Edessa was contemporary with Jesus, but the legend, unknown before Eusebius, is an obvious fiction, probably compiled for propagandist purposes. See also DOCTRINA ADDAEI.

R. MCL. WILSON

Abi ay'bi (אֲבִי H23, “my father,” short form of אֲבִיָּהּ H31, “[my] father is Yahweh”; see ABIJAH). The mother of King HEZEKIAH, spoken of also as the daughter of a certain Zechariah (2 Ki. 18:2 [NIV, “Abijah”; cf. 2 Chr. 29:1]). The form Abi is also used in the composition of many Hebrew names with various possible meanings, such as “father of,” “is father,” “the [my] father is” (the vowel *i* may represent the first person possessive pronoun, but it can also be interpreted merely as a linking sound). The term sometimes refers to a grandfather or more distant ancestor. See FATHER.

E. S. KALLAND

Abia, Abiah uh-bz'uh. KJV alternate forms of ABIJAH.

Abi-Albon ay'bz-al'buhn (אֲבִי־עֲלֹבוֹן H50, meaning uncertain). Identified as an Arbathite, Abi-Albon was a member of DAVID'S thirty mighty warriors (2 Sam. 23:31). Most likely he was from BETH ARABAH, a border town of Judah and Benjamin (Josh. 15:6, 61; 18:22). The name may be corrupt. Some suggest confusion with Shaalbon (cf. 2 Sam. 23:32). The SEPTUAGINT has Abiel in 2 Sam. 23:31; both the Hebrew and the Greek texts read Abiel the Arbathite in 1 Chr. 11:32. The suggestion that Albon is a corruption of BAAL is not likely.

E. S. KALLAND

Abiasaph uh-bz'uh-saf (אֲבִי־אֶסַף H25, “[my] father has gathered”; spelled אֶבְיָסַף H47 [Ebiasaph] in 1 Chronicles and by the Samaritan Pentateuch in Exodus). A Levite, one of the sons or clans of KORAH (Exod. 6:24; 1 Chr. 9:19). The order of succession in Exod. 6:11–24 and 1 Chr. 6:31–38 is Levi, Kohath, Izhar, Korah, A(E)biasaph. In 1 Chr. 6:21–23, the order of the clans is given as Kohath, Amminadab, Korah, Assir, Elkanah, Ebiasaph. He is apparently called Asaph in 1 Chr. 26:1 (cf. LXX).

Abiathar uh-bi'uh-thahr (אֲבִיָּאֵתָר H59, “father of abundance”). Son of the high priest AHIMELECH, who served at NOB during the reign of SAUL. His descent is traced back to PHINEHAS son of ELI (1 Sam. 14:3, where AHIJAH is presumably the apocopated form of Ahimelech), and further to AARON'S son, ITHAMAR (1 Chr. 24:3).

DAVID, while fleeing from Saul, stopped at Nob and requested five loaves of bread from the head priest, Ahimelech, father of Abiathar (1 Sam. 21). In making his request, David involved himself in a lie (21:2), which led to the massacre of Ahimelech and his associates. An Edomite named DOEG, Saul's head shepherd, was being detained at Nob that day and he overheard the conversation between the priest and the fugitive David. When Doeg returned to Saul, he came forward with this information, “Ahimelech inquired of the LORD for [David]; he also gave him provisions and the sword of Goliath the Philistine” (1 Sam. 22:10).

Of these three items, the account in 1 Sam. 21 has nothing to say concerning any inquiry made before the Lord, while it does in general support the other two items. Was Doeg falsely adding to the story? Ahimelech denied this charge (1 Sam. 22:15). There would seem to be more reason to trust the priest rather than Doeg. Moreover, if David had received an oracle from God, it probably would have been included as a theological interpretation and a blessing upon the legitimacy of David's claims and actions. This would have served to warn the priests also of the significance of the events in which they found themselves involved. David later acknowledged his share in the guilt connected with their deaths (1 Sam. 22:22). Afterward he would return to this topic as an example of the wrong use of the tongue (Ps. 52).

Abiathar escaped with the EPHOD and joined himself to David, becoming his priest and his means of discovering the divine will (1 Sam. 22:21–23; 23:6, 9; 30:1–8). Later he is frequently mentioned along with ZADOK (though Zadok is always mentioned first), both being described as high priests under David (cf. 2 Sam. 15:35; 19:11; 20:25; et al.).

Abiathar supported ADONIJAH when the latter rebelled, while Zadok remained loyal to David and SOLOMON (1 Ki. 1:7, 19). Since Adonijah's rebellion failed, Abiathar was in trouble; however, Solomon spared him because of his association with David, and he was exiled to ANATHOTH (2:21–27), so that Zadok remained as the sole high priest. (Note Jer. 1:1, where Jeremiah is identified as “one of the priests at Anathoth.”) The predicted word (1 Sam. 2:21–36) concerning the house of Eli in Shiloh was now fulfilled (1 Ki. 2:27).

On the critical problem of the name of the father of Abiathar, AHIMELECH (1 Sam. 21:1), it must be noted that this name could be shortened to AHIJAH (1 Chr. 5:15). The spelling Abimelech (18:16 KJV, following most Hebrew MSS) is a scribal error for Ahimelech (the reading of some Hebrew MSS and most ancient versions). The further problem of Jesus' reference in Mk. 2:26 to Abiathar as being the high priest when David asked for the consecrated bread has been answered in several ways. Mark's language (*epi Abiathar archiereōs*, “the days of Abiathar the high priest,” NIV) may denote the period when Abiathar served as priest, including the time during which his father was living. It may also have been a more convenient reference for the people of Jesus' day, since the priest associated so long with David was more famous than his father. Another suggestion is that the Greek phrase should be understood, not as temporal, but as a reference to a biblical passage (as in Mk. 12:26, *epi tou batou*, “in the account of the bush”; cf. R. H. Gundry, *Mark: A Commentary on His Apology for the Cross* [1993], 141–42).

Abib ay'bib, ah-veev' (אָבִיב H26, “ripened head of grain”). TNIV Aviv. The first month in the Jewish religious CALENDAR (corresponding to March-April), during which the PASSOVER took place. This is the older, presumably Canaanite name, for the month of NISAN (Exod. 13:4; 23:15; 34:18; Deut. 16:1). Two other Canaanite month names, ETHANIM and BUL, have been identified in Phoenician inscriptions, but neither Abib nor Ziv has so far been attested. The proto-Sinaitic ^bbb appears to be an Egyptian personal name (W. F. Albright, *Proto-Sinaitic Inscriptions* [1966], 38).

W. C. KAISER, JR.

Abib, Tel. See TEL ABIB.

Abida uh-bi'duh (אָבִידָע H30, “father of knowledge” or “my father knows/has acknowledged [me]”). The fourth of the five sons of MIDIAN, who was a son of ABRAHAM by his concubine KETURAH (Gen. 25:4; 1 Chr. 1:33). Abraham gave gifts to the sons of his concubines and sent them to the east while he was still living so that ISAAC'S inheritance would not be compromised (Gen. 25:4). The name has been associated with an Arabian tribe named Ibadidi and with the town of al-Bad^c (in NW Arabia).

E. S. KALLAND

Abidan uh-bi'duhn (אָבִידָן H29, “[my] father has judged”). Son of Gideoni and a Benjamite prince who represented his tribe as a census taker in the wilderness of Sinai (Num. 1:11; 2:22; 10:24). As one of the twelve tribal princes, he made an offering for the tribe of BENJAMIN at the dedication of the TABERNACLE in the wilderness. Benjamin's offering was on the ninth day (Num. 7:60, 65).

E. S. KALLAND

abide. A verb used in the KJV and other English versions of the Bible to render many words (such as Heb. ^āamad H6641 and Gk. ^{menō} G3531). When used in a transitive sense, the English verb means “to await” (Acts 20:23), “to withstand, endure” (Jer. 10:10; Mal. 3:2). As an intransitive verb it means “to continue in a place or state in which one now is” (Acts 27:31), “to dwell, reside” (Lk. 8:27; Jn. 8:35), “to last, endure” (esp. in trial; Ps. 119:90; 1 Cor. 3:14). The word “abide” (NIV, “remain”) is found with great frequency in the Gospel and Epistles of John. Christ used the figure of the vine to illustrate the need for his disciples to abide in him; they will bear fruit only as they remain in Christ (Jn. 15:1–10). See UNION WITH CHRIST.

S. BARABAS

Abiel ay'bee-uhl (אָבִיֵאל H24, “my father is God”). (1) A man of BENJAMIN who is mentioned as the father of KISH and the grandfather of King SAUL and ABNER (1 Sam. 9:1; 14:51). It is conjectured that JEIEL in 1 Chr. 8:29 and 9:35, the father of NER, is the same as Abiel. In that case, Abiel (Jeiel) was the grandfather of Kish and the great-grandfather of Saul. Other solutions have been proposed.

(2) One of DAVID'S thirty mighty warriors (1 Chr. 11:32), also called ABI-ALBON (2 Sam. 23:31). He was probably a native of BETH ARABAH in the N of Judah (Josh. 15:6) and was therefore known as Abiel the Arbathite.

E. S. KALLAND

Abiezer ay'bi'-ee'zühr (אֲבִיעֶזֶר H48, “[my] father is help”; gentilic אֲבִיעֶזְרִי H49, “Abiezrite”). (1) A descendant of MANASSEH, the son of JOSEPH. Abiezer, who settled on the W side of the Jordan (Josh. 17:2), is probably the same as IEZER (a contraction of Abiezer), regarded as the son of GILEAD (Num. 26:30). If 1 Chr. 7:18 refers to the same individual (but see KD, *Chronicles*, 138), he was apparently Gilead's nephew, in which case he may have been considered a son for genealogical purposes (see HAMMOLEKETH). The district of Manasseh inhabited by the Abiezrites (Jdg. 6:34) was the native region from which GIDEON came (6:11). The site of the appearance of the angel of the Lord to Gideon was Ophrah of the Abiezrites (6:24), the town from which Gideon drew his first support of men to fight the Midianites (6:34). See OPHRAH (PLACE). When the jealous Ephraimites complained that they had not been chosen to fight, Gideon responded by issuing the following proverb: “Aren't the gleanings of Ephraim's grapes better than the full grape harvest of Abiezer?” (8:2). With this soft answer, the wrath of the Ephraimites was mollified, and the tactful Gideon had averted a situation filled with political consequences. (This division continued, however, and eventually the pugnacious Ephraimites had their way in 931 B.C. when the kingdom was divided.)

(2) One of DAVID'S military elite, the Thirty; a native of ANATHOTH in BENJAMIN (2 Sam. 23:27; 1 Chr. 11:28). He was one of David's month-by-month army commanders, having his turn in the ninth month (1 Chr. 27:12).

W. C. KAISER, JR.

Abiezrite ay'bz'-ez'rit. See ABIEZER.

Abigail, Abigal ab'uh-gayl, ab'uh-gal (אֲבִיגַיִל H28, “[my] father rejoices” or “source of joy”; also אֲבִיגַל [1 Sam. 25:32; 2 Sam. 3:3] and אֲבִיגַיִל [1 Sam. 25:3]). (1) The wife of NABAL, a rich man of MAON in Judah. When Nabal refused to give provisions to DAVID and his men in payment for the protection they had given him, Abigail, a wise and beautiful woman, herself brought provisions to David, persuading him not to take vengeance on her husband. About ten days later Nabal died, and subsequently Abigail became David's wife (1 Sam. 25:1–42). Abigail bore to David his second son, KILEAB (2 Sam. 3:3; called Daniel in 1 Chr. 3:1 and Daluia in the LXX of 2 Sam. 3:3).

(2) Apparently a half-sister of King David and of ZERUIAH, the mother of JOAB (1 Chr. 2:16; 2 Sam. 17:25). This Abigail was the daughter of NAHASH and the mother of AMASA, who for a while was commander of David's army (17:25; 20:4). It has been suggested that “daughter of Nahash” might be a textual corruption, or that Nahash was another name for JESSE, or that Jesse married the widow of Nahash. Whether or not any of these surmises is true, Abigail and David had the same mother. Her husband was called Jether (2 Sam. 17:25 [NIV]; 1 Chr. 2:11–17; see discussion under ITHRA).

E. S. KALLAND

Abihail ab'uh-hayl (אֲבִיהַיִל H38, “my father is strength” or “strong father”; the form אֲבִיהַיִל H35 [1 Chr. 2:29; 2 Chr. 11:18] may be a variant spelling or a different name). (1) Father of Zuriel, who was head of the house of MERARI (Num. 3:35).

(2) The wife of Abishur of Judah, son of Shammai (1 Chr. 2:29).

(3) Son of Huri; he was a man of the tribe of GAD who lived in GILEAD (1 Chr. 5:14).

(4) Daughter of DAVID'S brother ELIAB. She married her cousin JERIMOTH (David's son) and was the mother of Mahalath, one of the wives of REHOBOAM (2 Chr. 11:18). Ambiguity in the Hebrew text leaves open the possibility that Abi-hail was another wife of Rehoboam (cf. KJV, but the singular in

the Hebrew of the next two verses suggests that he had only one wife).

(5) Father of Queen ESTHER and uncle of MORDECAI (Esth. 2:15; 9:29).

E. S. KALLAND

Abihu uh-bi'hyoo (אֲבִיהוּ H33, “he is [my] father”). The second of the four sons of AARON and ELISHEBA (Exod. 6:23; Num. 3:2; 26:60; 1 Chr. 6:3; 24:1). Aaron, his sons NADAB and Abihu, and seventy elders went part of the way up Mount Sinai with MOSES at the command of the Lord, and they “saw the God of Israel” (Exod. 24:1, 1–10). Abihu, along with his father and three brothers, was later consecrated as priest (Exod. 28:1; Num. 3:1–3; 1 Chr. 24:1). Abihu and his older brother Nadab were slain by God when “they offered unauthorized fire before the LORD, contrary to his command” (Lev. 10:1–2). Neither Nadab nor Abihu had any sons (Num. 3:4; 1 Chr. 24:2).

E. S. KALLAND

Abihud uh-bi'huhd (אֲבִיהוּד H34, “[my] father is majesty”). Son of BELA and grandson of BENJAMIN (1 Chr. 8:3; however, some scholars believe that the text should read “the father of Ehud” rather than “Abihud”).

Abijah, Abijam uh-bi'juh, uh-bi'juhm (אֲבִיהָ H31, “[my] father is Yahweh”; also אֲבִיהָ H32 [2 Chr. 13:21–21] and אֲבִיָּם H41 [1 Ki. 14:31—15:1, not in NIV]). KJV also Abia, Abiah. (1) Seventh son of BEKER and grandson of BENJAMIN (1 Chr. 7:8).

(2) Second son of SAMUEL. Along with his older brother JOEL, he was appointed by his father to be a judge in BEERSHEBA (1 Sam. 8:2). However, the brothers took bribes, perverted justice, and incurred the wrath of the people to such an extent that the Israelites came to Samuel and demanded a king (1 Sam. 8:1–6).

Abijah and his brother Joel, sons of Samuel, may have exercised their functions as judges here at the gate complex of Beersheba, identified by the U-shaped chambers. (View to the E.)

(3) According to 1 Chr. 2:24, a woman named Abijah was the wife of HEZRON (grandson of JUDAH by PEREZ) and the mother of ASHHUR, father (or founder) of TEKOA. The MT is difficult, and some of the ancient versions read differently. The RSV rendering, “Caleb went in to Ephrathah, the wife of Hezron his father, and she bore him Ashhur,” involves an emendation of Abijah (’ābiyyâ) to

“his father” ^ʾ*ābāhū*).

(4) A descendant of AARON who became the head of the eighth priestly division (1 Chr. 24:10). Twenty-four divisions were appointed by lot for the service of the TEMPLE in the time of DAVID. ZECHARIAH, the father of JOHN THE BAPTIST, belonged to the division of Abijah (Lk 1:5; KJV, “Abia”).

(5) Son of REHOBOAM and the second king of Judah during the divided kingdom. In 1 Ki. 14:31; 15:1, 1–8, he is called Abijam (possibly meaning “my father is Yam [the Sea]”) rather than Abijah; however, some Hebrew MSS read Abijah in these passages, supported by the SEPTUAGINT, the parallels in Chronicles, JOSEPHUS, and Matt. 1:7. The explanations given for the double spelling of this name are: (a) A scribal error whereby the final *h* is confused for a final *m*. This suggestion is made less attractive by the fact that the mistake is repeated five times. (b) The older name Abijam was changed to Abijah, a Yahweh-name that seemed to be more befitting to a king of Judah and the line of David than a name with the pagan Canaanite deity now known from the Ras Shamra tablets (see UGARIT) as Yamm, the god of the Sea. This is the more probable view unless the evidence increases for the third alternative. (c) Abijam could be the archaic hypocoristic ^ʾ*abiya-mi*, “my father is indeed [Yahweh].” Martin Noth (*IPN*, 109, 234) has called attention to the pre-Israelite Canaanite name ^ʾ*ahiyami*; cf. also such names as *ahūzzām* and *bilcām*, and Ugaritic *abm* and *šdqm* (C. H. Gordon, *UT*, 8.2).

Abijah (or Abijam) ruled for three years in Jerusalem (1 Ki. 15:2), which E. R. Thiele (*The Mysterious Numbers of the Hebrew Kings*, 3d ed. [1983], 81) reckoned to be from 913 to 910 B.C. While the LXX (including the Lucianic Recension) gives the length of his reign as six years, this looks suspicious and possibly may be interpreted as an attempt to make the total number of years for the kings of Judah from Rehoboam to Ahaziah’s death (which according to the MT is ninety-five years) equal the total for the kings of Israel from Jeroboam to the death of Joram, which is ninety-eight years.

Abijah’s mother is said to be “Maacah, the daughter of Abishalom [i.e., Absalom]” (1 Ki. 15:2; 2 Chr. 11:21–21), elsewhere called Micaiah daughter of Uriel of Gibeah (2 Chr. 13:2 NRSV); see MAACAH (PERSON) #9. Willis Beecher (*ISBE* [1929], 1:10) shrewdly suggests that SOLOMON, by marrying his son Rehoboam to his second cousin Maacah, hoped to conciliate the ABSALOM party in Israel who still were disappointed in Absalom’s abortive bid for kingship. Notice, however, the introduction of paganism from the distaff side of the family, for Maacah comes from the half-pagan family of Absalom.

Abijah’s reign was marked by wickedness (1 Ki. 15:3) with moments of piety, as illustrated by Chronicles on the occasion of his defeat of JEROBOAM on the frontier of Ephraim (2 Chr. 13:1–12). In his oration before the battle began, Abijah condemns the people of the north for their apostasy and declares, “God is with us; he is our leader” (v. 12). Fighting at a disadvantage of two-to-one odds, he was nevertheless victorious and captured Bethel, Jeshanah, and Ephron (v. 19). His fourteen wives bore him twenty-two sons and sixteen daughters (v. 21), and his other acts and sayings “are written in the annotations of the prophet Iddo” (v. 22).

(6) Son of JEROBOAM I, king of Israel (1 Ki. 14:1–18). When the son was taken by an illness, Jeroboam sent his disguised wife to the old prophet at Shiloh, AHIJAH, who had first announced to him that he would one day preside over ten of the twelve tribes of Israel. Jeroboam’s wife had no need to disguise herself, since the prophet was now old and blind. Nevertheless the prophet knew her even before she entered his house and he declared that Abijah would die as soon as she arrived home. He was the only one of the house of Jeroboam to receive a decent burial.

(7) The mother of HEZEKIAH, king of Judah, is called ABI (2 Ki. 18:2), an abbreviation for

Abijah (2 Chr. 29:1).

(8) One of the priests in the days of NEHEMIAH who sealed the covenant of reform in which the people promised to serve the Lord (Neh. 10:7). Some believe that this is a clan name, connected with the individual listed in 12:4 (see next item).

(9) A priest who returned from Babylon with ZERUBBABEL (Neh. 12:4). In the chronology of the priests given in Neh. 12:11–21, Zicri is listed as next descendant to rule the house of Abijah (12:17).

W. C. KAISER, JR.

Abijam. See ABIJAH.

Abila. See ABILENE.

Abilene ab'uh-lee'nee ('Αβιληνή G9). A region to the NW of DAMASCUS, taking its name from its principal city, Abila, the Abil as-Suq of the medieval Arab geographers and modern Suq Wadi Barada (it is possibly the Abel [^lbr for ^lbl] mentioned between Damascus and HAMATH among the conquests of THUTMOSE III in the 15th cent. B.C.). This site, which was distinct from the city of the same name in the DECAPOLIS, lay about 18 mi. from Damascus on the river ABANA (modern Barada), which flows S from between the ANTILEB-ANON range and Mount HERMON to Damascus. The most direct route from Damascus to Berytus (modern Beirut) on the coast lay up the Abana, and this accounts for the importance of Abila.

In the middle of the 1st cent. B.C. this area formed a part of the principality of ITUREA, which centered on Chalcis and Heliopolis (Baalbek) in the BEQA^l plain, and extended E almost to Damascus. The sources indicate that it was ruled by Ptolemy son of Menmaeus (c. 81–40 B.C.) and then by his son Lysanias (41–36 B.C.), but in 36 B.C. Lysanias was executed by Mark Antony and the territory given to CLEOPATRA, who leased it to Zenodorus, possibly Lysanias's son. During Zenodorus's period of rule (c. 31–20 B.C.), much of the Iturean principality was taken from him by the Romans, some being assigned by them to other nominees, and, though the details are not clear, it seems that by the end of the century Abilene was established as a separate unit. It was now bounded on the W by a much curtailed territory centering on Chalcis and an extensive Roman colony based on Berytus, on the E by (NABATEAN) Arabia, and on the S by Damascus.

A hint of the position of Abilene in the early 1st cent. A.D. is given in two virtually duplicate inscriptions from the site of Abila, recording the dedication of a temple for “the Lords Imperial” (ΤΩΝ ΚΥΡΙΑΝ ΣΕΒΑΣΤΩΝ), a title which in this context could have applied only to TIBERIUS (A.D. 11–37) and his mother Livia (d. A.D. 29) jointly while they were both alive. The inscription is therefore datable in the period A.D. 11–29. It was dedicated by a freedman of “Lysanias the tetrarch” (ΛΥΣΑΝΙΟΥ ΤΕΤΡΑΡΧΟΥ). This LYSANIAS is probably referred to by JOSEPHUS when he records that the Emperor Gaius (CALIGULA) on his accession in A.D. 37 granted the “tetrarchy of Lysanias” to Agrippa (see HEROD), and that his successor CLAUDIUS confirmed this grant on his accession in A.D. 41 (*Ant.* 18.6.10; 19.5.1; 20.7.1).

Abilene is mentioned in the NT when Luke defines the beginning of the ministry of John the Baptist (c. A.D. 27) by reference to a number of rulers, among whom is “Lysanias tetrarch of Abilene” (*Lysaniou tēs Abilēnēs tetraarchountos*, Lk. 3:1). The view that Luke is in error ignores the evidence that one or more individuals with the name Lysanias ruled during the reign of Tiberius. (See further R. Savignac in *RB* 9 [1912]: 531–40; A. H. M. Jones, *Journal of Roman Studies* 21

ability. See POWER.

Abimael uh-bim'ay-uhl (אֲבִימָאֵל *H42*, possibly “[my] father is truly God,” but the etymology is disputed). Son of Joktan and descendant of SHEM (Gen. 10:28; 1 Chr. 1:22).

Abimelech uh-bim'uh-lek (אֲבִימֶלֶךְ *H43*, “my father is king” or “father of a king”). TNIV Abi-melek. A cognomen applied to PHILISTINE rulers (as the names PHARAOH, AGAG, and JABIN were used by the Egyptians, Amalekites, and Canaanites respectively). This title is used of three different persons in the OT: one during ABRAHAM'S time (Gen. 21–21), one during ISAAC'S (ch. 26), and one during DAVID'S (PS. 34, title). Two other men in the Bible also bear this name.

(1) The king of GERAR was titled Abimelech. Seeing Abraham's wife SARAH, as Abraham sojourned with his flocks in his country after the destruction of Sodom and Gomorrah, the king or Abimelech of Gerar took her, intending to make her his wife. Abraham, again fearing for his life as he had with Pharaoh (Gen. 12:11–20), declared that Sarah was his sister. Whether Abraham was implying that she was doubly protected, as E. Speiser has maintained on the basis of the Nuzi documents, is uncertain (“The Wife-Sister Motif in the Patriarchal Narratives,” in *Biblical and Other Studies*, ed. A. Altmann [1963], 11–28). At Nuzi there were not only marriage documents but also “sistership documents” (*ṭuppi aḥātūti*; *ibid.*, 26); thus some wives simultaneously had the juridical status of a wife and sister, each recorded in separate, independent, legal documents. Abraham may therefore have been technically correct when he referred to Sarah as his “sister” if she was thus protected.

When Abimelech discovered the full truth of the situation or understood the implications of this Hurrian practice, he confronted Abraham about it. Abraham answered that he thought “the fear of God” (i.e., true religion) was not in Gerar and that therefore he would be slain because of his wife. “Besides, she really is my sister, the daughter of my father though not of my mother” (Gen. 20:11–12). Abimelech lavished Abraham with a number of gifts and an invitation to graze his flock in Gerar in recognition of his person and his intercession for him (20:11–17). Later, some 25 mi. from Gerar, a dispute broke out when Abimelech's servants seized a well being used by Abraham. This incident led to a covenant between Abraham and Abimelech at a place that came to be known as BEERSHEBA, “the well of seven (*or* of swearing)” (21:21–34).

© Dr. James C. Martin

It was somewhere in the dry Negev region near Beersheba that the servants of Abimelech king of Gerar seized a well being used by Abraham. (View to the SW.)

(2) A very similar incident occurred almost a century later between Isaac and another Abimelech of Gerar, “king of the Philistines” (Gen. 26:1–11). Isaac claimed that REBEKAH was his sister, and when Abimelech attempted to move in, God intervened. A series of incidents involving wells followed, and a covenant concluded the hostilities (26:11–32). The reappearance of the name PHICOL (26:26; cf 21:22), the chief captain of Abimelech’s army, may be the recurrence of family names in which the sons were named after their grandfathers, every other generation bearing the same name (cf. the examples of patronymy in Egyptian and Phoenician literature). It is often claimed, without sufficient evidence, that this incident is a literary doublet of the previous one.

(3) The title of Ps. 34 mentions an Abimelech in the time of David. In 1 Sam. 21:10, this man is identified as ACHISH, the king of (Philistine) GATH. Most commentators regard Abimelech in this psalm as a copyist error for Achish or a confusion with AHIMELECH, mentioned earlier in the Samuel narrative (1 Sam. 21:1). These solutions miss the point that an Abimelech may be simply a “king of the Philistines” (Gen. 26:1).

(4) The son of GIDEON (also known as Jerub-Baal) by a Shechemite concubine (Jdg. 8:31) in a matrilineal marriage (one in which the wife lives in the parental home and the children belong to the clan). After Gideon’s death, Abimelech approached the “lords” of his clan of SHECHEM (9:1–2, NIV “citizens of Shechem,” further designated in v. 28 as “the men of Hamor”; cf. Gen. 34:2) and proposed that he be proclaimed king. They agreed and promptly paid him seventy pieces of silver from the treasuries of their god BAAL-BERITH (Jdg. 9:4; cf. 8:33). With this start, he hired a handful of assassins who quickly helped him slay all of his seventy brothers except for the youngest, JOTHAM, who escaped.

His kingdom was limited to Shechem, BETH MILLO (apparently the tower of Shechem), ARUMAH, and THEBEZ (Jdg. 9:6, 41, 50). This is the first Israelite man in the Bible to form his name with the divine designation *melek* H4889, “king,” which may not have been his original name (cf. M. Buber, *Kingship of God*, 3d ed. [1967], 61–61, 71–76). According to Jdg. 8:31, Gideon’s concubine “bore him a son, whom he named [*lit.*, appointed his name] Abimelech.” The expression “to appoint a name” is not used of the giving of a name at birth, but of “giving a new name,” as in the case of Abraham (Neh. 9:7) or Jacob (2 Ki. 17:34). Possibly it can be translated reflexively, “he appointed for himself” the new name: this usurper and son of a concubine was therefore boasting that his father

before him was really a king. The men of Shechem, says the writer sarcastically and pleonastically, “kinged Abimelech [*i.e.*, father-king] as king” (Jdg. 9:6).

Jotham, the sole survivor of the bloody massacre of Abimelech and his henchmen, stationed himself on Mount GERIZIM and cried out his famous fable, which placed a deliberate slur upon Abimelech as a worthless bramble incapable of offering the men of Shechem security or profit; to the contrary, it grimly predicted their mutual destruction (Jdg. 9:1–21).

After three years of reign, God brought judgment on Abimelech and the men of Shechem in the person of GAAL son of Ebed (Jdg. 9:21–26). Gaal was another slick talker and thus the dissension was sown in Shechem (9:21–29). An armed rebellion ensued, and Abimelech was just on the verge of crushing it when an unknown woman dropped a millstone on his skull from the besieged tower at Thebez (9:51–53). Upset by the fact that it was a woman who finally put an end to his proud career, he begged his armor-bearer to spare him this disgrace, which he did by thrusting him through with Abimelech’s own sword (9:54).

(5) A priest in the days of David (1 Chr. 18:16). This however is a scribal error for A HIMELECH, the son of ABIATHAR (2 Sam. 8:17; 1 Chr. 24:6; also 1 Chr. 18:16 according to some Heb. MSS and the LXX).

W. C. KAISER, JR.

Abinadab uh-bin’uh-dab (אֲבִינָדָב H44, “[my] father is [*or* has shown himself] generous [*or* noble]”). (1) The second son of JESSE (1 Sam. 16:8; 1 Chr. 2:13). When GOLIATH challenged the Israelites in the Valley of ELAH and was killed by DAVID (1 Sam. 17), Abinadab and two of his brothers were in SAUL’S army (v. 13).

(2) One of the sons of Saul who died with his father and his two brothers on Mount GILBOA in battle with the PHILISTINES (1 Sam. 31:2; 1 Chr. 8:33; 9:39; 10:2).

(3) A man of KIRIATH JEARIM at whose place on a hill the ARK OF THE COVENANT remained after it was returned from the Philistines in the days of SAMUEL (1 Sam. 7:1). His son ELEAZAR was chosen by the city fathers to have charge of the ark (*ibid.*). His other sons UZZAH and AHIO were among those who assisted David in his first attempt to bring the ark to Jerusalem (2 Sam. 6:1–4; 1 Chr. 13:7), but Uzzah put his hand on the ark to steady it when the oxen stumbled, and immediately died for his breach of the instructions regarding the ark (2 Sam. 6:1–7).

(4) The father of one of SOLOMON’S sons-in-law (1 Ki. 4:11 KJV). However, the Hebrew *ben-’ābinādāb* (“son of Abinadab”) should probably be translated as the personal name BEN-ABINADAB (as in NIV).

E. S. KALLAND

Abinoam uh-bin’oh-uhm (אֲבִינוֹעַם H45, “father of pleasantness” or “my father is pleasantness”). The father of BARAK, mentioned in the narrative of Barak’s victory over the Canaanites under JABIN and SISERA and in the song of DEBORAH (Jdg. 4:6, 12; 5:1, 12).

Abiram uh-bi’ruhm (אֲבִירָם H53, “[my] father is exalted”; the LXX has the alternate form Αβιρων, “Abiron,” in Sir. 45:18). (1) One of three men of the tribe of REUBEN who, with KORAH the Levite, led 250 leaders of the Israelites in rebellion against MOSES, declaring that Moses and AARON had exalted themselves “above the assembly of the Lord” (Num. 16:1–3). Abiram and his household, along with Korah’s and DATHAN’S, were swallowed up alive into the earth as a punishment of God

(16:21–33).

(2) Son of HIEL of BETHEL. When Hiel rebuilt JERICHO during the reign of AHAB, “He laid its foundations at the cost of his firstborn son Abiram, and he set up its gates at the cost of his youngest son Segub, in accordance with the word of the LORD spoken by Joshua son of Nun” (1 Ki. 16:34; cf. Josh. 6:26). Some scholars argue that this act reflects a custom known as “foundation sacrifices”; others believe that the sons died of natural causes. See also SEGUB.

E. S. KALLAND

Abiron uh-bz’ruhn. KJV Apoc. form of ABIRAM (Sir. 45:18).

Abisei ab’uh-see’z’. KJV Apoc. form of ABISHUA (2 Esd. 1:2).

Abishag ab’uh-shag (אֲבִישָׁג H54, possibly “[my] father is a wanderer”). A beautiful young woman of the town of SHUNEM in ISSACHAR given to DAVID in his old age to keep him warm (1 Ki. 1:3). Some scholars suggest that this act was intended as a test of the king’s virility, but it is more likely that Abishag’s primary task was to nurse David back to health (there is some evidence for such a medical practice; cf. J. A. Montgomery, *A Critical and Exegetical Commentary on The Book of Kings*, ICC [1951], 71–72). Abishag also plays an indirect political role in the narrative. She was present when BATHSHEBA reminded David of his oath to make SOLOMON his successor (v. 15). After David’s death, Solomon executed ADONIJAH because he asked to marry Abishag. Evidently Abishag was considered a wife or concubine of David, and Adonijah’s request involved pretensions to the throne (1 Ki. 2:11–25).

E. S. KALLAND

Abishai uh-bi’ shi’ (אֲבִישָׁי H57, meaning uncertain; also אֲבִישָׁי H93 in 1 Chronicles). The oldest son of ZERUIAH (a sister of DAVID), and the brother of JOAB and ASAHEL (1 Chr. 2:16). Abishai was with David in the wilderness of Ziph when pursued by SAUL. Abishai volunteered to go with David into the center of Saul’s sleeping army. Standing by the somnolent Saul, he offered to kill him with one thrust of his sword, but David restrained him (1 Sam. 26:1–9). Some time later, after the death of Saul, Abishai assisted Joab in murdering ABNER in revenge for the killing of Asahel. David declared himself and his kingdom guiltless of the murderous act of Joab and Abishai (2 Sam. 2:18, 24; 3:30).

During ABSALOM’S rebellion, Abishai remained loyal to David. When David left Jerusalem surrounded by his mighty men, SHIMEI of the family of Saul cursed David and threw stones at him from a nearby hillside. Aroused to anger, Abishai said: “Why should this dead dog curse my lord the king? Let me go over and cut off his head” (2 Sam. 16:9). Here, again, David restrained Abishai’s impetuous, bloodthirsty spirit (v. 11). Abishai was set over one-third of David’s army to resist the attack of the Israelite army of Absalom under AMASA at Gilead (18:2). With Joab and ITTAI, Abishai was ordered by David to “Deal gently for my sake with the young man Absalom” (v. 5). In battle with the Ammonites, who were assisted by the Arameans, Abishai and Joab attacked these two groups respectively. Joab and Abishai were successful in their battles (10:1–14). Abishai also commanded an army that conquered the Edomites, killing 18,000 of them and placing garrisons in the country of Edom (1 Chr. 18:11–13).

As David returned to Jerusalem after the death of Absalom, though Shimei welcomed David and confessed his sin, Abishai said: “Shouldn’t Shimei be put to death for this? He cursed the LORD’S

ointed” (2 Sam. 19:21). Once more David rebuked and restrained Abishai. In the struggle to regain control of the nation after Absalom’s rebellion, Joab killed Amasa, and Joab and Abishai pursued SHEBA the son of Bicri, a Benjamite, who instigated rebellion against David. The pursuit ended in the dispersal of Sheba’s army and his death (20:1–22). Some time later, in a battle with the Philistines, David became exhausted and was pressed by a giant named Ishbi-Benob; but Abishai came to his rescue and killed the giant (21:11–17).

The exact status of Abishai among David’s great men is difficult, if not impossible, to ascertain. The KJV, following most Hebrew MSS, states that Abi-shai “was chief among three” (2 Sam. 23:18). But David’s three mighty men, Adino, Eleazar, and Shammah (vv. 1–11), did not allow the inclusion of Abishai. Consequently KJV adds the word “first” (without textual support) to the last statement of v. 19: “howbeit he attained not unto the first three.” This translation presumes that there were two groups of three mighty men and that Abi-shai was the most renowned of the second group. The NRSV, following two Hebrew MSS and some Syriac and Targumic evidence, translates v. 18, “was chief of the Thirty”; and v. 19, “He was the most renowned of the Thirty, and became their commander; but he did not attain to the Three.” The NRSV seems more plausible, but the textual evidence is not strong. The NIV takes the text to mean that Abishai became commander of the Three, “even though he was not included among them.”

Abishai probably died before the struggle between Adonijah and Solomon, since he is not mentioned on either side of that conflict.

E. S. KALLAND

Abishalom uh-bish’uh-luhm. Alternate form of ABSALOM.

Abishua uh-bish’oo-uh (אֲבִישׁוּעַ H55, “[my] father is salvation [or prosperity]”). (1) Son of PHINEHAS and great-grandson of AARON (1 Chr. 6:4, 50). An ancestor of EZRA the scribe, Abishua is included in the genealogy of LEVI among the descendants of Aaron serving the altar (Ezra 7:5).

(2) Son of BELA and grandson of BENJAMIN (1 Chr. 8:4).

E. S. KALLAND

Abishur uh-bi’suhur (אֲבִישׁוּר H56, “[my] father is a wall [of protection]”). Son of Shammai and descendant of JUDAH through PEREZ and JERAHMEEL; his wife’s name was Abihail (1 Chr. 2:21–29).

Abi’sum uh-bi’suhm. KJV Apoc. form of ABISHUA (1 Esd. 8:2).

Abital uh-bi’tuhl (אֲבִיטָל H40, “[my] father is dew,” or possibly “source of protection”). A wife of DAVID and mother of Shephatiah, the fifth son born to David in Hebron (2 Sam. 3:4; 1 Chr. 3:3).

Abitub uh-bi’tuhb (אֲבִיטוּב H39, “[my] father is good”). Son of Shazaraim by his first wife, Hushim; he is included among the descendants of BENJAMIN, but the precise genealogical connection is not stated (1 Chr. 8:11; cf. v. 8).

Abiud uh-bz’uhd (ἄβιουδ G10). A son of ZERUB-BABEL listed in Matthew’s GENEALOGY OF JESUS CHRIST (Matt. 1:13); this name does not occur in the OT.

abject. The plural form “abjects” (NIV “attackers”) is used by the KJV to describe some low outcasts who gathered together against the psalmist (Ps. 35:15). It renders the unique Hebrew word *nēkim* (possibly from *nākâ* H5782, “to smite”), which is of doubtful meaning and may be corrupt (RSV “cripples”; NRSV, “ruffians”).

ablution. An ablution is a ceremonial washing of the body (or some part of it), or of houses, clothes, and household objects for the purpose of ritual cleansing. Such rites were practiced in all lands in ancient times, but were a special feature of Jewish life and ceremony. The Jews recognized three kinds of ceremonial ablution of the body. The first was a washing of the hands, which is not specifically prescribed in the OT, but the Gospels show that it was stressed by the PHARISEES in Christ’s time (Matt. 15:1–2; Mk. 7:3). The second was a washing of the hands and feet, prescribed by law only for those about to perform priestly duties (Exod. 30:19; 40:31). A laver was used for this purpose in the tabernacle and the temple. The third was the immersion of the whole body in water; its purpose was to make possible the admission or readmission of those regarded as ceremonially unclean to the sacred community (Lev. 8:6; 14:8; 15:1–10, 11–27; 16:24; Num. 19:19). Houses, clothes, and household objects were also subjected to ritual cleansing (Exod. 19:14; Lev. 14:52; 15:1–8; Mark 7:4). See BATHING; CLEAN.

S. BARABAS

Abner ab’nuhr (אבנר H79, also אבנר H46, “[my] father is Ner [or a lamp]”). Son of NER and the most important Israelite military commander under both SAUL and DAVID. Abner was a member of the royal family and the first cousin of Saul through his father Ner (1 Sam. 14:51; according to another view, Abner was Saul’s uncle; see KISH).

The various military campaigns of Saul (1 Sam. 14:41–48) were successful in extending the kingdom of the twelve tribes to the S into the NEGEV and to the W against the PHILISTINES. The army was led by Abner. It was during the campaign against the Philistines that Abner presented David to Saul (17:51–58). Abner commanded the troops that pursued David and apparently acted as bodyguard to Saul (26:1–16). After Saul and the prince, JONATHAN, were killed by the Philistines near Mount GILBOA, Abner placed Saul’s son, ISH-BOSHETH, upon the throne. All the tribes except Judah, the most powerful, recognized Ish-Bosheth in the hill town of Mahanaim (2 Sam. 2:1–12).

Warfare ensued between the remnants of Saul’s retinue and the growing house of David. The ritual combat at GIBEON (2 Sam. 2:11–32) ended in the defeat of Abner and his troops. The fact that Ish-Bosheth was merely a figurehead and puppet of Abner was proven when Abner had intercourse with one of the royal concubines, Rizpah. In a rage

© Dr. James C. Martin

It was here at the Great Pool of Gibeon that ritual battle ended in the defeat of Abner and his troops.

at the rebuke of Ish-Bosheth, Abner arranged to yield the kingdom to David and brought an end to the house of Saul (3:1–11.) The fulfillment of Samuel’s choice of David was thus brought about by the treason of Abner. The fear and awe in which Abner was held by his contemporaries is evidenced even in Ish-Bosheth himself (3:11; 4:1). In his offices of peacemaker and king maker, Abner set out to address the twelve tribes and arrange David’s acceptance. He was praised by David after successfully approaching the last tribe, Benjamin (3:19).

After Abner’s departure, the king’s commander, JOAB, returned from a raid upon the surrounding country. He persuaded David that Abner had been obtaining intelligence for David’s downfall. Joab then pursued Abner and caught up with him at the well of Sirah. He brought him back to Hebron where, under guise of talking to him privately, Joab took him aside and stabbed him to death (2 Sam. 3:21–27). The motive was to revenge Abner’s impalement of Joab’s younger brother, ASAH, after the battle at Gibeon (2:11–23). The treacherous murder of Abner contributed to the fall of the house of Saul, as few, if any, of his former military commanders were now left alive. To a certain extent the effect of this barbarism was to plant a deepseated dissatisfaction in the hearts of a sector of the Israelite population that was to come to the surface and plague David throughout his reign and to split the kingdom under his grandsons.

David grieved for Abner and gave him a princely funeral. The lament in fine parallel poetic verse is given in 2 Sam. 3:31–34. This passage is of great antiquity and features some interesting terms. The short poem or dirge uses “staircase” (or 1:2) parallelism (see HEBREW POETRY). TWO phrases, “Your hands were not bound / your feet were not fettered,” are in reverse order and in parallelism to the one phrase, “as one falls before the wicked you have fallen”; and all are introduced by the question, “Should Abner die as a fool dies?” The people of Israel followed David in mourning for the dead commander.

David’s extravagant grief was not only in honor of the victim but also indicated that he was not the instigator of the crime. This is made clear by the curse he leveled upon those who had committed the crime (2 Sam. 3:39). The overall effect of Abner’s career was favorable for the establishment of the blessing of the COVENANT through the rise of the house of David. Only two other references to Abner and his son are found in the OT: 1 Chr. 26:21–28, which records certain spoils of war dedicated to Yahweh, and 1 Chr. 27:21, which refers to the son of Abner, Jaasiel, as a servant of David.

W. WHITE, JR.

abomination. A common term in the KJV and other English versions, denoting whatever is repugnant to God (and also to human beings) in the realm of religion and morality. In the OT it translates several Hebrew terms. The *noun* *piggûl* H7002 (“a foul thing”) is used of sacrificial flesh that was more than three days old and therefore putrid (Lev. 7:18; 19:7; cf. Ezek. 4:14); it is also applied to a certain type of stew associated with heathen practices, possibly made of swine’s flesh or including blood (Isa. 65:4). The term *šiqqûš* H9199 (“a detested thing”) is used in a derisory manner of various pagan deities (1 Ki. 11:5, 7; 2 Ki. 23:13) and of heathen practices generally (Isa. 66:3; Jer. 4:1; 7:30; 13:27; et al.). The related term *בְּרִיעַ* H9211 is a cultic term designating any kind of creature (or the flesh thereof) that cannot be touched or eaten without incurring ceremonial defilement (Lev. 11:11–23; Isa. 66:17). See also CLEAN; PURITY; UNCLEANNESS.

By far the most commonly used word, especially in Deuteronomy, Proverbs, and Ezekiel, is *tô‘ēbâ* H9359 (“an abominable thing”). It covers a wide variety of practices and objects that are regarded as loathsome, including anything that violates established custom (Gen. 43:32; 46:34; Deut. 22:5; et al.); of sexual irregularities (Lev. 18:22 et al.); idols (Deut. 7:21–26; 27:15; cf. 2 Ki. 23:13, where *šiqqûš* is used of ASHTORETH and CHEMOSH and *tô‘ēbâ* of MILCOM [MOLECH]). The most frequent use concerns idolatrous or unworthy practices of various kinds, including child sacrifice (Deut. 12:31; 2 Ki. 16:3); the worship of alien gods (Deut. 13:14; 17:4); the eating of unclean food (14:3); the practices of necromancy and wizardry (18:11–12); the prayer of the disobedient (Prov. 28:9). It is used of sacrifices (15:8) and the burning of incense (Isa. 1:13) offered by the ungodly. It describes such moral abuses as false weights and measures (Deut. 25:11–15; Prov. 11:1); double-dealing and violence (3:21–32); haughtiness, lying, false witness, and troublemaking (6:11–19); evil thoughts (15:26); arrogance (16:5); the misuse of power (16:12); the inversion of justice (17:15); scoffing (24:9); etc. In short, anything that dishonors God or violates his commandments, or is in any way unworthy of those who profess to follow him, is described as an abomination. See also ABOMINATION OF DESOLATION.

A. E. CUNDALL

abomination of desolation. This expression is used in the KJV and other English translations as a rendering of the Greek phrase *to bdelygma tēs erēmōseōs* (Matt. 24:15; Mk. 13:4), itself a rendering of the Hebrew phrase *šiqqûšîm mēšōmēm*, “abomination(s) making desolate” or “appalling sacrilege” (Dan. 9:27; cf. 11:31; 12:11). The term in Daniel was understood by the Jews as a prediction of the profanation of the temple by ANTIOCHUS IV in 165 B.C. (1 Macc. 1:54). Jesus clearly places the event in the future. Some scholars see its fulfillment in the desolation of Jerusalem and the temple (A.D. 70), together with the subsequent erection of a pagan house of worship at the site by the Romans. Many interpreters feel that Paul’s brief “apocalypse” of the final “man of sin” (2 Thess. 2:1–12) is an extension of Daniel’s and Jesus’ prediction. Paul distinctly relates it to our Lord’s second advent. See ANTICHRIST; ESCHATOLOGY.

R. D. CULVER

Abot(h). See PIRKE ^{אבות}ABOT.

Abrah am, Abram ay’bruh-ham, ay’bruhm (אַבְרָהָם H90, etymology uncertain, but interpreted as

“father of a multitude” [Gen. 17:5, perhaps a play on words]; his original name, used from Gen. 11:26 to 17:5, was אַבְרָם H92, possibly short form of אֲבִירָם H53, “[my] father is exalted” [see ABIRAM]). The primary source of information for Abram/Abraham is the narrative account given in Gen. 11:26—25:18. Significant is the fact that throughout the rest of the OT he is mentioned by name more than forty times. The number of references by NT writers exceeds seventy. Numerous archaeological discoveries in modern times have provided a wealth of material for the understanding of the cultural and historical background of the times in which he lived.

1. The life of Abraham
2. The geographical context
3. Chronology
4. Archaeology
5. Religion of Abraham
6. Significance

I. The life of Abraham. UR of the Chaldees, usually identified as modern Tell el-Muqayyar, located 9 mi. W of Nasiriyah on the EUPHRATES River in S Iraq, was the birthplace of Abram the son of TERAH, a descendant of SHEM. Migrating approximately 600 mi. N and W from Ur, Terah and his family settled in HARAN, located on the Balikh tributary of the Euphrates (Gen. 11:21–32).

At the age of seventy-five Abram, with his wife Sarai (see SARAH), his nephew LOT, and all their possessions, departed in response to God’s call for the land of Canaan—another 400 mi. Stopping en route at SHECHEM and BETHEL, Abram settled in the NEGEV or S country, but due to a prevailing famine he continued into Egypt. When Sarai because of her beauty unduly attracted the interest of Pharaoh, divinely sent plagues brought about the release of Abram and Sarai. After this crisis Abram returned to the NEGEV (Gen. 12:1–20).

Moving to the Bethel region, Abram and Lot experienced such an increase in wealth that a separation seemed expedient. Abram magnanimously offered Lot the choice of territory with the result that Lot relocated in the JORDAN valley,

The Egyptian tomb paintings at Beni Hasan, dating approximately to the period of Abraham, depict Semitic travelers to Egypt.

Abraham in the Promised Land.

in the sinful city of SODOM. AS Abram settled in the HEBRON area he received the divine promise of the land of Canaan for himself and his descendants, who would be countless in number (Gen. 13:1–18). When Lot and the kings of the Jordan valley had the misfortune of being taken captive by invaders from the north, Abram and his allies overtook them at DAN (PLACE), routing them beyond DAMASCUS to rescue the captives. Upon his return Abram refused to accept rewards, but gave tithes to MELCHIZEDEK, who was priest of the Most High God and king of SALEM (14:1–24).

Although ELIEZER of Damascus had been designated as his heir, Abram responded with faith when God assured him of a son whose descendants would be as numberless as the stars and would become possessors of the land of Canaan. After a special sacrifice came the further revelation predicting Israel's Egyptian enslavement and divine deliverance. God's COVENANT with Abram provided assurance of ultimate possession of the Promised Land for his posterity (Gen. 15:1–21).

After a ten-year residence in Canaan without visible prospects of having a son, Sarai impatiently suggested that an heir could be procured for Abram through their Egyptian handmaid HAGAR. Pregnant with ISHMAEL, Hagar mocked Sarai's barrenness with the consequence of being ostracized to the wilderness, where an angel of the Lord came to her rescue. Upon her return she bore Ishmael to Abram when he was eighty-six years of age.

Significant was God's revelation to Abram thirteen years later. With the covenant restated, indicating that nations and kings would be heirs to these everlasting promises, God changed Abram's name to Abraham signifying that he was to be the father of a multitude of nations. CIRCUMCISION was

established as the sign of the everlasting covenant. With the divine promise of Isaac's birth, Sarai's name was changed to Sarah. Subsequent to this divine revelation Abraham instituted the rite of circumcision in his household (Gen. 17:1–27).

Living in the MAMRE community, Abraham and Sarah had the prospect of Isaac's birth confirmed through another theophany. When Abraham was made aware of God's imminent judgment on Sodom and Gomorrah, he made intercession for Lot, who subsequently was rescued with his two daughters. From the plains of Mamre, Abraham witnessed the terrible destruction of the cities of Sodom and Gomorrah. Lot escaped to ZOAR where, through incest, his daughters gave birth to MOAB and AMMON, whose descendants were known as Moabites and Ammonites (Gen. 18:1—19:38). Subsequently Abraham migrated to KADESH and GERAR, where the local King ABI-MELECH was divinely warned not to defile Sarah, but rather ask Abraham as a prophet to intercede for him. With his life spared, Abimelech greatly increased Abraham's wealth (20:1–18).

The promised heir ISAAC was born to Abraham and Sarah when the former was 100 years old. Although contrary to custom (see below), Abraham was divinely encouraged to expel Hagar with her son Ishmael, who exerted an unfavorable influence on Isaac. This he did reluctantly. Miraculously, Hagar and her son were spared as they migrated to the wilderness of PARAN with the assurance that Ishmael would become a great nation. After this Abraham made a treaty with Abimelech to secure rights to BEERSHEBA as his dwelling place (Gen. 21:1–34).

Severe and crucial was the crisis when it was divinely revealed to Abraham that he should sacrifice his only son Isaac. In obedience Abraham carried out the command to the point of actual sacrifice in the land of MORIAH when a substitute ram offering was provided. Subsequently the covenantal promise was again confirmed. When Sarah died, Abraham purchased a field with the cave of MACH-PELAH in the Hebron area as a family burial place (Gen. 22:1—23:20).

When Isaac was forty years old, Abraham sent his servant Eliezer to the city of NAHOR in MESOPOTAMIA to secure REBEKAH, the daughter of LABAN, as a wife for Isaac. Abraham designated Isaac as the sole heir to his possessions and the divinely revealed covenantal promise. Other sons born to Abraham were endowed with gifts and sent eastward by Abraham before his death. When Abraham died at the age of 175, he was buried by his sons Isaac and Ishmael in the cave of Mach-pelah (Gen. 24:1—25:18).

II. The geographical context. The movements of Abraham extend from the Persian Gulf through the Fertile Crescent to the river NILE in Egypt, with his primary place of residence being the land of Canaan. It was common during Abrahamic times for merchant caravans, envoys, and others to travel back and forth to Egypt and Mesopotamia. From literature of the early part of the 2nd millennium B.C., it is evident that others sent for brides to distant points, making marriage arrangements as Abraham did for his son Isaac (cf. K. A. Kitchen, *Ancient Orient and the Old Testament* [1966], 50).

The geographical places identified with Abraham in the patriarchal records are known from archaeological attestation to have been inhabited at that time. The city of Ur on the lower Euphrates River was a large population center, and has yielded extensive information in the royal tombs that were excavated under the direction of Sir Leonard Wooley and the sponsorship of the British Museum and the museum of the University of Pennsylvania. Although no direct evidence of Abraham's residence is available, it is significant that the city of Ur reflects a long history preceding Abraham's time, possessing an elaborate system of writing, educational facilities, mathematical calculations, business and religious records, and art. This points to the fact that Ur may have been one of the largest and wealthiest cities in the Tigris-Euphrates area when Abraham emigrated northward

to Haran.

The vicinity of HEBRON, about 19 mi. S of Jerusalem, seems to have been a favorite place for Abraham to live. This city, known to the patriarchs as Kiriath Arba, apparently was settled at an early period, according to an American expedition (1964) that discovered a mud brick wall on bedrock dating back to about 3000 B.C. The biblical record frequently refers to this Hebron area as Mamre.

BEERSHEBA, located about 48 mi. SW of Jerusalem at a point approximately midway between the Mediterranean Sea and the southern end of the Dead Sea, marks the northern border of the Negev, meaning “dry.” Numerous wells were located here, which made it possible for Abraham and his descendants to settle in this area with their flocks and herds. The road identified in the Scriptures as “the way to Shur” passed through Beersheba from the Judean highlands down toward Egypt.

GERAR (Gen. 21:32, 34) is located in the “land of the Philistines.” Although Tell Jamneh, about 8 mi. S of GAZA, was thought to be the site of ancient Gerar by W. J. Phythian-Adams (1922) and W. M. Flinders Petrie (1927), later reconsiderations by Y. Aharoni have pointed to Tell Abu Hureireh (Tel Haror). This site, located about 11 mi. SE of Gaza, seems to offer surface potsherd evidence of habitation since Calcolithic times with a prosperous period in the Middle Bronze age when the patriarchs lived. In the Genesis account the relations between Abraham and Isaac and Abimelech of Gerar reflect their mutual interests in the wells at Beersheba. Although the Philistines may not have had a dominating influence in this area before the 12th cent. B.C., they had trading centers in SW Palestine as early as patriarchal times.

SODOM and GOMORRAH are places of unique interest in the biblical account of Abraham’s life. These are identified as CITIES OF THE PLAIN eastward of the Bethel-Hebron axis in Palestine (Gen. 13), where Lot settled after parting with Abraham. According to W. F. Albright, it seems probable that these cities were located in the shallow area of the southern part of the Dead Sea. This apparently was a very fertile plain where extensive settlements were located about 2000 B.C. The ruins of Sodom and Gomorrah likely are submerged in the Dead Sea.

III. Chronology. A correlation of external historical knowledge and the Genesis account points approximately to the 19th cent. B.C. as a reasonable date for Abraham. A sharp decrease in the density population estimate for this period is linked by some scholars with the destructive campaign mentioned in Gen. 14. The names of these kings are typical of the Old Babylonian period (2001–1700 B.C.), although it seems improbable that Amraphel is HAMMURABI, as some have thought. The power alliances in which four kings fight against five is typical of political and military coalitions for this particular period. Later, coalitions usually consisted of larger numbers of kings.

The personal names of Abraham and the other patriarchs are similar to names occurring in the literature from the 19th to the 17th centuries. Seasonal occupation of the Negev is reflected in the Genesis narrative as well as in the archaeological data for about 2101–1800 B.C. This was not the situation for the preceding millennium nor for the eight centuries following this period. Some scholars date Abraham centuries later. This late dating is delineated by H. H. Rowley (*From Joseph to Joshua* [1950]) and C. H. Gordon (*Introduction to Old Testament Times* [1953]), but their assumption that the genealogical references in the scriptural accounts provide a basis for calculating a complete chronology is tenuous.

The chronology for Abraham is directly related to the date for the exodus, which has a variable factor of approximately two centuries—c. 1451–1250 B.C. (see EXODUS, THE). If Abraham lived some 600 years before the exodus, the earliest date for his entrance into Canaan would be about 2085 B.C. or later, at which time he was seventy-five years of age. (For discussion of the dating for the exodus

and the time of the patriarchs, see M. F. Unger, *Archeology and the Old Testament* [1954], chs. 9 and 12.) In view of these tenable considerations in the chronology of this early period, it is reasonable to date Abraham at approximately 2001–1900 B.C.

IV. Archaeology. Archaeological discoveries have shed considerable light upon the Abrahamic account (Gen. 11–25). The laws and customs as practiced in the world and age in which Abraham lived have provided insight into his behavior pattern described in the Bible.

Extensive inheritance laws from the excavations at NUZI on the TIGRIS River offer an explanation for Abraham's anxiety about making provisions for an heir. According to these laws, a man could adopt a servant or slave as his legal heir if he did not have a son. In such an arrangement this adopted son would care for his master, provide proper burial, inherit the property, and continue the family name. Abraham was simply conforming to contemporary customs and practices when he considered Eliezer as his heir (Gen. 15:1–4). Should a son be born after such an arrangement had been made, it normally would have been voided in favor of the new heir. (The relevance of materials from Nuzi and elsewhere has been challenged by some scholars who question the historicity of the patriarchal narratives in Genesis. See, e.g., T. L. Thompson, *The Historicity of the Patriarchal Narratives: The Quest for the Historical Abraham* [1974], and J. Van Seters, *Abraham in History and Tradition* [1975]. For a response, see esp. A. R. Millard and D. J. Wiseman, eds., *Essays on the Patriarchal Narratives*, 2nd ed. [1983].)

Another way of providing an heir was through a slave-wife. When childless Sarah secured Ishmael through Hagar, it was natural for Abraham to consider him to be the legal heir (Gen. 16). Humanly speaking, for the next thirteen years it seemed probable that Ishmael would be the heir to all that Abraham had. Although Abraham had been informed by God that Eliezer was not his heir but that he would have a son, it was not until Ishmael was about thirteen years old that the promise to Abraham was given more specifically. A son was to be born to Abraham and Sarah (ch. 17). At this time the rite of circumcision was instituted as a sign of God's covenant with Abraham and his descendants. Even though circumcision was practiced by many people of antiquity, for Abraham and his offspring it became a mark of identity in this covenant relationship.

The law code of Hammurabi made provisions that a slave-wife or handmaid who bore a child to her owner did not take the place of the childless wife in the family household. The latter, however, had no right to dismiss the slave-wife and her child. When Hagar, having acted in a spirit of contempt, was mistreated by Sarah, she fled toward Shur on the road leading to Egypt. After she was divinely urged to submit herself to Sarah, she returned to Abraham's home, where Ishmael was born (Gen. 16). Apparently Abraham had no legal right according to contemporary customs to expel Hagar and her son, and did so only after he was divinely commanded to do so (21:11–21). With it came the divine assurance that out of Ishmael God would make a great nation.

The HITTITE law code seems to shed some light on the real estate purchase by Abraham when he secured a burial plot from Ephron (Gen. 23). Although this law code, discovered at the ancient Hittite capital of Boğazköy in ASIA MINOR, dates back to about the 14th cent. B.C., it is generally recognized that it embodies the practices of the Hittites as far back as the 19th cent. B.C. According to these laws, certain feudal obligations were included when an entire piece of land was sold, which was not the case when only part of the land changed ownership. Although Abraham wanted to buy only the cave, the stipulation by EPHRON was that the entire property be sold, and he likely transferred the responsibility of certain feudal services to Abraham. Trees on this property also were indicated in this real estate transaction as was usually done in Hittite business documents (23:11–18).

V. Religion of Abraham. Although Abraham came from a family of idol worshipers (Josh. 24:2, 14), he responded to God's command to migrate to the land of Canaan. The fact that God revealed himself to Abraham is repeatedly stated in the Genesis account, but the means by which God made himself known is not always indicated. STEPHEN spoke specifically of God's initial manifestation to Abraham, to which the latter obediently complied in leaving his family and settling in the land of Canaan (Acts 7:2).

Occasionally the manner of revelation is indicated to some extent. For example, God "appeared" to Abraham, communicating to him the promise that the land of Canaan would be given to his descendants (Gen. 12:7). God's presence was evident in the form of a firepot that passed through the sacrificial pieces (15:17). God "appeared" for the purpose of enlarging Abraham's knowledge of the covenant and then "went up from him" (17:1, 22). The most explicit theophany was portrayed when three men—one of whom was God—were entertained by Abraham (ch. 18). In the course of these appearances Abraham and God spoke face to face. Subsequently God was often identified as the God who appeared to Abraham. Divine messages also were revealed through the "angel of the Lord." Hagar equated this messenger with God (16:1–14). Abraham likewise acknowledged the "angel of the Lord" as revealing God's command to him (22:1–19). See ANGEL.

Abraham's response to the divine revelation resulted in an intimate relationship between him and God. Initially he expressed his faith and confidence in God by obedience in migrating to Canaan at the cost of separation from his family. Through the altars he erected at various places of residence, he gave public witness to the fact that he was committed to the worship of God in the midst of an idolatrous environment. Progressively his comprehensive knowledge of God was enlarged as God made known to him more details concerning the future plans for Abraham's descendants. Characteristic of Abraham was the fact that "he believed the LORD," and this faith was reckoned to him for righteousness (Gen. 15:6). Through Abraham's faith, obedience, and communion, this divine-human relationship between him and God became so distinctive that he was later known as "God's friend" (Jas. 2:23; cf. also Isa. 41:8; 2 Chr. 20:7).

PRAYER was a vital and normal part of Abraham's relationship with God. This was closely associated with his sacrifice (Gen. 12:8; 13:4), which he offered on the altars he erected in various places throughout Canaan. Through prayer Abraham expressed his practical concerns and questions about God's promises to him (15:4). When Abraham subsequently wished that Ishmael might be accepted as the promised seed, God answered his prayer by another confirmation that the promised son would be born in due time to him and Sarah (17:19).

The sublimity of intercessory prayer is exemplified in Abraham's appeal when God shared with him the solemn fact that divine judgment was about to be rendered upon the cities of Sodom and Gomorrah. Abraham reasoned on the ground that God as judge of all the earth would do right. Even though the cities were destroyed, God spared the few righteous people who were living there. The efficacy of prayer is also apparent in Abraham's relationship with Abimelech. The latter is divinely assured that his life will be preserved through the intercessory prayer of Abraham (20:7).

Divine guidance through prayer is delineated in the experience of Abraham's servant (Gen. 24). In all likelihood this servant reflects Abraham's attitude of expecting God's guidance in the developing circumstances as a bride was secured for Isaac. In prayer he expressed his dependence upon God and thankfully acknowledged that God had prospered him as the contacts in Mesopotamia unfolded favorably.

Abraham had a perspective of God that was comprehensive and practical. To him God was "the

LORD, God Most High, creator of heaven and earth” (Gen. 14:22), or “the LORD, the God of heaven” (24:7). The omnipotence of this God was a practical reality in Abraham’s life as the laws of nature were overruled in the provision of the promised heir (18:11–14). When endangered by Pharaoh in the land of Egypt, Abraham was delivered by God’s power.

God’s OMNISCIENCE likewise was apparent in the divine assurance of a son to Abraham and Sarah years before Isaac was born. In the course of twenty-five years after Abraham had initially obeyed God by migrating to Canaan, this promise of Isaac’s birth was gradually unfolded to Abraham. The sinfulness of Sodom and Gomorrah were likewise known to God (Gen. 18:20). The judgment upon these cities made Abraham conscious anew of the fact that a just and righteous God could not permit such wickedness to continue indefinitely. Although the iniquity of the Amorite was not yet full in Abraham’s time (15:16), the time for judgment upon these cities had come. Even for these cities, mercy preceded judgment because righteous Lot lived among these people for some time. His life undoubtedly reflected the righteousness and holiness of God, but his last appeal to some of the residents was not heeded, so that only Lot and his family were rescued before God’s judgment was executed.

God’s love, provision, purpose, and guidance were constantly evident in Abraham’s life. In the sixfold promise given to Abraham when God called

© Dr. James C. Martin. The British Museum. Photographed by permission.

This statuette was found in the Great Death-Pit at Ur and dates approximately 2600 B.C. The motif of a ram reaching up into a thicket is reminiscent of the substitute God provided for Abraham when he attempted to sacrifice his son, Isaac.

him (Gen. 12:1–3), Abraham was made aware of the fact that God’s love would abound toward him in blessing so that his descendants would constitute a great nation and ultimately bring blessing to all nations of the earth. Being conscious of God’s plan and purpose for him, Abraham magnanimously gave Lot the first choice in land when it was necessary for them to separate (13:8). Likewise he refused to accept a reward from the king of Sodom and gave testimony to the fact that his God is “the possessor of heaven and earth” (14:22 KJV). Furthermore Abraham gave the tithe to Melchizedek, the priest of the Most High God (14:11–20).

Abraham was a God-fearing person (Gen. 22:12). His love, reverence, and respect for God were evident in his attitude of faith, obedience, and wholehearted commitment to God, even to the point of sacrificing his only son. Abraham’s standard of living in morals and ethics was to reflect the fact that he was serving an almighty God (17:1). It was this God that gave witness concerning Abraham, “I have chosen him, so that he will direct his children and his household after him to keep the way of the LORD, by doing what is right and just, so that the LORD will bring about for Abraham what he has promised him” (18:19).

VI. Significance. Abraham has occupied a significant and unique place throughout the world for nearly four millennia. For the Jews he is the father of the nation of Israel. In the Islamic world he is regarded in the long calendar of accepted prophets as second only to Muhammad himself. The Koran contains 188 references to Abraham. In the Christian world Abraham is recognized as one of the greatest men of faith of all times.

Israelites were frequently identified as the seed of Abraham. Throughout OT times the truth that Abraham was the father from whom the chosen people descended is significantly emphasized (Isa. 51:2; Ezek. 33:24). Much was made of the fact that God chose Abraham (Neh. 9:7), redeemed him (Isa. 29:22), and peculiarly blessed him (Mic. 7:20).

The divine revelation God made to Abraham is of fundamental importance in Israel’s history. It was the God of Abraham who identified himself to Moses and the Israelites in Egyptian bondage (Exod. 2:24—6:8). Subsequently, after Israel was redeemed out of Egypt, Moses appealed for mercy on the basis of God’s covenant with Abraham (32:13). Throughout Deuteronomy, Moses reminds the Israelites that God loved their fathers and made a covenant with them. Moses appeals to them to obey so that God can fulfill toward them the covenant established with Abraham (Deut. 1:8; 6:10; 9:5, 21–28; 29:13; 30:20). Canaan, the land the Israelites are about to possess, is identified as the land God promised to Abraham (34:4).

David appealed to the God of Abraham in his prayer for Solomon (1 Chr. 29:18). So did Jehoshaphat with the consciousness that his people were the seed of Abraham, the friend of God (2 Chr. 20:7). Elijah, in challenging idolatrous Baalism, identified Israel’s God as the God of Abraham (1 Ki. 18:36). In the days of Jehoahaz, God was gracious and compassionate toward Israel, sparing them from capitulation to the Aramean King Hazael because of his covenant with Abraham (2 Ki. 13:23).

Psalms (Pss. 47:9; 105:6, 9, 42), Isaiah (Isa. 29:22; 41:8; 51:2; 63:16), Jeremiah (Jer. 33:26), Ezekiel (Ezek. 33:24), and Micah (Mic. 7:20) reflect a consciousness of the importance of Abraham as their father, with whom God had established a covenant and to whom God had manifested his mercy in a particular manner.

In the apocryphal literature and later writings Abraham is also significantly mentioned as a great

prophet and the recipient of the divine revelation through which the covenant was established. Cf. Sir. 44:11–21; *Genesis Rabbah* (passim); *m. 'Abot* 5:4; Jos. *Ant.* 1.1–8. Various legends of Abraham's life in Chaldea have been noted in the book of JUDITH and in JOSEPHUS. According to the TALMUD, Abraham was a first-rate astronomer or astrologer and shared his wisdom as he instructed kings of the E and the W.

In the Christian world Abraham is highly esteemed as a great man of faith. Genealogically Jesus is identified as the son of Abraham (Matt. 1:1). Jesus in his teaching and dialogues repeatedly acknowledged the significance of the Jews as being Abraham's seed, but at the same time asserted that he was greater than Abraham. (Cf. Matt. 1:1–2, 17; 3:9; 8:11; 22:32; Mk. 12:26; Lk. 1:55, 73; 3:8, 21–34; 13:16, 28; 16:21–30; 19:9; 20:37; Jn. 8:31–58.)

In the apostolic preaching much is made of Abraham when appealing to the Jews (Acts 3:13, 25; 7:1–32; 13:26). Paul used Abraham as the outstanding example of a man who was justified by faith (Rom. 4:1–16). In his epistle to the Galatians, Paul asserts that those who are Christ's are indeed the seed of Abraham, who responded with faith to the revelation and promises of God (Gal. 3). The author of Hebrews points to Abraham as the ancestor of the Levitical priesthood (Heb. 7:5), and allots primary consideration to Abraham as a man of faith in his relationship with God and the promises made to him. Since NT times Abraham has been repeatedly a point of reference when faith and obedience in relationship to God have been evaluated. (See further R. W. L. Moberly, *The Old Testament of the Old Testament: Patriarchal Narratives and Mosaic Yahwism* [1992]; P. R. Williamson, *Abraham, Israel and the Nations: The Patriarchal Promise and Its Covenantal Development in Genesis* [2000]; K. A. Kitchen, *On the Reliability of the Old Testament* [2003], ch. 7; N. S. SCHULTZ

Abraham, Apocalypse of. This important pseudepigraphic work may have originally been written in Hebrew (or Aramaic), but it is extant only in a medieval Old Church Slavonic version, which in turn was probably based on an earlier Greek translation. The work itself seems to be a composite, with the first third (chs. 1–8) being devoted to legends of ABRAHAM'S youth. This section is thought by some to have been written before A.D. 50. The apocalypse proper occupies the remainder of the work. Because it appears to refer to the destruction of Jerusalem in A.D. 70, most scholars date the work to the last decades of the first century or the beginning of the second. An edition of the text, with English translation, was published by G. H. Box (*The Apocalypse of Abraham* [1919]; for a more recent translation and introduction, see *OTP*, 1:681–705).

The *Apocalypse of Abraham* is somewhat of a midrashic commentary on Gen. 15. An angel, Iaoel (Jahoel, Jaoel), escorted Abraham up to the seventh heaven, where he saw past events such as the fall of Adam and Eve (caused by the sin of sex, and occasioned by the seduction of Azazel), and the Cain and Abel episode. The revelation also included such future events as the destruction of the temple and the coming of the Messiah, accompanied by ten plagues upon the heathen, the gathering of Israel in the Promised Land, and the judgment of the wicked.

The book is a mixture of dualism and monism. Abraham discussed the problem of evil with God. When Abraham asked why Azazel was tolerated, God said that evil comes from the free will of man. From its ambivalent theology at this point, some have concluded that various sources were used in its compilation. The devil is called Azazel, who is somewhat like BELIAL in TESTAMENTS OF THE

TWELVE PATRIARCHS. He is identified with the serpent of Gen. 3. Some have thought that parts of *Apoc. Ab.* dealing with Satan were circulated among the Gnostics (cf. Epiphanius, *Panarion* 39.5, and the references to Sammael in the NAG HAMMADI LIBRARY and in heterodox Judaism of the early Christian centuries). The angel Iaoel claims in *Apoc. Ab.* to possess the powers of the ineffable Name. This quality the rabbis ascribed to Metatron (*b. Sanh.* 38b), so in *Apoc. Ab.* Iaoel is being fused with Metatron. And since Michael's tasks are taken over by Iaoel, in a roundabout way MICHAEL is being transformed into Metatron. See also APOCALYPTIC LITERATURE.

A. K. HELMBOLD

Abraham, Testament of. An ancient Jewish pseudepigraphic writing that purports to give an account of ABRAHAM'S experiences at the end of his life. Abraham, as a very aged man, is informed by the angel MICHAEL that he must die. But Abraham refuses to give up his spirit. The angel then takes him in a chariot through the reaches of the firmament and, as Abraham observes the wickedness of men on earth, he calls down judgment upon them. Abraham is then given a vision of the broad road and the narrow road leading respectively to perdition and to PARADISE. The weighing of souls in judgment is then viewed, and a soul is spared through the intercession of Abraham. At last, while Abraham is still reluctant to give up his soul, "Death" takes him, and brings him, with great honor, to paradise.

The *Testament*, which is extant in many Greek MSS (though none older than the 13th cent.), survives in two different recensions, one about twice as long as the other. Although some believe that the work was translated from Hebrew, recent scholars have argued that it was originally written in Greek in Egypt. There are some Christian interpolations, but the work as a whole is thoroughly Jewish. In addition to the Greek MSS, the work is extant in Arabic, Coptic, Ethiopic, Romanian, and Slavonic versions.

This work has some affinity with the *Testament of Job* and with the *Apocalypse of Abraham*, and has generally drawn its ideas from Jewish sources. The angel Michael figures largely in the book and occupies the position of supremacy usually assigned to him by Jewish writings of the time. "Death" is portrayed as the OT angel of death but with some foreign traits (possibly Egyptian, Babylonian, or Persian) attached. There are three judgments according to the eschatology of this writing: one by Abel, one by the twelve tribes of Israel, and one by God at the last day. The MESSIAH does not appear at all at any of the judgments, but the whole book still moves well within the spirit of Jewish thought generally. (For a modern English trans. of both recensions, see *OTP*, 1:871–902; full commentary by D. C. Allison, *Testament of Abraham* [2003].)

H. G. ANDERSEN

Abraham's bosom. A figure of speech used by Jesus in the parable of LAZARUS AND DIVES (Lk. 16:22; NIV, "Abraham's side") to designate the state or place of security and significance with which Lazarus was honored upon his death. The figure is drawn from the ancient eastern banqueting custom of reclining upon one's side on couches at the meal. The configuration of the gathered company was such that the head of one would reach the chest of the one next to him. For purposes of conversation and fellowship, the one would lean his head back against the breast of the other. It was especially gratifying to be placed next to a special guest, and even more so, next to the host. To have leaned one's head against the breast of the principal guest, or that of the host, was proof of the existence of a special and intimate relationship with that person (see, e.g., Jn. 13:25; 21:20). Lazarus, therefore, who in his diseased earthly life had had to beg to maintain his existence in contrast to the rich man who had fared sumptuously, is pictured as feasting in the realms of bliss with the father of the race.

Indeed, he is seen to have been given the place of highest honor, being able to recline in the bosom of Abraham.

In the story, Abraham's bosom is seen in strong contrast with HADES. It is seen as the felicitous abode of the righteous poor, while Hades is the place of torment for the wicked rich. The Greek and later Jewish conception of Hades was that of a place that would receive all of the dead, but was divided into two compartments, one a place of blessing and the other a place of torment. This, however, does not seem to be the view taken here. While the two abodes are pictured as being close enough to allow some visual and vocal communication between the two, it is still in Hades itself, rather than in a compartment of it, that the rich man suffers. Further, the facts that there is a great chasm fixed between Abraham's bosom and Hades, and that there is no possibility of crossing the chasm in either direction, would seem to indicate that each is a permanent location or state and not simply a temporary waiting place for judgment. See also BOSOM; HEAVEN; PARADISE.

H. G. ANDERSEN

Abram. See ABRAHAM.

abrech. KJV mg. form of ABREK (Gen. 41:43).

abrek ay'brek (אֲבֵרֵק *H91*). An acclamation of homage of unknown source and meaning, which the populace cried out before JOSEPH when he drove among the people in PHARAOH'S second chariot (Gen. 41:43). Many Hebrew, Egyptian, Assyrian, and Akkadian derivatives have been suggested with such meanings as "Bow the knee!" (KJV, NRSV, as if from Heb. *bārak* *H1384*, "to kneel"), "Prostrate yourself!," "Bow your head!," "Make way!" (NIV), "Rejoice!," or "Watch out!" E. Mack (in *ISBE*, 1:18) follows Friedrich Delitzsch and M. G. Kyle (*Moses and the Monuments* [1920], 29), who judge the source to be the Assyrian *abarakku*, meaning "grand vizier" or "friend of a king." Some have thought that the word and practice was brought to Egypt by the HYKSOS.

E. S. KALLAND

Abron ay'bruhn (Ἀβρωνά; some MSS Χεβρων or Χευρων). A river of uncertain location mentioned in Jdt. 2:24 (KJV, "Arbonai"). Some identify it with the HAVOR, a tributary of the EUPHRATES (2 Ki. 17:6; 18:11; cf. 1 Chr. 5:26); others point to the town of ABDON (Josh. 21:30; 1 Chr. 6:74). The Greek may be a misunderstanding of the Hebrew phrase (*ēber hannāhār*, "beyond the river," read as a proper name).

E. S. KALLAND

Abronah uh-broh' nuh (עֲבְרוֹנָה *H6307*, perhaps "crossing, ford"). KJV Ebronah. A camp of the Israelites during their wilderness journey, one stop before EZION GEBER at the Gulf of AQABAH on the border of EDOM (Num. 33:31–35; not mentioned in Deut. 10:1–7). Possible identifications include (Ain ed-Defiyeh (Heb. 'Ein Avrona, about 9 mi. N of Ezion Geber) and ELATH (on the northern shore of the gulf).

E. S. KALLAND

Absalom, Abishalom ab'suh-luhm, uh-bish'uh-luhm (אֲבִשָּׁלוֹם *H94* and אֲבִשָּׁלוֹם *H58* [only 1 Ki. 15:2, 10], "[my] father is peace"). (1) The third son of DAVID, born at HEBRON to his third wife MAACAH,

the daughter of TALMAI, king of GESHUR (2 Sam. 3:3). The person of Absalom is described in great detail (14:21–27). All Israel praised his beauty, for there was not a blemish in him from “the top of his head to the sole of his foot.” So heavy was his hair that the weight of that gathered from his occasional cuttings would run at about five pounds.

His sister TAMAR was a beautiful girl, and this was to be the beginning of misery and grief in many Israelite lives. David’s first son by AHINOAM of Jezreel, named AMNON, fell in love with Tamar, and his frustration caused him to become ill (2 Sam. 13:1–2). Since his half sister was evidently kept in close guard, there was no way to gain access to her. Amnon’s friend JONADAB, the son of David’s brother Shimeah, suggested a crafty way of realizing Amnon’s objective: the custom that a sick person could request a special meal his heart desired (vv. 1–6). Soft-touch David granted Amnon’s request to have Tamar perform this custom, and Amnon seized the opportunity to force Tamar. She tried to talk sense and offered counterproposals, but the fool would not listen. Having disgraced Tamar, Amnon hated her with a stronger passion than that with which he had just previously loved her. Tamar was promptly dismissed to lead a solitary life as a widow even though she had never been a wife.

Absalom, as Tamar’s brother, waited in a rage to see if their father David would act against Amnon, but it was useless. After two years had elapsed, Absalom planned his revenge for the dishonor of his sister at a royal feast on the occasion of the sheep-shearing festivities. Apparently, Absalom owned some estates and pasture land N of Jerusalem (2 Sam. 13:23) in the territory of BENJAMIN. This was similar to such a festival in connection with NABAL and David (1 Sam. 25:1–8), so Absalom planned to celebrate his sheep-shearing by inviting the king and the king’s sons. The king had to decline, but he gave his consent to Amnon to attend (2 Sam. 13:21–27). A plan was laid whereby the servants would openly murder Amnon at a given signal from Absalom. No attempt was made at concealment, for the princes were to be forced into being witnesses to a just revenge to give it due legality. Amnon had come to the feast feeling that the invitation was a sign of forgiveness and reconciliation; but he was wrong. In the pandemonium that followed, everyone mounted his mule (sign of nobility) and rode off; Absalom himself decided to hasten across the Jordan to Talmai, king of Geshur, where he stayed for three years in exile (vv. 21–29, 37).

In this incident one sees the character of Absalom: tender, jealous, and fierce in his love for his sister Tamar; crafty, false, and sinister in his success in inducing David to allow Amnon to join the feast; daring, reckless, and foolhardy in his murder of Amnon; and ambitious, covetous, and heady in his designs on the throne of David now that his elder brother had been put to death. Nothing was said of KILEAB, the only other older brother. Should not he be the next legitimate king to reign since he now was the eldest son, and probably the first son to be born to David after he began to reign in Hebron? Did he not also have royal blood in his veins from his mother’s side? Perhaps he too had died.

The news was a shock David didn’t forget for years, for even after Absalom was restored at the end of three years (2 Sam. 13:38), it took an additional two years before he was admitted to the king’s presence (14:28). Actually, even Absalom’s return from exile was brought about by the clever engineering of JOAB, David’s chief of the military. Joab employed a wise woman from TEKOA (the village from which the prophet AMOS came), and together they devised a story ostensibly to secure the king’s help in the woman’s personal domestic life, but actually to involve the king psychologically because of the parallelism between his own son Absalom and the woman’s. The story involved the case of two sons in which one smote the other and now the woman stood in jeopardy of losing the other son because of the custom of blood revenge. Craftily she repeatedly obtained the oath of the

king that no one would kill the brother, and finally she introduced the Lord God's name in the repeated assurances given to her by David. The king then even swore to her by the name of Yahweh that there would be no new killing (14:11).

Instead of leaving satisfied, the woman pressed for one more objective and boldly substituted the "people of God" for the family and the "banished" son for her fictitious son in her parable. She named David the

Because of the rebellion of his son Absalom, David was forced to flee his palace escaping through the Kidron Valley. (View looking : W from the Kidron to the City of David.)

king as "the guilty one" (2 Sam. 14:13). Sensing that the king was catching on too quickly, the woman tried to do a type of double-talk and make it appear that she was still describing her own case, when in fact David knew better. David, knowing Joab's views on the matter, asked the woman, "Isn't the hand of Joab with you in all this?" Quickly the woman revealed the truth and praised the king's wisdom in extravagant terms (vv. 11–20). The permission was given to Joab to restore Absalom, but Absalom remained unhappy because he had not been brought to a full reconciliation. When Joab refused to do anything more for Absalom, his temper flared and he ordered his servants to set Joab's field of barley on fire. Joab quickly came to see Absalom, and the arrangements to see David were completed (vv. 21–33).

Reinstated, Absalom lost no time in going after his father's throne. With his retinue of horses, chariots, and fifty retainers to run before him he began to capture the imagination of Israel (2 Sam. 15:1). Early each morning he arose to see the people who had come to see the king for adjudication. With innuendo and insinuation, he intimated that if he were king things would straighten out in a hurry (15:1–4) and so he "stole the hearts of the men of Israel" (15:6). While the MT reads that it was after a period of "forty years" that Absalom made his move for the throne by asking the king to allow him to go to Hebron to pay an old vow to the Lord (15:7), most authorities, on the basis of the SEPTUAGINT and the Syriac Peshitta, agree it should read "after four years" from his return from his grandfather's home in Geshur. This excuse revealed the same Absalom who once before had asked David to allow Amnon to attend a feast. He retreated to the old capital of David in Hebron with two hundred men. He then called for AHITHOPHEL, David's wise counselor, to be his strategist (17:23).

When David learned of the planned rebellion, he immediately left Jerusalem. Apparently the opposition of the Saulist party and the defection of the tribes was so serious that the aging king decided to escape to MAHANAIM, E of the Jordan with the Kerethites, Pelethites, Gittites, Zadok the priest, Hushai the counselor, Ahimaaz son of Zadok, and Jonathan son of Abiathar (2 Sam. 15:11–30).

Absalom was proclaimed king in Hebron and he took Jerusalem without any opposition at all. Nevertheless David was able to upset and defeat the wise counsel of Ahithophel by the spy infiltrator HUSHAI (15:32; 17:14). The messengers for David's spy network were the sons of the two priests, AHI-MAAZ and JONATHAN (17:11–24).

Ahithophel counseled Absalom to publicly violate the harem of David left behind in Jerusalem and thus establish his legitimacy to the throne (2 Sam. 16:21–23). Next he counseled the usurper to attack David immediately before he could gather support (17:17), but fortunately for David, Hushai's counsel was heeded instead, and David had the time he needed due to the elaborate story which Hushai improvised and which contained great eulogies built to cater to Absalom's vanity and pride (17:1–13).

When the battle finally took place, David's forces had been neatly divided into three groups under Joab, ABISHAI, and ITTAI (2 Sam. 18:1–2). Absalom was caught by his hair in the branches of an oak tree while his mule rode out from under him, and there a certain man found him (vv. 9 – 14). Joab had promised ten shekels of silver and a wrestling belt to the man who slew Absalom, but the man declined the offer. Joab, refusing the softhearted king's request for mercy, thrust three darts into Absalom and thus the curtain fell on his career. He was buried on the spot, and a heap of stones marked the rebel's grave (vv. 11–17). During his lifetime, Absalom had erected a pillar to his name in the KING'S VALLEY (v. 18; cf. Jos. *Ant.* 7.10.3), since his sons apparently had died in their youth (2 Sam. 14:27). Nothing is known with certainty about this monument. David did not rejoice in the death of his son, but lamented over and over, "O my son Absalom! My son, my son Absalom!" (18:33; 19:4). (See C. Conroy, *Absalom, Absalom! Narrative and Language in 2 Samuel 13–20* [1978].)

(2) Abishalom (a variant of Absalom) in 1 Ki. 15:2, 10 may be the same as (1) above, in which case he also had a daughter or granddaughter named Maacah. Some believe this passage refers to a different person (see ABIJAH).

(3) One of two envoys sent by Judas MACCABEE to the Syrian commander LYSIAS in 164 B.C. (2 Macc. 11:17, *Abessalōm*). Some scholars associate this individual with "the house of Absalom" mentioned in the *Habakkuk Commentary* from Qumran (1QpHab V, 1–10).

(4) The father of a certain Mattathias, who was one of the commanders in the army of Jonathan Maccabee in 145 B.C. (1 Macc. 11:70). He is probably the same person referred to later (13:11) as the father of an envoy named Jonathan, sent by Simon Maccabee to occupy JOPPA. In both of these passages his name is spelled *Apsalōmos*.

W.C. KAISER, JR.

abstinence. See FASTING; SELF-CONTROL.

Abubus uh-boo'buhs ('Αβουβος). The father of Ptolemy, military governor of JERICHO, who murdered his father-in-law, SIMON MACCABEE, and his two sons in that city in 135 B.C. (1 Macc. 16:11–17).

abyss. The Greek term *abyssos* G12 (originally an adjective, "bottomless, unfathomable," then a noun, "deep place") is rendered by the KJV with "the deep" (Lk. 8:31; Rom. 10:7) and "bottomless pit" (Rev. 9:1–2, 11; 11:7; 17:8; 20:1, 3). The NIV treats it as a proper name, "Abyss" (except in Romans).

Classical writers used the word to describe things so deep or great as to be without measure, such as pools, fountains, and wealth. It occurs frequently in the SEPTUAGINT, usually translating the

Hebrew noun *těhôm* H9333 to signify the great ocean depths (e.g., Ps. 33:7; 107:26); in Gen. 1:2 it refers to the primeval sea. In Hellenistic times the concept of the underworld was suitably expressed by the same word. Its application in Lk. 8:31 to the place to which the demons are loath to go is understandable. Some see a connection with the SPIRITS IN PRISON mentioned in 2 Pet. 2:4 and Jude 6, though the word *abyss* is not used there. Care is necessary, of course, lest non-Christian concepts of the underworld govern the interpretation of the NT. Paul uses it to refer to the state or place of Christ in death (Rom. 10:7; this verse is an adaptation of Deut. 30:13, which has the word *yām* H3542, LXX *thalassa* G2498, “sea”).

The passages in Revelation describe the Abyss as an abode of evil beings. In Rev. 9:1–12 brutal locusts, whose king is ABADDON (“Destroyer”), proceed from this pit. The Abyss is also mentioned in 17:8 as the place from which the beast who bears the harlot BABYLON arises. It is the location of Satan’s confinement for one thousand years (20:1, 3; see MILLENNIUM). The varied uses of the term in Jewish, pagan, and Christian literature have in common the idea of an immense and terrifying place, though the specific applications differ according to context.

W. L. LIEFELD

Abyssinia. Alternate name for the country of ETHIOPIA.

Acacia tree located in the barren region of N Sinai.

acacia. There are several acacias (i.e., different species under common names) mentioned in the Bible, some of which yield gum arabic. In Exod. 3:1–4, the word “bush” (*sěneh* H6174) is probably the thorny *Acacia nilotica*, that is, Egyptian mimosa, rightly translated “thorn bush” by Moffatt. It is seen around the DEAD SEA. Some think it may be *Acacia arabica*; still others suggest *Loranthus acaciae*. See FLORA (under *Loranthaceae*).

The term “*šittā* H8847, usually in the plural *šittīm*, is *Acacia seyal* or *A. tortilis* (Exod. 25:5, 10, 11–23, 28; also chs. 26; 30; 31–38; Deut. 10:3; Isa. 41:19). KJV usually gives the transliteration “shittim” (in Isa. 41:19, “shittah tree”). These species flourish in barren regions, and *A. tortilis* (sometimes referred to as *A. raddiana*) is common even today. The wood is very hard, brownish-orange in color, and was used for cabinet-making; it is still used for furniture. The word *seyal* means “torrent,” reflecting the fact that the tree often grows by fast-moving streams. These trees were

probably plentiful in OT times, and were massed in desert valleys which became torrents in the rainy seasons. The wood is said to make the best charcoal.

The reference to “henna blossoms” (*Lawsonia inermis*) in Cant. 1:14 may allude to *Acacia catechu*, for HENNA paste is made by mixing the henna leaves when dried, and powdered with an extract of the wood of this particular tree. Probably the acacia was not native to N Palestine, as it is not mentioned at all in the later biblical books. (See *FFB*, 81–88.)

W. E. SHEWELL-COOPER

Acatan ak’uh-tan. KJV Apoc. form of HAKKATAN (1 Esd. 8:38).

Acbor ak’bor (עֲבֹר H6570, “mouse”). TNIV Akbor. (1) Father of BAAL-HANAN, an Edomite king (Gen. 36:31–39; 1 Chr. 1:49).

(2) Son of Micaiah and father of ELNATHAN; King JOSIAH commanded him to go with some others to consult HULDAH the prophetess concerning the newly discovered book of the law (2 Ki. 22:12, 14; Jer. 26:22; called Abdon son of Micah in 2 Chr. 34:20).

S. BARABAS

Accad. See AKKAD.

Accaron ak’uh-ruhn. KJV Apoc. form of EKRON (1 Macc. 10:89).

accent. This term is used once by the NIV and other versions to render Greek *lalia* G3282, “talking, speech” (Matt. 26:73). The Greek word likely refers to the dialectical peculiarity of one like PETER, who spoke Jewish ARAMAIC in a way characteristic of GALILEE. “Accent” may be too restricted a rendering, for *lalia* probably included the peculiar use of words and idioms as well as mere accent or intonation.

G. L. ARCHER

accents (Masoretic). See TEXT AND MANUSCRIPTS (OT) VII.

acceptance. A term meaning that a person or act is received with approval or welcomed by another. The idea is rendered by a variety of words or expressions in the OT and NT. In the Bible the most vital need of the person is to be acceptable to God. Sin separates. Acceptance is a condition of restoration to God. It is clear that God determines who is acceptable to him, and he it is who provides the means of RECONCILIATION of the estranged. God instituted reconciling sacrifices, but sacrifices in themselves are of no use if the worshipers are profane in their manner of life (Isa. 1:11–16). It was the penitent TAX COLLECTOR and not the self-justifying PHARISEE whom God accepted at prayer (Lk. 18:14).

The NT gives the final word on the solution. God provided access to himself through Jesus Christ by his cross (Eph. 2:18; 3:12). Acceptance is, in more personal terms, the equivalent of the idea of JUSTIFICATION, which comes through accepting God’s gift by faith (Rom. 5:1–2). We are accepted by accepting God’s gift. Since this is so, the believer can offer himself acceptably to God (Rom. 12:1). As a priest, his particular sacrifices are acceptable through Christ (1 Pet. 2:5), such as his gifts, his praise, his well-doing, and his sharing (Phil 4:18; Heb. 13:11–16). All the godly of

whatever race and station are through Christ acceptable to God, as CORNELIUS was (Acts 10:35). And because God has received believers, they are to forgive and accept each other in the fellowship of love (Eph. 4:32; 5:2), even though they differ on details of Christian conscientious behavior (Rom. 14:1, 3; 15:7 NEB).

N. B. BAKER

access. A word used to translate Greek *prosgōgē* G4643, which appears three times in the NT (Rom. 5:2; Eph. 2:18; in Eph. 3:12 NIV uses the term “approach”). Commentators are not agreed as to whether the word should be taken in the transitive sense, meaning “introduction,” or in the intransitive sense, meaning “access, personal approach.” In the NT it is always used of the work of Christ. He introduces a person into the royal presence of God. The redemptive blessings that belong to the believer are made possible through Christ by faith.

S. BARABAS

Aerial view of the Crusader city of Acco (looking NE).

Accho. KJV form of Acco.

Acco ak’oh (עכו H6573; II G4767). KJV Accho; TNIV Akko. A Canaanite-Phoenician coastal city in the territory of ASHER, known as Ptolemais in NT times; identified as modern Acre.

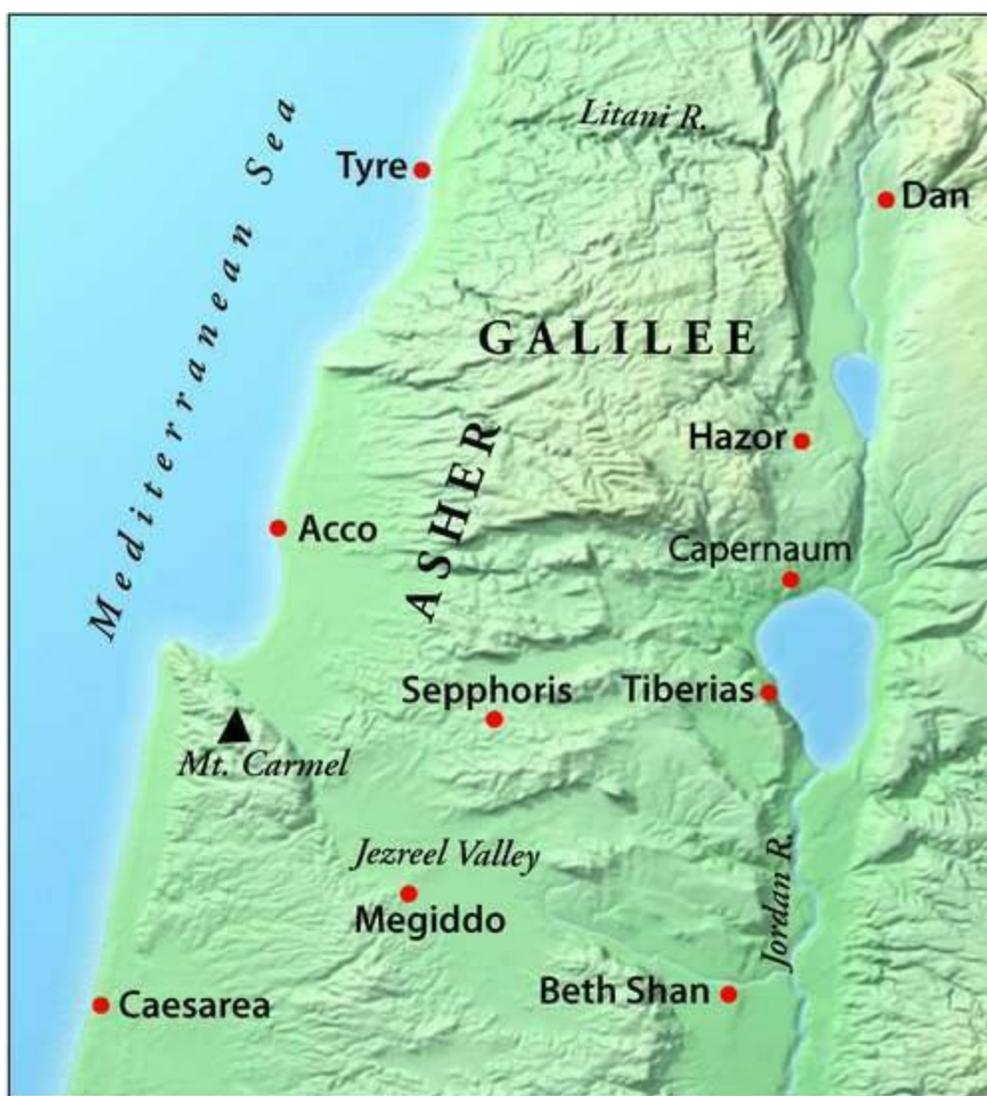

I. Location. In OT times the city was located at Tell el-Fukhkhar, one of the most impressive mounds in PALESTINE. The site stands at a natural dividing line between the southern and northern halves of the coastal plain, between the Carmel headland (see CARMEL, MOUNT) and the LADDER OF TYRE (Ras en-Naqurah). To the S there is a sandy beach that extends for quite a distance inland; in classical tradition, this was the source of an excellent type of sand used in the manufacture of glass (Strabo, *Geogr.* 16.2.25; Jos. *War* 2.10.2 §§181–91; Pliny the Elder, *Nat.* 5.75; 36.191; Tacitus, *Hist.* 5.7). The N shore line is rocky and rugged down to the water’s edge. The northern cove of the Haifa bay has served as Acco’s seaport, probably from time immemorial. There was probably a small town on the shore even in the Israelite period, but during the Hellenistic age the town spread from its tell to the site of the present town (Ptolemy, *Hist.* 5.15.5).

II. History

A. Bronze Age. Acco was an important Canaanite city state in the Middle and Late Bronze Ages. Its first recorded appearance is in the Egyptian EXECRATION TEXTS of the 19th cent. B.C. (where it is written ^(ky)); its prince was Turi-^(Ammu) (G. Posener, *Princes et pays d'Asie et de Nubie* [1940], No. E 49; cf. *ANET*, 329 n. 8). In mid-15th cent. B.C. it was conquered by THUTMOSE III, apparently during his first campaign (No. 47 on his list, ^(k)). During the next century Acco continued to play a major role in the affairs of Canaan, since it is mentioned repeatedly in the TELL EL-AMARNA letters. The names of its two known rulers are evidently non-Semitic, perhaps Indo-Aryan. During the 13th cent. B.C. Acco was again of key importance to the pharaohs of the 19th dynasty. Seti I was there on his first campaign to Canaan. One of RAMSES II's wall reliefs depicts the conquest of Acco. A school text (Papyrus Anastasi I) records Acco as one of the principal towns on the coastal route.

B. Iron Age. The only sure mention of Acco in the OT (unless the suggested reading of "Acco" in some Gk. MSS of Josh. 19:30 be accepted) is the comment that Asher did not "drive out those living in Acco" (Jdg. 1:31). The city, therefore, became an integral part of the Israelite monarchy only under DAVID; sometime in SOLOMON'S reign its region (called after CABUL) was transferred to Tyrian control (1 Ki. 9:11–13; 2 Chr. 8:1–2). Thus it remained Phoenician territory throughout the rest of the OT period (see PHOENICIA; TYRE). When SENNACHERIB, king of Assyria, made his punitive expedition to Palestine (701 B.C.), his forces took Acco (*ak-ku-ú*) along with the other fortified towns belonging to the king of SIDON at that time (*ANET*, 287). ASHURBANIPAL, on the return march from his campaign against the Arabs (c. 660 B.C.), found it necessary to punish severely the towns of Ushu and Acco (*ANET*, 300).

C. Hellenistic and Roman periods. Acco, renamed Ptolemais, always remained a Phoenician-Hellenistic city. It figured largely in the Maccabean wars, but was never joined to a Jewish kingdom under the HASMONEANS or the HERODS. Under Emperor CLAUDIUS (A.D. 51–54) Ptolemais was raised to the status of a *colonia* (Pliny the Elder, *Nat.* 5.17), and the veterans of various legions settled there. The pagan deities worshiped during the Hellenistic and Roman periods were known under nearly a dozen Greek names, but recent evidence suggests that most of these were epithets for the two main Syrian deities, HADAD and ATARGATIS. Because of its pagan influences, the Jewish rabbis disputed as to whether Ptolemais should be included in the "Holy Land." That is, they did not feel that the commandments incumbent upon a person dwelling in "Israel" were in effect for a resident of Acco.

Acco.

Sometime during this period a small Christian community had developed at Ptolemais, because at the end of PAUL'S third missionary journey (A.D. 57), the apostle and his traveling companions stopped there for one day en route from Tyre to CAESAREA (Acts 21:7). The local fellowship had doubtless sprung up among the Jews living in Ptolemais (cf. 11:19, which marked the beginning of the movement in that area), but the Hellenic nature of the city itself was also a probable factor in the reception of Christianity. By this time the Roman coastal highway from Tyre to Ptolemais was probably completed. (See further G. T. Newell, *The Dated Alexander of Sidon and Ake* [1916]; A. H. M. Jones, *Cities of the Eastern Roman Provinces* [1937], 241–42, 251, 257, 281; N. Makhouly and C. N. Johns, *Guide to Acre*, 2nd ed. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], passim; *NEAEHL*, 1:11–31.)

A. F. RAINEY

accommodation. A term used in biblical INTERPRETATION to indicate (1) some meaning other than the literal one, or (2) the recognition of God's need to reveal himself in terms of human understanding. In the interpretation of Scripture the literal meaning is to be followed unless there is some indication that a figurative sense was intended by the author. There are situations, however, in which the

interpreter is entitled to go beyond the specific meaning of a passage. This is called “accommodation.” When the passage under consideration makes a particular application of a general principle, the interpreter is legitimately entitled to apply that principle in areas different from the specific consideration of the author. To act in this fashion is not to reject the author’s original meaning but simply to offer a broader context to the same principle enunciated by the author.

Another example of accommodation would be the literary device known as “double entendre,” in which the author writes in such a way as to open the possibility of two interpretations. Generally one meaning only is to be ascribed to a passage, but the double meaning is intended in some cryptic passages. The writings of JOHN THE APOSTLE in the NT are especially characterized by this device.

ALLEGORY is also a literary device in which the interpreter accommodates the interpretation to the fact that the original plain meaning was not the intended meaning of the author. PAUL’S reference to the law and Sinai is often offered as an example (Gal. 4:21–31). The use of allegory has been much abused and care must be exercised not to treat poetical and metaphorical passages as if they were allegorical.

In interpretation it is necessary to acknowledge the anthropomorphic nature of Scripture (see ANTHROPOMORPHISM). God had to accommodate the divine REVELATION to the human mind. The Bible speaks of the corners of the earth. This does not discredit revelation. It simply acknowledges that many ancients thought of the earth as flat and having corners. When God spoke, he used the thought forms of the day and not the scientific terminology of a later age. Heaven is described in terms of human values: gold, silver, jewels. Hell is described in terms of fire and brimstone. God himself is spoken of as having a face, eyes, ears, mouth, hands, feet, etc. In no way does this accommodation affect the truth or the religious value of the passage. That which is declared is real, but intelligible to human beings only through their language and in their thought forms.

H. L. DRUMWRIGHT, JR.

accomplish. See FULFILL.

accord. See UNITY.

Accos ak’oz (A^{ΚΚΩΣ}). Grandfather or ancestor of EUPOLEMUS, a Jewish ambassador in the Maccabean period (1 Macc. 8:17; see MACCABEE).

Accoz ak’oz. KJV Apoc. form of HAKKOZ (1 Esd. 5:38).

accursed. The characteristic OT term for this concept is Hebrew *ḥērem* H3051, which signifies a person or thing devoted to Yahweh and therefore not to be used or even touched by human beings. Usually it was to be devoted to destruction, as in the case of JERICHO and all its inhabitants and livestock (Josh. 6:17), which as the most degenerate of the Canaanite cities was to be completely destroyed (except for its vessels of silver, gold, brass, and iron, which were to be dedicated to God in the sanctuary). Anyone touching such a thing incurred the curse of God, and like ACHAN, had to be destroyed; the taint of his sacrilege put all Israel under this curse (7:12) so that they were routed by the defenders of AI. The cognate verb (*ḥāram* H3049, hiphil) means “render accursed” or “utterly destroy” (e.g., Num. 21:1–3, with reference to the cities of ARAD); JOSHUA warned Israel not to take any spoil from Jericho, “lest you make yourselves accursed” (Josh. 6:18; NIV, “so that you will not

bring about your own destruction”).

In Deut. 21:23 a criminal hung on a tree is said to be “accursed of God” (NIV, “under God’s curse”), but here the term used is the noun *qēlālā* H7839 (from the verb *qālal* H7837 piel, “to regard as light, worthless, vile,” and hence “to curse”). Similarly in Isa. 65:20 (speaking of longevity in the kingdom age): “he who fails to reach a hundred will be considered accursed.”

The SEPTUAGINT renders ḥērem by *anathema* G353, which originally meant “something set up” (as a votive offering), but here was used of “something devoted to God for judgment and destruction,” such as the teacher of a false gospel (Gal. 1:8; NIV, “eternally condemned”), or as PAUL wished himself to be if it could bring the Jewish race to a saving knowledge of Christ (Rom. 9:3). A term familiar in classical Greek was *kataratos*, “bound under a curse,” a compound of which, *epikataratos* G2129, is used by Paul in Gal. 3:10, 13. A different term with similar meaning is *eparatos* G2063 (Jn. 7:49). See also ANATHEMA; BAN; CURSE; EXCOMMUNICATION.

G. L. ARCHER

Accuser. See SATAN.

Aceldama uh-kel’duh-muh. KJV form of AKEL-DAMA (Acts 1:19).

Achaea. See ACHAIA.

Achaemenids uh-kee’muh-nuhd. Dynastic name (from a 7th-cent. king named Achaemenes) applied to the rulers of the Persian Empire. See PERSIA III .C.

Achaia uh-kay’uh (‘A^{Ἀχαιοί} G938). Also Achaea. A Roman province that included all the Peloponnesus (the peninsula S of the Gulf of CORINTH), much of central GREECE, and the Cyclades islands. The name is derived from *Achaiói*, a common designation in Homer for the Greeks who besieged Troy in the 12th cent. B.C. It is generally applied to the followers of Agamemnon, who came from the fertile plains of Argos and the surrounding areas, and to the men of Achilles who came from Pithian Thessaly in the NE. It is also the name for the Greeks used in Hittite and Egyptian texts of the period 1401–1200 B.C. That they were Greek-speaking people is borne out by the decipherment of Linear B tablets from Late Bronze Age (Mycenaean) settlements at Mycenae, Pylos, and Thebes (see GREEK LANGUAGE). HERODOTUS (*Hist.* 7.94) was no doubt wrong when he stated that they supplanted the Ionians in the Peloponnesus after they moved from their original home in Thessaly. They were instead Greek-speaking intruders who replaced the original inhabitants of both regions, probably at the end of the Middle Bronze Age.

In historical times the name was applied to the N central part of the Peloponnesus. It extended from Elis to Sicyon and comprised the narrow, fertile plain and foothills between the Gulf of Corinth and the mountains behind. The twelve small towns located in this region formed a federal league that met first at Helice and later at Aegium. In the 3rd and 2nd centuries B.C. the league became the chief power of Greece. The league was remarkable as one of the most perfect examples of federal government. Every city had equal rights and managed its own internal affairs. In foreign affairs the

Achaia.

federal government was supreme. It consisted of all citizens of all the towns and met twice a year to consider matters of common interest. The Achaian constitution was used as a model by the framers of the American Constitution.

After the conquest of Greece by the Romans in the middle of the 2nd cent., the league went into a sharp decline. The region was administered by the Roman governor of MACEDONIA until 27 B.C., when the emperor AUGUSTUS divided Greece into two parts, Macedonia and Achaia. The latter became a senatorial province. CORINTH, which had been rebuilt in 46 B.C., became the capital and the residence of the proconsul. Because of a dispute over taxes, TIBERIUS in A.D. 15 reunited Achaia with Macedonia and Moesia under the administration of an imperial legate, but in 44 CLAUDIUS again made it a senatorial province. On the 28th of November of the year 67, NERO declared Greece free at the Isthmian games, but VESPASIAN soon made it a senatorial province again.

During his first visit to Corinth, PAUL was dragged before the governor of Achaia, L. Junius Gallio Annaeus, by Jews who resented his teachings (see GALLIO). The magistrate refused to become involved in their religious dispute, nor did he interfere when the crowd beat SOSTHENES, the ruler of the synagogue, in front of the judgment seat (Acts 18:11–17). The name Achaia is used in the NT to refer to the Roman province or to its inhabitants (Acts 18:27; 19:21; Rom. 15:26; 1 Cor. 16:15; 2 Cor. 1:1; 9:2; 11:10; 1 Thess. 1:1–8).

A. RUPPRECHT

Achaicus uh-kay'uh-kuhs (A^{Χαϊκός} G939, “belonging to Achaia”). A respected Christian of CORINTH. From his name some have inferred that he may have been a slave or ex-slave of the family of L. Mummius, conqueror of Achaia. He is mentioned only in 1 Cor. 16:17 as the third member of a three-man delegation coming to PAUL in EPHESUS with a letter from the Corinthian church (7:1). Some MSS also insert the three names of the delegation in 16:15. Their arrival refreshed Paul, giving him the needed direct contact with the church. They returned to Corinth, apparently taking with them 1 Corinthians (cf. the subscription after 16:24 in most MSS).

D. E. HIEBERT

Achan ay'kan (אָחַן H6575, derivation unknown; in 1 Chr. 2:7 the name appears as אָכָר H6580, “Achar,” which means “troublers”; LXX has A^{Χαῖρ} throughout). Son of Carmi and descendant of JUDAH through ZERAH (one of the twins born to Judah by his own daughter-in-law, TAMAR). Achan was stoned to death for violating the BAN during the conquest of JERICHO (Josh. 7:1–26). Achan stole 200 shekels of silver, a Babylonian garment, and a wedge of gold weighing 50 shekels, and hid them in the earthen floor of his tent (7:21).

The effect of this violation of the ban (Josh. 6:17) was immediately felt upon all Israel as they attempted to take the city of AI. Jericho had been offered to God as a sort of FIRSTFRUITS, wholly given to him and utterly withdrawn from human use forever; Achan thought he knew better! JOSHUA soon learned upon asking of God the reason for the military failure at Ai: that one man's sin had affected the whole group (7:1–13). The response of God was: “Israel has sinned; they have violated my covenant” (v. 11). With this evidence for CORPORATE PERSONALITY or solidarity of the community one may also note Achan's personal confession (vv. 21–21).

Not all scholars accept this narrative as evidence for corporate solidarity between a group and the actions of individuals within that group. J. R. Porter has denied this explanation of collective responsibility and argued for an infectious holiness that spreads to all who touch it, which in turn

earns the death penalty (*VT* 15 [1965]: 361–73; Hag. 2:12 would seem to negate Porter’s explanation).

When Achan was exposed after the lot fell upon him, all his family and their possessions were brought to the Valley of Achor for punishment. Whether the sons and daughters also were stoned depends on two questions: (a) whether the plural “them” (Josh. 7:25) refers to his possessions only or includes his sons and daughters; and (b) whether the children were knowingly involved in the crime, for the law of Moses prohibited children from being put to death for the sins of the fathers (Deut. 24:16). One cannot appeal to Josh. 22:20 (“He was not the only one who died for his sin”) as settling the case, since this verse may refer to the thirty-six men who also lost their lives in the unsuccessful attack on Ai. The Valley of Achor (“trouble”) symbolized for the prophets (Isa. 65:10; Hos. 2:15) the opposite of the eschatological “door of hope” and thus became a byword.

W. C. KAISER, JR.

Achar ay’kahr. See ACHAN.

Achaz ay’kaz. KJV NT form of AHAZ.

Achbor. See ACBOR.

Achiacharus ak’yuh-kay’ruhs. KJV Apoc. form of AHIKAR (Tob. 1:21–22; 2:10).

Achias uh-ki’uhs. KJV Apoc. form of AHIJAH (2 Esd. 1:2).

Achim ay’kim. See AKIM.

Achior ay’kee-ohr (’Αχιὼρ, possibly representing Heb. אַחִיאִוֹר, “brother of light”). An Ammonite chief captain who, after giving a favorable report on the Israelites to HOLOFERNES, the commander of the Assyrians, was left bound in Israelite territory. When JUDITH later showed Achior the severed head of Holofernes, he “believed firmly in God” and was converted to Judaism (Jdt. 5:5—6:21; 14:1–10).

E. S. KALLAND

Achish ay’kish (אֲכִישׁ H429, possibly from Hurrian *akk sha(rur)*, “the king gives” [so R. W. Corney in *IDB*, 1:27]). A PHILISTINE king of GATH to whom DAVID went for refuge when he had to flee from SAUL, after receiving the bread of the presence and the sword of GOLIATH from AHIMELECH the priest. When the servants of Achish disclosed who David was, David pretended he was insane and so escaped to ADULLAM (1 Sam. 21:11–15; 22:1). Later, when David had been some time a fugitive from Saul, he again sought asylum with Achish and was well received. Subsequently Achish gave him ZIKLAG as his home town. Though David raided other towns in the NEGEV, he informed Achish that his forays were against Judah, so that Achish trusted David (1 Sam. 27:1–12).

After the death of SAMUEL, the Philistines gathered their armies to attack Israel, and Achish asked David to go with him to battle. When the Philistine commanders saw David and his company, they insisted that David be sent back. Though Achish entreated for David, David and his men were sent back to the S country (1 Sam. 28:1–2; 29:1–9).

The “Achish son of Maacah” to whom two of Shimei’s slaves fled (1 Ki. 2:39; Achish is called “son of Maach” in 1 Sam. 27:2) may be the same king, though the time was about forty years later. The superscription to Ps. 34 says that David feigned madness before Abimelech, perhaps another name for Achish; but see ABIMELECH #3.

E. S. KALLAND

Achitob ak’uh-tob. KJV Apoc. form of AHITUB (1 Esd. 8:2; 2 Esd. 1:1).

Achmetha ak’muh-thuh. KJV form of ECBATANA (Ezra 6:2).

Achor ay’kohr (עֶכּוֹר H6574, “trouble”). The valley in which ACHAN, apparently with his family, was stoned to death because he had taken a beautiful Babylonian mantle, 200 shekels of silver, and a 50-shekel bar of gold from JERICHO, although God had instructed the Israelites that no booty was to be taken. Because Achan’s sin brought trouble to Israel by the defeat at AI, the place was named the Valley of Achor (Josh. 7:21–26). The valley is on the northern boundary of the allotment of JUDAH (Josh. 15:7) and is thought to be the modern el-Buqe^hah, SW of Jericho. The term “Valley of Achor” is used prophetically by both Isaiah and Hosea to indicate that the Lord (Yahweh) will bring blessing in the future in the places of trouble caused by their sin (Isa. 65:10; Hos. 2:15). (See *NEAEHL*, s.v. “Buqei^a, El-,” 1:261–69.)

E. S. KALLAND

Achsah ak’suh. See ACSAH.

Achshaph ak’shaf. See ACSHAPH.

Achzib ak’zib. See ACZIB.

Acipha uh-sz’fuh. KJV Apoc. form of HAKUPHA (1 Esd. 5:31).

Acitho as’uh-thoh. KJV Apoc. variant of AHITUB (Jdt. 8:1).

Acra ak’ruh. The Greek term *akra* means “citadel” (cf. the LXX at 2 Sam. 5:9; 1 Ki. 10:22) and is used especially of the fortress built by the Syrian forces near the temple in Jerusalem in 167 B.C. (1 Macc. 1:31–36). See JERUSALEM II.D.3

Acraba ak’ruh-buh (ΕΥΡΕΒΗΛ). A place near which part of the army of HOLOFERNES encamped when besieging the Israelites at BETHULIA (Jdt. 7:18 RSV; the KJV has “Egrebel,” and the NRSV, “Egrebeh” [apparently a typographic mistake for “Egrebel”]). It is usually identified with modern Akrabeh/Akrabeta, 25 mi. NNE of Jerusalem. In NT times the area between SAMARIA and SHILOH was called the Toparchy of Acrabet(t)a (or Acra-batene; cf. Jos. *War* 2.12.4 §235; 4.9.9 §551). See also AKRABATTENE.

Acre ah’kuhr. See ACCO.

Acropolis uh-krop'uh-lis (Ἄκροπολις, “upper city”). The Greek term can be used of the main fortress protecting a city and situated in a commanding position, but it is used especially of the citadel of ATHENS; it was also the principal sanctuary of its patron goddess, Athena. (See J. M. Hurwit, *The Acropolis in the Age of Pericles* [2004].)

acrostic. This term (Gk. *akrostichis*, from *akros*, “top, extremity,” and *stichos*, “line” of verse) refers to a poem in which the first letters of consecutive lines or stanzas follow the alphabet or form words. The NT contains no acrostics. The OT, however, contains fourteen acrostic poems, in which the twenty-two letters of the Hebrew alphabet appear, with slight variations, at the beginning of one of the following:

(1) each line of one-line verses (Lam. 3)

(2) each line, or each half, of two-line verses (Pss. 111; 112)

(3) each verse = every other line of two-line verses (Pss. 25; 34; 119; 145; Prov. 31:11–31; Lam. 4)

(4) every other line, or each half, of four-line verses (Nah. 1:1–10)

(5) each verse = every third line of three-line verses (Lam. 1; 2)

(6) every fourth line, or every two verses, of two-line verses (Pss. 9; 10; 37)

© Dr. James C. Martin, The British Museum. Photographed by permission.

Cuneiform tablet with an acrostic prayer from Ashurbanipal to the Assyrian deity, Marduk. Reading the first sign in each line down the left edge yields the words, “I am Ashurbanipal.”

A strophic arrangement, in which each letter begins three successive verses, appears in Lam. 3 (total, 66 vv.); similarly, each letter begins eight successive verses in Ps. 119 (total, 176 vv.).

The order of letters in the Semitic ALPHABET is now known to date back to Mosaic times (15th cent. B.C., UGARIT), confirming the possible antiquity of the acrostic psalms and their claim to Davidic authorship. Therefore, Ps. 10 must go with Ps. 9, since the two form one acrostic.

Acrostics aid in memorization. Awareness of acrostic structure has also assisted in the textual restoration of some verses, such as Pss. 25:5, 19; 34:7; 37:28; and 145:13 (the original text of Nah. 1:1–10, however, apparently incorporated only a portion of an acrostic). No acrostics are found in the NT, but an example from early Christianity is the use of the fish as a symbol of Christ, because the Greek word for “fish,” *ichthys* G2716 (in capital letters, ΙΧΘΥΣ), serves as an acrostic of *Iēsous Christos Theou Hyios Sōtēr*, “Jesus Christ, God’s Son, Savior.”

J. B. PAYNE

Acsah ak’suh (עַכְסָה H6578, possibly meaning “anklet”). Also Achsah; TNIV Aksah. A daughter of CALEB who was given in marriage to OTHNIEL, son of Caleb’s younger brother KENAZ, in fulfillment of Caleb’s promise that whoever captured KIRIATH SEIPHER would be given Acsah as his wife. (Some scholars believe this marriage was intended to strengthen the ties between the clans of Caleb and Othniel. Cf. ABD, 1:51–57.) Acsah persuaded Othniel to ask for an additional area, and then she herself asked for sources of water. She was given the upper and lower springs (Josh. 15:11–19; Jdg. 1:11–15; 1 Chr. 2:49).

E. S. KALLAND

Acshaph ak’shaf (אֲכַשָּׁף H439, “sorcery, enchanted [place]”). Also Achshaph; TNIV Akshaph. An old (Bronze Age) Canaanite town on the border of the territory given to ASHER at SHILOH (Josh. 19:25) after JOSHUA led the Israelites into northern Palestine against a coalition of kings under JABIN, king of HAZOR. The king of Acshaph, with many other kings, was defeated by Joshua in a battle by the waters of MEROM (Josh. 11:1–12; 12:20).

Acshaph is mentioned in Egyptian EXECRATION TEXTS of the 19th and 18th centuries B.C., in the Karnak list of places conquered by THUTMOSE III in the 15th cent., in the TELL EL-AMARNA letters of the 14th cent., and in Papyrus Anastasi 1 (a 13th-cent. Egyptian letter). Acshaph is tentatively identified with Tell Keisan, c. 6 mi. SE of Acco, or with Khirbet el-Harbaj, c. 12 mi. S of Acco.

E. S. KALLAND

Acts of Andrew. For this and similar apocryphal works, see under the name of the person (e.g., ANDREW, ACTS OF; PILATE, ACTS OF).

Acts of Solomon. This book, referred to in 1 Ki. 11:41 (with the same formula used to describe the “annals of the kings of Judah/Israel” in 14:19, 29 and elsewhere), may be a history of SOLOMON’S reign based on official state documents.

3. Contents
4. Style
5. Date
6. Sources
7. Purpose
8. Historical value
9. Religious value
10. Chronology
11. The church and the book

I. Title. The accepted title of the fifth book of the NT, the Acts of the Apostles, appears to date from the end of the 2nd cent. Its Greek form, *Praxeis Apostolōn*, is translated into Latin as *Acta (or Actus) Apostolorum* (*actus* being the term for the acts of a drama; the NT use is not noticed by Lewis and Short's *Latin Dictionary*). There are few significant variations. Acts, the common abbreviation, is found in ancient times, as well as the expansion into the Acts of the Holy Apostles.

It has been commonly realized that the title is not an exact description of the contents of the book. The preaching, journeys, and adventures of ten of the apostles are by-passed, and significant "acts" of preachers without apostolic rank and distinction are mentioned. Judas, John, and James, from the original Twelve, have incidental mention. The Twelve are listed in the first chapter and have collective reference in such contexts as that of the Jerusalem congress. Properly, the book is the Acts of PETER and of PAUL, and the two themes divide the book with some precision. In fact, there is an Acts I and an Acts II, divided at Acts 15:35. The first section traverses the emergence of the global gospel and the reception of the Gentile Christians into an emancipated church. The second section traces the expansion of the church to the capital of the Roman empire.

The first section could be described as the Acts of the Church, the second, the Acts of the Holy Spirit in the Church. Neither title is inclusive, and to accept the suggestion that the book be called the Acts of the Holy Spirit ignores the fact that the book is primarily a document of history and can be read as such. The Acts of the Apostles must, therefore, retain its title, and if it be pleaded that the story merges into the biography of one great man (Paul), Ralph Waldo Emerson can be quoted cogently: "There is properly no history; only biography."

Cities of Acts.

II. Author. No specific claim to authorship is contained in the text of the book itself. Tradition, however, is clear, ancient, and consistent. Moreover, this tradition is supported by the internal evidence of style and subject matter. It will be convenient to examine the question under several heads.

A. Tradition. As early as the middle of the 2nd cent., the church appears to have believed unanimously that Acts was written by LUKE the physician, friend and fellow-traveler of Paul. The evidence for this is strong. The MURATORIAN CANON, a document mutilated somewhat at its beginning and end, but listing in its eighty-five lines of bad Latin most of the books of the NT, names the third gospel and Acts as the work of Luke the physician. Patristic evidence agrees. IRENAEUS (c. A.D. 131–200), CLEMENT OF ALEXANDRIA (c. A.D. 151–215), TERTULLIAN (c. A.D. 161–200), and ORIGEN (c. A.D. 185–254) may be quoted in support. It might be urged that this evidence is not cumulative, but merely the repetition of an original conjecture. On the other hand, a living tradition can span a century, and if leading Christian scholars in the latter half of the 2nd cent. believed that a document frequently quoted throughout the whole of the century was of a certain authorship, there is strong supposition that their belief was soundly based and not the mere repetition of conjecture. And negatively, had the church in the 2nd cent. been forced back upon conjecture concerning a document of such importance, why, unless strong tradition supported the fact, should Luke have been the favored choice?

B. Internal evidence. If the 2nd-cent. tradition arose from the compulsion of the internal evidence, the fact demonstrates the strength and clarity of that evidence. It leads to the following conclusions: (1) It is manifest that whoever wrote the third gospel also wrote the Acts of the Apostles. The preface of the second book refers to an earlier and related composition. Both books open with a formal prologue in the established style of Greek historiography. The dedication to THEOPHILUS links the two, and the end of the first book dovetails with the beginning of the second. The style and language point inevitably to one author, as does also the form of composition, for both books move similarly to

a climax. It is clear that the writer of the second book had the form of the first in mind as he pictured Paul, his face “set steadfastly” toward Jerusalem, and a betrayal, a passion, and a trial at the hands of those who had earlier wrought the death of Christ. Gentile sympathies, the heroism, worth, and ministrations of women, and a polemic and apologetic emphasis mark both works as the conception of the same mind and pen.

(2) A habit of expression and choice of vocabulary common to both books make it highly probable that the author was acquainted with the Greek medical writers. Linguistic evidence so occasional would not in itself finally prove that their common author was a physician, but in support of the tradition that “Luke, the beloved physician” (Col. 4:14) was that author, the phenomenon is of evidential value.

(3) A plain reading of the text of the second book makes it quite clear that the writer was a companion of Paul and a partner of his work in certain defined sections of his travels and endeavors. In four passages of varied length he introduces the first person plural: “we” instead of “they.” The sections are Acts 16:11–17; 20:1–15; 21:1–18; 27:1—28:16; and from these the following pattern of events is apparent. The author joined Paul, SILAS, and TIMOTHY at TROAS. He could, indeed, have been “the Macedonian” (16:9) who was seen in a dream. At any rate, the author accompanied the party to PHILIPPI, a city with which he appears to have been familiar, and stayed there when the others moved on. He was still at Philippi (or again there) when, at the close of his third journey, Paul was moving back in the direction of Jerusalem with the money he had collected from the Gentile churches. The author accompanied Paul on this tragic journey, did his best to persuade him to abandon the project, and was at hand two years later to accompany Paul to Rome. The period of Paul’s imprisonment was the ideal opportunity for a companion so circumstanced to carry out the fundamental research and to seek the interviews which were so patent a prerequisite for the writing of the two integrated and associated narratives, and so obviously their background and inspiration. These passages in the third person cannot, on the grounds of style, language, or the integrity of the narrative, be dissociated from the rest of the book. The two books were, therefore, written by a friend and companion of Paul who shared with the apostle certain portions of the experiences he details.

(4) Could it be other than Luke? Timothy is excluded by events (Acts 20:1–6). Neither TITUS nor Silas accompanied Paul to Rome, nor were they there in his company. Other companions of the apostle from time to time were SOPATER, ARISTARCHUS, SECUNDUS, GAIUS, TYCHICUS, and TROPHIMUS. None of them can be seriously considered as the writer of the gospel and its sequel. The epistles written during the period of Paul’s house confinement in Rome provide a clue. Ephesians, Colossians, and Philemon, almost beyond doubt, are documents of this period. Two of these letters mention Luke’s presence in Rome (Col. 4:14; Phlm. 24). The case, therefore, seems proven. The 2nd-cent. tradition of Lukan authorship is supported by the weight of internal evidence.

C. Luke. Little is known of Luke himself. He was a writer not given to revealing himself in his work. Perhaps there is a glimpse of the man’s self-effacing personality in his deliberate turning from the artificial and cultured language of his prologues to the plain vernacular with which he begins, continues, and ends his narrative. He sought not the creation of a literary masterpiece, but the plain effectiveness of his message. He was content to set forth Christ in his first composition, his friend in the second. Tradition has it that Luke was an Antiochene, and some stress has already been laid upon the sturdiness of tradition in this historical context (see ANTIOCH OF SYRIA). On the other hand, a careful reading of the Philippian sections seems to show that Luke, if not a native, was at least a sojourner of the Macedonian town. There is no reason why Philippi and Antioch in Syria should be

exclusive. A Macedonian could easily count as a migrant Antiochene, or a man of Antioch could spend significant years in Philippi. Philippi had some standing as a medical center, and, in the close-knit Mediterranean world of the Roman peace, movement was free, safe, and common. The movements of PRISCILLA AND AQUILA, of APOLLOS, and of Paul himself are evidence enough of such journeyings.

Luke's character shows here and there. Paul's adjective "beloved" says much. His style, mentioned above, is self-effacing and avoids all striving for effect. Tradition mentions that he was an artist, and the artist's touch is evident in his words. His one aim was simplicity and the truth which accompanies it. Loyalty, a virtue allied to simplicity, was a shining mark of Luke's character. He accepted Paul's leadership without questioning, even after the apostle's rejection of advice which circumstances certainly proved sound. Luke's intellectual capacity is reflected in all his work. The gospel and its sequel are the writing of a first-rank historian and a man of exact and careful mind, painstaking in his research, accurate in his detail, and with a flair for the poetic and the dramatic.

III. Contents. The story overlaps the last scenes of the Gospels and shows the risen Christ commissioning his apostles for a worldwide task, and their enabling for its performance by the gift of the Holy Spirit. It describes the first assault upon the world at PENTECOST, with the scattered followers of Christ confident, united, and clear-cut in their message, proclaiming fearlessly in Jerusalem the truth committed to their care. It recounts their confrontation with the guilty hierarchy and the beginning of priestly and political persecution directed equally against the activities and the preaching of two distinct groups: those represented by Peter and the apostles on the one hand, and those represented by STEPHEN and the Hellenistic Jews on the other. The early appearance of the latter group in the internal and external activities of the church is not without relevance in its careful pattern.

The brief but lucid outlines of Peter's sermons and the long defense of Stephen before the SANHEDRIN on the day of his martyrdom reveal the similarities and the differences of the twin movements of evangelism. Both are clear that Christianity is a consummation, that the risen Christ is the authentication of the gospel, and that the gospel finds its point and purpose in a proclamation of repentance. Peter stressed the OT preparation. Stephen, equally insistent on the outworking processes of history, had a wider world in view than the land of Israel, and found historic precedent, as well as prophecy, in the OT. He was the predecessor of Paul and, at this point in the story, saw further than Peter.

The book is, in fact, early preoccupied to show the emergence of a new dynamic witness. Stephen, Philip, Paul is its sequence; Peter, at first the representative of a more exclusive and orthodox Jewry, is shown with subtle art adapting himself to a broader proclamation and merging his activities with those of the vigorous groups of Hellenistic Jews who claimed and won a part and place in the church, and soon were thrust to the forefront of its testimony. Peter was found significantly in the home of a tanner at JOPPA when the historic call to CAESAREA came to him.

It was primarily the enthusiasm and effectiveness of the Hellenistic Jews that precipitated major persecution and insured the expansion of Christianity beyond urban, parochial, or provincial limits. The Christian DIASPORA found a rallying point in Syrian Antioch, which became the second capital of the church. Through these early chapters the attentive reader will note the interweaving of the theme, a feature of the book's style and pattern. Overlap, anticipatory reference, swift brevity, sudden expansiveness, and deliberate repetition reveal Luke's own appraisal of the contents and his sense of

the outworking theme.

From the call of the Gentiles to their formal acceptance by the church at large is a span of six chapters. With firm insistence the book shows that Peter, the champion of orthodoxy, opened the door. Peter is advisedly prominent in this section, though Paul has already appeared—after the overlapping fashion of the book—arrested in his career of persecution on the DAMASCUS road. The story of Paul’s missionary incursions into the Gentile world overlaps in similar fashion with the developing theme of Gentile-Jewish relations in the church. A world is visibly opening as the reader turns the pages. A SIA MINOR is listening and eager. Neither Jerusalem nor Antioch could resist the evidence that something novel was afoot, a movement requiring decisions, vast reappraisal, and a wisdom in organization beyond anything envisaged in those first phases of the community’s life, which were described with cameo vividness in the opening chapters.

The decisions of the COUNCIL OF JERUSALEM bisect the book and officially and formally open the door to the Gentile convert. Christianity is obviously universal and not to be regarded as a reformed sect of Judaism or as a protest movement against corrupt religion, such as that which produced the Qumran community (see DEAD SEA SCROLLS). With this vital question settled, the great man, who emerged as leader, adopted his final apostolic role. Paul (no longer Saul) moved along the trade routes to plant his Christian communities in the key cities of the world. It is possible to see the vision of the empire won for Christ forming in his mind. From ANTIOCH OF PISIDIA to ROME itself, that pattern is visible in Paul’s evangelism.

The synagogues of the Dispersion were the stepping stones and the first point of contact. Paul was as clear as Peter that Christianity was a consummation and Judaism a preparation. But the blindness and archaism of Jerusalem is as evident abroad as in the metropolis. The readier acceptance, first evident among the Hellenistic Jews of Palestine, is similarly a feature of the wider world. The book keeps this theme vividly in view.

The story moved from Asia to Europe, patiently analyzed the nature of opposition and persecution, and described the first attitudes of secular authority toward the church. Neither the AREOPAGUS in ATHENS nor GALLIO’S court in CORINTH saw anything pernicious or seditious in the new movement. The governor of CYPRUS and the ASIARCHS of EPHESUS were also well-disposed. Two Roman PROCURATORS of Judea and a puppet monarch, the best of the HEROD family, failed to see any basis for legal or penal action against Paul when metropolitan Jewry cornered its archenemy.

Out of such events came an APPEAL to CAESAR, when the Roman citizen from TARSUS, who was also an accomplished Hellenist and a superbly educated Jew, exercised his civic right. With a memorable tale of shipwreck to mark the course of the narrative (see SHIPS IV), and with Paul moved to Rome by way of CRETE and MALTA, the story concluded indecisively with the apostle to the Gentiles under house arrest amid the densest concentration of Gentiles in the ancient world, imperial Rome herself.

Obviously the theme has followed one movement of history, and its reason for doing so will be analyzed in a later section. In the process it has become unwittingly a document of Roman history, revealing life and government in the towns and cities of the empire, glimpsing the provincial proletariat, revealing the form and fashion of travel in that unified and well-policed world, and showing the unmistakable signs of the growing tension that reached breaking point in A.D. 66 with the Great Rebellion and Rome’s four years of grim disastrous war in Palestine (see WARS, JEWISH). Apart from the Gospels, few other ancient texts show the empire in action so vividly and from so unusual an angle.

Manifestly, there were “acts” of other apostles and ministries like those of Stephen and Philip.

Apollos of Alexandria was of their order. Who took Christianity to the great Egyptian city of the Nile delta? Who were the disturbing visitors “from Syria,” mentioned by Claudius in an imperial communication to the Alexandrians in A.D. 42? There were Christians in Rome awaiting Paul’s coming. Of their number were the much traveled Aquila and Priscilla, Paul’s hosts in Corinth. They had been expelled from Rome with the whole Jewish ghetto in A.D. 49 following disturbances, if Suetonius is read correctly, arising from the first preaching of Christianity in the capital city of the empire. But, by whom?

Similarly, the message passed unrecorded down other lines of communication and trade. The bearers are mentioned only in tenuous traditions. Was it THOMAS who took Christianity to India? The trade routes were wide open, and the Italian seamen had found the secret of the monsoons. Did MATTHEW die in Persia or in Ethiopia? Who evangelized BITHYNIA, from which Paul was turned aside? In the first decade of the 2nd cent., PLINY the Younger, the Roman governor, found the area strongly Christian. The Acts of the Apostles has nothing to say about these parallel and divergent streams of activity and testimony. It remains a fascinating and often allusive story of one great drive of Christian expansion, one aspect of thirty years of church history. The writer clearly had his purpose and plan and was not to be diverted from it. He set out to use one roll of papyrus and used it well.

IV. Style. Acts is written in clear and competent Greek, with a command of language and expression that marks the writer as an educated man seeking without self-conscious art to communicate efficiently with literate men (see GREEK LANGUAGE). He wrote lucidly in the common dialect that was the *lingua franca* of the Eastern Mediterranean and its second language. At the same time there is found in all Luke’s writing more of the flavor of classical Greek than anywhere else in the NT. His language matched his ability as a historian, and that was high. The simplicity of sincerity, conviction, and firsthand reporting shows through, producing some memorable passages of descriptive narrative. The stories of the riot at Ephesus and the wreck of the big grain ship on the Malta beach merit a place in any anthology of ancient descriptive prose. As vivid, if more brief, are the stories of Peter’s release from prison, the noontide adventure on Simon’s roof where Peter dozed at JOPPA, the debacle at LYSTRA, and the riot and rescue at Jerusalem.

Efficient reporting in brief is a feature of the book. Peter’s group of sermons and speeches of defense, the astonishing précis of the Areopagus address, with its allusiveness and evocation of atmosphere, and the communication to the Ephesian elders on the beach at MILETUS are examples. The longer speeches of Stephen, Peter, and Paul are similarly vivid and efficiently interwoven with the theme. The book is in the full tradition of Greek historiography, which uses speeches to evoke a background and to analyze meaning and motive, as well as to report. The speeches are not, however, fictional, but based on reliable report, sometimes at firsthand. They reveal some of the art of the writer, for they are manifestly in character. Not only do Peter, Stephen, and Paul emerge in their reported words in sharp characterization, but even such minor characters as GAMALIEL, the incisive town clerk of Ephesus, and the rhetorical TERTULLUS stand out clearly and individually.

The book, in short, is the writing of one who had command of his material, who knew what he wished most to say, who could stress with patience and repetition his most significant reports, and could cut and abbreviate ruthlessly when his main purpose was not directly furthered by the narrative. Such decisiveness requires a clarity of mind and a literary ability of no mean order.

V. Date. The date of publication is to some extent decided by its authorship. If Luke wrote the book,

a 2nd-cent. date is forthwith excluded on this ground alone. The date of Luke's death would determine the narrower limits, and on this there is no information. Luke was with Paul during his last imprisonment, perhaps in A.D. 66 or 67 (2 Tim. 4:11), and there is a strong presumption that he did not long survive his friend. A historian so diligent and accomplished would surely not have neglected the great and obvious duty which confronted him—to continue the story beyond its inconclusive ending in his second treatise. The trial before NERO, Paul's further adventures, the arrest, and the end would have made a third book of surpassing interest and power. The fact that there is not even a tradition of such a book surely means that Paul's chronicler did not survive long enough to write it. The Lukan authorship, therefore, if that is established, also precludes a late 1st-cent. date. The allegation that Luke was familiar with the *Antiquities* of Flavius JOSEPHUS, published in the year 93, is no impediment. The allegation is quite ill-founded, and it might equally, and perhaps no more cogently, be urged in the contrary direction that the writer of Acts was unfamiliar with the letters of Paul, which appear to have been collected and made generally available about the year 90. The date, late or early, must be determined on stronger grounds than this.

The argument for a Lukan authorship thus confines conjecture to the brief span of years between Paul's first arrival in Rome and Luke's death or incapacity, in other words to the seventh decade of the century. It is possible on other evidence to press the matter a little more closely than this and to argue that the date was probably early in the decade. The main points may be set forth as follows:

(1) The book represents a view of Rome and the imperial power free from the fierce hostility that marks the Apocalypse (see REVELATION, BOOK OF), demonstrating a benevolent attitude that could hardly have survived the savage personal assault of Nero upon the church in July of 64. It most certainly could not have been maintained after the same persecution had been broadened, written into law, and had claimed Paul as one of its victims. When the book was written, apparently there was still reason to hope that a proper presentation of Christianity might convince authority that the new movement was beneficent and certainly not politically disruptive or disloyal. Much less could the book have been written from such a hopeful angle after DOMITIAN (A.D. 81–96) staged his empire-wide attack upon the church.

(2) Consonant with this date is the writer's narrative of events. He writes as an eyewitness or as one in direct touch with eyewitnesses. His account, for example, of the procurator's deference to Agrippa II (see HEROD VIII) is vividly true to life and to the facts of history, at a time when Rome was eager to conciliate influential opinion in an area obviously heading for major rebellion. FELIX is a portrait true to life and consistent with TACITUS'S scorn. The sensible GALLIO, brother of Seneca, appears in character. None of these accounts could have been written at a time too remote from the occurrences of the incidents described. References to titles, details of administration, life and government under Roman rule, exact in varied nomenclature and true in atmosphere, similarly fit a 1st-cent. context in a manner hardly to be achieved by other than a contemporary.

(3) The evocation of atmosphere may be further stressed, for it points with some cogency to the date here advocated. The writer obviously knew Palestine when the heat and pressure of Jewish nationalism was building up for the great explosion of A.D. 66. He was also aware of the closely knit character of worldwide Jewry, where sympathetic passions were rife. The fact that Jewish sedition was a wider and more serious imperial problem than even the costly and perilous revolt in Palestine has been adequately appreciated among historians only recently. It has been suggested that the absence of any reference to the grim climax of the war, the siege and destruction of Jerusalem, also points to a date for the book earlier than A.D. 70, the fatal year, but too much weight cannot be given to this. Luke was a competent historian and knew what to exclude. His focus was upon ten years

earlier, and he reflected the spirit of that time with exactitude.

(4) Also consonant with an early date is the simplicity of the theology evident in the book. The resurrection is a prominent theme, and it might be supposed that this was the first and most relevant Christian emphasis. Later, mainly owing to the work and elaboration of Paul in his epistles, the doctrine naturally and salutarly took its place in the developed corpus of Christian truth. The primitive organization of the church is described as if it were recent and relevant experience. The question of Gentile acceptance had a similar prominence and is stressed in a manner that would hardly have been necessary a generation later after the blow received by Jewry in the destruction of its home and center, together with the world-wide repercussions that must have followed.

VI. Sources. This theme is one of comparative simplicity and may be set forth as follows. (1) Major portions of the second half of the book are the report of an eyewitness and a participant in events. The account of the visit to Philippi in Acts 16 and that of the two voyages in chs. 21–21 and 21–28 read like a personal diary. The use of the first-person pronoun claims this authenticity, and the style and detail of the narrative in no way impugn the claim.

(2) Events between Acts 21 and 27, where no personal participation is implied or claimed, nevertheless took place while Luke was in contact with the situation, and these are recounted with a detail and a sureness of touch that mark them either as the work of an eyewitness or one in immediate contact with reliable witnesses. As for the speeches, Paul was a highly educated man and moved in a literate society. It would be quite surprising if he had retained no written outline of his major pronouncements. This applies to earlier speeches as well as the elaborate apologies of the later chapters, and notably the Areopagus address.

(3) Events falling between Acts 16 and 20 took place not far outside the orbit of Luke's personal knowledge. He remained at Philippi when Paul, and later the rest of the party, moved on to Athens and Corinth, which was civilized territory with well-developed roads. There is no reason why a resident of Philippi who crossed to Troas to meet Paul should not have visited him in the course of ministries or sojourns in Thessalonica, Athens, Corinth, and even Ephesus. Some of the events in these places are described with peculiar vividness.

(4) Apart from personal knowledge, there was abundant opportunity to consult with eyewitnesses and participants. There was much coming and going among the apostolic community. Silas, for example, Titus, Timothy, Apollos, and Aristarchus seemed to have traveled extensively. It was not a world of rigid frontiers, and although the footpad haunted the more remote mountain roads and constituted one of the trials of Paul's arduous journeying (2 Cor. 11:26), travel on the main routes was easy and comparatively safe. Lydia of Thyatira conducted her business in Philippi. Apollos moved from Alexandria to Ephesus and thence to Corinth. Aquila had been born in Pontus, traveled to Italy where he met and married Prisca (or Priscilla, to use the diminutive and more familiar form), and then under Claudius's ban, moved to Corinth. Timothy came from Lystra, and Barnabas from Cyprus. Luke would have had rich opportunity to collect information from reliable and experienced witnesses, whose active memories extended back over two generations.

Consider the following inferences: (a) If Luke was an Antiochene, though he may have later moved to Philippi, he could have first met and appraised Paul in his earlier ministry and heard from him personally the story of Stephen, the Damascus road, and its sequel (Acts 1–9). The account of the first missionary journey (chs. 11–14) could have been heard on the same occasion. It may have existed as a written report in the archives of the church. It was a common Greek habit to record details of travel and adventure. Xenophon's *Anabasis* was more than four centuries old; biographical

material in Herodotus, the historian and traveler, was older still. At Antioch (13:1) Luke could have met Barnabas, Simeon Niger, Lucius, and Manaen, the sources of information recorded and condensed in Acts 4:31–37; 9:21–36; 11:20; 12:21–23; 25:13.

(b) He would hear in Philippi the condensed account of the Asian section of the second journey, briefly outlined in Acts 16:1—11, from Paul himself. The continuation of that journey and the stirring events of Paul's ministry and travel up to the reunion at Philippi (20:5) would again find basis in Paul's personal narrative. He and Luke were frequently together. There were others in the party (20:4) who were also in a position to supply vital information.

(c) A vivid account of Philip's early ministry is interpolated in Acts 8, significantly linked with the story of Stephen. Again the source is personal and firsthand. Philip resided at Caesarea and was Luke's host (21:8) as the party passed that way on the journey to Jerusalem, and no doubt frequently again during Paul's two-year incarceration in the garrison city.

(d) During this same period, Luke had opportunity for a good deal of travel and interviewing. The early chapters of his gospel reveal his diligence in research and suggest a worthwhile contact with Mary. During the same period he may have met Peter and Peter's protégé, John Mark. Mark was in Rome at a date a little later than this, and it is not known when he went there, but Luke was with him (Col. 4:10, 14). Peter and Mark could be the authorities for the events of Acts 10 and 12, which Luke vividly recorded. See MARK, JOHN.

(e) MNASON (Acts 21:16), an original disciple, no doubt possessed valuable information and was conveniently at hand for the historian. It is manifest, therefore, that Luke had full facilities for the collection of material on the two themes of his writing, and that his claim to have carefully sought out firsthand material (Lk. 1:2) is one which the two books appear to justify, and known circumstances to have amply facilitated.

(5) Nor is it impossible that there were written records. Luke, at the beginning of his gospel, speaks of many written accounts of Christ's ministry, and these narratives are likely to have covered the events of the opening chapters of the Acts of the Apostles, which follow in natural sequence on the closing chapters of the "former treatise." A certain episodic character in the first five chapters of the book could be accounted for by the supposition of written accounts. R. B. Rackham (*The Acts of the Apostles* [1904], xliii) goes so far as to suggest that John was the first historian of the church, and supports his suggestion by an analysis of style and language that is not without effectiveness. Such fragments of narrative as the story of the woman taken in adultery, found in Jn. 8, though apparently by another hand than his, suggest a habit of recording and a disposition to grant authority to such records and to accept them on their merits. Luke may have had access to collections of such memoranda. It is again emphasized that it was a literate age. The Jerusalem council of Acts 15 would not have adjourned without something in the nature of minutes and a record of the debate that preceded the final decision. What were Paul's treasured "parchments" (2 Tim. 4:13)? The possibility already mentioned that Paul's speeches, and perhaps Peter's also, existed in written form, in full text or in précis, is also strong. The early Christians became rapidly aware that they were part of a great movement of history. It is the natural instinct of such people to record.

This account of the book's sources presupposes both Lukan authorship and the essential unity of the document. It has, therefore, by-passed the many suggestions of source and origin that arise from, or are invented to justify, sundry theories of authorship, date, and composition which a determined rejection of tradition and authority have inspired. Extravagance and audacity in theorizing and conjecture, which scarcely would be tolerated in other spheres of literary study, have been too frequent a feature of biblical scholarship over a century, and Acts has not escaped such destructive

attention. (Those interested in the major curiosities of this criticism will find a brief but documented summary in D. Guthrie's competent *New Testament Introduction*, 4th ed. [1990], 381–97.)

VII. Purpose. Every writer has his reasons and his motives, a point of view to urge upon his readers, a message to communicate, and vital information to set down and transmit. He is measured by the power of his persuasion, by the art with which he marshals and balances his facts, by the worth of what he has to say, and by the value of the history that he preserves and records. The writer's purpose can be multiple, and to compass successfully more ends than one in a piece of historical writing is a heavy demand upon intelligence and conviction. Such success is the mark of Luke's ability. More than one aim and purpose have been attributed to him by sympathetic commentators. They are not exclusive, and three of them may be considered.

A. History. Luke sought, like any historian, to give permanence to extraordinary events and to record the birth of a movement which he sensed would change the course of history, and in which he himself was a privileged participant. His aim, in short, was that of the most austere of the great Greek historians, Thucydides of Athens. The Great War, which determined the future shape of Greece and ended the Golden Age of Athens, had broken out between Thucydides' Athens and the grim state of Sparta. The young historian, for Thucydides was no more than thirty years of age, set to work, "believing it would be a great war, and more worthy of relation than any which had preceded it." Indeed it was, he believed, likely to be "the greatest movement yet known in history." Luke might have had these words in mind when he penned the prologue to the gospel, of which the Acts of the Apostles is its necessary sequel.

The Great Commission spoke of expanding areas of witness from Jerusalem to Judea, to Samaria, and the uttermost parts of the earth. Luke's book interprets the words. The gospel had set out to record with historical exactitude all that Jesus "began to do and to teach." The word "began" is significant because the first book was a beginning; the second recorded the next phase of the vast movement, with Christ's power operative in the lives of his disciples. Six sections of the book seem to record the outward surge of the apostolic witness. Each ends with a general statement and comment upon the process.

The first section is Acts 1:1—6:7, with the conclusion: "So the word of God spread. The number of disciples in Jerusalem increased rapidly, and a large number of priests became obedient to the faith." The Hellenistic evangelism begins with 6:8, and the story runs to 9:31, concluding with a clear reference to the Great Commission: "Then the church throughout Judea, Galilee and Samaria enjoyed a time of peace." The next section begins with Peter's momentous incursion into the Philistine coast and continues to 12:24: "But the word of God continued to increase and spread." From 12:25 to 16:5 runs the account of a great movement of Gentile evangelism. It concludes: "So the churches were strengthened in the faith and grew daily in numbers"—"churches" now, not simply members. From 16:6 to 19:20 Paul's progress is traced to its climax in Ephesus: "In this way the word of the Lord spread widely and grew in power." The final section takes the whole book to a logical conclusion. The scene has moved from Jerusalem to mighty Rome. The concluding words are a general comment similar to the five verses already quoted.

The divisions thus marked seem clear in the writer's purpose, but refraining from punctuating the theme, the reader cannot fail to see the expanding purpose and the emerging dynamic Christian community, zealous, aggressive, experimenting, organizing with widening aim, vision, and endeavor. It is an honest picture. The abortive experiment in a community of possessions is shown for the failure

it was, without unnecessary comment. Luke similarly recorded without comment the premature attempt to fill Judas's place. He mentioned with frankness the tension between the Hellenistic and metropolitan Jews in the charitable ministrations of the church (Acts 6:1). He told in full the somber story of ANANIAS and SAPPHIRA. In spite of the common hostility of the Jewish establishment against the church, Luke recorded with consistent fidelity every favorable Jewish reaction (5:34; 6:7; 17:11; 28:24). The picture of the primitive church—its personalities and problems and the major movement of its Gentile witness—is sharp and clear. If Luke had no other purpose, he had this, and fulfilled it well.

B. Universality. A second purpose, necessarily interwoven with the first, is to set forth the universality of Christianity. Luke had only to tell with sympathy and understanding the story of Paul's progress from Antioch and Jerusalem to Rome, to write simultaneously a commentary on Paul's own contention: "Here there is no Greek or Jew...slave or free, but Christ is all, and is in all" (Col. 3:11). He is careful to show that the liberal policy of Paul antedated the apostle and was no exotic invention of the scholar from Tarsus imposed upon a new movement of Judaistic reform. Philip went to the Samaritans and found acceptance among them. Stephen died for a wider gospel. Peter, not Paul, persuaded the church to open its doors to the non-Jewish world after his adventure at Caesarea. Luke stressed the Gentile membership of the church at Antioch, where the Christians first found their name and where, perhaps, he himself first became interested in Christianity and first met the man who was to be the greatest influence in his life.

C. Defense. The allegations and insinuations of the hostile Jewish hierarchy, beginning with the trial of Christ himself and reflected in the attitudes of many synagogues, made it relevant and urgent to stress the fact that Christianity was neither seditious nor disruptive. Apart from Jewish slander and intrigue, anyone who read aright the significance of such outbursts of hostility as the riot at Ephesus might have seen the urgency of such apology. Persecution was based in the proletariat. When the proletariat sickened of his cruelty, Nero himself was forced to call off the torment and murder of the Christians of Rome (Tacitus, *Ann.* 15.44). PLINY the Younger, the governor of BITHYNIA, at the end of the first decade of the 2nd cent. was forced, at the insistence of the guild of the butchers, to commence formal suppression of Christianity in his province (*Ep.* 10.56, 97). The shadows were gathering. Paul's great vision of the empire for Christ was to be lost in their murk. Luke's endeavor to show by repeated incidents that competent authorities had seen the church in action, had heard the allegations against it, and had cleared it of all disloyalty, malice, or sedition was a highly relevant action. He did this effectively in a manner arising from the development of his theme. It is, in fact, an emphasis carried consistently forward from the gospel, where neither the procurator, Pilate, nor Herod Antipas found substance in the charges brought against the prisoner, and a Roman centurion paid his tribute at the scene of death.

Sergius PAULUS, the proconsul of CYPRUS, was convinced of the claims of Christianity. In Philippi, the Roman colony and military bastion of northern Greece, the magistrates panicked when they found they had illegally assaulted and confined a Roman citizen (Acts 16:31–39). In Corinth, Gallio pompously swept the case from the order paper as one with which a Roman court had no valid concern or jurisdiction (18:11–16). The Asiarchs of Ephesus were manifestly well-disposed (19:31). The commandant of the Jerusalem garrison was respectful and had no reproach to make in his careful report to Caesarea (23:29). FESTUS saw no cause for punishment in the case as it was presented to him (25:21–27). Agrippa II, a cultured and well-informed Jew, agreed.

It has even been suggested, in the light of this consistent stress, that Luke looked upon his book as a brief of Paul's defense before the imperial tribunal in Rome. No doubt the book supplied sufficient detailed information for such a purpose, but Luke looked to a wider audience than the judge or judges of Paul's appeal. Moreover, the apologetic theme is interwoven and not to be disassociated from the narrative as a whole. Luke told his story, doubtless with these emphases, but the events of significance which he underlined were meaningful in the same manner in the context of their occurrence, and at the time of their happening. Rome was a very real goal in Paul's evangelism. It ranked with educated Jewry. To Rome, in the wide pattern of its imperialism, and to the devout Jews of his own Pharisaic caste, Paul sought with passion to bring the enlightening truth he had received. That he failed in both objects, within the narrower span of his life's effectiveness, does not diminish the value of a ministry that still influences history. Luke saw Jewry at large turn its back. At the time of Paul's stay in Rome, the object of winning the empire, or at least winning freedom to preach and teach without hindrance wherever the writ of the empire ran, was still a real and attainable goal, canvassed in conversation and watchfully observed in its progress. That the apologetic thread should be visible and prominent in the whole woven skein of the book was inevitable and a tribute to the writer's art.

VIII. Historical value. This theme has been touched at various angles under earlier headings, but it will be convenient to summarize and introduce a few other matters of importance. (1) If the Acts of the Apostles was written by Luke before A.D. 64, it was a contemporary document, both of the early church and the 1st cent. of the Roman peace, of paramount importance. It portrayed life in the provinces of the empire from the point of view of the alien, underlined problems and difficulties of government, revealed the machinery of imperialism in varied action, and provided vivid glimpses into the daily life of the cities of the eastern Mediterranean not to be matched elsewhere. Roman history, for the period from Tiberius's closing years to the principate of Nero, is dependent upon literary sources that were Rome-centered, and epigraphical sources that were impersonal and often problematic. Luke's narrative fills in some of the gaps in this one-sided and fragmentary record.

(2) It is fortunate that such a work was that of a trained mind and of a historian dedicated to accuracy and truth. The unity of the book has already been stressed. It builds to a climax and welds a complex variety of material together, omitting but never suppressing, emphasizing but never exaggerating, in a manner that demonstrates consistently the writer's clarity of purpose and complete honesty of mind. The frank revelation of the shortcomings of the early Christians is matched by the plain report of the "sharp contention" (Acts 15:39) between Paul and Barnabas, and the obvious disapproval with which Luke viewed Paul's last journey to Jerusalem. Paul had Luke's unstinted admiration and strongest loyalty, but neither quality quenched Luke's independence of mind and pursuit of historical truth. He wrote down what he judged worthy of transmission.

(3) Authenticity may be tried at various points. Luke's narrative traverses an immense tract of scene and circumstance and provides varied opportunity for that acid test of all historical writing—truth to life and veracity of detail. Paul went to Lystra and found himself in a Gentile environment, both alien and primitive. He and Barnabas became the center of an embarrassing experience, were mistaken for Hermes and Zeus in human form, and almost became the objects of worship and sacrifice (Acts 14:1–19). It is curious to find the Roman poet Ovid writing half a century before and detailing the story of Philemon and Baucis, which explains the local cult of Zeus and Hermes and accounts for the mistake of the rustic Lycaonians (*Metam.* 8.621–724). Let the story be probed a little more deeply in detail. Paul was the speaker, and thus he filled the role of Hermes, the gods' interpreter. Barnabas,

more silent and withdrawn, was called Zeus. The population prepared to sacrifice “before the city.” Archaeologists have uncovered at Isauria, not far away, an altar to “Zeus before the gate.” An inscription from Lystra dedicates an altar to the same two deities. The consistency of the evidence is striking.

Other localities are the scene of experiences just as revealing. With the ready adaptability that was the product of his Hellenism, Paul proceeded to Athens and forthwith adopted the manner and method of a Socrates. He argued and taught in the agora (Acts 17:17; see MARKET) with any who would talk and listen, and the scene might be

A view of the acropolis of Lystra (looking W), where Paul and Barnabas were mistaken for Hermes and Zeus (Acts 14:1–19).

duplicated from more than one Platonic dialogue. The Areopagus Court, which appears to have held some jurisdiction over who should teach in Athens, invited Paul to explain himself. Addressing himself rather to the STOICS with whom he had some points of contact, both in basic theology and by virtue of his Cilician origin, Paul spoke in a manner superbly adapted to the occasion, and with a relevance and understanding of his audience which no one acquainted with Athenian thought and Athenian literature could possibly miss.

Was it not the same Paul in an utterly different context, but betraying the same rhetorical technique, who addressed himself to the Pharisaic section of the Sanhedrin, with whom he had some intellectual contact, disregarding the SADDUCEES as he disregarded the EPICUREANS? And was it not the writer who thus briefly but surely depicted the same mind in action, simultaneously passing a stringent test of historiography? Ephesus is equally instructive. In smaller compass is the scene on the storm-driven galley, replete with details of ship and navigation, and vivid in its stark reporting.

(4) With similar surety Luke moved through the ramifications of imperial administration. Detail again provided a test. In 22 B.C., for example, Augustus made Cyprus a senatorial province. In the disguised autocracy called the empire, provincial administration was divided between the emperor and the now largely impotent senate. Senatorial provinces continued to be governed by proconsuls—the deputy of Acts 13:7 being an officer of this order. In a chapter further on (14:6), it is implied that in passing from Iconium to Lystra, Paul and Barnabas crossed an administrative frontier. Literary evidence from the 1st cent. appeared to contradict this assumption, and Luke seemed convicted of geographical error. The evidence as a whole, however, shows that Luke was correct (cf. F. F. Bruce *The Acts of the Apostles: The Greek Text with Introduction and Commentary*, 3rd ed. [1990], 319).

Luke’s accuracy in the terminology of magistracy was mentioned in connection with the proconsul of Cyprus. It may be similarly tested in Greek political contexts. In Philippi, for example, the officials are called by a Greek term (*stratēgos* G5130) that is the equivalent of Latin PRAETOR

(Acts 16:20, 35). It can be demonstrated from epigraphical evidence that this was a courtesy title for the *duumviri* of a Roman colony. Cicero speaks a little ironically of the practice (*Agr.* 2.93).

In the following chapter, where Luke mentioned the magistrates of Thessalonica (Acts 17:6, 8), the term *politarchēs* G4485 is used, a title not found elsewhere in extant literature. It was once dismissed as ignorance on Luke's, or the writer's, part. Sixteen epigraphical examples have since come to light from the area to prove that it was a Macedonian term. Epigraphy similarly confirms Luke's title for "the first man" of Malta (Acts 28:7; NIV, "the chief official").

These tests of detail support the contention that Luke's book must be treated with deep respect by all historians, not only ecclesiastical but also classical, a fact not sufficiently recognized by the latter class.

IX. Religious value. There must be a certain overlapping of themes, for Christianity is historically based, and the religious value of the Acts of the Apostles is interwoven with its significance and worth as a document of early church history, its evangelism, and its teaching. Luke wrote as a historian, but as a Christian historian.

A. The Christian community. The book reveals the emergence of the Christian church as a separate entity. It is clear that at the beginning the first Christians had no thought of disassociating themselves from the JUDAISM in which they had been bred. They continued to use the temple as their center and rallying point (Acts 2:46; 3:1, 11; 5:21, 42), just as Christ himself had done, and the faithful remnant before him (Lk. 2:37). The priests, from whom numerous converts were drawn (Acts 6:7), no doubt continued in their formal duties. It is true that the church in those first days had the coherence of any protest movement, but that was no uncommon situation. The Qumran sect had sought the desert, in deliberate separation from urban Jewry and its manifest corruption. It was an old instinct of Israel to seek the desert and the old pure sources of undefiled devotion. Urban religion, ever prone to apostasy of one sort and another, was never safe from the sudden irruption of an Elijah, an Amos, or a John the Baptist with a fearless challenge and a call to repentance.

Christianity itself had been preceded by a wilderness movement of unprecedented proportions, but the first Christian groups sensed no call to withdraw or to separate. They remained where they were, predominantly in the cities, it appears, in confrontation with the Judaism they sought to enlighten and reform. But all societies demand a measure of organization, and it rapidly became clear that the church, conscious of the apostles' leadership, and increasingly aware that it was a society apart from both hierarchy and synagogue, needed some framework of authority, hence, the appointment of the DEACONS (Acts 6:1–6).

It was the scattering occasioned by persecution (Acts 8:1) that accelerated the process of self-awareness. Driven from Jerusalem, and finding a second headquarters in Antioch, the Christian community that separated from the apostles' authority seems to have developed a democratic organization on the model of the Greek political *ekklēsia* G1711 (11:29; 13:1–3), which assumed responsibility for the dispatch of missionaries (13:2) and relief of the poor (11:29). The primacy of the Jerusalem community was recognized, both because of the presence of the apostles and because of the ancient sanctity of the Holy City. This preeminence was to pass with the destruction of Jerusalem in the Great Revolt (A.D. 61–70). There are indications that this tragedy was for the health of the church, for Jerusalem was clearly the home of the Pharisaic wing of the Christian community, more rigid in its Judaism than the task of world evangelism warranted, and aloof from Gentile participation. The scattering of the Jerusalem church members relieved Christians at large from the

embarrassment felt by Paul and James before the intransigence of this group (21:11–26).

Luke described frankly enough this potential schism, but was more impressed by the emerging unity of the church than by any of its divisions or differences. Paul is revealed as the model of all church statesmen, strong in controversy (Acts 15:2), conciliatory, as his worldwide collection for the poor of the Judean church pathetically demonstrated, clear-cut in his doctrine, and unwavering in the drive to his goal. The whole attitude of the church, as the book reveals it, was a zeal for expansion and extension, a sense of mission, which has inspired the missionary effort of all the centuries. The book is “the great handbook of Christian missionary enthusiasm” (A. W. F. Blunt, *The Acts of the Apostles* [1923], 39).

B. Preaching and doctrine. The book records the content of the first Christian preaching, and the first formulation of doctrine. In the first five chapters there is reference to four sermons or speeches of Peter (Acts 2:11–40; 3:11–26; 4:1–12; 5:31–32). The outline is brief, but Luke is something of a master in the art of précis, and the account of what was said was probably direct from Peter himself. An examination of these four short statements is enough to establish certain significant facts. It is clear that Paul’s CHRISTOLOGY was not the elaborate invention of the apostle to the Gentiles. It is visible in its fundamentals in Peter’s doctrine. The approach is invariably an appeal to the OT with full acceptance of its authority. Christ was the promised Messiah, whose coming, death, and resurrection were foretold in prophecy. The bodily historical RESURRECTION is given prominence. This, it should be noted, took place in Jerusalem, where the verification of the empty tomb was a simple matter. In short, Luke’s revelation of the first forms of Christian doctrine gives no manner of encouragement or excuse to any modification or corruption of Christianity that diminishes the authority of the Hebrew Scriptures, denies the full messiahship of Christ, or questions the historicity of the resurrection. It must be noted that Peter in his earlier pronouncements, like Paul after him (17:31–31), preached for decision and pointed his appeal with a strong call to repent. Little is said in these early speeches of the life and ethical teaching of Christ, but the context of the utterances accounts for this omission. The church was first in confrontation with the world. These were not directions to Christian communities anxious to interpret their Christian faith in daily behavior and social attitudes.

Stephen’s long statement before the hostile Sanhedrin is revealing as the utterance of a Hellenistic Jew and a spiritual and intellectual predecessor of Paul. He began with OT Scriptures, showing on a broader scale than Peter how the whole history of Israel and the message of its prophets found fulfillment and meaning only in Christ. To him he ascribed a messianic title, “the Righteous One” (Acts 7:52). The speech was interrupted by tumult, and it is clear enough that the end is hurried and abbreviated. In 7:56, however, there is the clearest declaration of the resurrection.

It is interesting to set the first reported sermon of Paul alongside the statements of Peter and Stephen. The four elements noted earlier are all present: the deity of the crucified Christ, the witness to the resurrection, the confirmation of the OT, and the call to repent. It is the same with the addresses to Gentile audiences, of which there are two interesting examples. All the elements noted are present except that of OT confirmation, irrelevant in such a context. Paul resorted to natural theology in the case of the sermon at Lystra, and to philosophic, theistic speculation in the case of the more sophisticated approach to the Areopagus Court in Athens. The whole speech was a brilliantly interwoven structure of Hebraic and Hellenic thought.

A complete Christology can therefore be constructed from the Acts of the Apostles alone. That he “suffered under Pontius Pilate, was crucified, dead and buried, descended to the Unseen World, rose again on the third day” can be taken phrase by phrase, like the rest of the Apostles’ Creed, and

illustrated and documented by quotation from the book. The doctrine of the INCARNATION of Christ is implicit. He bears messianic titles. The ATONEMENT is implied in the call to REPENTANCE and FAITH, and BAPTISM for the forgiveness of sins. The HOLY SPIRIT is a fact of daily experience, enabling, guiding, enlightening.

Blunt (*The Acts of the Apostles*, 42) summarizes well: “The impression, which Acts gives, is of a society with an astonishing spiritual power and vigour, of a common life which has not yet learnt or tried fully to define the conditions of its own existence, but which understands enough to acknowledge, in Jesus Christ exalted at God’s right hand, the source from which it flows, and to rely on the Spirit of Christ as its permanent principle of vitality. Interpretation and formulation were necessary stages, and soon followed; but this was the first and originative phase in the story of the doctrinal development of Christianity.”

To underline then, in conclusion of this section, a point already made: without Luke’s narrative of this first generation of the preaching and endeavor of the church, the epistles of the NT would have stood apart from the Gospels as mature but isolated statements of doctrine. Since so large a portion of their corpus is from the fertile pen of Paul, it would have been more possible than it now is to disassociate the teaching of Christ and the teaching of Paul. The attempt has been made with persistence and ingenuity enough. The narrative of Luke denies the likelihood or possibility. This is the supreme religious contribution of the book to Christian theology.

X. Chronology. In view of Luke’s undoubted carefulness in chronology, it is disappointing to find some quite intractable problems in his second book, for which he is hardly to blame. It was his rejection of all conjecture concerning dates that led to the use of vague phrases, such as “in those days” or “after certain days,” in the earlier part of the book. On this point Luke reflected the uncertainty of his authorities, the men and women of the early days of the church, who lived amid fast-moving events of peril and toil and had not considered the fact that they were making history. In the second half of the book, where chronology was more completely the historian’s responsibility, Luke was not neglectful in his references to time. The difficulties arise from the lack of external points of reference and sheer paucity of information on matters of importance. Two problems will provide sufficient illustration.

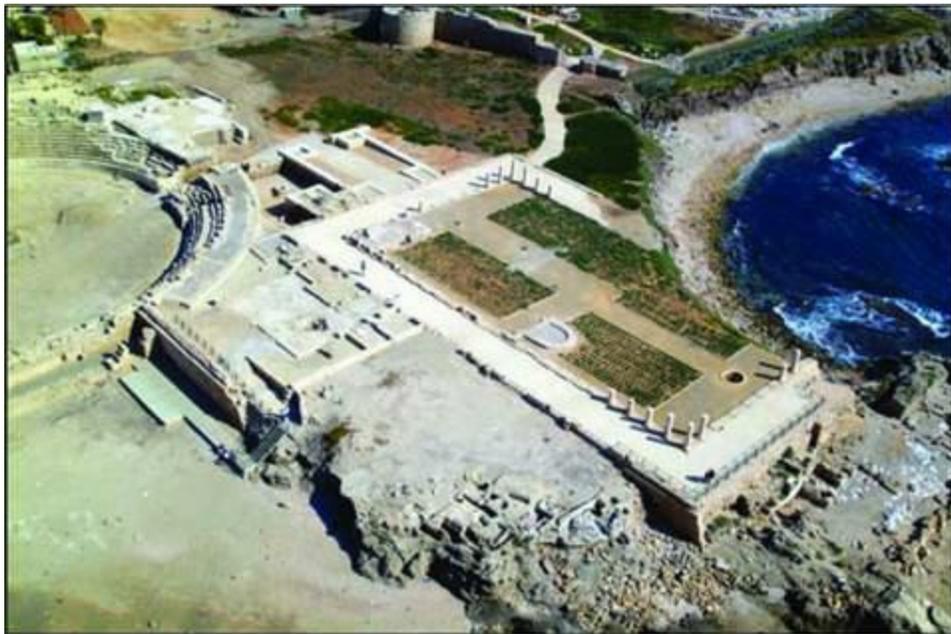

A. *The famine visit.* Just prior to the record of Herod Agrippa’s persecution of the church and the story of the king’s own horrible death, there is a brief report of a threatened famine, a reference to a relief fund in Antioch, and the employment of Paul and Barnabas to carry the contributions to Jerusalem (Acts 11:21–30). This was, of course, one of those anticipatory references by which Luke habitually prepared the way for the entrance of major actors on the stage of his narrative. At first sight the passage seems to contain chronological promise, for Herod died in the late summer of A.D. 44, and the sharp persecution of the church probably took place in the early months of the same year (see HEROD VII). Was Paul’s visit to Jerusalem, therefore, in the closing months of 43, or early in 44? Was it the second visit of Gal. 2:1 in connection with which he makes an ambiguous reference to “fourteen years”? The date of the famine does not help. Josephus mentions a famine that afflicted Judea under the procurators Cuspius Fadus and Tiberius Alexander between 44 and 48. It might be supposed that famine relief would be called for in the later rather than in the earlier years of the dearth. This assumption would disrupt a chronological sequence that it is natural to assume between the two successive chapters involved. Or did the church, moved by the vividness of AGABUS’S prophecy and the appeal that doubtless accompanied it, send aid in advance? But since authorities as

diverse as TACITUS, SUETONIUS, Dio Cassius, and EUSEBIUS refer to the frequent affliction of dearth through the Roman world in Claudius's principate, need the famine of Josephus's account be the one referred to in Acts 11:21–30? In other words, the date of Paul's journey to Jerusalem with his future colleague can only be guessed. It was before the outbreak of the Herodian persecution, and probably not long before. The margin of doubt is slight but real.

B. Festus. A problem equally insoluble gathers around the date of Felix's departure from his procuratorship and the arrival of his successor, Porcius Festus. The latter event is a crucial date, for from it Paul's voyage to Rome, his trial, and his probable release are to be relatively dated. Unfortunately the year is quite uncertain. According to Eusebius, Felix left at the end of A.D. 55, and Festus, presumably, arrived soon afterward. But this date is difficult to fit into a reasonable Pauline chronology. Space forbids a survey of the controversial details (R. J. Knowling collects the variant authorities in *EGT*, 2:39ff.), but the situation illustrates the margin of two or three years' uncertainty that haunts the chronology of Acts, and indeed may be traced back to the very date of the nativity.

A tentative chronological scheme may be set out as follows:

(1) The crucifixion, A.D. 29. This follows a date late in 5 B.C. for the birth of Christ. (See E. M.

Aerial view of Herod's palace in Caesarea (looking SE). The Roman Governor, Felix, ordered Paul kept under guard here, where he remained for two years. Porcius Festus then succeeded Felix and took charge over Paul's trial (Acts 21–25).

Blaiklock, *The Century of the New Testament* [1962], 141–51.)

(2) Paul's conversion. This cannot have been as early as A.D. 30. Time must be allowed for the developments in the first seven chapters of the book, probably 33 or 34. Paul's reference to Aretas (2 Cor. 11:32) is no help. It provides another tantalizing problem of two or three years' margin of uncertainty.

(3) The first missionary journey and the visits to Cyprus and Galatia may have occurred in A.D. 46, 47, or possibly 48.

(4) The Council of Jerusalem on Gentile admission can best be assigned to A.D. 48.

(5) The second missionary journey and the crossing to Greece would then belong to A.D. 48 to 52. Aquila and Priscilla, Paul's hosts in Corinth, were expelled from Rome in 49. Gallio came to

Corinth in 52.

(6) Asia and associated activities, A.D. 52 to 55.

(7) Paul's arrest in Jerusalem, A.D. 56.

(8) Incarceration in the garrison town of Caesarea, A.D. 51–58.

(9) Journey to Rome. Late autumn, winter, and early spring of A.D. 51–59.

(10) House arrest in Rome, A.D. 51–61.

(11) Outbreak of imperial persecution, A.D. 64 (July).

(12) Paul's death probably occurred in A.D. 66 or 67.

Conjecture haunts the list. With equal probability, F. F. Bruce thrusts most of the list forward by about a year. No problems of historical accuracy or authenticity are involved. Fuller information, literary or epigraphical, could clear up the major problems outlined. Under the latter head, information could still be forthcoming. See CHRONOLOGY (NT).

XI. The church and the book. Luke's book was not circulated to specific groups like Paul's letters, and there is no clear information on the manner in which it gained currency in the church. Its association with the gospel of the same author was, of course, sufficient to secure its survival and multiplication. It was so obviously a sequel to the first book, that it could hardly be separated when the four Gospels gained authoritative currency early in the 2nd cent.

At the same time, the NT Epistles, and especially the Pauline corpus, gained canonicity. They already possessed the authority that would naturally be granted them in the church communities to which they were originally addressed, and it could easily be assumed that the Acts of the Apostles, gaining popularity at an earlier date in the church, actually stimulated the collection and wider publication of the epistles.

Whatever the case may be, it is clear that the value and significance of the book would be obvious when the two other collections attained their place of usefulness and authority among Christians. Gospels and Epistles were separate, sacred collections and needed a strong link. The Acts of the Apostles provided this link, demonstrated Paul's apostleship, and showed its intimate connection with the apostleship of Peter and the rest. It also demonstrated the unity of the first work and testimony of the church, and provided the indispensable historical background for the letters. It is therefore, as Harnack remarked, the pivotal book of the whole NT, and in a very real sense binds the canon together.

At the end of the 2nd cent., TERTULLIAN was emphatic about the importance and authority of the book, denouncing with quite characteristic vehemence all who fell short in respect of this. Quotations can be traced through the whole century with varying certainty. As early as A.D. 95, Clement of Rome (see CLEMENT, EPISTLES OF) appears to quote the logion of Christ mentioned in Acts 20:35. He could, of course, have drawn it from the same source as Paul. The *Epistle of Barnabas*, in A.D. 100 or thereabouts, and the *Didache* of the same approximate date reflect the language of Acts 4:32. Hermas's *Shepherd*, of a few years later, seems to refer to Acts 4:12. IGNATIUS likewise, and at about the same date, seems to have Acts 1:25 in mind. POLYCARP'S *Epistle to the Philippians*, written about 120, seems to refer to Acts 2:24 and 10:42, and the *Epistle to Diognetus*, of the middle of the century, to Acts 17:21–25. Two passages in JUSTIN MARTYR'S first *Apology*, also of the mid-century, contain an allusion to Acts 17:25. The so-called *Acts of Paul*, by an unknown Christian of Asia Minor about 160, is quite certainly dependent upon the canonical book. Hegesippus, writing about 175, described the stoning of James the Just in words clearly reminiscent of Luke's story of Stephen's martyrdom. A letter from the churches of Vienne and Lyons, written in 177, referred similarly to

Stephen and showed knowledge of the regulation mentioned in 15:20.

The date of the book has been fixed on other grounds than these quotations, apparent quotations, and references. None of them could be pressed with certainty. Other explanations of verbal similarities and of resemblances of content are possible. Nevertheless, the cumulative evidence suggests a wide currency for Acts during the 2nd cent. Since that century is not a well-documented period, the traces thus listed are even more convincing.

E. M. BLAIKLOCK

Acua uh-kyoo'uh. KJV Apoc. variant of AKKUB (1 Esd. 5:30).

Acub, Acuph ay'kuhb, ay'kuhf. Respectively, KJV and NRSV Apoc. variants of BAKBUK (1 Esd. 5:31).

Aczib ak'zib (אֲצִיב H424, "lying, deceptive, disappointing"). Also Achzib; TNIV Akzib. (1) A boundary city of the tribe of ASHER on the Mediterranean coast (Josh. 19:29) from which the Asherites were not able to drive out the Canaanites (Jdg. 1:31). EUSEBIUS places Aczib on the road from Ptolemais (Acco) to TYRE. In NT times it was called Ecdippa, now identified with modern ez-Zib, 11 mi. N of Acco. (See *NEAEHL*, 1:31–36.)

(2) A city in the SHEPHELAH of JUDAH, probably to be identified with KEZIB (Chezib) in Gen. 38:5, where several of Judah's sons were born, and with COZEBBA (KJV Chozeba) in 1 Chr. 4:21–22, where its inhabitants are called "sons of Shelah son of Judah." Aczib is in the city lists of Judah and Simeon between KEILAH and MARESHAH (Josh. 15:44), and so not far from ADULLAM (cf. Gen. 38:1).

Micah makes a play on the meaning of the name when he says: “Aczib will prove deceptive [*ʾakzīb ləʾakzāb*] to the kings of Israel” (Mic. 1:14). It is tentatively identified with modern Tell el-Beida, 20 mi. SW of Jerusalem (but see LIBNAH).

E. S. KALLAND

Adad. See HADAD (DEITY).

Adadah ad’uh-duh (עֲדָדָה H6368, derivation uncertain). A city of the tribe of JUDAH on its SE border near EDOM (Josh. 15:22). Because the SEPTUAGINT (Codex B) reads *Arouēl*, many scholars emend the text to *ar(ārā* and identify the place as AROER (= Khirbet (Ar(arah), some 12 mi. SE of BEERSHEBA.

E. S. KALLAND

Adah ay’duh (עֲדָה H6336, “ornament, adornment” or “beauty”). (1) A wife of LAMECH and the mother of JABAL and JUBAL (Gen. 4:11–21).

(2) The first-mentioned wife of ESAU, a daughter of ELON the Hittite (Gen. 36:2). Adah was the mother of Eliphaz (vv. 4, 10), whose sons are called the sons of Adah (vv. 12, 16). The marriage of Esau and Adah introduced Canaanite blood and influence into ISAAC’S family. See also BASEMATH.

E. S. KALLAND

Adaiah uh-day’yuh (עֲדָיָה H6347 and H6348 [only 2 Chr. 23:1], “Yahweh has adorned” or “pleasing to Yahweh”; see IDDO). (1) A man of Bozkath; he was the father of Jedidah and thus grandfather of King JOSIAH (2 Ki. 22:1).

(2) A Levite of the family of GERSHON, ancestor of ASAPH, the temple singer (1 Chr. 6:41; apparently the same as IDDO in v. 21).

(3) The seventh of nine sons of Shimei listed among the Benjamite heads of family living in Jerusalem (1 Chr. 8:21, 28). Shimei (Shema in v. 13) was the fifth son of Elpaal.

(4) Son of Jehoram; a priest and head of family who returned to Jerusalem after the EXILE (1 Chr. 9:12; a fuller genealogy is given in Neh. 11:12).

(5) Father of MAASEIAH; the latter was one of the commanders who helped JEHOIADA destroy ATHALIAH and enthrone JOASH in Judah (2 Chr. 23:1).

(6) A descendant of Bani. He is listed among those who married foreign women during the exile but put them away during the reformation under EZRA (Ezra 10:29; 1 Esd. 9:30 [KJV, “Jedeus”]). Some believe this is the same individual as #7 below. See also BANI #6.

(7) A descendant of Binnui (Ezra 10:39). See #6 above.

(8) An ancestor of Maaseiah; the latter was a Judahite in Jerusalem in Nehemiah’s time whose lineage descended through PEREZ (Neh. 11:5).

E. S. KALLAND

Adalia uh-day’lee-uh (עֲדָלְיָהוּ H130, meaning unknown). The fifth of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:8).

Adam (person) ad’uhm (אָדָם H134, “man, human being, humankind”; ’A אָדָם G77). The etymology

of this name is uncertain, but it is probably related to the noun ^ʾ*ādāmā* H141, “ground,” or to the verb ^ʾ*ādēm* H131, “to be red.” The first of these (though possibly dependent on the second) is the meaning indicated by the biblical text (Gen. 2:7).

I. In the OT

A. Common and proper noun. Adam occurs approximately 500 times with the meaning “mankind.” In the opening chapters of Genesis, with three exceptions (Gen. 1:26; 2:5, 20), it has the definite article (*hāʾādām*), indicating “man” or “the man” rather than “Adam.” The first undisputed occurrence of the name of Adam is in the genealogy of Gen. 5:1–5. It is not necessary to assume thereby that the early chapters of Genesis deal generally with the beginning of human life rather than with the historical details of the first created individual. Of necessity the first created man is “the man” and the designation is equivalent to a proper name.

B. The Genesis narrative. The first chapter of Genesis focuses attention on Yahweh and his creative acts. The creation of “man...male and female” (Gen. 1:21–30) is represented as the crowning act of the whole process, although other beasts were made on the same day. Only in the case of human beings is gender specified (v. 27), which hints at, if it does not specify, a single pair. Man is said to be created in the image of God and given dominion over all other life, animate and inanimate.

The second chapter is not strictly a creation story, for many of the indispensable features of the first chapter are absent. It is a selective account, centering upon man and ultimately connected with Gen. 3, for which it provides an introduction. Man is portrayed as formed from the dust of the ground and animated by the divine breath (2:7). He was set in the Garden of EDEN (vv. 8, 15), where the obligation of obedience to the divine will was introduced in connection with the tree of the knowledge of good and evil (vv. 11–17). Names were given to all the animals and birds, but since none of these was a suitable companion for man, the woman EVE was fashioned from his own body (vv. 21–23). Initially they lived together in complete innocence (v. 25).

Chapter 3 recounts the FALL through the subtle insinuations of the serpent, who cast doubts upon the integrity of God and appealed to human pride (Gen. 3:1–5). First Eve and then Adam were involved (vv. 1–7), and it is perhaps significant that they judged themselves by hiding from God (v. 8) before they were excluded from the garden (vv. 22, 24). Other aspects of the punishment included (1) a perpetuation of the enmity between the seed of the woman and the serpent; (2) the cursing of the soil upon which mankind was dependent (vv. 11–19), and (3) the pains of childbirth (v. 16). After this, Adam became the father of CAIN and ABEL (4:2). Following the murder of Abel, Eve gave birth to SETH when Adam was 130 (LXX 230) years old (4:25; 5:3). Adam died at the age of 930 years (5:5). It is perhaps of significance that the only other unequivocal reference to Adam in the OT is in the genealogy of 1 Chr. 1:1; in other references

© Dr. James C. Martin. The British Museum. Photographed by permission.

Akkadian or Neo-Sumerian cylinder seal (2201–2100 B.C.) depicting a female figure and a god on either side of a date palm, with a snake behind them (the cylinder itself is on the upper left; the other objects are impressions, actual size and enlarged, that show the whole surface). Because of its thematic similarities with the Genesis narrative, some early scholars referred to it as the Adam and Eve Seal; we now know that such a depiction was common in banquet scenes.

(Deut. 32:8; Job 31:33) the word is best regarded as a common noun. The absence of allusions to the historical events of Gen. 1–4 is surprising; clearly the Israelites of the OT period traced their national history from ABRAHAM, not Adam.

C. Alleged Mesopotamian affinities. The connection of the Mesopotamian creation accounts with the biblical account is less significant than in the case of the flood narratives (see FLOOD, GENESIS). The common connections are infrequent and tenuous, and it is apparent that each is *sui generis*. The purpose of the creation of man in the Mesopotamian account was to form a labor force to provide for the gods and to free them from arduous toil. This has no genuine counterpart in Genesis, where Adam's toil does not become arduous until after his exclusion from Eden. The method of creation in the nonbiblical accounts is also strikingly dissimilar, the blood and flesh of a slaughtered god mixed with clay and the spittle of the gods (in some accounts) providing the materials for this act. There is no hint of the use of any part of a deity, living or dead, in Genesis.

D. The theological implications. The place of Adam is carefully detailed and safe-guarded in the Genesis narrative. He is other than God, with no actual physical descent from the Supreme Being or from any inferior deity. He is also sharply marked off from all other aspects of creation, being the only object into which God “breathed...the breath of life” (Gen. 2:7). Each stage of creation is approved with the words, “And God saw that it was good” (1:10, 12, 18, 21, 25, cf. 31), and the inference is that the creation of human beings was its consummation and climax. They therefore stand

on the borderline between God and his CREATION. They are of the earth, and yet made in the IMAGE OF GOD and given dominion over the earth.

That human beings were made in the image of God has been interpreted in different ways, but the most acceptable is that they were created as independent, spiritual beings with a capacity for communion with their Maker, a notion that finds expression in the inference of an evening tryst (Gen. 3:8). Man therefore is given a worthy place in God's creation, a concept that caused the psalmist to wonder, but the majesty is all God's, not man's (cf. Ps. 8:1, 9). Adam's disobedience meant that SIN supervened in this relationship and marred it. However, sin is shown to be essentially alien to humanity, which destroys what is fundamentally good, not only in human beings, but also in the whole of creation. The use of the generic "the man" implies that these incidents involve or typify the whole of humanity.

II. In the Apocrypha and Pseudepigrapha. In the noncanonical Jewish writings, significant developments took place in the interpretation of the character and significance of Adam. He was given a glory which transcended that of every other human being. In Sir. 49:16, at the conclusion of a catalog of the virtues of Israel's great leaders, one reads, "but above every other created living being was Adam." Elsewhere he is described as "a second angel, honored and great and glorious" (*2 En.* 30:11–12; *OTP*, 1:152). Another line of development is that the effect of Adam's sin involved all humanity. Thus 4 Esd. 3:21, "For the first Adam, burdened with a wicked heart, transgressed and was overcome, as were also all who were descended from him." And again, "For a grain of evil seed was sown in Adam's heart from the beginning, and how much ungodliness it has produced until now..." (4:30). These two concepts find a certain reconciliation in PHILO JUDAEUS, the outstanding representative of Hellenistic Judaism. Philo (*Alleg. Interp.* 1.31–32) distinguished between the two types of men (Gen. 1; 2). The first man, the "heavenly man," is uncreated, he is no more than an idea representing the perfection of humanity in the mind of God. The second man (ch. 2) is the "earthly man," the historical Adam, the forefather of sinful humanity.

III. In the NT

A. The Gospels. Christ was questioned concerning the law of DIVORCE (Matt. 19:1–9; cf. Mk. 10:1–9), and in his response he alluded to the creation of Adam and Eve, indicating the fundamental nature of the MARRIAGE bond in the original purpose of God (cf. Gen. 1:27; 2:24). The provision for divorce in the Mosaic law (Deut. 24:1–4) is regarded as secondary and permissive because of man's "hardness of heart" (Matt. 19:8). (It should be noted that in this passage, as well as in all other NT references, it is apparent that Christ and his disciples accepted the historical existence of the first man Adam and his fall as narrated in the early chapters of Genesis.)

Mention has been made of the tendency of the Jews to trace the history of the Jews back to Abraham, the father of the nation. This approach is reflected in the genealogy of Matt. 1:1–17. Luke, whose gospel is directed toward the Gentiles, sets the birth of Christ in a universal context by tracing his descent to Adam, the father of mankind (Lk. 3:21–38). The assertion of Lk. 3:38 that Adam was "the son of God" probably hints at the fact that he, and all his descendants, share in the divine nature.

B. The Epistles. There is a passing reference to Adam in the Epistle of Jude, which notes that ENOCH was "in the seventh generation from Adam" (Jude 14 NRSV). Two passages place stress on the creation of Adam before Eve (who was formed *from* man) as indicating man's essential priority in

the realm of public worship (1 Cor. 11:8; 1 Tim. 2:11–14, with an allusion to Eve’s leading part in the fall). There is also an oblique reference to Adam in Phil. 2:6, which says that Christ “did not consider equality with God something to be grasped”; in contrast, Adam succumbed to the temptation to “be like God, knowing good and evil” (Gen. 3:5), and ate the forbidden fruit (cf. 3:22).

The first of three references that are of vital importance in Paul’s theology is found in 1 Cor. 15:22. A theme already noted in connection with the intertestamental literature, namely, the involvement of all mankind in Adam’s transgression, is repeated. Paul observes that if there is a solidarity in Adam that brings death, there is a corresponding solidarity in Christ that brings life. This theme is worked out in greater detail in Rom. 5:11–21 (see below).

In the context of a discussion on the RESURRECTION (1 Cor. 15:41–49), a fundamental distinction is drawn between the natures of the two great representative men, Adam, “the first man,” and Christ, “the second man.” The first man was made of dust; he was a physical creature of flesh and blood, a perishable being. All people, because of the fact of racial solidarity, share this nature, which cannot inherit the kingdom of God. But Christ, in the starkest contrast, is the “man from heaven,” an imperishable spiritual being and a life-giving spirit. Those who are his partake fully of his nature and bear his image. The lesson drawn is that the resurrection is not to be conceived in material terms but in terms of a fulfillment of this relationship to Christ in the sharing of his immortal spiritual nature (1 Cor. 15:51–54; cf. the illustration from nature and its inference in vv. 31–44).

The same comparison between the solidarity of humankind in Adam and the redeemed in Christ is worked out in Rom. 5:11–21. In this case, however, the context is Christ’s work of salvation. Adam’s sin is shown to have involved all humanity in judgment, condemnation, and death. Whether this death is spiritual or physical is not made clear; probably both are involved. (There is no disparity between this section with its emphasis upon Adam’s sinful act and 1 Cor. 15:41–49, where Adam’s sinful nature is prominent. Adam’s sin is not mentioned in the latter section, but neither is Christ’s work of atonement; both acts, however, underlie the discussion.) This involvement in Adam’s sin included the generations born before the giving of the Mosaic law, which made specific the main classes of transgressions.

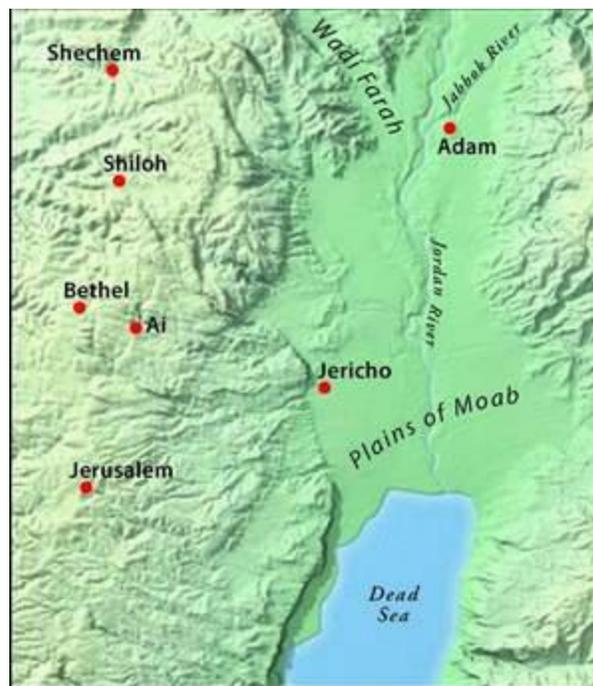

It has been objected that this aspect of Paul’s teaching lacks an ethical connection with the individual, since it seems to suggest that people perish because of an inherited depravity, or because they were necessarily involved in Adam’s sin. Paul may, in fact, have accepted both of these alternatives (the first is the outcome of the second) as the logical explanation of the universality of sin, which he notes elsewhere (cf. Rom. 3:1–23). The mode of sin’s transmission is not uppermost here; Adam’s transgression marked the entrance of sin into the world, and in Paul’s view, sin was a sufficiently powerful force to affect all human beings, even the would-be righteous person (cf. Rom. 7), until the effective intervention of Christ. In any case, his was no crude or mechanical concept of the crushing effects of heredity. The individual’s moral responsibility is made clear in the observation that “death came to all people, because all sinned” (5:12 TNIV).

Paul’s main concern, however, is with the broad contrast between Adam and Christ, both viewed as the heads of the human race. Again, there is the sharpest contrast between the effect of Adam’s one act of trespass and Christ’s one act of righteousness. There is no exact parallel; the act of Christ is markedly superior in its ultimate effects, since it annuls the evil legacy of Adam’s transgression. Christ’s act was a free gift, following many trespasses that, logically, ought to have received their due punishment. This unmerited gift brought JUSTIFICATION, acquittal, and life for all men. The emphasis is upon the free grace of God that supervened in a situation of death and transformed it into one of life through Christ’s perfect act of obedience in his death on a cross. Christ,

therefore, became the new spiritual head of a restored humanity, in contradistinction to Adam, who was the first, physical head of the fallen race.

A. E. CUNDALL

Adam (place) ad'uhm (אָדָם, “man, human being”). A city in the JORDAN Valley where the second largest river of TRANSJORDAN, the JABBOK, empties into the Jordan River. Here, according to Josh. 3:11–16, the Jordan was dammed, probably by the collapse of the 40-ft.-high banks along this narrow stretch of the river, allowing Israel to pass over

Adam.

dryshod opposite JERICHO (c. 16 mi. S of Adam). The name is found in an inscription of Pharaoh SHISHAK, preserved in the Amon temple at Karnak, that describes his invasion of Palestine in the fifth year of REHOBOAM the son of SOLOMON (cf. 1 Ki. 14:25–26). The site is identified with modern Tell ed-Damiyeh.

W. C. KAISER, JR.

Adam, Apocalypse of. A Jewish-Gnostic document preserved in the NAG HAMMADI LIBRARY (NHC V, 5). While the Coptic codex itself is dated A.D. 351–400, the original Greek work may have been composed two or three centuries earlier. It begins with the statement, “The revelation that Adam taught his son Seth in the seven hundredth year” (i.e., near the end of Adam’s life; cf. the unrelated work ADAM, TESTAMENT OF). After describing the FALL, Adam speaks of his slavery to “the God who created us,” a hostile power that is contrasted with “the God of truth.” Adam then relates the appearance of three strangers who revealed the future, including the flood and the coming of “the Illuminator of knowledge,” who redeems the souls of the seed of NOAH. (For an English trans. and introduction, see *OTP*, 1:701–19.)

Adam, Books of. See ADAM AND EVE, LIFE OF.

Adam, second. See SECOND ADAM.

Adam, Testament of. A Syriac work, but also extant in translations into Greek and other languages, consisting of three independent sections: (1) the first two chapters, known as the Horarium, in which ADAM describes the hours of the day and of the night; (2) chapter 3, the Prophecy of Adam as related by his son Seth; (3) the final chapter, the Hierarchy, which catalogs the various categories of angels. The material appears to have a Jewish origin, but it was adopted and heavily revised by Christians. In particular, the third chapter predicts that God would come into the world by being born of a virgin, that he would die and be raised, and that then he would grant Adam the wish of becoming a god. (English trans. and introduction in *OTP*, 1:981–95.)

Adamah ad'uh-muh (אָדָמָה *HI42*, “ground”). One of the nineteen fortified and fenced cities of NAPHTALI listed in Josh. 19:36. Not to be confused with Adami Nekeb (v. 33) or with Adam (3:16), its location has been disputed, but its position in the list would place it N of the Sea of Galilee. Y. Aharoni (*The Land of the Bible: A Historical Geography*, rev. ed. [1979], 53, 161, 429) identifies it with modern Qarn Ḥaṭṭin (Shemesh-adam in THUTMOSE III's city-list, no. 51), some 4 mi. W of Rakkath, which lies on the W shore of the Sea of Galilee.

E. S. KALLAND

Adam and Eve, Life of. A title applied to a number of noncanonical works dealing with real or imagined events in the lives of the first family. Two major versions of the story are extant, one in Greek, *The Apocalypse of Moses* (preserved also in Armenian and Slavonic translations), and the other in Latin, *Vita Adae et Evae*. Similar material is found in the extensive “Adam literature,” such as the Syriac *Cave of Treasures* and the Ethiopic *Conflict of Adam and Eve*. See also ADAM, APOCALYPSE OF; ADAM, TESTAMENT OF. Because of the Hebraisms, rabbinic parallels, and the absence of any anti-Christian polemic, L. S. A. Wells (*APOT*, 2:121–27) concludes that the original (prob. Heb. or Aram.) was written by a Jew, perhaps in ALEXANDRIA, some time after A.D. 60 and not later than 4th cent., with the earlier date more likely. (For a recent English trans. of the Greek and Latin texts, plus introduction, see *OTP*, 2:241–95.)

The Greek version begins with the expulsion of the first parents from EDEN. In a dream, EVE foresaw ABEL'S murder by CAIN. ADAM suffered illness and pain for the first time at the end of his life. SETH and Eve attempted to get oil from the Tree of Life to heal him. Seth was attacked by a beast that refused to respect the image of God in man. MICHAEL, the archangel, appeared and told Seth that Adam was incurable. When Adam died, his soul was taken to the third heaven after purification. Eve instructed Seth to record the events of his parents' lives on tablets of stone. Adam was interred by angels with Seth as the only witness. At this time Abel's body was also interred. Eve died a week later. Michael instructed Seth concerning her burial and warned him not to mourn more than six days (cf. *Jub.* 2.23).

Certain elements missing from the Greek text are present in the Latin version. Upon the expulsion, for example, Eve requested Adam to slay her because she had brought this calamity upon them. Adam suggested a period of repentance in which he was to stand in the JORDAN for forty days and she in the TIGRIS for thirty-seven. Eve suffered a second seduction on the eighteenth day when SATAN, as an angel of light, told her to leave the river since she had been forgiven. Adam unmasked his deceit. Satan then explained that he was jealous because God had told the angels to worship Adam.

adamant. This English noun, found twice in the KJV (Ezek. 3:9; Zech. 7:12), refers to a mineral or metal object that is impenetrably hard; it is sometimes used as a synonym for “diamond” (cf. Jer. 17:1 KJV and NEB). Up to the 17th cent. there was a confusion of ideas between DIAMOND (or other hard gems) and the magnetic iron oxide known as loadstone or magnetite (through a false etymology from *ad-amantem*, “having an attraction for”). The corresponding Greek term (*adamas*, “untamed, invincible”) was applied by Theophrastus to the hardest crystalline gem then known, the emery stone of Naxos in Greece, emery being a massive form of corundum (aluminium oxide) mixed with iron oxides, which is used for polishing hard surfaces. In Latin (*adamas*) it was used, poetically, for the hardest iron or steel, or anything hard or indestructible. PLINY the Elder used it to refer to a transparent crystalline gem, probably corundum (white sapphire), which among natural minerals is next in hardness to diamond. See FLINT.

D. R. BOWES

Adami Nekeb ad’uh-mi’-nee’keb (אָדָמִי נֶקֶב *HI46*, “ground of the pass” or “red pass”). A site on the border of NAPHTALI (Josh. 19:33). The KJV, following the SEPTUAGINT, divides the name into two, Adami and Nekeb. It is probably to be located at Khirbet Damiyeh (or Khirbet et-Tell, just above it), a Bronze Age site 5 mi. SW of TIBERIAS on the W side of the Sea of Galilee, controlling a pass on a caravan route from the area E of Galilee to the plain of Acco. This site, however, appears to be several miles from the Naphtali-Zebulun border. None of the names in the list of fortified Naphtali cities (19:31–38) are identified with the border cities (vv. 31–34; Adami Nekeb and DAMAH are generally understood to be different places).

E. S. KALLAND

Adar ay’dahr (אָדָר *HI160*; Aram. *HI0009*). (1) The twelfth month (late February to early March) in the Babylonian CALENDAR used by postexilic Israel. When necessary because of the lunar year, a second intercalary Adar was used (Ezra 6:15; Esth. 3:7, 13; 8:12; 9:1, 11–21).

(2) KJV alternate form of ADDAR (Josh. 15:3).

E. S. KALLAND

Adasa ad’uh-suh (Αδασα). A town mentioned in 1 Macc. 7:40, 45 and JOSEPHUS (*Ant.* 12.10.5), located between BETH HORON and JERUSALEM, most likely at the site of the present Khirbet (Addaseh, about 6 mi. SE of Beth Horon. Here, after prayer, Judas MACCABEE with 3,000 men defeated the Syrian army under NICANOR, a victory that occasioned an annual observance on the thirteenth of Adar (1 Macc. 7:49).

E. S. KALLAND

Adbeel ad’bee-uhl (אָדְבֵּעַל *HI18*, possibly “languishing for God” or “grief of God”). Third son of ISHMAEL and grandson of ABRAHAM by HAGAR the Egyptian (Gen. 25:13; 1 Chr. 1:29). The descendants of Adbeel should perhaps be identified with the Idiba(ileans, a bedouin Aramean tribe mentioned in Assyrian records of TIGLATH-PILESER (A. H. Sayce, *The Higher Critics and the Verdict of the Monuments* [1894], 202; cf. *ANET*, 283, and see F. V. Winnett, “The Arabian Genealogies in

Genesis,” in *Translating and Understanding the Old Testament*, ed. H. T. Frank and W. L. Reed [1970], 171–96, esp. 191–96). See also NODAB.

E. S. KALLAND

Addai ad’i. The founder of the church at EDESSA, according to Syriac tradition. Ancient writers identified him with the apostle THADDAEUS (cf. Euseb. *Eccl. Hist.* 1.12.3; 1.13.1–22). See DOCTRINA ADDAEI; THADDAEUS, ACTS OF.

Addan ad’uhn. See ADDON.

Addar (person) ad’ahr (אָדָר H161, “glorious”). Son of BELA and grandson of BENJAMIN (1 Chr. 8:3), also called ARD (Num. 26:40; in Gen. 46:21, Ard is included among the “sons” [probably meaning “descendants”] of Benjamin). The name Addar in 1 Chronicles may be the result of a scribal transposition of the consonants *d* and *r*.

Addar (place) ad’ahr (אָדָר H162, “glorious,” or less likely, “threshing floor”). A fortified city on the S border of JUDAH near KADESH BARNEA (Josh. 15:3; KJV, “Adar”). Addar may be the same as HAZAR ADDAR (Num. 34:4), and a possible location is (Ain Qedeis, about 5 mi. SE of Kadesh Barnea.

E. S. KALLAND

adder. A word used in the NIV to translate Heb. אֲדָמָה H704 (Job 20:16; Isa. 30:6; 59:5), which refers to a poisonous snake, a kind of VIPER. The word is used in the KJV and NRSV as a translation of other Hebrew terms. See also ASP; SERPENT.

© Dr. James C. Martin

The venom of this desert cobra (*Walterinnesia aegyptia*, found in the Negev and the Judean Desert) is neurotoxic, causing respiratory arrest.

Addi ad'i (ʾA^{דדי} G79). (1) An Israelite whose descendants returned from the EXILE (1 Esd. 9:31); perhaps an alternate form of ADNA (Ezra 10:30).

(2) Son of Cosam, included in Luke's GENEALOGY OF JESUS CHRIST (Lk. 3:28).

Additions to Daniel. See AZARIAH, PRAYER OF; BEL AND THE DRAGON; SUSANNAH.

Additions to Esther. See ESTHER, ADDITIONS TO.

Additions to Jeremiah. See BARUCH, BOOK OF; JEREMIAH, EPISTLE OF.

Addo ad'oh. KJV Apoc. form of IDDO (1 Esd. 6:1).

Addon ad'uhn (^{אדון} HI24 [Neh. 7:61] and ^{אדון} HI50 [Ezra 2:59], meaning unknown). One of five Babylonian places from which certain Jewish exiles returned who were unable to prove their Israelite ancestry (Ezra 2:59 [KJV and other versions, "Addan"]; Neh. 7:61). If Addon here is a place name, its location is unknown. However, the parallel in the APOCRYPHA reads, "The following are those who came up from Tel-melah and Tel-harsha, under the leadership of Cherub, Addan, and Immer" (1 Esd. 5:36 NRSV, following a generally accepted conjectural emendation), and some scholars argue that this reading is original.

E. S. KALLAND

Addus ad'uhs (A^{אדוס}). (1) A man whose descendants returned with ZERUBBABEL from Babylon (1 Esd. 5:34; his name is omitted in the parallel lists in Ezra 2 and Neh. 7).

(2) KJV Apoc. form of JADDUS (1 Esd. 5:38).

Ader ay'duhr. KJV alternate form of EDER (only 1 Chr. 8:15).

Adida ad'uh-duh (A^{אדידה}). A town situated on a hill above the plains of JUDEA, on a road leading from Jerusalem to the coast. Probably the same as the OT HADID (modern el-Haditheh, 11 mi. ESE of JOPPA). It was fortified by SIMON MACCABEE and used by him to meet the army of TRYPHO (1 Macc. 12:38; 13:13; Jos. *Ant.* 13.6.5). Here also ARETAS, king of Arabia, defeated Alexander Jannaeus in battle (Jos. *Ant.* 13.15.2; see HASMONEAN).

S. BARABAS

Adiel ay'dee-uhl (^{אדאל} H6346, "ornament of God"). (1) A clan leader from the tribe of SIMEON (1 Chr. 4:36). He is listed among those who increased their lands by defeating the people of Gedor during the reign of HEZEKIAH (cf. vv. 31–43).

(2) Son of Jahzerah; he was a priest whose son Maasai returned to Jerusalem after the Babylonian EXILE (1 Chr. 9:12; cf. Azarel in the parallel list in Neh. 11:13).

(3) The father of Azmaveth, who was in charge of the royal treasures of David (1 Chr. 27:25).

S. BARABAS

Adin ay'din (^{אדין} H6350, "luxuriant"). A man whose descendants returned from the Babylonian

EXILE. They were among the family heads who sealed the covenant with NEHEMIAH (Ezra 2:15; 8:6; Neh. 7:20; 10:16).

Adina ad'uh-nuh (עֲדִינָא H6351, “adorned”). Son of Shiza and descendant of REUBEN; a tribal chief who was one of DAVID’S mighty warriors (1 Chr. 11:42).

Adino ad'uh-noh. The KJV has the name “Adino the Eznite” in 2 Sam. 23:8 as a transliteration of the words (*ădînô hā(e)ṣnî*. On the basis of the parallel passage (1 Chr. 11:11), modern translations usually emend the words to read (*ôrē'et-ḥănîtô* (NIV, “he raised his spear”).

Adinus uh-dī'nuhs. KJV Apoc. variant of JAMIN (1 Esd. 9:48).

Adithaim ad'uh-thay'im (עֲדִיתַיִם H6353, meaning uncertain). A city in the SHEPHELAH of Judah (Josh. 15:36). The site is unknown, although some identify it with modern el-Ḥadithēh (see HADID).

Adlai ad'li (עֲדַלַי H6354, perhaps “Yahweh is just”). Father of Shaphat; the latter was herdsman of the royal flocks in the time of DAVID (1 Chr. 27:29).

Admah ad'muh (אֲדַמָּה H144, “ground”). One of the CITIES OF THE PLAIN. Along with SODOM, GOMORRAH, and ZEBOIIM, Admah is mentioned in Gen. 10:19 as marking CANAAN’S southern border. Its destruction is not recorded in the story of the ruin of Sodom and Gomorrah (Gen. 19), but it is implied in the account and specifically stated elsewhere (Deut. 29:23). Moreover, Hos. 11:8 uses the fate of Admah and Zeboiim as a warning to Israel to turn from its sin. The city, with its king SHINAB, is also mentioned as one of the five cities that were attacked by the four eastern kings (Gen. 14:2). Admah was probably situated in the Valley of SIDDIM, or perhaps in the JORDAN Valley E of the Benjamite country.

S. BARABAS

Admatha ad-may'thuh (אֲדַמְתָּא H148, Pers. name possibly meaning “unconquered”). One of “the seven nobles of Persia and Media who had special access to the king and were highest in the kingdom” (Esth. 1:14). Queen VASHTI was banished by AHASUERUS (XERXES) on their advice. See CARSHENA.

Admin ad'min (ἄμιν G98 [not in NIV]). Son of Amminadab, included in Luke’s GENEALOGY OF JESUS CHRIST, according to some MSS (Lk. 3:33 NRSV; the NIV follows a different reading).

administration. See DISPENSATION.

Adna ad'nuh (עֲדָנָא H6363, “delight”). (1) The head of a priestly house who returned from EXILE with ZERUBBABEL (Neh. 12:15).

(2) One of the descendants of PAHATH-MOAB who agreed to put away their foreign wives (Ezra 10:30).

Adnah ad'nuh (עֲדָנָה H6367 [1 Chr. 12:20]) and עֲדָנָה H6365 [2 Chr. 17:14], both meaning “delight”). (1) A soldier from the tribe of MANASSEH who defected SAUL’S army and joined DAVID in ZIKLAG (1 Chr. 12:20).

(2) A military commander of JEHOSHAPHAT’S army (2 Chr. 17:14).

ado. This English noun (meaning “fuss, bother”) is used once by the KJV in Jesus’ question, “Why make ye this ado?” (Mk. 5:39; NIV, “Why all this commotion?”).

Adonai ad’oh-ni’ (אֲדֹנָי H151 [a pl. form with 1st person sg. pronoun], from אֲדֹנָי H123, a common term for “lord, master”). Also Adonay. A divine name usually translated “the Lord.” When in combination with the Tetragrammaton (YHWH), the NIV renders the phrase “Sovereign LORD.” Its etymology is obscure, but its meaning is certain—God is the ruling Lord. It appears first in Gen. 15:2, 8, and is used often afterward. In the MT, the vowels of this name are used to vocalize the Tetragrammaton, indicating that the reader should not pronounce the sacred name, but rather read it as Adonai (this written combination of consonants and vowels led to the hybrid name Jehovah). See also GOD, NAMES OF.

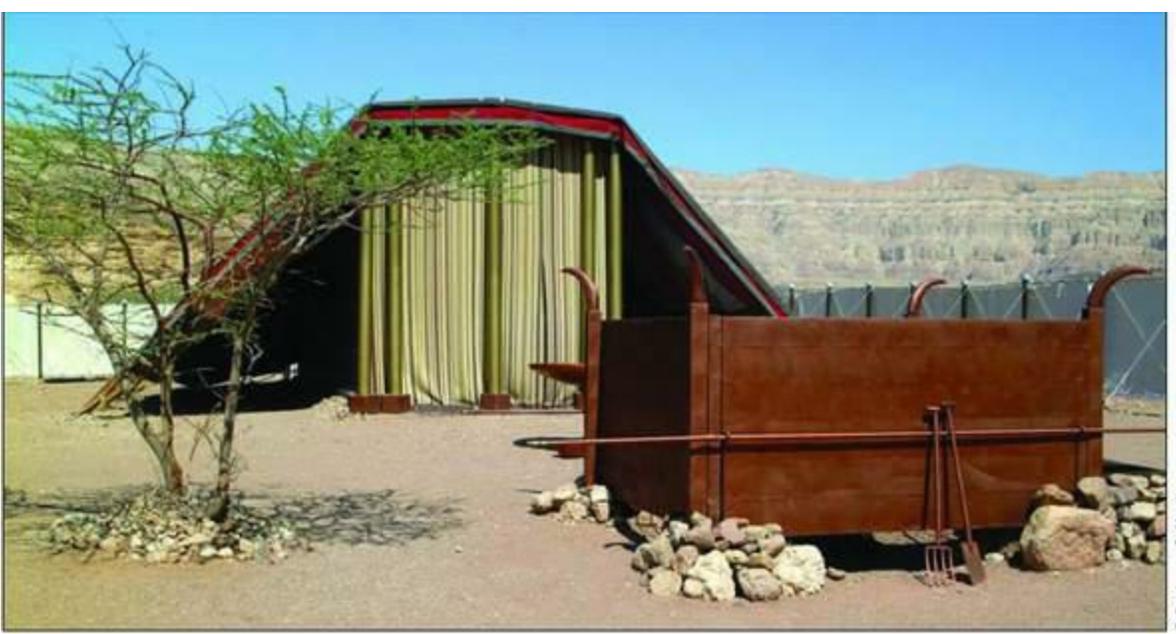

S. BARABAS

Adonay. See ADONAI.

Adoni-Bezek uh-doh’ni’-bee’zek (אֲדֹנֵי בֶזֶק H152, “lord of Bezek”). The title of the king of a town named BEZEK in northern Palestine, 13 mi. NE of SHECHEM. He was pursued and captured by the tribes of JUDAH and SIMEON; he then suffered the same kind of incapacitation to which he subjected seventy other kings, namely, the amputation of their thumbs and great toes (Jdg. 1:1–7). *Contra* G. E. Wright (*in JNES* 5 [1946]: 108), this king is not to be identified with ADONI-ZEDEK, king of Jerusalem (Josh. 10:1–3). Judah was probably threatened or attacked by Canaanite forces in the N under Adoni-Bezek, and therefore they turned to meet him before they could begin clearing out their own tribal territory (so KD, *Joshua, Judges, Ruth*, 252-53).

There is no reason, according to Y. Aharoni (*The Land of the Bible: A Historical Geography*, rev. ed. [1967], 214 and n. 76), to doubt the historical accuracy of the details in this first chapter of Judges, including the reference to Jerusalem as the place to which the mutilated Adoni-Bezek was taken (Jdg. 3:7), even though later (v. 21) it is said that Benjamin could not drive out the Jebusites from Jerusalem. Quite frequently, certain tribes succeeded in overcoming and destroying Canaanite emplacements only to lose the city or region for lack of a settlement, or of technical and organizational ability to rebuild and refortify the town. (Cf. DEBIR; HAZOR; LACHISH.) After a short time, Jerusalem apparently fell into the hands of the Jebusites until David captured it again.

Reconstruction of the tabernacle with the altar out front. Upon hearing of Solomon’s rise to the throne, Adonijah went to the tabernacle, which had been set up in Jerusalem, and held on to the horns of the altar until the king made an oath not to put him to death (1 Ki. 1:51).

Adonijah ad’uh-ni’juh (אָדוֹנִיָּהוּ HI53 and אֲדוֹנִיָּהוּ HI54, “my Lord is Yahweh”). (1) The fourth son born to DAVID by HAGGITH in HEBRON (2 Sam. 3:4; 1 Chr. 3:1–2). He is famous for making an unsuccessful bid for the throne when he presumed himself to be the oldest heir-apparent after the death of his two older brothers AMNON and ABSALOM (1 Ki. 1–2; KILEAB, David’s son by ABIGAIL, presumably had died too, although the record is silent).

Since it appears that David had promised to BATHSHEBA that her son SOLOMON would succeed him (1 Ki. 1:17), it is difficult to know what to make of Adonijah’s preparations and announcement of kingship. Was David’s intention known only by

Bathsheba and NATHAN? Was David unaware of Adonijah’s preparations or was he too senile to grasp their significance? Certainly Adonijah knew his own intentions, for he prepared an entourage of chariots, horses, and fifty runners without any restraining action from David (1 Ki. 1:1–6). This personal chariot force ostensibly enhanced his prestige, but it may also have anticipated a coup d’état. Further, he had JOAB, the commander-in-chief of the army, and ABIATHAR, one of the two high priests and a survivor of SAUL’S massacre, as his supporters (v. 1:7).

Feeling that he had the sanction of the army and the priesthood, Adonijah was ready to declare himself the new king and would have succeeded had it not been for the quick action of Nathan and Bathsheba. Even as Adonijah feasted at EN ROGEL, David agreed to declare Solomon king. The high priest ZADOK, the prophet Nathan, and BENAIAH, the commander of the king’s secret service, were commanded by David to take Solomon to the GIHON SPRING and there anoint him king. When the trumpet blew and the announcement was made, Adonijah’s feast was suddenly terminated. Adonijah immediately fled to the altar for sanctuary (1 Ki. 1:50). Solomon promised to spare his life if he remained loyal, but this loyalty was broken when Adonijah pressured Bathsheba to secure for him the release of beautiful ABISHAG, David’s former nurse. He argued that, after all, the kingdom had been his (2:15). Solomon interpreted this request as an attempt to gain a claim to the throne, as was common in Israel and the ANE (2 Sam. 3:7; 16:21; et al.). Solomon therefore had Adonijah promptly executed by Benaiah (1 Ki. 2:11–25).

(2) One of the Levites sent by JEHOSHAPHAT to teach the people in the cities of Judah the law of

God (2 Chr. 17:8).

(3) One of the leaders of the people who sealed the covenant in Ezra's time (Neh. 10:16). Some believe he is to be identified with ADONIKAM.

W. C. KAISER, JR.

Adonikam ad'uh-ni'kuhm (אֲדֹנִיקָם H156, "my lord has risen"). The name of one of the families that returned from EXILE (Ezra 2:13; Neh. 7:18). The descendants of Adonikam are given as 666 in Ezra and 667 in Nehemiah (also in 1 Esd. 5:14). In these two lists involving 153 ciphers each, 29 differ, of which 13 cases involve a difference of one unit. H. L. Allrik has ably discussed this problem (in *BASOR* 136 [Dec. 1954]: 21–27). Adonikam is also mentioned in Ezra 8:13 (= 1 Esd. 8:39) and possibly in Neh. 10:16 (if he is the same as ADONIJAH #3).

W. C. KAISER, JR.

Adoniram ad'uh-ni'ruhm (אֲדֹנִירָם H157, "[my] Lord is exalted"; alternately, אֲדָרָם H164 [not in NIV; 2 Sam. 20:24; 1 Ki. 12:18] and אֲדָרָם H2067 [not in NIV; 2 Chr. 10:18], possibly meaning "[the deity] Adad/HADAD is exalted"). Son of Abda; an official in charge of SOLOMON'S corvée, the equivalent of a department of forced labor (1 Ki. 4:6; 5:14). He is also identified with an official at the end of DAVID'S reign, and the opening of REHOBOAM'S, who functioned in the same office and who evidently was known by a contracted form of the same name, Adoram (2 Sam. 20:24; 1 Ki. 12:18) or Hadoram (2 Chr. 10:18).

Adoniram is described as the overseer of thirty thousand men of Israel serving in three relays of ten thousand each as they went to LEBANON to secure cedar and firm timbers (1 Ki. 5:8, 11–14). This system may have been adapted by David from the prevailing Canaanite system of requiring the labor of men as a form of taxation. The administrative texts from Ras Shamra (UGARIT) testify to this practice. The Israelites found this forced labor very distasteful, and when Rehoboam refused to relax the policy, the northern tribes split from Judah and Benjamin (1 Ki. 12:1–16; 2 Chr. 10:1–11). In an especially foolish move, Rehoboam sent to them Adoram, the arch-symbol of this hated system, and the people promptly stoned him to death (1 Ki. 12:18; 2 Chr. 10:18).

W. C. KAISER, JR.

Adonis uh-doh'nis ('Αδωνις from אֲדֹן H123, "lord"). The Syrian deity of vegetation, which wilts under the hot summer sun. He was called Dumuzi or TAMMUZ in MESOPOTAMIA (cf. Ezek. 8:14). In SYRIA and PHOENICIA he was known as *ʾadōnī*, from which comes his Greek name, Adonis. He was venerated throughout the ANE, Egypt, and Greece. A feast in his honor was celebrated in June/July. When the vegetation wilted under the scorching heat and he descended into the nether world, his wife, the goddess ISHTAR, went down too in order to revive him the following spring. The two were FERTILITY gods, symbolizing the death and restoration of life in nature. There is a possible reference to the worship of this god in Isa. 17:10, where the "finest plants" may refer to Adonis gardens, as the herbs planted in his honor were called (cf. NEB). (See *DDD*, 1–10.)

S. BARABAS

Adoni-Zedek uh-doh'ni'-zee'dek (אֲדֹנִי־צֶדֶק H155, "my lord is righteousness"). King of JERUSALEM when the Israelites invaded Canaan under JOSHUA (Josh. 10:1, 3). When he heard of the fall of AI and the league of the Gibeonites with Israel, he entered into a coalition with four other AMORITE kings to

the S and W of Jerusalem with the purpose of punishing the city of GIBEON. Joshua and his men quickly came to the assistance of Gibeon. In a memorable battle in which the sun stood still, the confederate forces were badly defeated (see DAY, JOSHUA'S LONG). The five kings were shut up in a cave in which they had hidden. After the battle ended, they were slain and their bodies were hung up until the evening, when they were removed and sealed in the cave with large stones.

S. BARABAS

adoption. The act of adoption is the conclusion of any action by which individuals are brought into a new family relationship where they now have new privileges and responsibilities, and at the same time lose all previous rights and are divested of all the previous duties of their former family relationship. Depending on the simplicity or complexity of the society in which provision is made for adoption, the legal process is more or less intricate. The process has been discovered in practically every culture and has been adapted in a wide variety of ways in contemporary society.

I. Ancient background. Relevant to biblical usage are the practices primarily of GREECE and ROME. Adoption was sometimes extended to slaves, as in the case of MOSES in EGYPT (Exod. 2:10), but was extended in Greece and Rome primarily to citizens. In Greek practice the adoptive father, because of lack of natural offspring and desiring to perpetuate his family, or because of deep affection for one whom he had come to know in other relationships, or perhaps for religious reasons, could in his lifetime or by his will extend to a son of another family the privileges of his own family in perpetuity. There was a condition, however, that the person adopted accept the legal obligations and religious duties of the new father. In Roman practice the relationship between the father and son was more severe and more binding because of their understanding of paternal authority (*patria potestas*). The emphasis was on the father's power, and the son's relationship was almost that of a slave. Thus the person adopted was transferred from his natural father's power to the control of the adoptive father. In understanding this transfer, one should think of it more in terms of a "sale" akin in some sense to a redemptive act or, more exactly, a ransom. (See now C. Kunst, *Römische Adoption* [2005].)

II. Hebrew background. The term was unfamiliar in Palestine in so far as life there reflected Hebrew rather than pagan practices. The Hebrew law codes made no mention of adoption. The Greek term *huiiothesia* G5625 does not occur in the SEPTUAGINT, and in fact no specific term corresponding to it exists in ancient Hebrew. The substitute for adoption in the Hebrew culture depended on its peculiar and careful laws regarding tribal possessions (Num. 27:1–11). The risk of childlessness was solved in part by the LEVIRATE LAW or by polygamy, and in some periods of history by easy divorce. One may reflect on SARAH and HAGAR, RACHEL and BILHAH, LEAH and ZILPAH (cf. Gen. 16:2; 30:1–9). The inheritance for EPHRAIM and MANASSEH, sons of JOSEPH, suggests that JACOB in some sense "adopted" his grandsons (Gen. 48:5), although it is more likely that this was Jacob's way of giving Joseph a double portion of the inheritance that would later be distributed under JOSHUA. Note also the transfer of REUBEN'S rights to Joseph because of the sin of Reuben (Gen. 49:4, 22, 26). Other examples of adoption in the OT are that of Moses by the Egyptian princess (Exod. 2:10), possibly GENUBATH by TAHPENES (1 Ki. 11:20), and ESTHER by MORDECAI (Esth. 2:7, 15). Significantly, all these cases were outside Palestine and the normal operations of the Mosaic Code.

III. Pauline usage. Adoption is a theological concept only in the NT and only in the epistles of PAUL (Rom. 8:11–17, 23; 9:4; Gal. 4:5; Eph. 1:5). The Greek word *huiiothesia* is used primarily in Gal.

4:5, which reads literally, “so that we might receive the adoption” (NIV, “that we might receive the full rights of sons”). In Eph. 1:5 the idea is clearly set forth: “he predestined us for adoption to sonship through Jesus Christ” (TNIV). In the passages in Romans, Paul covers the concept in other ways: “we are God’s children” (Rom. 8:16); “adoption” belongs to the people of Israel (9:4); “we wait eagerly for our adoption, the redemption of our bodies” (Rom. 8:23 TNIV).

Although a Jew, Paul knew well the customs of Greece and Rome. As nearly as it can be judged, he had no particular form of adoption in mind. He found readily at hand the Roman idea of *patria potestas* when he was emphasizing a person’s release from the slavery of sin, while he found the Greek idea congenial when he was emphasizing the relationships and gifts of sonship; thus the deliverance from debt and the liberty of sons. (For an approach that focuses on the OT background, esp. 2 Sam. 7:14, see J. M. Scott, *Adoption as Sons of God: An Exegetical Investigation Into the Background of* **ΥΙΟΘΕΣΙΑ** *A in the Pauline Corpus* [1992].) In general, Paul made the following emphases: (1) The process rests in the free act of God who adopts believers, and it is all of grace; (2) people are redeemed or “bought out” of their previous slavery into the new life as children of God; (3) by the operation of the Spirit of God believers have the assurance of this new relationship and in the experience of sonship they can with Christ cry, “Abba, Father” (Mk. 14:36; Rom. 8:15; see **ABBA**).

The whole idea of adoption or sonship is set forth by Paul in such a way that one may see that the new relationship toward the Father is diametrically opposed to the spirit of bondage (Rom. 8:15). The support of this experience is specifically Christian. With adoption the Spirit awakens and confirms the experience of sonship within us. Only those who have been truly adopted by God *know* that they are “children of God.” It is in the assurance of this experience that one speaks to the Father as Christ spoke to him, in full confidence, and in the approach only those could make who know themselves to be part of the family. See **FATHERHOOD OF GOD**.

IV. Parallel concepts. In the classical theological treatment of “the order of salvation” (*ordo salutis*) various classical terms arise—union with Christ, regeneration, conversion, repentance, faith, justification, sanctification, perseverance, glorification (see **SALVATION IV.A**). An understanding of adoption is clarified by comparing it with some of these other concepts. **UNION WITH CHRIST** is the inclusive and covering concept, and there is in adoption this idea of oneness in the family of God; those who are adopted are “joint heirs with Jesus Christ.” **REGENERATION** is assumed to be the secret operation of the **HOLY SPIRIT** paralleling the more popular figure, “new birth,” which defines especially the origin and initiation of the Christian life, the establishment of a new life principle. Adoption, however, is insistent not only that there is a new quality of life, but also that this quality of life carries with it a conscious experience of the new relationship. Even if one should hold to baptismal regeneration, adoption must still move beyond this event to the emphasis on personal **ASSURANCE**.

Some authors treat adoption as a variation or subheading of justification by faith. **JUSTIFICATION** is a forensic term not having to do with the righteous acts of believers but with the fact that God has declared a person to be righteous and treats him as such; and there is no question that this takes place through the finished work of Christ. Believers are declared righteous in the presence of God not because they live righteously but because of Christ’s **RIGHTEOUSNESS**. Adoption emphasizes more exactly the experience of the father-child relationship as against the judge-prisoner relationship. It is the embracing and restoration of the prodigal son. It is not so much the analogy of the judge setting the prisoner free as it is a father restoring his son—the robe, the ring, the feast, the celebration (cf. Lk.

15:21–32).

As over against SANCTIFICATION, which is a valid concept suggesting the process by which a believer is made more holy, one must emphasize again that the experience of adoption continues to move along with the activity of sanctification at every level of sanctity. The emphasis in adoption is always an ethical one, and although it has been initiated and is constantly sustained through God’s grace, it focuses constantly on response in the conscious experience of the believer. GLORIFICATION will be the fulfillment and completion of that which is already being experienced by the believer.

V. The universal dimension. Two passages (Rom. 8:11–24; Eph. 1:5), while not “universalist” in the usual sense of the word, lead one to a wider appreciation of what is involved in adoption. The lamb was slain from the foundation of the world, and Jesus Christ is the same yesterday, today, and forever. God is Father according to his nature, and the essence of his love and grace is externally the expression of his love toward his creatures. Potentially, then, from all eternity the Father has been destining human beings to adoption, and reflections of this idea are already seen in his relationship to Israel (cf. Rom. 9:3; Exod. 4:22; Deut. 14:1; 32:6; Jer. 31:9; Hos. 11:1).

God by his own nature could not be something less than Father, but only when the cross had answered his demands of holiness was it possible for him to receive his creatures as sons. The Spirit testifies to this sonship. Thus, the triune God is involved in adoption—the Father according to his nature, the Son according to his redemptive act, the Holy Spirit in his assuring presence. Paul boldly affirms that the whole creation is awaiting “the adoption of the sons of God.” Even nature will be redeemed and set free from the same bondage and futility that came upon all God’s creation because of human sin. The adoption of believers as CHILDREN OF GOD is a necessary step toward the new heaven and the new earth. (See further J. Murray, *Redemption: Accomplished and Applied* [1955], ch. 6; W. Grudem, *Systematic Theology: An Introduction to Christian Doctrine* [1994], ch. 37; T. Burke, *Adopted into God’s Family: Exploring a Pauline Metaphor* [2006].)

A. H. LEITCH

This road leads due E up the Adoraim ridge into the Judean mountains near Hebron.

Adora uh-doh’ruh. See ADORAIM.

Adoraim ad'uh-ray'im (אָדוֹרַיִם *HI26*, perhaps “[pair of] hills”). One of the fifteen cities fortified by REHOBOAM (2 Chr. 11:9). It is identified with the modern Dura in JUDAH, 5 mi. SW of HEBRON. In 1 Maccabees and in JOSEPHUS the name appears as Adora (*Adōra*). There SIMON MACCABEE stopped the Syrian leader TRYPHO in 142 B.C. (1 Macc. 13:21–24). John Hyrcanus (see HASMONEAN II.A) captured the city after the death of Antiochus VII in 129 B.C. (Jos. *Ant.* 13.9.1; *War* 1.2.6). In 59 B.C., the proconsul of SYRIA, Gabinius, rebuilt the city and made it one of his administrative districts (Jos. *Ant.* 14.5.3; *War* 1.8.4). According to *Jub.* 38.2, 1–9, ESAU was killed by JACOB at Aduram (Adora) and was buried there.

S. BARABAS

Adoram uh-doh'ruhm. Alternate form of ADONIRAM.

adoration. This term, from the Latin *adoratio*, expresses the internal religious response that externalizes itself in those actions denoted by *adorare*: “to pray, entreat, worship, pay homage to.” The word does not ordinarily appear in English translations of the Bible, and is more frequently used in Roman Catholic than in Protestant religious expression. Roman Catholics render homage (which excludes adoration) to the saints, their relics, and images, and render adoration to such things as have close reference to the divine; accordingly, they regard the cross as a proper object of adoration. In the strict sense, however, Roman Catholics, as do Protestants, regard adoration as exclusively reserved for God.

In its widest sense, adoration is simply the appreciative wonderment of the perfections and excellencies of the Creator as reflected in created realities, and the term is commonly used to express the awe that such reflections of the divine GLORY elicit in the human spirit. A man may adore a woman, a woman a man, and both adore the wonders of created realities. In this wide coverage, adoration does not ordinarily issue in prayer or worship; when it does, one's natural sense of awe and adoration becomes idolatrous.

In its narrower religious sense, adoration may be rendered to God only, for he alone is the proper object of homage, prayer, and worship. Although the term has a Latin (rather than Greek or Hebrew) origin, its religious use is legitimate, for it expresses what the Bible means by worship, prayer, prostration, and the lifting up of hands to God. Both Roman Catholics and Protestants regard the act of adoration as an equivalent of the NT Greek verb *proskyneō* *G4686* (“to prostrate oneself before [someone], to worship”).

Adoration in this distinctively religious sense is the human response to God's disclosure of himself in Jesus Christ as the God who, by his free act of grace, is for mankind in all his majestic love and power. This human response is a total response of the whole person without remainder. In adoration the intellect perceives and registers the love and grace of God revealed in Jesus Christ for the sinner. The will ratifies what the intellect perceives, thus commending it and declaring its Amen, that is, that it would have God be what he is in Jesus Christ. Our affections are stirred to the limits of their intensity and respond with an unearthly delight, an unspeakable joy, and a peace that surpasses both our understanding and our powers to articulate. Adoration is the effort of the total person to give total expression to his joyful comprehension and approbation of his vision of God in Jesus Christ. Since our response to this vision never adequately expresses that peace and joy which passes understanding, we reach for the liturgical aids of song, music, and symbol.

If adoration is that total response of human beings to God in which they acknowledge that power

and glory, love and grace truly and infinitely belong to God only, and that God alone is worthy of all adoration and worship, may such adoration be rendered to Christ who is as truly human as he is divine? The NT church, according to the NT, rendered to Christ after his ascension the same adoration that it rendered to God. This practice is clear from the history of the primitive church recorded in Acts. Revelation ascribes not only to him who sits on the throne, but also to the Lamb, blessing and honor, glory and dominion, for ever and ever (Rev. 5:13). See also WORSHIP.

J. DAANE

adorn. The Greek word *kosmeō* G3175 (“to arrange, put in order, decorate, embellish”) is used in Scripture in both a literal and a figurative sense. The figurative use can be traced back to the OT (cf. Isa. 61:10). Paul says that slaves are to live in such a way that they will “make attractive” the doctrine of God (Tit. 2:10). The book of Revelation compares the beauty of the new Jerusalem to a bride “beautifully dressed” (Rev. 21:2). Both Paul and Peter urge women not to be overly concerned about personal adornment, but to dress modestly and sensibly, and to be concerned about the beauty of good deeds (1 Tim. 2:9; 1 Pet. 3:5). The words of the apostles harmonize with the general teaching of Scripture that emphasis should be placed upon spiritual beauty rather than upon physical adornment.

S. BARABAS

Adrammelech (deity) uh-dram’uh-lek( H165, possibly “the lordship of the king,” but more likely represents an original *Adad-Milki*, “HADAD

This votive gift to Adad or Hadad, regarded as god of the weather, dates about 1300 B.C. (the wavy lines on the top and sides are thought to be thunderbolts). The god Adrammelech may have been viewed as a manifestation of Adad.

is king,” a name attested at Tell Halaf). TNIV Adrammelek. A god of the natives of S EPHARVAIM (possibly Sabraim in E central SYRIA) whom the Assyrians transplanted to SAMARIA after 722 B.C. (2 Ki. 17:31). See also ANNAMELECH.

Adrammelech (person) uh-dram’uh-lek (אדרמלך *HI66*; it is uncertain whether this name should be identified with that of the god Adram-melech [see previous entry]). Son of SENNACHERIB; he and his brother, SHAREZER, joined in murdering their father in the temple of NISROCH (2 Ki. 19:37; Isa. 37:38; JOSEPHUS [*Ant.* 10.1.5 §23] calls him Andromachos, and other Greek sources call him Adramelos and Adrumuzan). The discovery of letters sent by some Assyrian scholars to ESARHADDON and ASHURBANIPAL has established that Sennacherib’s murder was the result of a conspiracy led by his son Arad-Ninlil, who should have been named successor but was bypassed in favor of Esarhaddon, his younger brother. The Assyrian logograph usually read as Arad-Ninlil should probably be interpreted as Arda-Mulissu (other spellings possible), of which the name Adrammelech appears to be a corruption, perhaps a deliberate one. (See S. Parpola in *Death in Mesopotamia*, ed. B. Alster [1980], 171–82; *CANE*, 2:951–55.)

Adramyttium ad'ruh-mit' ee-uhm ('A δραμύτι-ΤΕΙΟΝ G101). Ancient port city of MYSIA in ASIA MINOR from which came the ship that conveyed PAUL from CAESAREA (Acts 27:2, where the name appears in the adjectival form *Adramyttēnos* G101, "of Adra-myttium"). This Adramyttian ship was probably bound for home and enabled Paul and his centurion escort to make connections for Rome. The city was located at the head of the Gulf of Adra-myttium facing the island of Lesbos. The ancient name is now preserved in the inland town Edremit, while the original site is known as Karatash.

Some think Adramyttium may have been Homer's Pedasus. A different and attractive explanation is that the city was founded by Adramys, brother of the Lydian king Croesus, in the 6th cent. B.C. An Athenian colony may have existed there prior to this time, though J. Rendel Harris (in *Contemporary Review* 128 [1925]: 191–202) has suggested an Arabian origin for the first settlement. In any case, the city gained considerable importance when PERGAMUM (Pergamus) became the capital of an influential Hellenistic kingdom under the so-called Attalid dynasty in the 3rd cent. B.C. Assizes were held there, and numismatic evidence points to the city as a center for the worship of Pollux and Castor (see DIOSCURI). The city boasted a good harbor, and its importance as a maritime city is attested by commercial coinage from the E found there and dating to the 2nd cent. B.C. or earlier. Adramyttium also was noted for the preparation of a special ointment (Pliny the Elder, *Nat.* 13.2.5; see further Strabo, *Geogr.* 13.1.51, 61–66; W. Leaf, *Strabo on the Troad* [1923], 318ff.).

H. G. ANDERSEN

Adria, Adriatic Sea ay'dree-uh, ay'dree-a 'tik ('A δρίας G102). The entire body of water lying between ITALY on the W and the Balkan Peninsula (including GREECE) on the E; it extends into the central Mediterranean to include the waters between CRETE and MALTA, where Paul's ship encountered the storm on the voyage to Rome (Acts 27:27; KJV, "Adria"; NRSV, "sea of Adria"; NIV, "Adriatic Sea").

The name Adria appears to be derived from Atria, an important ancient commercial town situated near the mouth of the river Po in northern Italy (Livy, *Hist.* 5.33.2; Strabo, *Geogr.* 5.1.2; Pliny the Elder, *Nat.* 3.120). Livy and others describe the town as Tuscan, but Justin (*Epitome of the Philippic History of Pompeius Trogus* 20.1.9) says the town was of Greek origin, a suggestion seemingly supported by the discovery of an abundance of Greek vases of a type not found elsewhere in this particular district of Italy.

In earliest times, Adria referred only to the inner expanse of water near the outflow of the Po, while the more southerly expanse was designated the Ionian Sea. These terms, however, soon came to be used either interchangeably or to designate respectively the inner and outer basins of the one body of water considered as a whole, and, in fact, the term Adria by itself could be used also to designate this whole (Strabo, *Geogr.* 2.123; 7.187). By a further extension, Adria came to refer to the entire expanse of water from the Po into the central Mediterranean. Thus Ptolemy, the 2nd-cent. scientist and geographer, describes the Adria as being E of Sicily (*Geogr.* 4.4), S of Achaia (3.14), W of Crete (3.15), and W and S of the Peloponnesus (3.16). The record JOSEPHUS gives of his rescue from the Adria by a ship of CYRENE (*Life*, 15) supports this use of the term.

H. G. ANDERSEN

Adriel ay'dree-uhl (אֲדְרִיֵּל H6377, "God is my help"; prob. an Aram. name, equivalent to Heb. AZRIEL). A son of BARZILLAI who lived in ABEL MEHOLAH in the Jordan Valley. SAUL gave him his daughter MERAB, although Saul had promised to give her to DAVID (1 Sam. 18:19). Adriel and Merab

had five sons, all of whom perished in David's dreadful and sinful acquiescence in the demand of the Gibeonites for scapegoats (2 Sam. 21:8, where most Heb. MSS read "Michal" for "Merab," apparently a scribal error).

S. BARABAS

Aduel uh-dyoo'uhl (A ^{δουηλ}). Son of Gabael and an ancestor of TOBIT (Tob. 1:1).

Adullam uh-duhl'uhm (אָדּוּלָם H6355, "retreat, refuge"; gentilic אָדּוּלָמִי H6356, "Adullamite"). A Canaanite town, situated on the route via AZEKAH and Soco, that controlled one of the principal passes into the hill-country of Judah from the northern SHEPHELAH. It is first mentioned in Gen. 38:1, which states that JUDAH left his brothers and established friendly relationships with the Canaanite cities of this district. Such is the context of the affair of Judah and TAMAR, with the intermarriage of the clan of Judah and the residents of Adullam. It is mentioned as a Canaanite royal city in Josh. 15:35. Adullam is usually associated with a cave nearby, where DAVID fled for refuge when he was refused protection by ACHISH, king of GATH (1 Sam. 22:1). Adullam is mentioned in the list of fortresses that REHOBOAM reinforced on the western approaches to the Judean hills (2 Chr. 11:7). The city is also mentioned by Micah in the description of SENNACHERIB'S invasion of Judah (Mic. 1:15), and Nehemiah refers to it as one of the inhabited towns after the exile (Neh. 11:30). It would later serve for refuge to Judas MACCABEE (2 Macc. 12:38, *Odollam*). The site of Adullam is usually identified with Khirbet esh-Sheikh Madhkur, some 16.5 mi. WSW of Jerusalem.

J. M. HOUSTON

adultery. This term is used in the Scriptures to designate sexual intercourse, with mutual consent, between a man, married or unmarried, and the wife of another man. Likewise, the term is used to describe sexual intercourse, with mutual consent, by a married woman with any man other than her husband. The Greek verb *moicheuō* G3658, "to commit adultery," is used in the NT as equivalent to Hebrew *nā'ap* H5537 in the OT. In ancient Israel the primary meaning of the term was the physical act of adultery. However, it was gradually used to designate idolatrous worship and unfaithfulness to God (Isa. 57:3; Jer. 3:8–9; Ezek. 23:43). Hosea described Israel as the adulterous wife of Yahweh due to her religious apostasy (Hos. 2:2). The significance of the act and the connotations of the term seemed to deepen and widen over time. See IDOLATRY

In ancient Israel adultery was expressly forbidden (Exod. 20:14; Deut. 5:18) and punishable (Lev. 18:20; 20:20; Deut. 22:22–24). In the earliest days of the nation's history, the physical act of adultery was condemned severely. Death, apparently by stoning, was the penalty prescribed for both the man and the woman who committed adultery. The death penalty covered adultery by an affianced woman as well as adultery on the part of a married woman (Lev. 20:10; Deut. 22:22–25).

Jewish law required that adultery be clearly established (Jn. 8:4; *m. Soṭah* 1:4; 5:1; 6:1, 25). If a man's wife was accused of adultery, she was required to prove her innocence by an ordeal referred to as drinking the waters of bitterness (Num. 5:11–30; *m. Soṭah* 1:4; 6:25). This ordeal was not endured by all accused adulteresses in Israel, but only by pure Israelites (and some pure Israelites apparently were exempt from the trial). The trial included drinking an innocuous potion composed of water from a basin in the temple or sanctuary, mingled with dust from the floor of the sanctuary and the ink scrapings from the accused woman's oath repeated during the formal trial. If the woman was guiltless, she supposedly would suffer no ill effects from drinking the potion. This trial was

conducted before the SANHEDRIN (*m. Soṭah* 1:4), and two witnesses of the alleged adulterous act were required before the woman was brought to trial. If the woman was found guilty on circumstantial grounds, the husband was compelled to divorce her, and the accused adulteress lost all her rights accruing from the marriage settlement. In addition, an adulteress was not allowed to marry her paramour (*m. Soṭah* 5:1). Originally this trial by ordeal was designed for guilty women, but gradually it was abolished due to increasing moral laxity among the male population of Israel. About A.D. 30 the death penalty for adultery was dropped in Israel along with the abolition of other forms of capital punishment.

Jesus emphasized that the adulterous thought was equivalent to the act of adultery. Some believe these and similar teachings showed that he was in agreement with the stricter interpretations of the law current in his day (cf. Matt. 5:17). Christ also taught that, under certain circumstances, marriage to a divorcee resulted in adultery (5:27–32). Adultery is mentioned in the NT as one of several sins, which if not repented of would exclude a person from the kingdom of God (1 Cor. 6:9; Gal. 5:19–21). Adultery was forbidden by Christ (Matt. 19:3–12; Jn. 8:4) and by the early church. Stern warnings were given to offenders lest such practices be repeated (1 Cor. 5–6). Furthermore, spiritual adultery, or the alignment of the Christian with either the world system or non-Christian religious systems, is clearly forbidden in the NT (Jas. 4:4; Rev. 2:20–23). See also MARRIAGE.

G. LAMBERT

Adummim uh-duhm'im (אֲדֻמִּים *HI47*, perhaps meaning “red [rocks]”). A pass about 6 mi. SW of JERICHO that was possibly used as a trade route at an early date. It leads from the JORDAN Valley in

The red soil along the Pass of Adummim near Jericho.

the vicinity of JERICHO to the hill country, including JERUSALEM. It has continued as a section of the road between these two cities down to present times. It was a part of Judah's northern boundary (Josh. 15:7) and was used as a point of reference in establishing the location of GELIOTH on BENJAMIN'S southern border (18:17).

EUSEBIUS (*Onom.* 24.9–11) refers to this place as Maledomni (from *ma'ālēh' ādummîm*, “the Pass/ Ascent of Adummim”), while JEROME'S translation of Eusebius adds that Adommim was a stronghold midway between Jericho and Jerusalem. It is regarded by some as the site of the inn of the

Good Samaritan (Lk. 10:34). The Arabic name for the pass is Tal (at ed-Damm, “the ascent of blood” (the reference is prob. to the red marl formations, not to the wounded traveler).

A. K. HELMBOLD

Advent. This English term, which refers to the arrival of someone or something important, is used especially of the coming of JESUS CHRIST at the INCARNATION. In Christian liturgy it refers to the period that begins the fourth Sunday before CHRISTMAS. The term is also used with reference to the SECOND COMING.

adversary. See SATAN.

adversity. See SUFFERING.

advice. See COUNSEL.

advocate. A common translation of the Greek word *paraklētos* G4156, found in 1 Jn. 2:1: “My little children, I am writing these things to you so that you may not sin. But if any one does sin, we have an advocate with the Father, Jesus Christ the righteous” (NRSV; the NIV renders, “we have one who speaks to the Father in our defense”). The word means: (1) a legal advocate, (2) an intercessor, (3) a helper. John means that Christ is the legal advocate and intercessor with the Father when one falls into sin. The next verse shows that the basis of the intercession is Christ’s propitiatory death for sin. This term occurs four other times in the NT (Jn. 14:16, 26; 15:26; 16:7), but in these passages it is a title given to the HOLY SPIRIT. In all four occurrences the KJV translates it “Comforter,” but recent English versions prefer renderings such as “Counselor” (NIV), “Helper” (NASB), “Advocate” (NRSV). See PARACLETE.

S. BARABAS

Aedias i-dee’uhs. KJV Apoc. variant of ELIJAH (1 Esd. 9:27).

Aegean Sea i-jee’uhn (A ἰγαῖος πέλαγος). An arm of the Mediterranean Sea, between GREECE and ASIA MINOR, almost 400 mi. long and 200 mi. wide. Its numerous islands, gulfs, and bays facilitated travel at a time when ships could not make long voyages. The Aegean Sea was the cradle of Greek civilization and the setting for many important historical events, including the wars between the Greeks and the Persians. See GREECE.

Aelia Capitolina. Pagan name given to JERUSALEM by Emperor HADRIAN. The first part derives from the emperor’s family name, Aelius; the second, from an epithet of the deity Jupiter (ZEUS).

Aeneas i-nee’uhs (A ἰνέας G138, “praise”). A resident at Lydda (see LOD), bedridden with paralysis for eight years, whom PETER miraculously healed (Acts 9:33–35). His healing caused many to accept Christianity. The text does not state whether he was a Christian before his healing. Aeneas is a common name in Greek literature.

Aenon ee’nuhn (A ἰνών G143, possibly from Heb. עֵינַן H6524, “spring”). Aenon is mentioned only

once in the Bible: “Now John also was baptizing at Aenon near Salim, because there was plenty of water” (Jn. 3:23). A discussion took place here about the role of JOHN THE BAPTIST over against the ascending popularity of Jesus (3:25–30). Earlier John had been baptizing in “Bethany on the other side of the Jordan” (1:28). The episode in Aenon occurred possibly about six months after the beginning of Jesus’ ministry. Jesus at this time had left Jerusalem, apparently traveling N by way of Samaria to Galilee (4:3).

The location of Aenon is disputed. This passage is also the only occurrence of the name SALIM (*Salim* G4890) in the NT. Some scholars follow EUSEBIUS (*Onom.* 40), who placed Salim in the JORDAN Valley about 8 mi. S of Scythopolis (BETH SHAN). There is a Tell Sheikh es-Selim located about this distance SSE of Beth Shan.

However, the Johannine reference to “much water” at Aenon would suggest locating the place outside the Jordan Valley (otherwise the reference would be irrelevant). The meager Johannine details would point to a place N of Jerusalem to the W of the Jordan Valley. About 3–4 mi. E of Nablus (SHECHEM) lies present-day Salim. W. F. Albright identifies this place with ancient Salim and adds: “nor can it be quite accidental that there is an (Ainun in the immediate vicinity” (*The Archaeology of Palestine* [1960], 247). In 1962 a survey of the area revealed an extensive tell with architectural remains in the vicinity of modern (Ainun. Surface sherds indicated significant occupation during the Roman period. This location is near the sources (some springs—cf. the meaning of Arab. (*ain*) of Wadi Fari^a, and it could properly be said that “there was much water there.” The discussion in Jn. 3:25–30 suggests that Jesus and his disciples were not too far from Aenon. As a result of the controversy, Jesus proceeded to Galilee by way of Samaria (4:3–5). Hence, the location of Aenon at Wadi Fari^a is preferable.

B. VAN ELDEREN

aeon ee’uhn. This term (also *eon*), meaning “a long period of time,” does not occur in most English translations of the Bible. However, the corresponding Greek word (*aiōn* G172, “age”) is found frequently in the NT and also in the Septuagint (esp. for Heb. (*ôlām* H6409). It is used in three ways: (1) The plural form denotes the ages that represent divisions of time, both past and future (e.g., Eph. 2:7; 3:9). God is “the King of the ages” (1 Tim. 1:17; NIV, “the King eternal”). (2) Often the word denotes a contrast (which goes back to pre-Christian Jewish apocalyptic thought) between the present age and the age to come. The present age (or world) is transitory and evil, its values contrary to those of God; the future age is that in which God holds undisputed sway (e.g., Mk. 10:30). (3) It is used in phrases that point to an indefinite past (Lk. 1:70) or future. The latter are commonly translated “for ever” (Lk. 1:33, 55), though it is necessary to tell from the context whether eternity is involved or only a long extended period. See also AGE; WORLD.

F. FOULKES

Aesora i-soh’ruh (^{Ἰσώρα}). A town on the borders of SAMARIA, mentioned along with BETH HORON, JERICHO, and other cities (Jdt. 4:4; KJV, “Esora”). The location is uncertain, but it has been identified by some scholars with the HAZOR of Josh. 11:1 or of Neh. 11:33. Others identify it with JAZER.

affection. See LOVE.

affliction. See SUFFERING.

afraid. See FEAR.

Africa. One of the seven continents of the world (the name as such does not occur in the Bible). It is uncertain what knowledge the ancients had of the continent as a whole, though HERODOTUS believed it was washed by the sea on all sides (*Hist.* 4.42). Israel's closest acquaintance was, of course, with EGYPT, the latter having provided grain for the patriarchs (Gen. 42–45) and, later, oppression and slavery for the children of Israel. Other African peoples such as the Lubim (see LIBYA) and PUT also are mentioned. CUSH is referred to frequently and indicates the land beyond Egypt, especially ETHIOPIA.

During the DIASPORA, large numbers of Jews settled in various parts of N Africa. In the NT, therefore, one is not surprised to find Egypt appearing as the place where Mary and Joseph took refuge to preserve the life of the infant Jesus (Matt. 2:13–15). The man who bore Jesus' cross was one Simon from CYRENE, a port in N Africa (Mk. 15:21), and there were many Jews from Egypt and Cyrene present at PENTECOST (Acts 2:10). Similarly, converted Cyrenians helped to evangelize ANTIOCH OF SYRIA (11:20), while the eloquent APOLLOS was a native of ALEXANDRIA (18:24). The ETHIOPIAN EUNUCH, converted under PHILIP, may well have been responsible for carrying the gospel back to his own country. EUSEBIUS (*Eccl. Hist.* 2.16) reports the tradition that Mark evangelized Alexandria (see MARK, JOHN), and indeed some of the strongest churches of the Christian world were found in Egypt and N Africa by the end of the 2nd cent. (See further E. M. Yamauchi, *Africa and the Bible* [2004].)

H. G. ANDERSEN

afternoon. The Hebrews reckoned the day from evening to evening and divided it into the following six unequal parts: the break of day; the morning, or sunrise; the heat of the day (beginning about nine o'clock); midday; the cool of the day; and the evening. The cool of the day corresponded to our late afternoon, and was so called because in Eastern countries a wind begins to blow a few hours before sundown and continues till evening. At that time much of the day's business was transacted (cf. Gen. 3:8; Jdg. 19:9).

S. BARABAS

Agaba ag'uh-buh. KJV Apoc. form of HAGAB (1 Esd.5:30).

Agabus ag'uh-buhs (^{ἄγαβος} G13, also accented ^{ἄγαβος} possible derivations are Heb. אָגַב H2506, “locust,” and אָבַב H6311, “to love, lust”). A NT prophet from JUDEA (Jerusalem) who on two separate occasions by the Spirit made a prediction. At ANTIOCH OF SYRIA he formally “predicted that a severe famine would spread over the entire Roman world,” which caused the Antioch assembly to gather a relief offering for the Judean brethren (Acts 11:27–28). The fulfillment took place “during the reign of Claudius” in the form of numerous local famines (Tacitus, *Ann.* 12,43; Suetonius, *Claud.* 18; Jos. *Ant.* 20.2.5; 20.5.2). Later, at the end of PAUL'S third missionary journey, Agabus at CAESAREA predicted, with vivid symbolic action, that the apostle would be fettered and handed over to the Gentiles if he proceeded to Jerusalem (Acts 21:10–11). Not new to Paul (Acts 20:23; 21:4), the prediction failed to deter him. Late tradition makes Agabus one of the Seventy (Lk. 10:1 KJV) and a Christian martyr.

Agade uh-gah'dee. See AKKAD.

Agag ay'gag (𐤀𐤂𐤁 H97, possibly “angry, warlike”; gentilic 𐤀𐤂𐤁 H98, “Agagite”). A name, or perhaps a title like PHARAOH, belonging to Amalekite kings (see AMALEK). One is mentioned in Num. 24:7 (BALAAM'S oracle) and another in 1 Sam. 15:8–33 (SAUL'S disobedience). In addition, the book of Esther describes HAMAN both as “the enemy of the Jews” (Esth. 8:1) and as “the Agagite” (Esth. 3:1 et al.). This is a significant detail in the history of the interpretation of the book, for it calls to mind the Amalekite king that Saul failed to destroy. See AGAGITE. The etymological meaning of the word is usually taken from Akk. *agāgu*, “to get angry, furious.” In a different context, M. Astour has pointed to the Greek form Ogygos as being a Semitic name derived from a root ḡg, “to flame” (*JNES* 23 [1964]: 200). These connections are uncertain. The name appears in Phoenician and Punic texts.

W.C. KAISER, JR.

Agagite ay'guh-gz't (𐤀𐤂𐤁 H98; LXX has Βουγαίος in Esth. 3:1; 9:10 [also Esth. 1:1^r = Add. Esth. 12:6] and ὁ ΜΑΚΕΔΩΝ in 9:24 [elsewhere it omits the epithet]). A gentilic used to describe HAMAN (Esth. 3:1, 10; 8:3, 5; 9:24). It was perhaps a general term for “enemy” (cf. the modern use of “Hun”). The land of Agag is mentioned in Akkadian inscriptions of Sargon, probably referring to Media. JOSEPHUS (*Ant.* 11.6.6) calls Haman an Amalekite (to compare him to Agag?). The term in Esther may be a literary device: what AGAG was to SAUL, Haman was to MORDECAI—a mortal enemy. See also BOUGEAN.

A. K. HELMBOLD

agape ah-gah'pay. The transliteration of the Greek term *agapē* G27, one NT word for LOVE (its verbal form is *agapaō* G26). It appears in the Johannine definition, “God is love” (1 Jn. 4:8). It is the love that the divine law demands of people for God and for their neighbors, whom they must love as themselves. *Agape* is, therefore, the fulfillment of the law as it relates to both God and fellow-man (Matt. 22:40); and of the trio “faith, hope and love,” *agape* is the greatest (1 Cor. 13:13). *Agape* is also the power that overcomes evil.

To this biblical data must be added that the NT has another word for “love,” *philia* G5802 (verb *phileō* G5797), although the distinctions are blurred in actual usage so that the meanings overlap. While the NT does not use (and the OT has no direct counterpart for) a third term, *eros*, both Testaments do recognize erotic love. In view of all this biblical data, it is neither surprising that the Bible has much to say about love nor that the mystery of love spills over the limits of the best definitions of love.

Any rigid categorization or definition of *agape* and *eros*, in which the one excludes the other, distorts the biblical meaning of each as well as their peculiar relationship. Anders Nygren's brilliant book, *Agape and Eros* (1953), is a case that illustrates this point. Nygren defines *eros* as it appears in Greek thought: *eros* is desire in search of satisfaction—it seeks its object in order to satisfy its own hunger and self-fulfillment. Unlike *agape*, *eros* seeks its own. In sharp contrast to this, Nygren sees the peculiar and distinctive character of *agape* in the NT teaching that God is *agape*, which he reveals in his self-giving redemptive love for sinners. *Agape* loves the unlovely and the unworthy; it is, therefore, neither elicited nor motivated by the loveliness or worth of its object. *Agape* seeks not

its own (1 Cor. 13:5), but the good of its object, however unlovely. While *eros* is motivated by what its object can do for it, *agape* is motivated by what it can do for its object. *Eros* seeks its object for the delight it proffers; *agape* loves though it sees nothing of delight in its object.

This sharp distinction between *agape* and *eros* does not comport with all the biblical data. In biblical teaching God the Father has *agape* for his eternal Son; men are summoned to have *agape* for God and for each other—a summons that Nygren tries to temper by the claim that the NT demands faith rather than love. His insistence that *agape* excludes a motivating delight in its object creates a difficulty for him in terms of the demand that one love one's neighbor "as oneself," and leads him to estimate the insistence of the Johannine epistles that one ought to love the "brethren" but not "the world" as a departure from the authentic NT meaning of *agape*. In biblical usage *agape*, regarding both God and neighbor, extends to the righteous as well as the sinners, to the lovely as well as the unlovely, and to those who love only those who love them (Lk. 6:32). It is an expression both for a person's love for God and the Father's love for the Son, and thus describes that delight which the one finds in the other because of what the other is.

Biblical thought does not endorse an *agape* that excludes *eros*, but one that allows for an erotic love that sees value, and takes delight, in its object. *Eros* in biblical thought is an expression for mutuality; the lover finds delight in this love. While the Hebrew has no specific word that means SEX, the OT gives erotic love a positive and noble role. *Eros* celebrates life in general, and bodily life in particular. Sexual differentiation, and the erotic love of husband and wife, are an expression of the image of God in which man was created (Gen. 1:27). The marital bond is an expression of both *agape* and *eros*. In it there is both self-giving and self-fulfillment. The sexual relationship is an image of God's COVENANT relationship to his people: Yahweh is the husband and Israel his wife; similarly Christ is the Bridegroom and the CHURCH his Bride—and his Body. Consequently, Hosea, in his peculiar marriage, uses erotic love as a representation of God's experience with Israel. The Song of Solomon is plainly a celebration of erotic love; even the attempts to spiritualize the Song as a celebration of Christ's love for the church must acknowledge that the celebration is expressed in terms of *eros*. In biblical thought *eros* is open to profound corruption, but it is also open to redemption and is recognized as an essential part of man's being. *Eros* is never surrendered to the selfishly centered connotation of *eros* in Greek thought, where it is ultimately sacrificed for an unbodied spirituality.

The clue to the validity of *eros*, and of its relationship with *agape*, is found in the freedom of God to express and share himself as *agape* in creation, election, covenant-making, and redemption. *Eros* is an expression of the freedom of God to desire to create a world and to take delight in that which he has created. God is free to impart existence and worth to an object and then to love it and take delight in it because of its worth. This divine giving to an object, and the divine love for and delight in this worth of the object, is an expression of divine *eros*. For God, too, *eros* is an expression of mutuality and self-giving, of the celebration of and delight in, bodily life and created reality, and this comes to expression in the biblical doctrines of covenant-making, election, and redemption. *Agape* alone does not explain the biblical view of any of these divine actions. It is *agape* plus *eros* that comes to expression in that freedom of the divine good-pleasure to create and redeem, and to find and take delight in what is created and redeemed.

Nygren's mutually exclusive definition of these two terms—*eros* as selfish self-seeking love and *agape* as God's love for only the unlovely—excludes the love, delight, and good pleasure that God has in creation as such, the neighbor-love that demands caring for another person as for one's self, and the divine love expressed in God's election, in which God loves the sinner and delights in the

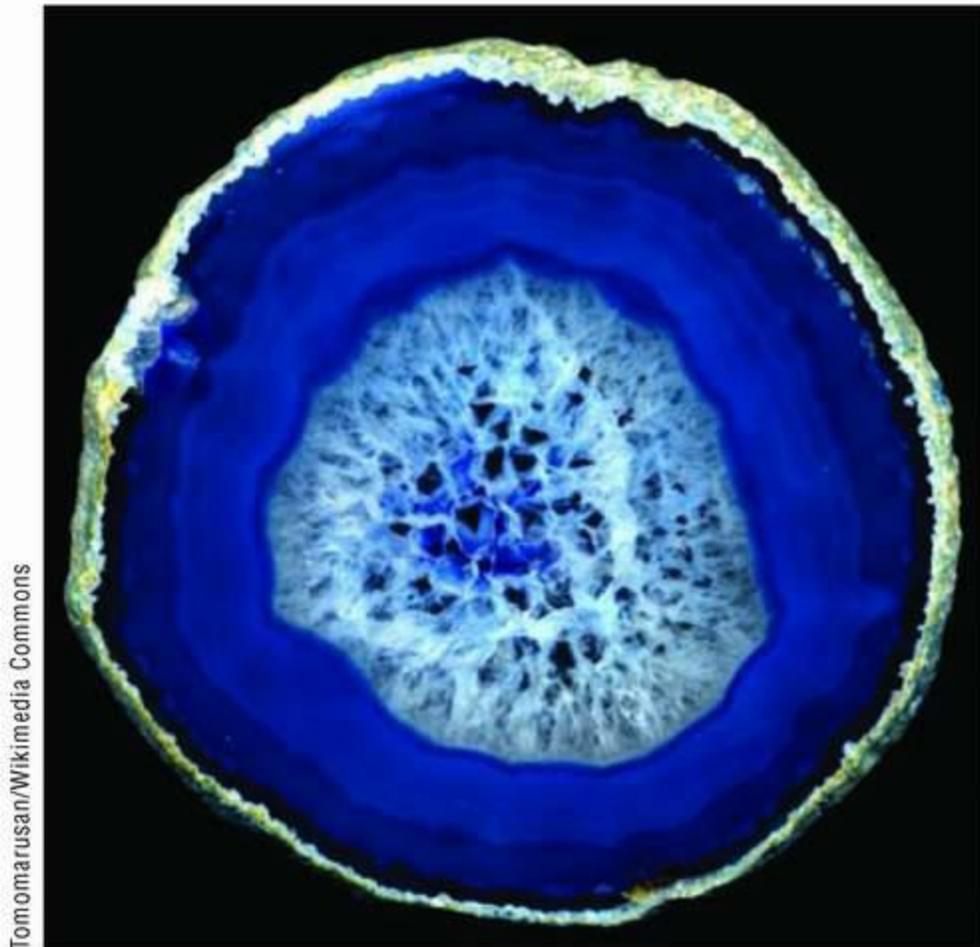

Christian as a good and righteous person. God's *agape* embraces sinners but does not exclude that *eros* in which God loves the righteous (Ps. 73:1), hates all the workers of iniquity (5:5), and takes delight in what is righteous and good and lovely for the very reason that they are such. Without *eros*, *agape* renders creation and its redemption absolutely necessary, or projects them as realities bereft of real worth. It is only when *agape* and *eros* are understood in their peculiar relatedness, that creation, election, redemption become meaningful and not arbitrary, and both *agape* and *eros* become an essential part of man's total life and being. (On the *Agape* Feast, see COMMUNION.)

J. DAANE

Agar ay'gahr. KJV NT form of HAGAR.

Agarenes ay'guh-reenz. KJV Apoc. term for "sons of Hagar" (Bar. 3:23). See HAGAR; HAGRITE.

agate. A precious stone (Heb. *šēbō* H8648, Exod. 28:19; 39:12; cf. also Rev. 21:19 NRSV for Gk. *chalkēdōn* G5907). It is a variegated CHALCEDONY and similar to JASPER (cf. Ezek. 27:16 NEB), being very fine grained silica (silicon dioxide). It is distinctive in consisting of alternating layers of various colors, mainly white, bluish, and pale brown. Most agates occur in cavities in ancient lavas such as those near Lake Tiberias and northeastward

Tomomarusan/Wikimedia Commons

Photo of an agate stone.

into Syria. The successive layers are approximately parallel to the sides of the cavity resulting from reaction to silica gel, which coagulated from water carrying silica in solution, with the adjacent

age. Although Plato used *aiōn* H172 in an exclusively eternal sense, this term and its Hebrew counterpart, (*ōlām* H6409, are not always used in that way. In contrast with Greek *kairos* G2789—which locates and specifies a point in time, as for instance, the event of the SECOND COMING—the word *aiōn* has to do in the main with extent and duration of time. (It is used a few times in a spatial sense, as in Heb. 1:2, where it is synonymous with WORLD, but that usage is infrequent.)

There is, however, some flexibility or ambiguity here. This extent or duration of time can be either limited and defined or unlimited and undefined. When used in the former sense, it may refer to the uncertain length of one's life (1 Sam. 1:22–28; 1 Cor. 8:13), which is comparatively brief in duration, but it may also refer to a much longer period, such as the age of the hills and mountains (Gen. 49:26). There are boundary points involved. Sometimes it has a double terminal or two points of reference. An illustration is “the present evil age” (Gal. 1:4), which looks backward to the FALL and forward to the event of the second coming. Sometimes it has but one point of reference. The coming age begins at the final judgment, but it has no *terminus ad quem*, since it continues throughout eternity.

When the quality of endlessness (ETERNITY) is involved, the intensive plural is used. Everlastingness is, of course, an attribute of deity. God's kingdom “is an everlasting kingdom” (Ps. 145:13), and he brings in “everlasting righteousness” (Dan. 9:24). Christ is “the King eternal, immortal, invisible, the only God” to whom “be honor and glory for ever and ever” (1 Tim. 1:17), and as the writer to the Hebrews states, he “is the same yesterday and today and for ever” (Heb. 13:8).

J. H. BRATT

age, old. Attainment to old age is frequently recognized as a divine blessing, a reward for godliness, and an indication of the favor of God to those who are faithful to his commandments (Job 5:26). ABRAHAM is promised a “good old age” (Gen. 15:15), and long life is pledged to those who respect the authorities established by God (Exod. 20:12). That is not to say that this blessing of God means exemption from trials and difficulties. Far from it. Old age does bring its health problems and disabilities (Ps. 71:9). ELI had failing eyesight (1 Sam. 3:2), as did JACOB (Gen. 48:10) and AHIJAH (1 Ki. 14:4); BARZILLAI was hard of hearing (2 Sam. 19:35), and DAVID had poor circulation (1 Ki. 1:1–4).

The book of ECCLESIASTES graphically describes the physical deterioration that old age brings. Life becomes a burden (Eccl. 12:1); vision is dimmed (v. 2); strength and vigor decline; the teeth disintegrate, a calamity before the day of artificial dentures (v. 3); insomnia develops (v. 4); fears accumulate (v. 5); and desire and ambition wane (v. 5). In the face of these disabilities, however, there is the assurance of God's tender concern (Isa. 46:4) and the anticipation of the hope of glory (Ps. 73:24). David confesses to God's abiding presence throughout all of life when he says: “I was young and now I am old, / yet I have never seen the righteous forsaken / or their children begging bread” (Ps. 37:25). It is quite significant that the Lord is depicted not only as a child and as a man in the full strength of his powers, but also as one crowned with white hair (Rev. 1:14), as if to remind human beings that he has relevance for all of life.

In keeping with oriental custom generally, old age is to be respected and honored. This reverence is germane to the religious life as an expression of the fear of the Lord (Lev. 19:32). Gray

hair is to be deemed a mark of honor, not a token of debility (Prov. 20:29). The warning is issued that failure to honor the elderly will surely bring evil upon the nation (Isa. 3:5; Lam. 5:12). The inhumanity and cruelty that marked the Babylonians is shown in part at least in their lack of respect for the elderly (2 Chr. 36:17). It is not that old age, as such, warrants honor and reverence. It must be coupled with integrity and a godly life, and the writer of Proverbs attaches a condition: “Gray hair is a crown of splendor; / it is attained by a righteous life” (Prov. 16:31). (See P. Thane, ed., *A History of Old Age* [2005].)

It is generally assumed that experience is a valuable teacher and that age brings along with it wisdom and discernment (Job 12:20; 15:10; 32:7). The elderly are regarded as depositaries of knowledge (15:10) and custodians of the tradition. MOSES, in his farewell, urges Israel to consult with the fathers and elders (Deut. 32:7). REHOBOAM made a fatal error when he spurned the counsel of the elderly. Positions of leadership and responsibility were usually entrusted to men of age and experience. Moses sought counsel of JETHRO and appointed seventy elders to furnish him with advice. See ELDER (OT). In the NT CHURCH the rulership was vested in individuals who by virtue of their age were called “presbyters” or “elders.” See ELDER (NT).

J. H. BRATT

Agee ay’gee (אגעי H96, derivation uncertain). A Hararite and the father of SHAMMAH; the latter was one of DAVID’S mighty warriors (2 Sam. 23:11). See discussion under HARARITE.

Aggadah ah’gah-dah’, uh-gah’duh. See HAGGADAH.

Aggaeus ag’ee-uhs. KJV Apoc. form of HAGGAI (1 Esd. 6:1; 7:3; 2 Esd. 1:40).

Agia ay’gee-uh (אגיא [1 Esd. 5:34] and אגיא [v. 38]). (1) The family head of temple servants (see NETHINIM) who returned from EXILE (1 Esd. 5:34; KJV, “Hagiah”); the parallels (Ezra 2:57; Neh. 7:59) have HATTIL.

(2) Wife of JADDUS, whose descendants returned from exile. She traced her lineage to BARZILLAI, who had been held in high regard by King DAVID (1 Esd. 5:38; KJV, “Augia”). The parallels (Ezra 2:61; Neh. 7:63) omit the names Agia and Jaddus.

agony. The Greek word *agōnia* G75 is found in the NT only in Lk. 22:44 (NIV, “anguish”), where it is used to describe the Lord’s distress in the Garden of GETHSEMANE (the cognate verb *agōnizomai* G76 was often used to describe the exhausting struggles and sufferings of athletes and gladiators). It is equivalent to “sorrowful and troubled” in Matt. 26:37 and “deeply distressed and troubled” in Mk. 14:33.

S. BARABAS

agora ag’uh-ruh. Transliteration of a Greek term (*agora* G59) that refers to a marketplace, usually the center of public life. See MARKET, MARKETPLACE.

agrapha ag'ruh-fuh. Transliteration of the plural form of Greek *agraphos*, meaning “unrecorded” (and used with that sense by Plutarch and other authors). The term does not appear in the NT, but was applied by the patristic author CLEMENT OF ALEXANDRIA (c. A.D. 150–220) to those sayings of the apostolic church that were not incorporated in the canonical NT. The German critical scholar J. G. Körner revived the term in his *De sermonibus Christi agraphois*, which appeared in a *Program* issued in Leipzig in 1776. The supposition made by Körner and his followers (chiefly A. Resch, *Texte und Untersuchungen zur Geschichte der altchristlichen Litteratur*, vol. 4 [1889]), was that there had been a large body of oral tradition about Christ, a “Q” source, from which the four evangelists and the other writers of the NT drew. (A more recent and influential work is J. Jeremias, *Unknown Sayings of Jesus*, rev. ed. [1964]. For a comprehensive collection, see W. D. Stroker, *Extra-canonical Sayings of Jesus: Texts, Translations and Notes* [1988].)

The outstanding source for such sayings has been the papyri known as OXYRHYNCHUS SAYINGS OF JESUS (see also THOMAS, GOSPEL OF). However, certain other apparently ancient collections of such sayings have been located in apocryphal works of various kinds, in the TALMUD, and in certain Muslim documents. As to the nature, value, and number of agrapha, scholars disagree radically. The canonical Gospels never state that they are either exhaustive or comprehensive, but indicate only that they are sufficient to elicit faith in Christ and his work (cf. Jn. 21:25 et al.). In the light of such texts and the allusions to teachings of the Lord not mentioned in the Gospels (e.g., Acts 20:35 and 1 Cor. 11:24–25, passages sometimes described as agrapha), it is likely that fragments of noncanonical discourses and sermons would be found extant in extrabiblical literature. To assume that these represent lost documents that are the true and authoritative sources of the canonical writings is a highly subjective judgment.

The term *agrapha* is also used with reference to sayings found in certain NT MSS but not in the major ancient texts, such as the incident about a Sabbath breaker, a textual variant in CODEX BEZAE (D) at Lk. 6:5. Although such problem passages can be solved through careful textual criticism, the question about their origin remains. It is most probable that little if anything of the traditional teachings and episodes concerning the Messiah were excluded or omitted by the evangelists, but individual phrases or aphorisms might be extant that were not utilized by the NT writers.

 4. Vine-tending season
 5. Fig and pomegranate harvest
 6. Livestock

I. Agricultural patterns in the Fertile Crescent. Scholars agree that agriculture is fundamental to civilization, for it enables the farmer to produce surplus food that frees others for specialized occupations and specialization in professions. Most biblical peoples were characterized by agriculture with attending civilization. Israel's agriculture was closely related to that practiced by ANE peoples. The crops produced, with emphasis upon cereal grains, were those common to the FERTILE CRESCENT. Likewise the domesticated animals, with multiple uses for meat, milk, wool, riding, or pulling, were shared with Israel's neighbors. Ecological factors caused variation in pattern and emphasis in the Holy Land, with certain adaptations reflected in techniques and production.

Undoubtedly the Hebrews observed Egyptian agriculture with its annual cycle of activities correlated with the flooding rhythm of the NILE. Although a pastoral people during the Egyptian sojourn (Gen. 47:6), the Hebrews must have become acquainted with the farming system based upon natural and artificial irrigation for the production of grains, fruits, and vegetables. When occupying the Promised Land, the people recognized the crops but necessarily adopted Canaanite farming methods in the transition from pastoralism to agriculture.

The Hebrews also knew Mesopotamian farming methods through culture contacts accompanying trade and conquest. The ecological pattern in the TIGRIS-EUPHRATES Valley differed from the Nile Valley, for Mesopotamian flooding was erratic and disastrous, with consequent flood control and an extensive canal system for irrigation. J. A. Wilson and T. Jacobsen (in H. and H. A. Frankfort et al., *The Intellectual Adventure of Ancient Man* [1946]) suggest these differences between Egypt and Mesopotamia and the ecological effect on the world views of the two civilizations. Nevertheless, both lands produced similar crops, especially grains, by irrigation. The Israelites grew the same crops but could not employ the same irrigation techniques in the hill-and-valley complex of the Holy Land.

II. Origin of agriculture. Examination of agriculture in the Bible involves the problem of origins. Most scholars conclude that agriculture began in the Middle East (R. Braidwood, *The Near East and the Foundations for Civilization* [1952]). The type was field agriculture with grain production by means of plow and draft animals. Of course other types of food production emerged later in such areas as SE Asia and Mesoamerica. The problem is not the place of origins, but whether human beings engaged in farming from the beginning or gained a livelihood by other means.

A. Biblical record. Genesis states that ADAM knew about, cared for, and used domesticated plants and animals at first. It seems clear that he practiced horticulture before the FALL (Gen. 2:9, 15). After his expulsion from EDEN, Adam encountered a recalcitrant environment that necessitated arduous toil to obtain subsistence (3:17–19). It is explicit that CAIN tilled the ground and ABEL tended flocks of sheep (4:2). Subsequent biblical statements support the view that mankind's subsistence was primarily from domesticated plants and animals.

B. Nonbiblical theory. Most archaeologists, anthropologists, and prehistorians hold that human prehistory is a series of cultural developments commonly labeled the Paleolithic, Mesolithic, and Neolithic. During the Paleolithic and Mesolithic ages, man was a hunter and gatherer (W. F. Albright, *From the Stone Age to Christianity* [1957]). Farming and herding began during the Neolithic Age about 10,000 years ago. Most prehistorians accept the interpretation of the evidence that early man gradually abandoned his dependence on wild game and plants in a transition to producing his food from domesticated forms. In this scheme the Natufian culture in Palestine is offered as evidence of the transition (R. Braidwood et al., *Courses toward Urban Life* [1962], 132–64). The question is: Were humans originally hunters or agriculturalists?

C. Historical views. This survey of biblical agriculture allows only brief consideration of this neglected question, but the author's assumption is to accept scriptural statements while suggesting archaeological data are incomplete and susceptible to varying interpretations. In scanning early views, one discovers that Christian writers had little concern with man's primeval economic life. From a synthesis of Hebrew and Greek traditions, Tertullian proposed that mankind subsisted on grains and fruit prior to the flood. This idea prevailed among church leaders who believed that man became carnivorous (really omnivorous) after the flood. Novatian, in the 3rd cent., agreed by asserting that man's diet was fruit before the fall, but then became omnivorous with grain and meat. AUGUSTINE modified these notions somewhat by insisting that Adam practiced agriculture and that it was not an onerous but a highly cooperative enterprise (G. Boas, *Essays on Primitivism and Related Ideas in the Middle Ages* [1948], 17–18, 50).

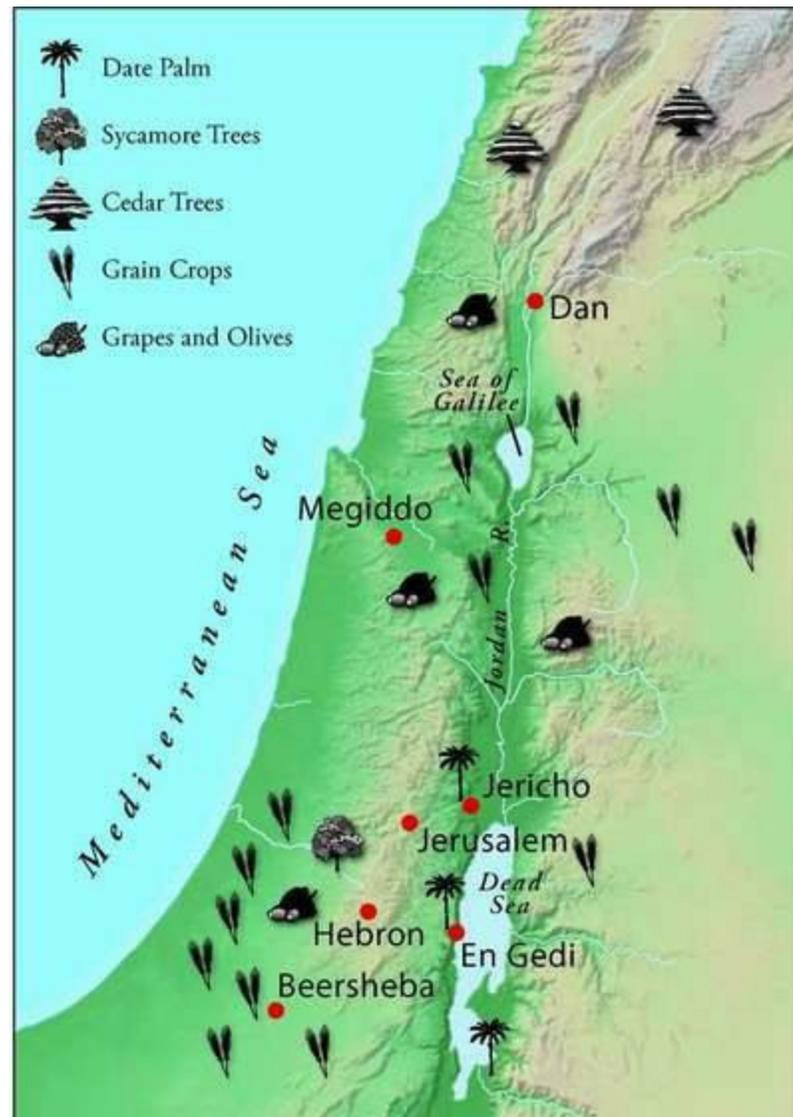

These views became traditional among Christians despite the increasingly popular opinion that after a hunting stage people turned to pastoralism and finally agriculture. In the late 19th cent. a German scholar, Georg Gerland, opposed the widely accepted notion by observing that "agriculture was the original occupation of mankind: that the traditional sequence of stages, hunters, nomads, farmers, therefore does not represent the original development. Mankind originally was undifferentiated and at that period was an agricultural people. Later groups splintered off, and, forced by the necessity of eking out a living, some became hunters, others gradually turned into nomads" (G. F. Kramer in *Geography Review* 57 [1967]: 80).

Gerland thus offers a clue for an answer to the question raised by archaeology's claim that early humans were hunters. In cognizance of divine judgment upon mankind and the environment following the fall, it is not surprising that people abandoned meager agricultural returns for the relatively easier products of the hunt. This seems explicit in the penalty assigned Cain for murdering his brother: "Now you are under a curse and driven from the ground, which opened its mouth to receive your brother's blood from your hand. When you work the ground, it will no longer yield its crops for you. You will be a restless wanderer on the earth" (Gen. 4:11–12). That hunting assumed importance is evident in the prestige accorded NIMROD: "Cush was the father of Nimrod, who grew to be a mighty warrior on the earth. He was a mighty hunter before the LORD; that is why it is said, 'Like Nimrod, a mighty hunter before the LORD'" (10:8–9).

When early man turned to hunting, he possibly forgot agriculture and pastoralism, or at least they became insignificant in his economic life, especially in adverse environments in the higher latitudes. Both plants and animals degenerated to a "wild" state without human attention and selective breeding. There are historical examples of this process, as when the Spaniards introduced the horse in America; some escaped to form wild herds in the American West. Regarding domesticated plants,

botanists agree that without human attention they will degenerate from heterozygosity in genetic structure and mutation. "Deterioration in performance becomes manifest as soon as selection by man declines or ceases" (F. Schwanitz, *The Origin of Cultivated Plants* [1966], 192).

A reasonable conclusion therefore is that the evidence for primeval agriculture and pastoralism, limited to a very small population, is lost to the

Agriculture in the Holy Land.

archaeologist. Only after a considerable lapse of time did factors coalesce to enable people to rediscover the advantages of food production by tending plants and animals. The transition to and development of farming and herding became widespread, with adequate evidence for the prehistorian to postulate the Neolithic.

III. Ecological factors. Agriculture is related to such environmental limitations as the topographic, climatic, and edaphic features. To understand farming in ancient Israel, it is necessary to recognize the combination of these factors as they favored or limited crop production.

A. Topography. The land of PALESTINE is predominantly hilly, with the greatest area in slope. The precipitous slopes along the JORDAN Rift Valley prevent cultivation except in narrow valley floors or where terracing is practical. Although the Jordan Valley is several miles wide and relatively level, it

is an arid plain above the narrow flood plain of the river. Irrigation was not possible with techniques

the terraced farming region of Judea, agricultural watchtowers were used to house the workers during harvest season.

employed in Egypt or Mesopotamia. JERICHO and other sites obtained water supplies from springs emerging from the adjacent highlands rather than from the Jordan. The northern uplands W of the Jordan Valley are characterized by hills interspersed with several valleys of sufficient area to favor agriculture. To the S in JUDEA'S hill lands the area is largely in slope, where terracing and a few undulating hill crests between JERUSALEM and BEERSHEBA permit field cultivation. The SHEPHELAH W of the Judean massif is largely dissected foothills, although a few E-W valleys can be tilled. The Plain of SHARON W of EPHRAIM (SAMARIA) is arable but is terminated in useless marshlands to the W: the flat ESDRAELON valley NE of the Carmel ridge was limited in biblical days by marshes (see CARMEL, MOUNT), as was the Huleh area just N of the Sea of Galilee. South of the Judean massif the terrain slopes gradually into the NEGEV, where aridity restricts farming more than does the terrain. The TRANSJORDAN plateau E of the Jordan begins precipitously from the valley, but the crest area (BASHAN, GILEAD, AMMON, and MOAB) is admirably suited to cultivation.

B. Climate. Surprising climatic diversity occurs in a country about one-fourth the size of Iowa. Precipitation varies considerably as determined by latitude and altitude. Rainfall is much more abundant and dependable in the N where the highlands receive thirty inches annually, in contrast to the Beersheba area to the S where half that amount falls with much annual irregularity. Easterly moving cyclonic storms deposit heavier rainfall on the higher western slopes in contrast to the arid "rain shadow" slopes facing E. The western exposure of Judea averages over twenty inches annually, but the Dead Sea, a few miles E, gets less than five inches. The uplands of Ammon and Moab a little farther E intercept almost as much as Judea, with the amount declining eastward into the Arabian Desert. The rainfall regime occurs during the cool season, the "early rains" beginning in October and the "latter rains" falling during March and April. In biblical days the agricultural cycle corresponded with the alternating wet and dry seasons: the farmer planted his allimportant grain fields at the inception of the rainfall and harvested when the rainy season ended.

Temperature conditions likewise correlated with elevation, for the uplands have lower readings throughout the year, with frost threat in the cool months. Plants susceptible to freezing (e.g., the OLIVE tree) were confined to slopes protected from highland frosts or the freezing wind from the eastern

desert. Of course the frost-free season in the Holy Land with its mild winters (snow is rare except in the higher mountains to the N in LEBANON) is quite different from the cold winters of higher latitude land masses such as Eurasia and North America. Nevertheless, the Israelite farmer planted his crops in respect to frost occurrence and the amount of precipitation. In general, planting, pruning, harvesting, and other tasks were performed earlier in the season by those living at lower elevations.

C. Soils. The edaphic conditions in the Holy Land, as elsewhere, are consequent to terrain, the underlying rock, the natural vegetation, and climate. For a small area, considerable diversity is present. Some of the larger valleys and the Plain of Sharon have fertile soils formed from deep alluvium, but in the highlands and the arid sections the soil is thin, less developed, and stony. In ancient Philistia and the Beersheba area, several inches of loess formed fertile soils, but aridity limited production. The hilly soils of Judah, Ephraim, Ammon, and Moab are thin and stony, but there is fertility, since they develop from limestone into calcareous types. Galilee, Bashan, and Gilead soils are also productive, for they are “recently” formed from underlying basalt. Of course, the soils are thinnest on steep slopes, and the farmer usually clears many stones from these fields to be used for fences or terrace walls.

D. Range of arable lands. It is not clear whether the Israelites extended their agricultural frontiers to all areas of political control during the reigns of DAVID and SOLOMON. Modern Israel has reclaimed many swamplands along the Mediterranean, Esdraelon, and Lake Huleh, areas unused in ancient Israel. Evidence suggests that peoples occupying adjacent regions to Israel engaged in farming even in the semiarid Negev and desert borders of Ammon, Moab, and Edom. This was not due to more precipitation then, for N. Glueck (*Rivers in the Desert* [1959]) argues convincingly against the theory that climatic change has occurred in historical times in Bible lands. He believes that desiccation resulted from misuse of the land and failure to observe conservation practices that formerly made semiarid regions productive.

Citing the NABATEANS as those who successfully coped with aridity in Edom and the Negev, Glueck praises their herculean task in creating cultivable fields in the wadis. Their mastering the science of soil and water conservation converted the valleys into ribbons of green and supported many flourishing agricultural villages. Perhaps similar conservation techniques in ancient Moab enabled people to continue production when drought caused ELIMELECH and NAOMI to desert BETHLEHEM for what proved to be an unfortunate sojourn in Moab (Ruth 1:1–5). In the extremely arid lands about DAMASCUS and JERICHO, specialized agriculture (or horticulture) did not depend on natural precipitation. These districts were farmed intensively by irrigation from springs (Jericho) or surface flow from the well-watered slopes of the Antilebanon mountains. An ancient saying is that “Damascus is Mount Hermon’s gift to the desert.”

IV. Distribution of crops. D. Baly (*Geographical Companion to the Bible* [1963], 60) has aptly cited 2 Chr. 2:15 as a summary of Israel’s major agricultural products: “Now let my lord send his servants the wheat and barley and the olive oil and wine he promised.” Wheat, barley, olives, and grapes were the staple items in the people’s diet; hence most farmers attempted to produce as many of these crops as possible. However, the environmental diversity (considered in ecological factors) favored production of one crop in certain areas, with other crops secondary to the dominant one. Judah led in viticulture, for the grapevine enjoyed a favorable ecological niche in the sunny terraced hillsides. To the N in Ephraim (or Samaria) the limestone weathered into a fertile *terra rossa* soil

that, coupled with adequate rainfall, proved to be the setting par excellence for the OLIVE tree. Farther N, the open valleys of Galilee, with rich alluvium soils and ample rainfall, favored extensive WHEAT production. To the S near the Negev and in Philistia, the loessial soils were fertile but rainfall was scanty, so barley was predominant. To the E of Jordan on the rainy uplands, wheat was important to the N in Bashan but barley became more important to the S in Moab and Edom.

V. The seasonal pattern. The so-called GEZER calendar is a significant archaeological find because it enables one to trace the agricultural cycle in biblical times (G.Wright, *Biblical Archaeology* [1957], 180). This stone inscription evidently served as a memory aid for some youth in learning the seasonal activities followed by Israelite farmers. It reads:

His two months are (olive) harvest;

His two months are planting (grain);

His two months are late planting;

His month is hoeing up of flax;

His month is harvest of barley;

His month is harvest and festivity;

His two months are vine tending;

His month is summer fruit.

A. Season of olive harvest. The Gezer inscription suggests that the Israelite farmer “started” his annual cycle with the olive harvest from mid-September to mid-November. The leading task during this period was picking the olives and extracting their OIL for multiple uses. The many uses of the oil made olives the third-ranking crop after grain and grapes. Of course olive trees need attention, so the farmer, to insure high productivity, plowed the soil around the trees in the spring to eliminate weeds and to create a surface mulch for retaining subsurface moisture for the trees during the rainless summer months. Pruning was also a spring chore to prevent excessive shoots from parasitic drain on the tree and thus reduce yield. The tree blossomed in May with the small white flowers falling a few days after opening (Job 15:33).

The berries developed during the summer and began to ripen in September when the first ripe berries dropped before the farmer and his family began picking. Long sticks were used to dislodge most berries, but agile youths often climbed the trees to procure the uppermost berries. The immature olives were left to ripen and be gathered later by the destitute (Deut. 24:20). Some olives were pickled in brine to be eaten with bread, but oil was more important and extracted in a number of ways. A simple method was to crush the berries by hand in a bowl-shaped stone that had a channel to convey the oil into a receptacle. A larger operation was to crush the berries in a stone vat with the feet, but the most efficient method used for sizeable orchards was to transport the fruit on basket-laden donkeys to mills where crushing was by a circular millstone. Besides multiple dietary uses, the

oil served as medication (Lk. 10:34) and for anointing, the latter having symbolical implications of peace and prosperity (Ps. 23:5).

B. Planting season. With the inception of the “early rains” in November, the farmer began plowing the fields preparatory to sowing the cereal grains. Some believe that the earliest farmers in the ANE used the digging stick or the hoe to till small plots of ground (E. C. Curwen and G. Hatt, *Plough and Pasture* [1953]). However, agriculture among the Israelites was characterized by the field type of cultivation with PLOW and draft animals (usually oxen). The shape of the fields tended to be rectangular to accommodate the linear furrows of the plow; the size of the fields depended on the terrain, and the area under cultivation in a given year corresponded to the area that could be plowed. The typical plow was constructed of wood with a copper or bronze plowpoint until the Israelites acquired iron for points from the PHILISTINES in the 10th cent. B.C. These plows are not to be confused with contemporary steel plows with their shares and moldboards for completely turning six or more inches of soil. The ancient plow scratched the surface to a depth of three or four inches without covering weeds or stubble. This plow with its wooden beam attached to a yoke of oxen may be observed even today in Middle Eastern countries.

Although a seeder was attached to some plows in ancient Mesopotamia, whereby the seeds were channeled from a hopper through a tube to be deposited behind the plowpoint, the Israelites apparently did not adopt the implement. Sowing was by a broadcast method, with the farmer casting the seed with sweeping actions of the hand and arm as he trudged up and down the field. He carried seed in a basket or in a pouch attached to his waist. The grain was covered promptly by a second plowing or by dragging branches or a log behind oxen. This method of “harrowing” served to level the field, to cover the seed to insure germination, and to prevent birds from eating the seed (Isa. 28:24–25; Matt. 13:4). The farmer usually selected the most fertile fields for wheat and less favorable sites for barley, lentils, or spelt (“rye” KJV).

The grain sowing continued until January when the “late planting” of other crops occurred. These supplementary crops included millet, sesame, chick peas, lentils, melons, cucumbers, garlic, and other vegetables. Customarily the vegetables were raised in garden plots near the village and farmer’s home. Sowing grain was man’s work, but women aided in planting and caring for the gardens. These planting and weeding activities continued into March.

Women from the village of Bet Sahour on the outskirts of Bethlehem harvesting wheat by hand.

C. Harvest season. The rainfall declined in April as the BARLEY began to ripen, with barley reaping

at its height in May. After the barley had been reaped, the men began wheat harvest which continued into June. To reap the grain, the men used small sickles with which they severed the stalks gathered in handfuls with the free hand (Ps. 129:7). Farmers owning much livestock cut the stalks close to the ground to increase the supply of straw for fodder and bedding purposes. If he had no livestock, the farmer cut the stalks within a few inches of the heads (“ears”) of grain so there was less straw to interfere with threshing. As the reapers cut the grain, the stalks were gathered into unbound sheaths to facilitate carrying the grain to the threshing floor. A sexual division of labor prevailed in the harvest fields, with men cutting the grain, children aiding in gathering it into sheaths, and women gleaning for stray stalks, as dramatically portrayed in the book of RUTH. Rain seldom fell during the harvest season, therefore little spoilage occurred. Two major threats to a bountiful harvest confronted the farmer, however: the dreaded hot wind (“sirocco”) from the desert occasionally withered the ripening kernels, or an invasion of LOCUSTS might consume much of the crop.

The reaped grain was carried and stacked on threshing floors near the villages. These threshing floors were either a circular area on a flat outcropping of rock or an area about 40 ft. in diameter that was cleared of stones, leveled, moistened, and packed so that the surface was sun-baked and hard. In threshing, the sheaves were pitched on the floor to be trampled by oxen drawing a sledge on which the farmer rode. The oxen hoofs and the sharp studs embedded in the underside of the sledge separated the kernels from the straw and chaff while reducing the straw into bits. Some farmers preferred a disk-harrow implement rather than the sledge; this implement was likewise drawn by oxen and was superior to the sledge in that not as many kernels were crushed (Isa. 28:27–28).

After the grain had been reduced to a mass of kernels, chaff, and chopped straw, the winnowing followed. Using a pitchfork with closely-spaced tines, the farmer tossed the mass repeatedly in the air to expose it to the wind that carried the chaff and straw away. The opportune time for winnowing was toward evening when the daily sea breeze provided a steady, but not too strong, flow of air. Customarily the threshed grain remained in heaps on the threshing floor with someone sleeping near the grain to prevent theft (Ruth 3). Later the grain was bagged for carrying it to storage in large jars or, in some cases, put in plastered silos that had been excavated beneath the floor of wealthy homes. Since rent (some farmers rented fields) and taxes were commonly paid in kind, some grain was transported by donkey to large pit silos built by wealthy landowners or the government (Wright, *Biblical Archaeology*, 182).

The Gezer calendar links the harvest season with “festivity.” This no doubt refers to social and religious ceremonies that coincided with the end of a seven-week period following the beginning of grain harvest (Deut. 16:9). Later the occasion became known as PENTECOST, at which time the people made an annual pilgrimage to the central sanctuary (first at hiloh and later at Jerusalem) to observe the FIRSTFRUITS ritual.

D. Vine-tending season. Caring for the VINE became the farmer’s preoccupation following grain harvest. The vine required attention earlier in the spring in the “latter rain” period. Each spring the farmer removed stones from the vineyard, repaired terrace walls, pruned the dead branches, and plowed or harrowed the ground about the vines to create a moisture-retaining mulch and destroy weeds. As the grapes formed and ripened, they required constant attention to prevent loss to wild animals (Cant. 2:15). The farmer, or a hired watchman, stationed himself in a tower built especially for this purpose, permitting surveillance of many vineyards. When picking time arrived in August and September, the entire family frequently moved into a temporary shelter (“booth”) where they lived while picking the grapes. While some grapes were eaten fresh and some were preserved in dried

form as raisins, most of the grapes were reduced to juice to allow fermentation into WINE. An air of festivity prevailed during the grape harvest and accompanying activity at the wine presses (Isa. 16:10). The common method of extracting grape juice was by placing the grapes in the upper end of a wide stone receptacle where they were crushed under foot with the juice draining into a basin at the lower end of the receptacle.

E. Fig and pomegranate harvest. FIGS and POMEGRANATES also were picked at the close of summer. Fig growing was widespread and the fruit ranked as a staple in the people's diet (Deut. 8:8). The antiquity of the fig is attested by the narrative of Adam and Eve, who converted fig leaves into aprons (Gen. 3:7). The fig tree extended productivity in area because it thrived in rugged stony terrain unsuited for most other important food plants. A slow-growing tree requiring many years to bear substantially, the fig became symbolic of economic and political continuity and stability in the land (1 Ki. 4:25). Yielding two crops annually, the tree produced the first crop in June from midsummer sprouts from the previous year, but the second crop in August was more important. The fruit generally was dried and pressed into cakes for later consumption, and its high sugar content, together with the date, was a main source of sugar in Israel's diet. The fig cakes were used also for medicinal purposes, as in the remarkable healing of HEZEKIAH (2 Ki. 20:7).

Pomegranate trees, like fig trees, are deciduous and put forth leaves as well as brilliant scarlet blossoms in April. The tree requires little attention and the fruit ripens in September when it is picked. The agricultural cycle each year concluded with the pomegranate harvest, according to the schedule of the Gezer inscription. The annual routine for the farmer enabled him to devote himself to the major food sources at different times, and much of the religious life coincided with the agricultural calendar.

VI. Livestock. The Israelites entered the Promised Land as a pastoral people with cultural traditions extending back to Abraham, the pastoral nomad (Gen. 13). After possessing Canaan, they experienced a transition from pastoralism to agriculture, which they adopted from the sedentary Canaanites. However, livestock persisted in their economic activities and contributed to the cultural ethos for a number of reasons. Much of the land was not arable but was admirably suited to herding (1 Sam. 16:11; Amos 1:1). Not only did animals provide products and income for the rural dweller, but it is clear that ceremonial rites in worship emphasized animal sacrifice in the tabernacle and temple services (1 Ki. 8:5; Heb. 9:18–22).

The common domesticated animals in Israel included sheep, goats, cattle, donkeys, and dogs. CAMELS, of course, should be included, but they were not kept by the typical farmer, for they did not fit economically into a sedentary pattern of life; therefore, camel owners were usually tradesmen or desert nomads. HORSES seem to have been prestigious animals and a luxury in which most farmers could not indulge; they were used primarily for chariotry and cavalry in the king's military system. Donkeys (see ASS, DONKEY) were beasts of burden and carried both man and his products, much as they continue to do in undeveloped rural areas of contemporary Middle Eastern countries. It will be remembered that the Lord, in his triumphal entry into Jerusalem, rode such a beast (Matt. 21:5). CATTLE or oxen were also beasts of burden, since they drew the plow, harrow, and other farming implements, and they were used for sacrificial purposes. They do not seem to have been kept for milk or meat products as in Western culture.

SHEEP were the most important animals to ancient Israelites and are mentioned early in the biblical record (Gen. 4:2). The fat-tailed variety, still popular in the Middle East, was preferred,

since the heavy tail, with its store of fat, enabled the sheep to tolerate uncertain grazing conditions during periods of drought. Mutton was favored as the source of meat, and WOOL was spun and woven into cloth for garments. No comment is necessary to emphasize their sacrificial uses (Isa. 53). The typical Israelite herd included GOATS with the sheep, for goats provided several products: meat, hair for a coarse cloth and tenting material (the black goat's hair tent is traditional in Bible lands and is still used by bedouins and other NOMADS), skins for bottles used for storing wine or carrying water and other liquids, and milk; these bottles were the preferred type among the people.

It may be noted that sheep and goats were far more common in Israel due to their greater tolerance of marginal grazing conditions than cattle and horses. The keeping of sheep and shepherd life are used as illustrations for spiritual relationships, with the shepherd as a great metaphor for the Lord and his care (Ps. 23; Jn. 10; see OCCUPATIONS). (See further G. B. Cressey, *Crossroads: Land and Life in Southwest Asia* [1960]; F. Schwanitz, *The Origin of Cultivated Plants* [1966]; D. C. Hopkins, *The Highlands of Canaan: Agricultural Life in the Early Iron Age* [1985]; O. Borowski, *Agriculture in Iron Age Israel* [1987]; P.J. King and L. E. Stager, *Life in Biblical Israel*[2001], 85–122.)

G.J.JENNINGS

Agrippa uh-grip'uh (ἉΓΡΙΠΠΟΣ G68). See HERODVII and VIII.

ague. A term used in the KJV (Lev. 26:16) with reference to fever. See DISEASE.

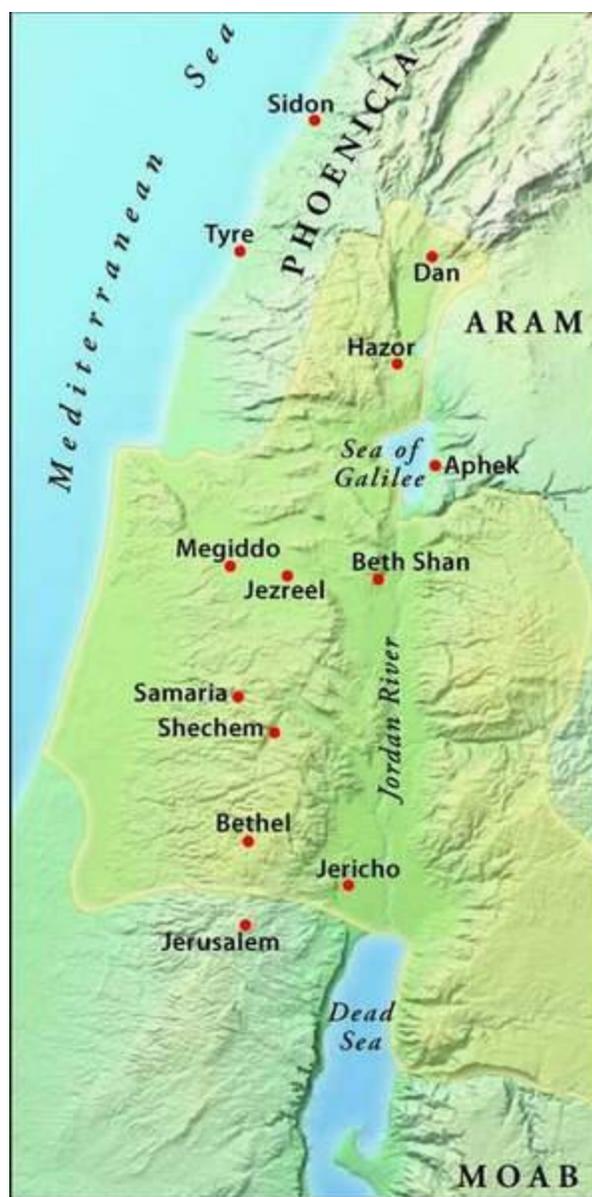

Agur ay'guhr (אגור H101, possibly “hireling” or “gatherer”). Son of Jakeh; an otherwise unknown writer of maxims who may have been from a place named MASSA (Prov. 30:1; cf. NIV mg., RSV, NJPS). Agur's proverbs were written to two unknown men, ITHIEL and UCAL, although the meaning of the text is debated. Most early rabbis and church fathers thought that SOLOMON was designated by the name Agur, but it is difficult to see why he should be referred to by a pseudonym. It has also been conjectured that Agur was the brother of LEMUEL (Prov. 31:1).

S. BARABAS

Ah-. This form (Heb. אָח H278, “brother”; also “Ahi-,” from אָחִי, “my brother”) is found in the composition of many Hebrew names, such as Ahab (“father's brother”) and Ahimelech (“my brother is king”). In these names, “brother” can be a reference to God. See also ABI.

Ahab ay'hab (אָחָב H281, “father's brother” [possibly suggesting that the son is just like the father]). Two men in the Bible are known by this name. (1) Ahab son of Omri, the eighth king of Israel, who reigned c. 874–853 B.C. and whose story is told mainly in 1 Ki. 16–22. (2) Ahab son of Kolaiah, a false (i.e., self-appointed) prophet who, along with a certain ZEDEKIAH, was guilty of immorality and claimed to speak in Yahweh's name among the exiles of Babylon; he is known only from Jer. 29:21–23. The rest of this article deals only with King Ahab.

I. Ahab's dynasty. OOMRI, father of Ahab and founder of a short-lived dynasty, was captain of the armies of Israel under ELAH. The assassination

The Northern Kingdom of Israel.

The Black Obelisk of Shalmaneser III (859–824 B.C.), whose conquests resulted in forced tribute by a number of the northern tribes of Israel. Here (side C), five Israelite emissaries bring tribute to the Assyrian empire.

of King Elah by ZIMRI, one of his leading army officers (1 Ki. 16:8–14), led unexpectedly to the popular choice of Omri as the new king (vv. 15–28). Though he reigned only twelve years and the

biblical narrative devotes only a few verses to him, Omri seems to have strengthened the kingdom considerably, introducing more order and stability than had prevailed for some time. Also, he made some impression in foreign countries, for after Omri's dynasty had been destroyed by JEHU (2 Ki. 9:10), SHALMANESER III of Assyria, as the Black Obelisk inscription claims, received tribute of Jehu, first king of the next dynasty, but called him "Jehu, son of Omri," as does still another inscription of Shalmaneser (J. Finegan, *Light from the Ancient Past: The Archaeological Background of Judaism and Christianity*, 2nd ed. [1959], 205–6; *ANET*, 280–81; *ANEP*, plates 351–55; *ARAB*, 1, sect. 590). No ancestral history of the family is provided by Scripture.

II. Chronology of Ahab's reign. Ahab is said to have reigned twenty-two years at Samaria. Some of the competing systems of chronology reduce this figure to twenty years or slightly less (see **CHRONOLOGY (OT)**; cf. E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, 3rd ed. [1983], 94–96). The elements of uncertainty chiefly arise out of the fact that OT annalists made use of two systems of dating accessions of kings. In one system the first full calendar year of a king's reign is counted as his first year. In the other system the fraction of a calendar year wherein a king reigned, immediately after the death of his predecessor, is counted as his first year. Also, some kings were coregents with their predecessors in the last months or years of their reigns; yet the chronologies of Scripture seldom take note of this fact.

III. Ahab's marriage. "He not only considered it trivial to commit the sins of Jeroboam son of Nebat, but he also married Jezebel daughter of Ethbaal king of the Sidonians, and began to serve Baal and worship him" (1 Ki. 16:31). Thus the clouded family connections of this man Ahab are introduced. ETHBAAL, his father-in-law, was a pagan steeped in the vile notions and practices of the BAAL cults that had occasioned the annihilation of the Canaanites long before. On top of that, Ethbaal was a wily and violent politician (according to Jos. *Ant.* 8.13.2, the Greek historian Menander of Ephesus [cf. Jos. *Ag. Ap.* 1.18] took notice of him). The central feature of Canaanite-Phoenician religion, both as seen in the OT and in secular sources, was connected with FERTILITY and sex—typical agricultural paganism but extraordinarily corrupt (Finegan, *Light*, 171–74; W. O. E. Oesterley and T. H. Robinson, *Hebrew Religion: Its Origin and Development* [1937], 180–87).

This MARRIAGE was a specific violation of a Pentateuchal prohibition against union with pagans (Deut. 7:1–5). Furthermore, in the issue of the marriage to JEZEBEL, the divine reasons for the prohibition are abundantly vindicated (Deut. 7:4, cf. 1 Ki. 16:31–33). The name Jezebel is thought by some to mean "chaste" or "virgin," yet she was anything but that. In her the reckless and immoral habits of the worst side of oriental royalty united with the aggressive strength of the Phoenicians (Tyrians) and the savage religious fanaticism of her father Ethbaal. The latter, who had come to the throne by the murder of his predecessor, Pheles (Jos. *Ag. Ap.* 1.18), combined with his royal office the priesthood of the goddess Astarte (i.e., ASHTORETH, consort of Baal). The next generation included several famous aggressive people, including Dido, foundress of Carthage, but all of bad character. Jezebel's baleful influence, through intermarriage of her offspring with the house of DAVID, extended to the kingdom of JUDAH (2 Ki. 8:16–17, 26–27; 11:1–20). She made of her husband a puppet (1 Ki. 21:25). Her evil genius became proverbial in her nation (2 Ki. 9:22), even turning up as a name for some form of fanatical religious perversion mentioned in the last book of the Bible (Rev. 2:20).

IV. Events of Ahab's reign. Several historical vignettes rather than a continuous story constitute the

biblical narrative.

A. Three and one-half years of drought.

At some point fairly early in his reign, the great prophet ELIJAH the Tishbite announced to Ahab, “As the LORD, the God of Israel, lives, whom I serve, there will be neither dew nor rain in the next few years except at my word” (1 Ki. 17:1). This startling announcement was not only a signal for the beginning of a long rainless period but also the abrupt introduction of the strange prophet Elijah—so similar in many respects to the forerunner of our Lord (cf. Mal. 4:3; Matt. 11:11-14; Mk. 9:11-13; Lk. 1:17). After threatening the drought, Elijah disappeared from the king for several years (1 Ki. 18:1 says it ended “in the third year,” while Jas. 5:17 specifies, “it did not rain on the land for three and a half years”). This long period of drought was familiar to the Jews in later periods, for 2 Esd. 7:39 mentions it, as did also Jesus when not far from the area of some of Elijah’s wondrous acts (Lk. 4:25).

Some see a connection between this period of terrible suffering, when evidently most livestock died and presumably many people also (1 Ki. 18:5), and the three and one-half years of divine wrath, producing worldwide tribulation (cf. “a time, two times, and half a time,” “forty-two months,” “one thousand two hundred and sixty days,” and one-half a prophetic week; see Dan. 7:25; 9:27; 12:7; Rev. 11:13; 12:6; 13:5). The two martyr-witnesses prophesy for 1,260 days and like Elijah have power to shut off rain during their time of prophesying. So this drought of Ahab’s time is a historical and hermeneutical landmark of Scripture. The dramatic close of the drought is set forth in connection with the bloody victory of Yahwism over Baalism reported in 1 Ki. 18.

B. The introduction and destruction of Phoenician Baalism. It is one of the discoveries of recent archaeology that the CANAAN of MOSES and JOSHUA was a cultural and geographical area reaching from the Sinai desert to far N of “the Land of Canaan,” as older Bible geography drew it, for in the TELL EL-AMARNA letters the name Canaan “applies to the Phoenician coast as far north as Ugarit (Ras Shamra in northern coastal modern Syria)” (Finegan, *Light*, 135). Baalism, a form of fertility cult, had been the prevailing religion of the entire region prior to the settlement of the Hebrews. Though suppressed, it had survived as an illicit cult in both Judah and Israel, as the biblical histories and prophecies amply illustrate. Jezebel brought with her a particularly virulent strain of the infection from her home in lower PHOENICIA (1 Ki. 16:31-33), seducing her husband and through him the entire nation to Baalism.

Nominally, Ahab was a worshiper of Yahweh, as the names of his children demonstrate (ATHALIAH, meaning possibly “Yahweh is great, exalted” 2 Ki. 8:26; AHAZIAH, “Yahweh has held [in protection],” 1 Ki. 22:40; JEHORAM, “Yahweh is exalted,” 2 Ki. 1:17): even though their Phoenician grandfather Ethbaal honored Baal in his name, their own names honored the true God of Israel—this in spite of the apostasy introduced to the northern kingdom by JEROBOAM’S calves and shrines at BETHEL and DAN (PLACE) (1 Ki. 12:25-33). There was already a strong foundation for Jezebel’s expansion of the vile fertility rites of Baalism (cf. Oesterley and Robinson, *Hebrew Religion*, 57-61). Ahab allowed the true national worship to be suppressed, involving the attempted “liquidation” of the prophets of Yahweh (1 Ki. 18:4). Unchecked, this movement would surely have entirely stamped out biblical religion in the northern kingdom. This gives significance to the incidents of ch. 18, explaining why such drastic measures against the priests and prophets became necessary, as also to the shouts of the people, “the LORD [= Yahweh]—he is God” (18:39).

C. Ahab's military campaigns. The record of 1 Kings reports three major engagements between Ahab and BEN-HADAD II of SYRIA (ARAM), who ruled from DAMASCUS. In the first war the Syrians besieged Samaria. After a diplomatic exchange particularly insulting to the Israelites, Ahab reverted (as monarchs are wont to do in time of great peril) to the older democratic ways, calling a national council of tribal elders. Then came an unusual prophet who in Yahweh's name advised Ahab to attack (1 Ki. 20:13). A smashing victory followed, the Syrian king barely escaping with his life (vv. 16-21). The same prophet then warned Ahab to prepare for another attack the next year. The narrative reports how Ahab won a great victory in the conflict, which did come just as the prophet had said, in vindication of the biblical religion of Yahweh (vv. 22-30). Though he secured important commercial concessions from Ben-Hadad and a handsome property settlement, Ahab, having captured the Syrian king, injudiciously released him and even made a covenant with him (vv. 31-34), whereupon Ahab was rebuked by still another prophet (vv. 35-43).

The third and last campaign was aggressive, Ahab taking the attack to the Syrians. Intervening was a period of three years of peace (1 Ki. 22:1). Apparently during this interval the disgraceful incident took place wherein Jezebel (acting as virtual mistress of the realm and doing what Ahab's Hebrew scruples did not permit him to do) secured a desirable piece of property from NABOTH, its owner, by destroying him and his sons (ch. 21; cf. 2 Ki. 9:26). This third campaign was undertaken by Ahab in alliance with JEHOSEPHAT, the Davidic dynast of Judah. Relations were friendly between the two ruling houses at this period, even to the extent of marriage between a daughter of Ahab and Jezebel (viz., Athaliah) to Jehoram the son of Jehoshaphat, adding greatly to the disaster and disadvantage of Judah. This third war was directed to the recovery of RAMOTH GILEAD, a city normally attached to Israel, but evidently still in Syrian hands in spite of the cession of cities from Syria to Israel after the second of the wars. In this battle the allied Hebrew kings failed, Ahab being mortally wounded (1 Ki. 22).

D. Ahab's spiritual life. It might seem that nothing but evil could be said of this man. Yet on occasion he furnishes important examples of sincere, if wavering, trust in the prophets of God. It was his wife's fury that sought their destruction, not his (1 Ki. 19:1-2). Furthermore, Ahab manifested remarkable, and apparently sincere, repentance after one prophetic rebuke (21:27-29).

V. Ahab's place in secular history. Sometime in the summer of 853 B.C., SHALMANESER III of Assyria met in battle a quite formidable coalition of twelve Syrian (Aramean) kings at a place called Qarqar, on the ORONTES River in northern Syria. On the "Monolith Inscription," now in the British Museum, there is a description of the battle, placing it in the sixth year of Shalmaneser III. Since the reigns of Assyrian kings are accurately dated by independent data, this battle becomes very important, for the inscription mentions "Ahab, the Israelite" as one of the twelve kings who fought Shalmaneser at that time. Thus we know when Ahab reigned, and there is created an important hinge (perhaps the most important one connecting secular and biblical history), making possible something close to an exact dating of the events of OT history (Finegan, *Light*, 204-5, esp. the valuable documentation and bibliography).

This expedition of Ahab is not mentioned in the Bible, showing how little concern the Bible authors really had for history or chronology as such (perhaps also suggesting the mistake in our modern preoccupation with it). The treachery of the king's wife in destroying a God-fearing freeholder is of much more spiritual significance than either winning or losing a battle, in which the

king really ought not to have participated anyway, for the alliance that took Ahab to Qarqar was contrary to Mosaic law. It is of interest to know that Ahab had a place of prominence among Levantine rulers of his time. Shalmaneser's statistics report "Ahab as commanding 2,000 chariots and 10,000 soldiers. In chariotry, Ahab's forces were much larger than those of any other king" (Finegan, *Light*, 205). Shalmaneser claims a big victory in the inscription, but he avoided Syria for a long time afterward, indicating that the "victory" was perhaps only paper propaganda for home consumption.

VI. Ahab the builder. The book of Kings refers to "the palace he built and inlaid with ivory" (1 Ki. 22:39), presumably at Samaria his capital. Somewhat later Amos denounced the unspiritual luxury of the rulers of the northern kingdom, fastening special attention on "beds inlaid with ivory" (Amos 6:4) and "houses adorned with ivory" (3:15). Thus it is of considerable interest, and perhaps great significance,

Although these inlaid furniture ivories were discovered in Nimrud, they were most likely remnants of the spoil that the Assyrians took from places such as Ahab's palace at Samaria.

that many ivory plaques and panels survived the millennia to be turned up by archaeologists at Samaria. These objects were originally attached to furniture and walls of houses. The ivories at least illustrate Ahab's building operations and perhaps even are a part of them (Finegan, *Light*, 187-88). (For a general study, see J. Walsh, *Ahab: The Construction of a King* [2006].) R. D. CULVER

Aharah uh-hair'uh (אָהָרָח H341, derivation unknown). Third son of BENJAMIN (1 Chr. 8:1). The name is probably a scribal corruption of AHIRAM (Num. 26:38).

Aharhel uh-hahr'hel (אָהָרְהֵל H342, derivation uncertain). Son of Harum of the tribe of JUDAH (1 Chr. 4:8). On the basis of the SEPTUAGINT, some scholars emend "Aharhel" to read, "the brother of Rechab."

Ahasai uh-hay'si'. KJV form of AHZAI (Neh. 11:13).

Ahasbai uh-haz'bi (אֲחַסְבַּי H335, derivation uncertain). Father of ELIPHELET, who was one of DAVID'S mighty warriors (2 Sam. 23:34). Described as "the Maacathite" (*ben-hamma'ākātî*, lit., "son of the Maa-cathite"), Ahasbai may have been from a Judean family named MAACAH (1 Chr. 2:48; 4:19), or from the city of ABEL BETH MAACAH (2 Sam. 20:14), or from the Aramean city of Maacah (2 Sam. 10:6-8).

However, in the parallel passage (1 Chr. 11:35b-36a), instead of "Eliphelet son of Ahas-bai son of the Maacathite" (*ēlīpelet ben-ʾāhasbay ben-hamma'ākātî*), the reading is "Eliphaz son of Ur, Hopher the Mekerathite" (*ʾāliphal ben-ʾūr hēper hammēkrātî*). Although it is not impossible that Eliphelet son of Ahasbai and Eliphaz son of Ur were two different individuals, the unusual double identification in Samuel ("son of Ahasbai son of the Maacathite"), as well as the discrepancies between the two lists, suggest to most scholars that one or both passages have suffered scribal corruption. Keil and Delitzsch, for example, emend the text to read, "Eliphelet son of Ur, Hopher the Maacathite" (KD, *Samuel*, 499-500).

Ahashtarites. See HAAHASHTARI.

Ahasuerus uh-has'yoo-er'uhs (אֲחַשְׁוֵרֶשׁ H347, from Pers. *hšayāršā*, possibly "mighty man"). (1) The father of DARIUS THE MEDE (Dan. 9:1 NRSV; the NIV has "Xerxes"). If this Darius is to be identified with Gubaru (Gobryas), viceroy of the province of BABYLON under CYRUS, then his father (the Ahasuerus mentioned here), according to some, may have been Cyaxares.

(2) The king of PERSIA mentioned in Ezra 4:6; Esth. 1:1; 2:16-17. Although one Jewish tradition identifies him as ARTAXERXES, the evidence makes clear that this Ahasuerus is the same as Xerxes I, the son of DARIUS I (Hystaspes) the Great, and ruler of Persia c. 486-465 B.C. The equation of Ahasuerus with Xerxes presupposes that Ezra 4:6-23 is somewhat parenthetical (providing further information from a later period). The famous remains at Persepolis were primarily his work. Found there was a historical inscription by Xerxes, listing the various nations subject to him, thus confirming the statement in Esth. 1:1 that he ruled "from India to Ethiopia." His reign came to an abrupt halt in 465 when he was assassinated in his bedchamber. See XERXES #2.

(3) A ruler who destroyed NINEVEH with the help of NEBUCHADNEZZAR (according to some MSS of Tob. 14:15 [*Asyēros*; KJV, "Assuerus"]); however, the NRSV has "King Cyaxares of Media").

K. L. BARKER

Ahava uh-hay'vuh (אֲחָוָה H178; the LXX has several textual variants). The name of a canal and its surrounding area in BABYLON, mentioned only in Ezra 8:15, 21 (which may be a gloss derived from the other two citations), and 31 (the parallel passage in the APOCRYPHA has the name "Theras," 1 Esd. 8:41, 61). No such location has ever been found, and there is little evidence to support the supposition of the older commentators that it was a city. It was the gathering place for the Israelites returning to Jerusalem with EZRA.

Ahaz ay'haz (אֲחָז H298, short form of אֲחָזִיאֵל H3370, "Yahweh has taken hold [for protection]"; see JEHOAHAZ and cf. AHAZIAH). (1) Son of Micah and great-grandson of King SAUL (1 Chr. 8:35-36; 9:41-42). Nothing else is known about him.

(2) Son of JOTHAM and thirteenth king of JUDAH, belonging to David's line. A cuneiform

inscription of TIGLATH-PILESER III mentions Ahaz by the name “Yauhazi [i.e., Jehoahaz] of Judah” among those from whom he received tribute (J. Finegan, *Light from the Ancient Past: The Archaeological Background of Judaism and Christianity*, 2nd ed. [1959], 207-8; *ANET*, 282; *ARAB*, sect. 801; *BDB*, 28, cf. xiv). His story is told in 2 Ki. 16:1-20 and 2 Chr. 27:9—28:27, the second account enlarging greatly on his disastrous religious, military, and diplomatic ventures. The so-called “Book of Immanuel” (Isa. 7-12) relates to his time also. The rest of this article deals only with King Ahaz.

I. Ahaz’s family connections. His father, grandfather, and great-grandfather were among the best of the Davidic line (2 Chr. 27:6; 26:4-5). From the entire dynasty, his son HEZEKIAH is the most noted for godly faith (2 Ki. 18:5-6).

II. Chronology of life and reign. There is a serious problem with the numerical data. According to 2 Chr. 28:1 and 2 Ki. 16:2, Ahaz would have died at the age of thirty-six, but according to 2 Chr. 29:1, his son Hezekiah succeeded to the throne at the age of twenty-five, upon the death of his father, Ahaz—thus making Ahaz only eleven or twelve years of age at the birth of his son Hezekiah. The SEPTUAGINT has twenty years in 2 Ki. 16:2 for the age of Ahaz at his accession, but a variant in 2 Chr. 28:1 (with other versional support) says twenty-five. The lower figure is not, however, impossible, for as is well known, children of very young age—below ten—are frequently married in the Orient. The kings of Judah, more often than not, were conceived when their fathers were in middle or late “teens.” Coming to the throne about 735 B.C., Ahaz’s reign lasted sixteen years. By supposing a coregency with his father, Jotham, a somewhat longer reign is possible. Accordingly, scholars frequently assign to his reign a length of twenty or twenty-one years.

III. Events of his reign. Early in his reign the two nearest northern neighbor kingdoms, Israel under PEKAH the son of Remaliah and Syria (Aram) under REZIN of DAMASCUS, formed an alliance bent on conquest of Judah and termination of the reign of the Davidic dynasty by placing a certain “son of Tabeel” (Isa. 7:6) upon the throne. Who this person might have been is unknown—the name suggests a non-Hebrew, hence likely a scion of some leading Syrian family. That the king of Israel would cooperate in a project so alien to the history and faith of the Mosaic institutions speaks volumes for the low state of affairs in the northern kingdom at that time. In this time of national peril and of testing for the young king Ahaz, the prophet ISAIAH, with holy zeal and great faith, encouraged the king by the word of the Lord, promising early deliverance of Jerusalem, if not of the whole land of Judah (Isa. 7:3-9). Ahaz responded with a great lack of faith (vv. 10-13). The prophecy was fulfilled anyway, for though great losses were sustained, Jerusalem was spared, to the encouragement of Isaiah and his faithful disciples (7:14—8:22).

The narratives are not crystal clear at this point, but presumably in connection with the attacks of the combined forces of Israel and Syria, large numbers of captives were taken from outlying portions of Judah and transported to Samaria (2 Chr. 28:8). Supported bravely by several Ephraimite chieftains (v. 12), the remonstrances of the prophet ODED, who pointed out the contrariety of such action to the Mosaic law and threatened divine judgment, brought about the return of the captives, with provisions for life and decency, to their homes. The vile Pekah, king at Samaria, however, had slain 120,000 “in one day” in the process of his depredations—a loss that could not be restored (vv. 5-6). The author of Chronicles states that these disasters came because the inhabitants of Judah “had forsaken the LORD, the God of their fathers” (v. 6).

At this time Judah, till now a strong power in the Levant, suffered other serious losses of territory and strength. The Edomites not only reasserted their independence of Judah, but also captured ELATH, long-time seaport for Judah on the Gulf of AQABAH to the S (cf. 2 Ki. 14:22) and even successfully invaded the S of Judah (2 Chr. 28:17-19; 2 Ki. 16:6). (It is possible that the expulsion of Jews from Elath may have been by Syria, since the names ^ʾārām H806 [Aram, i.e., Syria] and ^ʾēdôm H121 [Edom] are sometimes confused.) The long quiescent PHILISTINES raided cities of Judah in the NEGEV and the SHEPHELAH and occupied them (2 Chr. 28:17-20).

In such exigencies Ahaz, apostate from the Mosaic faith and lacking both courage and ingenuity, did not shrink from breaking the divine law to seek help from foreign kings and—what turned out to be the ultimate disaster—from foreign gods as well. The two accounts show that Ahaz appealed to the king of Assyria to send forces to deliver him from his enemies on every side (2 Ki. 16:7; 2 Chr. 28:16-19). The Assyrians had been probing deeper and deeper into Syria for several decades. The then reigning king, TIGLATH-PILESER III, already planning a war of conquest against the kings of the area, gladly sent his “assistance.” The result was the immediate end of the Syrian kingdom of Damascus and the death of Rezin its king (2 Ki. 16:9).

Known as the Annals of Tiglath-Pileser, whose reign overlapped that of Ahaz, this cuneiform tablet contains a record of Assyrian military campaigns against the kings of Phoenicia, Israel, Ammon, Moab, and coastal cities along the Philistine plain.

Not long afterward Ahaz witnessed the end of the northern Israelite kingdom which, after suffering earlier losses of territory to Tiglath-Pileser (= Pul, cf. 2 Ki. 15:18-20), now suffered final national demise from the attacks of SHALMANESER V, who destroyed it (2 Ki. 17:1-23). The spineless

Ahaz, in order to save the deteriorating situation, had done the worst possible thing—militarily, diplomatically, spiritually—when he called on the Assyrians for help. True, he would no longer be in danger from Israel and Syria, but in their place the Assyrians threatened the national existence of Judah. He had to accept the position of vassal or tributary king to Assyria. That meant that he would have no military power except such as the Assyrians would allow him to have; the laconic Chronicles account states, “Tiglath-Pileser king of Assyria came to him, but he gave him trouble instead of help” (2 Chr. 28:20). Diplomatically Judah was now fully isolated, without power to exist except by Assyrian sufferance. This sufferance Ahaz purchased at the price of robbing the temple of all its treasures as well as its most costly furnishings (2 Chr. 28:21; 2 Ki. 16:8), in addition to draining the national treasury (2 Ki. 16:8) and confiscating the resources of leading citizens (2 Chr. 28:21).

IV. The spiritual significance of Ahaz. Spiritually Ahaz was a disaster to the whole nation. All three accounts—Kings, Chronicles, Isaiah—point out that Ahaz imported the corrupt pagan religious practices of Mesopotamia to Jerusalem. This involved worship of the heavenly bodies (stars and planets), child sacrifice, and consulting with wizards and necromancers (2 Chr. 28:22-25; Isa. 8:19). His name is connected with heathen abomination (sun worship), which survived until the times of JOSIAH nearly a century later (2 Ki. 23:11). Of course there were minor cultural “benefits” from the importations—enough to provide their advocates (of false religion) a certain plausibility. A beautiful “altar of Damascus” was adopted, no doubt to the delight of “modernizing” esthetes (2 Ki. 16:10-16), and the courts now had the benefit of a “timepiece,” a sundial probably imported (Isa. 38:8). (See S. A. Irvine, *Isaiah, Ahaz, and the Syro-Ephraimitic Crisis* [1990].) R. D. CULVER

Ahaz, dial of. See DIAL.

Ahaziah ay’huh-zi’uh (𐤀𐤇𐤇𐤇𐤇 H301, also 𐤀𐤇𐤇𐤇𐤇 H302, “Yahweh has taken hold [for protection]” or “whom Yahweh sustains”; cf. JEHOAHAZ, AHZAI). (1) Son of AHAH and eighth king of the northern kingdom of Israel, who reigned something less than two years (1 Ki. 22:51), 850-849 B.C. He was placed quite unexpectedly on the throne when Ahab died from a wound inflicted at RAMOTH GILEAD (1 Ki. 22:34-37). So short was his reign that events in the civil conduct of this period largely go unnoticed. It is stated that MOAB rebelled after the death of Ahab, but personal misfortunes overtook Ahaziah before he could attempt to recover Moab. We learn from the story of the longer reign of his successor that the material loss was an annual payment by MESHACH king of Moab of the surprising amount of 100,000 lambs and wool of 100,000 rams—no mean amount (2 Ki. 3:4-5).

The unhappy Ahaziah suffered a bad fall when a lattice gave way in the second floor of his palace. Whether this was a lattice door, a lattice window, or floor grating to let light through to the ground floor is difficult to say. In this connection he showed himself to be a true offspring of JEZEBEL, the able but wicked pagan wife of Ahab. For instead of using the lawful priests and prophets for consultation about the issue of his injuries, he sent messengers to a famous pagan shrine at EKRON of the PHILISTINES where BAAL-ZEBUB, god of the city, was to be consulted. A more direct insult to the God of Israel by the nation’s most prominent citizen cannot easily be imagined. Among the last acts of the now aged prophet ELIJAH was to intercept those messengers, at divine direction, and to return them to King Aha-ziah with the announcement of that unhappy man’s imminent death. He had “walked in the ways of his father and mother” (1 Ki. 22:52) with this result.

Industrial olive processing facility near the gate at Ekron (view to the NE). When Ahaziah was injured, he sent messengers to the pagan temple at Ekron rather than consulting the Lord.

Since Ramoth Gilead had been lost by Ahab and the Syrians (Arameans) held TRANSJORDAN, Ahaziah's forces had no access to MOAB except through Judah. Evidently the time was not ripe to attempt the recovery of Moab through the combined effort of Judah and Israel. This came during the following reign. Ahaziah did propose a joint effort with JEHOASHAPHAT king of Judah, aimed at restoration of the sea trade through the port of EZION GEBER near ELATH on the Gulf of AQABAH, but "Jehoshaphat was not willing." After a brief and unsuccessful reign, Ahaziah died without issue, and his brother JEHORAM succeeded to the throne (2 Ki. 1:17). (There are problems of synchronization of the reigns of the kings of Judah with that of Aha-ziah; see CHRONOLOGY (OT).)

(2) Son of JEHORAM, nephew of the earlier Ahaziah, eighth and Davidic king of the southern kingdom of Judah for less than a year in 842 B.C. (2 Chr. 22:1-5). He suffered chiefly from the baleful influence of that same wicked queen mother JEZEBEL, whose idolatries the older Ahaziah had imitated, and who was also the grandmother of the younger Ahaziah. For JEHOASHAPHAT (king of Judah 873-849 B.C.), good man that he was, made the disastrous mistake of espousing his son Jehoram (father of the younger Ahaziah) to ATHALIAH, daughter of Ahab and Jezebel. He is called Jehoahaz in 2 Chr. 21:17 (Hebrew text, reflecting a transposition of the elements of his name; see AHAZ) and Azariah in most Hebrew MSS of 2 Chr. 22:6.

Ahaziah's age at accession is given in 2 Ki. 8:26 as twenty-two years, while 2 Chr. 22:2 has forty-two years. According to 2 Chr. 21:5 and 20, his father was only forty years old at Ahaziah's accession, so the lower figure is undoubtedly correct. Perhaps in early times the Hebrew numbers were not spelled out but indicated by the numerical value of the letters of the alphabet (כב=42, though the order of the letters, as in Arabic, may have been reversed). Twenty-two would have been כב, and the mistake of כב for כב by some early copyist would account for the error.

Providence allowed Ahaziah only one major military error, one purely personal error, and one spiritual error. The military error was to join his uncle Jehoram, king at Samaria, in an expedition to conquer Ramoth Gilead in the Transjordan (2 Ki. 8:27-28; 2 Chr. 22:6), a contested city between the house of OMRI and the kings of Syria through several generations. Jehoram (= Joram) was badly wounded in the evidently otherwise successful encounter and went to JEZREEL (a city S of Lake KINNERETH safely within uncontested Israelite territory) to recover. In this connection Ahaziah made his great personal mistake: he traveled from Jerusalem to Jezreel to visit the ailing Jehoram. The

story of this visit, which resulted in Ahaziah's capture and death, is reported in 2 Chr. 22:7-9.

His spiritual mistake was to follow the pernicious religious customs of his ancestors through his mother ATHALIAH, daughter of JEZEBEL and granddaughter of ETHBAAL, king of TYRE (2 Ki. 8:26-27). The pervasive depravity of mankind, which renders evil more easily propagated than good, makes the intermarriage of a member of a godly family with an ungodly one almost invariably disastrous. Ahaziah was the miserable fruit of the error of Jehoshaphat, his otherwise righteous grandfather, in securing Athaliah (the morally depraved daughter of a morally depraved daughter of the vile Ethbaal) as bride for Ahaziah's father. There were strong reasons, indeed, for the Mosaic command to exterminate the Canaanites and the prohibition of intercourse with them on all levels. R. D. CULVER

Ahban ah'ban (אֲבָנָן H283, derivation uncertain). Son of Abishur and descendant of JUDAH through PEREZ and JERAHMEEL (1 Chr. 2:29).

Aher ay'huhr (אָהֵר H338, "another" [possibly indicating a substitute for a sibling who has died]). A Benjamite identified as the father or ancestor of the Hushites (1 Chr. 7:12; see HUSHIM #2). The text is emended by some scholars, but if it is sound, the name may be a contracted form of AHIRAM (Num. 26:38).

Ahi ay'hi (אֲחִי H306, "my brother"; perhaps a contraction of AHIJAH). (1) Son of Abdiel and descendant of GAD; head of a family (1 Chr. 5:15).

(2) Son of Shomer and descendant of ASHER (1 Chr. 7:34); some read the text as *āhîw*, "his brother" (cf. RSV and NIV note).

The form *Ahi* is also used in the composition of many Hebrew names with various possible meanings, such as "brother of" and "my brother is" (where "brother" can be a reference to God). See also AH-.

Ahiah uh-hi'uh (אֲחִיָּהוּ H308, short form of אֲחִיָּהוּהוּ H309, "[my] brother is Yahweh"; see AHIJAH). One of the leaders of the people who sealed the covenant of reform with NEHEMIAH (Neh. 10:26). Here the KJV has "Ahijah," but in several passages where other versions have "Ahijah," the KJV reads "Ahiah" (1 Sam. 14:3, 18; 1 Ki. 4:3; 1 Chr. 8:7). No version seems to be completely consistent in the spelling of this name.

Ahiam uh-hi'uhm (אֲחִיָּאָם H307, possibly a hypocoristic, *ādhiyā-mi*, "my brother is indeed [Yahweh]"; see ABIJAH #5). Son of Sharar the HARARITE; he was one of DAVID'S mighty warriors (2 Sam. 23:33; called "son of Sacar" in 1 Chr. 11:35).

Ahian uh-hi'uhn (אֲחִיָּאָן H319, possibly "little brother"). Son of Shemida and descendant of MANASSEH (1 Chr. 7:19).

Ahiezer ay'hi'-ee'zuhr (אֲחִיעֶזֶר H323, "my brother is help"). (1) Son of Ammishaddai; in the time of MOSES he represented the tribe of DAN on a number of important occasions (Num. 1:12; 2:25; 7:66, 71; 10:25).

(2) Son of Shemaah of GIBEAH; he and his brother JOASH were warriors from the tribe of

BENJAMIN who left SAUL and joined DAVID at ZIKLAG (1 Chr. 12:3; cf. v. 1). On the basis of the primary SEPTUAGINT witnesses and a few Hebrew MSS, the plural “sons” is often emended to “son”; if the singular reading is original, this word then refers only to Joash, and Ahiezer’s father is not named.

Ahitud uh-hi’huhd (אֲחִיטוּד H310, “[my] brother is majesty”). (1) Son of Sheloni and a leader of the tribe of ASHER; he was appointed by MOSES to help divide the land W of the Jordan after the Israelites settled there (Num. 34:27).

(2) The head of a Benjamite family (1 Chr. 8:7). The text is difficult and probably corrupt; he may have been the son of Ehud (KJV) or of Gera (NIV) or of Heglaim (NRSV).

Ahijah uh-hi’juh (אֲחִיָּהוּ H308, also אֲחִיָּהוּ H309, “[my] brother is Yahweh”; see AHIAH). (1) Son of Ahitub and a priest in the days of SAUL. He was a descendant of ELI through PHINEHAS’S line (1 Sam. 14:3, 18; KJV, “Ahiah”). He is also called AHIMELECH (possibly a short form of Ahijah, 1 Sam. 22:9, 11, 20; some infer that Ahijah and Ahimelech were brothers). Thus Ahijah or Ahim-elech, the father of ABIATHAR, served as priest at NOB, wore the EPHOD, and bore the responsibility for the ARK OF THE COVENANT. He consulted the oracles of God for Saul on the field at MICMASH (1 Sam. 14:18-19; note the LXX reference to the ephod). He is the same one who offered the showbread to DAVID when he was hungry and fleeing from Saul (1 Sam. 21:1-10).

(2) A Pelonite who was one of David’s Thirty, the military élite of the nation (1 Chr. 11:36). However, the parallel list at this point reads, “Eliam the son of Ahithophel the Gilonite” (2 Sam. 23:34; this reading is to be preferred).

(3) A Levite in the time of David who was “in charge of the treasuries of the temple (1 Chr. 26:20 KJV, NRSV). The NIV, following the SEPTUAGINT and most commentators, reads *’āhêhem* (“their brothers”) and translates, “Their fellow Levites.”

(4) Son of Shisha; he and his brother Elihoreph were secretaries (see SCRIBE) for SOLOMON (1 Ki. 4:3; KJV, “Ahiah”).

(5) A prophet from SHILOH who found JEROBOAM in the field. The prophet had a new garment that he promptly took and ripped into twelve pieces. He then offered to Jeroboam ten of the twelve pieces, saying that God would rip the kingdom out of Solomon’s hand and offer to Jeroboam ten of the tribes (1 Ki. 11:29-31). Amazingly enough, the prophet also promised to build a sure dynasty out of his descendants even as he did for David’s house! While this incident did not revoke the Davidic covenant (vv. 34-36), yet it did offer a similar covenant to the house of Jeroboam if he would obey God’s commandments and walk in all his ways (11:38). Notice the theology of 1 Ki. 12:15, whereby the breach was not healed, because God had proclaimed his word by the prophet. Later the prophet, aged and blind, announced to Jeroboam’s wife God’s word concerning the illness of his son Abijah (14:1-5). Briskly, the prophet announced the death of the child and a violent end to the promise of a dynasty (vv. 6-17). The fulfillment of these words continued to roll in during subsequent days (1 Ki. 15:29; 2 Chr. 10:15). “The prophecy of Ahijah the Shilonite” was one of the sources used in the history of Solomon (2 Chr. 9:29).

(6) Father of King BAASHA of Israel; the latter conspired against NADAB, the son of Jeroboam, and then ruled in his place (1 Ki. 15:27, 33; 21:22; 2 Ki. 9:9). He was from the tribe of ISSACHAR.

(7) Son of JERAHMEEL and descendant of JUDAH (1 Chr. 2:25). Instead of the personal name Ahijah, the LXX here has “his brother” (reading *’āhîhû*; the Syr. reads “their sister”).

(8) Son of EHUD and descendant of BENJAMIN (1 Chr. 8:7; KJV, “Ahiah”). The text is difficult,

as some argue that the names Naaman, Ahijah, and Gera are a dittography (from vv. 4-5). Further, both Ahijah (v. 7) and Ahoah (v. 4), as well as Ehi (Gen. 46:21), may be scribal variations for an original reading of AHIRAM (Num. 26:38-40).

(9) One of the leaders of the people who sealed the covenant of reform with NEHEMIAH (Neh. 10:26 KJV; other English versions spell it AHIAH).

(10) Son of Phinehas and ancestor of EZRA (2 Esd. 1:2; KJV, “Achias”). W. C. KAISER, JR.

Ahikam uh-hi'kuhm (אֲחִיקָם H324, “my brother has arisen” [possibly a reference to God as rising for battle]). A prominent man in the reign of King JOSIAH and the following decades (2 Ki. 22:12, 14; 25:22; 2 Chr. 34:20; Jer. 26:24; 39:14; 40:5—41:18; 43:6). Josiah made him a member of the deputation to consult with the prophetess HULDAH concerning the Book of the Law. In the reign of JEHOIAKIM, Ahikam protected JEREMIAH from death. He was a son of SHAPHAN, royal secretary under Josiah, and the father of GEDALIAH #2, whom NEBUCHADNEZ-ZAR made governor of the land after the destruction of Jerusalem.

Ahikar uh-hi'kahr (Aram. אֲחִיקָר “my brother is precious”). Also Aḥiḳar and (in more recent scholarship) Ahiqar. TOBIT refers to Ahikar (Gk. *Achiacharos*, but the spelling varies) as his nephew, who was “chief cupbearer, keeper of the signet, and in charge of administrations of the accounts under King Sennacherib of Assyria,” and later under Esarhaddon (Tob. 1:21-22 NRSV). When Tobit lost his sight, Ahikar took care of him for two years. Ahikar and his nephew Nadab were present at the wedding of Tobit’s son, Tobias (2:10; 11:18). Shortly before his death, Tobit said to his son: “See, my son, what Nadab did to Ahikar who had reared him. Was he not, while still alive, brought down into the earth? For God repaid him to his face for this shameful treatment. Ahikar came out into the light, but Nadab went into the eternal darkness, because he tried to kill Ahikar. Because he gave alms, Ahikar escaped the fatal trap that Nadab had set for him, but Nadab fell into it himself, and was destroyed” (14:10 NRSV).

These references witness to an earlier Mesopo-tamian legend, dating perhaps to the 6th cent. B.C. It appears that the story was originally composed in ARAMAIC. The earliest evidence for it is a fragmentary papyrus from ELEPHANTINE (5th cent. B.C.), which begins with the statement, “[These are the words] of one Ahiqar, a wise and skillful scribe” (*OTP*, 2:494). It contains a brief and incomplete narrative, followed by a collection of sayings that reflect the story’s polytheistic background (this second part is thought to be independent of the narrative). The story became very popular and has been preserved in a much fuller form in various languages. (See *APOT*, 2:715-84 for an English translation of the Syriac, Arabic, and Armenian versions in parallel columns, followed by a translation of the Ethiopic and Aramaic fragments, as well as a portion of the story of Aesop that reflects influence from the Ahikar story. For a more recent translation of the Aramaic text, with introduction and notes, see *OTP*, 2:479-507.)

While there is no uniformity of detail among the extant versions, the legend proceeds as follows: Ahikar was the vizier of SENNACHERIB, king of ASSYRIA (704-681 B.C.) and noted for his wisdom. He was childless (in spite of having sixty wives), so he decided to adopt the son of his sister, named Nadan, and raise him as his successor in Sennacherib’s court. Ahikar began what turned out to be an arduous task of educating this young man by using a series of proverbs. He described his pupil as a “goodly apple,” but “rotten at the core.” Threatening to replace the ungrateful youth with his younger brother Nabouzadan only led to the betrayal of his uncle by Nadan. Nadan composed letters to the

surrounding sovereigns in Egypt and Persia with Ahikar's forged signature and seal in which he proposed betraying Assyria's troops to them. Then to add insult to injury, he went to Sennacherib and accused Ahikar of treason, whereupon the poor man was condemned to die. Fortunately enough for the vizier, the executioner turned out to be a friend of Ahikar whose life he had saved in the past. Secretly he substituted a condemned criminal in Ahikar's place and concealed Ahikar until the king's wrath had subsided.

An occasion finally arose in which Sennacherib found himself wishing wise Ahikar were still around to solve a new provocation incited by the king of Egypt, who demanded that Assyria pay tribute or produce someone who could make a castle in the air or ropes twisted out of sand. When the servant produced Ahikar, he was wasted, withered, long-haired, and with fingernails like the talons of an eagle. He confronted his nephew with a number of rebukes cast into a series of proverbs, such as "O my boy! you have been to me like a man who saw his comrade naked in the chilly time of winter; and he took cold water and poured it upon him" (Arabic version, 8.5). Upon hearing these rebukes, Nadan's body swelled and his "belly burst asunder." As for the Egyptian provocation, Ahikar demonstrated that he still had the same wisdom when he used eagles to carry two boys into the air, who thereupon urged the Egyptian to pass the bricks and mortar up to them so that the castle building could begin. Faulting the supplier, the builder was excused and Assyria was saved, whereupon Ahikar was restored to his original post.

Because the name "Ahuqar" appears in a cuneiform text from Uruk, many infer that Ahikar was a historical character, possibly a sage in ESARHADDON'S Assyrian court. The legend and sayings constitute a sapiential novel, similar to Tobit. Although pagan in origin, it was adopted by Jewish people and exerted considerable influence among them, as well as among Christians and Muslims (the story is included in some editions of the *Thousand and One Nights*). W. C. KAISER, JR.

Ahilud uh-hi'luhd (אֲחִילֻד *H314*, perhaps "my brother is born"). The father of a certain Jehoshaphat who served as "recorder" during the reigns of DAVID and SOLOMON (2 Sam. 8:16; 20:24; 1 Ki. 4:3; 1 Chr. 18:15). This Ahilud is probably also the one identified as the father of BAANA, one of Solomon's district governors (1 Ki. 4:12).

Ahimaaz uh-him'ay-az (אֲחִימָעַז *H318*, perhaps "my brother is wrath"). (1) The father of SAUL'S wife, AHINOAM (1 Sam. 14:50).

(2) Son of ZADOK, the high priest (2 Sam. 15:27; 1 Chr. 6:8, 53). Ahimaaz remained loyal to DAVID during the rebellion of ABSALOM. He and JONATHAN, the son of ABIATHAR, stationed at EN ROGEL, were messengers for David (2 Sam. 17:17) when he fled from Absalom (15:27, 36). Ahimaaz was especially famous for his swift running, which he demonstrated at his own initiative when he raced ahead of a Cushite messenger to bring the news of the victory of David's army and of Absalom's death (18:27). At one point, the aforementioned system of espionage almost collapsed when Ahimaaz and Jonathan were detected by a lad who told Absalom of their activities. They fled for their lives to a house in BAHURIM that had a well in its courtyard, and there they hid. A woman covered over the well's lid and spread her ground corn over the lid and thus they escaped (17:17-19). The career of Ahimaaz in subsequent days is uncertain. From the facts known, it would appear that he did not succeed Zadok as high priest, for he is not listed among Solomon's officials; rather, AZARIAH, another son of Zadok, is mentioned as the priest (1 Ki. 4:2).

(3) The husband of BASEMATH, daughter of SOLOMON. He was one of the king's twelve officers

in charge of the food service for the royal household as financed by the eighth assigned district of NAPHTALI (1 Ki. 4:15). In contrast to the other officers in the list, the name of this man's father is missing. Some therefore conjecture that it is the man's own name that has dropped out of the text and that only the name of his father (Ahimaaz son of Zadok, see above) has remained. W. C. KAISER, JR.

Ahiman uh-hi'muhn (אֲחִימָן H317, perhaps "my brother is fortune"). (1) One of the three sons or descendants of ANAK living in HEBRON when the twelve spies reconnoitered the land in the time of Moses (Num. 13:22; Josh. 15:14; Jdg. 1:10). They were so tall and strong that ten of the spies were terrified of them and persuaded the Israelites not to enter the land that God had promised them. Ahiman was probably the name of an individual and of a clan or group of clans. The three clans were driven out from Hebron by CALEB (Josh. 15:14) and later defeated again by the tribe of JUDAH (Jdg. 1:10).

(2) A Levite in the postexilic period. He was one of the chief gatekeepers of Jerusalem (1 Chr. 9:17). Since he is not included in the parallel list (Neh. 11:19, "Akkub, Talmon and their associates [*lit.*, brothers]"), some emend the text to read *āhēhem*, "their brothers."

Ahimelech uh-him'uh-lek (אֲחִימֶלֶךְ H316, "my brother is [the god] Melek" or "my brother is king"). TNIV Ahimelek. (1) Son of AHITUB and father of ABIATHAR, DAVID'S high priest (1 Sam. 21:1-2, 8; 22:9-23; 23:6; 30:7). This priest of NOB gave assistance to David by offering him the showbread (21:6), and when SAUL learned of this aid, it cost Ahimelech his life (22:11-19). AHI-JAH (14:3, 18) may be (a) a short form of the name Ahimelech, (b) another name for Ahimelech, or (c) Ahimelech's father in a fuller genealogy. One of the eight fugitive psalms (title of Ps. 52) refers to the evil use of the tongue by DOEG, the Edomite, against Ahimelech.

(2) Son of Abiathar (2 Sam. 8:17; cf. 1 Chr. 18:16), that is, a grandson of #1 above. Most scholars regard this as an inadvertent transposition for "Abiathar the son of Ahimelech." While such a textual corruption is possible, the detailed account of 1 Chr. 24:3, 6, 31 would seem to rule against it. One has only to look at the Phoenician lists of names in *CIS* to find examples of patronymics where father, grandson, and great-great-grandson all share the name "A" while son and great-grandson share the name "B" (i.e., the patrilineal pattern of "A" begets "B" begets "A" begets "B" begets "A").

(3) A HITTITE who followed David while he was a fugitive in the wilderness hiding from Saul (1 Sam. 26:6).

W. C. KAISER, JR.

Ahimoth uh-hi'moth (אֲחִימוֹתַי H315, possibly "my brother is death"). Son of ELKANA, included in a list of Levites descended from KOHATH (1 Chr. 6:25). He was an ancestor of SAMUEL. A later list (1 Chr. 6:35) has the name MAHATH in a similar position, and it has been suggested that Ahimoth is a conflation of this name and the word *ādîw* ("his brother").

Ahinadab uh-hin'uh-dab (אֲחִינָדָב H320, "my brother is noble"). Son of Iddo (1 Ki. 4:14) and one of SOLOMON'S "twelve district governors over all Israel, who supplied provisions for the king and the royal household" (v. 7). His district was S GILEAD, and his headquarters, MAHANAIM.

Ahinoam uh-hin' oh-uhm (אֲחִינוֹעַם H321, "my brother is delight"). (1) Daughter of Ahimaaz and wife of SAUL (1 Sam. 14:50), thus the first queen of Israel.

(2) A woman from JEZREEL whom DAVID married after Saul took MICHAL from him and gave her to another husband. Ahinoam was probably his first wife, even though his marriage to ABIGAIL is mentioned first (1 Sam. 25:39-44). Three other times they are mentioned together, and Ahinoam is always mentioned first (27:3; 30:5; 2 Sam. 2:2). She was the mother of David's first son, AMNON, and Abigail was mother of his second (2 Sam. 3:2; 1 Chr. 3:1).

Ahio uh-hi'oh (אֲחִיוֹ H311, perhaps "little brother" or short form of אֲחִיָּהוּ H309, "[my] brother is Yahweh"; see AHIHAH). (1) Son of ABINADAB and brother of UZZA (2 Sam. 6:3-4; 1 Chr. 13:7). He went before the cart that carried the ARK OF THE COVENANT from the house of Abinadab to Jerusalem.

(2) Son of BERIAH and descendant of BENJAMIN, listed among the heads of families living in postexilic Jerusalem (1 Chr. 8:14; cf. v. 28). The NRSV and other versions, however, include him among the sons of ELPAAL. Some scholars, however, emend the name to *ḥyhm* and translate the verse, "Their [i.e., Beriah's and Shema's] kinsmen were Shashak and Jeremoth" (cf. G. N. Knoppers, *I Chronicles 1-9*, AB 12 [2004], 474, 477).

(3) Son of Jeiel and brother of KISH (1 Chr. 8:29-31; 9:35-37), possibly the uncle of King SAUL (cf. 8:33; 9:39).

Ahiqar. See AHIKAR.

Ahira uh-hi'ruh (אֲחִירָה H327, possibly "my brother is a friend" [*HALOT*, 1:34] or "my brother is evil" [BDB, 27]). Son of Enan and a leader of the tribe of NAPHTALI in the time of MOSES, whom he assisted in the census (Num. 1:15). He commanded his tribe when on the march (10:27) and made the tribal offering (2:29; 7:78-83).

Ahiram uh-hi'ruhm (אֲחִירָם H325, "my brother is exalted"). Third son of BENJAMIN and grandson of JACOB (Num. 26:38). In 1 Chr. 8:1, where the sons of Benjamin are explicitly numbered, the third name, AHARAH, is probably a corrupt form of AHI-RAM (cf. also the forms AHOAH in v. 4, AHIJAH in v. 7, and AHER in 7:12). In the Benjamite genealogy found in Gen. 46:21, EHI may be an abbreviated form of Ahiram. In this genealogy ten sons of Benjamin are mentioned, but some of them are referred to as more remote descendants in other lists.

Ahisamach uh-his'uh-mak (אֲחִיסַמַּחֵד H322, "my brother has supported"). TNIV Ahisamak. Father of OHOLIAB, a member of the tribe of DAN (Exod. 31:6; 35:34; 38:23). Oholiab assisted BEZALEL in building the TABERNACLE and its furniture.

Ahishahar uh-hish'uh-hahr (אֲחִישָׁהָר H328, "brother of the dawn" [see SHAHAR]). Son of Bil-han and descendant of BENJAMIN (1 Chr. 7:10); he was a head of family in the clan of JEDIAEL (v. 11).

Ahishar uh-hi'shahr (אֲחִישָׁר H329, meaning uncertain). A man who was in charge of SOLOMON'S household (1 Ki. 4:6).

Ahithophel uh-hith'uh-fel (אֲחִיתּוֹפֵל H330, perhaps "brother of foolishness"; the name may have been אֲחִיפֵלֵט, "my brother is deliverance" [cf. ELIPHELET, 2 Sam. 23:34], purposely distorted by

transposing the consonants, changing the **ש** to a **ת**, and using the vowels of **בַּשֶּׁת** H1425, “shame”; others think the name was originally **אֲחִיבַּעַל**, “my brother is Baal” [cf. ISH-BOSHET]). DAVID’S private counselor who came from GILOH in the highlands of Judah, possibly near HEBRON. He participated in the rebellion against David and became ABSALOM’S counselor only to end his life in suicide, having foreseen what would become of Absalom and himself when the rebel king failed to follow his advice in favor of the eloquent doubts cast upon such plans by HUSHAI, David’s infiltrator of the rebel court (2 Sam. 17:14, 23; 1 Chr. 27:33-34).

The reputation that Ahithophel had was such that his counsel was “as if one consulted the oracle of God” (2 Sam. 16:23 NRSV) and thereby the Bible clearly teaches “that a man can still think validly and talk wisely, within a limited field, without special revelation” (D. Kidner, *Proverbs* [1964], 17). David seriously prayed to God that he would help him “by frustrating Ahithophel’s advice” (2 Sam. 15:34).

Speculation as to why a loyal Ahithophel should turn so decidedly on David involves building a case for his being the grandfather of BATHSHEBA. A connection has been made between “Eliam son of Ahithophel the Gilonite” (2 Sam. 23:34), who was one of David’s Thirty, and the ELIAM who is Bathsheba’s father (2 Sam. 11:3; cf. 1 Chr. 3:5). Do we now have the motive for his defection in Ahithophel’s knowledge of David’s sin with URIAH’S wife Bathsheba? Possibly, if one can demonstrate two more things: (1) that Ahithophel was much older than David and had a married granddaughter, and (2) that there was only one Eliam in Israel and not two by the same name in the contemporary records of Israel. H. W. Hertzberg (*I and II Samuel* [1964], 337-38), who favors the identification, notices that Ahithophel was apparently no longer at the king’s court, since he was summoned from his home at Giloh.

Excavated section in Jerusalem known as Area G, which is thought to have functioned as the administrative center of the ancient city during the rebellion in which Ahithophel participated.

The advice Ahithophel gave to Absalom was to publicly violate David’s harem, which advice he followed (2 Sam. 15:21-22). This assured him the royal succession, but it also unwittingly brought upon David’s head the prophesied consequences of his sin with Bathsheba spoken by NATHAN the prophet (12:11-12). He also advised that the new king immediately pursue David with a surprise attack of men before David had time to consolidate and gather support; this advice Hushai was able

to defeat, and thus ended the brilliant career of Ahithophel (17:1-23). W. C. KAISER, JR.

Ahitob uh-hi'tob. See AHITUB #3.

Ahitub uh-hi'tuhb (אחיטוב H313, “my brother is goodness”). (1) Son of PHINEHAS and father of the priest AHIJAH (also called AHIMELECH, 1 Sam. 14:3; 22:9, 11-12,20).

(2) Son of AMARIAH and father of ZADOK, the high priest during the time of DAVID (2 Sam. 8:17; 1 Chr. 6:7-8 [MT, 5:33-34]; 6:52-53 [MT, 6:37-38]; 18:16; Ezra 7:2). Some argue (on the basis of 1 Chr. 9:11 and Neh. 11:11) that this Ahi-tub was really the grandfather of Zadok; however, see #3 below.

(3) Son of Amariah II and father of Zadok II (1 Chr. 6:11 [MT, 5:37-38]; 9:11; Neh. 11:11; cf. also Achitob or Ahitob [*Achitōb*] in 1 Esd. 8:2; 2 Esd. 1:1). Some scholars believe that this Ahitub is the same as #2 and that there is confusion in the lists. (See the discussion in KD, *Chronicles*, 112-20.)

(4) Son of Elijah and ancestor of JUDITH (Jdt. 8:1 [*Achitōb*]; KJV, “Acitho”). W. C. KAISER, JR.

Ahlab ah'lab (אחלב H331, possibly “forest” or “fruitful”). A town within the boundaries of ASHER, probably located at Khirbet el-Maḥalib, near the coast, c. 4 mi. NE of TYRE. The tribe of Asher was unable to drive out the Canaanite inhabitants of the town (Jdg. 1:31). See also HELBAH and MAHALAB.

Ahlai ah'li' (אחלי H333, possibly “the brother is my God” or derived from the interjection אחלי H332, “O would that!”). (1) Son or daughter of Sheshan and descendant of JUDAH through JERAHMEEL (1 Chr. 2:31). The name is introduced in the Hebrew with the words, “the sons of Sheshan,” but we are later told that “Sheshan had no sons—only daughters” (v. 34). Ahlai may have been the daughter that Sheshan gave in marriage to his Egyptian servant JARHA (v. 35; but see discussion under SHESHAN). The phrase “the sons of Sheshan” may indicate that Ahlai was regarded as the one through whom Sheshan’s line was preserved and as the progenitor of an important Jerahmeelite clan. See also #2 below.

(2) Father of ZABAD; the latter was one of DAVID’S mighty warriors (1 Chr. 11:41). Some argue (on the basis of 2:35-36) that this Ahlai was a woman, an ancestress of Zabad, identical with #1 above.

A^hlamû. See ARAM.

Ahoah uh-hoh'uh (אחוא H291, derivation uncertain). Son of BELA and grandson of BENJAMIN (1 Chr. 8:4). It is possible that the name is a scribal error for AHIJAH (cf. v. 7).

Ahoi uh-hoh'hz' (אחוי H292, apparently a gentilic of אחוא H291). *The NRSV* renders 2 Sam. 23:9 literally as “Dodo son of Ahoi,” whereas KJV and NIV, on the basis of the parallel passage (1 Chr. 11:12), have “Dodo [Dodai] the Ahohite.” See AHOHITE.

Ahohite uh-hoh'hi't (אחוי H292, apparently a gentilic of אחוא H291). Probably a patronymic used by the descendants of AHOAH. The term is used only in connection with military heroes in DAVID’S

time: DODAI (2 Sam. 23:9; 1 Chr. 11:12; 27:14) and ZAL-MON (2 Sam. 23:28; called ILAI in 1 Chr. 11:29).

Aholah; Aholiab; Aholibah; Aholibamah. KJV forms of OHOLAH; OHOLIAB; OHOLIBAH; OHOLIBAMAH.

Ahriman ah'ri-muhn. The Middle Persian form of the title of the evil principle in the cosmos according to the Avesta, the book of ZOROASTRIANISM (Mazdaism), in which he is known as *Angra Mainyav*, "Evil Spirit." He is the equal and opposite of the "Good Spirit," AHURA MAZDA, in the great system of dialectic DUALISM.

Ahumai uh-hyoo'mi (אָהוּמַי H293, "it is indeed a brother"). Son of JAHATH and descendant of JUDAH through SHOBAL (1 Chr. 4:2). He and his brother LAHAD are referred to as "the clans of the Zorathites" (see ZORAH). Some argue that the list in 1 Chr. 4:1-7 gives the genealogy of CALEB (cf. Shobal in 2:50).

Ahura Mazda uh-hoor'-uh-maz'duh (Old Pers. *A[h]-ura-mazda[h]*, "wise lord"). The great overseeing principle of good, the divine spirit in the teachings of the Persian sage, *Zarathustra* (see ZOROASTRIANISM). He is worshiped as the creator of the cosmos and the archenemy and totally other of the evil spirit, AHRIMAN. Ahura Mazda is mentioned in the royal inscriptions of the Achaemenid dynasty, which brought PERSIA to its height as an archaic-religious state, beginning with the reign of CYRUS (2 Chr. 36:22; Isa. 44:28; et al.; frequently in Ezra). The formulas in Old Persian are often taken from the Sumero-Akkadian royal inscriptions. However, the success and prestige of each king is attributed to Ahura Mazda (cf. R. G. Kent, *Old Persian* [1950], 116-57). Of special interest is an inscription of DARIUS I that mentions other gods, implying that Ahura Mazda was the head of a complex pantheon. The antagonism of the Persians to idolatry was certainly a factor in the positive verdict upon Cyrus and his successors given by the OT (Ezra 7:12-20). W. WHITE, JR.

Ahuzam uh-huh'zuhm. KJV form of AHUZZAM.

Ahuzzam uh-huh'zuhm (אָהוּצָם H303, possibly "possessor"). KJV Ahuzam. Son of ASHHUR and descendant of JUDAH (1 Chr. 4:6). Some argue that the list in 1 Chr. 4:1-7 gives the genealogy of CALEB.

Ahuzzath uh-huh'zath (אָהוּצָת H304, possibly "possession"). A personal adviser (Heb. *mērēa'*, lit., "friend") of ABIMELECH, PHILISTINE king of GERAR, who with PHICOL, commander of the army, went with Abimelech to make a covenant with ISAAC at BEERSHEBA (Gen. 26:26-31).

Ahzai ah'zi' (אָהַצַּי H300, short form of אָהַצַּיִת H302, "Yahweh has taken hold [for protection]"). KJV Ahasai. Son of Meshillemoth, descendant of IMMER, and grandfather (or ancestor) of AMASH-SAI; the latter is mentioned among the priestly leaders who resettled Jerusalem in EZRA'S time (Neh. 11:13). Ahzai is probably the same as JAHZERAH (1 Chr. 9:12).

Ai *i, ay'i* (עַיִ H6504 [always written with the definite article, הַעַיִ], “the heap” or “the ruin”; also עַיִת H6569 [Isa. 10:28] and possibly עַיִדָּה H6509 [1 Chr. 7:28; Neh. 11:31]). (1) A town in central Palestine, lying E of BETHEL (Gen. 12:8; 13:3; in these two passages KJV reads “Hai”). A study of the biblical references to Ai in both the MT and the SEPTUAGINT indicates a persistent relationship of Ai with JERICHO, JERUSALEM, and Bethel. “Now Joshua sent men from Jericho to Ai, which is near Beth Aven to the east of Bethel” (Josh. 7:2). At first repulsed by the defenders of Ai, the Israelites triumphed after ACHAN was punished for his sin. The people of Ai were killed on JOSHUA’S order, the king hanged, and the city burned and left “a heap of ruins” (7:1—8:29). It may have become an Ephraimite town (1 Chr. 7:28, “Ayyah,” though some Heb. MSS have *azzâ*, “Gaza/ Azzah”; see AYYAH), but it was occupied by the Benjamites after the EXILE (Neh. 11:31, also in the form “Ayyah,” but usually transcribed “Aija”). Isaiah portrays the Assyrian armies reaching Jerusalem by way of Ai (Isa. 10:28, “Aiath”).

Early Bronze Age excavations at the site of Khirbet et-Tell, generally identified with the biblical city of Ai. (View to the SW.)

The modern site Khirbet et-Tell, some 2 mi. SE of Tell Beitin (Bethel), is generally identified as biblical Ai. Joseph A. Callaway, director of a series of excavations at et-Tell (1964-76), finds the site the only satisfactory location of Ai. This conclusion is based on the correspondence of meanings of the ancient and modern names, the topography and the close relationship to Bethel, Jerusalem, and Jericho. Previous archaeological excavations at the site have been carried on by John Garstang (1928) and Judith Marquet-Krause (1933-35). There was a pre-urban occupation of Ai in the last centuries of the 4th millennium (3200-3000 B.C.). An impressive and prosperous city flourished at the site during the Early Bronze period in Palestine (3000-2500 B.C.).

Archaeological evidence indicates that this occupation was heavily attacked twice during its history. Artifacts point to Egypt as the power that controlled the site. Ai may have been one of the cities through which Egypt dominated Palestine in the Pyramid Age. With the destruction of Bronze

The location of Ai.

Age Ai, Bethel then became the dominant town in the area. A subsequent Early Iron I occupation of Ai (c. 1200 B.C.) lasted for about a century (cf. J. A. Callaway in *Palestine in the Bronze and Iron Ages*, ed. J. N. Tubb [1985], 31-49). There is, however, no evidence that et-Tell was occupied at the time of the Israelite conquest. Alternate identifications of Ai have been suggested, such as the nearby sites of Khirbet el-Maqtar and Khirbet Nisya, but few scholars accept these proposals. The discrepancy between the biblical account and the archaeological data remains an unsolved problem.

(2) An Ammonite town (see AMMON) mentioned only once (Jer. 49:3); its location is unknown.

H. M. JAMIESON

Aiah ay'yuh (אִיָּהּ H371, “falcon”). (1) Son of Zibeon, a HORITE; ancestor of a clan in EDOM (Gen. 36:24 [KJV, “Ajah”]; 1 Chr. 1:40).

(2) Father of Rizpah, a concubine of SAUL; ISH-BOSHETH falsely accused ABNER of having an affair with her (2 Sam. 3:7). Years later her sons were handed over to the Gibeonites by DAVID for hanging (21:8-11).

(3) NJPS form of AYYAH.

Aiath ay'yath. Alternate form of Ai (Isa. 10:28).

Aija ay'juh. Alternate form of Ai (Neh. 11:31).

Aijalon ay'juh-lon (אֵיְיָלוֹן H389, “[place of the] deer”). KJV also Ajalon. (1) A town on a hill some 13 mi. NW of JERUSALEM, as well as a valley named after it. The town is identified as modern Yalo. Some remains from c. 2000 B.C. have been found at nearby Tell el-Qoqa. Aijalon is mentioned in the 14th and 15th cent. B.C. letters from TELL EL-AMARNA as Aialuna (e.g., EA, 273). In the biblical narrative, the town appears as a place surrounded by good pasture lands and it figures largely in the military history of Israel. The name first appears in the biblical record in Joshua’s speech given after the defeat of the Amorites: “O sun, stand still over Gibeon, / O moon, over the Valley of Aijalon” (Josh. 10:12). See BETH HORON, BATTLE OF. In the division of Canaan, Aijalon was assigned to the tribe of DAN (19:42) and was also designated as one of the LEVITICAL CITIES (21:24). The Danites, however, failed to take the town (Jdg. 1:35). SAUL and JONATHAN won a great victory against the PHILISTINES in the vicinity of Aijalon (1 Sam. 14:31). At one stage, the town was inhabited by Ephraimites (1 Chr. 6:69) and at another by Benjamites (8:13). Under the divided kingdom, Aijalon fell to Judah, and REHOBOAM fortified it, along with many other towns, with strong defenses for the

protection of both Judah and Jerusalem (2 Chr. 11:10). In the reign of AHAZ, the Philistines raided the cities of the SHEPHELAH (“lowlands”) and occupied Aijalon (28:18). Some believe that ELON

The Aijalon Valley with a view E toward the Judean mountains.

BETHHANAN in 1 Ki. 4:9 is a reference to Aijalon. There is no mention of Aijalon in the NT.

(2) A town within the tribal territory of ZEBU-LUN, mentioned only once (Jdg 12:12); its location is unknown. The judge ELON (*ʾēlôn* H390) is said to have been buried there. H. G. ANDERSEN

Aijeletth Shahar ay’juh-leth-shay’hahr. KJV transliteration of *ʾayyelet haššahar* in the title of Ps. 22; NIV understands it as a tune name, “The Doe of the Morning.” Others take the first word in the phrase as related to *ʾēyālūt* H394 in v. 19, meaning “strength” or “help.” If this is correct, the words actually entitle the psalm “Help at Daybreak” suitably, as vv. 22-31 show. See also PSALMS, BOOK OF VII.A.

Ain ayn (אֵין H6526, “spring”). (1) A town in the NE corner of Canaan named, no doubt, for the presence of a spring there (Num. 34:11). Some MSS of the VULGATE have *fontem Daphnim* (“the spring of Daphne”), and the identification of Ain with modern Khirbet Dufna (less than 2 mi. W of DAN (PLACE)) has support in some rabbinic texts. Some scholars identify Ain with modern Khirbet Ayyun, some 3 mi. E of the southern tip of the Sea of Galilee. See also RIBLAH #2.

(2) A Levitical city in the NEGEV appearing in the Judah/Simeon list (Josh. 21:16, although some emend the text to read “Ashan” on the basis of some MSS of the SEPTUAGINT as well as the parallel list in 1 Chr. 6:59). The name also appears in Josh. 15:32; 19:7; 1 Chr. 4:32 (unless it is combined with the next name and read as EN RIMMON). The site is unknown. W. C. KAISER, JR.

Ain Feshka ayn-fesh’kuh. An oasis some 2 mi. S of Khirbet QUMRAN, on the W coast of the Dead Sea. An excavation there in 1958 uncovered a small settlement that may have been the agricultural center for the Qumran sectaries, producing vegetables, grain, and meat supplies. It also contained a tannery for the processing of leather and possibly the manufacture of parchment. See also DEAD SEA SCROLLS.

Ain Karim ayn-kair’im. A village some 4 mi. W of Jerusalem that, according to one tradition, was the home of ELIZABETH and ZECHARIAH, parents of JOHN THE BAPTIST (cf. G. Dalman, *Sacred Sites*

and Ways [1935], 52-55, who mentions other traditions; HEBRON has been favored by some writers because it was a priestly city). Mary the mother of Jesus went there to visit her kinswoman (Lk. 1:24, 39).

air, kingdom (power) of the. SATAN is called “the ruler of the kingdom of the air [*tēs exousias tou aēros*], the spirit who is now at work in those who are disobedient” (Eph. 2:2; KJV, “the power of the air”). Paul believed that through the FALL the world had become subject to demonic powers who dwell in the atmosphere and who oppose God, seeking to frustrate his purpose. PAUL was not consciously accommodating himself to the erroneous views widely held by his contemporaries, but was expressing a genuine conviction that Christians are engaged in a cosmic, spiritual conflict “against the rulers, against the authorities, against the powers of this dark world and against the spiritual forces of evil in the heavenly realms” (Eph. 6:12). See DEMON.

Airus ay’ruhs. KJV Apoc. form of JAIRUS (1 Esd. 5:31).

Ajah ay’juh. KJV alternate form of AIAH (Gen. 36:24).

Ajalon aj’uh-lon. KJV alternate form of AIJALON (Josh. 19:42 et al.).

Akan ay’kan. (אִכָּן H6826, derivation uncertain). Son of EZER and grandson of SEIR the HORITE; he probably became the progenitor of a clan in EDOM (Gen. 36:27; in 1 Chr. 1:42 most Heb. MSS have JAAKAN [KJV, “Jakan”]).

Akbor. See ACBOR.

Akedah. See ISAAC III.

Akeldama uh-kel’duh-muh (κελδαμάχ G192, from Aram. אַרְמַיִם אַרְמַיִם “field of blood”). KJV Aceldama; other versions, Hakeldama. The Aramaic name given by the inhabitants of Jerusalem to the place where JUDAS ISCARIOT died. As explained in Acts 1:19, this name means “field of blood” (*chōrion*)

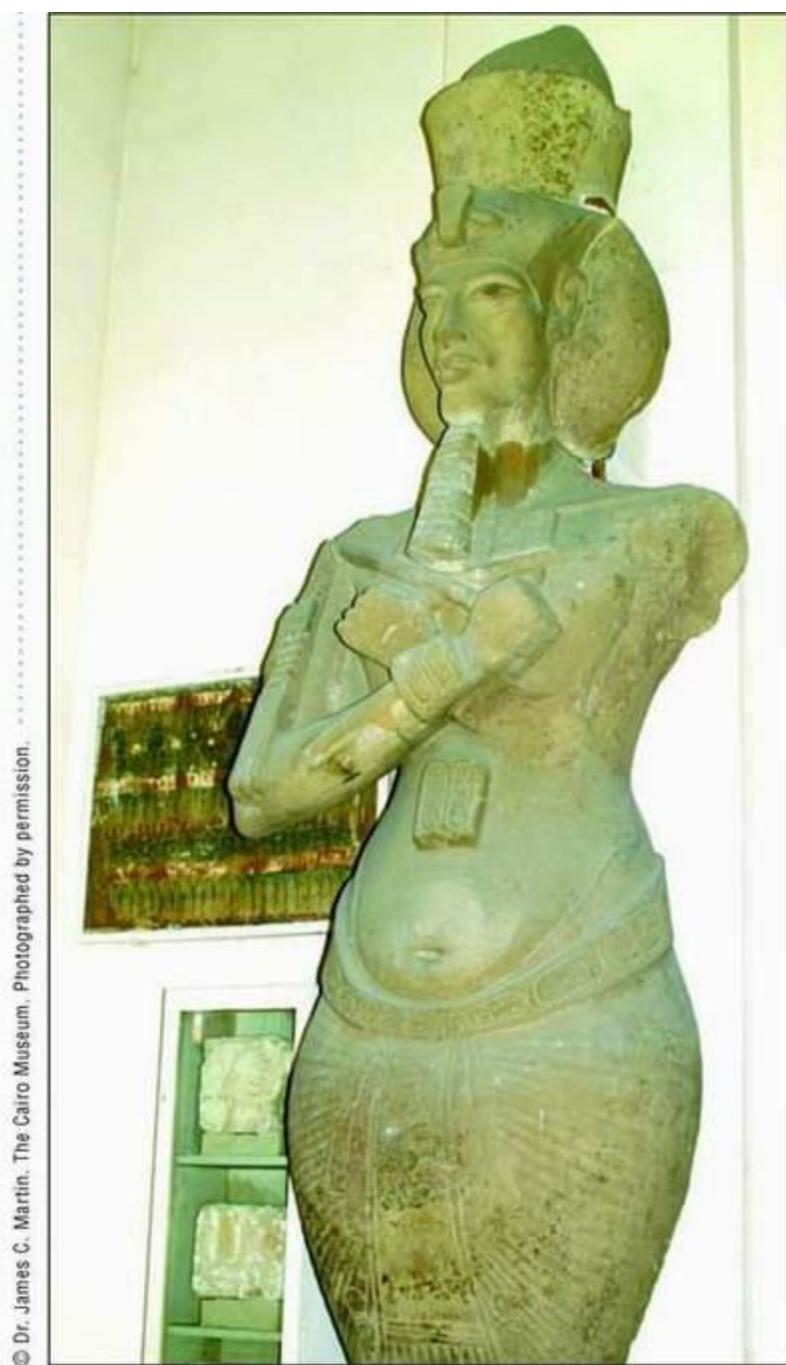

haimatos; in the other account of the death of Judas, only the Greek name is given, *agros haimatos*, Matt. 27:8). The two traditions in the NT regarding the death of Judas agree basically on the name of the site. The content and structure of the account of the death of Judas in Acts 1:18-19 suggest that it is an insertion by the author into the speech of PETER (cf. the parentheses used in NIV).

The Matthean account contains a few additional topographical details. The area previously was known as the “potter’s field” (*ton agron tou kerameōs*) and was purchased by the chief priests as a burial place for strangers (Matt. 27:7). Matthew further indicates that this purchase was the fulfillment of a prophetic oracle: “They took the thirty silver coins, the price set on him by the people of Israel, and they used them to buy the potter’s field, as the Lord commanded me” (27:9-10). Matthew ascribes these words to the prophet Jeremiah. No direct identification with a verse in Jeremiah is possible, although allusions to several passages have been suggested (Jer. 18:2-12; 19:1-15; 32:6-10). However, the major part of the quotation is found in Zech. 11:13 LXX. Gundry suggests that Matthew saw fulfilled in this one event two separate prophecies, one typical (Jer. 19) and one explicit (Zech. 11:13), and cited only one author in the composite allusion—not an uncommon practice. Apparently some similarities between these OT passages led Matthew to associate them with the “Field of Blood” and thus to conflate them and attribute them to Jeremiah (R. H. Gundry, *The Use of the Old Testament in St. Matthew’s Gospel* [1967], 124-25; in n. 3 he lists ten different views regarding this problem).

Tradition has located the “Field of Blood” S of Jerusalem in the Valley of HINNOM, W of its junction with the Valley of the Kidron. Some 1st-cent. tombs have been found in this area. The soil contains a kind of clay that is suitable for use in the manufacture of pottery and the area could be designated as the “Potter’s Field.” B. VAN ELDEREN

Akhenaten akh’uh-naht’uhn (Egyp. “Blessed Spirit of Aten” or “Beneficial to Aten”). Also Akhenaton. King of EGYPT c. 1370-1353 B.C. and founder of the city now known as TELL EL-AMARNA. He was still a teenager when, either as coregent or as king, he replaced his father as effective ruler of Egypt under the name Amenhotep (Amenophis) IV. He became ruler both of Egypt’s once mighty military machine and of the vast religious bureaucracy administered by the priesthods. Available evidence indicates that his mother, Tiy, was influential at court, but not that she was the real power behind the throne. He married Nefertiti.

Large statue of Amenhotep (Amenophis) IV erected at Karnak early in his reign, before he moved to Amarna and changed his name to Akhenaten.

The young king neglected his political duties, preferring instead to implement religious reform. As a result, Egypt's Asiatic empire was almost lost, control over Nubia (see ETHIOPIA) was relaxed, and administrative efficiency declined even in Egypt proper. He suppressed the entire religious bureaucracy of Egypt, and he seems to have desired especially to curb the power of the priesthood of AMON (Amun). By the sixth year of his reign he had built a large temple to the Aten, the deified sun disk, in THEBES. Then he decided to abandon Thebes for a new capital, Akhet-Aten (i.e., Tell el-Amarna), which became the center for the Amarna Revolution. About this time he changed his name from Amenhotep to Akhenaten and began a savage proscription of the older deities. This proscription became so severe that even the word "gods" was effaced from the monuments. For these reasons he is sometimes, but inaccurately, referred to as a monotheist (or even the first monotheist).

By his twelfth year, it was clear that the reform movement had failed, and he attempted a reconciliation with the Amon establishment, but the priests of Amon refused reconciliation. The rest

of his reign, his death, and his burial are obscured by inadequate evidence and conflicting theories. It is certain, however, that his enemies did their best to wipe out his memory, and some scholars suggest that they even desecrated his corpse. His political weakness has led some to suggest that he was associated with the exodus (see EXODUS, THE).

Akhenaten's physique was somewhat sickly and effeminate, although the unusual features have been exaggerated (see TELL EL-AMARNA II.B). But his personality was not weak. Only a strong personality could have defied the entrenched conservative forces of Egyptian life as long as he did. (See D. Lorton, *Akhenaten and the Religion of Light* [1999]; N. Reeves, *Akhenaten: Egypt's False Prophet* [2001].)

A. BOWLING

Akhet-Aten. See TELL EL-AMARNA.

Akhlamu. See ARAM.

Akiba, Rabbi uh-kee'buh (אֲבִיבָה). Also Akiva, Aqiba. A very prominent Jewish sage during the first decades of the second century (d. A.D. 135), whose disciples played a major role in the development of rabbinic literature. Akiba is credited with organizing the contents of the oral law according to subject matter (see MISHNAH and TALMUD). He is especially known for having devised a method of biblical interpretation that drew meaning from the smallest details of the text, and some believe that his approach is reflected in the Greek translation of the Hebrew Bible produced by AQUILA. According to one (debatable) tradition, he was behind the revolt led by BAR KOKHBA in A.D. 132. Later Judaism pictures Akiba as the ideal master of the TORAH. According to one well-known story, MOSES himself visited Akiba and his disciples but was unable to follow their discussions of the Mosaic law (*b. Menah.* 29b). He is said to have died as a martyr under HADRIAN'S persecution of the Jews (*b. Ber.* 61b).

Akim ay'kim ('A:im G943). Also Achim. An ancestor of Jesus and descendant of ZERUBBABEL (mentioned only in Matt. 1:14). Some scholars consider this name a shortened form of JEHOIAKIM or of AHIMAAZ. See also GENEALOGY OF JESUS CHRIST.

Akkad (אֲכַד H422, meaning uncertain; LXX ρχαδ). Mentioned in Gen. 10:10 with BABYLON, ERECH, and possibly CALNEH (a word rendered "all of them" in NRSV) as one of the major cities founded by NIMROD in the land of SHINAR. The exact location of the remains of this ancient Babylonian city are today unknown, although some identify it with Tell Der, Tell Sheshubar, or even Babylon itself. The date of the city's foundation cannot be determined by extrabiblical documents. As early as c. 2350 B.C. a dynasty founded by a king named Sargon flourished at Akkad (Agade in Sumerian). This dynasty controlled all of S Babylonia and sent trade missions and military expeditions into Syria, Central Asia Minor, and Elam. Although the dynasty lasted only two centuries, it became symbolic to later generations of Babylonians as an ideal empire, a kind of "golden age" kingdom. Favorable to this trend was the etymology of Sargon's name ("true king"). The geographical name Akkad was later applied to the whole of N Babylonia, contrasting with SUMER (= S Babylonia).
H. A. HOFFNER, JR.

Akkadian uh-kay'dee-uhn. The Eastern Semitic language spoken by Assyrians and Babylonians, the oldest written form of which stems from documents composed during the reign of Sargon of AKKAD. See LANGUAGES OF THE ANE II.

Akko. See Acco.

Akkub ak'uhb (עֲקֻבִּי H6822, perhaps “protector” or “protected”). (1) Son of Elioenai and descendant of King JEHOIACHIN, from the line of DAVID (1 Chr. 3:24).

(2) Name of a family of Levitical gatekeepers in the temple after the EXILE (1 Chr. 9:17; Ezra 2:42; Neh. 7:45; 11:19; 12:25; 1 Esd. 5:28 [KJV, “Dacobi”]).

(3) Name of a family of NETHINIM or temple servants (Ezra 2:45; 1 Esd. 5:30 [KJV, “Acua”]).

(4) A Levite who assisted EZRA in expounding the law (Neh. 8:7-8; 1 Esd. 9:48 [KJV, “Jacubus”]).

Akrabattene ak'ruh-bat'uh-nee (Ἀραβαττήνη). KJV Arabattine. A place supposedly in IDUMEA where Judas MACCABEE won a military victory over the Idumeans (1 Macc. 5:3). It may be the same Akrabattene that JOSEPHUS mentions as being SE of Shechem (*War* 2.12.4; 4.9.9; cf. *SacBr*, 311-12). Some scholars relate this name to AKRABBIM. See also ACRAVA.

Akrabbim uh-krab'im (עֲקָרְבִים from עֲקָרֵב H6832, “scorpion”). The ascent of Akrabbim (*ma'āleh* (*aqrābbîm*; NIV, “Scorpion Pass”) was a mountain pass on the S side of the DEAD SEA (Num. 34:4; Josh. 15:3 [KJV, “Maaleh-acrabbim”]; Jdg. 1:36). It is usually identified with the modern Naqb eṣ-Şafa, some 20 mi. SW of the southern tip of the DEAD SEA, but some suggest Umm el-ʿAqarab, on the W side of the Dead Sea. This may be the area where Judas MACCABEE defeated the Edomites (1 Macc. 5:3); see AKRABATTENE.

Aksah. See ACSAH.

Akshaph. See ACSHAPH.

Aksib. See ACZIB.

alabaster. In present-day usage the term *alabaster* refers to a very fine-grained and compact, snowwhite or light-colored, massive variety of gypsum (hydrated calcium sulphate), used for interior ornamental work. The alabaster of the ancients, or oriental alabaster (including Algerian onyx), was MARBLE. It was used for making ointment jars (Matt. 26:7; Mk. 14:3), and the Algerian onyx was used in buildings of Carthage and Rome. The marble is generally banded with the so-called onyx-marbles consisting of concentric zones of calcite or aragonite (both calcium carbonate). When pure, it is white or translucent. Impurities give a great variety of colors, particularly cream, yellow, buff, brown, and red, due to the presence of iron oxide. Strictly speaking it is neither marble nor onyx, for the onyx is a banded CHALCEDONY, composed largely of silicon dioxide.

Its formation is the result of deposition from cold water solutions in CAVES, particularly as stalactites and stalagmites, in crevices, and around the exits of springs. This type of deposition occurs in regions with limestone (calcium carbonate) strata. The calcium carbonate is dissolved by ground

water containing carbon dioxide that moves along bedding planes and joints. In caves, formed just below the water table, calcite or aragonite is precipitated when carbon dioxide is lost from the ground water. Stalactites hang vertically from the cave roof with concentric layers of crystals being added as ground water slowly flows down the outer surface. Rate of growth generally is of the order of 0.25-3.0 mm/year. Concentrically banded stalagmites grow upward from the cave floor toward the drip surface in the roof. D. R. BOWES

Alalakh. Also Alalach, Alalah. A Bronze Age city in northern SYRIA, NNE of UGARIT. Although this city is not mentioned in the Bible, archaeological evidence from the excavated site (Tell Aṭṣan or Tell Atchana)—consisting especially of numerous and important tablets written in AKKADIAN—sheds considerable light on ANE culture and history in the 3rd and 2nd millennium B.C. The city was destroyed around 1200 B.C. (See C. L. Woolley, *A Forgotten Kingdom* [1953]; D.J. Wiseman, *The Alalakh Tablets* [1953]; *The Oxford Encyclopedia of Archaeology in the Near East*, ed. E. M. Meyers [1997], 1:55-59.)

Alameth al'uh-muhth. KJV form of ALEMETH.

Alammelech uh-lam'uh-lek. KJV form of ALLAMMELECH.

alamoth al'uh-moth (עֲלֻמוֹת H6628, meaning unknown). Probably the name of a musical tune (1 Chr. 15:20; Ps. 46, title). See also MUSIC VI.C.

Alcimus al'si-muhs ("A λκιμος). High priest in Jerusalem from 163 to 161 B.C. Knowledge of him is derived chiefly from 1 Macc. 7:4-50; 9:1-57; 2 Macc. 14:1-27; Jos. *Ant.* 12.10. Although he was a descendant of AARON, Alcimus was not of the priestly family and was the first such to be so appointed. At the time he was ousted by the Jews of Jerusalem under Judas MACCABEE, Alcimus led a group of wicked men to join King DEMETRIUS, who reigned after ANTIOCHUS. Alcimus also accused the followers of Judas of slaying Demetrius's friends.

Demetrius then sent BACCHIDES with Alcimus to take vengeance on Judas and the Israelites. At first Bacchides sought to deceive Judas into thinking that he was on a peaceful mission, but Judas did not believe him. Some sixty people who did believe Bacchides were treacherously murdered. Alcimus contended for the high priesthood, and when some went over to Alcimus's side, Judas began to punish these traitors. Alcimus retreated to King Demetrius once again.

NICANOR was then sent to destroy Israel. He too sought to deceive Judas, who at first trusted him. When Judas learned the true nature of Nicanor's visit, battle ensued. Five thousand of Nicanor's army were killed and he himself died in battle. Demetrius, hearing of Nicanor's defeat, sent Bacchides and Alcimus again. A huge army accompanied Bacchides, and Judas's forces deserted him. In battle Judas was killed, and Jonathan his brother was chosen as his successor.

Jonathan and his forces left Jerusalem, and finally Alcimus was established in Jerusalem as high priest. However, it was a short-lived victory. He ordered the wall of the inner court of the sanctuary torn down and also destroyed the works of the prophets. While doing this he was smitten by a plague and lay paralyzed. He died shortly in great torment. After that, there was peace for two years in the land.

In 2 Maccabees, Nicanor is portrayed as more friendly to Judas than in 1 Maccabees. It should

be noted also that JOSEPHUS contradicts 1 Maccabees in teaching that Alcimus died before Judas was killed. Josephus called those who followed Alcimus renegades and said plainly that Alcimus was smitten by God in the plague that took his life. (See J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 236-39.) J. B. SCOTT

alcoholism. See DRUNKENNESS; SELF-CONTROL.

Alema al'uh-muh (A λεμοι, presumably from A λεμοα). One of a half-dozen cities in GILEAD in which the Gentile inhabitants had imprisoned some Jews (1 Macc. 5:26). When Judas MACCABEE was informed of the situation, he took the cities and slew their inhabitants (5:28-44). The exact location of Alema is unknown, but it has been identified with Alma (possibly the same as HELAM, 2 Sam. 10:16), on the plain of HAURAN.

Alemeth (person) al'uh-meth (עלמת H6631, possibly “concealment”). (1) Son of BEKER and grandson of BENJAMIN (1 Chr. 7:8; KJV, “Alameth”).

(2) Son of JEHOADDAH and descendant of SAUL through JONATHAN (1 Chr. 8:36; in 9:42, the father's name is given as JADAH [most Heb. MSS, “Jarrah”]).

Alemeth (place) al'uh-meth (עלמת H6630, possibly “concealment”). A Levitical city in the tribal territory of BENJAMIN (1 Chr. 6:60), also called Almon (Josh. 21:18). Identified with Khirbet Almit, 4 mi. NE of Jerusalem.

aleph ah'lef (from אֵלֶף H546, “cattle”). (1) The first letter of the Hebrew ALPHABET (א), with a numerical value of one. It is named for the shape of the letter, which in its older form resembled the head of an ox. Phonetically, the sound it represents is a glottal stop (a momentary closure of the glottis, as in the English interjection *oh-oh*, though English speakers do not perceive the separation of the two syllables as a sound).

(2) The letter א is regularly used as the symbol for CODEX SINAITICUS, a 4th-cent. Greek biblical MS.

Aleppo uh-lep'oh (Arab. *Ḥalab*). A city in northern Syria, about 30 mi. S of the Turkish border and 60 mi. E of the Mediterranean coast, and known as BEREIA in Hellenistic times. An ancient and important city, Aleppo was the capital of the kingdom of Yamkhad during the 2nd millennium B.C.

Aleppo Codex. A 10th-cent. MS of the Hebrew Bible, regarded by some scholars as the most reliable (though incomplete) Masoretic codex. See TEXT AND MANUSCRIPTS (OT).

Alexander al'ig-zan'duhr (Ἀλέξανδρος, “defender of men”). A name common from Hellenistic times. (1) ALEXANDER THE GREAT. See separate article.

(2) Alexander Balas, pretended son of the Seleucid King ANTIOCHUS IV. He overthrew DEMETRIUS I in 150 B.C. and was in turn supplanted by the latter's son, Demetrius II, in 145 B.C. These civil wars hastened the decline of Seleucid powers, and provided Jonathan, the brother and successor of Judas MACCABEE, with the opportunity of securing the high priesthood in Jerusalem (1

Macc. 10:1—11:19).

(3) Alexander Jannaeus, ruler of the Jews (103-76 B.C.). See HASMONEAN II.C.

(4) Son of SIMON of Cyrene (Mk. 15:21). Alexander and his brother RUFUS are mentioned here presumably because they were known to Mark's intended readers (in Rome?).

(5) A member of the high-priestly family, mentioned at the inquiry into PETER's preaching (Acts 4:6); otherwise unknown.

(6) The Jewish spokesman at the time of the riot in EPHESUS (Acts 19:33).

(7) An apostate from the Christian faith who, along with HYMENEUS, was "handed over to Satan to be taught not to blaspheme" (1 Tim. 1:20).

(8) A coppersmith who did PAUL great harm and opposed his message (2 Tim. 4:14). He could be the same person as #5, or alternatively as #6.

E. A. JUDGE

Alexander the Great. Born 356 B.C., son of Philip II of Macedon (MACEDONIA) and Olympias of Epirus; king of Macedon from his father's death in 336 to his own in 323 B.C.

I. Background. For 200 years prior to Alexander, the Greek republics had fallen within the sphere of influence of the Persians, whose Achaemenid kings held sway from the Aegean to the Indus and from Afghanistan to Egypt. Although victories such as at Marathon and Salamis secured some independence in the 5th cent., later in the 4th cent. Persian finance and diplomacy often prevailed. Many Greeks of ASIA MINOR remained under Persian rule throughout. Macedonia controlled the rich hinterland to the N of the AEGEAN, but was hitherto undeveloped and in the Greek view uncivilized, being ruled by local cavalry barons. Their king was elected by the army from among them. During Alexander's childhood, however,

Statue of Alexander the Great (reigned 336-323 B.C.).

Philip II subjugated the Greek peninsula. The pleas of Demosthenes were heeded too late to save (or, in the view of some, precipitated) the defeat at Chaeronea in 338 B.C., which left Philip leader of a confederacy of Greek states, ostensibly directed against Persia. Two years later, at the age of twenty, Alexander inherited this cause.

II. The conquest of the Persian empire. By 334 B.C. Alexander had firmly established his home base, overawed the Greeks to the S, and the northern peoples as far as the Danube. Crossing the Hellespont with some 40,000 men, he won his first victory over the Persians at the Granicus, which cleared the way to the Greek states of western Asia Minor, the object of his expedition. There is unfolded in subsequent events an ambition far more extensive. Having cut the Gordian knot, he could claim the promised lordship of Asia. Through the Cilician Gates he pressed down into the plains, on the road to Syria. Here the news reached him that DARIUS, the great king, concerned at the failure of

his satraps to stop the invader, was on his way from Babylon.

Greek nationalists in the homeland hoped that Alexander had at last over-reached himself, and Alexander himself must have been stunned when Darius actually appeared behind him, cutting off the retreat. His "Companion" cavalry, however, gave Alexander the day at Issus (333 B.C.). The royal women of Persia fell into his hands, and the heart of the empire lay open. Darius had escaped to recruit his strength in the E, but Alexander, instead of pursuing him, turned to the occupation of PHOENICIA and EGYPT, the bases of the Persian seapower that had long disrupted the Greek Aegean. The island of TYRE was taken in a remarkable siege; Alexander's mole now joins it to the mainland. In Egypt, Alexander founded ALEXANDRIA, the most famous of the many cities that took his name. In the Libyan desert he received divine honors as the new PHARAOH at the oracle of AMON.

It was only now that he committed his men to the course that was to change the world. In 331 he marched around the FERTILE CRESCENT to face the full might of Darius. At Gaugamela, across the TIGRIS, the great king was again defeated. The splendid capitals of the empire were the prize: BABYLON, the metropolis; SUSA, the seat of power; PERSEPOLIS, the treasury and mausoleum of the Achaemenids, its ruins still marking the drunken feast that burned it in a night; and ECBATANA, the summer seat of the Medes. Such a triumph and such spoils far exceeded any vengeance for old wrongs the Greeks on their distant frontier could have envisaged. For Alexander it was only a new beginning. He discharged his Greek mercenaries, and turned to the other half of the empire.

Darius retreated N and E, until he was murdered by his Bactrian satrap, whereupon Alexander

Sarcophagus scene of Alexander the Great on his royal stallion discovered at the royal necropolis of Sidon.

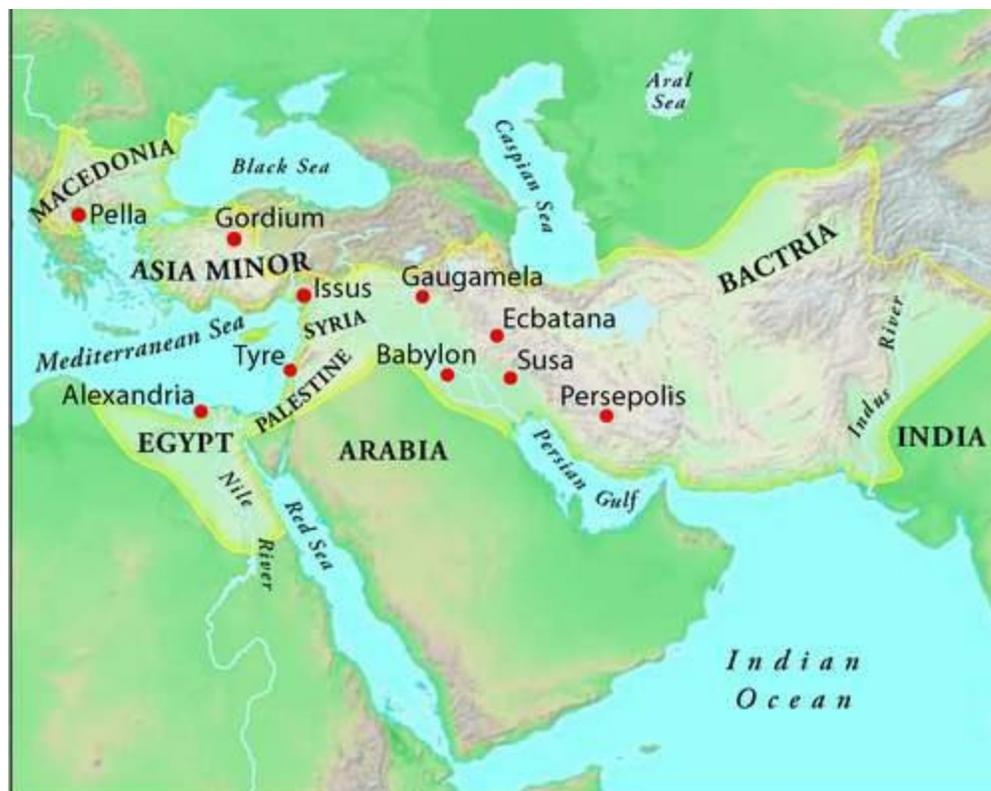

claimed the succession for himself. In two hard years' campaigning he subdued Bactria (modern Afghanistan and Kazakhstan) before passing down into the Indus valley (327 B.C.). Here he found that before he could reach the eastern ocean, which Greeks believed was the end of the world, he must traverse another great river-system, the Ganges. For once he was defeated: his men refused to go further. In retaliation Alexander marched them home to Babylon through the horrors of the Gedrosian desert of Iran, while his fleet opened up the neighboring coast. This inspired fresh ambitions of naval exploration: did the Caspian Sea lead out to the ocean to the N, and did Arabia represent another

India to the S? It was in the midst of plans for such expeditions that Alexander died of fever (or poison?) after a more than usually protracted round of drinking orgies.

III. Alexander and the gods. Throughout his career Alexander showed an intense interest in his connection with the gods. Doubts as to his paternity may have sharpened this concern; local political requirements may have encouraged his link with particular cults; and the range of his conquests stimulated comparison with Dionysus and Hercules. In the last year of his life he appears to have asked the Greek states to treat him as divine. While much of this may stem simply from his own or his admirers' attempts to distract attention from his personal defects and atrocities, it paved the way for the cult of the ruler, which time was to make fully acceptable to Greek thought. To Hebrew monotheism it was to become an increasingly unbearable provocation.

IV. Persian culture. Alexander shocked his Macedonian "Companions" by adopting the style of the Persian court, including the harem. He married a Bactrian princess, Roxane, and encouraged such unions amongst his officers and men. Persian nobles often were retained as satraps, and some integration of Persian and Macedonian forces was attempted, including the training of Persian youths in the Macedonian style of warfare. Alexander's motives may have included political necessity, a genuine admiration for the Persian nobility, and his own desire to rule as heir to Darius. To the Macedonians it was highly distasteful, and the source of much of the disaffection that dogged him. If Alexander worked for the unity of mankind (which many doubt altogether), he did not carry the day. His flamboyant style sufficed for gestures, but hardly for serious reform. Universalist ideas did grow up in the next century.

V. Alexander and Hellenism. Greek influence was already widespread in the E (Darius had a strong force of Greek mercenaries on his side throughout), but Alexander's triumphs insured it a thousand-year ascendancy, especially in Syria and Egypt. The heirs of SELEUCUS and PTOLEMY,

The empire of Alexander the Great.

two of his generals, firmly established the new way of life, and passed it on to the Romans. Even in Bactria and India, the Greek veterans, left behind in garrison-settlements, provided the basis for an empire that prevailed for two centuries. In Palestine the Hellenistic civilization met the determined reaction of those who preferred to follow another law, and so the conflicts of the Maccabean era and of the time of Christ belong also to the legacy of Alexander. See HELLENISM.

VI. Alexander and the Jews. The ancient commentators saw the leopard of Dan. 7:6 as Alexander; he is also the goat of 8:5, 21 (the ram being Darius), and the “mighty king” of 11:3. Alexander is named in 1 Macc. 1:1 as the conqueror who set up the division of power that led to the outrages of ANTIOCHUS Epiphanes. JOSEPHUS, writing in the late 1st cent. A.D. (*Ant.* 11 §§314ff.), tells the story of a visit by Alexander to Jerusalem, in which he pays respect to the high priest, having been warned to do so by God, who had assured him of victory in a dream. This visit is not now accepted as historical. In the Middle Ages a number of other stories from Jewish sources were popular, including Alexander’s walling up of the tribes of Gog and Magog, who waited to break out into the civilized world in the last days, and his discovery of the ten lost tribes of Israel beyond the Caspian. (See R. L. Fox, *Alexander the Great* [1973]; N. G. L. Hammond, *Alexander the Great: King, Commander and Statesman*, 2nd ed. [1989]; A. B. Bosworth and E. J. Baynham, *Alexander the Great in Fact and Fiction* [2000]; C. G. Thomas, *Alexander the Great in His World* [2007].)

E. A. JUDGE

Alexandria

Alexandra al’ig-zan’druh (Ἀλεξάνδρα). A HAS-MONEAN ruler, the only Jewish queen regnant other than the usurper ATHALIAH. Known in Hebrew as Salamzion (other forms are Salome, Salina, etc.; see *HJP, rev. ed.* [1973-87], 1:229 n. 2), Alexandra was the wife of Aristobulus I (104-103 B.C.),

and after his death became the wife of his brother Alexander Jannaeus (103-76 B.C.), apparently as the result of a LEVIRATE marriage. (According to some scholars, however, the wife of Aristobulus was Salome or Salina, and she is to be distinguished from the queen, Salamzion. Cf. T. Ilan in *JSJ* 24 [1993]: 181-90.) At the close of his turbulent rule, Alexander left the kingdom to his wife, advising her to make peace with the PHARISEES. During her rule (76-67 B.C.), the Pharisees achieved dominant power by being admitted to the SANHEDRIN for the first time (*Jos. Ant.* 13.12.1; 13.15.5; 13.16.1-2, 5-6). Her wise and peaceful rule quieted internal dissensions in the kingdom, and her reign was generally looked upon by the people as one of prosperity. A celebrated Pharisee, Simon ben Shetach, reputedly was the brother of Alexandra.

D. E. HIEBERT

Alexandria al'ig-zan'dree-uh. Capital of EGYPT during the Hellenistic and Roman periods. Alexandria was founded in 332 B.C. by the Macedonian conqueror ALEXANDER THE GREAT, and it was only one of many cities that bore his name. Alexander was in the midst of his destructive drive through the crumbling Persian Empire, an advance maintained and spearheaded by his superbly drilled Macedonian phalanx and its fine cavalry arm. Without adequate communications, he was successful largely because of the shock tactics of his assault on an ill-knit and loosely garrisoned, polyglot political system. Alexander needed bases and a network of control behind him as he drove deeper and deeper into E Egypt, strategically essential to the control of the Eastern Mediterranean and strategically vulnerable, requiring a strong garrison and firm government. A city and port on the NILE delta provided both, with harbor facilities in addition. The astounding Greek conquest of the Middle E brought unprecedented unity to a vast and ancient sector of the world, thus promoting the growth of Alexandria.

When Alexander died in 323 B.C., and PTOLEMY, one of his generals, took Egypt as his share of the succession, a Greek state was founded in Egypt. Alexandria became the seat of government in place of MEMPHIS, the last capital of the pharaohs. Ptolemy was aided not a little by his shrewd interception of Alexander's corpse, for which he built a magnificent tomb. The dynasty Ptolemy founded lasted three centuries. Fourteen monarchs of the name sat on the throne of Greek Egypt, and the last of the varied line was the famous CLEOPATRA, who almost divided the Roman empire before its time.

From the beginning Alexandria was cosmopolitan. Greeks and Jews in large numbers made it a goal of emigration. There was a large native Egyptian population. Rapidly becoming a great commercial center and a nodal point of communication like CORINTH, Alexandria was a terminal of the E Mediterranean sea routes, with canal links from the Nile to the Red Sea, and the dhow trade, which plied to the Malabar Coast and Ceylon. The city became the metropolis where E met W, where wealth inevitably accumulated, and where the ambitious, the able, and the cultured assembled. They gathered under the stimulus and encouragement of the first able members of the Ptolemaic line. (Cf. P. M. Fraser, *Ptolemaic Alexandria*, 3 vols. [1972].)

HELLENISM was born in Alexandria. The Museum, founded by Ptolemy Philadelphus, the second ruler of the dynasty, was one of the first great universities of the world. A "museum," in ancient parlance, was not, as in modern times, a collection of objects of art, rarity, and curiosity, but a center of culture, a "home of the Muses," as its name implies. The Alexandrian Museum was established in 280 B.C. on the advice of Aristotle's pupil Demetrius of Phalerum. Ptolemy gathered a band of men, who today would be called research scholars, from all parts of the Mediterranean and supported them by generous salaries to foster learning, academic discussion, and writing. The Caesars inherited the

Museum from the Ptolemies, and for centuries its band of learned men promoted the culture of the Greek and Roman world. The buildings, worthy of a city famous for its architecture, were splendidly furnished and had a great dining hall and lecture and seminar rooms.

In spite of the vicissitudes of cultural life in a politically turbulent city, and the fortunes of changing imperialism, the Museum pursued its active life for at least five centuries, and the preservation of much of the culture of the ancient world must be ascribed to its beneficent work. This invaluable function of conservation was shared by the great library of the city, also a foundation of the first two Ptolemies (see R. MacLeod, ed., *The Library of Alexandria: Centre of Learning in the Ancient World* [2000]; L. Casson, *Libraries in the Ancient World* [2001]). A series of notable scholars and literary men worked in this great institution and together established a Silver Age of Greek literature, whose forms and canons deeply influenced and inspired the literature of Rome, and through Rome the literature of Western Europe and the world.

It was in Alexandria, under the influence of the cultural and literary activity gathering around the Museum and the Library, that the scholars from the great Jewish sector of Alexandria produced the SEPTUAGINT (LXX), the Greek translation of the OT. The production of this version is one of the most significant events in the history of religion. The LXX is the subject of much legendary lore, and it is not known for certain how and when it was produced. It is sufficient to say that it

The so-called Column of Pompey in Alexandria dates between the 3rd cent. B.C. and the 3rd cent. A.D. (View to the W.)

probably appeared at intervals during the 3rd and 2nd centuries B.C., the work of unknown translators of unequal merit. The influence of the LXX in the history of world Judaism is beyond calculation. It played a major part in the growth of the intelligent Hellenistic Judaism whose exponents—men like STEPHEN, PHILIP, and PAUL—took Christianity to the world and preserved it from the narrowing influence of metropolitan Judaism. The LXX, of course, had currency and influence in wider spheres than Judaism and the Hellenistic synagogues. It familiarized thoughtful multitudes, to whom old forms of paganism no longer appealed, with the God of the Jewish faith and OT canons of righteousness. The fact that quotations from the Hebrew Scriptures in the NT are from the LXX shows that the Alexandrian translators had provided the early church with a Bible.

The same hothouse atmosphere of speculation, philosophy, and literary criticism that produced

the attempt to fuse Hebraism and Hellenism found its greatest exponent in the Jewish scholar PHILO JUDAEUS, a contemporary of Christ. This movement, with its elaborate and obtuse allegorizing, was a barren one, but it influenced a school of Christian theologians including CLEMENT OF ALEXANDRIA and his successor ORIGEN, whose speculative interpretations and extravagant “typology” has always found partisans in the church. For the most part, however, Jewish Alexandrianism was irrelevant to the emerging theology of Christianity, though some have thought that here lay the reason for the further instruction APOLLOS of Alexandria needed from PRISCILLA AND AQUILA (Acts 18:24-28). Others have thought that the epistle to the Hebrews and parts of the epistle to the Galatians (e.g., Gal. 4:24-31) show traces of Alexandrian hermeneutics. The fact that the synagogue of the Alexandrian Jews (Acts 6:9) in Jerusalem emphatically opposed Stephen’s plain interpretation of OT history shows that Christianity owed little to Alexandrian Jewish thought. Paul, in his person, doctrine, and writing, demonstrated that fusion of Judaism and Hellenism which the Jews of Alexandria and Philo’s school attempted to achieve but failed to discover.

The Jews of Alexandria reflected the spirit of the city in other ways than in their enthusiasm for literary culture and intellectual speculation. They constituted a turbulent section of the great city, ever prone to riot and contention with the Greeks, and frequently the victims of pogrom and repression. It was an explosive situation. In Alexandria the largest and most self-conscious section of the Jewish DIASPORA lived side by side with a Greek community notorious for its unruliness. The Jewish community claimed to be coeval with the city itself and had received special privileges and concessions from the first Ptolemies. They had rapidly overflowed the NE quarter, their statutory ghetto, and when in A.D. 42 the bungling governor Flac-cus declared alien all the Jews domiciled in Greek districts of Alexandria, no fewer than 400 business establishments were destroyed by the riotous mob. The anti-Semitism was probably inspired by the manner in which the Jews were dominating the trade and commerce of the city. There is some evidence that they controlled the wheat export trade, and since Egypt was Rome’s granary, vast tonnage of grain passed through the Alexandrian docks. It was a grain ship of Alexandria on which Paul sailed to Rome (Acts 27:6). Flaccus, no doubt, was encouraged by CALIGULA’S well-known hostility to the Jews, an attitude that occasioned Philo’s embassy to Rome, but such outbursts must find base and impetus in popular discontent. It was a dangerous situation relieved only by the mad, young emperor’s early and opportune death. (On the significance of Alexandria for Judaism, cf. V. Tcherikover, *Hellenistic Civilization and the Jews* [1961], 320-328, 409-415.)

CLAUDIUS, learned and conciliatory, succeeded Caligula, and the pogrom was the occasion of a wordy letter to the Alexandrians in which, with appeal and threat commingled, Claudius sought to reduce the city to peace. In the course of the document he mentions “Jews who come down the river from Syria.” This may be the first indication of Christian missionaries arriving in Alexandria and becoming there, as elsewhere, a source of debate and unrest in the Jewish community. Apart from this, there is no certain knowledge of how the Christian religion reached Alexandria.

Alexandria probably housed a million people by the end of the 1st cent. B.C. The city was worthy of the reputation that wealth, trade, and a cultured

Alexandria's modern lighthouse and harbor. (View to the SW.)

monarchy had given it. The Romans inherited from the Ptolemies a city of palaces and public buildings unique in the world, interlaced with parkland like some ancient Washington or Canberra. The royal palace, where Julius CAESAR first met CLEOPATRA, occupied a whole section of the level waterfront, dominated by the Pharos, the mighty 590-ft. lighthouse built for the second Ptolemy by Sostratus of Cnidus. The temple of Serapis was accounted one of the finest buildings in the world. The temple of Pan is described by the geographer Strabo as an artificial rock mound like a pine cone, from the top of which was a panoramic view of the whole flat, geometrically planned city. Ancient writers mention many other magnificent buildings. The architectural magnificence of Alexandria, its boulevards, motley crowds, industry, culture, trade, crowded dockland, and busy roads and waterways made Alexandria more like some modern metropolis than almost any other city of the 1st cent. Its active life is as open to modern view as that of Rome itself. Rome left a literature in poetry, prose, and multitudinous inscriptions. Alexandria also left considerable literature, but the papyri of Egypt (see PAPYRUS), with their astounding revelation of common life in town and countryside over the many centuries of Alexandria's preeminence, give as vivid a view of the teeming life of the delta port and metropolis as any source which the ancient world has to offer. (See further W. V. Harris and G. Ruffini, eds., *Ancient Alexandria between Egypt and Greece* [2004]; A. Hirst and M. Silk, eds., *Alexandria: Real and Imagined* [2004].)

all. The word *all* (which renders a variety of Hebrew and Greek terms) cannot in every case be taken in an absolute sense. Its real meaning can usually be determined from the context. Frequently it means a “large number” or a “great part of,” as in Lk. 2:1 (KJV, “that all the world should be taxed”; NIV, “that a census should be taken of the entire Roman world”; cf. also Acts 11:28; 19:27; 24:5). There are also a number of puzzling expressions involving the use of “all” in the KJV that are rendered more clearly in modern translations. In Jdg. 9:53, the KJV reads, “A certain woman cast a piece of millstone upon Abimelech’s head, and all to brake his skull.” What does “all to brake his skull” mean? Does it express the purpose of the woman or the result of her action? The Hebrew means literally “crushed his skull” (cf. NRSV). To understand what the KJV translators intended, one must know that in Old and Middle English “all to” was regarded as an adverb meaning “completely” or “entirely.” A different example from the NT is 1 Cor. 11:5, “that is even all one as if she were shaven,” where the NIV has, “it is just as though her head were shaved.” H. A. HANKE

(Alla, Deir. See DEIR (ALLAH.

Allammelech uh-lam’uh-lek (תְּרֵבִינִת הַמֶּלֶךְ H526, “terebinth of the king”). KJV Alammelech. A town in the tribe of ASHER (Josh. 19:26). It was probably located in the southern part of the tribe’s territory, but the precise site has not been identified.

allegory. The corresponding Greek verb (*allēgoreō* G251, from *allos*, “other,” and *agoreuō*, “to speak”) originally meant “to speak in a way other than what is meant.” The English term *allegory* usually refers to a device whereby a writer conveys hidden, mysterious truths by the use of words that also have a literal meaning. Even if the writer did not intend a hidden meaning, the allegorical method is a way of interpreting a poet, a story teller, or a Scripture passage in such a way that the interpreter sees a mysterious meaning the writer may not have intended.

This view, that there is a deep meaning not intended by the writer, accompanies Scripture INTERPRETATION more often than it accompanies the interpretations of other writings, because it is understood by many that the Holy Spirit might well have conveyed to future generations, as he inspired the writers of the Bible, meanings that were not at all evident to the writers themselves. Spencer’s *Faerie Queen*, Swift’s *Tale of a Tub*, and, above all in English literature, Bunyan’s *The Pilgrim’s Progress* are allegories. It is evident that their authors themselves intended deeper meanings than are seen on the surface. In Bunyan’s allegory, thought up and written down for his own devotional exercise, the people whom Pilgrim meets on his journey, the obstacles he encounters, and the journey’s final culmination are all intended to tell a deeply religious story about a person’s journey through this life and on into heaven—a story that runs alongside the literal story.

Because, in a given allegory, one often has repeated instances of a deeper meaning attaching to a tale, allegory has often been called “a sustained metaphor.” The hidden meaning is not as obvious as in a simile, where something is said to be like something else (e.g., “As the deer pants for streams of water, / so my soul pants for you, O God,” Ps. 42:1). A metaphor is more subtle than a simile, as when Jesus says of Herod, “Go and tell that fox...” (Lk. 13:32). The metaphor is a less obvious comparison, but often more vivid and more direct and, therefore, more communicative than a simile. An allegory, which is a sustained metaphor, often contains repeated strokes in which a deeper meaning is drawn, along with a story that has also a literal meaning.

A PARABLE is at least somewhat sustained, as a full-fledged allegory is; but a typical parable gathers a truth up in order to teach one important matter, whereas an allegory is not unified to that extent and teaches numerous hidden truths throughout the story. The fable, used especially among the ancient Latins, is similar to the parable in being a sustained story about a fictitious event, but it often treats things and animals as though they were persons. Some consider Jdg. 9:8 a fable, where JOTHAM says, “One day the trees went out to anoint a king for themselves. They said to the olive tree, ‘Be our king.’”

An allegory, since it appeals to the imagination, is different from an analogy, which appeals to reason. An analogy presented as a puzzle is a RIDDLE (cf. Jdg. 14:14; Ezek. 17:3-21). An allegory is also different from TYPOLOGY, which succeeds when there are earlier things and places, and even persons, that are similar to later ones and are, therefore, thought of as meaningful anticipations of the later ones (the book of Hebrews abounds in these). In an allegory the hidden meaning is inherent and does not depend on certain later historical developments.

I. Allegory in the Bible. There is some use of allegory in the OT itself. More than anywhere else in that body of literature, allegory is found in the book of Ezekiel. That prophet was a poet, and he preferred to say or act out something that had a deeply spiritual meaning, instead of writing down prose that had simply a literal significance (see J. Kenneth Grider in *Beacon Bible Commentary*, 10 vols. [1964-69], 4:566ff.).

Many Jewish and Christian scholars have supposed that the SONG OF SOLOMON is an allegory. Ancient Jewish scholars usually interpreted this book as depicting God’s love for Israel. Christian scholars have often interpreted it as an allegory depicting Christ’s love for his church. It has been argued that this way of interpreting that beautiful love story, on the part of both the rabbinical and Christian scholars, arises out of a Greek-influenced notion that the human body, with its sexual desires, is sinful and that the story, therefore, could not mean what it says—that it describes the attraction between a man and a woman. (Others believe that although the focus of the book is on human love, it also functions as a picture of the love between God and his people.)

The NT contains perhaps still more allegory than does the OT. Jesus’ references to himself as “bread” (Jn. 6:35) and as a “vine” (ch. 15), for example, may be understood as brief allegories, although some such references are hardly more than metaphors. Jesus might have used allegory in his own interpretations of some of his parables (e.g., the sower, Matt. 13:18-23; Mk. 4:14-20; Lk. 8:11-15). His interpretations of parables, in which something literal often has another and deeper meaning, are not allegories as such. They are clarifications of parables and are intended to teach truth plainly, not obscurely, as is often done in allegories. Jesus did not interpret the OT allegorically (as the contemporary PHILO JUDAEUS did), with the possible exception of his reference to “the stone the builders rejected,” at the end of the parable of the wicked husbandmen (Matt. 21:42; Mk. 12:10; Lk. 20:17-18).

The book of Revelation employs allegory, however, where such references as “woman” (Rev. 12:1), “creatures” (4:6; 19:4), and a “white horse” (6:2; 19:11) must be interpreted as having a deeper-than-literal meaning. So many allegories, in fact, appear in this book, that Martin Luther, who preferred plain teachings to obscure ones, did not include Revelation among the first-class books of his canon.

The apostle PAUL did not resort to allegory frequently, as Philo did earlier and as ORIGEN did later, but many believe that it is found in his writings. In a well-known passage in Galatians he refers to Abraham’s “free” wife, Sarah, and his “slave” wife, Hagar, and says, “These things may be taken

figuratively [*allēgoroumena*], for the women represent two covenants...Now Hagar stands for Mount Sinai in Arabia” (Gal. 4:24-25). According to some scholars, however, Paul’s method here is better described as typological.

Another example is Paul’s interpretation of the law that forbids the muzzling of an ox as teaching that the Christian church should support its ministers financially. After stating that Christ’s ministers have the right to live by their service, he gives as authority for his view Moses’ law that the ox should not be muzzled as it treads out the grain (Deut. 25:4). Paul even appears to deny the literal sense of the Mosaic law on this matter. He asks, “Is it for oxen that God is concerned?” (1 Cor. 9:9 NRSV) He implies “No” by another question: “Or does he not speak entirely for our sake?” Then he puts it into a positive statement, adding, “It was indeed written for our sake” (9:10). (Note, however, that the broader context of the OT passage cited by Paul focuses on such topics as not taking advantage of a hired man, allowing the poor to take part of one’s harvest, and being humane when punishing criminals, Deut. 24:14-15, 19-21; 25:3.)

There may be an instance of allegory when Paul, referring to the rock from which the Israelites drank in the wilderness, explains that the rock was Christ (1 Cor. 10:4). Some scholars question whether this is an allegory because Paul might have meant that Christ really was the one who sustained them at that time. Yet he is called a “rock,” and this figure may be considered allegorical.

Paul and other NT writers (esp. the writer of Hebrews) often use typology, as was mentioned earlier, which is similar to allegory, but different in that something referred to in the OT, such as Egypt, the Jordan, or Canaan, means more than what it does literally, and is symbolical of (or a type of) teachings on such matters as sin and grace which appear in the NT.

II. Extrabiblical allegory. No one knows just when the interpretation of literature by the allegorical method of discerning hidden meaning first began, but it was at least several centuries before the Christian era. Among the earliest known usages of this method are those connected with interpretations of Homer. Theogenes of Rhegium (c. 520 B.C.) was probably the earliest Homeric allegorist.

Homer had talked of battles, injustices, immoralities, and other imperfections among the gods, and as the Greeks became more ethically sensitive, they began to interpret Homer allegorically, so as to make him more palatable. Plato was aware of such interpretations. In the *Republic* (378-79), speaking of the battles of the gods in Homer, he says that “these tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not.” He adds, “For the young person can not judge what is allegorical and what is literal...therefore it is most important that the tales which the young first hear should be models of virtuous thoughts” (trans. B. Jowett, *The Dialogues of Plato*, 4th ed. [1953], 2:223). Plato is aware, then, of the allegorical interpretation of Homer, and of other Greek poets for that matter, but he does not try to save them by any such device. He says, simply, “Then we must not listen to Homer” (ibid., 2:224).

The poetry of Homer, which was the oldest literature the Greeks possessed, became quasi-sacred for the Greeks, and many of them, especially the STOICS, tried to salvage such literature by supposing that it did not mean what it said, and that it contained instead hidden meanings that were deeply moral and ennobling. It was popular to be known as teaching what Homer taught, so the Stoics interpreted Homer allegorically to make him not only morally palatable, but also to bring him into harmony with their own philosophy. (See L. Brisson, *How Philosophers Saved Myths: Allegorical Interpretation and Classical Mythology* [2004]; I. Ramelli and G. Lucchetta, *Allegoria*, 3 vols. [2004-].)

A Jew by the name of Aristobulus, who lived during the early half of the 2nd cent. B.C., was probably the earliest allegorist of the OT (see ARISTOBULUS #9). He was confident that Moses had taught what Plato and other Greek philosophers later advocated (portions of Aristobulus's work have survived in EUSEBIUS, the 4th-cent. historian). In some of the APOCRYPHAL books there is allegory, as in Wisd. 16, where the daily MANNA by which Israel had been fed was taken to refer to God's people being fed upon God's word. Better known is the fact that Philo of Alexandria (49 B.C.-A.D. 20) allegorized the OT to harmonize it with Plato and other Greek philosophers. He "summoned to his aid, as the solvent of all problems, the system of allegorical interpretation" (J. Drummond, *Philo Judaeus* [1888], 18). A real extremist in this matter, Philo thought that while the divine Scriptures contain a literal sense, that sense is not as important as its spiritual, mystical meaning. Just as our bodies are less important than our souls, so, for Philo, the literal meaning is less important than the figurative.

While JUSTIN MARTYR, as a Christian, uses the allegorical method of interpretation in order to make the OT and NT teach Greek philosophy, it remained for CLEMENT OF ALEXANDRIA (c. 150-215) and his successor ORIGEN (c. 185-254) to capitalize upon this method for commenting on the Scriptures. Along with baptizing some of their Platonic views into Christianity (e.g., Origen's view of the soul's preexistence), they used the method to baptize Judaistic faith, especially in the prophetic and the poetic books, into Christianity (see Clement's *Stromata* 7.16 in *Ante-Nicene Christian Library* 2 [1897]; and Origen's *Concerning Principles*, Books 4-5, in *ANF* 4:349ff.).

Until Luther, Origen and his like prevailed. Indeed, it was often a far more puerile allegorizing of Scripture that prevailed. The School of Antioch sounded alarms against the method, but such alarms were seldom heeded. JEROME seemed to be aware of the divorcement from Scripture that such interpretation could produce, and he said many unkind things about the allegorical method used by Origen and others. Yet he resorted to this method frequently, even when he had no important reasons for doing so. Origen often had reasons for allegorizing that were philosophically important to him. Jerome would allegorize for purely fanciful and frivolous reasons (cf. F. Farrar, *History of Interpretation* [1886], 222ff.).

AUGUSTINE (354-430) likewise had sound things to say about rules for interpreting Scripture, and yet he seemed oblivious to his own rules in his actual comments on Scripture. He was even more fanciful than Jerome in his allegorizing. On the theory that nothing in Scripture could possibly oppose his own theology, and what he considered Christian orthodoxy, he fit Scripture into his own scheme by mystical interpretations.

With all the acumen of Thomas Aquinas (1225-1274) as a theologian, he was like the Scholastics in general, including his teacher, the encyclopedic Albert the Great, in fanciful flights of allegory in Scripture interpretation. Just after the time of Aquinas, the little known Nicholas of Lyra exegeted the Scriptures with real respect for the literal sense. This method was little heeded, and not until the Reformation itself was there a real breaking of the stranglehold of the allegorical method upon the church's interpretation of Scripture. (However, cf. M. Silva, *Has the Church Misread the Bible?* reprinted in *FCI*, 32-61.)

As is well known, Martin Luther (1483-1546) did far more than anyone up to his time to break down the traditional use of allegory in Scripture interpretation. Only one or two of the Scholastics had taken the pains to learn Greek and Hebrew well. Luther, however, knew the languages and had a doctoral degree in the Holy Scriptures. He not only translated the entire Bible into German (NT, 1522; OT, 1534), but he also wrote many commentaries. In these, he often resorted to allegory, especially to see Christ referred to in Genesis and other OT books such as the Psalms; but for the most part he advanced and supported the method of interpreting Scripture from the standpoint of what is in the grammar and the historical situation in which the passage is set. John Calvin (1509-1564), more consistent than Luther, avoided the allegorical method. He helped greatly in establishing the tradition that downplays this method and emphasizes what is known as grammatico-historical exegesis.

J. K. GRIDER

alleluia. See HALLELUJAH.

alliance. A close association or formal agreement between nations or other groups. The concept is expressed in Hebrew with various terms, such as *ḥābar* H2489, “to bind, unite” (e.g., Gen. 14:3; 2 Chr. 20:36), *ḥātan* H3161, “to combine, join affinity” (as in marriage, 2 Chr. 18:1; 1 Ki. 3:1), *bērît* H1382, “covenant,” with the verb *kārat* H4162, “to cut [i.e., make] a covenant” (Gen. 15:18; 21:27). See COVENANT.

I. Nature and confirmation. Alliances are akin to covenants, although the former apply more to the political and military and the latter to the religious and personal. Alliance implies reciprocal action. It involves obligations, risks, protection, and rewards. Because of the anticipated threat of religious contamination by cults of Canaanite neighbors, MOSES issued a law prohibiting Israel's alliance with them (Exod. 34:15-16; Deut. 7:1-6). The manner of making alliances varied, but most of them had certain factors in common, such as oral agreement of mutual protection, oaths, exchange of gifts, eating together, and often intermarriages.

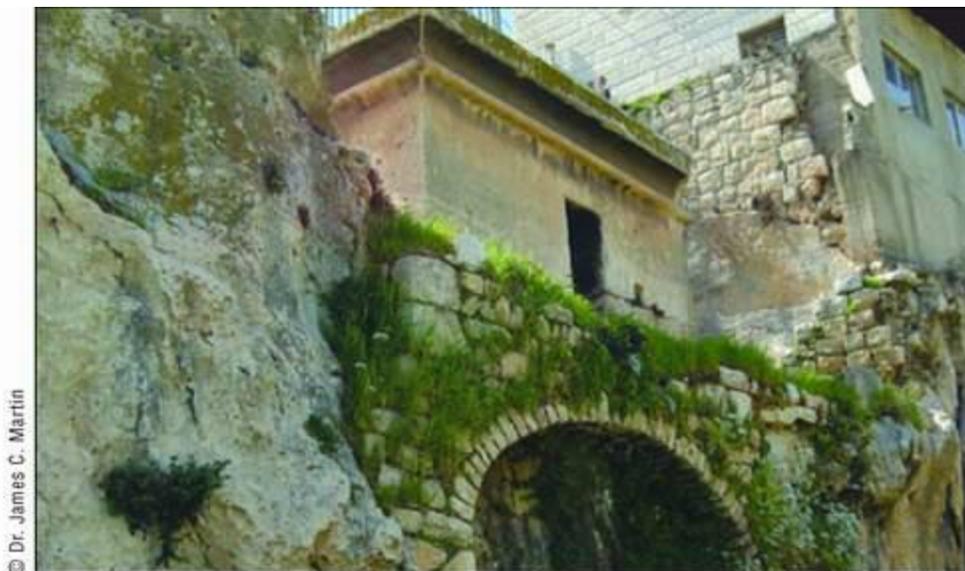

II. Military and political incidents. The earliest record of a Hebrew alliance is that between ABRAHAM and three AMORITE chieftain brothers, MAMRE, ESHCOL, and ANER (Gen. 14:13). Later Abraham made an alliance with ABIMELECH, king of GERAR (21:22-34). Likewise ISAAC and King Abimelech made an alliance, from which it is said that BEERSHEBA received its name (26:26-33).

JACOB and LABAN made a divisional covenant whereby GALEED was established and enclosed by a heap of stones as the boundary between Israel and Syria (31:44-54). Moses married a KENITE woman and formed an alliance with the Kenites that lasted for generations (Exod. 18; cf. Num. 10:29-31; Jdg. 1:16; 4:11; 5:24; 1 Sam. 15:6). The Gibeonites (see GIBEON) tricked JOSHUA into making an alliance with them, and the Israelites honored it even after learning of the deception (Josh. 9).

DAVID, while an exile in PHILISTIA, made an alliance with King ACHISH by which he received ZIKLAG for his military exploits (1 Sam. 27:5-12). He later formed an alliance with ABNER, resulting in the union of all the tribes under David (2 Sam. 3:12-21). In the successful expansion of his kingdom, David secured his holdings by forming alliances with his neighbors, such as HIRAM of TYRE and King Tou (Toi) of HAMATH (2 Sam. 5:11; 8:9-12).

III. Marriage alliances. These were formed by kings for political reasons. Such intermarriages sealed alliances, fostered good relationships, and were a guarantee to loyalty. The intermarriage of royalty was an approved custom in the context of political alliances. David had twenty or more wives and concubines, of which two or more were foreign princesses (2 Sam. 3:2-5; 5:13-16). “Solomon made a marriage alliance with Pharaoh king of Egypt” and with many other neighbor countries (1 Ki. 3:1 NRSV; 9:16; 11:1). OMRI and ETHBAAL formed a Phoenician-Israelite alliance and ratified

G. B. FUNDERBURK

Remains of a necropolis from about the 9th cent. B.C. The lower flat-roofed structure cut out of bedrock was a tomb memorial that once had a pyramid roof. It is usually referred to as the Tomb of Pharaoh's Daughter. It is by the marriage of Prince AHAB to Princess JEZEBEL (16:23-31). JEHOSHAPHAT “made a marriage alliance with Ahab” (2 Chr. 18:1). Both Israel and Judah made alliances with Aram (1 Ki. 15:15-20; 20:30-34). Three southern kings formed alliances with Assyria (2 Ki. 16:5-9; 23:29-33). HEZEKIAH and ZEDEKIAH allied with Babylon (2 Ki. 20:12-16).

Allogenes Supreme a-loj'uh-nee-z. A Gnostic apocalyptic discourse preserved in the NAG HAM-MADI LIBRARY (NHC XI, 3). It consists of revelations that the female deity Youel gave to Allogenes (Gk. *allogenēs* G254, meaning “of another race, foreigner”), who in turn relates them to his son Messos. This work has affinities with other tractates, such as the *Three Steles of Seth* (NHC VII, 5), and contains much philosophical language. It speaks of God as “the Unknown One” and as “the perfect Triple Power.” While the Coptic codex itself is dated A.D. 300-350, the original Greek work was composed perhaps a century earlier. It is apparently cited by Porphyry in his biography of Plotinus.

(For an English trans., see *NHL*, 490-500.)

Allom al'om. KJV Apoc. variant of ALLON (1 Esd. 5:34).

Allon al'on (אלון H474, “oak”). (1) Son of Jedaiah and descendant of SIMEON (1 Chr. 4:37); included in the genealogy of Ziza, a clan leader.

(2) KJV rendering in Josh. 19:33, where modern translations, correctly, have “the oak” (NRSV) or “the large tree” (NIV).

(3) One of SOLOMON'S servants whose descendants returned from exile under ZERUBBABEL (1 Esd. 5:34 NRSV [KJV, “Allom”]). According to a conjecture, the name here should be *Amōn*; see AMON #3.

Allon Bacuth al'uhn-bak'uht (אלון בכות H475, “oak of weeping”). TNIV Allon Bakuth. The burial site of DEBORAH, REBEKAH'S nurse, somewhere in the vicinity of BETHEL (Gen. 35:8). Some modern scholars allege that the text confuses this person with the later Deborah who used to hold court under a palm tree “between Ramah and Bethel” (Jdg. 4:5). The confusion is only in the mind of critics. One may infer with Luther that the burial of this servant merits the attention of the writer because of the way she served and advised JACOB.

W. C. KAISER, JR.

allotment. This English term (rendering such Heb. nouns as *gôrāl* H1598, “lot” which is cast, and *maḥālōqet* H4713, “share” of property) is used primarily in reference to the allocation of Palestine to the tribes of Israel (Josh. 15-17). Such practice stems, not from the land's originally communal ownership, as is sometimes alleged (*IDB*, 1:85; R. de Vaux, *Ancient Israel* [1961], 165), but from its divine ownership (Josh. 22:19); the human residents were “aliens” and “tenants” before God (Lev. 25:23). Even as God chose Israel for his inheritance (Exod. 19:5; Deut. 4:20), so he in turn became the “portion” of his people (Pss. 16:5; 73:26). Specifically, he promised to the seed of ABRAHAM the land of Canaan (Gen. 13:15; 17:8; cf. Josh. 21:43) and then provided for its distribution to their tribes and families (Num. 26:53; 33:54). Precise amounts depended upon the size of each group (26:54); but assignments were to be made by lot (26:55-56; cf. Josh. 16:1; 17:1), indicative of God's ultimate control (Prov. 16:33; Isa. 34:17). See LOTS.

MOSES before his death simply distributed TRANSJORDAN to the two and one half tribes upon their own request (Num. 32:33; cf. their borders in Josh. 13:15-32); JOSHUA, however, assisted by ELEAZAR and the tribal chieftains, subsequently divided W Palestine among the remaining nine and one half tribes by lot, as God had commanded (Josh. 11:23; 12:7; 13:7; 14:1, 2; cf. Num. 34:13, 16-29). LEVI received no land, since God's offerings were their inheritance (Num. 18:20; Deut. 10:9; Josh. 13:14; cf. their forty-eight cities, assigned by lot, Josh. 21; 1 Chr. 6:34-81), but the tribe of JOSEPH had been divided into the two tribes of EPHRAIM and MANASSEH (Josh. 14:4). Joshua made final allotments to the seven remaining tribes (18:11—19:48), on the basis of a land survey conducted by a special commission composed of three representatives from each tribe (18:2-10).

No reallocations are recorded in Scripture. (Ezek. 24:6 appears to discuss merely a possible exemption from exile, on the basis of lots.) Lands were not to be sold permanently (Lev. 25:23); and alienated properties were subject to redemption within the family (v. 25), and were to revert to their original owners at the JUBILEE YEAR (vv. 8-10). Even upon the default of male heirs, inheritances

were to be kept within the family and tribe (Num. 27:8-11; 36:7-9). In the face, however, of extortion and conquest (1 Sam. 8:14; Isa. 5:8; Mic. 2:2), the prophets envisioned a future reallocation (Mic. 2:5; cf. E. Kraeling, *Commentary on the Prophets* [1966], 2:211), especially in messianic times (Ezek. 45:1; 47:22; 48). (Cf. further *NIDOTTE*, 1:840-42; 2:162-63.) See also INHERITANCE.

J. B. PAYNE

alloy. See METALS AND METALLURGY.

Almighty. This English term is often used to render Hebrew *šadday* H8724, which occurs in the OT forty-eight times (thirty-one of these in the book of Job), either alone or in combination with ʾēl H446, “God.” The Greek term *pantokratōr* G4120 occurs in the NT ten times (nine of these in Revelation). No satisfactory interpretation of the root meaning of *šadday* has been found. One widely accepted theory connects it with the Akkadian word for “mountain,” which is sometimes used as an epithet of some of the gods. In ancient times the symbol of the mountain often was used to point to the power and majesty of a deity. According to Exod. 6:2-3, the worship of Yahweh began with Moses, and in the period of the patriarchs God was known as EL SHADDAI (Gen. 17:1; 28:3; 35:11; 43:14; 48:3; 49:25; Exod. 6:3; Num. 24:4, 16; Ruth 1:20-21; Job 5:17; Pss. 68:14; 91:1; Isa. 13:6; Ezek. 1:24; Joel 1:15; et al.). The NIV also uses “Almighty” to translate the name *Sabaoth*. See GOD, NAMES OF; LORD OF HOSTS. S. BARABAS

Almodad al'moh'dad (אלמודד H525, possibly “God is loved”). Eldest son of JOKTAN and descendant of SHEM (Gen. 10:26; 1 Chr. 1:20). He was presumably the eponymous ancestor of a S Arabian tribe (see *ABD*, 1:160-61).

Almon al'muhn (עלמון H6626, possibly “signpost”). See ALEMETH (PLACE).

almond. The almond tree (*Prunus amygdalus communis*) was common in Palestine in JACOB'S days (Heb. *šāqēd* H9196, Gen. 43:11), probably introduced into Egypt when JOSEPH was governor. This is how the children of Israel were able to use almonds as models for the cups of the golden lamps (Exod. 25:33-36). AARON'S ROD that budded and produced almonds (Num. 17:1-8) was probably brought from Egypt in the exodus. There is a play on the Hebrew word in Jer. 1:11-12, based on the fact that the flowers of the almond appear long before the leaves. Jeremiah said, “I see the branch of an almond tree,” to which the Lord responded, “You have seen correctly, for I am watching [from *šāqad* H9193] to see that my word is fulfilled.” The blossoming of the almond tree pictures old age in Eccl. 12:5 because the flowers, which appear in

In the biblical world an almond tree in blossom was a reminder of the white hair that comes with old age.

midwinter in Palestine, look white from a distance. The Hebrew word *lûz* H4280 (Gen. 30:37; KJV, “hazel”) also refers to the almond tree, which gave its name to the city of Luz (later Bethel). (Cf. *FFB*, 90–90.) See also FLORA, under *Rosaceae*.

W.E. SHEWELL-COOPER

Almon Diblathaim al'muhn-dib'luh-thay'im (עַלְמֹן דִּבְלַתַּיִם H6627, possibly “signpost of the [double] fig cakes”). A stopping place in the wilderness journeys of the Israelites (Num. 33:46–47) in MOAB. It is usually identified with BETH DIBLATHAIM (Jer. 48:22).

alms, almsgiving. Our English word *alms* (derived from Gk. *eleēmosynē* G1797, “pity, charity donation”) refers to benevolent giving for the relief of the poor. Only in the NT is there direct mention of the giving of alms. In the KJV *eleēmosynē* is rendered “alms” twelve times and “almsdeeds” once (Acts 9:36; “acts of charity” RSV). In Matt. 6:1 the true reading is *dikaiosynē* (“righteousness” ASV; “piety” RSV). The verse properly is not limited to “alms,” but is introductory to the three exercises commended: almsgiving (vv. 2–4), prayer (vv. 5–15), and fasting (vv. 16–18).

I. In the OT. Although almsgiving as such is not explicitly mentioned in the OT, the duty of compassionate aid to the poor is strongly emphasized throughout. It is difficult to make a sharp distinction between general benevolence and almsgiving. The Israelite was enjoined to be generous, “to be openhanded toward your brothers and toward the poor and needy in your land” (Deut. 15:11). The law required that the gleanings of the field, the olive tree, and the vineyard should be left for the poor, the sojourner, the fatherless, and the widow (Lev. 19:9–10; 23:22; Deut. 24:19–22). Every Israelite was allowed, as a special consideration for the poor and hungry, to eat his fill from a grain field or vineyard when passing by it (Deut. 23:24–25). Every third year the tithe of the produce was to be given to the Levite, the sojourner, the fatherless, and the widow (Deut. 14:28–29). The fields were to be left fallow every seventh year so that “the poor of your people may eat” (Exod. 23:10–11).

The motives for such generosity to the poor were religious: obedience to God’s command, remembrance of his mercies in the exodus, and the hope of reward (Deut. 15:2–5; 24:19–22). It was recognized that there would always be the poor in their midst (15:11), but poverty was the exception rather than the rule when the law was obeyed (15:3–6). Since Israel was largely an agricultural

people, POVERTY was generally the result of indolence (Prov. 20:4; 24:30–34). Beggary was a punishment pronounced upon the house of ELI (1 Sam. 2:36) and a curse invoked upon the children of the persecutor (Ps. 109:10).

JOB was famed for his generosity to the poor (Job 29:12–17; 31:16–23). Proverbs pictures kindness to the poor as an index of character (Prov. 14:21; 19:17). The prophets condemned heartless oppression of the poor and cited it as a cause for impending judgment (Isa. 3:14; 10:2–3; Amos 8:4–8).

II. In the intertestamental period. Following the EXILE, greater emphasis began to be placed on the value of almsgiving. Poverty was widespread, and it was regarded as pious to meet the needs of the poor. Begging became a profession. Gradually almsgiving lost the motive of inner compassion and gratitude to God and was regarded as a meritorious act with sacrificial and atoning values.

This view finds clear expression in the APOCRYPHA. Sirach taught, “Almsgiving atones for sin” (Sir. 3:30; cf. 29:12), while Tobit said, “Almsgiving delivers from death, and it will purge away every sin” (Tob. 12:9). Prayer, fasting, and almsgiving were held to be “righteousness,” almsgiving being the foremost righteous act. In the SEPTUAGINT the Hebrew word for “righteousness” (*Ṣēdāqā* H7407) is often rendered “alms” (*eleēmosynē* G1797). In rabbinical literature the phrase *ntn ṣdqh* (“to give [do] righteousness”) corresponded to Gk. *didonai eleēmosynēn* (“to give alms”; see TDNT, 2:486). This view of almsgiving as righteousness prevailed among the Jews in Jesus’ day, and spread also among the Christians, accounting for the change from *dikaïosynēn* (“righteousness”) to *eleēmosynēn* (“alms”) in many MSS at Matt. 6:1.

In support of this view, appeal is sometimes made to Prov. 11:4, but the next two verses make clear that here “righteousness” does not mean “alms.” Support for the notion that alms have saving merit is sometimes claimed from Dan. 4:27, where Daniel says to Nebuchadnezzar: “Renounce your sins by doing what is right, and your wickedness by being kind to the oppressed.” However, he is commanded to cease his sinful practices and to practice justice, not so that his sins may be thereby forgiven, but so that the humiliating judgment that will teach him wisdom may be delayed (cf. E. J. Young, *The Prophecy of Daniel: A Commentary* [1949], 108–9). In Ps. 112:9 (quoted by Paul in 2 Cor. 9:9) “alms” are equated with “righteousness,” not as justifying a person, but as an outward expression in right conduct, having lasting spiritual values.

There is almost complete silence concerning almsgiving in the DEAD SEA SCROLLS. Apparently this was due to the communal manner of life. The silence need not mean that the Qumran community did not believe in or practice almsgiving.

III. In the NT. The teaching of Jesus concerning alms must be viewed in the light of contemporary Pharisaic views and practices. His words in Matt. 6:2–4 assume that his followers will practice almsgiving. Jesus and his disciples did so (Jn. 13:29). He did not condemn aiding the poor openly, but rebuked ostentatious charity for the purpose of gaining praise. The injunction “do not announce it with trumpets” (Matt. 6:2) is not to be taken literally, for which practice there is no evidence, but figuratively, as prohibiting self-advertisement (cf the expression, “blow your own horn”). The warning has parallels in Jewish writings.

Jesus commended liberal giving (Matt. 5:42; Lk. 6:38). He prized not the costliness of the gift, but the love and proportional self-denial that prompted it (Mk. 12:42–44). His followers were urged to give with spiritual motives (Lk. 11:41; 12:33), for giving has value for breaking the stranglehold of materialism (Matt. 19:21). He also taught the blessedness of giving (Acts 20:35).

Caring for the poor received due attention in the early church. The needs of the poor were voluntarily supplied (Acts 4:32–35). Its first officers were elected for almsgiving (Acts 6:1–6). Paul urged the duty of helping the poor by his personal example (Acts 24:17; Rom. 15:25–27; 1 Cor. 16:1–2; 2 Cor. 8–9; Gal. 2:10) and instruction (Rom. 12:13; Eph. 4:28; 1 Tim. 6:18). Paul urged support for the needy, not for the lazy (2 Thess. 3:10), and commanded honest work that would enable giving to the needy (Eph. 4:28). A mendicant order has no place in Paul’s teaching. The writer of Hebrews describes such deeds of charity as sacrifices well-pleasing to God (Heb. 13:16). Both James and John insist that such a willingness to share with the needy has spiritual significance. It proves that such a one has a living faith (Jas. 2:14–17), and it is a test of the reality of Christian profession (1 Jn. 3:16–18). See KINDNESS.

D.E. HIEBERT

almug tree. A type of wood mentioned in 1 Ki. 10:11–12 (Heb. ^ʾ*almuggîm* H523) as an import from OPHIR. It is thought by some to be the red sandalwood (*Pterocarpus santalinus*), an Indian wood that accepts a high polish; it is red-colored, smooth, and expensive to use. Others believe it is the *Juniperus phoenicia excelsa*, native to Lebanon. (See *FFB*, 88.) In 2 Chr. 2:8; 9:10–11 the word appears as “algum” (^ʾ*algûmmîm* H454), probably a spelling variant, although some think it may be a different species growing in Lebanon, perhaps the cypress (*Cupressus sempervirens horizontalis*) or the eastern savin (*Sabina excelsa*). See also FLORA (under *Leguminosae*).

W.E. SHEWELL-COOPER

Alnathan al-nay’ thuhn. KJV Apoc. form of ELNA-THAN (1 Esd. 8:44).

aloes. This aromatic substance is mentioned in both OT and NT (Heb. ^ʾ*ăhālîm* H193, Gk. *aloē* G264) in connection with INCENSE OR PERFUME (Num. 24:6 [KJV, “lign aloes”]; Ps. 45:8; Prov. 7:17; Cant. 4:14; Jn. 19:39). The perfume of the true aloe comes from the island of Socotra at the lower end of the Red Sea, hence its Latin name, *Aloē succotrina*. It is thought, however, that the aloe mentioned in the OT is the *Aquilaria agallocha* (alternatively, the *Aloexyllon agallochum* or perhaps the sandalwood, *Santalum album*). The *A. agallocha* is the eaglewood that grows in N India, Malaya, and parts of China, where it is sometimes called the “aloes wood.” It is when the wood partially decays that the fragrance appears, and this is highly valued in the E. The sandalwood is close-grained and fragrant. The strong scent repels all insects. It was, therefore, used often for chests and cabinets. The aloes mentioned by Balaam (Num. 24:6) could not have been eaglewood, because they do not grow in the Holy Land. Is Moffatt’s translation right, therefore, when it calls the lign-aloes “oaks,” which were native to the region? Moffatt assumes an error in the text for the word ^ʾ*ēlâ* H461, “oak.” (See further *FFB*, 90–91.)

There is little doubt that the aloe mentioned in Jn. 19:39 is the true *Aloē succotrina*, which was used often by the Egyptians, both for embalming and for perfume. It was mixed with MYRRH and sprinkled evenly among the wrappings during the embalming process. NICODEMUS used a large quantity (he bought 100 Roman pounds, approximately 75 lbs. avoirdupois) for embalming the body of the Lord Jesus. The drug was imported, so Nicodemus would have found it extremely expensive. In all hot countries, large quantities of scented SPICES have to be used because dead bodies putrefy quickly. The *Aloē succotrina* produces tubular, red flowers from thick, fleshy, pointed leaves, which grow as a large rosette. The fragrant drug comes from the pulp in the leaves. See also FLORA (under

Aloth ay'loth (עלוֹת H6599, meaning unknown). One of the Solomonic districts (1 Ki. 4:16); the Hebrew text can be read as either “in Aloth” (KJV, NIV) or “Bealoth” (NRSV, NJPS). See B EALOTH #2.

alpha and omega al'fuh, oh-meg'uh (τὸ ἄλφα καὶ τὸ ὦ G270 + G1642, the latter an abbreviation of ὠ ἔγα). The first and last letters of the Greek alphabet (α and ω), *alpha* being roughly equivalent to our letter *a*, and *omega* (literally, *great o*) to our *o*. The first and last letters of the Hebrew alphabet are א (see ALEPH) and ו (see TAU), and these were used by the ancient Jews to mean “from first to last” or “from beginning to end” (cf. English “from A to Z”). This Jewish background may explain the similar usage of *alpha* and *omega* in the NT.

The phrase occurs three times in the NT (Rev. 1:8; 21:6; 22:13), and always with the repeated definite article. It is probable that the occurrences in Revelation were intended as allusions to Isa. 44:6 and 48:12, “I am the first, and I am the last,” asserting the eternal and transcendent greatness of Yahweh. Perhaps also they were intended as allusions to Rom. 11:36 and Eph. 1:10, not in the actual words but in the theological concepts involved.

In Rev. 1:8 it is “the Lord God” who asserts, “I am the Alpha and the Omega,” and the speaker is further described as the One “who is, and who was, and who is to come, the Almighty.” In 21:6 and 22:13, on the other hand, the Lord Jesus Christ is the speaker who calls himself “the Alpha and the Omega.” These two verses taken with 1:8 constitute a strong assertion of the true and eternal DEITY OF CHRIST. Similarly, the use of language in 21:6 and 22:13 concerning Jesus Christ is equivalent to that used concerning Yahweh in Isa. 44:6 and 48:12 and involves a strong implication Jesus’ divine nature. As used in these texts, the meaning plainly is not merely chronological or taxonomic, but ontological and metaphysical; it concerns not merely when Jesus Christ exists or where he is to be ranked among existences, but who and what he is in his essential being or nature. The implication includes his eternity, preexistence, and essential deity. For any created being, however exalted, to claim to be the Alpha and the Omega, as these terms are used of Jesus Christ in Scripture, would be blasphemy.

J.G. Vos

alphabet (through Lat. from Gk. ἀλφάβητος derived from the initial two letters of the Greek alphabet, ἄλφα and βῆτα). A series of conventional signs for transcribing the sounds of a language, each sign ideally representing one single sound. This concept must be distinguished from other forms of WRITING, of which there are two main types: (a) the *ideogram*, which is a single, often complex sign signifying one word or idea, the sign itself being generally derived from the *pictogram*, a diagrammatic drawing of the thing signified by the word or illustrating its main aspect; and (b) the *syllabary*, which is a series of signs representing syllables, often consonant followed by vowel. These two forms of transcribing human speech, which still continue to be used, preceded strict alphabetic writing.

This article will be limited in scope to a discussion and description of such prealphabetic series and such alphabets properly so-called as are relevant to the study of the Christian Scriptures and their ramifications. It excludes, therefore, from its purview the Chinese alphabet, its related scripts and

derivatives, the alphabets of India and SE Asia, and the indigenous scripts of America. The article will be divided under the following heads:

1. Prealphabetic writing of the ANE
2. Prehistory of the alphabet
3. Derivation of the alphabet
4. Developments of the North Semitic alphabet
 1. Early Hebrew and related scripts
 2. Phoenician
 3. Aramaic
 4. Descendants of the Aramaic script
5. Derivatives of the Phoenician script
 1. The Greek alphabet
 2. Descendants of Greek script
 3. The Latin alphabet and its descendants

I. Prealphabetic writing of the ANE. CUNEI-FORM (wedge-shaped) writing was used in MESO-POTAMIA and the adjacent lands from the 3rd millennium B.C. into the Christian era. It is so called because it was designed to be written upon wet clay with a stylus that left a wedge-shaped mark. The most influential form was perfected for the expression of the language of SUMER. (Some remains of a distinct early Elamite cuneiform are known, but later this was superseded by a script of Sumerian derivation. See LANGUAGES OF THE ANE.)

This script was originally pictographic; one sign could often represent several words semantically related (e.g., AN = “heaven,” but also “God/goddess”; KA=“mouth,” but also “tooth, word, to speak”). Combinations of signs expressed other related ideas (e.g., LU. GAL, “man” plus “great” = “king”; SAL. KUR, “woman” plus “mountain”=“slave-girl,” i.e., a woman from the hill country taken in war). In the former case identical signs for different words were distinguished in their use by added signs used as determinatives; for example, the sign for a place added signified that the preceding sign was used for a “place word.” Other determinatives were signs expressing in themselves the sound of the final syllable of the specific word intended. (See G. R. Driver, *Semitic Writing from Pictograph to Alphabet*, 3rd ed. [1976]; J. Naveh, *Early History of the Alphabet* [1982]; G. J. Hamilton, *The Origins of the West Semitic Alphabet in Egyptian Scripts* [2006].)

Sumerian cuneiform was adapted for a number of languages, the best known to modern scholars being its adaptation for Akkadian in ASSYRIA AND BABYLONIA. Whereas for Sumerian a sign meant one word, when adapted for Akkadian the signs were used as syllables, so from an ideographic writing a syllabary was created. However, since Sumerian functioned as the “classical” language of Babylon and Assyria, ideograms continued to be used alongside or as alternatives to words written in syllables (e.g., the people called HABIRU in some Babylonian texts are indicated by the ideogram SA. GAZ in the TELL EL-AMARNA letters). The HITTITES too adopted cuneiform for their writing. While retaining many Akkadian and Sumerian forms, they basically reduced the number of signs and also introduced separation of words.

In EGYPT, writing developed perhaps a few centuries after the production of cuneiform and possibly under its influence. The oldest form, clearly pictographic in origin, is *hieroglyphic*, chiseled or painted by brush on temple walls. A more stylized form named *hieratic* was created for writing on papyrus, wood, and other materials, while later yet a cursive adaptation, *demotic*, was produced for

use in business and other nonsacred connections. The basic principles are the same in all three. There are three classes of signs. The earliest were ideograms. Second, signs of phonetic meaning were developed; these expressed only consonants, some only one, some more than one. Third, and increasingly throughout the history of the language, determinative signs were created. In spite of the presence of phonetic signs, Egyptians never developed alphabetic writing; ideograms continued to be used, alternating with or accompanied by phonetic spellings and followed by determinatives.

II. Prehistory of the alphabet. There are several instances of attempts to create alphabetic systems from cuneiform or hieroglyphic systems, although none of them is connected with the present alphabet. Such are the so-called pseudo-hieroglyphic inscriptions of Byblos, thought by some to be a way of writing Phoenician; the adaptation of Akkadian cuneiform to express Persian, as on the well-known BEHISTUN INSCRIPTION of DARIUS I; and the Cypriot syllabary, known from inscriptions mainly in Greek, but evidently (as a few remains show) designed for a different language. Moreover, an alphabet written upon clay with stylus like cuneiform is known in the epoch-making material from UGARIT, discovered at Ras Shamra, in which both language and material reveal otherwise unknown aspects of Canaanite culture and religion. It is probable, however, in the cases of Persian cuneiform and Ugaritic script, that the prior existence of a true alphabet influenced their creation.

III. Derivation of the alphabet. Although there are some remains that can be dated earlier, the earliest examples of alphabetic writing that have yielded intelligible phrases on decipherment are the series of inscriptions, about twenty-five in number, from the mines in the Sinai peninsula. They have been variously dated between the mid-19th cent. and the 16th cent. B.C. They were the work of Semitic laborers in the mines. The writing is evidently related to the Egyptian hieroglyphic, but since only twenty to thirty signs are used, it is clearly alphabetical. The phrase “to the [goddess] Ba‘alat,” the verbal noun “giving” or “gift,” and the personal name “beloved of Ba‘alat” have been identified. Paleo-Sinaitic or Proto-Sinaitic are the names given to these inscriptions, to distinguish them from much later Neo-Sinaitic inscriptions dated just within the Christian era.

The Paleo-Sinaitic inscriptions give some indication of the probable origin of the alphabet and of the principles upon which it was formed. The creators followed the *acrophonic* principle; that is, to represent a sound, they chose a common and simple word that had that sound as its initial consonant, and represented this sound by the pictogram or ideogram depicting the whole word. While this factor does not account for all the signs, it shows how the creators of the alphabet began their task. No such readily comprehended primary principle has been found to explain the order of the alphabet—an inquiry further complicated by the different orders of the N Semitic alphabet (from which most others are derived) and its S Semitic counterpart.

These two alphabets developed, with little if any contact, from a prototype probably fairly close to the Paleo-Sinaitic. The S Semitic alphabet is found in a number of inscriptions in various dialects spoken in S Arabian kingdoms and survives to this day in Ethiopic script, used for the classical Ge‘ez of ETHIOPIA and the current vernaculars (e.g., the official language Amharic). In these, each letter is modified in seven different ways to represent its consonantal sound followed by a particular vowel. Much biblical, late Jewish, and patristic material has been preserved in Ethiopic (Ge‘ez).

IV. Developments of the North Semitic alphabet. The order of the N Semitic alphabet is attested in archaeological evidence by the series of letters *’aleph, beth, gimel, daleth, hē*, inscribed on a step in

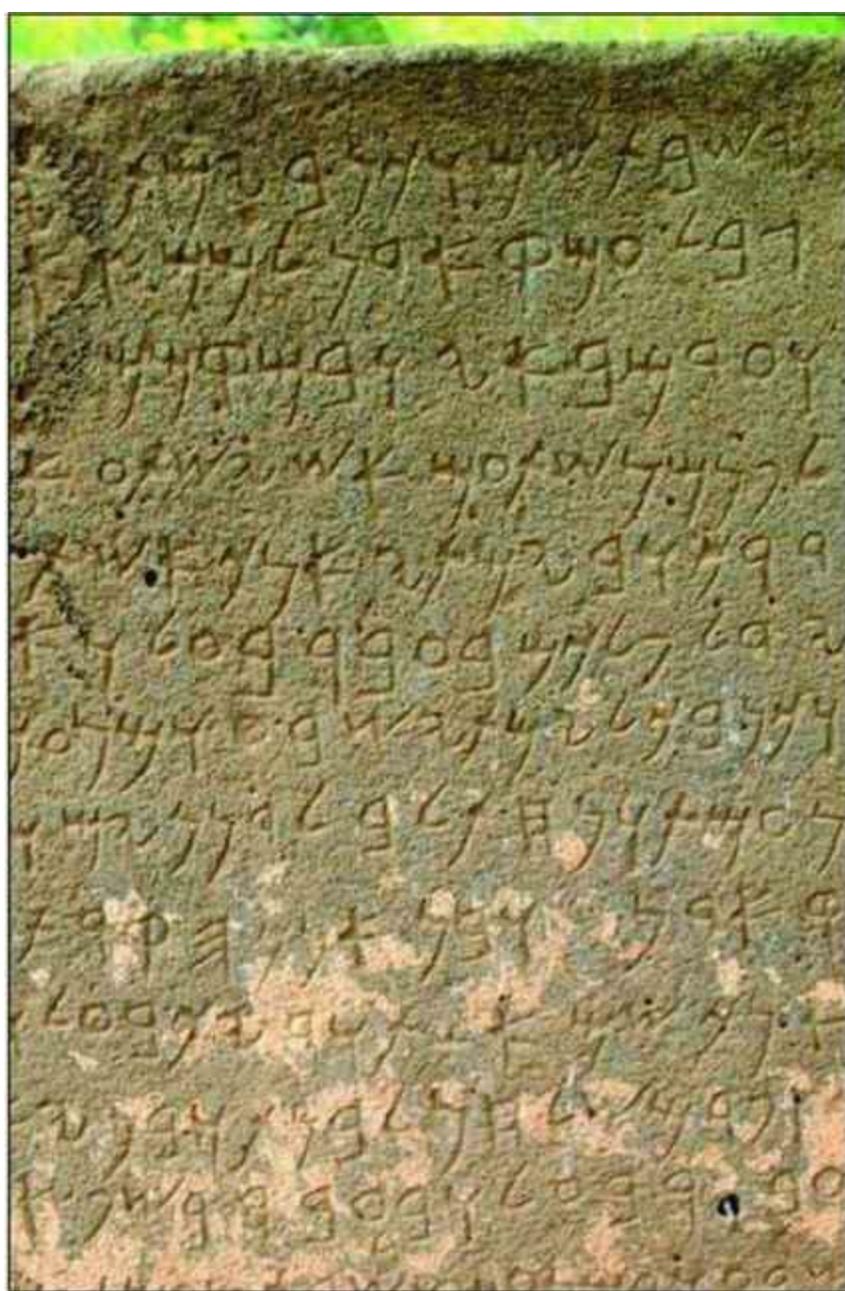

the 7th-cent. B.C. palace at Lachish. It is also reflected in the acrostic form of several psalms and prophetic passages (e.g., Pss. 25; 34; 37; 111; 112; 119; 145). It may be that in Isa. 28:10 (where the familiar translation “precept upon precept, line upon line” is purely conjectural) there is an echo of the recitation of the alphabet in school, repeating the teacher’s words, *Ṣaw lāṣāw Ṣaw lāṣāw qaw lāqāw qaw lāqāw*, namely, the letters *ṣadhe* and *qoph* in the N Semitic order. The word *zē(ēr H2402* (“a little”) will mean “lad,” “little one,” the teacher calling for answers from members of his class.

The principles of formation are easily illustrated by noting several letters in the early Phoenician-Hebrew alphabet (in contrast to the “square” Aramaic-Hebrew forms, which are later). The first consonant, *ʾaleph* (a glottal stop), is a picture of an “ox” (which is the meaning of *ʾelep H546*). Similarly, the *yod* represents a “hand” (*yād H3338*), and the *mem* is a picture of running “water” (*mayim H4784*).

The N Semitic alphabet is divided into two main types, Canaanite and Aramaic. The Canaanite type has two main subdivisions, early Hebrew and Phoenician, with minor varieties such as Ammonite, Moabite, and Edomite, related to early Hebrew.

A. Early Hebrew and related scripts. The earliest example of early Hebrew script is the so-called GEZER calendar (see AGRICULTURE V), a list of months defined by their agricultural operations; it is dated between 1100 and 900 B.C. Next in date, from about 850 B.C., comes the celebrated MOABITE STONE, a stela of MESHHA, king of MOAB, recording his victory over Israel (cf. 2 Ki. 3:4–27). Seals and inscribed potsherds enable us to trace the script through the next 150 years to the SILOAM inscription, which records the completion of the conduit from the Virgin’s Spring to the pool and is to be dated in the reign of HEZEKIAH about 700 B.C. (cf. 2 Ki. 20:20). The final monument of early Hebrew script is found in the LACHISH letters, twenty inscribed potsherds carrying correspondence between an outpost of Hebrew soldiers and the military governor of Lachish as the Babylonians closed in on the city about 586 B.C. After the EXILE, early Hebrew script was superseded by square Hebrew, a form of the Aramaic script, but it continued to be written in a limited way and is found on coins minted during several periods of Jewish independence (between 135 B.C. and A.D. 135). It has also continued to be used to this day by the Samaritans. The use of the Hebrew letters to represent NUMBERS (acrophonic system) is probably a postbiblical development.

B. Phoenician. From Byblos, the ancient GEBAL, already the source of a series of pseudohieroglyphic inscriptions, comes the earliest inscription in the Phoenician type of N Semitic alphabet, the inscription from the tomb of King Ahiiram, who has been variously dated between the 13th and the 10th cent. B.C. Without doubt the script was used much earlier, but there is no archaeological evidence. We have some further royal inscriptions of the 10th cent. and later, and also material from the time of NEBUCHADNEZZAR. But, inexplicably, it is not in PHOENICIA itself that the majority of

© Dr. James C. Martin

Phoenician text inscribed on basalt, found in Hittite : excavations.

inscriptions are found; the far-flung trading contacts throughout the Mediterranean have so influenced the record that inscriptions are found in Cyprus, Malta, Sicily, Sardinia, Greece, N Africa, Spain, and Cilicia. In Carthage, the Phoenicians planted their most enduring colony; the form of the language used there is referred to as Punic. Phoenician script was used in the homeland until the 2nd cent. B.C., but the latest Punic inscription is from the 3rd cent. A.D. The main importance of the Phoenician alphabet lies in its parenthood of the Greek and Latin alphabets, to which we shall return in section V.

C. Aramaic. The Arameans (see ARAM) were in origin Semitic nomads who were first heard of in Assyrian records of the 12th cent. B.C. They established themselves in little kingdoms in Syria and Mesopotamia. Although these were at length overthrown by the Assyrians in the 9th and subsequent centuries, the ARAMAIC language and its script became the *lingua franca* of the ANE by the end of the 7th cent. B.C., and in the period of the Persian empire was the language of diplomacy as well as trade. It was spoken as the native language throughout Syria and Mesopotamia and during the exile became the speech of the Jews, the language of parts of Scripture and of other religious writings,

including the TARGUMS and parts of the TALMUD. It was the tongue of Jesus and the early church, whose traditions were transmitted and perhaps even written in Aramaic; in its Syriac form, it was the language of an important section of the early church. It survives sporadically as a vernacular in Lebanon, Iran, Iraq, and adjacent parts of the Soviet Union, and as the liturgical language of certain churches in Syria and India.

The Aramaic form of the N Semitic alphabet spread as the vehicle of the language, assuming different varieties of form and being adapted for transcribing other languages in nearby lands. The earliest inscriptions are royal stelae, one giving the title BEN-HADAD (not infrequently met in the Bible) for a king of DAMASCUS about 850 B.C. With the spread of Aramaic, many cuneiform documents are found with Aramaic summaries of their contents. Many Aramaic texts in PAPYRUS and OSTRACA come from Egypt, among them the important ELEPHANTINE papyri, remains of a Jewish or Israelite military colony in Persian times, which reflect the immediate period after the exile and the times of EZRA and NEHEMIAH. A similar, more recently found collection is of parchments, official documents of Persian officers in Egypt.

D. Descendants of the Aramaic script. Tradition has it that the “square Hebrew” (still used today) was adopted by the Jews during the exile, and accordingly it is alternatively called the “Assyrian” script. Archaeological evidence for its use is found first in the Maccabean period (see MACCABEE). Biblical MSS of a period earlier than the 7th cent. A.D. were wanting until recently, apart from the NASH PAPYRUS containing the Decalogue (dated variously between the Maccabean period and the 2nd cent. A.D.). The DEAD SEA SCROLLS (some of which date from the 1st cent. B.C. and earlier) have provided many almost complete biblical books and many fragments, mostly written in the square script, which continued to be used through the Middle Ages. Some biblical MSS from the 9th-cent., and many from between the 12th and 16th cent., have survived.

This script was used also to write the languages spoken by Jews in the W, namely Yiddish (a German dialect) and Judeo-Spanish (Ladino). While it has shown varieties of form in this long history of use, it has maintained an essential unity, so that those who know the modern printed alphabet can readily recognize it in ancient MSS. It is to this alphabet that the familiar “jot” and “tittle” of Matt. 5:18 KJV refer, the “jot” being the smallest letter (*yod*), and the “tittle” being a tiny stroke (Heb. *qeren* H7967, “horn”) by which closely similar letters are distinguished from one another (e.g., ך from ך and ם from ם). The systems of indicating vowels by signs above or below the line are of much later origin than the alphabet, in which only consonants are indicated.

The Aramaic language and script were used in inscriptions by the NABATEANS, an Arab nation with a capital at the famous PETRA; they were powerful until the early 2nd cent. A.D. The alphabet of the Neo-Sinaitic inscriptions is related to Nabatean Aramaic, so that they appear to represent two stages in the creation of the script of classical Arabic. Inscriptions show that this system was created before the rise of Islam, but naturally it was this religion and its conquests that gave to Arabic the vast spread of influence which it holds to the present throughout the Muslim world.

The city of Palmyra in northern Syria (see TADMOR) gained importance by its position on the caravan routes to Mesopotamia; it was powerful in the two last centuries B.C. and the early centuries A.D., sometimes independent, sometimes under Roman rule, even under the Queen Zenobia (who ruled a vast section of the eastern part of the Roman Empire). Aramaic was spoken in Palmyra, and the form of Aramaic script used there is known from many inscriptions carved in the centuries of the Christian era (from these the study of Semitic inscriptions at large began). While Palmyra fell into oblivion, its script was widely influential in the production of several alphabets important for the

history, and particularly the religious history, of West and Central Asia in the Roman and medieval centuries. Palmyrene inscriptions are found not only in Palmyra but also in many places of the Roman empire, even in England, the work of Palmyrene legionaries.

The term *Syriac* is reserved to designate an “eastern” form of Aramaic, classically the language spoken in EDESSA, in which Christian Scripture, liturgy, and other literature were written. Some examples of this form of the language and its alphabet are known from pre-Christian times, but the main body of literature is Christian. The form of the alphabet is closely related to Palmyrene and may have been derived from it. There are three main forms of the Syriac script: Estrangela, Jacobite, and Nestorian. Estrangela (prob. from Gk. *strongylē*, “round”) was a beautiful script already by the date of the earliest dated MSS (A.D. 411). The other forms are named after the two major divisions of the church among the Syrians following the divisive Council of Chalcedon, namely, Monophysite or Jacobite (from their leader Jacob Baradaeus) and Nestorian. The earliest dated Jacobite MS was written in A.D. 731; the script is also called Serta (“the [ordinary, normal] writing”) and is a fluent cursive style. Nestorian is first encountered in a dated MS of A.D. 599. There are also biblical and other Christian writings in a somewhat distinct dialect known as Christian Palestinian Syriac, which is closer to Jewish Palestinian Aramaic; its script is related to the Estrangela style, but may have been developed directly from Palmyrene in some letters. When the Arabs overran and dominated Christian lands, Arabic eventually ousted Syriac; in the early period of this development Arabic was sometimes written in the Syriac alphabet, which was then known as Karshuni, a word of uncertain meaning and derivation.

About A.D. 215 there was born in Babylonia a man named Mani, who founded the MANICHEAN religious system. It owed something to the MANDE-ANS (see below) and to Christianity; Mani, in fact, called himself the apostle of Jesus. He was executed by the Persian king Bahram I c. A.D. 273. The religion spread westward, where it competed for awhile with Christianity, and into Asia. Mani committed his teaching to writing in Middle Persian, and for this end perfected a form of alphabet, evidently related to Syriac Estrangela, but probably derived from a common ancestral script akin to Palmyrene. This script was also used for Sogdian, in which both Manicheans and Christians wrote. It was later adapted for the language of the Uigurs, a Turkish people who embraced the religion in the 8th cent., and became the ancestor of the Mongolian alphabet.

Aramaic had been the official language of the Persian empire in the pre-Christian period; this form of the language is called Official or Imperial Aramaic. The form of the Aramaic alphabet used for it was gradually adopted for writing the various Iranian dialects. This was not done on a purely alphabetic basis, for many Aramaic words of frequent occurrence continued to be used as ideograms. This prevented the script from becoming available to the masses, and helps to explain why later in the religious context it was superseded by the Manichean script. The name Pehlevi is given to this adaptation of the Aramaic alphabet.

The script used for the Mandaean writings was probably developed from the Aramaic script of the imperial period. This sect, with its curious and involved Gnostic beliefs, exists to this day in Iraq and Iran, having fled into Mesopotamia from Syria to escape persecution by the Byzantine emperors. It influenced Mani, and at an earlier stage may have had contacts with primitive Christianity. A vowel system has been developed from the letters *ʾaleph*, *waw*, and *yod*, which are added to the consonants to make a syllabary analogous to that developed in Ethiopic.

The kingdoms of Armenia and Georgia have the honorable place in the history of Christianity of being the first two kingdoms to accept the faith nationally, in the 3rd and 4th centuries respectively. Tradition has it that the Armenian Mesrop (in another source known as Mashtotz) created alphabets

for both nations and their languages. Whether or not this is true, both alphabets are masterpieces of exact phonetic transcription, and the uncial or capital forms of the two are closely similar, though not identical, and thus perhaps show the same mind at work. A third people Christianized at this time were the Caucasian Albanians, for whom also Mesrop created an alphabet; few traces of it remain and there are no traces of biblical or other MSS, since at length the Muslims obliterated the church. A form of Pehlevi was the probable model for the work of Mesrop in all three alphabets, but it is undecided which specific form. Both Armenian and Georgian alphabets remain in use today. Armenian has capital or uncial (*Erkathagir*) and minuscule or cursive (*Bolorgir*) forms of the letters; Georgian has three forms, namely (a) capital or uncial, (b) minuscule (these first two were the initial forms, later used only for sacred literature and hence known as Khutsuri or priestly writing), and (c) a more rounded form under Greek influence created in about the 13th cent. and known as Mkhedruli or knightly writing, which is the form used currently.

V. Derivatives of the Phoenician script. The Phoenicians left a permanent mark upon the cultural and intellectual history of mankind in the bequest of their alphabet to the European peoples, specifically to the Greeks and the Italic peoples. (Cf. P.K. McCarter, *The Antiquity of the Greek Alphabet and the Early Phoenician Scripts* [1975].)

A. The Greek alphabet. The decipherment of the hieroglyphic “Linear B” of Cnossus and Mycenae makes it probable that a way of writing the GREEK LANGUAGE was used at that primitive period, but it is clear that it was lost after the fall of these kingdoms, about 1150 B.C. The earliest Greek alphabetic inscriptions date from the 8th cent., and although legend suggests otherwise, it is thought that the adoption of alphabetic writing antedated these by only a little. The Semitic origin of the Greek alphabet is proven by a number of facts. The names of most of the letters are meaningless in Greek, but clearly show the Semitic names known to us. The earliest form known consists of twenty-three letters, one more than the N Semitic, and follows its order with an additional sign at the end. There is a close similarity between the earliest Greek signs and such important Semitic monuments as the Ahiram epitaph, the Moabite Stone, and the Siloam inscription. Greek writing originally went from right to left, the order of Semitic script. (Later it alternated right-to-left and left-to-right on consecutive lines, called “writing *boustrophedon*” [i.e., as the oxen turn in plowing], before eventually being written left to right throughout.) Lastly, with one important difference, the majority of Greek signs represent the same basic sounds as their Semitic equivalents.

The main distinction lies in the use of certain signs to express vowels, which are not represented in the N Semitic alphabet. Certain Semitic guttural sounds were not found in Greek, leaving the signs for ^haleph, he, and ^hayin, together with yod, without function. These were utilized for the vowels α, ε, ο ι respectively (and a new sign for υ created), but without distinction of vowel-length. At the earliest period, and for much longer in many dialects, the sign Η, derived from the guttural ḥeth, was used to express aspiration or breathing before a vowel. The sign derived from waw was retained, as the sound w still was found in Greek: we have only the Byzantine name *digamma* for this sign (it looks like two capital *gammas*, similar to our “F”).

Three more additional signs were soon created, the present Φ, ψ, χ, which were used for different sounds in different areas. The alphabet known to students of the NT and classical Greek is that developed for the Attic dialect. In it, the *ēta* sign (Η, η) is used to distinguish long from short *e*, and the additional sign *omega* (Ω, ω) is added to make possible a similar distinction between long and short *o*. The Semitic *samekh* has become the sign for ξ (the double sound *ks*), while *ṣadhe* and

qoph (*koppa*) have quite fallen out. The signs Φ and χ express aspirated sounds ($[p^h]$ and $[k^h]$ respectively, similar to English κ and ρ , but later pronounced like English f

Replica of a Greek abecedarium from the 7th cent. B.C. The alphabet here is written right-to-left.

and German *ch* respectively), while Ψ represents the double sound *ps*. The breathings (derived from a simple bisection of capital *ēta*) and accents are later developments; when the alphabet is used as a series of numerals, the obsolete *digamma*, *koppa*, *sadhe* are retained so that the twenty-seven signs give expression to hundreds, tens, and units to nine hundred.

In MSS, the Greek alphabet appears in two forms, uncial (capital letters), used for literary texts until the 12th cent. A.D., and cursive, used in private correspondence in the pre-Christian period, but not adapted to calligraphical use until the 9th cent. A.D. Cursive adapted to the writing of literary texts is also called *minuscule*; the printed form of Greek derives from the latest medieval form.

B. Descendants of Greek script. The Greek alphabet was adopted by Egyptian Christians to write their native language, the last stage of old Egyptian. Greek remained the official language in Egypt so that the writings of the Christians were primarily religious in content. The language and its script are known as Coptic, which is simply the Arabic rendering of the Greek for “Egyptian.” Since there were certain sounds in Coptic not found in Greek, seven signs from the demotic form of ancient Egyptian writing were taken over to express these. Some signs were used only in words of Greek derivation, namely *g*, *d*, and *z*, since Coptic did not have these sounds (they are sometimes confounded with *k*, *t*, and *s*). Since *b* and *f* alternate in spellings, it would seem that β was already pronounced approximately like English *v* in the Greek of the time. With the conquests of Islam, Coptic gradually died out as a spoken language, although it is still used liturgically today. Much Christian and Gnostic writing is preserved in Coptic.

An alphabet for transcribing the language of the Christian Goths was created in the mid-4th cent. by Wulfila, the native translator of the Scriptures into Gothic. Nineteen or twenty signs were taken from Greek and five or six from Latin, while the letters for *th* and *o* appear to have been derived from the Runic system of writing. (Runic consisted of about twenty-seven signs of unknown origin, perhaps from Etruscan [see below]. It was used—to judge from inscriptions—in Scandinavia, the British Isles, and S Germany, to write the various Germanic languages of those regions. Inscriptions are datable between the 3rd and 12th centuries, but no lengthy texts are known.) There are not many Gothic MSS extant, but they are among our earliest records of versions of the Bible, since they antedate the fall of the Gothic kingdoms in the 6th cent.

The Slavs were converted much later, their evangelization beginning in the 9th cent., when the Byzantine emperor sent Constantine (later Cyril) and Methodius to Moravia at the native prince’s request. The brothers, native Slavic speakers, framed a mode of alphabetic writing for their scriptural

and liturgical translations. There are, in fact, two quite distinct alphabetic systems known in MSS, and scholars continue to differ about their origin. The alphabet that has become the basis of the languages of modern Russia, Bulgaria, and other Slavic lands is traditionally known as Cyrillic; it is closely based on late Greek uncial forms, and draws on other sources such as Hebrew for sounds not found in Greek. The other alphabet, now little used even for liturgical books, is named Glagolitic (Slavonic *glagol*, “word”), which appears to be quite unrelated to Greek or any other known system, but is as perfectly adapted to Slavonic as the other system. In the view of some, Glagolitic was the work of Constantine, and Cyrillic that of Kliment his pupil in the next generation (providing a script simpler for Greek literates to learn); in the view of others, Constantine invented both. Much Christian literature has been preserved in MSS of either script.

C. The Latin alphabet and its descendants. The Greeks in S Italy gave their form of the alphabet to the Etruscans, a pre-Roman people whose influence on Roman culture was great. There is a wealth of archaeological material, but their language is not understood, although it can be read. This form of the Greek alphabet still had the sign “H” as an aspirate and preserved the signs “F” and “Q.” From the Etruscans, the Romans and other Italic peoples adopted it. It thus became the vehicle of Latin literature both pagan and Christian; uncial and minuscule forms are found, the period of change being about the 6th cent. While there was relatively little variation of styles in Greek minuscule, Latin minuscule shows a far richer variety of regional scripts and scripts of particular periods, such as the Irish and Anglo-Saxon hands and the Carolingian hand. The alphabet, in the first instance as the vehicle for religious literature following in the wake of the gospel, was adopted for the languages of Western Christendom, and is still used for the languages of Western Europe. For some of these, such as Italian or Welsh, an alphabetic usage closely related to phonetic needs has been produced; for others, such as English, the needs of the language and the history of the script have produced a complex and indeed perplexing situation. The modern missionary movement has taken this alphabet to non-European lands, in many of which (esp. those not previously possessed of an alphabet) it has been adapted to express native languages.

The alphabet is one of the most influential inventions. Its development has been molded by great cultural and historical movements and events of which we are still heirs, and its spread has often been linked with the advance of the great spiritual and religious experiences of mankind. (See further P.T. Daniels and W. Bright, eds., *The World’s Writing Systems* [1996], part 5.)

J. N. BIRDSALL

Alphaeus al-fee’uhs (Ἀλφαῖος G271, from Heb. אֶלְפָּאִי). (1) The father of Levi (Mk. 2:14), who is identified with the apostle MATTHEW (Matt. 9:9; 10:3). Nothing more is known about him.

(2) The father of JAMES, another of the apostles, sometimes called “James the younger” (Mk. 15:40; KJV, “the less”) to distinguish him from the better known James who was the brother of JOHN THE APOSTLE and the son of Zebedee (Matt. 10:3; Mk. 3:18; Lk. 6:15; Acts 1:13). Some scholars identify the father of Levi with the father of James the younger, and hold that Levi and James were brothers. CHRYSOSTOM thought that they were not only brothers, but also tax collectors before they became disciples of Jesus. Some MSS (D Θ Φ f¹³) have “James” instead of “Levi” in Mk. 2:14, but this likely is a scribal attempt to harmonize this passage with those in which James the son of Alphaeus is mentioned (Matt. 10:3; Mk. 3:18; Lk. 6:15; Acts 1:13). The preponderance of MS evidence is for the “Levi” reading.

Some writers speculate that Alphaeus, the father of James the younger, is the same person as

CLOPAS (Jn. 19:25). It is assumed by them that MARY, the wife of Clopas, who was present at the crucifixion of Jesus with some other women, is the same as Mary the mother of James, who was also present at the crucifixion (Matt. 27:56; Mk. 15:40). James the son of Mary (Matt. 27:56) would then be the son of Mary the wife of Clopas (Jn. 19:25). Some of these scholars also hold that Alphaeus and Clopas are derived from the same Hebrew word, ḥalpî (the second by changing the aspirate into the sound *k*, a very doubtful suggestion) and that both names were used by this man. However, the evidence for identifying Alphaeus with Clopas is not strong.

S. BARABAS

Altaneus al'tuh-nee'uhs. KJV Apoc. variant of MATTENAI (1 Esd. 9:33).

altar. This English term, referring to an elevated place where SACRIFICES or religious ceremonies are performed, is used primarily to render Hebrew *mizbēaḥ* H4640 (e.g., Gen. 8:20) and Greek *thysiastērion* G2603 (e.g., Matt. 5:23; cf. also *bōmos* G1117, Acts 17:23).

I. The name. The common Latin word for altar was *ara*. The term *altare* or *altarium*, from which the English word derives, was late and ecclesiastical. It was a noun formed from the adjective *altus*, which meant “high,” and implied any raised structure with a flat top, on which offerings to a deity were placed or sacrifice made.

The common term in classical Greek literature was *bōmos* G117, which apparently derives from *bainō* (“to come, go”). The basic meaning would thus appear to be an “approach,” since it was applied originally to any raised platform on which to place something, such as a raised parking place for chariots (*Iliad* 8.441) or the base of a statue (*Odyssey* 7.100). The early Greek apparently felt the need of adding the adjective *hieros* G2641 (“holy”) when the word was used to denote an altar proper. In the NT *bōmos* is used only once, significantly enough in reference to the Athenian altar to the unknown god. The term marks Paul’s characteristic adaptation to his non-Christian audience (Acts 17:23).

The other instances of the word *altar* in the NT represent the Greek term *thysiastērion* G2603 (from *thyō* G2604, “to burn”), a word that appears to have been coined by the SEPTUAGINT as a rendering of the common and frequent Hebrew word for altar, *mizbēaḥ* H4640 (from *zābaḥ* H2284, “to sacrifice”). The Hebrew term refers to the raised place where sacrifice was made, although it came to be used for any form of offering table, such as the “altar of incense” (Exod. 30:1–10).

II. The shape. The altar, therefore, in all ancient religious practice took shape from the idea of a raised table of stone or turf (Horace, *Odes* 1.9.3) on which an offering of blood, and later burned flesh, or even the products of agriculture (Gen. 4:3) were set before the deity. Combined with the notion of a table was probably an idea more ancient still in pagan practice, that deity resided in great stones and could receive strength by an oblation of shed blood.

The altar was a feature of universal worship used by the Hebrews and developed as an object of ritual and sanctity. It was the centerpiece of every sanctuary and the place of sacrifice: “Make an altar of earth for me and sacrifice on it your burnt offerings and fellowship offerings, your sheep and goats and your cattle...If you make an altar of stones for me, do not build it with dressed stones, for you will defile it if you use a tool on it” (Exod. 20:24–25). This simple structure continued to be a normal Hebrew form until the end of the nation’s history (1 Macc. 4:41; Jos. *War* 5.5.6).

A curious feature of the altar, not adequately explained, is the pointed elevation at the four

corners known as the “horns” (Ps. 118:27; Amos 3:14; Rev. 9:13). These details were regarded as of such special sanctity that they were individually marked by the blood of sacrifice in the Levitical ritual (Lev. 4:30; 16:18). Perhaps their original intention was to

Four-horned incense altar discovered at Megiddo, dating to the 10th cent. B.C.

contain the sacrifice on the plane top of the altar, while at the same time allowing the blood, which had deep mystic significance in the ritual, to drain away completely. In addition, the Hebrew altar was constructed without steps, though Canaanitish structures had no such prohibition. The regulation (Exod. 20:26) was designed to preclude any unseemly exposure of feet or legs by the officiating priest in the midst of the solemnities of sacrifice.

III. Pagan altars. All types of altars have been discovered in Canaanitish Palestine (see HIGH PLACE). They range from the small Early Bronze Age structure of plastered stones, set against a wall in a small temple at Ai, to the mud brick and lime-plastered stone rectangular altars of Middle and Late Bronze Age construction, discovered at MEGIDDO, LACHISH, BETH SHAN, HAZOR, and other places. A large structure of rubble and unhewn stone at Megiddo, an elevation 26 ft. in diameter and over 4 ft. high, is perhaps rather to be called a “high place” than an altar. Such an objection may beg the question if altars generally are,

© Dr. James C. Martin

The Canaanite round altar at Megiddo was used between 2700 and 2200 B.C. (View to the S.)

in fact, miniature “high places,” and find at least one root of their origin in a symbolic rendering of the common habit of hilltop sacrifice. Such speculation is inconclusive, and the proliferation of all types of altars in pre-Hebrew Palestine is of interest to the Bible student from this major standpoint only. They demonstrate the manner in which the Mosaic code took over, purified, and adapted to its symbolic ritual and monotheistic purposes the forms and practices of alien religion. It is notable, here and elsewhere, how carefully the Pentateuch regulates the construction and use of the altar.

IV. Patriarchal altars. The covenant code (Exod. 20:24–26) clearly recognizes a plurality of altars, implying that the object was an almost indispensable accompaniment of formal WORSHIP, and that sacrifice, which was inseparable from worship, and all forms of approach to the deity could not be made without an altar. Altars were built by NOAH on leaving the ark (Gen. 8:20); by ABRAHAM at SHECHEM (12:7), at BETHEL (12:8), and on MORIAH (22:9); by ISAAC at BEERSHEBA (26:25); by JACOB at Shechem (33:20) and at Bethel (35:7); by MOSES at REPHIDIM (Exod. 17:15) and HOREB (24:4).

It would appear that the special regulations by which the two altars of the TABERNACLE were set up did not preclude the construction and use of the altars authorized in Exod. 20. The patriarchs seem to have set up altars as symbols of some notable encounter with God and as memorials of spiritual experience. The concentration of the Israelite worship in the service of the tabernacle does not appear to have withdrawn from the individual the satisfaction of setting up an altar to commemorate some act or outcome of private devotion. JOSHUA built an altar on Mount EBAL (Josh. 8:30), and GIDEON built one at OPHRA (Jdg. 6:24); an unnamed holy man built one at Bethel, or, like Elijah, rebuilt a disused structure there (Jdg. 21:4). Similarly, SAMUEL built one at RAMAH (1 Sam. 7:17), SAUL at MICMASH after his victory there (1 Sam. 14:35), and DAVID on the threshing floor of ARAUNAH (2 Sam. 24:25). As a solemn prelude to his sacrifice, ELIJAH on Carmel rebuilt an old altar of unhewn stones (see CARMEL, MOUNT). None of these acts appears to have been in conflict with the execution of formal worship at a central and authorized sanctuary.

V. The altars of the tabernacle. The more far-fetched speculations of typological teaching (see TYPOLOGY) need not be accepted along with the ready admission that the TABERNACLE was a great object lesson and a demonstration of spiritual truth. Its presence in the midst of the marching or

encamped host, and the entire pattern of its worship and ritual, were of prime educative importance for a people that was being molded and instructed for a great historic purpose. With meticulous care every detail of construction and furniture was recorded in the account.

Two altars were specified. One, which stood in the eastern half of the courtyard, was of bronze, laid over acacia wood (Exod. 27:1–8; 38:1–7). This piece of furniture measured 5 x 5 x 3 cubits and was called the altar of burnt offering from the use required of it. It had projecting horns and fittings for transport. No top is mentioned, as in the case of the second altar, and it is reasonably conjectured that it was a hollow metal frame packed with earth. This feature would account for the preservation of the wooden frame in spite of the heat of the fire of sacrifice.

The second altar was a smaller piece, 1 x 1 x 2 cubits, made of acacia wood plated with gold (Exod. 30:1–10). It had four horns and a crown of gold, together with devices for transport as the nomad host moved its place of encampment. Curiously enough, these two altars are named elsewhere only in the Chronicles (1 Chr. 6:49; 16:40; 21:29; 2 Chr. 1:5–6).

The placing of the two altars is significant. The altar of burnt offering stood in the eastern part of the court and would thus be the first major feature visible to one who approached the tabernacle, setting forth symbolically the truth that the shedding of blood provided access and forgiveness for the rebel, a truth spiritualized and consummated in the NT (Heb. 9:9, 22). The altar of INCENSE was set before the veil that screened the Holy of Holies (Exod. 30:6; 40:5). It was thus called “the altar before the LORD” (Lev. 16:12). Incense was burned twice daily, symbolizing the offering of prayer (Rev. 8:3). ZECHARIAH was on duty at this place when he received his vision (Lk. 1:8–11).

VI. The temple altars. In the “upper court” (Jer. 36:10) of Solomon’s TEMPLE in Jerusalem was placed a vast altar of bronze, 15 ft. high and 30 ft. long. It was, no doubt, an enlarged replica of the tabernacle, departing from that model only in the fact that it was approached by a flight of steps, a sheer necessity to cope with its elevation. The hollow interior was filled with stone and earth so that the blaze of sacrifice should be visible to the crowd in the courtyard below (2 Chr. 4:1). Before this altar, prayer was made (1 Ki. 8:22, 64), and periodic sacrifice offered (1 Ki. 9:25). Solomon’s altar stood thus for almost three centuries.

Early in his reign AHAZ (735–715 B.C.) sought the assistance of TIGLATH-PILESER III of Assyria against his northern neighbors and won some dearly bought political success. It confirmed him in his apostasy (2 Chr. 28:23–25), and this may be the explanation of the altar he set up to replace that of SOLOMON in the temple courtyard (the story is told in 2 Ki. 16:7–16). Ahaz visited, as an ally, the conquered city of DAMASCUS and saw “the altar” (not “an altar” as KJV and NIV 2 Ki. 16:10). Perhaps this was the altar of the defeated Syrian god, RIMMON, reconsecrated by the Assyrian victor in honor of one of his own deities. In gross flattery, if this conjecture holds, Ahaz sent to the head priest Uriah a careful drawing of the altar that had so struck his fancy. The subservient priest undertook without protest to have a replica ready upon the king’s return to Jerusalem. Ahaz, usurping the priest’s office, likewise without protest from a hierarchy that once had firmly resisted Uzziah’s intrusion into the sacerdotal office, made offerings personally on his new altar.

It was in the course of this same apostasy that Ahaz removed the bronze altar of Solomon from its place in front of the temple porch. He coveted this position of honor for his own altar. Solomon’s ancient altar was removed to the N side, and Ahaz ordered that all sacrifices should henceforth be made upon “the large new altar” (2 Ki. 16:15). The old bronze altar, he said, “I will use for seeking guidance” (does the Hebrew imply, “I can wait until I consider what to do with it”?).

It is not clear what happened upon Ahaz’s death. In 2 Chr. 29 there is a full account of the

reconstitution of the temple worship under HEZEKIAH. The chronicler's narrative would appear to indicate that the reforming monarch invalidated the procedures of his predecessor's day (29:7), and the purification of the altar (29:18) may perhaps indicate that Solomon's altar was restored to its proper place. It seems unlikely that the altar of Ahaz, considering its Damascene and pagan origins, survived an inspired iconoclasm as thorough as that of Hezekiah. An enigmatic reference (2 Chr. 33:16) suggests that some restoration was effected in MANASSEH'S superficial reformation fifty years later. It would appear (Jer. 52:17–20) that the altar of Solomon, or its essential metal, was part of the loot NEBUCHADNEZZAR carried off to Babylon.

Perhaps it was this fact, or even the known and visible presence of the piece of sacred furniture in Babylon, that inspired the vision of Ezekiel's ideal temple. Through the three gateways that led to the inner court, right in the middle so that it should be in full view, a great altar of burnt offering was projected, a huge stone structure rising in three terraces to a height of 18 ft., having a breadth and length of 26–27 ft. at the base. The altar thus placed was to be the center of the sanctuary, for the consciousness was growing that the altar was the one indispensable adjunct to the sacrificial worship and the one vast lack for those in exile. When the first exiles returned to the ruins of Jerusalem, and before they were able to rebuild the temple, JESHUA erected an altar on the site and instituted the daily ritual (Ezra 3:2). From Ezekiel's vision, it is evident that the sacrificial consecration of the altar was equated with the dedication of the whole sanctuary (Ezek. 43:18–27).

The second temple no doubt had its altars, and it is unlikely that the tradition of two altars, established with the tabernacle, was fundamentally broken. ANTIOCHUS Epiphanes is said to have carried off a golden altar of incense in 169 B.C. (1 Macc. 1:21). Two years later the same tyrant set up an "abomination of desolation," probably an image of ZEUS, on the altar of burnt offering (1 Macc. 1:54). The Maccabees restored both altars (1 Macc. 4:44–49). It is not known whether these altars were incorporated in HEROD'S enlarged shrine, in which the altar of burnt offerings was a pile of unhewn stone, approached not by the forbidden steps but by a ramp.

It may be noted, in conclusion, that the growing consciousness of the centrality and importance of the altar in the temple worship led to the doctrine that the great altar in Jerusalem was the one valid place of sacrifice. Hezekiah seems to have been the first to enforce this, and to have incurred some popular resentment in so doing, if the propagandist taunt of SENNACHERIB'S envoy be read aright (2 Ki. 18:4, 22). It would appear from the Assyrian's words that these altars were considered places of orthodox worship. In JOSIAH'S case it is not so clear that the altars broken down and defiled in the course of the great religious revival were other than pagan (2 Ki. 23:8, 20). To set up an altar, as AHAB had clearly demonstrated (1 Ki. 16:32), was to adopt and sanction a special form of worship and to recognize a god. The presence of the central altar at Jerusalem was, as JEROBOAM foresaw (1 Ki. 12:26–33), a source of tremendous prestige for the city. Thus was the altar welded to politics and Jerusalem established as a holy city, a role which it fulfilled to the end of its history and which it continued to play in the symbolism of the New Jerusalem, wherein was no temple nor the altar that accompanied it (Rev. 21:22).

VII. The altar in the NT. In the worship of the CHURCH, as envisaged in its beginnings in the NT, no altar is prescribed. The furniture of Hebrew religion is set aside and all the symbolism of the altar has found fulfillment. This fact, of course, does not preclude a new Christian symbolism that makes use of a formal altar, provided that no practice associated with it conflicts with central theological doctrine.

The NT necessarily uses the word *thysiastērion* G2603 in reference to the altar in the temple of

Jerusalem (eight instances in the Gospels: Matt. 5:23, 24; 23:18–20, 35; Lk. 11:51); and in reference to various OT altars (five instances in the epistles: Rom. 11:3; 1 Cor. 9:13; 10:18; Heb. 7:13; Jas. 2:21). The word is used figuratively in the imagery of Revelation (seven contexts: Rev. 6:9; 8:3, 5; 9:13; 11:1; 14:18; 16:7). One passage in Hebrews may be singled out for the metonymy it seems to contain: “We have an altar from which those who minister at the tabernacle have no right to eat” (Heb. 13:10). If the simple meaning of the prepositional phrase is pressed, the word “altar” stands for the sacrifice that lies upon it, but without essential difference to the meaning, the metonymy may be avoided and the word “altar” taken literally as the place of origin of the appropriated sacrifice.

VIII. The altar of the Areopagus address. The only NT writer to use the pagan word *bōmos* *G117* is PAUL, who employs it properly in the context of his address to the Court of the AREOPAGUS to refer to a special feature of the Athenian city scene, the altars to “unknown gods,” of which epigraphical evidence survives. The matter merits a paragraph because of the importance of the address. Paul’s approach was conciliatory and courteous, but perhaps just touched with that irony which was the common fashion of Athenian speech: “Men of Athens! I see that in every way you are very religious. For as I walked around and looked carefully at your objects of worship, I even found an altar with this inscription: TO AN UNKNOWN GOD” (Acts 17:22–23). In the Greek there is noun and adjective only (*agnōstō theō*), without either a definite or indefinite article. One or two examples of such inscriptions survive, but always in the plural, “to unknown gods.” In the plural English can avoid using an article, but in the singular a choice must be made between the definite and indefinite article. The definite is better, “to *the* unknown god,” provided the reference and context of the inscription are realized. The inscription in each case refers to the unknown deity concerned with the altar’s foundation, not generally or transcendently to a god vaguely realized and sought. Paul adapted the inscription for homiletic ends. He was not deceived about its meaning, but like any perceptive preacher sought an illustration and a point of contact in a known environment. The device captured attention and anchored the theme in experience.

What did the inscription mean? Diogenes Laertus (*Lives* 110.3) preserves a tradition that Epimenides, the Cretan religious teacher and miracle worker, was in Athens about 500 B.C. To combat an epidemic, Epimenides directed the Athenians to loose sheep from the Areopagus, and wherever they lay down, they were to build an altar to the local god; this incident led to the existence of various “anonymous altars.” Perhaps the story is an etiological myth, a tale invented to explain a visible phenomenon. Perhaps the altars merely represented a scrupulosity which, in a city full of deities from all the Eastern Mediterranean, sought to avoid offense to any in this slightly naive fashion. It is impossible to say more.

IX. The altar of Pergamum. In the imagery of Revelation is a reference to one of the most famous altars of the ancient world. It stood on the crag of the hill above the Asian city of PERGAMUM and was described by the Greek traveler Pausanias. It was discovered in 1871 and taken to Germany, where it stands reconstructed today in Berlin, something like a small version of Italy’s elaborate Victor Emmanuel monument in Rome. The structure, a perron of steps leading to a huge altar, commemorated the defeat of a Gallic invasion two centuries before. The roving Celts, who also reached Rome and Delphi in this era of their folk wanderings, infiltrated ASIA MINOR, where they gave their name to GALATIA. Pergamum was a royal city and strong enough to drive them off. It celebrated the deliverance with the altar to Zeus. Its frieze represents the gods of Olympus battling with the giants, shown in the sculpture as a brood of muscular warriors with snake-like tails. The Zeus to whom the

altar was dedicated was called “Zeus the Savior,” a blasphemous offense to Christian minds. The altar must be the throne of Satan mentioned in the letter to Pergamum (Rev. 2:12). (There is a curious footnote: the archaeological discovery of the battered marble figure of a giant in the junkyard of the Worksop Town Council, England. Experts from the British Museum pronounced it to be part of the frieze from Pergamum’s altar, brought to England by the Earl of Arundel two centuries ago, and fallen on evil days when Worksop Manor was demolished.)

E.M. BLAIKLOCK

altar of witness. See ED.

Al-taschith al-tas’kith. A word found in KJV in the titles of Pss. 57–59 and 75 as a transliteration of the Hebrew phrase *al-tašḥēt*, meaning “do not destroy” (some versions transliterate “Altashheth”). This phrase may form the beginning of an old tune, normally sung at the harvesting of grapes, as described in Isa. 65:8. See also MUSIC VI.B.

Alush ay’luhsh (אֱלוֹשׁ H478, meaning unknown). A stopping place of the Israelites in their journey through the wilderness (Num. 33:13–14). Alush was apparently located between DOPHKAH and REPHIDIM, but the site has not been identified.

Alvah al’vuh (אֶלְוָה H6595, meaning unknown). Descendant of ESAU, listed among the clan chiefs of EDOM (Gen. 36:40; 1 Chr. 1:51; in the latter passage, the KJV and other versions have “Aliah,” following the *Ketib*). The name was probably applied to a territory as well. Some identify Alvah with ALVAN.

Alvan al’vuhn (אֶלְוָן H6597, perhaps “tall” or “ascending”). Son of Shobal and grandson of SEIR the HORITE (Gen. 36:23; 1 Chr. 1:40; in the latter passage, the KJV and other versions have “Alian,” following most Heb. MSS). Some identify Alvan with ALVAH.

Amad ay’mad (אֶמְעַד H6675, derivation unknown). A town in the tribal territory of ASHER (Josh. 19:26). The site is unknown.

Amadatha, Amadathus am’uh-day’thuh, am’uh-day’thuhs. KJV Apoc. forms of HAMME-DATHA (Add. Esth. 12:6; 16:10, 17).

Amal ay’muhl (אֶמֶל H6663, possibly “laborer”). Son of Helem, listed among the brave warriors who were heads of families of the tribe of ASHER (1 Chr. 7:35; cf.v.40).

Amalek am’uh-lek (אֶמְלֵק H6667, derivation uncertain; gentilic אֶמְלֵקִי H6668, “Amalekite”). Son of ELIPHAZ (by his concubine Timna), grandson of ESAU, and a tribal chief (*allûp* H477) of EDOM (Gen. 36:12, 15–16; 1 Chr. 1:36). The name is applied to his descendants, an ancient marauding people in the S of Canaan and the NEGEV who were fierce enemies of Israel, particularly in the earlier part of its history.

The Amalekites roamed throughout this region in SE Israel referred to in the Bible as the Desert of Zin.

I. Early history. According to Gen. 14:7, KEDOR-LAOMER and his associate kings subdued, among others, “the whole territory of the aites.” This statement need not be taken as an anachronism, but is to be understood as possibly a different Amalek; or better, the term is used to identify the land that later became the home of the Amalekite descendants of Esau. In Num. 24:20 BALAAM prophesied, “Amalek was first among the nations, / but he will come to ruin at last,” probably meaning that the Amalekites were the first nation to attack Israel in her exodus experiences (cf. Exod. 17:8; Num. 14:45).

II. Territory. The Amalekites as a nomadic desert tribe moved about in the area from the Sinaitic region and the steppe land of the Negev in S Canaan, S of BEERSHEBA, over E to include the ARABAH region N of ELATH and EZION GEBER and possibly the more interior ARABIA. See 1 Sam. 15:7, where Saul is said to have “attacked the Amalekites all the way from Havilah to Shur, to the east of Egypt.” This region seems to have been the same general area inhabited by the ISHMAELITES (Gen. 25:18). Another passage, 1 Sam. 30:1–2, points to heavy raiding activity on the part of the Amalekites in the area of the Negev, and Jdg. 6:3, 33 speaks of their association with “other eastern people,” which suggests that for a period they lived in the Arabian territory.

The Amalekites also extended their influence farther N into the PHILISTINE country and the region of EPHRAIM. This is borne out by Jdg. 12:15, where the area of Ephraim around the town PIRATHON (not far from present-day Nablus) is called “the hill country of the Amalekites.” And according to 1 Sam. 27:5–7 and 30:1, they raided Philistine towns like ZIKLAG (a few miles N of Beersheba), which ACHISH king of GATH had given to DAVID.

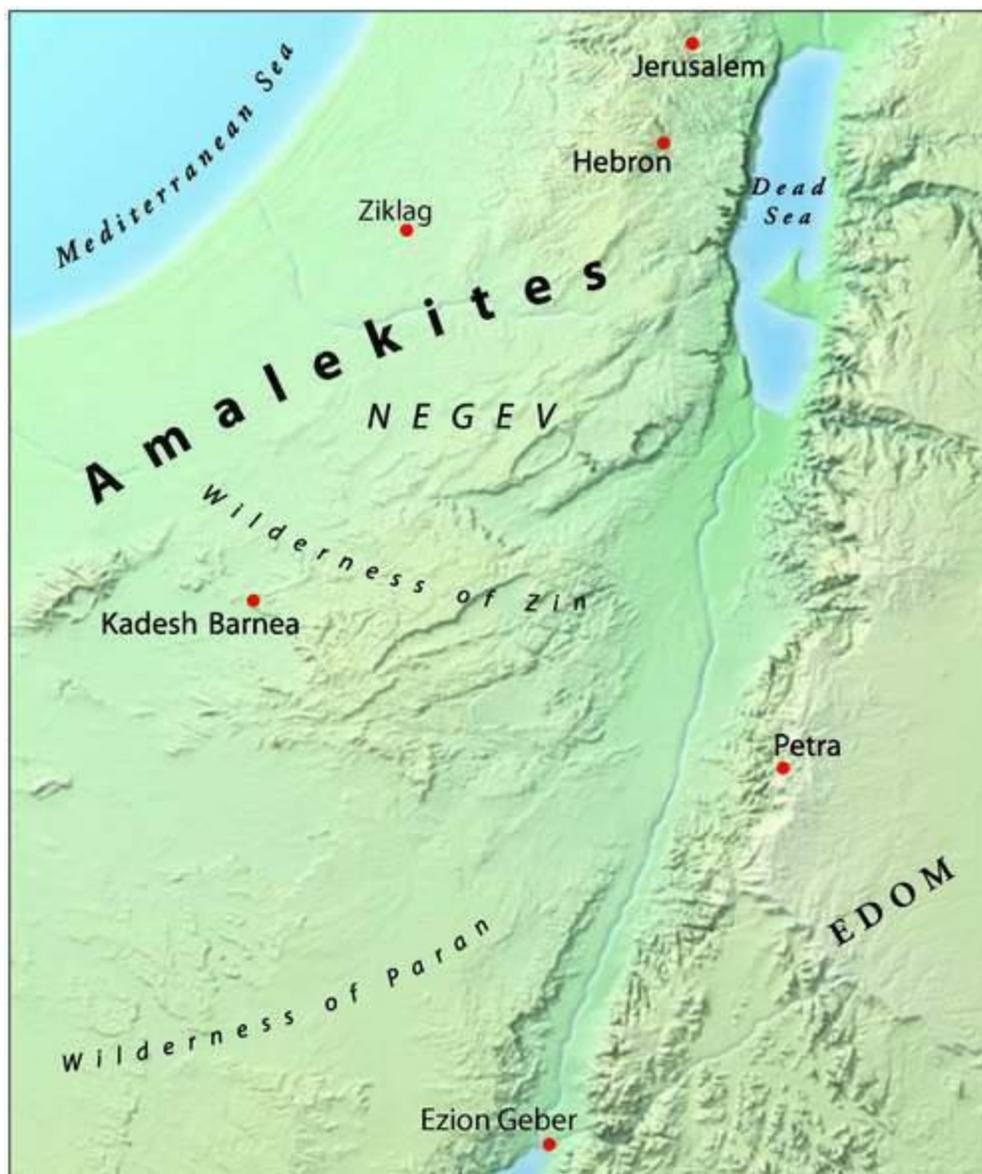

III. Amalek and Israel

A. In the wilderness wanderings. The book of Exodus describes Israel’s first encounter with, and defeat of, the wandering Amalekites at REPHIDIM, a place between the wilderness of Sin and the wilderness of Sinai where the Israelites camped in their journey from Egypt (Exod. 17:1, 8–16; 19:2). Concerning further harassment Moses recounts how Amalek, with no fear of God, attacked the Israelites’ rear guard and cut off those who became physically weak (Deut. 25:17–18). Moses goes on to command that because of this wicked treatment of an oppressed people, Israel later, when in the land of Canaan, was to exterminate the Amalekites (v. 19). That their unrelenting and destructive

spirit and action against God and the cause of his people Israel was heinous to the Lord is seen later in the reminder to SAUL concerning these wilderness incidents and in God's command that the king was to destroy the God-defying Amalekites (1 Sam. 15:2–3; cf. also Jdg. 10:12). Thus, the continuing oppressive spirit of this pagan nomadic tribe required a different treatment by the Lord from that which was to be normally carried out (terms of peace were usually first offered to a potential enemy, Deut. 20:10–12).

After Rephidim, the next major encounter with Amalek came following the report of the Israelite spies that the enemy forces to the N of KADESH BARNEA in the wilderness of PARAN in S Canaan, which included the Amalekites living in the Negev, were too strong to conquer (Num. 13:25–33; 14:38). Israel rebelled. When God in judgment withdrew his hand of blessing and ordered them to go back S into the wilderness (14:1–25), the people again disobeyed God and, with their own feeble effort, attacked the Amalekites. They were completely defeated and chased as far as HORMAH (near ARAD and ZIKLAG, Num. 14:39–45; Josh. 12:14; 15:30).

B. In the period of the judges. Later in the time of the judges the Amalekites showed continued harassing activity against Israel. When some men of Judah went down to fight against the Canaanites who exercised some control over the Negev and the area of HEBRON, presumably they also came in contact with the Amalekites who roamed the same general area. The KENITES lived with the Amalekites at the city of Amalek (1 Sam. 15:5–6) and earlier had taken up this residence with the people in the region of the Negev near Arad (Jdg. 1:16), which was only about 20 mi. S of Hebron. Observing this connection, there is no need to follow the NRSV in emending the text of Jdg. 1:16 from “the people” (*hā'ām*) to “the

Amalekites.

Amalekites” (*hā(ā)mālēqî*); the connection of the Kenites in these two passages is clear, and evidence for changing the text is lacking.

Within this period of the judges the Amalekites were associated with the Moabites, Ammonites, and Midianites in their marauding activities. This is seen in Jdg. 3:12–14 in the account of how EGLON, the king of MOAB, collected the forces of the Amalekites and the Ammonites and defeated Israel and took the City of Palms (evidently JERICHO, cf Deut. 34:3). DEBORAH (who was from Ephraim, Jdg. 4:5) and BARAK speak of how Ephraim had shown strength in rooting out those of the Amalekites who were in its midst (Jdg. 5:14, where NRSV unnecessarily changes “in Amalek” to “into the valley”; cf. 12:15 and earlier remarks). Moreover, the Amalekites are depicted as joining forces with MIDIAN and making camel raids against the agriculture communities of Israel as far S as GAZA (Jdg. 6:3–4, 33; 7:12; the Midianites seem to have wandered in the area of Sinai, the wilderness E of Paran, and the territory E of GILEAD, Exod. 4:19; 1 Ki. 11:18; Jdg. 8:4–12). When these peoples came with considerable forces and camped in the Valley of JEZREEL (Jdg. 6:33), GIDEON and his 300 men, under the direction of the Lord, routed and killed many of them (7:19–23).

C. In the time of Saul. Although King Saul routed the Amalekites early in his reign (1 Sam. 14:48),

they must have continued to flourish. In the light of Amalek's past harassment of Israel, the Lord commanded Saul to exterminate this enemy (1 Sam. 15:1–3). The king attacked them and conquered their city (15:4–7), the exact location of which is not known. Evidently the Amalekites had some cities, as this one, in which they sometimes settled and possibly fulfilled religious obligations, as has been shown was the case of nomadic tribes in the TRANSJORDAN in connection with a 15th-cent. B.C. temple (see E. F. Campbell and G. E. Wright in *BA* 32 [1969]: 104–12). Contrary to God's command, Saul kept alive the king of the Amalekites and the best of their livestock (vv. 8–9). For Saul's failure to fulfill completely the divine command, Samuel announced to the monarch the Lord's rejection of him as king (vv. 10–23). Saul then made a statement of repentance and obtained some public reconciliation with the prophet Samuel, following which the prophet killed AGAG, the Amalekite king (vv. 24–33).

D. In the time of David. The initial encounter of David with the Amalekites, according to the OT record, took place during the time of his association with Achish, king of Gath, when the young Israelite made raids in the S against the Amalekites and others (1 Sam. 27:8). Later Amalek raided the Negev and, in David's absence, completely conquered Ziklag, taking captive the inhabitants, including David's two wives, Ahinoam and Abigail (30:1–6). Then the future king, through the help of an abandoned Egyptian servant of an Amalekite (vv. 11–15), found the Amalekite camp, defeated the enemy, and recovered his wives and possessions (vv. 16–20).

Some time later, an Amalekite who claimed he had finished killing Saul (cf. 1 Sam. 31:3–5; 2 Sam. 1:4–10) was executed by David for the sin of lifting his hand “to destroy the LORD'S anointed” (2 Sam. 1:14–16). This act demonstrates again Israel's strong antipathy to Amalek. The psalmist lists Amalek with the avowed enemies of Israel (Ps. 83:7). A summary of David's conquests of the Amalekites is given in 2 Sam. 8:12 and 1 Chr. 18:11.

IV. Amalek in later history. The Amalekites seem to have been fairly well controlled under the monarchy, for the OT does not mention them again until the time of HEZEKIAH (c. 700 B.C.) and only as a remnant whom some of the Simeonites defeated at Mount SEIR (i.e., Edom; Gen. 32:3; 1 Chr. 4:41–43). There is no further biblical reference (however, see AGAGITE).

W.H. MARE

Amam ay'mahm (אָמָם H585, derivation uncertain). An unidentified city in the NEGEV that the tribe of JUDAH received in the allotment of the land (Josh. 15:26).

Aman ay'muhn. KJV Apoc. form of HAMAN (Add. Esth. 10:7; cf. also Tob. 14:10 KJV, where NRSV has the variant “Nadab”).

Amana uh-may'nuh (אָמָנָה H592, perhaps “constant”). Also Amanah. A mountain in the ANTILEBANON range (Cant. 4:8), near the course of the river ABANA (2 Ki. 5:12, where the river too is called “Amana” in a variant reading).

amanuensis uh-man'yoo-en'sis. This Latin term, meaning “secretary,” is used specifically of someone who takes dictation or copies a MS. Amanuenses were frequently used by writers in antiquity. PETER speaks of being assisted by SILAS in writing a letter (1 Pet. 5:12). When PAUL refers

to writing a greeting with his own hand (1 Cor. 16:21; 2 Thess. 3:17; cf. also Phlm. 19 and esp. Gal. 6:10–18), he implies that the rest of the letter was written by a secretary. One of them, TERTIUS, identifies himself in Rom. 16:22. The use of amanuenses may serve to account for stylistic differences between letters that have the same author, but there is debate about how much freedom these secretaries were given in the composition of documents. (Cf. E. R. Randolph, *Paul and First-Century Letter Writing* [2004].) See PSEUDONYMITY.

Amariah am'uh-ri'uh (אֲמַרְיָהוּ H618 and אֲמַרְיָהוּ H619, “Yahweh has said”). (1) Son of Meraioth and descendant of AARON in the line of ELEAZAR; grandfather (or ancestor) of ZADOK the priest (1 Chr. 6:7, 52).

(2) Son of Hebron and descendant of LEVI in the line of KOHATH; contemporary of David (1 Chr. 23:19; 24:23).

(3) Son of Azariah and descendant of AARON in the line of ELEAZAR; ancestor of EZRA (1 Chr. 6:11; Ezra 7:3; 1 Esd. 8:2 [here listed as son of Uzzi]; 2 Esd. 1:2 [in the last two references KJV has “Amarias”]).

(4) A chief priest in the reign of JEHOSHAPHAT (2 Chr. 19:11); some identify him with #3 above.

(5) A Levite who faithfully assisted KORE in distributing the contributions made to the temple during the reign of HEZEKIAH (2 Chr. 31:15).

(6) One of the descendants of Binnui who agreed to put away their foreign wives (Ezra 10:42 [cf. v. 38 NIV and NRSV]; 1 Esd. 9:34 RSV by conjecture [NRSV, “Zambris”]).

(7) A priest who returned to Jerusalem and sealed the covenant under NEHEMIAH (Neh. 10:3). Some believe he is the same as the Amariah who returned from Babylon with ZERUBBABEL (12:2; cf. v. 13).

(8) Son of Shephatiah, descendant of JUDAH, and ancestor of Athaiah (Neh. 11:4).

(9) Ancestor of the prophet ZEPHANIAH and son of Hezekiah, possibly the king (Zeph. 1:1).

S. BARABAS

Amarias am'uh-ri' uhs. KJV Apoc. form of AMARIAH (1 Esd. 8:2; 2 Esd. 1:2).

Amarna Tablets. See TELL EL-AMARNA.

Amasa uh-may'suh (אֲמָסָא H6690, possibly short form of אֲמָסִיָּה H6674, “Yahweh has carried [*i.e.*, protected]”; see AMASIAH). (1) Son of Jether (see ITHRA) and captain of the Israelite army appointed by ABSALOM when the latter attempted to overthrow DAVID'S rule in Israel (2 Sam. 17:25; 1 Chr. 2:16–17). JOAB killed Amasa during the subsequent rebellion led by Sheba. As the son of Jether/Ithra and ABIGAIL, who was apparently David's half-sister, Amasa was related to the royal family; he was also a cousin to Joab, whose mother ZERUIAH was Abigail's sister.

When Absalom rebelled, David divided his forces, assigning one third of his army to Joab, one third to ABISHAI a brother of Joab, and another third to ITTAI the Gittite. In the course of defeating the rebellion forces, Joab killed Absalom in explicit disobedience to David's command and consequently incurred the king's disfavor. This action may account for David's decision to pardon Amasa and appoint him as captain of the army in place of Joab (2 Sam. 19:13).

When Sheba led a rebellion movement, David ordered Amasa to assemble an army in three days (2 Sam. 20:4). No explanation is given in the biblical account concerning his failure to do so in the

allotted time, but Abishai was subsequently assigned the task of suppressing the rebellion. When Abishai—who was supported by Joab with the KERETHITES, the Pelethites, and all the mighty men—advanced as far as GIBEON, he was joined by Amasa and his forces. Here Joab personally killed Amasa (2 Sam. 20:8–10), and subsequently he led the combined forces in victory over Sheba. See also AMASAI #4.

(2) Son of Hadlai; he was one of the princes of EPHRAIM who supported ODED the prophet in warning the Israelites not to take captives from Judah (2 Chr. 28:9–15). During the Syro-Ephraimitic war, the Israelites under PEKAH invaded the southern kingdom of Judah and brought some of the people to SAMARIA as captives with the intention of enslaving them. Amasa and some of the other princes in Ephraim joined the prophet in his word of warning and then provided for the proper return of the captives to JERICHO.

S.J. SCHULTZ

Amasai uh-may'si (עֲמַשִּׁי H6691, possibly short form of עֲמַסִּיָּה H6674, “Yahweh has carried [*i.e.*, protected]”; see AMASIAH). (1) Son of ELKANAH and descendant of LEVI in the line of KOHATH (1 Chr. 6:25 [Heb. v. 10]). Somehow he also is linked with the genealogy of the musician HEMAN and thus is listed as the father of Mahath (v. 35 [Heb. v. 20]).

(2) One of the priests appointed by DAVID to blow the trumpets before the ARK OF THE COVENANT when it was brought to Jerusalem (1 Chr. 15:24).

(3) Father of Mahath, a Levite who served in the time of HEZEKIAH'S revival (2 Chr. 29:12). Since the Amasai in #1 above also had a son named Mahath, it might appear that they are the same person, but 1 Chr. 6:25 and 35 refer to someone who served much earlier, during the time of SOLOMON.

(4) The “chief of the Thirty,” upon whom the Spirit came when he met DAVID at ZIKLAG (1 Chr. 12:18). Some identify him with AMASA, captain of Absalom's army (2 Sam. 17:25), and others with ABISHAI, the brother of JOAB (1 Chr. 11:20; cf 2 Sam. 23:18; 1 Chr. 2:16; 18:12). The problem would remain, however, in that none of the three (Amasai, Amasa, or Abishai) appears in the lists of the Thirty given in 2 Sam. 23 and 1 Chr. 11.

W.C. KAISER, JR.

Amashai uh-mash'i. KJV form of AMASHSAI.

Amashsai uh-mash'si (עֲמַשְׁסִּי H6692, possibly a scribal error for עֲמַשִּׁי H6691, “Amasai”). KJV Amashai. Son of Azarel and descendant of IMMER; a postexilic priest (Neh. 11:13). Some identify him with MAASAI in the parallel list (1 Chr. 9:12).

Amasiah am'uh-si'uh (עֲמַסִּיָּה H6674, “Yahweh has carried [for protection]”). Son of Zicri; a Judahite commander under JEHOSEPHAT “who volunteered himself for the service of the LORD” (2 Chr. 17:16).

Amatheis am'uh-thee'uhs. KJV Apoc. variant of ATHLAI (1 Esd. 9:29).

Amathis am'uh-this. KJV Apoc. form of HAMATH (1 Macc. 12:25).

Amaw ay'maw (עַמּוֹר). Also Amau. According to some scholars, this term refers to the land near the EUPHRATES River from which BALAK, king of MOAB, summoned BALAAM to curse Israel (Num. 22:5 NRSV). If this translation is correct, Amaw (or Ama'e) may be identified with a region in the valley of the river Sajur in N Syria mentioned on a 15th-cent. B.C. statue of King Idrimi (*ANET*, 557). A few Hebrew MSS, supported by several ancient versions, read AMMON, preferred by some scholars because of this country's closer proximity to Moab. It is better, however, to read the Hebrew text not as a proper noun, but as the word for "his people" (cf. KJV), thus NIV, "his native land." See also PETHOR.

amazement. See ASTONISHMENT.

Amaziah am'uh-zi'uh (אֲמַזְיָהוּ H604 and אֲמַזְיָהוּ H605, "strength of Yahweh" or "Yahweh is powerful"). (1) Son of JOASH and his successor as king of Judah. His mother was a certain Jehoaddin of Jerusalem (2 Ki. 14:2; 2 Chr. 25:1). The length of his reign is given as twenty-nine years in 2 Ki. 14:2, but such a long reign is difficult to reconcile with other data, unless the figure includes a period of coregency with his son Azariah (UZZIAH); thus some scholars date his reign c. 800–783 B.C., others 796–767. It is clear that Amaziah was a good king who ascended the throne in the midst of trying circumstances, when his father was murdered by some of his courtiers (2 Ki. 14:5–6; 2 Chr. 25:3–4). He was quite successful against the Edomites in the S along the Jordan Valley but was foolish to challenge the more powerful Jehoash, king of Israel, as a result of which he lost his kingdom (2 Ki. 14:7–14; 2 Chr. 25:17–24). He then fell the victim of a court intrigue and was pursued to LACHISH, where he was murdered. His body was brought back in a funeral cortège, and he was buried in the royal tombs outside the Mount of Zion.

(2) Father of Joshah, a clan leader in the tribe of SIMEON (1 Chr. 4:34; cf. v. 38).

(3) Son of Hilkiyah and descendant of LEVI in the line of MERARI (1 Chr. 6:45); he is listed among those who "ministered with music before the tabernacle, the Tent of Meeting, until Solomon built the temple of the LORD in Jerusalem" (v. 32).

(4) A minor figure named Amaziah is mentioned as a priest at the shrine of BETHEL during the reign of the second JEROBOAM. He attempted to deter AMOS from prophesying there and reported the prophet's denunciations to the king (Amos 7:10–17).

W. WHITE, JR.

ambassador. An official representative of a ruler or government. Ambassadors and envoys are mentioned throughout most of the biblical period (e.g., Num. 20:14; Jdg. 11:12; 2 Chr. 32:31; Isa. 30:4). Disrespect shown to them was regarded as a serious insult to their sovereign and his people, and sometimes led to war (2 Sam. 10). In the NT the term is used only in a figurative sense. Paul called himself "an ambassador in chains" (Eph. 6:20); he also said, "We are therefore Christ's ambassadors, as though God were making his appeal through us" (2 Cor. 5:20; in both passages Paul uses the verb *presbeuō* G4563). See MESSENGER.

S. BARABAS

ambassage. A term used in the KJV with the meaning, "group of ambassadors" (for Gk. *presbeia* G4561, Lk. 14:32, NIV "delegation").

amber. A yellow translucent fossil tree resin that through loss of volatile constituents, oxidation, and polymerization has attained a stable state. Burial time needed to reach this state may be millions of years, and as “fossil” implies prehistoric life, the resin must have been exuded from a tree at least before recorded history. It occurs as irregular modules or droplike shapes in all shades of yellow with aspects of orange, brown, and, rarely, red. Deeply colored translucent to transparent varieties are prized as gem material and have been used, since prehistoric times, for ornaments. The phrase “gleaming amber” is used by NRSV in Ezek. 1:4, 27; 8:2 (Heb. *ḥašmal* H3133; NIV, “like glowing metal”).

D.R. BOWES

ambush. A military stratagem in which an arrangement of soldiers or other persons in hiding make a surprise attack upon an enemy (Josh. 8:2–22; Jdg. 20:29–38; Acts 23:21; et al.). The concept also is used figuratively for the wiles of the wicked (Ps. 10:8; Prov. 1:11 [NIV, “let’s lie in wait”]; Jer. 9:8; et al.).

amen ah-men’, ay’men’. A Hebrew term (*’āmēn* H589; cf Gk. *amēn* G297) used to express assent.

I. Meaning. In both Greek and English (and many other languages), this term is a transliteration of a Hebrew adverb meaning “truly, verily,” itself derived from a verb meaning “to be reliable, have stability” (niphāl of *’āman* H586; see *NIDOTTE*, 1:427–33). Therefore “Amen” is far more meaningful than a stop or a signing-off word by which a prayer, song, or declaration is terminated. It carries the weight of approval, confirmation, and support of what is said or sung. Its significance is seen in MOSES’ instructions to JOSHUA. When the curses were to be read by the priests at SHECHEM, “all the people shall say, ‘Amen!’” (Deut. 27:15–26). Subsequently this practice became a Jewish custom in the SYNAGOGUES, and from them was passed on into Christian assemblies. After a reading or a discourse when a solemn PRAYER was offered to God, members of the audience responded with “Amen,” thereby making the substance of what was uttered their own (cf. 1 Cor. 14:16).

II. In the OT. The earliest reference to “Amen” is in the court procedure Moses prescribed for the trial of a woman suspected of adultery. After the priest administered the oath, “the woman shall say, ‘Amen. Amen.’” (Num. 5:22 NRSV). Similarly, when NEHEMIAH, the governor, assembled the rulers in an economic crisis, he administered an oath to the priests whereby real estate was to be restored to its rightful owners and tax collecting ceased. “At this the whole assembly said, ‘Amen,’ and praised the LORD. And the people did as they had promised” (Neh. 5:13). Assent of the congregation to the law was to be a responsive “Amen” in unison (Deut. 27:15–26; Neh. 8:6). Another common use of “Amen” was in a DOXOLOGY (1 Chr. 16:36; Pss. 41:13; 106:48). The doxologies of the first three books of PSALMS are concluded with “Amen” (Pss. 41:13; 72:19; 89:52). The last two had the added emphasis in the unusual phraseology “Amen and Amen.” It was also customary to respond to good news with “Amen” (Jer. 28:6). BENAIAH responded to DAVID’S appointment of SOLOMON as his regal successor with a hearty “Amen” (1 Ki. 1:36). The Hebrew term can also be used substantively (“truth, faithfulness”) as a divine title or attribute of God: “the God of truth” (Isa. 65:16).

III. In the NT. Following the precedent set by Jesus, “Amen” came into popular use in the NT. It was always used with discretion, purpose, and meaning. It appears in benedictions, prayers, doxologies,

and other religious parlance. The LORD'S PRAYER, according to some MSS, was concluded with "Amen" (Matt. 6:13), a prevailing custom among Christian churches today. The Synoptic Gospels record fifty-four instances of Jesus' use of the word, all of which are translated "verily" in the KJV (Matt. 31 times; Mk. 14 times; Lk. 9 times). In most of these instances Jesus prefaced some important statement with the term, "Truly, I say to you" (e.g., Matt. 5:18, 26; 6:5; 10:15; 13:17; NIV, "I tell you the truth"). John's gospel alone uses the double form, "Verily, verily I say to you," and does so in every one of the twenty-five times it occurs (e.g., Jn. 1:51; 3:3; 5:19, 24, 25; 12:24; 14:12; et al.). This double use has the force of a superlative. As already seen, some double uses of "Amen" occurred in the OT (Num. 5:22; Neh. 8:6; Pss. 41:13; 72:19; 89:52).

Other writers in the NT employed "Amen" in all its customary uses. Paul favored it in his written benedictions, which sometimes appear in the body of his letters as well as at the end (Rom. 15:33; 16:27; 1 Cor. 16:24; Gal. 6:18; Phil 4:20; 1 Tim. 6:16); following doxologies (Rom. 11:36; Gal. 1:5; Eph. 3:21; Phil 4:20); and similar laudations (1 Tim. 1:17; 6:16; 2 Tim. 4:18). Paul found "Amen" to hold a singularly elegant connotation with reference to God (Rom. 1:25; 9:5; 2 Cor. 1:20). Other NT writers concluded their doxologies with "Amen," usually preceded by the phrase "for ever and ever" (Heb. 13:21; 1 Pet. 4:11; 5:11; 2 Pet. 3:18; Jude 25; Rev. 1:6; 7:12). The author of Hebrews concludes both the benediction and the postscript with "Amen" (Heb. 13:21, 25).

John employs "Amen" nine times in a variety of ways in Revelation, reaching its climactic application in a name for Jesus Christ: "These are the words of the Amen, the faithful and true witness, the ruler of God's creation" (Rev. 3:14). John seems to see the personification of "Amen" in Jesus Christ, who confirms, approves, and supports God in revelation and creation. John mentions three instances in his vision in which the four living creatures said, "Amen," joined in the third instance by the twenty-four elders (5:14; 7:12; 19:4). Appropriately, John concludes Revelation with a repetition of Amen: in response to the Lord's second coming, "Amen. Come, Lord Jesus!" and the final benediction, "Amen" (22:20–21). (See *NIDNTT*, 97–99.)

G.B. FUNDERBURK

Amenhotep ah'muhn-hoh'tep. See AKHENATEN.

amethyst. A violet or purple transparent variety of quartz (silicon dioxide) used as an ornamental or gem stone (Heb. *ʾaḥlāmā* H334, Exod. 28:19; 39:12; Gk. *amethystos* G287, Rev. 21:20). The color is attributed usually to the presence of manganese, or it may be due to organic material. The ancient Egyptians used it as a gem stone and a common use in antiquity was for intaglios. Amethyst occurs either in mineral veins associated with granites or as a lining of hollow AGATE nodules.

D.R. BOWES

Am ha-arez ahm'hah-ahr'ets (אֲמֵי הָאָרֶץ H6639 + H824, "people of the land"). Also *Am ha-arets*; more properly, (*Am hā'āreṣ*).

I. General designation. Originally the term referred to native dwellers of the land, such as the HITTITES from whom ABRAHAM purchased the cave of MACHPELAH (Gen. 23:9). Each land had its own people (*am*): Egyptians (Gen. 42:6), Canaanites (Num. 13:28), and Hittites (Gen. 23:7). Many think that the term refers more strictly to the responsible male citizenry who lived on their own land, served in the army, and participated in judicial proceedings and cult festivals. M. H. Pope (in *IDB*,

1:106) finds the limitation inherent in the word (*am* in contrast to *gôy* H1580, which refers to the entire population. But *am*, by itself, does not always seem to be used in the narrower sense of landed citizens. Note, for example, its frequent use for the Israelites in Exodus at a time when they all were slaves.

II. Status of the people. Some go so far as to make the *Am ha-arez* of Israel the governing body in the nation (e.g., M. Sulzberger, *Am Ha-aretz: The Ancient Hebrew Parliament* [1909]). Others, under the influence of the later opprobrium attached to the term, consider them poor and ignorant commoners. Neither extreme is clear from the Scriptures. Only once does the OT refer to POVERTY among them. The context is generally one of influence and power, though not necessarily of high government office. It may be simply the power inherent in responsible citizenship.

They who own land have a vital concern in the government. Hebrew law was zealous to protect ownership and inheritance of land, with all the prerogatives, from generation to generation. G. von Rad (*Studies in Deuteronomy* [1953], 63–66) calls the *Am ha-arez* peasant proprietors and credits them with the achievement of partial reform under JOASH (2 Ki. 11:13–18) and fuller restoration under JOSIAH (21:24). They seem to have been the chief support of national independence with all its religious implications. They were the most able to resist treachery and aggression. According to von Rad (*Old Testament Theology* [1962], 2:75), they were the only ones capable of keeping alive and fostering the Yahwistic tradition. They were believers of the old-fashioned kind or, at least, imagined that they were. As the hard core Israel, these people who owned and defended the land were also the special target of foreign powers who levied indemnities and taxes (23:35; 25:18–21).

Various inferences seem to indicate the power and prestige of the *Am ha-arez* throughout most of the biblical times. According to S. Daiches (in *JTS* 30 [1928–29]: 245–48), the best text of Gen. 47:20–21 indicates that JOSEPH took the land from the owners and reduced them to town dwellers. The strength of the statement is in the implied power and position of free landowners. In a sense, every landowner is a lord. Together, they formed a solid block in government. In Israel, it was these responsible citizens against whom the prophets cried out. Good government, pure religion, and sound ethics depended on them in large measure. Their irresponsibility and self-indulgence could spell doom to the nation. Likewise, when NEBUCHADNEZZAR took Jerusalem, the significance of the *Am ha-arez* became apparent. Sixty of them were taken along with priests and rulers to be executed (2 Ki. 25:19). Well-known imperial policy by-passed the weak and common people to transplant or kill only the potential leaders. It appears that the *Am ha-arez* were considered powerful and dangerous.

The people of the land worked and defended the land of the promise.

III. A term of reproach. After the EXILE, the term retained its connotation of responsible citizenry, but the land had fallen to people of mixed origins. They were no longer the conservative custodians of national tradition. Animosities grew between returnees and settlers.

PHARISEES and rabbis elaborated laws and insisted on their universal application. They heaped opprobrium on the careless. The hostility was mutual. *Am ha-arez* became a term of contempt for common people who did not specialize in the law (Jn. 7:49). This use, as preserved in the MISHNAH, almost completely overshadowed the etymological and earlier connotation (a “semantic revolution,” according to A. H. Gunneweg in *ZAW* 95 [1983]: 437–40). C. Montefiore (*The Religion of the Ancient Hebrew* [1892], 502) calls the *Am ha-arez* the creation of the burdensome agrarian and purity laws. Some tend to account for the success of the gospel by reference to the Christians’ more friendly attitude toward the masses. (See further *ABD*, 1:168–69.)

Ami ay'mi (אמי) H577, “trustworthy”). See AMON #3.

amillennialism. The view that Christ’s millennial kingdom extends from his RESURRECTION to the time of his SECOND COMING on the clouds at the end of this age, when he will judge the living and the dead in one great resurrection of the righteous and the wicked (see also MILLENNIUM; PREMIL-LENNIALISM; POSTMILLENNIALISM). According to this view, the judgment of the sheep and the goats and the great white throne judgment are identical, followed by the eternal kingdom of God. The millennial kingdom of Christ is therefore *now*, both in heaven and on earth. On earth, Christ’s kingdom “is not of this world,” but he reigns especially in the hearts of his people on earth, and in heaven over the hosts of the redeemed and his holy angels for a “thousand years,” the perfect, complete time between the two comings of Christ. It is held that the “binding of Satan” for the thousand years (Rev. 20:2) took place either during his earthly ministry (Matt. 12:29) or at his resurrection from the dead, and that it particularly concerns the inability of SATAN to keep the nations in spiritual darkness (Rev. 20:2–3) as he did before the first coming of Christ. At the end of this present age, Satan is to be released from that restriction, and he will again be permitted to deceive the nations for a short period, until Christ

comes down and defeats him at the battle of ARMAGEDDON (Rev. 19:19; 20:8).

Meanwhile, the souls of believers who have died live and reign with Christ in heaven (Rev. 6:9; 14:13; 20:4). The judgments all take place at the time of the second coming of Christ, when the believers, dead and living, are raptured to meet Christ in the air (1 Thess. 4:17), and all appear before his judgment seat (Rom. 14:10). Perhaps the best picture of the one great judgment is found in 2 Thess. 1:9–10, which states that the wicked will be punished “on the day he comes to be glorified in his holy people.” This passage clearly declares that the final judgment occurs at the time of the second coming, not 1,000 years later.

I. Jewish beliefs about the kingdom. The Jews of the time of Christ expected an earthly kingdom of the MESSIAH, much as the premillennialists expect today. Christ clearly taught, however, that after living believers die, they will neither marry (and of course not have children) nor die again, but will be like the angels in heaven (Lk. 20:27–36). That is contrary to the teaching of the premillennialists, who hold that during an earthly millennium believers will marry, have children, and die.

II. The judgment of the sheep and the goats. The premillennialists teach that the judgment of the sheep and the goats takes place at the beginning of the alleged earthly millennium, but Christ taught that the living wicked at that time will be sent to eternal punishment (Matt. 25:46), while the living believers enter at once into glory (25:46) and will not marry, nor have children, nor die after that judgment (Lk. 20:27–36). According to their teaching, the wicked dead will not be raised until after a thousand years, so there would be no source from which Satan could gather the wicked at the final battle (Rev. 20:7–9). This fact clearly shows that the battle of Rev. 20:7–9 must take place before the second coming and is, therefore, identical with the battle of Armageddon (19:19–21).

III. The binding of Satan. The binding of Satan (to prevent his deceiving the nations in the interadventual period) is described in Matt. 12:22–29. Here Jesus says that he cast out demons because he had bound the strong man (Satan). The PHARISEES had said that he cast out demons because he had the power of BEELZEBUB (v. 24), and Jesus then pointed out that if that were the case, Satan’s kingdom could not stand (v. 26). Probably the consummation of the binding did not occur until the resurrection of Christ, but Christ could act during the closing period of his ministry as though it had already taken place, since God does not change his mind or his plans.

IV. The parable of the wheat and the tares. The parable of the wheat and the tares (Matt. 13:24–30) was interpreted by Jesus to his disciples (vv. 36–43). He said that his kingdom was in the world. The good seed refers to the children of the kingdom. The weeds were the children of the evil one (Satan). They were to be left together until the judgment at the end of this age, and the weeds (the children of the devil) were to be gathered *before* the wheat (the children of the kingdom) was gathered into the barn (the eternal kingdom of God). Thus Jesus taught that the rapture of believers would not occur until the children of the devil were all gathered into eternal punishment at the time of the final judgment (v. 30). Christ’s kingdom is clearly to precede the rapture. The kingdom that follows is the eternal kingdom of God.

V. Interpretation of OT prophecies. One of the principal areas of difference in INTERPRETATION concerns the prophecies in the OT. The premillennialists insist that unless the language is clearly figurative (as in Isa. 55:12, “all the trees of the field will clap their hands”) *all* prophecies must be

interpreted literally. They do not believe that many of the prophecies must be interpreted symbolically. They insist that the prophecies of the Messiah sitting on the throne of David demand that a time is coming when the throne of David must be reestablished in Jerusalem, with the Messiah reigning on an earthly throne over the Jews for a thousand years.

Premillennialists believe that the restoration of the temple and the whole sacrificial system, as prophesied in Ezek. 40–48, will take place at the second coming. Such an event, however, would seem to make the once-for-all sacrifice of Christ on the cross null and void. The priesthood would be restored and the duties of the priests reestablished, including the teaching of the distinctions between the clean and unclean foods. Most incongruous of all, the priests would prepare the sacrifice for the prince (who would be the Messiah), as though the sinless Son of God would need a sacrifice! In fact, the many features of the ceremonial law of Moses would be restored, including the CIRCUMCISION of all the men who enter the sanctuary (Ezek. 44:9). The epistle to the GALATIANS was written by Paul to prove that circumcision was no longer necessary for Gentile Christians. This alone should be sufficient to prove that the literal understanding of the Ezekiel prophecies is not the correct method of interpretation.

The whole problem of the interpretation of the Ezekiel temple prophecies is cleared up if we realize that these prophecies in the last eight chapters of the book are symbolical. God wanted the prophet to teach the truth that the ideal spiritual relationship between God and his people is a relationship in which everything centers on the spiritual WORSHIP of the sovereign God! Since in the OT dispensation the only way a person could approach God in worship was through the ceremonies and sacrifices of the Mosaic law, the ideal worship of God at the center of all national and personal relations had to be pictured in terms of the ceremonial law of Moses. That was the only way the people could have understood the theocentric worship God demanded of people.

Treated symbolically, these last chapters of Ezekiel have a tremendous message for Christians today. The worship of God must be at the center of human society (represented in Ezekiel by the city), human government (represented by the prince), and ecclesiastical organization (represented by the priests and Levites). The sovereignty of the triune God should be the center of all life, thought, and action, both public and private. The ideal life is discussed in Ezekiel in symbolic terms of the temple and the nation, pointing out that all the realms must be subordinated to the worship of the sovereign triune God. The sovereignty of God over all realms of life is the ideal of the earthly phase of the kingdom of God. The amillennialist believes that this is the message of these last chapters of Ezekiel, *not* the restoration of an earthly Jewish temple and nation, including the whole Mosaic ceremonial law, in a millennial kingdom in Palestine in the future.

VI. The rod of iron rule of Christ. One of the cardinal features of the premillennial system of interpretation is that when Christ comes and establishes a millennial kingdom with its capital in Jerusalem, he will rule over the nations with a rod of iron (Rev. 2:27; 12:5; 19:15; NIV, “iron scepter”). It teaches that during the millennium the nations will be composed of rebellious people who will be kept from making war on each other by the stern, forceful iron rod rule of the reigning Christ. In these passages the Greek verb is *poimainō* G4477, so the phrase may be translated “act the part of a shepherd with a rod of iron.” The OT shepherd in Palestine had two rods: a shepherd’s crook to guide the sheep, and an iron-studded club for the protection of the sheep from wild animals. Shepherding the sheep would thus be killing the enemies of the sheep with the rod of iron. Instead of the shepherd using the rod of iron to make the sheep obey him, he would use it to protect them from the wild animals. What these passages mean, then, is that when Christ comes again he will destroy all

our enemies “with the rod of iron.” There is, therefore, no indication that any wicked people will be left on earth after the second coming. If there were a millennium after his return, there would be no wicked people for Satan to gather at the end of that age to make war on the saints (Christians).

VII. The interpretation of Rev. 20. The principal NT basis for the belief in a thousand-year millennial reign of Christ on earth after his return is Rev. 20, the only place in the Bible where the thousand-year reign on earth is mentioned. Is that chapter to be interpreted literally as teaching that there is such a reign on earth *after* Christ’s return? Or is there an indication that the thousand-year reign precedes the second coming?

The most logical outline of Revelation would divide the book into seven sections that picture the present age in symbolic language. But instead of being successive, each of the seven sections seems to be describing the present age from different aspects, all seven dealing with the *same time period*, the period from the resurrection of Christ to the final judgment. The last period actually goes beyond the present age into the eternal age, though beginning at the first coming. The reason the book of the Revelation has always seemed so difficult to interpret is that Christians have failed to notice two things: (1) that the whole book is symbolic, and (2) that each section *covers the same time period*, namely from the first coming of Christ to the end of time.

According to this point of view, then, the seventh section covers the *whole present age*. It begins with a symbolic picture of the binding of Satan. Satan is a spirit and could not be bound by a literal chain of iron or brass or any other metal. It clearly must refer to the *limitation of the power of Satan* in some way. That way is described in Rev. 20:3: “to keep him from deceiving the nations anymore” until just before the end of this present age, when his power to deceive the nations is restored for a little time. It is not said that he will not be able to tempt people, and assuredly he does. He is to be prevented from continuing national deception. Before the coming of Christ the nations of the world were all in the darkness of heathenism, under the control of the deceptive powers of the devil, as nations. At the coming of Christ the nations “saw a great light.” From that time onward the light of the gospel began to spread over the whole world. Most people do not realize how widespread the gospel was during the 1st and 2nd centuries after Christ.

The souls of Rev. 20:4 cannot be reigning with Christ in human bodies, for they were beheaded for the testimony of Jesus and did not worship the beast. The amillennialist believes that those disembodied souls reign with Christ for the thousand years. Where? In heaven. But is their reign limited to only a literal thousand years? No. The thousand years is the symbolic period between the two comings of Christ.

As for the “first” resurrection (Rev. 20:5), it must refer to the spiritual resurrection of the souls dead in sins at the time of their new birth. In Jn. 5:24–25 this spiritual resurrection from sin is contrasted with the bodily resurrection in 5:28. It is mentioned also in Eph. 2:4–6; 5:14; Col. 2:12. The first resurrection is the spiritual resurrection of the soul that had been dead in sins, and the second resurrection is the resurrection of the body. The first DEATH is the death of the body, and the second death is spiritual—eternal punishment.

The release of Satan (Rev. 20:7) at the close of this present age refers to the national deception that besets the worldly nations of the earth just before the end of this age. Suddenly the non-Christian nations will reject all gospel missionaries and all gospel preaching at the instigation of Satan, and they will all be gathered in the final assault against the living Christians. Then Christ will come in the clouds and send fire from heaven to destroy them all, followed by the judgment of the great white throne, which is identical with the judgment of the sheep and the goats of Matt. 25, and also with the

judgment of 2 Thess. 1:9.

At about the same time the general resurrection of the bodies of all people will take place; the righteous will be raptured and their bodies will be made like the glorified body of Christ. The wicked unbelievers will all be sent into eternal punishment, while the believers in Christ and all God's elect of all history will enter eternal life in the eternal kingdom of God, which will be established in the new heavens and the new earth in which righteousness dwells. (See further F. E. Hamilton, *The Basis of Millennial Faith* [1942]; R. G. Clouse, ed., *The Meaning of the Millennium: Four Views* [1977]; A. Hoekema, *The Bible and the Future* [1979]; K. Riddlebarger, *A Case for Amillennialism: Understanding the End Times* [2003].)

F. E. HAMILTON

Aminadab uh-min'uh-dab. KJV NT form of AMMINADAB.

Amittai uh-mit'i (אִמִּטַּי H624, "faithful"). Father of the prophet JONAH, from GATH HEPHER in the tribal territory of ZEBULUN (2 Ki. 14:25; Jon. 1:1).

Ammah am'uh (אֲמָה H565, prob. "[water] canal"; cf. METHEG AMMAH). A hill near GIAH in BENJAMIN, somewhere E of GIBEON, where JOAB and ABISHAI halted in their pursuit of ABNER and his forces (2 Sam. 2:24). The site has not been identified.

Amman ah-mahn'. The capital city of the modern country of Jordan. See RABBAH.

Ammi am'i (אֲמִי [from אִם H6639], "my people"). The new name to be applied to Israel in the time of restoration (Hos. 2:1; NIV, "My people"), in contrast to rejected Israel, called LO -AMMI, "Not my people," the name given to HOSEA'S third child by GOMER (1:9). On the use of the term Ammi to form compound names, see AMMON.

Ammidians uh-mid'ee-uhns (אַמִּידִּיּוֹת). A family that returned from the Babylonian captivity under ZERUBBABEL (1 Esd. 5:20; KJV, "Ammidoi"; the name is omitted in the parallel lists in Ezra 2 and Neh. 7).

Ammiel am'ee-uhl (אֲמִיֵּל H6653, "my kinsman is God"). (1) Son of Gemalli, of the tribe of DAN; one of the twelve spies sent by MOSES into Canaan (Num. 13:12).

(2) Father of MAKIR, in whose house MEPHIBOSHETH was hidden from DAVID (2 Sam. 9:4–5). Makir later befriended David (17:27).

(3) Father of BATHSHEBA, a wife of David and the mother of SOLOMON (1 Chr. 3:5 NIV; the NRSV, following most MSS, has "Bath-shua, daughter of Ammiei"). Elsewhere he is called ELIAM (2 Sam. 11:3; note that the two names have the same meaning, but with the components reversed).

(4) Sixth son of OBED-EDOM, whose family took care of the South Gate of the TEMPLE and the storehouse in the time of David (1 Chr. 26:5, 15).

Ammihud uh-mi'huhd (אֲמִיחֻד H6654, "my kinsman is glorious" or "my people have majesty"). (1) Father of ELISHAMA; the latter was head of the tribe of EPHRAIM during the sojourn in the

wilderness (Num. 1:10; 2:18; 7:48, 53; 10:22). Ammihud is listed in the genealogy of JOSHUA (1 Chr. 7:26).

(2) Father of Shemuel, who was one of the leaders of the tribe of SIMEON appointed by MOSES to help divide the land of Canaan (Num. 34:20).

(3) Father of Pedahel, who was one of the leaders of the tribe of NAPHTALI appointed by Moses to help divide the land of Canaan (Num. 34:28).

(4) Father of TALMAI, king of GESHUR, to whom ABSALOM fled after the murder of his brother AMNON (2 Sam. 13:37, where the *Ketib* reading is Ammihur).

(5) Son of Omri and father of Uthai; listed among leaders from the tribe of JUDAH who were the first to resettle after the EXILE (1 Chr. 9:4).

Amminadab uh-min'uh-dab (עֲמִינָדָב H6657, “my kinsman is noble” or “my people are generous”; μινναδάβ G300). (1) Father of NAHSHON, who was the head of a family in the tribe of JUDAH (Num. 1:7; 2:3; 7:12, 17; 10:14). Amminadab was also the father of ELISHEBA, the wife of AARON (Exod. 6:23). He descended from PEREZ, Judah's son (Gen. 38:29; 46:12), was an ancestor of DAVID (Ruth 4:19–20), and is included in the GENEALOGY OF JESUS CHRIST (Matt. 1:4; Lk. 3:33).

(2) The name Amminadab is listed in the MT of 1 Chr. 6:22 (= v. 7 in MT and LXX), possibly by textual corruption, as a son of KOHATH (who was a son of LEVI) and as the father of KORAH. However, according to vv. 37–38 (and in Exod. 6:18, 21; cf Num. 3:19), Kohath's son who fathered Korah was IZHAR (the reading of some MSS of the LXX in 1 Chr. 6:22).

(3) The head of the Levitical family of UZZIEL; he helped to bring the ARK OF THE COVENANT to Jerusalem in David's time (1 Chr. 15:10–12).

(4) According to the SEPTUAGINT, Amminadab was the name of ESTHER'S father, but the MT reading, ABIHAIL, is probably correct (Esth. 2:15; 9:29).

W.C. KAISER, JR.

Amminadib uh-min'uh-dib (עֲמִינָדִיב [from עם H6639 + נָדִיב H5618], “my people are noble” or “my kinsman is generous willing”). A name found only in an obscure passage, “my soul made me *like* the chariots of Amminadib” (Cant. 6:12 KJV). However, the NIV interprets the term as two common nouns and renders, “my desire set me among the royal chariots of my people” (similarly NRSV, “my fancy set me in a chariot beside my prince”).

Ammishaddai am-i-shad'i (עֲמִישַׁדַּי H6659, “Shaddai is my kinsman”). The father of Ahiezer, who was a leader of the tribe of DAN in the wilderness journey (Num. 1:12; 2:25; 7:66, 71; 10:25).

Ammizabad uh-miz'uh-bad (עֲמִיזָבָד H6655, “my kinsman has bestowed”). Son of BENAIAH; the latter was one of DAVID'S bodyguards and captain of the elite Thirty, while Ammizabad was in charge of the division led by his father (1 Chr. 27:6).

Ammon am'uhn (עַמּוֹן H6648, derivation uncertain; gentilic עַמּוֹנִי H6649, “Ammonite”). An ancient nation in TRANSJORDAN.

I. Name. According to Gen. 19:38, LOT'S younger daughter gave birth to a child by her own father

and named him BEN-AMMI; he was the ancestor of the Ammonites. It is clear that the child's name offers an explanation for the ethnic name (*ammônî* (or *běně*) *ammôn*). The proper translation of the name Ben-Ammi is not clear. Some render it "son of my people," others "son of my paternal uncle [or paternal clan]." Also possible would be the interpretation of Ammi as a divine name or epithet.

Given the narrative context of Gen. 19, however, the name could mean only "son of my own father." The uncompounded name Ammi does not occur elsewhere in the OT, although its compounds can be cited. LO-AMMI is the symbolic name given by the prophet HOSEA to his son (Hos. 1:9). Among other compounds one can cite AMMIEL, AMMIHUD, AMMINADAB, AMMISHADDAI, and AMMIZABAD. Of these, all but the second example can quite convincingly demonstrate the primary reference of Ammi to God (or a god). The bare element (or its extension Ammiyan, hence Ammon) represents merely an abbreviated or hypocoristic form of the longer compounds. In such compound names the first element probably means "[divine] kinsman/ protector." In the context of Gen. 19 the daughter regarded her widowed father as her only protector; hence, the name Ben-Ammi. The compounded form *bn*(*my*), with the variant *bn*(*myn*), is found in the texts from UGARIT as a personal name.

In the MARI texts (c. 1780 B.C.), where the W Semitic (*ayin* was spelled with the cuneiform **h**), one finds compounded names such as Hamma-El (cf. OT Ammiel), Hammi-Andulli, Hammi-Shagish, Hammi-Ishtamar (cf. the Ugaritic royal name (Ammishtamru), Hammi-Tilu, Hammu-Rāpi), and Hammu-Tar, along with the hypocoristic Hammānu (= Heb. Ammon!). In the TELL EL-AMARNA tablets (c. 1400–1300 B.C.) the following example occurs: (Ammu-nīra, Prince of Beirut. In the ALALAKH tablets a mayor bears the name (Ammīya, and other Ammi names are: (Ammī-tābā, (Ammīya-Haddu, (Ammī-taqum, (Ammu-Hadda (OT Ammihud?), and (Ammu-Rāpi). Both the forms (Ammān and (Ammīyān occur as personal names. Although the long *a* in the final syllable of the name (Ammān had shifted to long *o* in the Hebrew speech, it remained *a* in Ammonite speech, as heard by the Assyrians in the 9th and 8th centuries B.C. They called the land *Bīt-Ammanay* ("house of *Ammanay*") or *māt ban Ammanay* ("land of the *ban-Ammanay*").

II. Origin and ethnic affiliation. As noted above, the OT account in Gen. 19 places the origin of the Ammonites and Moabites (see MOAB) in southern Transjordan at the beginning of the 2nd millennium B.C. Both groups spoke languages closely related to Hebrew, and intermarriage between Hebrews and Moabites (RUTH'S sons) and Hebrews and Ammonites (2 Chr. 12:13; 24:26) indicates that communication between these groups and the Israelites to the W was never any problem. Many Ammonite and Moabite personal names have striking parallels in early Arabic, suggesting that strong influence was brought to bear upon them from the oasis towns to the SE. Since Transjordan was settled by groups that recently had adopted sedentary ways, it is likely that a large proportion of the population was related to nomadic groups such as the Midianites (see MIDIAN).

At the time of the Israelite entrance into Canaan under MOSES, three primary groups occupied Transjordan: the Ammonites in the area surrounding the later capital Rabbath-Ammon (see RABBAH), probably extending no further W than the settlement of JAZER, the AMORITE kingdom of HESHBON located between Ammon and Moab, and the Moabites whose northern border must at that time have been the ARNON River. In addition, to the N of Ammon was the kingdom of BASHAN, ruled by King OG. The territories of Ammon and Moab were left untouched by the Israelites; but the kingdoms of Bashan and Heshbon were conquered. Ammon was left as a peninsula of land, jutting out into the

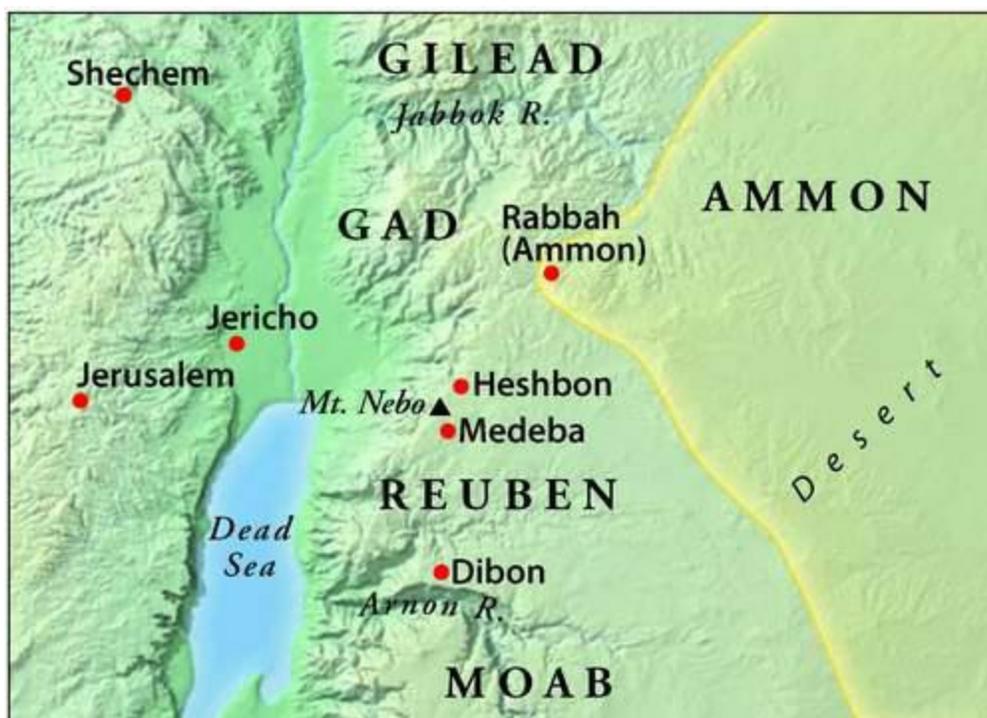

“sea” of former Amorite territory to the N, W and S, recently conquered by Moses and the Israelites. These three groups (Amorites, Ammonites, and Moabites) were doubtless related in some manner, but precisely how is unknown.

Little is known about the religion of Ammon other than the name of its national god, MILCOM. The forms *milkōm*, *malkam*, and *mōlek* appear to be three alternate variants of his name. All contain the common Semitic noun *mlk*, “king.” It has been suggested that the final *m* in the name is the possessive pronoun “their,” and that the name means “their king.” If so, the name finds a near parallel in that of the god of the city of Nesha in central Asia Minor c. 1800 B.C., *Siu-summi* (“their god”). (See further D.I. Block in AUSS 22 [1984]: 197–212.)

III. History of Ammon

A. Earliest history attested in OT (c. 1250–1100 B.C.). In the middle decades of the 13th cent. B.C., while the Israelites under Moses and Joshua were passing through Transjordan on their way to Canaan, the OT attests the presence of an organized political kingdom of the Ammonites (Num. 21:24; Deut. 2:19–21, 37; 3:16), whose land Yahweh refused to give to the tribes of Israel. This land is said to have belonged long before to a group named the Zamzummites (Deut. 2:20), whom the Ammonites dispossessed. That Ammon should not have been mentioned in the Song of Moses (Exod. 15) or the Oracles of Balaam (Num. 23; 24) does not mean that it did not yet exist. In the former poem only Philistia, Edom, Moab, and Canaan are numbered among the trembling foes. Powers to the N of Moab are simply ignored. No mention is made of Bashan or Heshbon either, yet one may not discount their organized existence at this time. Likewise, in the Oracles of Balaam the countries mentioned are not intended to exhaust the known powers of the area; Canaan, Philistia, the Amorite kingdoms, nor Ammon are included. Not long after the initial settlement of the tribes in Israel, Ammon appears as a military ally of Eglon, king of Moab. The Ammonite troops assisted the Moabites in their attempt to regain former Moabite territory at the northern end of the Dead Sea, including Jericho (“the City of Palms,” Jdg. 3:13).

B. The Ammonite War with Jephthah the Gileadite (c. 1100–1020 B.C.). Excavation reveals that during the 11th cent. the Ammonites had fortified their borders with structures in the megalithic style. Judges records: “For eighteen years they oppressed all the Israelites on the east side of the Jordan in Gilead, the land of the Amorites. The Ammonites also crossed the Jordan to fight against Judah, Benjamin and the house of Ephraim; and

Ammon.

Israel was in great distress” (Jdg. 10:8–9). The inhabitants of GILEAD sought and found an able leader in JEPHTHAH, the bastard son of Gilead and a harlot (11:1). After making a compact with the elders of Gilead, Jephthah gathered his army and defeated the Ammonites (11:32–33). Since the victory was a decisive one, it was not necessary for Jephthah to conduct any campaign W of the Jordan against Ammonite settlements. It is of interest that the unnamed king of the Ammonites claimed Israel had taken away Ammonite land when it conquered the territory between the Arnon and JABBOK Rivers (11:13).

C. Ammonites in the period of Saul (c. 1020–1000 B.C.). A new Ammonite king, named NAHASH, came to power c. 1020 B.C., determined to reassert Ammonite power over the Israelite settlements to the E of the Jordan. He chose as the target of his campaign the town of JABESH GILEAD, whose citizens offered to make a treaty with him, something he refused except on the cruelest of terms—the gouging out of the right eye of every citizen (1 Sam. 11:1–2). Given seven days in which to make their decision, the citizens of Jabesh sent an embassy to GIBEAH of SAUL, seeking military aid from the Benjamites there (v. 4). Saul heeded their plea and sent messengers throughout the tribes demanding “volunteers” for his muster (v. 7). The volunteers came to a rendezvous at BEZEK, N of SHECHEM in the hills of MANASSEH. Leading 330,000 men (v. 8), Saul assaulted the camp of the Ammonites with three separate attack columns and took no prisoners from his victory. All who were not killed were scattered (v. 11) according to the principles of holy war. Later in his reign (14:47–48) Saul fought further battles with the Transjordanian peoples who raided the Israelite settlements (Moabites, Ammonites, Edomites).

D. Ammon as a vassal state under David and Solomon (c. 1000–922 B.C.). During the years of Saul’s pursuit of DAVID, at least one Ammonite soldier threw in his lot with the young Judean (ZELEK the Ammonite, 2 Sam. 23:37). King Nahash, who had fought with Saul, was inclined to be friendly with his successor David both before and after his accession to the Israelite throne. When Nahash

died and his son HANUN succeeded to the throne, David sent an embassy to express both his sadness at the passing of Nahash and his joy at the accession of his son Hanun. The intentions of this embassy, however, were questioned by Hanun's advisers, who maintained it had been sent to spy and plan the conquest of Ammon (2 Sam. 10:1–3; 1 Chr. 19:1–3). Hanun ordered them to be shorn of half their beards and the lower half of their garments, exposing them to shame and ridicule (2 Sam. 10:4–5; 1 Chr. 19:4–5). This was an affront calculated to bring on a war. The Ammonites sent for military aid from the Aramean states of SYRIA (see ARAM): BETH REHOB, MAACAH, TOB, ZOBAH. With a payment of 1,000 talents of silver, Hanun was able to recruit 33,000 foot soldiers (2 Sam. 10:6) and 32,000 chariots (1 Chr. 19:7).

The native troops of Ammon deployed about the gate of the capital city (2 Sam. 10:8; 1 Chr. 19:9), while their Aramean mercenaries deployed themselves in the vicinity of the Reubenite town of MEDEBA to the S of the capital. David's generalissimo, JOAB, decided upon a plan of attack. He would personally command the crack troops of his army and attack the Aramean companies to the S in Medeba, while sending his brother ABISHAI at the head of the rest of the Israelite army to fight the Ammonites at Rabbah (2 Sam. 10:9–12; 1 Chr. 19:10–13). The strategy succeeded. Joab and the elite corps soon put the Arameans to rout, thus thoroughly demoralizing the Ammonite army, which quickly retired from the battlefield to the safety of the walled capital city. The fleeing Arameans sought further assistance from SHOBACH and HADAREZER, Aramean leaders from beyond the EUPHRATES River (2 Sam. 10:15–16; 1 Chr. 19:16). But David launched an over-powering expeditionary force against the Arameans, forcing Hadadezer and his vassal kings to submit and become the vassals of David (2 Sam. 10:19).

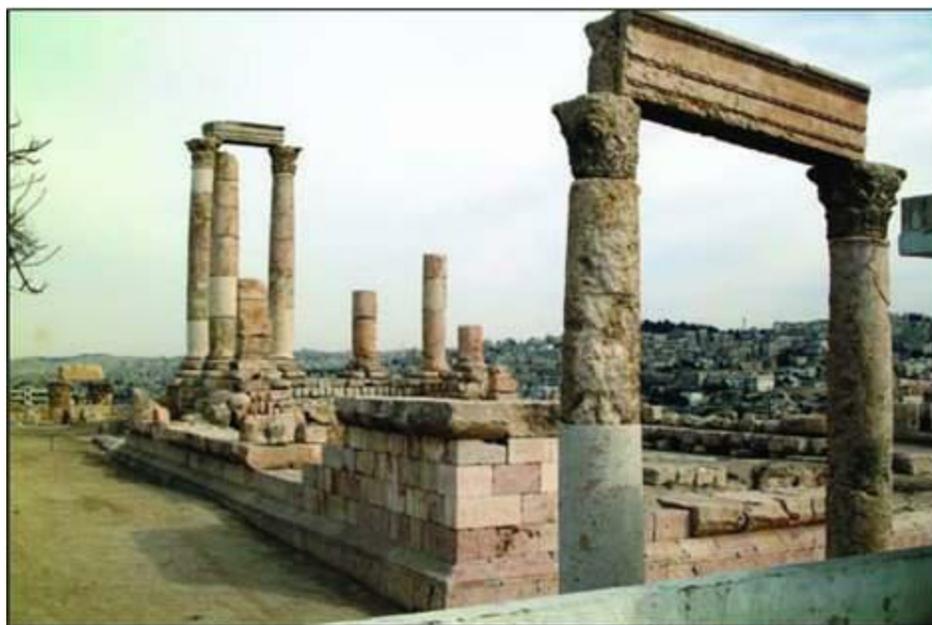

The following year David sent Joab again at the head of a massive army to ravage the Ammonite countryside and put the capital under siege (2 Sam. 11:1; 1 Chr. 20:1). When Joab had besieged the capital for many months and had finally captured its water supply ("the city of waters," 2 Sam. 12:27 KJV), he sent word to David, notifying him that the capitulation of the city was imminent and that the king should come at once to assume command of the besieging forces, in order to preside over the capture of the Ammonite capital (12:28). David arrived and was in command at the fall of Rabbah.

With the fall of its capital and the transfer of the golden crown of its king to the head of David (2 Sam. 12:29–31), Ammon became another Israelite vassal state. During the remainder of the reign of David and that of SOLOMON, the Ammonites were governed through a viceroy from among the old royal family. When David took refuge from ABSALOM in MAHANAIM in Transjordan (2 Sam. 17), he was supported by SHOBI, the son of Nahash from Rabbah of the Ammonites (17:27). Probably it was from this same Nahashite line that Solomon's Ammonitess wife, NAAMAH, was chosen. She became the mother of REHOBOAM, the next king (1 Ki. 14:21, 31; 2 Chr. 12:13). Thus Ammonite blood was introduced into the Israelite royal family, as the blood of Ruth the Moabitess had already entered the line before the birth of King David (Ruth 4:13–22).

E. Ammon during the period of the kingdoms of Israel and Judah (c. 900–580 B.C.). Shortly after the division of the kingdom of Solomon in 925 B.C. and the devastating campaigns through Palestine c. 924 by SHISHAK, king of Egypt, who passed through Ammonite terrain when he touched at SUCCOTH and ZAPHON on his way N to BETH SHAN, the Ammonites declared their independence from Israel and Judah. Some time later a king arose in Ammon bearing the same name as the third king of the northern kingdom, BAASHA. He hailed from Beth Rehob and was a member of the twelve-king alliance headed up by AHAB of Israel and HADADEZER of DAMASCUS to oppose the westward march of the Assyrian king SHALMANESER III in 853 B.C. His contribution to the alliance consisted of

several thousand foot soldiers. The league succeeded in halting Shalmaneser, whereupon its members dispersed and resumed their jockeying among themselves for local power.

Shortly thereafter the Ammonites allied themselves with other Transjordanian powers (Moab and perhaps the MEUNITES, although the text, 2 Chr. 20:1, reads “Ammonites” instead of “Meunites”) against JEHOSHAPHAT of Judah. The reason for their attack is not stated in the biblical account (20:1–30). Jehoshaphat had fought beside Ahab against Transjordanians in the battle of RAMOTH GILEAD (1 Ki. 20:1–34; 22:1–40; 2 Chr. 18:1–34), which did not earn for him the love of the Ammonites and Moabites. He had reinstated Judah’s rule over Edom in the S and attempted to restore maritime trade at EZION GEBER (1 Ki. 22:48–50;

The Citadel in Amman is considered the most ancient part of the city. Ruins of the temple of Hercules built in honor of the Roman emperor Marcus Aurelius (reigned A.D. 161–80) stand where David once sent Joab to besiege the city.

2 Chr. 20:35–37); both actions perhaps threatened Moabite and Ammonite control over trade routes to the E of the Jordan. All of this doubtless contributed to the animosity of the Transjordanian powers against the king of Judah. At some time during the short reign of AHAZIAH of Israel (c. 850–849 B.C.) the Ammonites, Moabites, and Meunites attacked Judah. The attack was not a concerted drive to conquer, but was rather in the nature of a raid. In a daring move the invaders crossed the Dead Sea at the ford opposite MASADA, climbed one of the difficult but short ascents into the heart of the Judean hills, and camped in the vicinity of EN GEDI, also called HAZAZON TAMAR (2 Chr. 20:1–2).

When word reached Jehoshaphat, he turned to God for help in his consternation (2 Chr. 20:3–12). Assured by the Lord’s promise of victory through the prophet JAHAZIEL (20:13–19), the Judean force marched S from Jerusalem through BETHLEHEM and TEKOA to the Wilderness of Tekoa. The enemy armies were making their way up the Ascent of ZIZ to the Wilderness of JERUEL. When they were suddenly set upon by Judean ambushers, the Moabite and Ammonite columns panicked and fought mistakenly against their allies, the Meunites from Mount SEIR (20:20–23). Their demise was total.

When Ahaziah of Israel died and was succeeded by JEHORAM, Jehoshaphat of Judah joined him in an expedition against Moab (2 Ki. 3:4–27). Because MESAHA of Moab had so heavily fortified the approach to his kingdom from the N with fortresses at BEZER, NEBO, KIRIATHAIM, BETH BAAL MEON,

MEDEBA, and ATAROTH, the kings of Israel and Judah chose to circumvent the southern tip of the Dead Sea, attack the “soft underbelly” of Moab at HORONAIM, and drive on from there to KIR HARESETH. They were able to secure the services of the prophet ELISHA on the expedition. After seven days of traveling, the caravan found no water holes and were faced with a critical situation. According to a promise from God through Elisha, a sudden flood of water came down a dry WADI from the direction of Edom and saved them (3:20). The march resumed and the battle was joined in Horonaim, where the Moabites were put to flight. Cutting off all the water supply of the enemy in the vicinity, the Israelite army laid siege to the walled city of Kir Hareseth. The king of Moab in the direst emergency offered his eldest son as a human sacrifice to his god CHEMOSH on the city wall in full view of the enemy. Demoralized by the sight, the Israelites withdrew to their land.

After the humbling of Moab, their northern neighbors the Arameans pushed southward to the Arnon River (2 Ki. 10:32–33). The Ammonites doubtless helped these Arameans in the effort to fill the vacuum left by a failing Moab and to keep out Israel and Judah’s influence in the E. When the Assyrian king Adad-nirari III (810–783 B.C.) imposed tribute on some of Aram’s dependencies, Ammon seems to have been left alone and continued to control Gilead until c. 750 B.C.

The accessions of JEROBOAM II of Israel and UZZIAH (Azariah) of Judah c. 785 B.C. ushered in an era of prosperity and expansion for both kingdoms. The Assyrians had first broken the power of the Arameans of Damascus and then retired to the E themselves, leaving Transjordan to fend for itself against its former masters on the W bank of the river. Uzziah, for his part, was able to regain control over “the Arabs who lived in Gur Baal,” as well as over the Meunites and Ammonites (2 Chr. 26:7–8). This must have seemed to Amos, who prophesied during the reign of Uzziah, the beginning of the fulfillment of God’s word through him against Ammon for its cruelties against the people of Gilead (Amos 1:13–15).

After Uzziah died (c. 741 B.C.), his son and successor JOTHAM had to put down an attempted rebellion by a king of the Ammonites (2 Chr. 27:5–6). Jotham received from Ammon an annual tribute after that of 100 talents of silver, 10,000 cor of wheat, and 10,000 cor of barley. In 732 the Assyrian king TIGLATH-PILESER III deposed PEKAH, king of Israel, and made HOSHEA of Israel an Assyrian vassal. In the same year the Assyrians crushed Damascus and her king REZIN. All of the Syro-Palestinian states fell into line and rendered tribute, including AHAZ of Judah (2 Ki. 16:7–8; 2 Chr. 28:16, 21).

This statue of the Ammonite king Yerah (Azar, discovered at the Amman Citadel, dates to the end of the 8th cent. B.C.

All of the Transjordanian states and their native dynasts (Shanip of Ammon, Shalaman of Moab, Ka^hus-malak of Edom) paid tribute.

Shortly after SARGON II of Assyria died (c. 705 B.C.), rebellions in the W brought his successor SENNACHERIB (c. 704–681) to quell the potentially dangerous situation (c. 701). During this campaign Sennacherib received tribute and submission from the Transjordanian states and their dynasts: Buduili (Bod^hel?) of Ammon, Ayarammu of Edom, and Kammushu-nadbi (Chemosh-nadab) of Moab. The same king Buduili is mentioned in the annals of the Assyrian kings ESARHADDON (681–669) and ASHURBANIPAL (668–633, but not mentioned after 667). A building inscription of Esarhaddon's mentions Buduili of Ammon as supplying materials for the royal palace at NINEVEH. A letter written to Esarhaddon himself informs us that the Ammonites paid a larger amount of tribute (two minas of gold) than either Moab or Judah, which suggests that renewed Ammonite control over the Transjordanian trade routes had raised her level of prosperity above that of her neighbors. About the year 667, Buduili died and was succeeded by Ammi-nadab, whose name appears in a cylinder of Ashurbanipal among those twenty-two kings of the seacoast who paid tribute to the Assyrian in the course of his campaign against Egypt in 667. Archaeological findings in Ammon from the period of the 7th cent. suggest that Ammonite officials of this period enjoyed a higher standard of living than Judah under MANASSEH, AMON, and the first years of JOSIAH.

As the power of Assyria began to wane at the end of the 7th cent. (c. 630–615 B.C.), rebellious Arab tribes of the Syrian Desert began to harass Ammonite borders. After the fall of Nineveh, the Assyrian capital, in 612, it would seem that the Ammonites moved into territory formerly held by the

kingdom of Israel (cf. Jer. 49:1–6; Zeph. 2:8–11), in particular cities that had once belonged to the tribe of Gad—probably MĒPHAATH, HESHBON, BETH PEOR, BETH JESHIMOTH, KIRIATHAIM, and MEDEBA, and possibly all the cities as far S as the Arnon River. It is not likely that the Ammonites at this time controlled Gilead or that stretch of land between Jazer and the Jordan River. Rather, Josiah of Judah seems to have gained control of this former Assyrian province. According to the Babylonian Chronicle, in 599 NEBUCHADNEZZAR II (c. 605–562) led troops into Syria and from there sent raiding parties into the desert to attack the Arabs. During the reign of JEHOIAKIM of Judah (609–598), Nebuchadnezzar sent raiding parties of Arameans, Moabites, and Ammonites against Judean territory (2 Ki. 24:2), particularly Transjordanian Judean territory. Thus the Ammonites, in return for Babylonian defense against the Arabs, helped to harass Judah.

In 593, however, during the reign of ZEDEKIAH of Judah, Ammon joined with Edom, Moab, TYRE, and SIDON in a conspiracy meeting at Jerusalem to rebel against BABYLON (Jer. 27:3). Jeremiah warned the assembled envoys that God would bring their plan to naught (vv.4–11). The rebels were encouraged by an Egyptian promise of support, but it never materialized and the attempt failed. Nebuchadnezzar sacked Jerusalem and deported thousands of its leading citizens. Ammon did not receive the same crushing blow from Babylon yet. In fact, some Judeans took refuge in Ammon, including ISHMAEL son of Nethaniah (41:1), who fell under the influence of BAALIS, king of Ammon, and plotted with him to assassinate the Judean collaborationist governor Gedaliah (40:14). The assassination succeeded (41:2–3, 15), but whatever hopes Baalis might have had of reviving Judah under Ammonite domination were dashed by another punitive expedition by Nebuchadnezzar, during which he sacked Rabbah and deported many Ammonites. (A seal discovered at Tell Umeiri refers to Baalis as Baal-Yasha. Cf. the articles by L. G. Herr and R. W. Younker in *BA* 48 [1985]: 169–80.) Into the vacuum that remained poured the Arab invaders who were called “sons of the east” (*bēnêqedem*; see EAST, CHILDREN OF THE). This marked the end of the autonomous Ammonite state. Ammon remained a camping ground for Arabs until c. 530 B.C., when the Persians assumed control over the former Babylonian provinces in the W.

During the time of NEHEMIAH (c. 445–433 B.C.) there lived a certain TOBIAH, the head of a Jewish enclave in Ammon, who is called an Ammonite official (*ebed H6269*, Neh. 2:10, 19; 4:3, 7; et al.). Since a Libyanite inscription mentions a certain “(Abd, the governor,” who seems to have been the Persian governor of Ammon and DEDAN, the above mentioned formula mentioning Tobiah *may* be a spelling error for “Tobiah *and* (Abd the Ammonite.” Tobiah would have been the Jewish assistant to the governor (Abd. This Tobiah may have been the first in a long line of Tobiahs whose home was (Araq el-Emir, where the family tombs have been found (however, see H. G. M. Williamson, *Ezra-Nehemiah*, WBC 16 [1985], 183.

H.A. HOFFNER, JR.

Amnon am'non (אֲמֹנִי H596, “faithful”). (1) Firstborn son of DAVID by AHINOAM (2 Sam. 3:2; 1 Chr. 3:1). He dishonored his half sister TAMAR and was subsequently slain (2 Sam. 13). See discussion under ABSALOM.

(2) Son of Shimon and descendant of JUDAH (1 Chr. 4:20).

Amok ay'mok (עֲמוֹק H6651, “deep” or “wise”). A leader among the priests who returned from EXILE with ZERUBBABEL and JESHUA; Amok's son or descendant Eber was head of his family in the time of JOIAKIM (Neh. 12:7, 20; cf. v. 12).

Amon am'uhn (אֲמוֹן H571 [אֲמוֹן in 1 Ki. 22:26], “faithful”; Ἀμόων G321). (1) Son of MANASSEH and fifteenth king of Judah; the brief accounts of this monarch's two-year reign are in 2 Ki. 21:18–26 and 2 Chr. 33:20–25. His father Manasseh had been an exceptionally wicked king before he “knew that the LORD is God” and repented (2 Chr. 33:12–13; the account in 2 Kings does not contain a record of Manasseh's conversion). The biblical description of Amon is: “He did evil in the eyes of the LORD, as his father Manasseh had done” (2 Ki. 21:20; 2 Chr. 33:22). The text, without giving a reason, tells us that his officials “conspired against him and assassinated the king in his palace” (v. 24). This dastardly deed did not have popular support, for one reads next that “the people of the land killed all who had plotted against King Amon, and they made Josiah his son king in his place” (v. 25). JOSIAH was both a good king and one who lived long. Many speculate that Manasseh converted too late in life to have any effect on the evil Amon, but Josiah, the grandson, was influenced for the good. Josiah would have been six years old when Manasseh died, and eight when his father Amon died. Amon is included in Matthew's GENEALOGY OF JESUS CHRIST (Matt. 1:10, where the NRSV reads “Amos” [*Amōs*], the form found in the earliest Gk. MSS and other important witnesses; because this form is also a variant reading in the SEPTUAGINT, Matthew may have used it deliberately).

(2) Governor of the city of SAMARIA who was ordered by AHAB king of Israel to put MICAIAH the prophet in prison (1 Ki. 22:26; 2 Chr. 18:25; the LXX gives his name as *Emēr*).

(3) One of SOLOMON'S servants whose descendants returned from EXILE under ZERUBBABEL (Neh. 7:59); called Ami in one parallel passage (Ezra 2:57) and possibly Allon in another (1 Esd. 5:34, where CODEX VATICANUS has *Allōn*, but Rahlfs and others emend to *Amōn*).

(4) The name of an Egyptian deity (*āmōn* H572) who resided at No (meaning “the city,” i.e., THEBES, Jer. 46:25; KJV renders this as “the multitude of No”). Often spelled Amun or Amen. In Nah. 3:8, “Thebes” is a translation of *nō* (*āmōn* H5531 (lit., “the city of Amon”; KJV, “populous No”). Since Amon, the king of Judah, bore this name—which is one of relatively few Hebrew names with no Semitic divine element incorporated into it—some scholars have connected him with this Egyptian deity. This supposition is strengthened in the light of the unorthodoxy of Amon's father, Manasseh. The Thebian god Amon, a fertility deity, was often pictured having elements of sacred animals (the ram and the goose). When Thebes became the capital of Egypt, Amon was connected with RE, the sun god. Amon-Re^c thus came to be worshiped as the supreme god. (Cf. *DDD*, 28–32). See EGYPT VII.

R. L. ALDEN

Amoraim (pl. of אַמּוֹרָיִת [from אָמַר H609, “to say”, “speaker, interpreter”). Title given to the rabbinic authorities that lived during the 3rd–6th centuries (contrast TANNAIM). It thus refers to the scholars primarily responsible for the interpretation of the MISHNAH and the formation of the TALMUD.

Amorite am'uh-rit (אֲמֹרִי H616, prob. “westerner”). In the biblical narrative, this term refers to one of the ethnic groups that inhabited CANAAN prior to the Israelite conquest.

I. Name. The Akkadian term *amurrû* served to render the Sumerian *mar-tu*. Both are often translated as “westerner(s).” While this seems adequate as an explanation of the name from the viewpoint of Babylonia, it fails to explain either the use of the name by the Amorites themselves (why would they call themselves “westerners”?) or its application to them by other western peoples such as the Hebrews. It seems preferable to admit that we do not know the original “meaning” of the designation *amurrû*. Certain groups that moved about on the fringes of the Syrian desert in the early 2nd millennium B.C. called themselves by this name. It was heard by the settled peoples to the E, who then employed it as a general designation for western nomads and westerners in general.

II. The Amorites in extrabiblical sources. According to a chronicle dated c. 2360 B.C., Sargon the Great of AKKAD sent an expedition far to the NW

The land of the Amorites.

to the land of Amurru in order to procure materials for his building projects. The chronicle that records this act of the eleventh (some think third) year of his reign says that he “conquered the country of the West, in its full extent...He established there a central government (lit.: he made its mouth be one). He erected his stelae in the West. Their booty...he ferried over on rafts” (*ANET*, 266). Various omen texts confirm this chronicle: “he went to the land of Amurru, defeated it, and his hand reached over the four regions (of the world)”; and again: “he went to the land of Amurru...smote it for the second time (and) his warriors...brought him forth from the midst.” If Sargon made two expeditions to the W, one may have been in his third year and the other in his eleventh. Just where this land of Amurru was can be determined by the spots the king visited: the cedar forest in the Amanus Mountains, the “silver mountains” of the Taurus range. In other words, the land of Amurru was in SYRIA, stretching eastward as far as the ancient city of MARI on the EUPHRATES.

Gudea, king of LAGASH (c. 2125 B.C.), on one of his statue inscriptions, tells of his expedition to the far NW to procure materials for the building of the temple of Ningirsu, his city-god: “In Umanum, in the mountains of Menua, he quarried great blocks of stone, as well as in Basalla in the mountains of Amurru. From them he carved stelae and set them up in the courtyard of the Ninnu temple. From

Tidanum in the mountains of Amurru he brought alabaster in great blocks and fashioned it into slabs and erected them in the temple as barriers” (cf. *ANET*, 269). The existence of an extensive area that could be called the “land of (the) Amurru” does not necessarily presuppose an organized kingdom of Amurru. In fact no such organized kingdom becomes known until the TELL EL-AMARNA Age (c. 1500 B.C.). It is quite in order to speak of the Amorite kingdoms of Syria and Mesopotamia, by which we mean Yamkhad-Aleppo and the Kingdom of Mari. Even the great HAMMURABI of Babylon (c. 1792–1750) can be called an Amorite.

Shortly after 2000 B.C., Semitic peoples whose name types distinguish them from earlier waves of Semites such as the Akkadians (c. 2300) begin to appear in concentration in Babylonia. Mounting concern on the part of the Sumerian rulers shows itself in the construction during the reign of Amar-Suen of Ur (c. 2040) of a fortress along the lower course of the Euphrates River. The function of the fortress is betrayed by its name: “That Which Keeps Away Tidnum (= Amurru).” The measure succeeded temporarily. But in the fifth year of Ibbi-Sin of Ur (2025) Amorites penetrated deeply into SUMER, cutting off NIPPUR and Isin in the N from the southern capital of UR. Further deterioration in the power of the rulers of Ur led to the assumption of royal power in the towns of Isin and Larsa by two Amorites named Ishbi-Erra and Nablanum.

About 1895 B.C. an Amorite sheik named Sumuabum began to reign as king of Babylon. His fifth successor on the throne of Babylon was Hammurabi (c. 1792). About the year 1814 a resourceful Amorite by the name of Shamshi-Adad I began a rule

Iron Age cistern at the Amorite city of Heshbon. (View to the SE.)

in Assyria that was destined to have great influence. His reign lasted for thirty-three years (until 1782). During that time he was able to control a realm that stretched from E of the Tigris River to well into Syria in the W. His son, Yasmakh-Adad, ruled the important city of Mari for seventeen years (1796–1780). This was the golden age of the Amorites, for their rulers governed Assyria in the NE, Babylonia in the SE, and Mari and Yamkhad-Aleppo in the W. In addition, tribes of Amorites who had not yet decided to become fully sedentary roamed about in the vicinity of Mari. The names of the tribes have a strangely biblical ring to them: Banū-Yamīna, Ianū, Sutū.

The first king of the organized “Kingdom of Amurru” is Abdi-Ashirta, who ruled c. 1390–1360

B.C., including the first eighteen years of the reign of Suppiluliuma I of Hatti (see HITTITE). He was succeeded by his son Aziru (c. 1380–1345), who allied himself with Suppiluliuma I of Hatti by treaty and became the latter's vassal. The two kings of Amurru who followed Aziru, DU-Teshub and Tuppi-Teshub, ruled from c. 1345 to c. 1315 and were vassals of Mursili II of Hatti. In the archives of the Hittites were found both Akkadian and Hittite versions of a treaty between Mursili and Tuppi-Teshub. After the battle of Kadesh (c. 1300), when King Muwattalli of Hatti had fended off an Egyptian attempt to control the land of Amurru, he installed a new king, Shapili (c. 1300–1286?).

Shortly after Muwattalli died and Hattusili III had banished the former's son by a concubine from the throne of Hatti (c. 1286), Hattusili removed Shapili of Amurru from his throne and replaced him with Benteshina, who reigned until the end of Hattusili's life (c. 1265). Benteshina was succeeded by Shaushgamuwa (c. 1265–1230?). During the reign of Benteshina, the Hittite emperor had allowed Ini-Teshub of CARCHEMISH to supervise affairs in Amurru. The new Hittite emperor, Tudhaliya (Tudkhaliyas) IV, granted to Shaushgamuwa a greater degree of freedom and dignified him by dealing directly with him. In fact, Tudhaliya IV contracted a treaty with Shaushgamuwa, copies of which were kept at the Hittite capital.

During the twilight years of the Hittite empire (c. 1260–1200), the rulers of Amurru showed more loyalty to their Hittite overlords than did other Syrian vassal kingdoms. During the centuries of the Neo-Assyrian

RULERS OF THE KINGDOM OF AMURRU

Ruler of Amurru	Approx. Dates of Reign	Contemporary Rulers of other ANE States
Abdi-Asirta	c. 1390–1360	Amenophis III of Egypt Suppiluliuma I of Hatti
Aziru	c. 1380–1345	Amenophis IV, Tutankhamon and Ai of Egypt; Suppiluliuma I of Hatti
IR/DU-Teshub	c. 1345–1330	Horemhab of Egypt Mursili II of Hatti
Tuppi-Teshub	c. 1330–1315	Horemhab and Ramses I of Egypt Mursili II of Hatti
Benteshina	c. 1315–1300	Ramses I and Seti I of Egypt Muwatalli of Hatti
Shapili	c. 1300–1286	Ramses II of Egypt Muwatalli and Urhi-Teshub of Hatti
Benteshina	c. 1286–1265	Ramses II of Egypt Hattusili III
Shaushgamuwa	c. 1265–1230	Ramses II and Merneptah of Egypt Tudhaliya IV of Hatti

empire (c. 900–600), the land of Amurru is often mentioned, but it seems to conform to the usage of the term in the centuries prior to the Amarna Age (c. 2500–1500), that is, it refers to the general area of Syro-Palestine rather than to a specific kingdom tightly localized in the mountains of Lebanon.

III. The god Amurru. Although it would seem that the principal deity venerated by Amorites in the 18th cent. B.C. was Dagan (see DAGON), and the HURRIAN god Teshub was chief in the Amarna Age kingdom of Amurru (c. 1400–1200), it is of some interest that a god who bears the name Amurru

(Sumer. *Mar-tu*) appears in cuneiform documents from Syria, Assyria, and Babylonia. This god is first attested in personal names from the third dynasty of Ur (c. 2100–2000). Amurru-Martu was the son of the sky-god An. His consorts (wives) were Bēlet-sēri (“Lady of the Steppe”) and Ashratu (see ASHERAH). Amurru shows the typical aspect of a storm god, storming over the land and wrecking cities. A Sumerian myth tells of how Amurru sought in marriage the daughter of the city god of Kazallu (a city in Middle Babylonia). The daughter, Numushda, consented to the marriage despite warnings of well-wishers, who told her of the rude customs of the NOMAD: he eats raw meat, often goes without a house, and is not buried properly.

IV. Language. The principal source of our knowledge of the Amorite language is the corpus of Amorite personal names, most of them from the Mari texts. This language is a member of the western branch of the Semitic family, closely related to Ugaritic, Canaanite, Hebrew, and Arabic. In fact, if Amurru is extended to both Syria and Palestine, then Canaanite, Moabite, Ugaritic, and Phoenician would have to be considered as branches of the broader “Amorite” family. Amorite was also the ancestor of the Aramaic language. Its importance for the understanding of certain aspects of biblical Hebrew can be illustrated by the occurrence in Amorite of a number of words that so far occur only in the Mari texts and in the OT. See LANGUAGES OF THE ANE.

V. Amorites in the OT. The term “Amorite” is used in several distinct ways in the OT. Occasionally (Gen. 15:16) it denotes the pre-Israelite population in general. In other places, when it is paired and contrasted with the name “Hittite” (Ezek. 16:3), the former may represent only the southern part of Syro-Palestine. Amorites are rarely localized. One group dwelt in the area later occupied by the tribe of Judah (Deut. 1:19–20; Josh. 10:5–6), while another, represented by the two kingdoms of HESHBON and BASHAN, settled to the E of the Jordan River (Num. 21:13; Josh. 2:10; 9:10; 24:8; Jdg. 10:8; 11:19, 23). SIHON, OG, and MAMRE are three Amorite leaders mentioned by name in the OT (Gen. 14:13; Num. 21:21; Deut. 31:4). In keeping with the picture given elsewhere in the OT of the pre-Israelite inhabitants of the land displaced by them (Num. 13:33 et al.), the Amorites are portrayed as towering figures, “tall as the cedars and strong as the oaks” (Amos 2:9). The ways of the pagan population of the land of Israel are the iniquitous ways of the Amorites (Gen. 15:16). The Baals and Ashtartes and other “gods” whose worship seemed always to threaten to infiltrate the true worship of Yahweh are the “gods of the Amorites” (Josh. 24:15; Jdg. 6:10). Chronologically the last mention in the OT of an Amorite group continuing to exist as a unit in the land consists of the Gibeonites (see GIBEON), on whom King SAUL inflicted a great slaughter and for which David later made atonement (2 Sam. 21).

I. Background. The concurrent reigns of UZZIAH of Judah and JEROBOAM II of Israel were marked by a period of peace and prosperity in the N and S that approached in character the “golden age” of

DAVID and SOLOMON. This situation resulted from a number of factors, one of the most important being the removal of BEN-HADAD III of ARAM (c. 796–776 B.C.) as a military threat to the northern kingdom. This ruler, son of HAZAEL (2 Ki. 13:3), had brought pressure to bear on Jehoash (JOASH) and, according to the Zakir stela, had led a powerful coalition against Zakir of HAMATH, a usurper from Lu'ash who had seized control of the entire kingdom of Hamath-Lu'ash. The stela narrated the way in which Zakir and his allies defeated the coalition of Ben-Hadad, thus ending the Aramean dominance of Syria.

Shortly afterward, DAMASCUS came under the sovereignty of Jeroboam II (2 Ki. 14:28), and the territory of the northern kingdom was ultimately extended to Hamath. The extent of Israel and Judah to the S and E approximated the limits of the kingdom in the days of David and Solomon. While Assyria was becoming an increasing political threat, its military might under TIGLATH-PILESER III (745–727 B.C.) was still a distant prospect when Jeroboam II succeeded to sole rule in Israel.

Once the menace of war had been removed, a remarkable cultural, social, and economic revival took place in Israel and was reflected to a lesser extent in Judah. The northern kingdom was now free to control the trading caravan routes of the E that passed through its newly acquired territory. One consequence of this development was the rise of a rich mercantile class that shared with the nobility the wealth of the nation and created new demands for an increasingly wide variety of luxury items. The expansion of trade and commerce fostered a steady drift of the populace from the country to the city, and for the first time in their history the small towns in the northern kingdom gradually became overcrowded.

Prosperity was accompanied by an almost unprecedented degree of social corruption (Amos 2:6–8; 5:11–12), caused mainly by the demoralizing influence of Canaanite BAAL worship, which had been taken over from the Phoenicians and developed at the local shrines from the time when the northern kingdom had assumed a separate existence under Jeroboam I (930–909 B.C.). Archaeological discoveries have provided a dramatic picture of the nature of contemporary Canaanite religion, showing without question that it was the most corrupt of any in the ANE in its descent to the lowest depths of moral depravity.

Ritual prostitution was a perennial feature of Canaanite religion, and characterizations of ANAT, an eminent female member of the pantheon, depicted her as a divine courtesan. One cuneiform text from UGARIT portrayed her as a butcher, brutally slaying both young and old in a fiendish orgy. The lily and the serpent, commonly found in association with this FERTILITY CULT goddess, were venerated as symbols of fecundity. Canaanite religion recognized four principal annual feasts, and for the most part the worship was carried on at outdoor altars or near the tops of hills. Certain types of sacrifice were indulged in, and from cuneiform sources appear to have been more diversified than Israelite sacrifices. Drunkenness, violence, idolatrous worship, and gross sensuality were inevitable concomitants of Canaanite festal observances, and were extremely common in Israelite religion also. On every side in the northern kingdom there was an avowed interest in cultic worship at the shrines (Amos 4:4–5; 5:5), but the perverted character of the observances had nothing in common with the traditions of the Mosaic Torah.

The effect of this degenerating influence upon Hebrew society began to be felt in the corruption of justice, in willful and luxurious living of the upper classes, and in the general decay of social unity. The rich manifested no sense of responsibility toward the poor, and instead of relieving their economic distress, they seemed bent upon depriving them of all their property. Small farmers were dispossessed by the rapacious wealthy class in order to make possible the accumulation of vast estates, and where this could not be done legally, it was achieved by means of bribing the judiciary to

render judgment in favor of the rich contestant. In a very short time the nation, whose strength had subsisted in the mass of its independent citizens, was divided into the dissolute rich and the oppressed poor. Within a few short years the latter had been reduced to the level of serfs, and when circumstances made it necessary, they were sold into bondage by their masters, frequently for trivial considerations (Amos 2:6). The virtual disappearance of the middle class marked a turning point in the stability of Israelite life and portended an ominous future for the nation.

This situation has been amply illustrated archaeologically by the famous Samaritan OSTRACA, which have been assigned to the reign of

The ministry of Amos.

Jeroboam II. Some sixty-three potsherds inscribed in ink were recovered in 1910 by the Harvard expedition to SAMARIA in some ruins just W of the site of the royal palace. When the fragments were deciphered, they were found to comprise administrative documents recording shipments of wine and oil to Samaria. One potsherd contained the name of the treasury official in receipt of the wine, the district from which it had been sent, and the names of the peasants who had paid their taxes in this manner. Of the twenty or more place names in the ostraca, six appear as clan-designations in the OT. The references in the sherds to “pure clarified wine” and “refined oil” typified the exaggerated demands of the luxury-loving Samaritan elite, and demonstrated the extent to which the northern kingdom had moved away from the ancient Hebrew ideal of the small independent landowner.

Some idea of the way in which cultural interests were coming to the forefront can be obtained

from the jasper seal of "Shema, servant of Jeroboam," discovered by G. Schumacher at MEGIDDO in 1904. On epigraphic grounds it probably should be assigned to the period of Jeroboam II, and the magnificently executed lion it depicted is a striking testimony to the artistic standards of the 8th cent. B.C. A great many ivory inlays, the earliest of which belonged to the time of A HAB (c. 874–853), have been recovered from the hill of Samaria (modern Sebastiyeh), mostly in the form of small panels in relief depicting such things as palmettos, lilies, lions, deer, sphinxes, and winged human figures. The remains of a bed decorated with ivory inlays were also recovered (cf Amos 6:4). The workmanship of the ivories is distinctly Phoenician, although by contrast many of the subjects executed are Egyptian in nature. In any event they amply justify the prophetic censures (Amos 3:15; 1 Ki. 22:39; et al.) of wanton luxury on the part of the Israelite upper classes.

II. Authorship and unity. Questions relating to the authorship and composition of the prophecy have been widely discussed in modern times. While the Hebrew text furnishes no indication as to whether or not Amos actually put his oracles into written form during his lifetime, or at his death left behind written sources containing some or all of his utterances, the freshness and vitality of much of the material would suggest the direct authorship of Amos himself. Adherents of the Scandinavian tradition-historical theories have maintained that the oracles of Amos, like those of all other prophets, were transmitted orally over a long period of time before being put into their extant form. However, the remarkably sound condition of the Hebrew text seems to favor the view that either Amos or an AMANUENSIS set down the utterances in writing within a short time of their promulgation.

Certain scholars have suggested that the visions (Amos 7:1–9; 8:1–3; 9:1–4) belonged to a period preceding the mission to Israel and that they were compiled as a separate document at the time of the earthquake (which served coincidentally to stress their message of doom), and that 8:4–14 was added later to this document. By contrast, the oracles in chs. 1–6 were collected at the end of the ministry in Israel and may have concluded originally with the biographical section. According to this theory, both documents were subsequently united in exilic or postexilic days to form the extant work along with a few editorial additions. This theory was based in part upon the supposed presence in the superscription (1:1, "The words of Amos...what he saw") of parallel verses held to imply the presence of two collections of material, namely, "The words of Amos" and "The visions of Amos, which he saw." According to certain scholars, these two had been combined in the extant title by a redactor in order to furnish a proper sense of unity for the final composition.

A modification of this view suggested that apart from certain minor additions, the prophecy was in fact the accredited work of Amos, but entertained the idea of a twofold division, the first part of which comprised Amos 1:2–7:9, recording the speeches and events occurring prior to the summary ejection of Amos from BETHEL, while the second section, 8:1–9:15, contained the speeches and visions of the prophet that had taken place subsequent to that time. Another passage, 7:10–17, was thought to have been added to the first of these divisions just prior to the unification of the prophecy.

Great caution must be urged in advancing any theory that would make for a hard and fast division between oracles and visions in the extant prophecy. When the book of Amos is compared with other clearly attestable prophecies compiled in bipartite form, such as ISAIAH, EZEKIEL, and DANIEL, it is evident that the grouping of the Amos material into oracles and visions is incidental to the process of compilation and was never meant to depict a true bipartite structure. That the visions ought to be integrated with the oracular utterances in the ministry of the prophet is apparent in the first vision (Amos 7:1–3). Amos was already functioning in a characteristic intercessory capacity, begging God to be merciful toward delinquent Israel. To insist on anything approaching a rigid distinction between

the visions and the oracles, as some critics have done, is an extremely precarious procedure, for when the contents of both sections are compared, it is readily apparent that there is no fundamental difference between them in either content or nature. Again, it seems improbable that the visions themselves can be dated in a period occurring much before the oracular utterances, since there is a close connection between them in certain significant areas. This can be illustrated by the relationship of the vision recorded in 7:7–9, in which the prophet foresaw the overthrow of the Israelite royal house, and the consecutive narrative passage, which recounted his summary dismissal from the northern kingdom for treasonable utterances against the regime of Jeroboam II.

A careful reading of the text leaves little doubt that the visions comprise a literary as well as a spiritual homogeneous unit. This is apparent from the construction of the material as a whole, which rises rhetorically to a climax, and also by the general consonance of the form and subject matter. There seems little reason for doubting that they comprised a unified group from the time of oral proclamation, and the fact that the first person singular was used for the visions suggests that Amos himself was the author. While it is possible that the material in Amos 8:4–14 may have been placed in its present position in order to supplement the account of the visions, it obviously belongs in nature to earlier oracular utterances of the prophet.

The collection of oracles in Amos 1–6 exhibits certain stereotyped features, including the climactic use of numbers in the phrase “for three sins...even for four.” Quite possibly the way in which the denunciation of the nations was arranged—beginning with pagan peoples, then the blood relatives of Israel, followed by oracles against the southern and northern kingdoms—is a device original with Amos, though somewhat similar examples have been noted in Egyptian literature. Against the view that this section of material was concluded with the biographical statement, one need only observe that its presence in the visionary passages was necessary in order to demonstrate that they constituted an essential part of the northern ministry of Amos.

Some scholars have detected what are thought to have been annotations to the original prophecy, such as the placing of the king of Judah before the king of Israel in the superscription. While this could have been the work of a Judean scribe, the juxtaposition of the two names need imply nothing more than that, in the mind of Amos, only the Davidic line, represented by Uzziah, was legitimate, a situation that may also be in evidence in Hos. 1:1. Some questions have been directed at the originality of Amos 2:4–5, which involved a pronouncement of doom upon Judah. It has been argued accordingly that whereas other oracles condemned the inhumanity of the nations concerned, this particular utterance related only to moral and spiritual transgressions in Judah and was thus out of character with previous statements. On the other hand, it would have been strange had Amos mentioned all the neighbors of Israel except Judah, since she too was apostate, and as such equally deserving of decisive punishment. In any event, acts of inhumanity were by no means as common a feature of life in the southern kingdom as was the case in the N.

The authenticity of the doxologies in the book (Amos 4:13; 5:8–9; 9:5–6) has been questioned by some scholars, on the assumption that they were inserted at a much later date in connection with the public reading of the prophecy. However, it should be noted that there is no single element in these ascriptions which is in any way inconsistent with the thought of Amos or of any other 8th-cent. B.C. prophet, dealing as they did with the functions of the all-powerful Creator, and, therefore, there can be no valid reason for not allowing them to Amos. Similarly, the hopeful conclusion of the book (9:8–15) has been denied to the prophet because of its fundamental contrast to all preceding material. Furthermore, it has been argued, the references to ruined Palestinian cities (9:11, 14), the dispersion of the nation (9:9, 15), the end of the Davidic dynasty (9:11), and the anticipation of its restoration

could hardly be dated earlier than the exilic period. This hypothesis overlooks the fact that, from early times, there was a consistent pattern evident in Israelite prophecy that combined promises of blessing conditional upon repentance and spiritual fidelity with oracles of doom if the nation persisted in apostasy. While Amos did not elaborate upon a glorious future for the covenant people, he did at least extend the prospect of hope for the faithful remnant in Israel, as did other 8th-cent. B.C. prophets.

The great majority of scholars are prepared to accept the prophecy as being the authentic product of Amos, although the work of editorial hands is frequently posited. Attempts to distinguish between individual editors seem pointless in view of a complete lack of supporting evidence. Some minor insertions have been alleged, mostly in connection with material relating to Judah, along with the concluding verses of the prophecy dealing with the future prospects of the nation.

The extent to which the prophet may have attracted disciples depends largely upon whether or not he exercised a later ministry in the southern kingdom, as the priest AMAZIAH had advised (Amos 7:12). There are, however, no indications that anyone other than Isaiah had a following of disciples, and if the ministry of Amos was of short duration, it seems unlikely that anyone would perpetuate his particular message in Israel in view of the prevailing national temper. Quite possibly his prophecy may have undergone slight redactional procedures in Judah, since in antiquity the SCRIBES regularly revised material in different generations. However, it is extremely difficult to pronounce either on the nature or on the scope of such activities in the extant work because of the remarkable uniformity of standpoint it demonstrates. On the basis of the available evidence there is little doubt that Amos, with or without scribal help, was responsible for the written form of the oracles and visions attributed to him in the superscription.

The literary style of the prophecy exhibits freshness, simplicity, and originality, all of which must have made an immediate claim upon the attention of his hearers. His poetic utterances are among the finest in Hebrew literature, and the dirge-like rhythms he utilized are powerful agents in the task of building up an ominous sense of expectation of calamity. Yet his diction is never so compounded with figures of speech that its meaning is not immediately apparent, nor his lyricism so exalted as to obscure his theological teachings.

Some scholars have suggested that Amos included fragments of a cultic hymn in his prophecy (Amos 4:13; 5:8; 9:5–6), on the ground that the doctrines contained therein were too advanced for the prophet's thought. It is questionable whether the cultic prophets of the northern kingdom were more than casually interested in true morality and religion, and if so, it would be improbable that the material originated in such circles. That they appear to be genuine words of Amos seems borne out by the fact that their teachings were already firmly rooted in Mosaic law and were merely being recapitulated by the prophet in a way that would meet contemporary needs. The "fragments" in question are so closely integrated into the surrounding material as to make their removal impossible without causing a basic disruption of the text, which would again appear to indicate that they are genuine utterances of Amos.

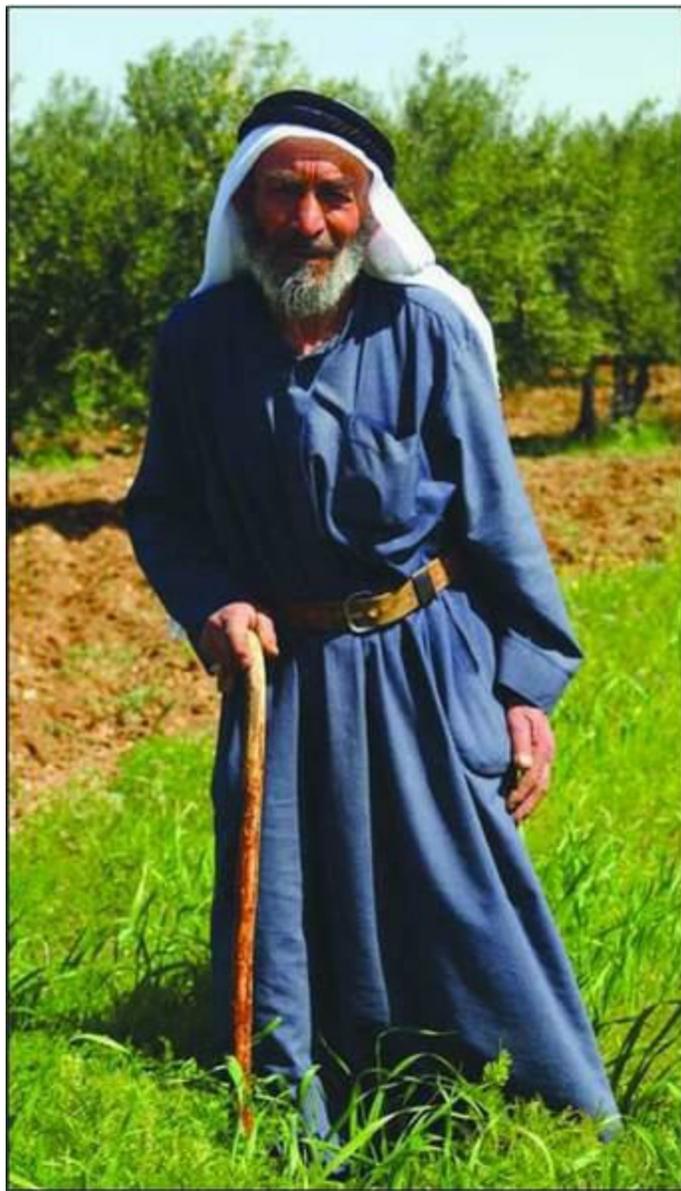

III. Date. From the superscription to the prophecy (Amos 1:1), it is known that Amos lived during the reigns of UZZIAH of Judah (767–39 B.C.) and JEROBOAM II of Israel (782–753 B.C.). Uzziah had been coregent with AMAZIAH of Judah from the year 790, while Jeroboam II was coregent with Jehoash (JOASH) of Israel from 793. The date at which Amos began his ministry has been a matter of dispute. Some scholars have thought that the confident mood of the nation reflected in the prophecy points to a date c. 760 or shortly afterward, while others have suggested that Amos was aware of the westward

advance of Tiglath-Pileser III of Assyria and predicted destruction accordingly. It seems evident that the prophetic denunciations were based on the conviction that Israelite apostasy and idolatry could not fail to be punished by God and that political developments in Assyria had no place in the thought of Amos. Significantly enough, he never once mentioned the quarter from which the doom might be expected to come, though he spoke of captivity “beyond Damascus” (5:27).

The mention in the superscription of an earthquake that occurred two years after the appearance of the prophet is unfortunately of no help in dating his ministry, even though the phenomenon was still remembered in the days of Zechariah (Zech. 14:5) as having occurred in the reign of Uzziah. Since the leprosy of the latter occasioned a coregency during the latter years of his reign (2 Ki. 16:1–7), the ministry of Amos could perhaps be placed about halfway through the concurrent reigns of Uzziah and Jeroboam II, possibly about 760.

It is difficult to say precisely how long the ministry of the prophet continued, and it may have lasted only a few months at the most. It appears to have terminated in Bethel (Amos 7:10–17), where his announcement of the coming invasion of the land and the fall of the house of Jeroboam II was, not unnaturally, taken as treason. There is no need to suppose that Amos did all his preaching at either Samaria or Bethel, and although Amos could be interpreted as speaking to an audience in Samaria itself (2:9; 4:1; 6:1), it may well be that his hearers were the people of Samaria worshiping at Bethel, the site of the Israelite royal sanctuary from the days of Jeroboam I. From the discussion of the authorship above it will be evident that his prophecy was almost certainly complete during his lifetime.

IV. Place of origin and destination. Although Amos was one of the more colorful personalities in an era of several towering prophetic figures, comparatively little is known about his origin. He was a native of TEKOA (Amos 1:1), a town in the southern kingdom about 10 mi. S of Jerusalem, now represented by the ruined five-acre site of Khirbet Tequ⁶. The extensive upland countryside of Judah provided pasture for the flocks he tended in addition to his work as a dresser of sycamore trees. The latter involved incising of the fruit of the sycamore fig some four days before it was due to be harvested, so as to hasten the ripening process. The importance of this information about the background of Amos lies in its proof that he was not brought up in the class from which prophets usually came and that he had not been trained for his mission in life in the prophetic schools or guilds (7:14–15). He was a man of agricultural pursuits, and until his call was a layman with no professional preparation

© Dr. James C. Martin

This Palestinian farmer, like Amos, was from Tekoa.

for religious office. The life of the Judean shepherd was reflected in the imagery of his prophetic oracles, illustrated by the reference to the Pleiades and Orion (5:8) as witnesses to the creative power of God, to the devastating plague of locusts that denuded the pasture lands, and to the nocturnal sounds of the lion roaring over its prey.

Upon receiving his call, Amos proceeded resolutely to the center of pagan worship in the northern kingdom and protested vigorously against the luxurious and careless living so typical of Samaria. He pointed to the unmistakable symptoms of a morally sick society and castigated the perversion of religion that was being allowed at the cultic shrines of GILGAL and BEERSHEBA, stating flatly that ritual could never constitute an acceptable substitute for righteousness. His denunciation of IDOLATRY included the firm assertion that God exercised a moral jurisdiction over all nations (Amos 1:3, 6, 9, 11; 2:1, 4, 6) and that Israel would be severely punished if it failed to repent and renew covenantal fellowship with God.

V. Occasion and purpose. Amos had been greatly exercised by the license, apostasy, and corruption of life in the northern kingdom, a situation that furnished the occasion and reason for the prophecy. To these circumstances Amos came with a message of stern denunciation. Although he was not an

inhabitant of the northern kingdom, he was well aware of its moral, social, and religious shortcomings. The fact that Amos forsook Judah to deliver his oracles at Bethel and perhaps Samaria has led some scholars to make him a northerner by origin, on the supposition that he moved to Tekoa only when expelled by the authorities of the northern kingdom because of his prophecies of doom. While the absence of sycamores near Tekoa in modern times might seem to support such a view, it is refuted by the fact that Amaziah clearly regarded Amos as a native Judean and bade him return home with all speed (Amos 7:12).

VI. Canonicity and text. This prophecy stood third in the list of the canonical twelve Minor Prophets, but Amos was one of the first of the so-called “writing prophets,” and as such initiated a new period in the growth of the prophetic office in Israel. The Hebrew text of Amos is in good condition, although some scholars have seen fit to suggest emendations for certain passages (e.g., Amos 2:7; 3:12; 5:6, 26; 7:2; 8:1). The SEPTUAGINT and other ancient versions appear to have been made from a text related to that of the Masoretes; as for the Qumran fragments of Amos, they too present no important variations from the traditional text.

VII. Content

(1) Amos 1:1–2:16. Superscription and the announcing of judgment upon neighboring peoples (1:3–2:3) and upon Judah and Samaria (2:4–16) for their repeated transgression of the moral law.

(2) Amos 3:1–6:14. A series of addresses introduced by a formula (3:1; 4:1; 5:1; 6:1) in which the moral responsibility of Samaria was enunciated and the “day of the Lord” proclaimed.

(3) Amos 7:1–9:7. Five visions of judgment, depicted by the symbols of locusts (7:1–3), fire (7:4–6), a plumb line (7:7–9), summer fruit (8:1–14), and a devastated sanctuary (9:1–7). This section includes an extended autobiographical note (7:10–17).

(4) Amos 9:8–15. An epilogue describing the restoration of the Davidic kingdom.

VIII. Theology. Any interpretation of the prophetic message that sees the Judean shepherd as the harbinger of unrelieved doom is incorrect, particularly since it requires the rejection of Amos 9:8–15 as authentic prophetic material. In proclaiming blessing, Amos was in fact demonstrating the fidelity of God to his covenant, a faithfulness that would be exhibited in the faithful remnant’s return from captivity (9:14). Not unnaturally, an understanding of his concept of God is a prerequisite to a proper interpretation of his teachings. In common with other prophets of his century, such as Hosea, Micah, and Isaiah, Amos believed that the Lord was the creator and sustainer of the world (4:13) and as such could dictate the occurrence of plenty (9:13) or famine and pestilence (4:6–10). This kind of sovereignty was also extended to created humanity, where God exercised control over the fortunes of nations, exalting one and deposing another (6:14; 2:9). God’s restraining influence was supplemented by the functions of a judge (1:3–2:3) when various peoples offended against his moral precepts as expressed in the law.

In this latter connection it is important to notice the number of references in the prophecy to material occurring in the TORAH. As far as the ritual and moral aspects of the Mosaic law were concerned, the allusions of Amos to ritual (Amos 5:21), to the New Moon and Sabbath (8:5), and to the statutory sacrifices and tithes (4:4–5; 5:22) indicated that he was familiar with those areas of the Torah where such religious institutions were regulated. As was the case with the other prophets, Amos based his teachings firmly upon the ancient Mosaic law, and there was no single element in his utterances that had not found prior enunciation in the Torah. Indications of his knowledge of ancient

Hebrew historical traditions preserved in the PENTATEUCH can be seen in the references to the destruction of SODOM and GOMORRAH (4:11), the deliverance of the exodus (3:1), the wilderness wanderings (5:25), and the ultimate conquest of Canaan (2:9–10). These were supplemented by the mention of patriarchal figures (3:13; 5:6; 7:16) and an allusion to the traditional enmity with EDOM (1:11), all of which would be familiar to the hearers of the prophetic message.

While Amos did not mention the COVENANT directly, it was clearly fundamental to his estimate of the relationship between God and Israel. The creator of the cosmos had entered into a special association with Israel (Amos 3:2), which, although privileged in nature, involved high moral and spiritual responsibilities. Failure to recognize the latter factor, and to be governed accordingly, could only bring judgment upon the nation. In adopting this position, Amos rejected the popular idea that the covenant relationship automatically placed Israel in a privileged position that could not be violated or repudiated even by God himself. In Amos 9:7 the nation was told bluntly that it had no more claim upon God than the Ethiopians, the Philistines, or the Syrians, a statement that showed how greatly Amos was concerned to rescue the covenant concept from a perverted interpretation. The fact that God had entered into such an association with Israel demanded that the nation should reciprocate by exhibiting in her national character those high moral and ethical qualities typical of the God of Sinai. That such attributes were patently lacking in the life of the people was proof that the bond with God had been repudiated, and for this apostasy the nation could expect only to incur due retribution from him who was the Lord of history.

The animosity Amos manifested toward the cultic religion of the northern kingdom was directed at the abuses of traditional Hebrew morality which the rituals enshrined, rather than at the fact of a ritualistic kind of worship. Canaanite religion, with which the cultic procedures of the Israelites was heavily overlaid, was of the most depraved moral character, degrading and debasing its enthusiastic participants rather than uplifting and enriching them. The prophecy shows that, rather than exemplifying the stern morality of the Sinai covenant, the Israelite priests had been condoning the most flagrant violations of the ethical principles revealed in the Torah. By encouraging the nation in the belief that proper payment of dues at the sanctuaries and an appropriate degree of participation in the rituals of the cultus was all that was required by God, the priests had contributed materially to the state of apostasy that had overtaken the nation.

Like other Hebrew prophets, Amos made it a matter of prime importance to stress that no form of rite, ceremony, liturgical procedure, or festal celebration could form an acceptable substitute for sustained and deliberate violation of the revealed moral law. The elaborate rituals that had been devised were an abomination to a Deity who demanded first and foremost that his people should manifest holiness of life. If the nation persisted in showing that it had no serious intentions of measuring up to the ethical standards laid down in the law, its implicit divorce of religion from morality could only result in drastic punishment (Amos 5:27). God was already standing beside the altar (9:1), poised and prepared to shatter it into pieces as an expression of his anger against a false and apostate religion. This general attitude should be sufficient to refute the view held by some scholars that, since Amos nowhere directly condemned calf worship in Israel, he was favorable to the cultus to some extent. In addition, it should be noted that the mention of cultic procedures at Gilgal, Carmel, and elsewhere was invariably in terms of condemnation, since Amos was well aware of the abuses that characterized worship at these locations.

The primary call of the prophet was for national repentance and a return to God, but this was not just a matter of reforming cultic practices and observing traditional forms of Hebrew worship. The corruptions of Canaanite religion had spread to all levels of society, and the appalling violations of

justice and equity in Israel demanded immediate redress in the spirit of the Torah, which exhibited an advanced doctrine of social responsibility among the covenant people. Judgment and righteousness (Amos 5:24) must henceforward replace the oppression of the poor (5:11), bribery, injustice (5:15), apostasy, and immorality if the nation was to have any relief from the threat of destruction. For Amos, a nation in covenant relationship with God was under obligation to pursue equitable social as well as spiritual behavior, and if Israel persisted in divorcing herself from God by failing to remove the many serious blemishes upon national life, she would quickly go into oblivion.

So convinced was Amos of impending doom that he never wavered in his pronouncements of future destruction. While God naturally desired the nation to choose repentance and life rather than continued sin and consequent destruction, it was clear to Amos that the covenant of grace existing between Israel and God demanded that Deity should be more severe in his dealings with delinquent Israel than with any of the pagan nations. While Amos did not present the doctrine of the REMNANT in as developed a form as did his younger contemporary Isaiah, there is no doubt that it was present in essence in his prophecy (Amos 5:4, 15).

The message of judgment for the nation, based upon the concept of a divine RIGHTEOUSNESS, involved a repudiation of the widely held notion of the DAY OF THE LORD as an occasion of prosperity and material blessing for Israel (Amos 5:18–20). Precisely how this ESCHATOLOGY gained currency is difficult to say, but it may have resulted in part from the contemporary prosperity of the nation and perhaps also from a form of cultic celebration at the shrines, though the latter is by no means certain. Without question it was radically different from comparable notions enshrined in the Torah, where future blessings for the nation were always contingent upon the honoring of covenant obligations and general obedience to the divine will.

Much scholarly discussion has taken place regarding the possibility that such eschatological ideas were in existence in the 8th cent. B.C. Precisely what form the “day of the Lord” was supposed to have taken has also been debated, with a resultant wide diversity of opinion. The popular expectation appears to have envisioned a time when Israel would triumph gloriously over all her foes and exact tribute from them while living in luxury herself. Abetting this view was the fact that the contemporary state of material prosperity was taken as a sign of divine blessing and a token of the greater riches to follow when the successes of the nation occurred.

The prophetic belief, however, was of a different order, involving disaster and judgment for Israel, in which the symbol of fire as a cleansing and purifying agent (Amos 1:4, 7, 10, 12, 14; 2:2; 5:6, 18–20) was prominent. The “day of the Lord” would indeed come, but it would serve to vindicate the moral character of God against those who had denied it while at the same time claiming the privileges of the covenant relationship. From the nature of the rival systems depicted in the prophecy, it seems evident that both were distinct realities in the 8th cent. B.C., coexisting and employing the same title, but being different in essence. In this regard the task of Amos was to demonstrate which of the two was valid.

R.K. HARRISON

Amoz ay'muhz (אָמוֹז H576, prob. short form of אֲמוֹזָהָה H605, “strength of Yahweh”; see A MAZIAH). The father of the prophet ISAIAH (2 Ki. 19:2; Isa. 1:1).

amphictyony am-fik'tee-uh-nee. This term refers primarily to a league of Greek states united by

Excavated area of Amphipolis. (View to the S.)

common religious ideas and a central sanctuary. In biblical scholarship the term has been used by some (esp. M. Noth, *Das System der zwölf Stämme Israels* [1930]) to describe the structure of premonarchic Israel. While this approach was popular for a time, many recent scholars tend to regard it as inappropriate. See TRIBE III.

Amphipolis am-fip'uh-lis (Ἀμφίπολις G315, “city on both sides”). A city and trading center of Thrace (see THRACIA). Originally it was a Thracian town known as *Ennea hodoi* (“nine roads”) located on the E bank of the Strymon River (modern Struma or Karasu), where it emerged from Lake Cercinitis about 3 mi. from the sea. Its seaport, Eion, was located at the mouth of the river. According to some it was called Amphipolis (“both-side or encompassing city”) because it was almost completely surrounded by a bend in the river. The site was a terraced hill protected on the NW and S by the river and elsewhere by a wall. The name may be derived from the fact that it was conspicuous on all sides (see Thucydides, *Hist.* 1.100).

It was settled in 436 B.C. by Athenian colonists under Hagnon after previous attempts in 497, 476, and 465 had failed. In 424 it surrendered to the Spartan general Brasidas because of the

negligence of Thucydides, who was with a fleet at the island of Thasos nearby. It was to be restored to ATHENS by the peace of Nicias in 421, but remained independent until it was occupied by Philip of Macedon in 357.

The region was economically important for two reasons. The fertile land nearby yielded excellent wine, oil, and wood. Fine wool was also produced. Silver and gold were mined in the area. The town was strategically important to the Romans because of its situation. It commanded a bridge over the Strymon and the main road, the VIA EGNATIA, across MACEDONIA from Dyrrachium, the seaport in Epirus connecting Italy and Greece to the Hellespont in ancient times. It was 33 mi. S of PHILIPPI. Under the Romans it was recognized as a free town, though it was the residence of the Roman governor of Macedonia.

PAUL traveled through it on the way from Philippi to THESSALONICA, evidently without preaching there (Acts 17:1). It was known as Popolia in the Middle Ages. The village of Neochori (Yeni Keui) now occupies the site. Numerous inscriptions and coins have been found. Portions of the ancient fortification walls and of a Roman aqueduct still survive.

A. RUPPRECHT

Amplias am'plee-uhs. KJV form of AMPLIATUS.

Ampliatius am'pli-ay'tuhs (Ἀμπλιᾶτος G309; the shortened form Ἀμπλιᾶς is a textual variant, thus KJV, "Amplias"). A Christian living in ROME to whom PAUL sends greetings and to whom he refers as one "whom I love in the Lord" (Rom. 16:8). His name was common in ancient Rome, especially among slaves and freedmen. It is found twice in the cemetery of Domitilla at Rome, the older of two inscriptions dating from about the end of the 1st cent. A.D.

Amram am'ram (עמרם H6688, "exalted people" or "the kinsman [referring to a deity] is eminent"; gentilic עמרמי H6689, "Amramite"). (1) A Levite, son or descendant of KOHATH; he was the husband of JOCHEBED (his aunt) and the father of MOSES, AARON, and MIRIAM (Exod. 6:18, 20; Num. 3:19; 26:59; 1 Chr. 6:3). The Amramites, descended from him, had special duties in the wilderness tabernacle and in the temple (Num. 3:27; 1 Chr. 26:23).

(2) One of the descendants of Bani who agreed to put away their wives during EZRA'S reforms (Ezra 10:34; 1 Esd. 9:34 RSV [KJV, "Omaerus"; NRSV, "Maerus"]).

(3) KJV form of Hamran (1 Chr. 1:41; see HEMDAN).

Amraphel am'ruh-fel (אמרפל H620, meaning disputed [cf. HALOT, 1:68]). A member of a league of four kings (Amraphel of Shinar, ARIOCH of Ellasar, KEDORLAOMER of Elam, and TIDAL of Goiim) that fought an opposing league of Palestinian kings (of Sodom, Gomorrah, Admah, Zeboiim, and Bela) and defeated them (Gen. 14). The head of the eastern league was Kedorlaomer, king of Elam. Although identifications of several of these kings have been suggested (e.g., Amraphel = HAMMURABI of Babylon, Tidal = Tudhalia I of Hatti), few have accepted them. Difficulties are of two types. (1) *Phonological*: the Hebrew consonants ^lmrpl need to be distorted or altered in order to fit the most likely pronunciation of the name Hammurabi (^lmrp). (2) *Chronological*: all rulers identified with the biblical names should be contemporaries of each other and of ABRAHAM the Hebrew.

H.A. HOFFNER, JR.

amulet. An amulet is anything worn as a charm or protection against evil, disease, witchcraft, snakebite, poison, and other perils, bodily or spiritual. In fact, the wearing of jewelry and all manner of facial and bodily ornaments had its deepest origin in this superstition. The English word *amulets* occurs once in KJV and NRSV at Isa. 3:20 (NIV, “charms”), in a list of condemned feminine trinkets. The Hebrew noun, *laḥaš* H4318, means literally “whispering, charming,” the hissing of the snake charmer lying behind the metaphor (Ps. 58:5; Eccl. 10:11; Jer. 8:17).

Amulets had many forms, and archaeology has abundantly illustrated them. They were gems, cut, carved, or inscribed with magical formulae; stones; lunar discs associated with the worship of Astarte (i.e., ASHTORETH or ISHTAR); pierced shells, the origin of the cameo; pearls; teeth; inscribed rolls of papyrus; earrings; signet rings, worn on the body or hung from door and wall for the protection of a dwelling place or town. The ancient world was addicted to the superstition, and it has not yet died out even in Christian and cultured communities. In Rome, Greece, Egypt, and all through Asia Minor and the Middle E the practice is found interwoven with every form of sympathetic magic. A divine hero in some threatening pose was an amulet of victory; a nude goddess, sometimes heavily emphasized, was a charm for childbirth or fertility. The HITTITES colored their amulets red, the hue of blood, life’s vital fluid, or blue, a propitious color for protection against the evil eye.

The Hebrews seem not to have resisted the temptation to wear amulets in spite of sporadic efforts to combat the practice (e.g., HEZEKIAH’S destruction of the brazen serpent [2 Ki. 18:4] and JACOB’S earlier cleansing of his household [Gen. 35:1–4]). The people at Sinai had enough golden earrings to provide AARON with the material to fashion the golden calf, itself a symbol of the bull’s strength and a national amulet (see CALF, GOLDEN). Judas MACCABEE was horrified to find amulets under the tunics of his dead soldiers (2 Macc. 12:40). The phylacteries, small boxes containing quotations from the law (esp. Exod. 13:1–16; Deut. 6:4–9; 11:18) that the PHARISEES wore on arms and forehead were properly amulets. The word PHYLACTERY (*phylaktērion* G5873) actually means a “safeguard” or “amulet,” an extension of the basic significance of “guard post” or “garrison.” These tiny scrolls were actually thought to ward off evil. The practice was an attempt to spiritualize a custom that others had found to be inveterate. The tufts or tassels, with crimson cords, which were worn at the four corners of the outer garments (Num. 15:37–41; Matt. 23:5), and the bells that decorated the high priest’s robe may have originated in a similar compromise or sublimation. Christian practice has frequently been invaded by superstition. Witness Calvin’s scorn for the alleged fragments of the cross and the numberless nails of Calvary and other relics of saints and martyrs.

E.M. BLAIKLOCK

Amun. See AMON #4.

amusements. See GAMES.

Amzi am’zi (אֲמִזִּי H603, “my strength,” or short form of אֲמִזִּי יְהוָה H605, “strength of Yahweh”; see AMAZIAH). (1) Son of Bani, descendant of LEVI in the line of MERARI, and ancestor of ETHAN, who was a musician in the temple (1 Chr. 6:46 [Heb. v. 31]; cf. v.44 [Heb. v.29]).

(2) Son of Zechariah and ancestor of Adaiah; the latter was a priest who returned to Jerusalem after the EXILE (Neh. 11:12).

Anab ay’nab (אֲנָב H6693, “[place of the] grape”). A city in the hill country of JUDAH, near DEBIR,

from which JOSHUA drove out the Anakites (Josh. 11:21; 15:50; see ANAK). The modern site is Khirbet (Unnab eṣ-Ṣaghīr, some 12 mi. SW of HEBRON).

Anael an'ay-uhl (Αναηλ). Brother of TOBIT and father of AHIKAR, who was a very high official of SENNACHERIB, king of Assyria (Tob. 1:21–22 KJV; NRSV, “Hanael”).

Anah ay'nuh (עֲנָה H6704, derivation uncertain). The name of one or more individuals mentioned in Gen. 36:2, 14, 18, 20, 24–25, 29 (cf. also 1 Chr. 1:38–41). The first two references in the MT describe Anah as the *daughter* of ZIBEON the HIVITE, but the NRSV says *son*, following several ancient versions. (The NIV translates, “Oholibamah daughter of Anah and *granddaughter* of Zibeon the Hivite.” This rendering, which assumes that in this clause the second occurrence of *bat* also refers to OHOLIBAMAH, leaves open the question whether Anah was her father or her mother.) If this Anah was indeed a man, he is probably the same as the HORITE in Gen. 36:24, identified as a son of Zibeon who discovered some “hot springs” (KJV, “mules”; the Hebrew word is of uncertain meaning) in the desert.

Anaharath uh-nay'huh-rath (אַנְחָרַתִּי H637, meaning unknown). A city in the tribal territory of ISSACHAR (Josh. 19:19). It is no. 52 in THUTMOSE III's list, and should probably be identified with Tell el-Mukharkhash (Tel Rekhesh), about 8 mi. SW of the southern tip of the Sea of Galilee, close to SHUNEM.

Anaiah uh-nay'yuh (עֲנַיָּה H6717, “Yahweh has answered”). One of the men who stood beside EZRA when he read the law to the people (Neh. 8:4; called “Ananias” in 1 Esd. 9:43). He is probably the same individual listed among the leaders of the people who sealed the covenant with NEHEMIAH (Neh. 10:22).

Anak ay'nak (עֲנָקִים H6737, possibly “long-necked [people]”; gentilic עֲנָקִים “Anakites”). Anak was the eponymous hero of the Anakites (KJV and other versions, Anakim), a tribe inhabiting PALESTINE in pre-Israelite times. Without the article, Anak appears in Num. 13:33 and Deut. 9:2, but with the article (a collective term equivalent to the plural form) in Num. 13:22, 28; Josh. 15:13–14; 21:11; Jdg. 1:20.

The place of Anak's origin was KIRIATH ARBA (“city of Arba”—ARBA was Anak's father), later known as HEBRON, so the Anakites regarded it as their home (Num. 13:22, 28, 33; Deut. 1:28; Josh. 11:21; 14:12; 15:13–14; Jdg. 1:20; the LXX calls Hebron their *mētropolis*, Josh. 14:15; 15:13; 21:11). After CALEB drove them out, they survived in the PHILISTINE cities of GAZA, GATH, and ASHDOD (Josh. 11:22).

The people of Anak (a HURRIAN name?) are the most frequently mentioned of the “giant” class (see also GIANTS; NEPHILIM; REPHAITES). So tall and formidable were these descendants of Anak that their name and reputation became a byword in Israel: “Who can stand against the Anakites?” (Deut. 9:2; cf. also 1:28, 2:10, 21). They are probably the people referred to as Iy'aneq (whose three princes have Semitic names) in the Egyptian EXECRATION TEXTS of the 19th–18th centuries B.C. (ANET, 328).

W.C. KAISER, JR.

Anakim, Anakites an'uh-kim, an'uh-kits. See ANAK.

Anamim an'uh-mim. See ANAMITES.

Anamites an'uh-mīts (עַנְמִיִּים H6723, meaning unknown). A tribe or nation related to the Egyptians (MIZRAIM) and mentioned in the ethnographic lists of Gen. 10:13 and 1 Chr. 1:11. See NATIONS. Various suggestions have been made regarding their location (such as CYRENE, the desert of LIBYA, and an area W of ALEXANDRIA), but the identification of the Anamites remains uncertain.

S. BARABAS

Anammelech uh-nam'uh-lek (עַנְמֶלֶךְ H6724, perhaps “Anath is queen [*lit.*, king]”). TNIV Anammelek. A deity of the natives of SEPHARVAIM (Sabraim in E central Syria) whom the Assyrians transplanted to SAMARIA after 722 B.C. (2 Ki. 17:31). Some scholars hold that the name should be spelled “Anumelech” (Anu was the great sky-god of the Sumerians). Others suggest that the name alludes to the Canaanite goddess Anath (see ANATH #2). See also ADRAMMELECH.

S. BARABAS

Anan ay'nuhn (עַנָּן H6728, possibly “cloud” or short form of עַנְנִיָּה H6731, “Yahweh has heard me”; see ANANIAH). (1) One of the leaders of the people who sealed the covenant with NEHEMIAH (Neh. 10:26).

(2) KJV Apoc. form of HANAN (1 Esd. 5:30).

Anani uh-nay'ni (עַנְנִיָּה H6730, short form of עַנְנִיָּה H6731; see ANANIAH). Son of Elioenai and descendant of King JEHOIACHIN (1 Chr. 3:24).

Ananiah (person) an'uh-ni'uh (עַנְנִיָּה H6731, prob. “Yahweh has heard/answered [me]”). Father of Maaseiah and grandfather of AZARIAH; the latter was an Israelite who helped rebuild the walls of Jerusalem under NEHEMIAH (Neh. 3:23).

Ananiah (place) an'uh-ni'uh (עַנְנִיָּה H6732, prob. “Yahweh has heard/answered”). A town in the tribal territory of BENJAMIN occupied by Jews after their return from EXILE (Neh. 11:32); it is probably modern el-(Azariyeh (= NT BETHANY).

Ananias an'uh-ni'uhs (Ἀνανίας G393, from Heb. עַנְנִיָּה H2863, “Yahweh is gracious”). (1) KJV Apoc. form of HANANIAH, one of Daniel's three companions (Pr. Azar. 66; LXX Dan. 3:88).

(2) KJV Apoc. form of ANNIAS (1 Esd. 5:16).

(3) KJV Apoc. form of HANANI (1 Esd. 9:21; cf. Ezra 10:20).

(4) KJV Apoc. form of HANANIAH (1 Esd. 9:29; cf. Ezra 10:28).

(5) KJV Apoc. form of ANAIAH (1 Esd. 9:43; cf. Neh. 8:4).

(6) KJV Apoc. form of HANAN (1 Esd. 9:48; cf. Neh. 8:7).

(7) The father of TOBIT'S relative, Azarias (Tob. 5:13, where the angel Raphael identifies himself as Azarias; NRSV, “Hananiah” and “Azariah”).

(8) Ancestor of JUDITH (Jdt. 8:1).

(9) An early member of the church in Jerusalem who was punished with sudden death for his

attempted deception (Acts 5:1–10). He and his wife SAPPHIRA coveted the approbation that the church bestowed on those who generously sold their possessions for the relief of the poor (4:32–37). Selling a piece of property, they agreed to contribute part of the proceeds under the pretense that it was the total amount received. The sin was not in retaining part, but in pretending that they were giving all, a deliberate attempt to deceive both the apostles and God. When under separate questioning Sapphira reaffirmed her husband’s pretense, she also fell dead under the divine punishment (5:7–10).

(10) A Christian at DAMASCUS who was commissioned by the Lord to minister to Saul of Tarsus (see PAUL) following Jesus’ appearance to him on the Damascus road (Acts 9:10–19). He was not a refugee from Saul’s persecution, but had heard of his activities and knew the purpose of Saul’s visit to Damascus. Upon being informed of the divine purpose for Saul, Ananias put aside his fears and carried out his commission. He addressed Saul as a Christian brother, explained to him the significance of his experience on the road (22:12–16), and assured him of recovery of sight and filling with the Spirit (9:17). Saul’s immediate recovery of sight was followed by baptism and a period of fellowship with the Christians at Damascus. In his speech to the Jerusalem mob, Paul described Ananias as “a devout observer of the law,” having the full approval of the Jews at Damascus (22:12). Later tradition makes Ananias one of the Seventy, bishop of Damascus, and a Christian martyr.

(11) The high priest who presided over the SANHEDRIN meeting called to interrogate Paul following his arrest in Jerusalem (Acts 22:30–23:5). Because of his insolent command to strike Paul on the mouth, Paul called him a “whitewashed wall” (23:3). Paul’s subsequent assertion (v. 5) that he did not know that Ananias was high priest has been variously explained (see C. K. Barrett, *A Critical and Exegetical Commentary on the Acts of the Apostles*, ICC, 2 vols. [1994–98], 2:1061–62). He appeared in person in CAESAREA to support the charges against Paul in the trial before FELIX (24:1). According to JOSEPHUS (*Ant.* 20.5.2), Ananias was the son of Nebedeus and was appointed high priest by Herod, king of Chalcis, in A.D. 48. Quadratus, legate of SYRIA, sent him to Rome in the year 52 to answer charges of cruelty, but he was acquitted by CLAUDIUS through the efforts of Agrippa the Younger (*Ant.* 20.6.2–3) and retained office until the year 58. He was a typical SADDUCEE, haughty, wealthy, and unscrupulous (*Ant.* 20.9.2). He cooperated with the assassins (*sicarii*) to accomplish his purposes. Because of his collaborations with the Romans, he was hated by the nationalistic Jews. When the war broke out in 66, he was hunted down by the assassins and murdered (*Jos. War* 2.17.9). He has been called one of the most unworthy men to hold the office of “high priest.”

D.E. HIEBERT

Ananiel uh-nan’ee-uhl (Ανανιηλ, from Heb. אַנַּנְיָאֵל “God is gracious”; cf. HANANEL). Father of Tobiel and grandfather of TOBIT (Tob. 1:1 [NRSV, “Hananiel”]; in v. 8, C ODEX SINAITICUS, by a scribal error, calls Ananiel Tobit’s father).

Anasib an’uh-sib (Ανασιβ). Ancestor of a priestly family that returned from the EXILE with ZERUBBABEL (1 Esd. 5:24; KJV, “Sanasib” [a variant in the Gk. MSS]; Vulg., “Eliasib”). The name is not found in the parallels (Ezra 2:36; Neh. 7:39).

Anat ay’nat. See ANATH #2.

Anath ay'nath, ah'nath (עַנַּתְּ *H6742*, meaning unknown). (1) Father of SHAMGAR; the latter was one of the judges in Israel (Jdg. 3:31; 5:6). It has been suggested that the phrase *ben-ʿānāt* (“son of Anath”) is really a military title (P. C. Craigie in *JBL* 91 [1972]: 239–40). Others emend to *bēt-ʿānāt* (“house/temple of [the goddess] Anath”) and regard it as a reference to the city of BETH ANATH (1:33).

(2) Anath (or Anat) was also the name of a warrior-goddess worshipped by various nations in the ANE. She is especially prominent in the texts found at UGARIT, where she is referred to as the sister (perhaps not in a literal sense) and consort of BAAL (see *DDD*, 36–43). This goddess is not explicitly mentioned in the OT, although perhaps she is alluded to in the names of various cities (e.g., ANATHOTH, BETH ANATH, BETH ANOTH).

anathema uh-nath'uh-muh. This English term, borrowed directly from Greek (*anathema* *G353* or *anathema* *G356*, “that which is devoted, dedicated, banned, cursed”), occurs once in the KJV (1 Cor. 16:22), but not at all in most modern versions. The SEPTUAGINT uses the Greek term frequently, though not exclusively, to translate *ḥērem* *H3051*, a noun that occurs twenty-nine times in the OT and that is used in two senses, both relating to the idea of devoting something to God.

It would appear that Lev. 27:28 speaks about a person voluntarily devoting some of his goods in a solemn way to Yahweh, while the following verse refers to someone who is to be *destroyed*. In contrast to the *consecrated* things (hiphil of *qādaš* *H7727*) mentioned in the earlier parts of the chapter, neither of these two *devoted* classes of items can be sold or redeemed. But they must be different from each other, for there is no necessary reason why the items mentioned in v. 28 should be devoted, whereas such a reason must surely be present in v. 29, since here the one devoted is to be put to death. These represent two types: that which is dedicated and that which is set apart for destruction. (However, note that NRSV translates *ḥērem* “devoted to destruction” in both verses.)

In the first class should be included the *ḥērem* that belongs to the priests (Num. 18:14; Ezek

Statuette from Hazor, mid-2nd millennium. According to Deut. 7:25–26, idols such as this bronze bull were considered anathema and were to be destroyed.

44:29). The rest of the examples are of the second type. The following are to be destroyed: idols

(Deut. 7:26); cities in Israel in which idolaters live (13:16); Canaanite cities and their goods (Josh. 6:17–18); ACHAN, who violated the previous *ḥērem* (Josh. 7:1, 11–13; 22:20; 1 Chr. 2:7); the Midianites (Num. 31:7–12; see MIDIAN); the Amalekites and their goods (1 Sam. 15:21; see AMALEK); BEN-HADAD, king of ARAM (1 Ki. 20:42). The connection of the *ḥērem* with warfare is close, but Deut. 20:10–18 makes it clear that not all warfare was to employ such severe destruction, but only that which was directed against the Canaanites and related peoples. On the question of why these things were to be destroyed, some have suggested that originally it was their connection with a god other than Yahweh, although there are some passages where this connection is no longer felt. See also ACCURSED; BAN; CURSE; DEVOTED; EXCOMMUNICATION.

In nonbiblical Greek, the emphasis of *anathema* is upon the idea of dedicating something to deity (the verb *anatithēmi* G423 becomes a semitechnical term for setting up a votive offering). In the NT the term is used once of votive offerings (Lk. 21:5), while the LXX meaning “object devoted to destruction” is perpetuated in Rom. 9:3 (*anathema...apo tou Christou*, “accursed and cut off from Christ”); 1 Cor. 12:3 (no one who has the Spirit can call Jesus “anathema”); 16:22 (the word used as a curse on those who do not love the Lord); Gal. 1:8–9 (NIV, “let him be eternally condemned,” a wish uttered twice). In Acts 23:14 the noun (as the object of its cognate verb *anathematizō* G354) is used with the meaning “oath, curse.”

D. HUTTAR

Anathoth (person) an’uh-thoth (עַנְתוֹת H6744, prob. from ANATH). (1) One of the leaders of the people who sealed the covenant along with NEHEMIAH after the return from the Babylonian captivity (Neh. 10:19).

(2) Son of BEKER and grandson of BENJAMIN (1 Chr. 7:8).

Anathoth (place) an’uh-thoth (עַנְתוֹת H6743, prob. from ANATH; gentilic עַנְתוֹתִי H6745, “Anathothite,” KJV “Anet(h)othite”). One of the forty-eight cities allotted to the Levites from the territory of the tribe of BENJAMIN (Josh. 21:18). The name (prob. not a pl. form) may derive from ANATH, a Canaanite goddess, thus suggesting that the city was devoted to the worship of that deity before the Hebrew occupation.

SOLOMON banished ABIATHAR to Anathoth for his part in the unsuccessful attempt of ADONIJAH to lay claim to the throne after DAVID’S death (1 Ki. 2:26). Anathoth was also the birthplace of JEREMIAH and the town where some of his first prophetic utterances were made. These, however, met with such opposition from the people of Anathoth that Jeremiah’s life was threatened (Jer. 11:21). In a prophetic oracle depicting the advance of the Assyrian invaders, Isaiah speaks of Anathoth as one of the places standing in the path of the invading armies. It occurs in a play on words in conjunction with the word (*ʾāniyyah* (Isa. 10:30, translated “Answer her, O Anathoth” by NRSV, and “Poor Anathoth” by NIV).

ABIEZER, one of David’s warriors (2 Sam. 23:27), and JEHU, who joined David at ZIKLAG (1 Chr. 12:3), were Anathothites. After the EXILE, 128 men of Anathoth returned in the contingent that came with ZERUBBABEL (Ezra 2:23). The city was settled in the time of NEHEMIAH (Neh. 11:32), and its name apparently lives on in the modern Anata. Ancient Anathoth, however, is usually identified with the nearby site of Ras el-Kharrubeh, 2.5 mi. NE of Jerusalem, where excavations have revealed settlements from early Israelite times.

T. McCOMISKEY

Anatolia a'-nuh-toh'lee-uh (from ἀνατολή G424, “rising [of the sun],” referring to the east). A term equivalent to ASIA MINOR. The Anatolian languages include several that belong to the Indo-European family (Hittite, Luwian, Palaic, Lydian, Lycian, and Phrygian) and some that do not (Hattic, Hurrian, and Urartian; possibly Carian and Sidetic). See LANGUAGES OF THE ANE.

anchor. A heavy object attached to a vessel to keep it in place. The ancient anchor (Gk. *ankyra* G46) was originally a pierced or indented stone, a form found from the Mediterranean to Polynesia. By the 1st cent. of the modern era, anchors of recognizable similarity to the modern type, complete with crossbar, teeth, and flukes, had been developed. There were also large wooden anchors, weighted by a lead crossbar.

Anchors are mentioned in two contexts in the NT. The first is the brilliantly written account of the wreck of the Alexandrian grain ship in Acts 27. Finding the shoal beneath, “they dropped four anchors from the stern” (27:29). Some sailors, seeking to contrive an escape, lowered a boat under pretext of letting out anchors from the bow, in itself a not unreasonable procedure if the ship was to be braced in the swell by a quadrangular pattern of support (v. 30). To beach the galley they cut loose the anchors (v. 40). See also SHIPS.

In the second NT context, the term is used as a powerful figure for Christian confidence: “We have this hope as an anchor for the soul, firm and secure” (Heb. 6:19). See ASSURANCE; HOPE.

E.M. BLAIKLOCK

Ancient of Days. This elegant Semitic expression (Aram. *attîq yômîn* H10578 + H10317, equivalent to “advanced in years”), which refers simply to someone old, occurs only in Dan. 7:9, 13, and 22. Although these verses do not directly say so, commentators “take it at once to be a euphemistic term for God, indicating his eternal existence” (J. A. Montgomery, *A Critical and Exegetical Commentary on the Book of Daniel*, ICC [1927], 297), “apparently much in the same sense as Eternal” (McClintock-Strong, *Cyclopedia*, 1:220). It is a peculiar expression probably chosen to contrast God and his kingdom with the temporary limited duration of the four successive kingdoms, under the figures of four wild beasts, which appear earlier in the chapter. The eternal Yahweh of all the universe appropriately defeats them and establishes his own eternal kingdom under the matchless “son of man” and his “saints” who appear in the same scene (vv. 13–14, 22). The details are elaborated elsewhere in Scripture (Ezek. 1:1–2:8 and Rev. 4–20) and imitated in the APOCRYPHA and PSEUDEPIGRAPHA.

In Rev. 1:13–14, someone “like a son of man” is described in terms that are reminiscent of the Ancient of Days. It has been argued that this identification of Christ may have been aided by the SEPTUAGINT rendering of Dan. 7:13, which speaks of the one like a son of man coming *hōs palaios hēmerōn* (“as an ancient of days”). However, the text of Daniel is disputed, and some scholars believe it should read, *heōs palaiou hēmerōn* (“to an ancient of days”; see J. Ziegler’s edition, *Daniel, Susanna, Bel et Draco*, Septuaginta 14/2 [1954], ad loc., and cf. MT and Theodotion). Still, it is clear that in Revelation some of the attributes of the Ancient of Days are transferred to Christ.

R.D. CULVER

Andrew an'droo (Ἀνδρέας G436, “manly”). The brother of Simon PETER and one of the first disciples of Jesus. Although a native Palestinian Jew, Andrew bore a Greek name. He was the son of

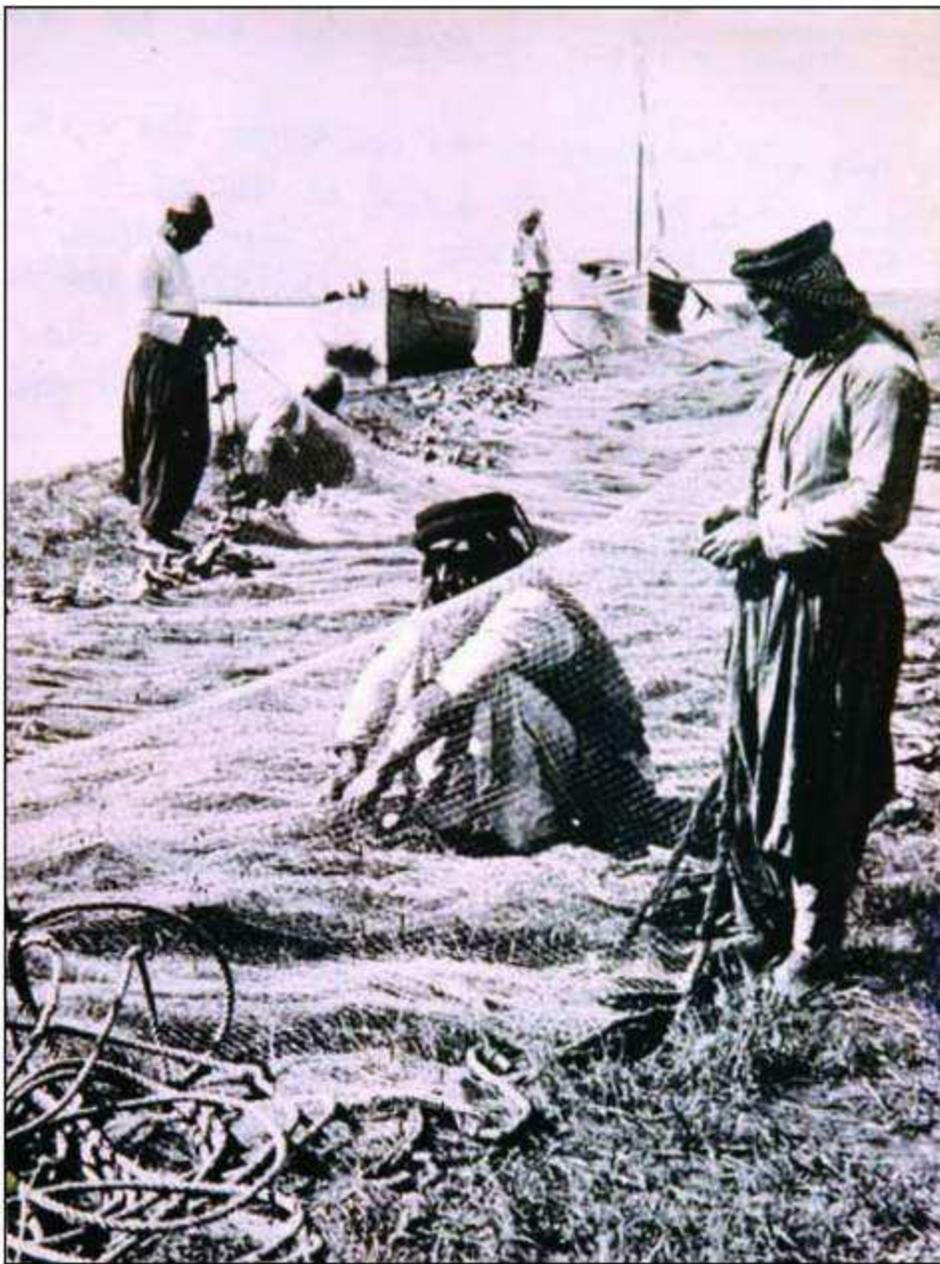

Jonah (Matt. 16:17) or John (Jn. 1:42; 21:15–17; see JOHN #4), whose home was in BETHSAIDA in GALILEE (Jn. 1:44; 12:21). Doubtless Andrew, as a native of Galilee, where life was strongly influenced by Gentile culture, spoke Greek as well as ARAMAIC. Simon his brother, as a married man, made his home in CAPERNAUM (Mk. 1:21), and Andrew apparently shared the house with him (1:29). By trade Andrew and Simon were fishermen on the Sea of Galilee (Matt. 4:18). They worked in partnership with James and John, the sons of ZEBEDEE (Lk. 5:10; see JAMES I; John the apostle).

When JOHN THE BAPTIST was preaching at BETHANY beyond the Jordan (Jn. 1:28; KJV, “Bethabara”), Andrew, like many of his countrymen, laid aside his daily work to go to hear the famous preacher. What Andrew saw and heard influenced him greatly. He became a disciple of John (Jn. 1:35, 40) and, receiving the baptism of repentance, committed himself to receive the Messiah when he came. When John the Baptist pointed out Jesus as “the Lamb of God,” Andrew and another disciple (apparently John) acted upon the implied suggestion of the Baptist and sought an interview with Jesus. The interview with him that day convinced Andrew that Jesus was indeed the expected Messiah (Jn. 1:35–39). He was one of the first acknowledged followers of Jesus.

Andrew enthusiastically went in search of his brother Simon to share the discovery with him. He used his good influence to bring his brother into personal contact with Jesus (Jn. 1:40–42). It proved to be the turning point in Peter’s life. Apparently Andrew and the other followers won at Bethany remained with Jesus during the events recorded in Jn. 1:43–4:54. If so, Andrew was an eager participant in those early events and shared in the baptizing recorded in Jn. 3:22; 4:2.

Upon Jesus’ return to Galilee, Andrew resumed his work as a fisherman. When Jesus established his headquarters at Capernaum (Matt. 4:13), he called Andrew and Peter, with James and John, into full-time training to be “fishers of men” (Matt. 4:18–22;

Fishermen mending their nets on the shore of the Sea of Galilee in the first half of the 20th cent.

Mk. 1:16–20; Lk. 5:1–11). Their ready response to the invitation of Jesus, as recorded in the Synoptic Gospels, presupposes their previous associations with Jesus as recorded in the fourth gospel.

Some time later Andrew was among the Twelve whom Jesus selected as his apostles (Mk. 3:18; Lk. 6:14). In all the lists of the Twelve (Matt. 10:2–4; Mk. 3:16–19; Lk. 6:14–16; Acts 1:13), Andrew was always named among the first four, although the order varies. He was associated with Peter, James, and John in their “private” inquiry of Jesus concerning his predictions of the future (Mk. 13:3–4). Andrew did not attain to the intimacy and resultant privileges of the other three as the “inner circle,” but he was on the fringe of it.

On two occasions in the fourth gospel, Andrew was closely associated with PHILIP, the only other apostle with a Greek name. At the feeding of the five thousand, the anxious, calculating reaction of Philip stands in contrast to the practical action of Andrew, who called Jesus’ attention to the boy with his small store of food, even though he too failed to see its sufficiency for the purpose of Christ (Jn. 6:4–9). When at the last Passover Philip, in perplexity, conferred with Andrew concerning the request of some Greeks for an interview with Jesus, Andrew concluded that the solution was to lay

the request before Jesus himself and let him decide whether or not to grant the interview (12:20–22). In the book of Acts, Andrew's name is included among those who waited in the upper room after the ASCENSION OF CHRIST (Acts 1:13). Following that occasion, his name disappears completely from the NT.

Tradition has been busy with the later life of Andrew. EUSEBIUS (*Eccl. Hist.* 3.1) records the tradition that Andrew's area of labor was in Scythia (NE of the Black Sea); hence he has been adopted as the patron saint of Russia. Other traditions connect him with Lydia, Thrace, and Achaia. The apocryphal *Acts of Andrew* pictures him as evangelizing in ACHAIA and being martyred at Patras by being bound to an X-shaped cross (*crux decussata*, subsequently called St. Andrew's Cross). (See also ANDREW, ACTS OF.) He has been made the patron saint of Greece. A later tradition claims that his body was transferred to Constantinople, and then to Italy during the Crusades. Andrew also has been made the patron saint of Scotland because of the late tradition that his arm was brought to its E coast by St. Regulus. (Cf. F. Dvornik, *The Idea of Apostolicity in Byzantium and the Legend of the Apostle Andrew* [1958]; S. Lamont, *The Life of Saint Andrew: Apostle, Saint and Enigma* [1997].)

It is only in the fourth gospel that the character of Andrew emerges with any distinctness. He was a sincere man with earnest and devout messianic expectations. He was not bound by traditional views, but was open to, and eager for, new truth. He was a man who had the courage of his convictions, eager and enthusiastic to have others share what he had come to know. He was always busy bringing others into touch with his Master. As a man of action, he was practical, ready and willing to do any needed task. On the basis of Jn. 1:41 and 12:22, he has been called "not only the first home-missionary...but also the first foreign-missionary" (G. Milligan in *DCG*, 1:53).

Andrew did not possess the native ability and aggressive leadership of his brother Peter, but he was content to play a lesser role. His broad sympathies, practical common sense, and steady discipleship made him a valuable member of the apostolic band.

D.E. HIEBERT

Andrew, Acts of. This work is first mentioned by EUSEBIUS (*Eccl. Hist.* 3.25.6) among writings put forward by the heretics, of which, he says, no writer in the ecclesiastical succession has condescended to make any mention; in his opinion they are not even to be ranked with the spurious books (*notha*) but rejected as altogether absurd and impious. According to EPIPHANIUS the book was current among the ENCRATITES and other groups, while Philastrius and others later mention its use by the MANICHEANS. References in the Coptic Manichean Psalter, however, do not necessarily show knowledge of this work in its original form.

I. Text. The knowledge of this document rests largely on an epitome by Gregory of Tours, since the full text has not survived. There is a long series of texts, mainly Byzantine, relating the fate of the apostle, but these have been revised to conform with later theology. Martyrdoms frequently circulated independently of the works to which they originally belonged, and in varying forms. Part of the original *Acts* is preserved in a codex with the designation Vaticanus graecus 808, and a further fragment in a Coptic papyrus in Utrecht. A second Coptic fragment in Oxford is doubtful, since it relates a conversation between Andrew and Jesus, and looks more like part of a gospel. Further fragments appear in the PSEUDO-TITUS Epistle (*NTAp*, 2:103) and in Evodius of Uzala. (For information on separate works of later date, see ANDREW AND MATTHIAS, ACTS OF; PETER AND ANDREW, ACTS OF.)

II. Content. The *Acts of Andrew* was probably the longest of the five major books referred to as “Acts.” Gregory speaks of its excessive verbosity, and states his intention to extract and set out the “virtues” only (i.e., the miracles), omitting all that bred weariness. His outline of a journey from Pontus to Achaia, with miracles at various stages, is confirmed by Philastrius, but there is evidence also of considerable modification. For example, Gregory says that Andrew did not forbid marriage, and that it is a divine institution, which is inconsistent both with Vatic. gr. 808 and with the fragment in Pseudo-Titus. To judge from the extant fragments, the narrative was punctuated by lengthy and sometimes tedious speeches, and was severely ascetic in tone. Some incidents are related in divergent forms in different texts. Andrew’s martyrdom in particular, of which Gregory gives only a hint, has to be pieced together from various sources (such as several Greek MSS that contain the last sections of *Acts of Andrew*, as well as a later translation known as *The Armenian Martyrdom*). The chief theme is that of turning away from the world of transitoriness and illusion, and the realization of true being in return to God. Special interest attaches to the speculations on the cross as the symbol of the Logos (cf. *NTAp*, 2:109), which go back ultimately to Platonic and Stoic ideas.

III. Character. On the character of the work, opinions have differed. Some scholars have thought it Gnostic, while others have regarded the author as an orthodox Christian strongly influenced by Neo-Platonism. Against the first view is the absence of the more characteristic traits of GNOSTICISM (e.g., cosmic DUALISM); against the second it has been objected that the contacts noted are not sufficient to make Neo-Platonic influence probable. The ascetic element is not necessarily Gnostic, for such tendencies were strong in some quarters; and allowance must be made for the fluidity of thought in the early centuries, and the extent to which an “orthodox” author could assimilate alien ideas without actually going beyond the limits recognized by the contemporary church. More recently attention has been drawn to close contacts with the theology of Tatian. Such features, with the speculations on the cross already mentioned, are typical of the syncretism of the period. (See the articles in J. N. Bremmer, ed., *The Apocryphal Acts of Andrew* [2000].)

IV. Date. There is no complete agreement on the date. Those who detect Neo-Platonic influences favor the second half of the 3rd cent., others place the book before A.D. 200. A probable *terminus a quo* is the reign of HADRIAN (117–138), and a *terminus ante quem* is provided by the *Acts of Paul* (c. 190–200), whose author seems to have used it (see PAUL, ACTS OF; cf. also the allusions in the 3rd-cent. Manichean Psalter). This gives a range between A.D. 120 and 200, but the work should probably not be dated too early within this period. The second half of the 2nd cent. is perhaps the closest approximation possible. The place of writing may be somewhere in Achaia, but one has no conclusive evidence, nor is it possible to say anything about the personality of the author.

R. McL. WILSON

Andrew, Acts of Peter and. See PETER AND ANDREW, ACTS OF; APOCRYPHAL NEW TESTAMENT.

Andrew, Fragmentary Story of. A story, extant only in Coptic, from a late apocryphal book, about a woman who killed her child in the desert and fed it to a dog. On the approach of the apostles she fled, but the dog reported what had happened. Andrew prayed, alluding to a miracle of Jesus on Mount Gebal when “Thou didst command all the scattered stones and grains of sand to be gathered in one place.” The child then apparently came to life again.

R. McL. WILSON

Andrew and Matthias, Acts of. Among the most famous of the apocryphal romances, the *Acts of Andrew and Matthias (Matthew)*, possibly dating to the 4th cent., is extant in various versions, including Latin, Greek, and Syriac. It was prefixed by Gregory of Tours to his epitome of the *Acts of Andrew* (see ANDREW, ACTS OF), but is not part of that work, and is also preserved in the Anglo-Saxon *Andreas* attributed to Cynewulf (see K. R. Brooks, *Andreas and the Fates of the Apostles* [1961]). The name Matthew in some forms of the title is due to confusion of Matthias (Acts 1:26) with the better-known evangelist. (English trans. in *ANF*, 8:517–34. For a discussion of several issues, including the relationship between this work and the *Acts of Andrew*, cf. *NTAp*, 2:443–47.) The following is a brief summary of this book's contents.

When the apostles divide the world into mission areas, Matthias is allotted the land of the cannibals, who imprison strangers, blinding and drugging them to take away their senses, and finally eating them on the thirtieth day. Matthias is imprisoned and blinded, but retains his senses and prays for help. On the twenty-seventh day Jesus appears to Andrew, sending him to the rescue. Andrew and his disciples embark on a boat piloted, unknown to them, by Jesus, at whose bidding Andrew recounts Jesus' mighty works, including a visit to a heathen temple where the (Jewish) high priests are confuted by a talking sphinx. On arrival Andrew rescues Matthias, who with the disciples is carried off by a cloud, leaving Andrew alone. He works miracles, but is arrested and tortured, then nearly destroys the city by water called forth from a statue; when the inhabitants repent he restores the city, draws plans for a church, and baptizes the people.

R. McL. WILSON

Andrew and Paul, Acts of. A fragmentary story, extant only in Coptic, from one of the later apocryphal Acts. (Full Coptic text with French trans. by X. Jacques, *Orientalia* 38 [1969]: 187–213. Cf. *NTAp*, 2:449–50.) According to this work, Paul dives into the sea to visit Amente (the underworld), leaving a message for Andrew to bring him up again. On his return he tells of meeting Judas, the last soul left in Amente; forgiven for his betrayal of Jesus, Judas had been frightened by Satan into worshiping him and then had killed himself. Now he is doomed to remain until the Day of Judgment. The apostles visit a city, but the Jews refuse them admission. Paul strikes the gates with a piece of wood brought from Amente, and they are swallowed up in the earth. A dispute leads to the conversion of some 2,700 Jews.

R. McL. WILSON

Andronicus an-dron'uh-kuhs (Ἀνδρόνικος *G438*, “conqueror of men”). (1) A deputy of ANTIOCHUS Epiphanes who, left in charge of ANTIOCH OF SYRIA, aroused the Jews by the murder of ONIAS, and upon complaint to the king was executed (2 Macc. 4:31–38). Diodorus Siculus (*Bibl. Hist.* 30.7.2–3) gives a different account of his death (cf. J. A. Goldstein, *II Maccabees*, AB 41A [1983], 238–39).

(2) An officer whom Antiochus Epiphanes, after sacking Jerusalem, left in charge at GERIZIM (2 Macc. 5:23).

(3) A Christian at Rome to whom PAUL sent greetings (Rom. 16:7). The apostle calls him and JUNIAS “my relatives,” though the Greek term (*syngenēs G5150*) may indicate blood relatives (the most common meaning, cf. vv. 11, 21), members of the same (Jewish) civic tribe at TARSUS, or simply fellow-Jews (cf. 9:3). The apostle says that they became Christians before he did and that they shared imprisonment with him (where or when is not known). They are further described as “outstanding among the apostles.” This comment may mean that they were held in high esteem by the

apostles (taking “apostles” in the strict sense) or that they were themselves distinguished apostles (in a wider sense, i.e., early authorized preachers of the gospel). The Greek expression (*epiēmoi en tois apostolois*) favors the second view. (For a discussion of the names in Rom. 16, see P. Lampe in *The Romans Debate*, ed. K. P. Donfried [1991], 216–30.)

D.E. HIEBERT

Anem ay’nuhm (עֲנָם H6722, meaning uncertain). One of the Levitical cities of ISSACHAR assigned to the descendants of GERSHON (1 Chr. 6:73). The parallel list reads EN GANNIM (Josh. 21:29). If they are not the same site, Anem may be identified either with ⁽Olam, some 8 mi. SE of Mount TABOR (W. F. Albright in *ZAW* 44 [1926]: 231; but see Z. Kallai, *Historical Geography of the Bible* [1986], 425), or with Khirbet ⁽Anim, c. 2 mi. NE of ⁽Olam (F.-M. Abel, *Géographie de la Palestine* [1933], 2:244, who gives the form ⁽Anīn).

Aner (person) ay’nuhr (עֲנָר H6738, meaning unknown). One of three AMORITE brothers, including MAMRE and ESHCOL, allies of ABRAHAM in his pursuit after the four kings who had taken LOT captive (Gen. 14:13, 24). Since Mamre is an old name for HEBRON (Gen. 23:19), and Eshcol is the name of a valley near Hebron (Num. 13:23), it is likely that Aner was also the name of a locality.

Aner (place) ay’nuhr (עֲנָר H6739, meaning unknown). One of the Levitical cities of MANASSEH assigned to the descendants of KOHATH (1 Chr. 6:70). The parallel list reads TAANACH (Josh. 21:25). If they are not the same site, the location of Aner remains unknown.

Anet(h)othite an’uh-t(h)oh-thīt. KJV alternate forms of Anathothite. See ANATHOTH (PLACE).

angel

1. Definition and description

 1. To announce and forewarn
 2. To guide and instruct
 3. To guard and defend
 4. To minister in times of need
 5. To assist in judgment
5. Angelology

I. Definition and description. In Scripture records, angels constitute a distinct order among the higher echelons of universal beings.

A. Appellative terms. Though both the Greek and Hebrew terms are sometimes used to designate human messengers, as a prophet (Hag. 1:13) or a priest (Mal. 2:7), differentiation is usually made from the context. Other terms for angels were “sons of God” (Gen. 6:2–4 [a disputed passage]; Job 1:6; 2:1; Ps. 29:1, NIV, “mighty ones”; 89:6, NIV, “heavenly beings”); “holy ones” (Ps. 89:5, 7; Dan. 4:13); “heavenly host” (Lk. 2:13); and “hosts,” as in the familiar phrase “LORD of hosts,” originally meaning “LORD of armies” (1 Sam. 1:11 et al.). The SERAPHS in Isa. 6:2 obviously belong to the order of angels. Enoch spoke of “holy myriads” (Jude 14; NIV, “thousands upon thousands of his holy ones”).

B. Spiritual beings. Angels are spirits, supernatural celestial beings. The author of Hebrews asks, “Are not all angels ministering spirits sent to serve those who will inherit salvation?” (Heb. 1:14). They are more than personifications of abstract good and evil; angels are majestic beings whom God created to execute his will (Ps. 148:2–5; Col. 1:16). They are therefore active in a multiplicity of universal operations. They were created at a time that long antedates the creation of man (Job 38:7). Being spirits, angels can function as mediators between God and human beings. They can pass back and forth from the spiritual realm to the natural at will, unimpeded by physical boundaries (Acts 12:7). Angels are superhuman in strength: “...even angels, although they are stronger and more powerful, do not bring slanderous accusations against such beings in the presence of the Lord” (2 Pet. 2:11). Yet, they are not omnipotent (Ps. 103:20; 2 Thess. 1:7). Angels are also endowed with superior intellect and wisdom (2 Sam. 14:17, 20), but are not omniscient (Matt. 24:36; 1 Pet. 1:12).

References to angels in common parlance shed further light on their superhuman qualities: King ACHISH said to DAVID, “I know that you have been as pleasing in my eyes as an angel of God” (1 Sam. 29:9). The wise woman from Tekoa who approached King David in disguise reflected on the superior wisdom of angels: “for my lord the king is like an angel of God in discerning good and evil”; and, when David asked whether JOAB was back of this ruse, she replied, “My lord has wisdom like that of an angel of God—he knows everything that happens in the land” (2 Sam. 14:17, 20). PAUL solemnly pronounced a curse on anyone, even “an angel from heaven,” who should preach a false gospel (Gal. 1:8). Pursuing his appeal to the Galatians, he recalled their former kindness to him, saying: “you welcomed me as if I were an angel of God” (Gal. 4:14). Warning the Corinthian Christians against the false apostles, Paul said about their deception: “And no wonder, for Satan himself masquerades as an angel of light” (2 Cor. 11:14). In his masterpiece on LOVE, Paul wrote of the eloquence of angels (1 Cor. 13:1).

When refuting the SADDUCEES’ argument against angels and RESURRECTION, Jesus stated that angels were not sexual and did not marry. He also pointed out their present superiority to human beings, but said that people who are worthy of the coming age “are like the angels. They are God’s children, since they are children of the resurrection” (Lk. 20:35–36). Since Jesus was temporarily incarnate, the writer of Hebrews, quoting from the psalmist, declared, “You made him a little lower than the angels” (Heb. 2:7; Ps. 8:5). However, Christ ultimately would be supreme ruler: “It is not to angels that [God] has subjected the world to come” (Heb. 2:5). And Paul asked, “Do you not know that we will judge angels?” (1 Cor. 6:3).

C. Human characteristics. Angels consistently appeared in human form, with the exception of the

seraphs (Isa. 6:2). Contrarily, angels never appeared in subhuman form, as animals, birds, or material objects. Though the angel of the Lord spoke out of fire and cloud, and even caused a donkey to speak, he never identified himself with either. Moreover, it should be observed that there is no biblical record showing that an angel ever appeared to a wicked person or warned such a one of impending danger (cf. Matt. 24:37–39). Good angels always appeared to God’s people: Abraham, Moses, David, Daniel, Jesus, Peter, Paul, and others. Furthermore, angels always appeared as men, never as women or children, and they were always clothed. Thus God has repeatedly revealed himself by establishing rapport in the medium of human perception.

Many times angels were so disguised as men that they were not at first identified as angels. ABRAHAM entertained “three men” as dinner guests. One remained to talk with him while the other “two angels” went on down to SODOM and spent the night with LOT, who thought that they were men (Gen. 18:2; 19:1). Referring to this incident, the writer of Hebrews admonished his readers to show hospitality to strangers, “for by doing so some people have entertained angels without knowing it” (Heb. 13:2). Similarly, just before the Israelites’ attack on JERICHO, JOSHUA “looked up and saw a man standing in front of him with a drawn sword in his hand,” but this man was an angel (Josh. 5:13–15). GIDEON too did not know that a reassuring guest was an angel until he had served him a sumptuous meal and the angel had made a burnt offering of it (Jdg. 6:11–22). “The angel of the LORD” made several appearances as “a man” to MANOAH and his wife (13:2–21).

Occasionally angels displayed themselves as men with awesome appearances in countenance or clothing. The description given by Manoah’s wife was, “A man of God came to me. He looked like an angel of God, very awesome” (Jdg. 13:6). At the tomb of Jesus, “two men in clothes that gleamed like lightning stood beside” the women (Lk. 24:4). As the Twelve witnessed Jesus’ ascension, “two men dressed in white stood by them” (Acts 1:10). A most colorful description of an angel was given by DANIEL, who saw him while standing on the banks of the TIGRIS: “I looked up and there before me was a man dressed in linen, with a belt of the finest gold around his waist. His body was like chrysolite, his face like lightning, his eyes like flaming torches, his arms and legs like the gleam of burnished bronze, and his voice like the sound of a multitude” (Dan. 10:5–6). On numerous other occasions angels were described as men (e.g., Ezek. 40:3; Dan. 10:18; Zech. 2:1). In all these instances angels were soon, if not immediately, recognized as such. On other occasions angels were instantly recognized as angels, such as those seen by BALAAM (Num. 22:31), DAVID (2 Sam. 24:17), ZECHARIAH (Lk. 1:11–12), and MARY, MOTHER OF JESUS (Lk. 1:26–29).

II. Classification and names. Angels were created holy (cf. Gen. 1:31), and like men were apparently given freedom of choice in attitude and action during a probationary period (cf. Jude 6). Some chose to worship and serve God and some rebelled, creating two major divisions of angels.

A. Good angels. Good angels are called “the holy angels,” “the angels of God,” “angels in heaven,” “his powerful angels” (Lk. 9:26; 12:8; Heb. 1:6; Matt. 16:27; 22:30; 24:31; 2 Thess. 1:7). Of these good angels only two are mentioned by name in the Bible. First, MICHAEL is called the archangel by Jude (v. 9), while in the book of Daniel the messenger angel called him “one of the chief princes” (Dan. 10:13). In Rev. 12:7–8 Michael is portrayed as the commander of the army of good angels who defeated and expelled the bad angels from heaven.

Second, GABRIEL appears to be the chief messenger angel. He announced the forthcoming births of John the Baptist and of Jesus (Lk. 1:13, 31). He also interpreted Daniel’s dream and on the same mission delivered God’s decree (Dan. 8:15–27). JOSEPHUS (*War* 2.8.7) stated that the initiation oath

of the ESSENES included the pledge to preserve the names of angels. This interest in angels is illustrated in the DEAD SEA SCROLLS, which show the emphasis the Qumranites placed on the later Jewish writings, where angels figure prominently. For example, the apocryphal book of *1 Enoch* contains an interesting list of angel names. Each of the names is followed by the phrase “one of the holy angels” (which for the sake of brevity is omitted in the following quotation): “And these are the names of the holy angels who watch: Uriel...who is over the world and over Tartarus; Raphael... who is over the spirits of men; Raguel...who takes care of the world of the luminaries; Michael...is set over the best part of mankind and over chaos; Saraqael...is set over the spirits who sin in the spirit; Gabriel...is over paradise and the serpents and the cherubim; Remiel...whom God set over those who rise” (*1 En.* 20). Good angels will continue their blissful existence with God and his elect in the future age.

B. Bad angels. Bad angels consist of “the devil and his angels.” It appears that their habitation was for some time in heaven, but they proved unfaithful to their trust and were driven out of heaven down to earth by the holy angels (cf. Rev. 12:7–12). The apostasy of the angels must have taken place before man’s creation, for SATAN as the serpent caused ADAM and EVE to sin in the Garden of EDEN. Out of the group of degenerate angels Satan emerged as the chief exponent of evil and wickedness. The PHARISEES called him BEELZEBUB, “the prince of demons” (Matt. 12:24). Jesus said that the devil was a murderer, a liar, and the father of lies (Jn. 8:44). Paul said that Christians are contending “against the spiritual forces of evil in the heavenly realms” (Eph. 6:12). Bad angels will in the end be cast “into the eternal fire prepared for the devil and his angels” (Matt. 25:41). The nebulous passage of Gen. 6:1–5, showing the increase of wickedness as man multiplied, is translated in various ways. One of the oldest commentaries on the subject is an elaborate account of the same story in *1 Enoch*. In its mythological account an attempt is made to solve the problem of sin by attributing it to marriages between lustful angels and earthly women (*1 En.* 15:9–16). See SONS OF GOD.

III. The angel of God. This figure, also called “the angel of the LORD,” stands out in distinct preeminence in the OT.

A. Character and distinctiveness. Though it was natural for the terminology discussed above to be applied to any good angel (Matt. 2:20, 23), there was definitely a theophanic mediator, unique and distinct. He introduced himself as the Deity and yet as distinct from God. He spoke face to face with early Bible characters as man to man, in whose form he appeared. The angel of the Lord gave aid and encouragement twice to HAGAR, Sarai’s Egyptian slave girl, in her distress in the wilderness

© Dr. James C. Martin

Some of the curtains of the tabernacle were embroidered with angelic creatures known as cherubim (Exod. 26:1 et al.).

(Gen. 16:7–13; 21:17). On the second occasion he called from heaven, as he did on two occasions to Abraham: when he stopped his attempt to sacrifice ISAAC and when he promised him countless descendants (22:11, 15–18). He was spokesman of the “three men” who came to announce to Abraham the impending doom of Sodom and Gomorrah, and to foretell the birth of Isaac. After the other two left for Sodom, Abraham detained him in his supplication to spare the city (18:1–19:1). The angel of the Lord accompanied ELIEZER on his mission to HARAN to get a wife for Isaac, through whom the chosen people were to be perpetuated (24:7, 40). He appeared to JACOB in a foreign land, identified himself as “the God of Bethel,” and instructed him to go home (31:11–13). Later, after wrestling with him, Jacob said, “I saw God face to face” (32:24–30).

It was the angel of the Lord who appeared to MOSES in the BURNING BUSH and identified himself as “the God of your father, the God of Abraham, the God of Isaac, and the God of Jacob” (Exod. 3:6). The same angel later guided and guarded the Israelites in their exodus from Egypt (13:21–22; 14:19). He frequently talked to Moses on the wilderness journey, and delivered the TEN COMMANDMENTS to Moses on Mount Sinai (chs. 19–20). He blocked the road for Balaam on a questionable mission (Num. 22:22) and identified himself as “commander of the army of the LORD” to Joshua at the beginning of the conquest of the Promised Land (Josh. 5:14; 6:2).

Early in the period of the judges, when the Israelites were forsaking God, the angel of the Lord spoke to them at BOKIM (Jdg. 2:1–5). He later appeared to GIDEON to commission him for military leadership (6:11–14). Then he appeared to Manoah and his wife to promise them a son, SAMSON (ch. 13). He appeared to DAVID at the threshing floor of Ornan (ARAUNAH), where he stopped the destroying angel; and afterward he commanded the prophet GAD to order David to build an altar on that rock (1 Chr. 21:15, 18, 27). The angel of the Lord received a report from the angels who patrolled the earth and then asked God to have mercy on Jerusalem (Ezek. 1:10–13).

B. Preincarnate Logos. The question of the identity of “the angel of God” has aroused an intriguing interest among Bible students. The view with which most concur is that he is a distinct personal self-manifestation of God, who may be called the incarnate LOGOS. The reference in Jdg. 2:1 shows

clearly that “the angel of the LORD” is God in his self-manifestation. This is also the case with similar patriarchal passages dealing with Abraham, Jacob, and Moses. The angel whom David saw at the threshing floor was superior in rank to the destroying angel whom he ordered to stop. He later spoke with divine authority concerning the building of the altar on the spot. He was of the angelic order, but was superior to other angels. He always had the same specific personality, distinguishable from angels in general. For instance, he was not restricted to executing a single order, but, like Jesus, he spoke with authority as though he were God himself. Only the Logos, or some other manifest personification of God, would be able to do that.

John declared that the Logos “was in the beginning with God” and that he “was God”; that he was instrumental in the CREATION; and that he “became flesh and made his dwelling among us” (Jn. 1:1–14). It is interesting to note that this angel did not appear on earth while Jesus was in the flesh. The angel who announced Jesus’ birth to the shepherds was probably Gabriel, but was referred to only as “an angel of the Lord” (Lk. 2:9). Other resemblances between “the angel of the Lord” and Jesus support the thesis that he was the preincarnate Logos. The wife of Manoah reported that his countenance was “very awesome”; and his appearance to David and to Balaam was terrifying. He appeared to Moses in the midst of a fire, and vanished from Gideon with the holocaust fire. Daniel said his eyes were like flaming torches, and Ezekiel saw on a throne “a figure like that of a man” who seemed to be “full of fire” (Dan. 10:6; Ezek 1:26–28). In comparison to these descriptions one can find striking similarities in John’s vision of Jesus: “...his eyes were like blazing fire. His feet were like bronze glowing in a furnace, and his voice was like the sound of rushing waters” (Rev. 1:14–15).

It is amazing how often the appearance of “the angel of the LORD” marked a turning point in history, or sparked the innovation of some project with long-lasting consequences. Some examples are the founding of the chosen race through Abraham; deliverance of the same race from Egypt; founding a theocracy at Mount Sinai; leading an Israelite settlement into the Promised Land; laying foundation for Solomon’s temple by ordering an altar built on Ornan’s threshing floor rock; supporting Elijah in preserving monotheism; and protecting his elect in the Babylonian captivity. Another characteristic of the deity exercised by the angel of God was the authority to forgive sins (Exod. 23:21). In summary, the angel of the Lord was the guardian angel of the chosen race. The following words in Isaiah’s prophecy are both predictive and reflective: “In all their distress he too was distressed, and the angel of his presence saved them. In his love and mercy he redeemed them; he lifted them up and carried them all the days of old” (Isa. 63:9).

IV. Distribution of work. In general the work of angels is to execute God’s universal will in heaven and on earth. They praise, reverence, and obey God. They promote divine goodness, and they are mediators of God’s love and good will to man. With their relation to man, the writer of Hebrews states tersely the role of angels in his question: “Are not all angels ministering spirits sent to serve those who will inherit salvation?” (Heb. 1:14). Their service is rendered throughout a wide distribution of duties, observed in the following categories.

A. To announce and forewarn. Angels announced beforehand the births of some of God’s select servants. An angel announced in advance to Abraham and Sarai the conception and birth of their son Isaac (Gen. 18:9–10). Likewise, an angel foretold the birth of Samson to his parents, Manoah and his wife (Jdg. 13:2–24). Gabriel announced the birth of John the Baptist to his father Zechariah before his wife Elizabeth became pregnant, and the birth of Jesus to Mary before she was with child (Lk. 1:13, 30). On the night of Jesus’ birth, that momentous event was announced by an angel to the shepherds

and immediately a chorus of heavenly angels began praising God and blessing man (Lk. 2:8–15).

Angels not only announced blessed events, but on occasions forewarned the righteous of imminent danger or threatening disaster. Abraham and Lot were forewarned by angels of the destruction of Sodom and Gomorrah (Gen. 18:16–19:29). Joseph was warned by an angel to “take the child and his mother and escape to Egypt. Stay there until I tell you; for Herod is going to search for the child to kill him” (Matt. 2:13). Gabriel revealed future events involving God’s judgment to the prophet Daniel: “I am going to tell you what will happen later in the time of wrath, because the vision concerns the appointed time of the end” (Dan. 8:19). Similarly, an angel revealed to John on Patmos in a kaleidoscope of visions some eschatological scenes including the resurrection, the judgment, and the new Jerusalem (Rev. 1:1; 5:2 et al.).

B. To guide and instruct. From the day that Abraham left his home in Ur of the Chaldees until Joshua settled the tribes of Israel in Canaan, there is the manifest implication that the chosen people were divinely led. Always and everywhere during the nomadic wandering of the patriarchs, the sojourn in Egypt, and the wilderness tour to the Promised Land, an angel, visible or invisible, seemed to be ever near. Abraham was repeatedly in conversation with angels, and when he sent Eliezer to Mesopotamia to get a wife for Isaac, he assured the servant that God would send his angel with him (Gen. 24:7, 40). Later, when Jacob was on a similar mission for himself, he had a marvelous dream of angels ascending and descending a ladder reaching from earth to heaven, with the Lord standing above and giving the reassurance, “I am with you and will watch over you wherever you go, and I will bring you back to this land. I will not leave you until I have done what I have promised you” (28:15).

When Moses led the Israelites out of Egypt, “the angel of God, who had been traveling in front of Israel’s army, withdrew and went behind them” (Exod. 14:19). Subsequently Moses reassured the Israelites with God’s promise, “See, I am sending an angel ahead of you to guard you along the way and to bring you to the place I have prepared” (23:20). He bolstered this promise by recalling that the Lord “sent an angel and brought us out of Egypt” (Num. 20:16). Directing and instructing were kindred functions, often combined in the same angelic mission. The most comprehensive instruction in the OT was the law received by Moses from angels on Mount Sinai. When Stephen was on trial before the Sanhedrin, he mentioned in his survey of Israel’s history “the angel who spoke to [Moses] on Mount Sinai,” and proceeded to charge the rulers that they had “received the law that was put into effect through angels but have not obeyed it” (Acts 7:38, 53). Paul said that the law “was put into effect through angels by a mediator” (Gal. 3:19).

Elihu envisioned an angel “as a mediator...to tell a man what is right for him” (Job 33:23). An angel gave Manoah’s wife instructions for her personal care during pregnancy and for rearing her son Samson (Jdg. 13:3–5). An angel informed Joseph of the nature of Mary’s conception and instructed him to marry her (Matt. 1:20–21). An angel appeared to the centurion Cornelius at Caesarea and told him to “send men to Joppa to bring back a man named Simon who is called Peter,” and gave direction where to find him (Acts 10:5). An angel instructed Philip to leave Samaria and go to a desert place on the Jerusalem–Gaza road, where later he was to learn the purpose of the mission (8:26). Paul repeatedly received divine instruction, mediated, at least at times, by angels. One striking example was during a storm at sea, when an angel stood by Paul and assured him of his safety and that of the crew, and told him that he was yet to stand before Caesar (27:23–24). Angels also interpreted visions for Zechariah, Daniel, and John (Zech. 1:9, 19; Dan. 7:16; Rev. 17:7).

C. To guard and defend. The belief in guardian angels is an old one and has scriptural basis. “The

angel of the LORD encamps around those who fear him, and he delivers them” (Ps. 34:7). Angels guarded Jacob during his twenty years in Haran and brought him safely home to Canaan (Gen. 28:12, 15; 31:11; 32:1, 24). An angel, by cloud and fire, defended Israel from Egypt during the exodus (Exod. 14:19–20). When Moab and Midian allied to bring a curse of destruction on Israel, their plan was aborted by an angel who made Balaam revise his prophecy and rewrite his sermon (Num. 22). Reminiscent of Jacob’s experience in seeing God’s army of angels on returning to Canaan was that of Joshua when he met the “commander of the army of the LORD,” who joined him as an ally at the beginning

Modern replica of a carved Assyrian relief depicting a guardian angel.

of the conquest of Canaan (Gen. 32:1–2; Josh. 5:14). In David’s thanksgiving psalm he sang, “Bless the LORD, you his angels, you mighty ones who do his bidding, who obey his word” (Ps. 103:20). God’s army stood by to defend Elisha and his servant (2 Ki. 6:17). The writer of Chronicles, profoundly impressed with the brave warriors who continued to come to David’s support, said, “Day after day men came to help David, until he had a great army, like the army of God” (1 Chr. 12:22).

An angel prevented Abraham from committing murder and losing his only son of promise, and at the same time guarded the life of Isaac (Gen. 22:9–12). An angel guarded the lives of Daniel and the three young Hebrews against the sentences of death pronounced by powerful rulers (Dan. 3:28; 6:22). On the subject of guardian angels for children, Jesus warned, “See that you do not look down on one of these little ones. For I tell you that their angels in heaven always see the face of my Father in heaven” (Matt. 18:10). The psalmist, after listing some of the worst perils that threatened him, pointed to God as his refuge and declared, “he will command his angels concerning you to guard you in all your ways” (Ps. 91:11). The angel who talked with Daniel said that he had been the guardian angel of DARIUS. He had just stated that Michael was the guardian angel of Daniel (prob. meaning of the Jews in general), and that he and Michael had contended with the prince (angel) of Persia and that later the prince of Greece would come (Dan. 10:13–11:1). Obviously, then, nations and cities, as well as individuals, have guardian angels. To this may also be added churches, as seen by the seven angels respectively assigned to the seven churches of ASIA MINOR (Rev. 2–3).

In the guardianship of God’s people, angels were sometimes engaged in militant action against their enemies. “The destroyer,” the angel of death, slew the firstborn of the Egyptians to force the release of the Israelites from the bondage of slavery (Exod. 12:23, 29). When SENNACHERIB’S army threatened the destruction of Jerusalem in the days of King HEZEKIAH and the prophet ISAIAH, “the angel of the LORD went out and put to death a hundred and eighty-five thousand men in the Assyrian camp” (2 Ki. 19:35). The most enlightening and most reassuring comment on angelic guardianship was spoken by Jesus himself at the time of his arrest in the Garden of GETHSEMANE. PETER had just attempted a valiant defense of Jesus by wielding his sword when Jesus disarmed him and uttered amazing words of reassurance: “Do you think I cannot call on my Father, and he will at once put at my disposal more than twelve legions of angels?” (Matt. 26:53).

D. To minister in times of need. All angelic service to God’s people is ministering in some form to their needs. Angels are mediators of God’s love and good will to human beings, and their mission is always benevolent, either immediately or ultimately. As already seen, angels ministered to Abraham, Isaac, and Jacob in times of critical need. Nor did angelic service end with people of honorable estate, but with tender compassion ministered necessary aid to the slave girl, Hagar, and her young boy, Ishmael, when they were threatened with thirst and starvation in the wilderness (Gen. 21:17–18). When the Israelites were sorely oppressed by the taskmaster’s lash and seemingly hopeless Egyptian bondage, the angel of the Lord came to Moses and said, “I have indeed seen the misery of my people in Egypt. I have heard them crying out because of their slave drivers, and I am concerned about their suffering. So I have come down to rescue them” (Exod. 3:7–8).

When Elijah, with exhaustion, fear, and loneliness, fell asleep under a broom tree in the desert, a celestial being ministered to his needs. An angel awoke him and served him with a hot cake and a jar of water, which provided him with strength for a long journey ahead (1 Ki. 19:5–7). After Jesus had spent forty days in the wilderness, threatened by wild beasts, weakened by fasting, and harassed by the devil, “angels attended him” (Mk. 1:13). In his agony, loneliness, and sorrow in Gethsemane, “an angel from heaven appeared to him and strengthened him” (Lk. 22:43). After Jesus had been laid in the tomb, “an angel of the Lord came down from heaven and, going to the tomb, rolled back the stone and sat on it” (Matt. 28:2). Peter was delivered from chains and prison by an angel, just as earlier an angel of the Lord had opened the prison doors and brought the apostles out and commanded them to go into the temple and preach (Acts 5:19; 12:6–11).

E. To assist in judgment. Finally, angels assist in God's judgment. Enough instances are on record to show that this is continually being done in human history. Some have already been mentioned. Another striking example of this is the death of HEROD Agrippa: "Immediately, because Herod did not give praise to God, an angel of the Lord struck him down, and he was eaten by worms and died" (Acts 12:23). Some examples of their roles in judgment are shown in the visions of John on Patmos. One angel with great authority and amazing splendor proclaimed the fall of Rome, while a mighty angel threw a large stone into the sea, symbolizing the fall of Rome (Rev. 18:1, 21). In the outset of the war in which Christ and his heavenly armies defeated the beast and his cohorts, an angel stood in the sun and summoned carrion fowl to eat the corpses of God's enemies to be slain in the conflict (19:17–18). Another angel bound Satan and threw him into the pit (20:1–3).

Jesus said to NATHANAEAL that what Jacob had seen in a vision he would now see in reality in Jesus' ministry: "I tell you the truth, you shall see heaven open, and the angels of God ascending and descending on the Son of man" (Jn. 1:51). Later, Jesus declared to his audience: "If anyone is ashamed of me and my words, the Son of Man will be ashamed of him when he comes in his glory and in the glory of the Father and of the holy angels" (Lk. 9:26). Similarly he said, "whoever acknowledges me before men, the Son of Man will also acknowledge him before the angels of God. But he who disowns me before men will be disowned before the angels of God" (12:8–9). Moreover, Jesus said that angels would attend him on his SECOND COMING: "When the Son of Man comes in his glory, and all the angels with him, he will sit on his throne in heavenly glory" and judge all the nations (Matt. 25:31). When he comes, "he will send his angels with a loud trumpet call, and they will gather his elect from the four winds, from one end of the heavens to the other" (24:31; cf. Mk. 13:27). Doubtless the major function of angels in the age to come is to praise God continually (Rev. 19:1–3; Lk. 2:13–14).

V. Angelology. Angels are referred to in an open and straightforward manner from Genesis to Revelation, from Abraham by the oaks of Mamre to John on the island of Patmos. Their appearances are reported at various places in Bible lands over a period of more than 2,000 years. Scripture writers assume the existence of angels and, therefore, make no attempt to prove it. The earliest archaeological evidence of a reference to angels appears on the stela of Ur-Nammu (c. 2100 B.C.), where angels are seen flying over the head of this king while in prayer. Since Abraham came on the scene in this area not long after that time, he doubtless was acquainted with angelology from his youth and saw clearly that it had a natural place in the monotheism which he fostered.

Though angelology was mixed with mythology in the primitive religions, and in the polytheism of Israel's neighbors, the chosen people did not borrow distorted concepts from them only to be sloughed off with the maturation of their own religion. Contrarily, the records of angels increases as biblical history unfolds. They were sporadic throughout the OT until near its close. During the Babylonian captivity angels became more evident. It is the opinion of Bible scholars generally that ZOROASTRIANISM made a generous contribution to Jewish angelology. In any case, the NT opens with angel activity and continues so to its end. The visible activity of angels, however, has been superseded by the HOLY SPIRIT, who now guides Christians "into all truth" (Jn. 16:13).

(See further E. Langton, *The Angel Teaching of the New Testament* [1937]; W. G. Heidt, *Angelology in the Old Testament* [1949]; W. O. E. Oesterley, *Angelology and Demonology in Early Judaism* [1950]; W. Carr, *Angels and Principalities* [1981]; W. Grudem, *Systematic Theology: An Introduction to Christian Doctrine* [1994], ch. 19; M. angel of God (of the Lord). See ANGEL III.

angels of the seven churches. The seven stars in John's vision (Rev. 1:16) were interpreted to him by the spiritual guest to mean seven angels (v. 20). They were seen in the right hand of Jesus in the midst of the seven golden lampstands, or churches. The seven letters to the seven churches were addressed directly to the seven angels respectively. Consequently, the critical appraisal, censure, and praise, as well as admonition, so identified the angels with the churches that the two were inseparable. Obviously they were spiritual guardians or superintendents, intimately related to the lives of the churches, directing their attitudes and acts, and to be held responsible for them. There is much difference of opinion, however, as to whether the reference is to literal angels or to human "messengers" (e.g., the leaders of the churches; see G. R. Osborne, *Revelation*, BECNT [2002], 98–99).

G.B. FUNDERBURK

anger. At least eight Hebrew and two Greek words are used to express this concept in Scripture. The most common Hebrew word is ^l*ap* H678, "anger" (lit., "nose," thought of as the seat of anger, from its use in hard breathing). Other words are *za*^{am} H2405, "indignation"; *za*^{ap} H2408, "rage"; *ḥēmā* H2779, "heat, fury"; *ḥārā* H3013, "to burn, to be angry"; *ka*^{as} H4088, "grief, vexation"; *ebbrā* H6301, "outpouring of anger"; *qeṣep* H7912, "the breaking forth of wrath." In the SEPTUAGINT these various words are almost always translated by one of two Greek words, *orgē* G3973 and *thymos* G2696, which seem interchangeable. In classical Greek *thymos* suggested the inward emotion of anger, and *orgē* the outward manifestation, but in the NT *thymos* tends to mean the sudden outburst of passionate anger, while *orgē* implies the settled attitude of moral indignation. All ten words are used with regard to both human and divine anger.

I. Human anger. The anger of human beings against other persons (individually or in groups) is just and holy insofar as it is concerned with righteousness and not motivated by personal considerations. Examples of the former in the OT are the anger of DAVID toward the unjust rich man of NATHAN'S story (2 Sam. 12:5), of NEHEMIAH anger at the extortion of the Jewish leaders (Neh. 5:6), of MOSES with the people for their distrust and disobedience of God (Exod. 16:20; 32:19; Lev. 10:16), of ELISHA anger because of his disappointment with King JOASH (2 Ki. 13:19). On the other hand, there are examples of selfish and therefore wrongful anger, as that of CAIN against ABEL (Gen. 4:5), ESAU against JACOB (27:41–45), BALAK against BALAAM (Num. 24:10), SAUL against JONATHAN (1 Sam. 20:30), ASA against the seer (2 Chr. 16:10), UZZIAH against the priests (26:19), Ahasuerus (XERXES) against VASHTI (Esth. 1:12). In many cases, motives are a mixture of regard for righteousness and personal or family self-interest, as in the case of JACOB'S anger against LABAN (Gen. 31:36–42), that of DINAH'S brothers against SHECHEM (34:7), and David's against AMNON (2 Sam. 13:21).

In the NT human anger is almost invariably condemned. The anger of the ungodly against the innocent is illustrated in the case of HEROD (Matt. 2:16), the people of NAZARETH (Lk. 4:28), the SANHEDRIN (Acts 5:33), those who stoned STEPHEN (7:54), Saul (PAUL) before his conversion (9:1), the silversmiths of EPHEBUS (19:28). Such wrath is in the final analysis directed against God (Lk. 15:28; Rev. 11:18) and is seen in its most concentrated ultimate form in the devil (12:12, 17). Anger

is forbidden to the Christian as one of the works of the flesh (Gal. 5:19–21) or as the clothing of the old nature to be put off (Col. 3:8). Christians should be slow to anger, which does not accord with God’s righteousness (Jas. 1:19–20), and which hinders true prayer (1 Tim. 2:8). Jesus spoke of anger as incipient murder, rendering one liable to judgment both human and divine (Matt. 5:21–22). The only hint of any concession to human weakness is Paul’s command (quoting Ps. 4:4), “‘In your anger do not sin’ : Do not let the sun go down while you are still angry, and do not give the devil a foothold” (Eph. 4:26–27), which implies that if anger comes to the heart, it must be controlled and dispelled before nightfall. Otherwise one gives opportunity to the devil. Paul continued to beg the Ephesians to put away all rage and anger and brawling in favor of tenderhearted, forgiving kindness and love (Eph. 4:31–5:2).

II. The anger of Jesus. We are expressly told of Jesus’ anger with the hard-hearted people in the synagogue at CAPERNAUM (Mk. 3:5), and of his indignation with the disciples when they sought to stop the children from being brought to him (10:14). His actions and words in emptying the temple precincts of the hucksters suggest anger (11:15–17). His words in various other places seem also to indicate indignation, as against those who cause little ones to stumble (Matt. 18:6–9), PETER when he speaks the tempting words of SATAN (16:23), the SADDUCEES with their foolish mockery of a solemn question (Mk. 12:24–27), and the SCRIBES and PHARISEES with their hypocritical attitudes (Matt. 23:13–36). In all these examples, there is nothing of self-interest, only holy anger against unrighteousness, which is abhorrent to God. The suggestion that his cursing of the fig tree (Matt. 21:18–20; Mk. 11:12–14, 20, 21) showed petulant anger may be dismissed. This was surely an acted parable (cf. Lk. 13:6–9). The Lord’s character was not insipidly mild; there was real strength and virility balanced finely with his gentle kindness. He could be angry, but only for God’s honor. (See B. B. Warfield, “On the Emotional Life of Our Lord,” in *Biblical and Theological Studies by Members of the Faculty of Princeton Theological Seminary* [1912], 36–90.)

III. The wrath of God. In the OT God’s anger is directed continually against the nation of Israel for forsaking his COVENANT and breaking his laws, and also against his individual servants when they fail in their function, such as was the case with Moses (Exod. 4:14; Deut. 1:37), Aaron (9:20), Miriam (Num. 12:9), and various kings and prophets. The prophets speak also of God’s wrath against the nations because of their wickedness (Jon. 1:2), their crimes against humanity (Amos 1–2), and their attacks against his own people Israel (Jer. 10:25). This wrath of God was exercised against his people by means of national calamities, such as the fiery serpents in the wilderness (Num. 21:6) or the three days’ pestilence (2 Sam. 24), but most often he used other nations as the instruments of his chastisement of Israel (Amos 3:9–11; Isa. 10:5) and in turn of one another (Isa. 13:4–5, 17–19; Jer. 50:24–27, 41–43).

The NT gospel is introduced by the Baptist’s warning of wrath to come (Matt. 3:7; Lk. 3:7), a note that continued in Jesus’ preaching (Lk. 21:23). This eschatological view of the wrath of God is seen in the epistles (Rom. 2:5–9; 5:9; Eph. 5:6; Col. 3:6; 1 Thess. 1:10; 2 Thess. 1:7–10) and repeatedly in Revelation. But Paul emphasizes that all men are “by nature objects [lit., children] of wrath” (Eph. 2:3) and stand even now under the wrath of God (Rom. 1:18–3:20) because of ungodliness (*asebeia* G813) and wickedness (*adikia* G94).

C. H. Dodd regards “the wrath of God” not as “the attitude of God to man, but an inevitable process of cause and effect in a moral universe” (*The Epistle of Paul to the Romans*, MNTC [1932], 50). But a completely depersonalized concept is not adequate to cover biblical teaching. The wrath of

God is certainly no capricious passion, but it is the personal attitude of a personal God—what has been called “the eternal recoil against the unholy on the part of the all-holy God.” One side of God’s HOLINESS is his anger against sin; the other, and more fundamental aspect, is his love and mercy, to which the whole Bible bears witness. If we fail to recognize his wrath, we shall not fully appreciate his mercy. (Cf. R. V. G. Tasker, *The Biblical Doctrine of the Wrath of God* [1951].) See also WRATH.

D.G. STEWART

angle, the At NEHEMIAH’S refortification in 444 B.C., the “angle” (KJV, “turning”; Heb. *miqṣôa’* H5243, “corner” of a building, court, or altar) extended southward along the eastern edge of ancient Mount ZION from a point above the GIHON SPRING (Neh. 3:24–26), through eight sections of construction, to the “armory” (3:19–20). Three centuries before, UZZIAH had erected a tower at this point (2 Chr. 26:9). Since the ramparts seem here to have run relatively straight, “the angle” may refer to some interior structure that paralleled or abutted upon the wall. It should not be confused with the NE “corner” of the city (Neh. 3:31–32). See also JERUSALEM III.A.

J.B. PAYNE

Anglo-Saxon Versions. See VERSIONS OF THE BIBLE, ENGLISH III. A.

anguish. See SUFFERING.

Aniam uh-ni’uhm (אֲנִיעָם H642, “lament of the people” [if from אָנָה H627] or “I am kinsman” [if from אָנִי H638]). Son of Shemida and descendant of MANASSEH (1 Chr. 7:19). Some scholars emend Manasseh’s genealogy here on the basis of Num. 26:30–32.

Anim ay’nim (אֲנִים H6719, possibly “springs”). A city in the hill country of JUDAH (Josh. 15:50). It is mentioned in the TELL EL-AMARNA letters as Hawini. Anim is identified with modern Khirbet Ghuwein et-Taḥta, 11 mi. S of HEBRON. (See *NEAEHL*, 1:62.)

animal. This English word, which came into general use after the publication of KJV and thus is absent from it, is used in modern versions of the Bible as the translation of various terms. Hebrew words referring to animals include the following: *bēhēmâ* H989, “beast”; *ḥayyâ* H2651, “living [being]”; *miqneh* H5238, “cattle”; *ṣō’n* H7366, “sheep”; *nēbēlâ* H5577, “carcase.” Relevant Greek words in the NT are: *thērion* G2563, “wild beast”; *tetrapous* G5488, “quadruped”; *ktēnos* G3229, “beast of burden”; *zōon* G2442, “creature.” Strictly speaking, an animal is any living being endowed with sensation and voluntary movement—in contrast to plants. In popular use it refers primarily to four-footed animals, sometimes only to four-footed mammals, in contrast to humans, birds, fish, etc. See also BEAST; FAUNA.

G.S. CANSDALE

anise. A term used by KJV once to render Greek *anēthon* G464 (Matt. 23:23), and thought by some to be a reference to *Pimpinella anisum*, an aniseed-flavored herb. The Greek word, however, undoubtedly refers to DILL (*Anethum graveolens*).

W.E. SHEWELL-COOPER

ankle chain, anklet. Anything worn around the ankle as an ornament. Such ornaments are referred to in Isa. 3:16,18 (NRSV), 20, where the women of Zion are described as “tripping along with mincing steps, with ornaments jingling on their ankles,” and who are warned that “the LORD will snatch away their finery.” Archaeology has uncovered many anklets through Palestine. Oriental women were partial to them, often wearing them in sets of three or more. Anklets were made of various metals: gold, silver, bronze. As the wearer walked, they made a ringing sound.

Anna an’uh (Ἀννα or Ἀννα G483, the equivalent of Heb. אַנָּה H2839, “grace”). (1) The wife of TOBIT (Tob. 1:9). She plays a significant role in the narrative.

(2) An aged prophetess in Jerusalem who witnessed the presentation of Jesus in the temple (Lk. 2:36–38). She was the daughter of Phanuel, of the tribe of ASHER. (Although her tribe was taken into the Assyrian captivity and never officially returned, presumably her family remembered its genealogy and returned to the Promised Land.) After being married for seven years, she lived eighty-four years in widowhood, so she must have been well over one hundred years old at the time of Jesus’ presentation (according to KJV and RSV, she was eighty-four years old at the time, but this translation is less likely). A devout and saintly woman, she spent all her time in fasting and prayer. The comment that she “never left the temple” can hardly mean she had her residence in the temple precincts, but rather that she spent her waking hours there in the worship of God. At Christ’s presentation, she joined her praises with those of the aged SIMEON to thank God for the long-awaited redemption through the MESSIAH.

(3) The mother of Mary and grandmother of Jesus, according to the apocryphal *Protevangelium of James* and subsequent legends concerning the birth of the Virgin (see JAMES, PROTEVANGELIUM OF). Long childless, she and her husband Joachim received angelic assurances of the birth of a child in answer to their prayers. The girl, named Mary, was dedicated to a lifelong service of God. At the age of three Mary was taken to the temple by Anna, where she remained, fed by angels, until the age of twelve. Later embellishments make Anna the mother of two more girls, both named Mary, who became the wives of ALPHAEUS and ZEBEDEE respectively.

D.E. HIEBERT

Annaas an’ay-uhs. See ANNAS.

annals. See CHRONICLES, BOOKS OF.

Annan an’uhn (Ἀνναν). Ancestor of some Israelites who agreed to put away their foreign wives (1 Esd. 9:32 [KJV, “Annas”]; the name apparently corresponds to HARIM in Ezra 10:31).

Annas an’uhs (“Ἀννας G484, shortened form of “Ἀνανῆς; = אַנָּהיָה H2863, “Yahweh is gracious”). (1) KJV Apoc. form of ANNAN (1 Esd. 9:32; some editions of KJV have “Annaas”).

(2) KJV Apoc. variant of SENAAH (1 Esd. 5:23).

(3) A high priest of the Jews from A.D. 6 to 15, and who as long as he lived was the virtual head of the priestly party in Jerusalem (see J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 420–24). The son of Seth, he was appointed high priest by QUIRINIUS, governor of SYRIA, and was deposed by Valerius Gratus. In the time of Christ high priests were

appointed and deposed at the whim of the Roman governors. Although removed from office, Annas's power and influence were so great that five of his sons, as well as his son-in-law Caiaphas and his grandson Matthias, likewise became high priests (Jos. *Ant.* 18.2.1–2; 20.9.1). Years afterward he lost the office, but the people continued to regard him as high priest. Even after Jesus' death and resurrection his name appears first in the list of priestly leaders (Acts 4:6). In Jn. 18:19, 22 the high priest is undoubtedly Annas, although in vv. 13 and 24 Caiaphas is mentioned as occupying the office.

Annas is referred to in connection with the beginning of John the Baptist's ministry, which took place "during the high priesthood of Annas and Caiaphas" (Lk. 3:2), as though father and son-in-law were joint holders of the office. It seems clear that due to his ability and force of character he was virtually high priest, although Caiaphas had the title. When Jesus was arrested, he was first brought before Annas (Jn. 18:13). It was apparently Annas who questioned him about his disciples and his teaching, and who gave orders to one of the officers standing by to strike Jesus with his hand (18:19–22). After the questioning, he sent Jesus to Caiaphas. He was undoubtedly the ruling spirit in the council that condemned Jesus, although nothing is said about his part in the proceedings that followed the preliminary questioning. He was present at the meeting of the SANHEDRIN before which Peter and John defended themselves for preaching the gospel of the resurrection (Acts 4:6). For further discussion and bibliography, see CAIAPHAS.

S. BARABAS

Annias uh-ni'uhs (**Αννιάς**). Head of a family, numbering 101, who are among those listed as returning from the Babylonian captivity with ZERUBBABEL (1 Esd. 5:16; the name is omitted in the parallel passages, Ezra 2; Neh. 7).

S. BARABAS

annihilationism. See IMMORTALITY; PUNISHMENT, ETERNAL.

Anniuth uh-ni'uht (**Αννιουθ**). One of the Levites who assisted EZRA in teaching the law of the Lord (1 Esd. 9:48 [KJV, "Anus"]; called BANI in Neh. 8:7).

annunciation. This term is used in theology with reference to the supernatural announcement of the births of JOHN THE BAPTIST and JESUS CHRIST. According to the Gospels, three people received an annunciation: ZECHARIAH (Lk. 1:13), JOSEPH (Matt. 1:20), and MARY, MOTHER OF JESUS (Lk. 1:26–38; the words "Blessed art thou among women" in the KJV of v. 28 are not found in the earliest MSS and are undoubtedly an interpolation from v. 42). The term most commonly refers to the angel GABRIEL'S announcement to Mary that she would give birth to Jesus. Added details, undoubtedly legendary, of the annunciation are related in the apocryphal 2nd-cent. book known as the *Protevangelium of James* (chs. 10–11; see JAMES, PROTEVANGELIUM OF). The Feast of the Annunciation is celebrated on March 25 on the basis of a date of December 25 for the Nativity. The well-known prayer *Ave Maria* is based in part on Gabriel's salutation to Mary.

S. BARABAS

Annunus an'yoo-nuhs (**Αννουνος**). KJV Annus. One of the priests who returned to Jerusalem with EZRA (1 Esd. 8:48; his name does not appear in the parallel list, Ezra 8:19).

Annus an'yoo-uhs. KJV Apoc. variant of ANNUNUS (1 Esd. 8:48).

anoint. To apply OIL or ointment on an object or a person, usually as a religious ceremony. The common ointment was OLIVE oil, although other substances were used. Sacred anointing oil was carefully compounded and reserved for sacral use. The term is used to render primarily Hebrew *sûk* H6057, “to pour,” or *māšaḥ* H5417, “to smear”; and Greek *aleiphō* G230, “to rub oil,” or *chriō* G5987, “to anoint.”

I. History of the practice

A. Origin. W. Robertson Smith (*Lectures on the Religion of the Semites*, rev. ed. [1907], 233, 383–84) thinks that the religious rite arose from nomadic sacrificial practices. Perhaps it developed from a custom of smearing the sacrificial fat on the pillar (*maṣṣēbâ* H5167) as part of a communal meal (or feast with totem animal). Others feel it is an outgrowth of the secular use of anointing for medicinal and cosmetic purposes. See OINTMENT.

B. Pre-Hebraic examples. The practice of anointing is well attested in Babylonian and Egyptian customs well before biblical times. The specific

© Dr. James C. Martin. The Church of Annunciation Museum. Photographed by permission.

practice of anointing a king is mentioned in the 14th cent. B.C. (TELL EL-AMARNA Letter #37). One text from Ras Shamra refers to anointing BAAL (C. H. Gordon, *UM*, #76; *ANET*, 142a; cf. *Syria* 17 [1936]: 150–173).

C. Hebraic customs. Anointing is attested throughout all periods of Hebrew history.

1. Sacral practice in the premonarchic period. The earliest usage in premonarchic times seems to be that recorded in Gen. 28:18 (cf. 31:13), which states that JACOB anointed the pillar he had erected at BETHEL. During the time of the judges it was assumed that a king was inducted into office by anointing (Jdg. 9:8, 15).

2. Sacral practice during the monarchy. During the monarchy there is evidence for the anointing of the first three kings: SAUL (1 Sam. 9:16; 10:1), DAVID (16:13), and SOLOMON (1 Ki. 1:34, 39, 45). Others anointed include JEHU (2 Ki. 9:1–13), JOASH (11:12), and JEHOAHAZ (23:30).

3. Nonsacral practice in OT. Nonsacral usage in OT times is widely attested from the period of the exodus (Deut. 28:40) to exilic times (Ezek. 16:9).

4. Postexilic and Christian usage. In Zech. 4:14 the postexilic successor to David's claim to the throne, ZERUBBABEL, is said to be anointed. Here, as in Isa. 45:1, where the Persian king CYRUS is called the Lord's anointed, the reference may be metaphorical rather than literal. In intertestamental and NT times literal anointing for medicinal purposes is attested in Jdt. 10:3; 16:10; Jas. 5:14; Rev. 3:18. As a mark of hospitality or special honor, guests were anointed (Lk. 7:37–46; Jn. 11:2).

II. Meaning of the practice

A. Literal usage. Persons were anointed (1) to give relief from the sun (Ps. 104:15); (2) as part of the toilette (Ruth 3:3; 2 Sam. 12:20; 2 Chr. 28:15; Dan. 10:3; Amos 6:6; Mic. 6:15); (3) as part of the care of newly born infants (Ezek. 16:9), (4) as part of other medicinal usages (see above, I.C.4).

It is called the oil of joy or gladness (Ps. 45:7; Isa. 61:3). Refraining from its use was a sign of mourning (2 Sam. 12:20; 14:2; Isa. 61:3; Dan. 10:3; Jdt. 10:3). This custom persisted into Christian times, as indicated by Christ's strictures against it (Matt. 6:17). An honored guest was anointed on the head (Ps. 23:5; Lk. 7:46; Jn. 11:2) or, rarely, on the feet (Lk. 7:38). For other examples of literal usage see sections III and IV below.

B. Metaphorical usage. Since persons ritually anointed were believed to have received the HOLINESS and virtue of the deity in whose name they were anointed, it was also believed that they received a special endowment of the Spirit of Yahweh (1 Sam. 10:10; 16:13). There was a transfer of divine powers and authority. By extension, "to anoint" became a metaphor for the bestowal of God's favor (Ps. 23:5; 92:10—as parallelism shows) and for the designation of someone to a particular place or office in God's plan (Ps. 105:15; Isa. 45:1). Anointing indicated preparation for service and the gift of God's Spirit (1 Sam. 10:1, 9; 16:13; Isa. 61:1; Zech. 4:1–14). This is carried on in the NT (Acts

10:38; 1 Jn. 2:20, 27). Perhaps Jas. 5:14 should be included here, with oil as the symbol of the presence of the HOLY SPIRIT, the Lord and Giver of Life.

III. Objects anointed

A. Noncultic. Noncultic objects may have been anointed. Some interpreters see such a practice in 2 Sam. 1:21 and Isa. 21:5. However, two other possibilities are present: (1) that anointing the shields may have been a part of the ritual of sanctifying a war; (2) that the reference is simply to a preservative measure (so RSV in Isaiah), but this interpretation does not fit the context of 2 Samuel.

B. Cultic. Among the cultic objects anointed were the TABERNACLE and all its furniture and utensils (Exod. 30:26–29; 40:9–11; Lev. 8:10, 11; Num. 7:1). Special note is made of anointing the ALTAR (Exod. 29:36; Num. 7:10) and the ARK OF THE COVENANT (Exod. 30:26). In patriarchal times stone pillars were anointed (Gen. 28:18; 35:14).

IV. Persons anointed

A. Kings. Kings were inducted into office by the rite of pouring oil on their heads at coronation. The anointing was by a divine representative, usually a prophet (1 Sam. 10:1; 1 Ki. 1:39, 45; 19:16; 2 Ki. 9:6; 11:12). Only JOASH seems to have been anointed by a priest. ABIATHAR was present when ADONIJAH was crowned, but did not anoint him. In the rite the king became the vassal (*nāgîd* H5592) of Yahweh (1 Sam. 10:1; cf. 2 Sam. 6:21, which implies David's feudal subservience to Yahweh). Anointing conveyed divine authority. JEHU'S fellow officers thought the young prophet sent by ELISHA was a madman, but they accepted Jehu as their king (2 Ki. 9:11–13). Because it was customary to anoint kings, the phrase “the Lord's anointed” became a synonym for “king” (1 Sam. 12:3, 5; 24:6, 10; 26:9, 11, 16, 23; 2 Sam. 1:14, 16; 19:21; Ps. 20:6; Lam. 4:20).

B. Priests. Priests were customarily inducted into office by anointing (Exod. 28:41; 29:7; 30:30; 40:13–15; Lev. 4:3; 8:12, 30; 16:32; 21:10). The anointing conferred office in perpetuity (Lev. 7:35–36; 10:7).

C. Prophets. Although ELIJAH was commissioned to anoint ELISHA as his successor (1 Ki. 19:16), there is no record that this was ever done. R. de Vaux (*Ancient Israel* [1961], 103–6) thinks the reference here is metaphorical, as is clearly the case with the anointing of the speaker in Isa. 61:1. The spirit of Elijah was given to Elisha, and thus is fulfilled the commission to anoint him. However, the obvious parallelism of Ps. 105:15 to 1 Chr. 16:22, when taken in context, seems to indicate the possibility that some prophets were anointed, unless, again, “anointed” means the Hebrews as God's representatives on earth, rather than an individual.

V. Metaphorical usage

A. Persons endowed with God's Spirit. They are called God's “anointed” (Pss. 28:8; 84:9; 89:38, 51; Hab. 3:13). In the NT the descent of the Holy Spirit is a metaphorical anointing (2 Cor. 1:22; 1 Jn. 2:20, 27).

B. Technical term for the Messiah. The English word MESSIAH is a direct transliteration of the Hebrew word *māsîah* H5431, “anointed.” In a literal sense the reigning king in OT times was the Messiah. After the promise to David (2 Sam. 7:13), “anointed” came to indicate the royal line of David (Pss. 2:2; 18:50; 84:9; 89:38, 51; 132:10, 17). However, in the sense of a coming deliverer the term Messiah is first found in *Psalms of Solomon* (17:36; 18:8), dating from c. 50 B.C. (For possible pre-Christian usage in DSS, see W. LaSor in *Studies and Essays in Honor of Abraham A. Neuman*, ed. M. Ben-Horin et al. [1962], 343, 364.) The term “anointed of Yahweh” is never used in the OT for a coming king, but for the actual king (cf. A. Richardson, *Theological Word Book of the Bible* [1950], 45). In NT times the term “anointed” (Messiah, Christ) came to mean a promised deliverer (Jn. 1:41; 4:25; see JESUS CHRIST).

A.K. HELMBOLD

Anos ay’nos. KJV Apoc. variant of VANIAH (1 Esd. 9:34).

ant. The name *ant* is technically and popularly given to insects, forming a family of the order *Hymenoptera* (membranous wings) containing over 10,000 species; only the sexual forms are winged, the great bulk of each colony being sexless workers and soldiers. Their most important feature is that all kinds are social, forming colonies that range from a few dozen to perhaps a million. They vary greatly in size, and span from wholly carnivorous to wholly vegetarian. Some are entirely arboreal; others nest underground but travel widely in search of food. Palestine has many species, including some that are now house pests.

The context of both occurrences in the OT (Prov. 6:6–8; 30:25; Heb. *nēmīālâ* H5805) suggests the harvester ant (*Messor semirufus*). Many species can be said to “provide their food in the summer,” but few so obviously as the harvester ant, which is usually found in the desert. The nest is underground, with its entrance made conspicuous by a series of well-worn paths leading to it from several directions. These ants are nearly one quarter of an inch long, and during spring and early summer they spend the day collecting seeds from a wide area around the nest. Seeds with a loose kernel are dehusked after delivery at the nest; the husks are thrown out and carried down wind, making the entrance even more obvious.

G.S. CANSDALE

antediluvians. People who lived before the flood (“deluge”) of NOAH (see FLOOD, GENESIS). This period is covered by Gen. 3–6, from which we learn that they calculated time in years, months, and days. They apparently were familiar with AGRICULTURE (ADAM kept the garden of EDEN, 2:15; Adam and ABEL tilled the ground, 3:17–19; 4:2), botany (thorns and thistles, 3:18; cypress wood, 6:14; fig tree, 3:7; pitch, 6:14), metallurgy (bronze and iron tools, 4:22), architecture (CAIN built a city, 4:17), and music (harp and flute, 4:21). The hints of government seem to be patriarchal and possibly city states. With regard to religion, SACRIFICES appear to have been established (Gen. 4:4; 8:20), and Noah was familiar with “clean” animals (7:2; 8:20). Of the lineage of SETH and ENOSH it is said,

© Dr. James C. Martin

It has been suggested that dinosaurs roamed the earth in the antediluvian period (Gen. 3–6), but modern science dates them much earlier.

“At that time men began to call on the name of the LORD” (4:26). A contrast with the descendants of Cain, who presumably did not call upon God, seems to be implied.

The dates of Adam and Noah are not known. In fact, any dates of patriarchs before ABRAHAM are uncertain. Even the various methods for computing the date for Abraham yield results that differ as much as 300 years. The uncertainty in the date for the flood may be thousands of years. See CHRONOLOGY (OT). Much information has been learned from archaeology and anthropology about ancient peoples and their cultures that likely predate the flood. Radiocarbon and potassium argon methods of radioactive dating are among the most reliable means of obtaining absolute dates (in contrast to relative dating). By these a time scale in years is obtained, generally with a precision of about two to five per cent on the measurement and a probable accuracy of about five to ten per cent with respect to the true date. Certainly, this is evidenced repeatedly by numerous comparisons with ancient artifacts of known historic age, and of tree rings where the yearly rings can be counted. Radiocarbon is reliable in dating organic (once living) materials back to about forty or fifty thousand years. The precision is not as good for a 40,000-year-old sample as for those of recent age because the radioactivity is very low. Potassium argon precision is good on samples a million years old or more. For younger samples the analytical precision is poorer because the samples are too young to have accumulated sufficient radiogenic argon for more precise measurement.

I. Genealogies and the period from Adam to Noah. In Gen. 5 we find a GENEALOGY of ten antediluvian patriarchs along with statements on (1) the age of each at the birth of a son, (2) the number of years remaining until his death, and (3) the sum of the years of these periods combined.

J. D. Davis (*ISBE* [1929], 1:139–43) compares the numbers of this genealogical list in three ancient texts—the Hebrew MT, the SAMARITAN PENTATEUCH, and the SEPTUAGINT—supplemented with several other textual sources. There seems to be in the LXX a systematic excess of 100 years for the age of the patriarch at the birth of the son. Also the longevity of JARED, METHUSELAH, and LAMECH is variously divergent in the Samaritan text. Davis presents the opinions and theories from a number of commentaries and favors these conclusions: (1) the divergencies of the texts are due mainly to systematic alteration and not to accidental corruption; (2) the differences in the Samaritan text give evidence of adjustment to a theory; and (3) biblical scholars no longer question the general superiority of the Hebrew text of the Pentateuch as a whole over the LXX and Samaritan texts. Which

source is superior in this passage is still in question.

FROM THE FALL TO THE FLOOD

Genesis 4:1–8:14

Cain and Abel and Their Offerings	The Genealogies of Cain and Seth	The Great Apostasy and Following Judgment
Gen. 4:1–15	Gen. 4:16–5:32	Gen. 6:1–8:14
(i) The First Home (Gen. 4:1–2)	(i) Cain’s Posterity (Gen. 4:16–24)	(i) The Blending of the Seeds (Gen. 6:1–2)
(ii) The Time of Worship (Gen. 4:3a)	(ii) Seth’s Posterity (Gen. 4:25–5:32)	(ii) The Divine Warning (Gen. 6:3)
(iii) The Two Offerings (Gen. 4:3–4a)		(iii) The Prevailing Wickedness (Gen. 6:5, 11–13)
(iv) The Divine Response (Gen. 4:4b-7)		(iv) The Divine Resolve (Gen. 6:6–7, 13)
(v) Murder and Martyrdom (Gen. 4:8)		(v) The Godly Remnant (Gen. 6:8–9)
(vi) The Divine Judgment (Gen. 4:9–12)		(vi) The Preparation for Judgment (Gen. 6:13–7:10)
(vii) The Cry of Cain (Gen. 4:13–15)		(vii) The Punitive Flood (Gen. 7:10–8:14)

One of the theories, based on the interpretation that the names denote individuals with no omissions, suggests that the LXX translators noted from their data that Methuselah would have survived the flood and so accordingly increased his age at the birth of Lamech. Likewise the Samaritan scribes noted that Jared, Methuselah, and Lamech would have outlived the flood, so their respective ages were reduced to indicate that they died in the year of the flood. Other rather involved changes have been suggested to bring the several accounts into agreement. The net result is that we cannot be sure of the original reading of the data on the ages of the patriarchs.

Other biblical scholars of repute give essentially this same warning and believe it is improbable that the genealogical framework in Gen. 5 can be used, or was intended to be used, for calculating the length of time between the CREATION and the flood. Such terms as “begat” and “son” can be used in a variety of ways and may indicate distant descendants. The brevity and symmetry of the genealogies (ten generations from Adam to Noah, and ten from Noah to Abraham; cf. the groupings in Matt. 1) seem to argue against unbroken father-to-son relations. Human beings are now scientifically known to have existed long before 4000 B.C. M. F. Unger (*Archeology and the Old Testament* [1954], 18) has written that God’s revelation, the Bible, may be made “more fully understandable as a result of light shed upon it from external sources—whether it be ancient history, modern archeology, or any other branch of learning. And anyone who would understand the Bible as fully as possible has no right to

neglect light that may be obtained from extra-Biblical sources.” Archaeologists and anthropologists place the ancient civilizations of Egypt, the Indus Valley, and Mesopotamia back to 3000–4000 B.C. or somewhat before. There is no known universal break in faunal species or geologic sedimentation that would date the biblical flood, and hence the date for antediluvians. Furthermore, most scientists believe that the earliest human fossils are more than two million years old (more than four million if bipedalism is thought to be a defining human characteristic).

In discussing antediluvians from Adam to Noah we are left still with the question, When did Adam live? We do not know. Was Adam the first member of *Homo sapiens* or was he the first member of an earlier genus such as *Australopithecus*? Some would place Adam as the first of genus *Homo*, but then, was Adam’s race of antediluvians contemporary with Neanderthal man? These are questions that cannot be answered now from paleontology. Perhaps in the future new data will shed further light.

J. O. Buswell—after affirming the Bible as the Word of God, fully reliable on matters that it claims to set forth, including the special creation of man—says that, as far as the antiquity of human beings on the earth, “the Bible gives us no data on which to base any conclusion or even an estimate” (*A Systematic Theology of the Christian Religion* [1962], 325). B. B. Warfield, widely regarded as the greatest defender of the inerrancy of the Bible, says, “...for aught we know instead of twenty generations and some two thousand years measuring the interval between the creation and the birth of Abraham, two hundred generations and something like two hundred thousand years may have intervened. In a word, the scriptural data leaves us wholly without guidance in estimating time which elapsed between the creation of the world and the deluge, and between the deluge and the call of Abraham. So far as the Scripture assertions are concerned, we may suppose any length of time to have intervened between these events, which may otherwise appear reasonable” (“On the Antiquity and the Unity of the Human Race” [1911], in *Studies in Theology* [1932], 244).

Both Warfield and Buswell cite William Henry Green (*BSac* 47 [1890]: 285–303), who discusses a dozen genealogical lists and passages that clearly show “that the Biblical writers in giving a list of names in a genealogy, never intend to give the readers to understand that all the links in the chain are included, but, on the contrary, expect the readers to recognize that the names given are selected, and that there may be gaps in the list,” and that the lengths of the gaps are irrelevant to the purpose of the writer. For example, in Matt. 1:1–17 we have “the generation of Jesus Christ...all the generations from Abraham to David...and from David until the carrying away into Babylon.” However, in v. 8 Matthew dropped the names of three kings of Judah—namely, Ahaziah (2 Ki. 8:25), Joash (12:1), and Amaziah (14:1) between Joram and Ozias (Uzziah)—and later (Matt. 1:11) he omitted Jehoiakim after Josiah (see 2 Ki. 23:34; 1 Chr. 3:16). Therefore it is apparent that Matthew used the word “begat” in a figurative sense, meaning “to have as a descendent.”

Furthermore, Buswell points out that Matthew’s genealogy (Matt. 1:2–17) is divided into three sections each containing fourteen names (see v. 17). On observation there are forty names rather than forty-two, since the last name in the first section is the first name of the second section, etc. He suggests that Matthew did not intend three fourteens that could be added together but rather three fourteens that would be easy to memorize (*Systematic Theology*, 330). Davis shows that Genesis is divided into ten sections, each introduced by the same formula (Gen. 2:4; 5:1; 6:9; et al.). In this pattern the flood was a point of crisis, with ten generations named before that event and ten after. Also the time from Noah to Abraham is divided into two equal sections with five generations named from Noah to Peleg (during whose life “the earth was divided,” 10:25), and five generations named from Peleg to Abraham (11:10–26). Davis concludes, “There is no basis in the genealogy from Adam

to Noah for the calculation of Chronology. The table was constructed for a different purpose and the years are noted for another reason than chronology” (*ISBE* [1929], 1:142).

In a discussion of ancient idiom, Buswell writes that Moses in these genealogies “had no intention of giving figures which could be added up, but took it for granted that his readers would understand that the biographical information in these chapters was given, not at all for long term chronology, but among other purposes, to show God’s dealings with men and families from the beginning of the human race down to Abraham, regardless of the unmentioned persons and gaps in the record as given, and to show the great antiquity of God’s redemptive program through many ancient families prior to Abraham’s time” (*Systematic Theology*, 326). Davis also points out that the Hebrew author himself does not use the genealogies to construct a chronology: “There is no computation anywhere in Scripture of the time that elapsed from the Creation or from the Deluge, as there is from the descent into Egypt to the Exodus (Exod. 12:40), or from the Exodus to the building of the temple (1 Ki. 6:1)” (*ISBE* [1929], 1:142).

The Hebrew method of recording genealogies has a parallel in the Sumerian King Lists. The Weld-Blundell Prism lists eight kings who reigned before the flood and fourteen dynasties after it. To the eight kings who ruled at five different cities seemingly in succession are ascribed lengths of reign from 18,600 years to 36,000 years for a total of 241,200 years (J. Finegan, *Light from the Ancient Past: The Archaeological Background of Judaism and Christianity*, 2nd ed. [1959], 27–36). A later form of the same list is known from the writings of Berossus, a priest of Marduk’s temple at Babylon about 300 B.C. He gives ten names instead of eight and further exaggerates the lengths of reigns from 10,800 years to 64,800 years for a total of 432,000 years (*ibid.*, 28; *ISBE* [1929], 1:141).

Davis points out some remarkable similarities between the Genesis account and the Babylonian account, and well there might be if each obtained information from the same earlier writings. One recognizes, of course, that Moses wrote Genesis about a thousand years before Berossus’ list. The correspondence begins with the third name in each list. The third patriarch (Genesis) is Enosh, meaning “man,” and the third king (Babylonian list) is Amelu, which has the same meaning; the fourth patriarch is Kenan, derived from a root meaning “to fabricate,” and the fourth king is Ummanu, meaning “artificer”; the seventh patriarch was Enoch, who walked with God, and the “seventh king is Enmeduranki, who apparently was reputed to have been summoned by the gods Shamash and Ramman into their fellowship and made acquainted with the secrets of heaven and earth”; the tenth patriarch, Noah, was the hero of the flood, as was the tenth king (*ibid.*, 142).

Davis goes on to show apparent differences. The Hebrew account “asserts kinship, however remote, between the successive links,” whereas in the Babylonian account the “descent of the government from father to son” is asserted in only two instances, namely, between the first two and between the last two. Also the longevity of the patriarchs contrasts with the longevity and length of reign of the Babylonian kings. There is no apparent systematic ratio between the years indicated for the members of each list, but the symmetry of the numbers in the Babylonian list makes it suspect. For example, there are ten kings, and the sum of their combined reigns is 120 sars (a sar is 3,600 years), which is a multiple of ten and twelve, corresponding to their duodecimal number system. Davis illustrates, “There are ten reigns of ten sars each, and three successive reigns which taken together, 3, 13, 12, make ten and eighteen sars. Taking the reigns in the order in which they occur, we have as their duration the series 10, 18–10, 18, 10, 18, 10, 8, and 18.”

The weight of evidence according to the foregoing interpretations of available data clearly indicates that the Genesis account of the antediluvians does not give a chronology of a specific number of years from Adam to Noah. It is also clear that we have no date for when Noah or Adam

lived.

II. Antediluvian longevity. The genealogies of Gen. 5 are used also to indicate much greater longevity before the deluge. Unger (*Archeology and the Old Testament*, 19) indicates that some writers interpret the genealogies as giving actual and consecutive years, and then, to explain the long lifetimes, they postulate a more perfect health for early man and a more healthful climate. One should make clear that this is a theory, possible perhaps, but supported by little or no data. There is medical research currently into the cause of aging. How is it that some animals, such as the turtle, may live considerably longer than humans? Simple forms of life like the Protozoa *Globigerina* do not die: the protoplasm divides and goes on living in the form of two new individuals *ad infinitum*.

Perhaps unwise habits, stresses, and pollution of the environment combine to reduce longevity today. However, it would appear from paleoecology and paleoenvironmental studies that there has been little change in the environment aside from regional variations in temperature and rainfall for many thousands and even millions of years. Yet, if the genealogy years mean longevity of individuals, the longevity of the antediluvians was a factor of ten greater than today.

A more viable interpretation given by Davis (*ISBE* [1929], 1:142–43) and Buswell (*Systematic Theology*, 339–43) is that most, if not all, of the names in the genealogies of Gen. 5 and 11 are names of families, or dynasties, as well as individuals. It is common to speak of Israel, Jacob, or Judah to denote the individuals and also to denote the tribes or nations that derived from them. David denotes both the king by that name and the dynasty that he founded. In Gen. 10 and 25 the genealogies obviously contain the names of tribes (Jebusites, Amorites) and the countries they inhabited: MIZRAIM, as Egypt was called by the Hebrews, “begat” the Ludites (10:13; see LUD), and CANAAN “begat” (the city of) SIDON (v. 15). “Sometimes the family takes its name from its progenitor or later leading member; sometimes the name of the tribe or of the country it inhabits is given to its chief representative, as today men are constantly addressed by their family name, and nobles are called by the name of their duchy or country,” says Davis. “It is quite in accordance with usage, therefore, that Noah, for example, should denote the hero of the Flood and the family to which he belonged. The longevity is the period during which the family had prominence and leadership; the age at the son’s birth is the date in the family history at which a new family originated that ultimately succeeded to the dominant position.”

Buswell (*Systematic Theology*, 340) interestingly points out that in Gen. 46:1–4 the name of Jacob as an individual and as a nation is blended. God promises to Jacob as an individual, “I am God, the God of your father...Do not be afraid to go down to Egypt, for I will make you into a great nation there. I will go down to Egypt with you, and I will surely bring you back again.” Jacob died in Egypt before his people came out, so the personal pronouns “refer both to Jacob as an individual and to his people as a nation.” Buswell also refers to Isaiah, who calls the nation “Jacob” without fear of confusion, and Ezekiel, who prophesies the restoration of Judah and Israel and says that “David my servant will be king over them” (Ezek. 37:24). He clearly means the Messiah of the line of David and not David as an individual.

C. H. Pfeiffer (*The Patriarchal Age* [1961], 20) comments, “It has often been suggested that the descriptions of the Biblical patriarchs are actually records of the movements and activities of whole tribes. Terms such as ‘son’ and ‘begat’ may be used metaphorically, and in some instances the Biblical writers use them to show the relationships of ethnic groups.”

antelope. The NIV and other modern versions use this term to render Hebrew *tē'ô* H9293, which occurs twice (Deut. 14:5; Isa. 51:20; KJV, “wild ox” and “wild bull”). See discussion under ORYX; cf. also GAZELLE.

Anthothijah an'thoh-thi'juh (ענתותיה H6746, possibly “belonging to Anathoth”). KJV Antothijah. Son of Shashak and descendant of BENJAMIN (1 Chr. 8:24); he is included among the clan chiefs who lived in Jerusalem (v. 28).

anthropology. (1) The study of human beings in relation to history, geography, culture, and so forth. See RACE; SOCIETY. (2) The biblical and theological doctrine regarding the origin, nature, and destiny of human beings. See BODY; CREATION; FALL; HUMAN NATURE; RESURRECTION; SIN; SOUL.

anthropomorphism. A figure of speech whereby the deity is referred to in terms of human bodily parts or human passions. To speak of God's hands, eyes, anger, or even love is to speak anthropomorphically.

It may be helpful to distinguish two types of anthropomorphisms: those which picture God in bodily form and those which refer to God as possessing various aspects of human personality. In a sense, it can be argued that only those of the first type are true anthropomorphisms. They speak as if God possessed bodily form, which of course he does not. The second type of anthropomorphism may be called factual description and not a figure of speech at all (though the term *anthropopathism* is sometimes used specifically with reference to

This figurine with its human characteristics comes from Ur during the time of Abraham and possibly represents the sun-god, Shamash.

the ascription of human feeling to God). It is the Christian teaching that the living and true God is actually possessed of these personal characteristics, which human beings recognize in themselves as attributes of personality.

I. Bodily anthropomorphisms. There are numerous instances of bodily anthropomorphisms in both the OT and NT. Some of these are of a majestic nature for all their bodily representations. Some are much more ordinary. There are a few examples commonly referred to, which should be noted.

A case in point is the creation of man, for God is said to have formed him of dust and to have breathed into his nostrils (Gen. 2:7). ADAM and EVE “heard the sound of the LORD God as he was walking in the garden in the cool of the day” (3:8). This particular case may be doubted. The word “cool” is the word *rûah* H8120, regularly translated “wind” or “spirit,” never “cool.” The word for “walk” is a general word meaning “go” (*hālak* H2143). The picture may just as well be that the voice of the Lord was going throughout the garden borne along upon the wind and that the representation of God is wholly immaterial.

When people made the tower of BABEL, God “came down to see” (Gen. 11:5). Likewise God resolved to “go down and see” the sin of SODOM (18:21). Such anthropomorphisms are to be distinguished from the appearance of God in human form to ABRAHAM as he sat at his tent door in MAMRE. The divine appearance in human form is called a THEOPHANY and is not a figure of speech.

The book of Exodus speaks of the feet of God (Exod. 24:10). The commandments were written with the finger of God (31:18). MOSES sees God’s “back” but not his “face” (33:23). Actually, this last instance is questionable. The Hebrew word here is not the regular word for “back” but can suggest “aftereffects.” That is, Moses saw the GLORY, but not the essence of God.

The Psalms illustrate the use of anthropomorphisms. The highly poetic Ps. 18 pictures God as breathing forth smoke (v. 8), as uttering a voice of thunder (v. 13), and as one whose breath is the wind (v. 15). God’s eyes and eyelids test human beings (Ps. 11:4). Second Chronicles pictures the eyes of the Lord as running throughout the earth (2 Chr. 16:9). In Ezek. 1:26–27 God is pictured as seated on a throne in human form, and in the NT this symbolism is repeated (Rev. 4:2–3).

There has been a tendency to apologize for these figures of speech and assume that they betray a low concept of deity. It is alleged also that the “J” narrative of the PENTATEUCH, as separated out by critical scholars, is characterized by such anthropomorphisms, whereas other narratives like “E” or “P” represent God as more distant and speaking only through the medium of angels. This division into documents is highly subjective, however, and is an example of circular reasoning. Most anthropomorphisms are placed in “J” and this is the reason it has several notable examples. The alleged “P” document also has anthropomorphisms, such as God’s “resting” (Gen. 2:2). The SEPTUAGINT occasionally removes the anthropomorphisms of the Hebrew text, possibly in the interests of a more transcendent picture of the Deity (but see K. H. Jobes and M. Silva, *Invitation to the Septuagint* [2000], 95–96).

It should be admitted on all sides, however, that the OT does not anywhere represent God as actually possessed of a bodily form. The whole denunciation of IDOLATRY rests upon the uniform teaching of the spiritual nature of God. The Psalms refer repeatedly to the eyes of God, but Ps. 94:9 remarks that the God who made the eye is not limited to lesser faculties than the creatures he made. The picture of God in the OT is an altogether worthy one portraying an exalted Being who, though pictured as having hands, yet reaches out to uphold his children even in the uttermost part of the sea (Ps. 139:9–10). The Israelites never thought of their God as six-foot tall with any limitations of body or flesh. The references to the bodily activities of God are clearly figures of speech.

II. Anthropomorphisms of personality. The Bible repeatedly speaks of God as living, active, speaking, loving, thinking, judging. There have been many philosophers who insist that this is only a way of speaking of the infinite one. God himself, being the Absolute, does not have the limitations of personality. Indeed, they say, God cannot be known or defined in his essence. Man can have no factual knowledge of him; he can have only a direct awareness, an experience, a divine-human encounter. God in himself cannot be known, so the theory goes, nor can he be defined in human terms.

This is an old view newly reemphasized in more recent times. Some Greek skeptics argued that man pictures God like himself and thereby deceives himself. They said that if a triangle could talk, it would say “God is a triangle.” There is more truth in this charge than at first appears. The obvious point is that if a triangle could talk, it would not be a mere triangle. It would be a three-sided figure possessed of intelligence, rationality, and self-expression. In short, to talk like this is the essence of human personality. Human personality may rightly claim that God is akin to humans, because he has revealed that they are created in his own image.

The fact of the IMAGE OF GOD in man is what makes religion possible, and indeed is the only solid basis for finding meaning in life. If people are made in the image of God in personal characteristics, then it is no mere figure of speech or mythologizing description to say that God is love. Hodge in a significant treatment of these problems declares: “We know that he is a Spirit, that he has intelligence, moral excellence, and power to an infinite degree. We know that he can love, pity, and pardon; that he can hear and answer prayer. We know God in the same sense and just as certainly as we know our father or mother. And no man can take this knowledge from us or persuade us that it is not knowledge, but a mere irrational belief” (C. Hodge, *Systematic Theology*, 3 vols. [1871–73], 1:360). C. S. Lewis has a most helpful discussion of the same matters. He tells of a girl he knew who was brought up to believe that God was a perfect “substance.” On examination it developed that “her mental concept of God was ‘a vast tapioca pudding’! Such is the bleak alternative for those who deny personality in God” (C. S. Lewis, *Miracles* [1947], 75–82).

The Bible everywhere assumes and repeatedly teaches that God is a living, infinite Person, and the description it gives of his love, pity, justice, and pardon are not really anthropomorphisms, but are sober descriptions of the living and true God. However, some passages ascribe to God feelings that are associated with the limitations of human beings. One well-known example is that of REPENTANCE, but there are others as well (such as grief, WRATH, and so on) that are couched in terms of the human experience. It is to these that the term *anthropopathism* is often applied.

R.L. HARRIS

antichrist. This term derives directly from the Greek compound, *antichristos* G532, “against Christ,” or secondarily, “instead of Christ,” that is, a pseudochrist or substitute MESSIAH.

I. References in Scripture. Specific reference to antichrist is found only four times in Scripture, all in the epistles of John (1 Jn. 2:18, 22; 4:3; 2 Jn. 7). The first reference in 1 Jn. 2:18 provides the norm of the doctrine: “Dear children, this is the last hour; and as you have heard that the antichrist is coming, even now many antichrists have come. This is how we know it is the last hour.” John seems to anticipate an individual who is specifically antichrist, a notorious opponent of JESUS CHRIST. He declares that this person was anticipated by “many antichrists” who have already come. This fact is offered as evidence that “the last hour” is approaching.

In 1 Jn. 2:22, antichrist is defined as one who “denies that Jesus is the Christ.” Such a one also “denies the Father and the Son.” According to John’s definition, an antichrist is anyone who denies that Jesus is God and Christ. In 1 Jn. 4:3, reference is made to “the spirit of the antichrist,” which again is described as coming in the future and “even now is already in the world.” In this passage, also, an antichrist is defined as one who is a denier of the DEITY OF CHRIST.

In 2 Jn. 7, a more specific reference is made to contemporary rejection of Christ by those who deny the reality of the INCARNATION: “Many deceivers, who do not acknowledge Jesus Christ as coming in the flesh, have gone out into the world. Any such person is the deceiver and the antichrist.” John is anticipating docetism, the view that Christ merely appeared to be in the flesh and was not actually incarnate. From these four passages it is clear that antichrist, according to John’s definition, is a theological concept primarily and relates to rejection of Christ or heretical views concerning his person.

II. Extent of application. As used in theology and the history of doctrine, the concept of antichrist has been applied more widely than it is in the epistles of John. Such application first of all proceeds

on the idea of a future antichrist based on 1 Jn. 2:18, “You have heard that the antichrist is coming.” It is concluded from this reference that while there were contemporary opponents of Christ who denied his deity or his true humanity, these forces of opposition would eventually focus on one person as seen in futuristic interpretations of prophecy. A still wider application has been made to all antigod movements in Scripture, including many references to BELIAL in the OT, and to any blasphemous persons or movements in either history or prophecy. Accordingly, by theological usage, antichrist is a broad term covering either persons or movements against God, in contrast to the rather restricted usage in the epistles of John.

III. Historical identifications. An almost unlimited number of identifications of antichrist to specific historical characters can be found. Among the more prominent are Muhammad, the founder of the Muslim faith; CALIGULA, a Roman emperor who claimed to be God; and NERO, a popular candidate for the title because of his burning of Rome

© Dr. James C. Martin. The Rockefeller Museum, Jerusalem. Photographed by permission.

A coin bearing the image of Emperor Nero, who was identified by some as the Antichrist.

and persecution of the Jews and Christians. To these can be added almost every prominent ruler of the past, including more modern characters such as Napoleon and Mussolini. In all these historical identifications, there is little more than evidence of being antichristian, but the variety of claims leaves the concept of antichrist in considerable confusion.

IV. Old Testament prophecies. The only school of INTERPRETATION that has been able to create a self-consistent understanding of the antichrist concept has been the futurist school of prophecy. This is supported by the prophecies linking the destruction of the antichrist with the future SECOND COMING of Christ. While recognizing past and present antichrist movements and individuals, as a system of interpretation it regards the antichrist concept as culminating in a person who is supremely the antichrist and who is the satanic counterfeit of Christ. Although a great variety of interpretations are possible in attempting to identify the characteristics and place of such a person to appear in the future, a number of passages in the Bible seem to make a major contribution.

In the prophecies of Dan. 7, where four world empires are depicted as four beasts, those who identify the fourth beast as the Roman empire will find in the last mentioned ruler—the eleventh horn or little horn—a portrayal of the antichrist. In the interpretation of the dream given to Daniel, this individual is described: “He will speak against the Most High and oppress his saints” (7:25). He is

described as ruling until his reign is replaced by the “everlasting kingdom,” which “will be handed over to the saints, the people of the Most High” (7:27). In this description he is made the last great ruler of the world and one who is opposed to Christ.

In Dan. 11:36–45 another king is introduced who is identified by some as the same personage as the little horn of ch. 7. He is described as an absolute ruler: “The king will do as he pleases. He will exalt and magnify himself above every god” (11:36). In the subsequent description he is portrayed as against all the gods of the past and a materialist who “will honor a god of fortresses; a god unknown to his fathers he will honor with gold and silver, with precious stones and costly gifts” (11:38). The challenges to his rule are mentioned in 11:40–44, apparently referring to a great final world war. Like the little horn (ch. 7), he is a blasphemer, opposed to God, hence an antichrist, and apparently is the last ruler before the return of Christ and the resurrection (cf. 12:1–3). An alternate view is that he is a less important personage, a minor ruler of Palestine in the time of the end, a view somewhat contradicted by this ruler’s claims of supremacy over all others politically or religiously. Some also interpret the small horn (8:9) as the future antichrist, although he is more probably ANTIOCHUS Epiphanes, a king of SYRIA (175–164 B.C.).

V. New Testament prophecies. In the NT, references are made by Jesus to false Christs who shall arise at the end of the age (Matt. 24:24). In addition, he constantly referred to SATAN as the enemy of God, and in one sense antichrist. This is seen in the TEMPTATION OF CHRIST by the devil (Matt. 4:1–11; Lk. 4:1–13). Also in the parable of the wheat and the tares, Christ identifies the sower of the tares as the devil (Matt. 13:37–39). Christ seems, however, to have anticipated that there would be a specific fulfillment in one person of the antichrist concept when he stated, “for the prince of this world is coming” (Jn. 14:30). Similarly Jesus said, “I have come in my Father’s name, and you do not accept me; but if someone else comes in his own name, you will accept him” (5:43).

PAUL never uses the term “antichrist” in his epistles, but does develop the concept of those who are antigod or antichrist. He refers to Belial in the question, “What harmony is there between Christ and Belial?” (2 Cor. 6:15). Paul’s major discourse on the concept is found in 2 Thess. 2:1–12. In discussing a future DAY OF THE LORD, he states: “...that day will not come until the rebellion occurs and the man of lawlessness is revealed, the man doomed to destruction. He will oppose and will exalt himself over everything that is called God or is worshiped, so that he sets himself up in God’s temple, proclaiming himself to be God” (2:3–4). He predicts that after the lawless one is revealed, “the Lord Jesus will overthrow [him] with the breath of his mouth and destroy [him] by the splendor of his coming” (2:8). Because of the similarity between the activities and the final doom of this person at the second coming of Christ, many futurist interpreters identify this person with the little horn of Dan. 7 and the king of Dan. 11:36.

The most impressive NT passage relating to antichrist is the description given in the book of Revelation regarding two beasts, one rising out of the sea (Rev. 13:1–10), and another one out of the land (13:11–18). Variations of interpretation are without number, but generally the first beast is identified by futurists as the final world ruler before the second coming of Christ, and the second beast is considered a religious leader working under the political authority. Because of the similarity between the first beast (bearing ten horns and seven heads) and the small horn of Dan. 7:8, many have identified this personage and the government he heads as being the antichrist. Others, considering Christ religiously rather than from the standpoint of supreme authority, identify the second beast as antichrist. Obviously both are antichrist in spirit.

One of the interpretative problems relative to antichrist is the reference to “the number of his

name” (Rev. 13:17). The passage continues, “This calls for wisdom. If anyone has insight, let him calculate the number of the beast, for it is man’s number. His number is 666” (13:18). Explanations too numerous to mention have been offered to solve the riddle of this statement using the letter equivalents for the numbers in Latin, Greek, and Hebrew. One common explanation is that it refers to Caesar Nero, which can be transliterated into Hebrew as *nrwn qsr* (*Nerōn Kaisar*), and these consonants have a total numerical value of 666 ($n=50, r=200, w=6, n=50, q=100, s=60, r=200$). Similar explanations using Greek letters can make allusion to Caligula. Taken as a whole, however, the best explanation seems to regard the triple six as referring to man, since six is short of the perfect number seven (cf. NEBUCHADNEZZAR’S image, which was sixty cubits high and six cubits broad). The implication would then be that the antichrist, great though he is in power and influence, is only a man who ultimately will be judged by Christ who is God.

VI. Is antichrist Jewish? A complication in futurist interpretation is the attempt to prove that either the first beast or the second is Jewish, an approach based on the statement of Dan. 11:37, “Neither shall he regard the God of his fathers” (KJV). It is argued that this person will deceive the Jews by claiming to be their Messiah and that he could not do so unless he is a Jew. The supporting evidence, however, is lacking. The word “God” in Dan. 11:37 is the general term *ʾēlōhîm* H466 (not the specific name Yahweh, the God of Israel; see GOD, NAMES OF), and it may even be rendered “gods” (cf. NIV). It is also questionable whether the final world ruler, obviously the last in a long line of Gentile rulers, would be a Jew. The second beast of Rev. 13:11–18 also represents a world religion not predominately Jewish, hence the conclusion is reached that these characters are antichrists in the sense of being opposed to Christ, rather than primarily being pseudochrists. The futurist interpretation of Revelation, however, supports the concept that the final ruler of the world will be a satanic substitute for Christ who claims to be God and who will attempt to fulfill the role of King of kings, Lord of lords, and Prince of peace. Both the individuals represented by the beasts of ch. 13 are cast into the lake of fire at the second coming of Christ (19:20).

VII. Antichrist in apocalyptic and patristic writings. Allusions to the antichrist concept found in APOCALYPTIC LITERATURE are of such a general nature and subject to such varied interpretations that they contribute little to the doctrine. The early church fathers seldom referred to the concept except as in the case of POLYCARP, who quotes 2 Jn. 7 with reference to DOCETISM. The notion that Nero was to rise from the dead in order to be antichrist was advanced as early as the 3rd cent. by Commodian. In the Middle Ages it was fashionable to identify antichrist with Muhammad and occasionally with other rulers. With the rise of Protestantism, Romanists and Protestants tended to identify each other as antichrist. Protestants specifically found the beasts of Revelation and the lawless one of 2 Thess. 2:8–9 as references to Roman Catholicism.

In more recent times, the concept of antichrist has been principally discussed by conservative biblical interpreters who anticipate a future fulfillment of predictions of antichrist at the end of the age prior to the second coming of Christ. Apart from these biblical discussions the concept of antichrist has not attracted modern discussion.

VIII. Conclusion. Taking scriptural references as a whole, it may be concluded that while the concept of antichrist can apply to many people and antigod movements of the past and the future, there is reasonable justification for expecting this process to culminate in a single person who will be *the* antichrist and who will be destroyed by Christ at his second coming. This person will be antichrist

theologically as he claims to be God himself; he will be antichrist politically as he will attempt to rule the world. He will be antichrist satanically because he will prosper on satanic power, much as Christ manifested the power of God. In many respects the future antichrist will be to Satan what Christ is to God the Father, and the supporting false prophet of Rev. 13:11–18 will fulfill a role antithetically similar to that of the Holy Spirit, justifying the concept of an unholy trinity composed of Satan, the antichrist, and the false prophet. See also **ESCHATOLOGY**.

J.F. WALVOORD

Antilebanon an'ti-leb'uh-nuhn (Ἀντιλίβανος [Jdt. 1:7, KJV, “Antilibanus”]). Also Anti-Lebanon. A mountain range E of the **LEBANON** range itself and roughly equal to it in length and height. The southernmost peak is Mount **HERMON**, rising to over 9,000 ft. The Bible refers to it with such terms as **SIRION** (Ps. 29:6; cf. also **SENIR** in Deut. 3:9) and “Lebanon, toward the sunrising” (Josh. 13:5 KJV; NIV, “Lebanon to the east”). However, Lebanon (or even Antilebanon) by itself may designate both ranges. These regions are the major source of water for the Jordan and other rivers.

H.G. ANDERSEN

antilegomena an'ti-luh-gohm'uh-nuh. In the history of the **CANON** (NT), this term (Gk. sing. *antilegomenon*, “spoken against”) has been used to describe books that were disputed in the first few centuries of the church. **EUSEBIUS** (*Eccl. Hist.* 3.25) used it of two distinct groups: (1) those books well-known and recognized as canonical by most, of which he names James, Jude, 2 Peter, 2–3 John; and (2) those books he considered spurious, such as the *Acts of Paul*, *Shepherd of Hermas*, *Apocalypse of Peter*, *Barnabas*, and the *Didache*. The ones in the first group were eventually accepted as Scripture by the church as a whole.

D. GUTHRIE

Antilibanus an'ti-lib'uh-nuhs. The classical Latin term for **ANTILEBANON** (Jdt. 1:7 KJV).

Anti-Marcionite Prologues. Some MSS of the **VULGATE** include brief introductions to Mark, Luke, and John that support the church tradition regarding their authorship and value (Latin text in K. Aland, *Synopsis quattuor evangeliorum*, 5th ed. [1968], 532–33). These prologues have been thought to reflect a common origin and an anti-Marcionite bias, thus their name. Certainly the material prefixed to the Gospel of John opposes **MARCION**, but the prologues to Mark and Luke are of a different character and probably had independent origins (cf. E. Haenchen, *The Acts of the Apostles: A Commentary* [1971], 10–11). Scholars have dated the Anti-Marcionite Prologues as early as the 2nd cent. and as late as the 4th. They appear to have been written originally in Greek (the prologue to Luke is in fact extant in Greek in one MS). See also **MARCIONITE PROLOGUES TO PAUL**.

antimony. A hard, brittle, and lustrous metallic element (symbol Sb). The term is used twice for Hebrew *pûk* H7037 in the **NRSV** and some other versions (1 Chr. 29:2 [KJV, “glistening stones”], in a list of precious metals and stones that **DAVID** accumulated for the construction of the temple; and Isa. 54:11 [KJV, “fair colours”], apparently referring to a substance that enhances the beauty of building stones [cf. **NJPS**]). In both of these instances, the **NIV** translates “turquoise”; some believe that the meaning is “hard cement.” The Hebrew word occurs also in two other contexts, where it seems to refer to (black) eye paint (2 Ki. 9:30; Jer. 4:30).

E.S. KALLAND

antinomianism an'ti-noh'mee-uh-niz-uhm. This term (from Gk. *anti* G505, “against,” and *nomos* G3795, “law”) refers to a theology that interprets biblical teaching, particularly that of PAUL, to mean that Christians are so wholly in GRACE that they have no obligation to keep the LAW. In this original form, antinomianism arose within the NT period, as is evident from Paul’s reaction to it (Gal. 5:13–21). Antinomianism was endorsed by some of the Gnostics in the early church (see GNOSTICISM), by some sectarians in the Middle Ages, and at the time of the Reformation by Anabaptists who appealed to Luther’s emphasis on salvation by grace apart from works. It appeared later in certain sects in England, and is still advocated by some sectarian groups in the United States and elsewhere.

The original understanding of law and grace as taught by Paul was transformed over the centuries into a distinctive theology whose chief characteristic stems from its elimination of the Pauline tension between law and grace in the life of the believer. This elimination was accomplished by ignoring the temporal process in which SALVATION was accomplished in Christ and realized in the sinner’s life. Christ’s gracious action for the sinner was viewed as making the sinner perfect in Christ, so that the sins of the believer are no longer to be regarded as his, but those of his “old nature” now dead and gone. See also ETHICS OF PAUL.

On this view of the sinner’s status in Christ, JUSTIFICATION sometimes came to be regarded as an event in eternity—which makes the cross not so much a decisive, historical act of divine love as a mere disclosure of an eternal love. At other times justification came to be regarded as an event that occurred within the RESURRECTION, with the consequence that the believer did not at the time of his conversion become justified and set on the road of SANCTIFICATION, but merely came at that point to know that he is, and was long since, free from the law and in the grace of Christ.

Although springing from a different theological motif, the denial of all obligatory force to biblical moral law places the “New Morality” and other comparable movements in the category of antinomianism.

J. DAANE

Antioch, Chalice of. A large silver cup (7.5 in. high) embossed with twelve portrait figures, discovered in 1910 in Antakya, Turkey (see ANTIOCH OF SYRIA). It was launched on the world a few years later by G. A. Eisen (in *AJA* 20 [1916]: 426–37) as a 1st-cent. representation of Christ (twice), eight apostles, and two evangelists. This dating and identification received the substantial support of J. Strzygowski and A. B. Cook, and the cup had a vogue as the actual vessel used at the Last Supper. It was exhibited, for example, at the Chicago World’s Fair of 1933. But while there is no doubt that it portrays Christ, most other claims made for it have been challenged.

Since the circumstances of its discovery remain obscure, it has even been alleged to be a modern forgery. However, chemical tests support its antiquity, and the date must be settled on stylistic grounds. It comes from a time when the naturalistic portraiture of the Hellenistic age was giving way to the colorism of the Middle Ages, the human figures being subordinated to highly stylized ornament (in this case, vines). Following a thorough study by G. de Jerphanion, most authorities accepted the late 4th or early 5th cent. as its date. G. A. Eisen (*The Great Chalice of Antioch*, 2 vols. [1923]) replied that the plain lining of the cup could still be the original chalice, later enclosed in the decorated outer shell, but it has been countered that the lining may itself be a later substitute for an original glass vessel. As for the portraits, it has been shown that the authentic tradition of Christ’s appearance was lost by the 2nd cent. The artistic types of Christ and the apostles were then slowly elaborated from unrelated Hellenistic models. The cup is now in the Cloisters Collection of the Metropolitan Museum of Art in New York. (See J. Rorimer, “The Authenticity of the Chalice of Antioch,” in *Studies in Art and Literature for Belle da Costa Greene*, ed. D. E. Miner [1954], 161–68.)

E.A. JUDGE

Antiocha an-ti’uh-kuh. See ANTIOCHIA.

Antioch of Pisidia an’tee-ok pi-sid’ee-uh (Ἀντιόχεια τῆς Πισιδίας G522 + G4407, or Ἀντιόχεια ἡ Πισιδία [Pisidian Antioch] G522 + G4408). Roman colony near modern Yalvaç in south-central Turkey. Lying strictly in PHRYGIA beyond the limits of PISIDIA (which, as Acts 14:24 correctly implies, comes between Phrygia and PAMPHYLIA), Antioch was, nevertheless, in a controlling position “near” Pisidia (so Strabo, *Geogr.* 12.577). To distinguish it from the other Antioch in Phrygia it was popularly said to be “of Pisidia,” or, as in the reading of the oldest codices of Acts 13:14, “Pisidian.”

A great wedge of mountain ranges, based to the W on Lycia and to the E on CILICIA Tracheia, embraces Pamphylia, and converges in Pisidia to its N. Any E—W traffic is here ruled out by the terrain, but routes such as that followed by PAUL run N into the interior up the river valleys. Where they emerge into the lake-studded plateau that marks the limit of Pisidia stands Antioch, astride the southernmost of the great E—W highways of ASIA MINOR that was to carry Paul on to LYCAONIA (Acts 14:6). Immediately to the N again is the range now known as Sultan Dag, which in antiquity gave to its “slopes” on either side the name of Phrygia Paroreios. This tract, which centers on

Antioch, was incorporated in the new Roman province of GALATIA in 25 B.C. Thus, on the “South Galatian” theory, Antioch is one of the places to which the epistle to the GALATIANS was addressed.

As a Greek city, Antioch was founded probably on the site of a Phrygian temple-village of the god Mên, within twenty years of the Seleucid assumption of power over the region in 281 B.C. Its name honors ANTIOCHUS I, the son of Seleucus, one of the successors of ALEXANDER THE GREAT. Settlers were brought in from Magnesia on the Maeander, and the city was one of several designed to pin down the difficult mountain peoples of Pisidia to the S. Two and a half centuries later the same problems led AUGUSTUS to make Antioch (under the name Colonia Caesarea) one of a chain of Roman colonies (including LYSTRA) with which he surrounded Pisidia. (Cf. B. Levick, *Roman Colonies in Southern Asia Minor* [1967].) The fact that Antioch alone was already a considerable town may suggest that the objective was not only military, but extended to grafting a specifically Roman civilization on

Byzantine church ruins in Pisidian Antioch; beneath them lie the remnants of an ancient synagogue.

to a region where the Greeks had not flourished. The new settlers were veterans from central and northern Italy. Some 3,000 of them may have been planted as the new elite of Antioch.

By Paul’s time the military problem had faded into the background; inscriptions and coins attest a rich amalgam of Greek, Latin, and Phrygian traditions, to which the evidence of Acts adds a strong Jewish element, itself thoroughly accepted by the others (Acts 13:43). It is noteworthy that the writer of Acts chooses the synagogue of Antioch as the setting for his fullest account of Paul’s preaching to the Jews (13:14–41). At the same time it represents the first occasion on which Paul is shown preaching to a mass audience of Gentiles (13:44), over and above those God-fearers who had been in the synagogue audience already.

The eminence of the Jewish community is shown by their ability to appeal against Paul to the leading men of the city, the husbands no doubt of those women of high society (Acts 13:50) who were God-fearers. These people must have included many Latin speakers. (Among them could have been the young C. Caristanius Fronto, who was to marry into the family of Sergius PAULUS [13:7] and become the first citizen of Antioch to enter the Roman senate.) Yet, like the Jews, they heard Paul and BARNABAS speak in Greek. Whether or not the action against the apostles took an official form, it is intriguing, in the light of later events at PHILIPPI, that Paul did not invoke his Roman citizenship to insure his protection in this key center. In spite of the persistence of his opponents (14:19), Paul twice returned to Antioch to support his converts (14:21; 16:6). (See S. Mitchell and M. Waelkens, *Pisidian Antioch: The Site and Its Monuments* [1998].)

Antioch of Syria an'tee-ok sihr'ee-uh (Ἀντιόχεια τῆς Συρίας G522 + G5353, regularly referred to simply as Antioch). Capital of SYRIA in Seleucid and Roman times, now Antakya in SE Turkey.

I. Site and origin. Antioch's particular location, about 15 mi. from the Mediterranean on the ORONTES River, was hardly advantageous. It was earthquake prone, subject to sudden flooding, and exposed to attack across the crest of Mount Silpius, below which it was built. The good water supply brought by aqueduct from the hillside resort of DAPHNE, 5 mi. away, presumably determined the site. Antioch's nine-hundred-year history as one of the greatest cities of the Greco-Roman era was however shaped by its larger setting. The conquest of the Persian empire by ALEXANDER THE GREAT put Syria at the center of the Hellenistic world, strategically placed between the three great centers of power: Macedonia, Egypt, and Babylonia. With the revival of Persian strength under the Parthian and Sassanid rulers of Roman times, Antioch retained its preeminence as the main base for the whole EUPHRATES frontier.

The city's foundation (in 300 B.C.) marks the emergence of the three-sided concert of Hellenistic powers after the generation of upheavals that followed Alexander's death. SELEUCUS, one of the victors at Ipsus (301 B.C.), extended his eastern kingdom into the territory Antigonus had held along the Mediterranean in Syria. He founded a new capital, SELEUCIA, on the coast, and Antioch (named presumably after his father rather than his son) as its counterpart, a day's journey inland from it. This second city was to prove more secure against attack from the sea, and better related to the network of land communications. During the reign of ANTIOCHUS I (281/0–261 B.C.), the son of Seleucus, it displaced Seleucia as the capital of his empire. Antioch was laid out on the standard Hellenistic gridiron pattern that can still be detected in the street plan of the modern city, while the existing bazaar apparently preserves the site of the original AGORA.

The inhabitants of the new city were mainly Greeks and Macedonians, discharged soldiers of Seleucus's army or settlers from Antigoneia, the nearby capital of the former ruler, which was broken up. In later times Antioch prided itself on the Athenian element in its makeup. Some Jews were no doubt present from the beginning, though it is doubtful whether JOSEPHUS can be right in thinking they enjoyed full citizen privileges. The difficulty of Jews participating in the Greek cults must have led them into forming their own community life, as at ALEXANDRIA. Syrians were also settled in the city, but not with rights of citizenship. The purpose of the strong Greco-Macedonian settlement would have been to establish the usual Hellenistic style of life and provide a bastion of loyal support for the Seleucids. The original number of adult men with citizen rights seems to have been 5,300.

II. Seleucid Antioch. On the death of Antiochus II in 247/6 B.C., the attempt of his second wife Berenice, a Ptolemaic princess, to claim the succession for her son led to the occupation of Antioch by an Egyptian force. Although Seleucus II, the heir of the first marriage, recovered the city in 244, the port of Seleucia remained in Ptolemaic hands until 219 B.C. In the reign of Antiochus III (the Greek) the last known influx of Greek settlers took place, no doubt veterans of the war in the Aegean against the Romans. After his defeat at Magnesia in 190 B.C., the Seleucid empire was cut off from the old homelands. Antioch was thrown into greater prominence as a metropolis, and under Antiochus IV Epiphanes (175–163 B.C.) was of unprecedented magnificence. His efforts to consolidate the empire included accentuation of the Hellenic religion and ruler cult, setting the stage for the Maccabean revolt (see MACCABEE). Antioch was dazzlingly adorned with the proceeds of provincial temple treasuries such as that of Jerusalem.

Antioch in Pisidia and Syria.

This “third captivity” of the Jews must have added considerably to the numbers and problems of the Jewish community in Antioch. The refugee high priest ONIAS III resided at Daphne, and there was a synagogue (later a church) at Antioch dedicated to the Maccabean martyrs, apparently in the belief that they had died in the city that bore the name of their persecutor. During the civil war in the time of Demetrius II, the Jewish leader Jonathan sent 3,000 troops to help him. They boasted of killing 100,000 Antiochenes (1 Macc. 11:45–47), and surely did much to confirm anti-Jewish feeling in the city.

The last century of Seleucid rule is a time of great obscurity during which Antioch must have suffered considerably in the continued dynastic struggles. A severe earthquake is also recorded. The city’s coins give occasional evidence of independence, and a period of Armenian rule occurred before POMPEY assumed control of Syria on behalf of the Romans in 64 B.C.

III. Roman Antioch. The PARTHIANS now became a source of fear or hope to the peoples of the Levant, according to their political alignments. In 53 B.C. the Roman general Crassus was defeated and killed at Carrhae, leaving Antioch exposed to attack, and in 40 B.C. the Parthians occupied all Syria including Antioch for a brief period. But Roman rule, though at first insecure, brought with it an influx of Italian businessmen, and a new era of prosperity for Antioch, which was treated as a free city. Pompey, Caesar, and Antony all contributed to its enhancement and Romanization, while the era of Augustan peace brought enlargement and much new building to the city (see AUGUSTUS).

A notable contributor to this expansion was HEROD the Great, an enthusiastic client and collaborator of the Caesarian regime. Herod supplied the famous two-mile marble boulevards, to which under TIBERIUS Caesar there were added colonnades, monumental gates, and statuary, the whole complex being some 90 ft. in breadth. By this stage Roman Antioch had eclipsed the brilliance

of the earlier Seleucid city. It was not only the capital of a flourishing province, but also the hub of the whole eastern Roman empire. A network of diplomatic connections held together the multitude of minor states and kingdoms embraced within the provincial system, and reached out across the Parthian frontier as far afield as India. The contemporary geographer Strabo reckons it not much smaller in size than Alexandria and Seleucia (the Parthian metropolis on the Tigris); it may well have had over half a million people.

In A.D. 40 an outbreak of rioting between the circus factions developed into a pogrom against the Jews. The high priest at Jerusalem, Phinehas, is said (by Malalas) to have led a punitive expedition of 30,000 men against Antioch, resulting in the recall and punishment of the representatives of the Roman government. Although such an expedition must be apocryphal, the general situation fits the known history of serious trouble between Jews and Greeks at this time. From CLAUDIUS'S letter to Alexandria we know that the Jews there brought in agitators from Syria. This was also the year of the conflict in Jerusalem over the statue of CALIGULA that he himself ordered set up in the temple. It was at this stage that Antioch witnessed an even more momentous shift in relations between Jews and Greeks. (Cf. also G. Downey, *A History of Antioch in Syria from Seleucus to the Arab Conquest* [1961]; J. H. W. G. Liebeschuetz, *Antioch: City and Imperial Administration in the Later Roman Empire* [1972]; C. Kondoleon, ed., *Antioch: The Lost Ancient City* [2000].)

IV. The Christians at Antioch. Among the seven “Hellenists” had been NICOLAS, distinguished as being both a convert to Judaism and coming from Antioch (Acts 6:5). He marks that interest of the Antiochenes in Judaism that led some of the refugee preachers there for the first time to open the gospel to “God-fearing” Greeks as well as to Jews (11:20). Although the principle had already been established in the conversion of CORNELIUS, the mass movement of Gentiles at Antioch clearly took the church in Jerusalem by surprise. Perhaps sensing that much was at stake in such an influx, they sent an emissary (BARNABAS) who encouraged and taught the new church.

Although the point was not yet spelled out, the iron curtain of the law had now been decisively dropped, with vast consequences for the whole Gentile world. At Antioch the gospel threw open the door to the ends of the earth. Barnabas matched the man to the hour by seeking out the help of Saul, the converted archenemy, in following the new way forward (Acts 11:25). (See PAUL.) At Antioch, too, the phenomenon of Gentile believers first caught the attention of the general public and called for a distinctive name (11:26). The term CHRISTIAN is a Latin form and is paralleled by other partisan labels coined by Romans. Jewish critics would hardly have devised a term that conceded the very point (the messiahship of Jesus) that was at issue, while believers themselves in NT times clearly found no need for such a group name for themselves.

Although the disciples at Antioch are said to have met as a church (Acts 11:26; 13:1; 14:27), the structure of the church at Jerusalem does not appear to have been repeated. Paul and Barnabas are not referred to as ELDERS (nor were they subsequently claimed as BISHOPS). The ministries in the church were teaching and prophecy, shared between a number of people. How this situation gave way to the fixed ministry of bishops, priests, and deacons that appears in the epistles of IGNATIUS two generations later is unknown.

V. Antioch between Jerusalem and the West. Out of this company Barnabas and Paul were called to carry the gospel, preaching westward to the synagogues and to the Gentiles of CYPRUS and central ASIA MINOR. For all the new churches they appointed elders (Acts 14:23) before returning to report to the church at Antioch. But there were also links with Jerusalem. After the sending of Barnabas,

prophets had come from there, and in the great famine of A.D. 46 or 47 the disciples of Antioch had sent Barnabas and Paul back to Jerusalem with relief funds (11:27–30). This was perhaps the occasion on which they took TITUS, an uncircumcised Greek convert (Gal. 2:1–10), and won acceptance for their policy with James, Peter, and John.

Now following their return from the western mission there came visitors from Judea teaching the necessity of CIRCUMCISION (Acts 15:1–3). These may be the same as the men who Paul says came from JAMES (Gal. 2:12). If so, PETER was already at Antioch, and the believers there divided into Jewish and Gentile meetings. Paul and Barnabas were sent by the church to consult the apostles and elders at Jerusalem. A meeting of the church there supported James’s judgment that only limited observance of the law was required in the case of Gentiles. JUDAS Barsabbas and SILAS were sent back to Antioch with this instruction (Acts 15:4–35), the latter subsequently joining Paul (15:40) on a visit to the western churches. (See COUNCIL OF JERUSALEM.)

Whatever the order of events, it is clear that Antioch was the center of a major conflict of practice involving the leading apostles, and that its resolution set the seal forever upon the freedom of the gospel from the law. It also seems to have been a source of funds to support the preaching. According to later tradition, Peter became the first bishop of Antioch, being followed by Euodius, the predecessor of Ignatius. Alongside this orthodox tradition there sprang up at Antioch a strong school of Gnostic speculation (see GNOSTICISM), which traced its origins back to SIMON MAGUS. (Cf. also D. Wallace-Hadrill, *Christian Antioch: A Study of Early Christian Thought in the East* [1982]; R. E. Brown and J. P. Meier, *Antioch and Rome: New Testament Cradles of Catholic Christianity* [1983]; M. Zetterholm, *The Formation of Christianity in Antioch: A Social-Scientific Approach to the Separation between Judaism and Christianity* [2003].)

Grotto of St. Peter in modern Antakya. According to tradition the first Christians of Syrian Antioch met in this cave.

Antiochene (Ἀντιοχέως G523). Also Antiochian. This term is used in 2 Macc. 4:9, which indicates that the privilege “to enroll the people of Jerusalem as citizens of Antioch” (NRSV) was one of the favors purchased from ANTIOCHUS Epiphanes after his accession (in 175 B.C.) by JASON, the high

priest who had supplanted his own brother ONIAS. Three different explanations have been advanced: a cultural society formed within Jerusalem to practice the Greek way of life, centered upon the gymnasium; a grant of the citizenship of Antioch, the Seleucid capital, to Jerusalem (cf. NRSV trans. above); or (most prob.) the formation of a new city called Antioch at Jerusalem. In the manner of Hellenistic foundations, this would have excluded from citizenship nonhellenized inhabitants, and adapted the life of the city to the international model. The point of 2 Macc. 4:18–20 is that the Antiochians still drew the line at the Greek sacrifices their new status might have implied. (Cf. V. Tcherikover, *Hellenistic Civilization and the Jews* [1959], 161–70, 404–9.)

In the NT, the term occurs once as a designation of NICOLAS (Acts 6:5; NIV, “from Antioch”). In church history, the term is also used to refer to the early Christian fathers (most prominently John CHRYSOSTOM, d. A.D. 407) who resided in Antioch and whose approach to biblical INTERPRETATION is usually contrasted to that of the Alexandrian theologians.

Antiochia an-'tee-ok'ee-uh. KJV Apoc. form of ANTIOCH (1 Macc. 4:35; 6:63; 2 Macc. 4:33; 5:21). Some editions had the form Antiocha.

Antiochian an'tee-ok'ee-uhn. See ANTIOCHENE.

Antiochis an-ti'uh-kis (**Ἀντιοχίς**). A concubine of ANTIOCHUS IV, Epiphanes (2 Macc. 4:30). When the king presented the Cilician cities of TARSUS and Mallus to his mistress as a gift, these cities revolted in protest.

Antiochus an-ti'uh-kuhs (**Ἀντιόχος**, “opposer, withstander”). A favorite name of the Seleucid kings of SYRIA from 280 B.C. onward.

(1) Antiochus I, Soter (324–261 B.C.), son of SELEUCUS I, founder of the dynasty, and Apama, a Bactrian woman. He was joint king with his father from 293/2 until he became the sole ruler in 281. Antiochus became known for his defense of ASIA MINOR against the invasion of the Gauls (from which he earned his title *Sōtēr* G5400, “Savior”) and was considered the greatest founder of cities since ALEXANDER THE GREAT. He lost important districts of Asia Minor and Syria to PTOLEMY II Philadelphus during the “First Syrian War” (274–271) and was slain in a battle against the Gauls in Asia Minor in 261.

(2) Antiochus II, Theos (286–246 B.C.), second son of Antiochus I and Stratonice. His reign commenced in 261. Although many facets of his life are obscure, it seems that he, with the help of Antigonus II Gonatas of Macedonia, attacked PTOLEMY II Philadelphus and regained much of what Antiochus I had lost, namely, the coast of Asia Minor and districts of COELESYRIA. This is called the Second Syrian War, which lasted from 260 to 253. In the midst of this war, a self-willed Timarchus made himself tyrant of MILETUS and plundered the people. In 258, Antiochus defeated Timarchus, and the Milesians in gratitude for the victory surnamed him *Theos* G2536, “a god” (Appian, *The Syrian Wars* 65). A brilliant political triumph was accomplished by Ptolemy when in 253 Antiochus agreed to marry Ptolemy’s daughter, Berenice, on the condition that he get rid of his first wife, Laodice (Appian, *Syrian Wars* 65; Dan. 11:6), with the understanding that the kingdom should go to Berenice’s son. On the part of Ptolemy this was a diplomatic master-stroke but it is incomprehensible why Antiochus agreed to it. The marriage was consummated in 252 and hence there was peace

between the Seleucids and the Ptolemies, but this was short-lived because both Antiochus and Ptolemy died in 246. Their sons had not the mutual feelings of friendship that their fathers had.

© Dr. James C. Martin. The British Museum. Photographed by permission.

This Babylonian astronomical diary, dated 273 B.C., makes reference to Antiochus I's preparations for the First Syrian War.

(3) Antiochus III, the Great (242–187 B.C.), the second son of SELEUCUS II and grandson of Antiochus II and Laodice, succeeded his older brother Seleucus III Soter who was assassinated in 223. With fragmentation in the kingdom (Bactria and Parthia) and threats of this problem spreading to Media, Persia, and Asia Minor, his order was consolidation and then expansion. With the accession of PTOLEMY IV Philopater in 221, Antiochus invaded Lebanon in an attempt to wrest Palestine from his rival (“Fourth Syrian War”). He was stopped by the strong line of defense erected by Ptolemy’s general Theodotus near Gerra (c. 30 mi. NW of DAMASCUS). Antiochus made a second attempt, driving the Egyptians southward and capturing SELEUCIA (near ANTIOCH OF SYRIA). In 218 he captured TYRE and Ptolemais (see Acco), as well as inland cities all the way from Philoteria to Philadelphia, and then returned to Ptolemais and spent the winter of 218-217 there. In 217 he pushed southward as far as Raphia (near GAZA) where he was utterly defeated, leaving Ptolemy IV in undisputed control of Coelesyria and PHOENICIA (Polybius, *Hist.* 5.51-87; Dan. 11:11 – 12). Following this defeat he concentrated his warfare in the east (212-206), acquiring Armenia and regaining Parthia and Bactria as vassal kingdoms, feats that gained him, like Alexander, the title of “Great.”

With the death of Ptolemy IV in 203 B.C., who was succeeded by his son (five to seven years of age), Antiochus saw his opportunity to take Coelesyria from Egypt and in 202 made a pact with Philip

V of Macedon for a division of Egypt between the two powers (Livy, *Epit.* 31.14.5). In 201 he invaded Palestine and after great difficulty captured Gaza. Having secured Palestine, Antiochus invaded the dominions of ATTALUS, king of Pergamos (who was pro-Roman against Philip V), in the winter of 199-198. Scopas, an Egyptian general, hearing of Antiochus's absence, invaded Palestine and recovered the lost territories. Antiochus returned to oppose Scopas, and at Panias (CAESAREA PHILIPPI) Ptolemy IV was decisively defeated (Jos. *Ant.* 12.3.3 §§131-33; Polybius, *Hist.* 16.18-19; 28.1; Dan. 11:14-16). He granted the Jews the freedom to worship according to their laws; allowed them to complete and maintain the temple; exempted the council of elders, priests, and the scribes of the temple from taxes, which exemption the citizens of Jerusalem enjoyed for the first three years and after that period they were exempted a third part of their taxes; and released the prisoners (Jos. *Ant.* 12.3.3-4 §§138-53). The Battle of Panias marked a turning point in Jewish history, for from this time until the Roman control in 63 B.C. the Jews remained connected with the Seleucid dynasty. Under Ptolemaic rule, the Jews had been treated with considerable tolerance, but under the Seleucid rule, after only a brief period of tranquility, they experienced fierce persecution.

Rome, having defeated Hannibal at Zama (near Carthage) in 202 B.C. and the Macedonian monarchy in 197, began to concentrate on the Seleucids. In the light of the new threat Antiochus discontinued his war with Egypt and made a treaty with Ptolemy V Epiphanes in which the latter married Antiochus's daughter, Cleopatra, with the idea that her son (his grandson) would be the next king of Egypt and would be partial to the Seleucids (Polybius, *Hist.* 28.20; Appian, *Syrian Wars* 5; Jos. *Ant.* 12.4.1 §154; Dan. 11:17). Antiochus went westward and invaded Thrace in 196, and with Hannibal's influence he invaded Greece (which the Romans had evacuated) in 194; but the Romans retaliated, defeating him at Thermopylae in 191 and at Magnesia in Asia Minor in 190. In the peace treaty signed at Apamea in 189, Antiochus agreed to give up Asia Minor N and W of the Tarsus Mountains, as well as much of his military force, and to pay a heavy indemnity over a twelve-year period. He had to deliver twenty hostages to Rome until the indemnity was paid, one of the hostages being his son, Antiochus IV Epiphanes (Appian, *Syrian Wars* 36-39; Polybius, *Hist.* 20-21; Livy, *Epit.* 36-37; Dan. 11:18-19; 1 Macc. 1:10; 8:6-8; Jos. *Ant.* 12.10.6 §414). In 187 Antiochus III died in a rebellion. He was succeeded by his son SELEUCUS IV Philopater.

(4) Antiochus IV, Epiphanes (215-163 B.C.), third son of Antiochus III, succeeded his brother, SELEUCUS IV Philopater, as king in 175. After being in Rome fourteen years as a hostage in 176/175, his nephew Demetrius I (second son of Seleucus IV) took his place and Antiochus went to Athens, where after a short time he was appointed chief magistrate. In 175 his brother Seleucus IV was murdered by his chief minister Heliodorus, and upon hearing the news Antiochus, with the help of Eumenes II, king of PERGAMUM, ousted Heliodorus and made himself king. His newly acquired kingdom lacked political and financial stability. To heal the political factions within his domain, he attempted to unify them by a vigorous program of hellenization (Tacitus, *Hist.* 5.8). Religion was one of the unifying factors, and although he was no monotheist, he was favorable to the Olympian ZEUS; later (c. 169) he even encouraged people to worship his own person in the form of Zeus (Dan. 11:21-24). Hence he assumed the title Theos Epiphanes, meaning "the manifest God," but some of his enemies called him Epimanes (which requires only one letter change in the Gk. spelling, *Epiphanēs* to *Epimanēs*), meaning "mad man" or "insane" (Polybius, *Hist.* 26.10).

Soon after Antiochus's accession he was called upon to settle a dispute between the high priest ONIAS III, who was pro-Ptolemaic, and Onias's brother JASON (a Gk. name, preferred over his Heb. name Joshua/Jesus), who was pro-Seleucid. In 174 B.C. Jason secured the high priesthood by a larger payment of money to Antiochus and by pledging his wholehearted support to the hellenizing of

the Jerusalemites (1 Macc. 1:10-15; 2 Macc. 4:7-17; Jos. *Ant.* 12.5.1 §§237-41). Jason asked if he would be permitted to build a GYMNASIUM in Jerusalem for Jewish youth in order to introduce them to Greek games and customs. Of course, Antiochus immediately agreed to all of this, for it would not only further his hellenization program, but also help him line the Seleucid's coffers, which were depleted

The kingdom of Antiochus III and IV.

at least in part by his father's payment of the heavy indemnity to Rome. Three years later (171) Jason sent MENELAUS to Antiochus with money he owed to the king. Menelaus seized the opportunity by pledging to Antiochus a more vigorous hellenization program and offering 300 more talents than Jason was able to give. Antiochus accepted this offer, for it meant not only more money, which he needed, but also, since Menelaus was outside the priestly Aaronic line (according to 2 Macc. 4:23 and 3:4 he was a Benjamite), it would break a great unifying factor among the Jews and it would allow the Seleucids to select high priests at will. Jason fled to the Ammonite country. In a desperate need of money Menelaus robbed the temple treasury of a number of golden vessels, selling some and giving others to Andronicus, Antiochus's deputy in Antioch, as a bribe. The legitimate high priest Onias III, who was still in Antioch, protested against these actions, and Menelaus urged Andronicus to kill Onias (2 Macc. 4:31-34).

In 170 B.C. the amateur regents Eulaeus and Lenaeus advised their minor king Ptolemy VI Philometor to avenge Pannias and recover Coelestria. But Antiochus got wind of these plans and with a large army invaded Egypt in 170/169, defeating Philometor, and then proceeded to Memphis, where he proclaimed himself king of Egypt. Antiochus then went to Alexandria and besieged it (in 169). Arrangement was made whereby Philometor was king in Memphis and his brother Ptolemy VIII

Euergetes king in Alexandria. Hoping that Egypt would remain paralyzed by the rivalry of the two brother kings (Dan. 11:25-27), Antiochus left Egypt to return to Syria. However, when Antiochus was in Egypt, new troubles broke out in Jerusalem. Menelaus plundered the temple and the people began to riot. In addition there was rumor that Antiochus was killed in Egypt, and so Jason came out of his hiding in TRANSJORDAN and attacked Jerusalem, compelling Menelaus to take refuge in the Acra (see JERUSALEM II.D.3). Unwisely Jason massacred many innocent people and consequently he was driven out of the city and took refuge again in Transjordan (2 Macc. 4:39—5:10). Antiochus learned of this trouble on his way back from Egypt and decided to subdue Jerusalem (2 Macc. 5:11-17). He felt that the Jews' rebellion against Menelaus was a rebellion against his own authority. With Menelaus he desecrated and plundered the temple of its treasure, leaving the city under one of his military commanders, Philip, a Phrygian (1 Macc. 1:20-29; 2 Macc. 5:18-22; Jos. *Ant.* 12.5.3 §§246-47).

In the winter of 168-169 B.C., the two brothers in Egypt agreed to unite as joint-kings against their uncle Antiochus. Inevitably Antiochus went to Egypt in the spring of 168. The Ptolemaic kingdom was in no shape to offer much resistance. Antiochus marched to Memphis, and from there he again went to Alexandria. However, before he could subdue Alexandria, the Roman representative Popillius Laenas, whom he had known at Rome, handed him (at Eleusis, suburb of Alexandria) an ultimatum from the senate to evacuate Egypt within a certain number of days (Rome was not able to come to Egypt before because of its involvement in the Third Macedonian War, 171-168). Antiochus wanted time for consideration, but the Roman legate arrogantly drew with his walking stick a circle in the sand around Antiochus and demanded his answer before he stepped outside the circle. Having become acquainted with Roman power when he was a hostage in Rome for fourteen years, he agreed to evacuate (Polybius, *Hist.* 29.2.1-4; 27.1-8; Livy, *Epit.* 45.12.1-6; Diodorus Siculus, *Bibl. Hist.* 31.2; Velleius Paterculus, *Hist. Rom.* 1.10.1-2; Appian, *Syrian Wars* 66; Justinus, *Epit.* 34.3; Dan. 11:28-30). With bitterness he retreated to Palestine (Polybius, *Hist.* 29.27.9; Dan. 11:30).

Antiochus was determined to make sure that Palestine was loyal to himself in order to act as a buffer state between himself and the Romans. Considering himself Zeus Epiphanes, he ordered a cultic hellenization policy in Palestine. Antiochus sent his general Apollonius with 22,000 soldiers, who came under the pretense of peace, attacked Jerusalem on the SABBATH, knowing that orthodox Jews would not fight, and killed many people. Women and children were taken as slaves, and the city was plundered and burned. Shortly afterward, in 167 B.C., Antiochus determined to exterminate the Jewish religion by forbidding the people to live in accordance with their ancestral laws. He forbade the observance of the Sabbath, customary festivals, traditional sacrifices, and the CIRCUMCISION of children, and ordered that copies of the TORAH must be destroyed. Idolatrous altars were set up, and the Jews were commanded to offer unclean sacrifices and to eat swine's flesh (2 Macc. 6:18). Anyone who disobeyed any of these orders was sentenced to death. The climactic infamous deed was on Kislev 25 (16 December 167), when the temple in Jerusalem (as well as the Samaritan temple at Mount Gerizim) became the place of the worship of the Olympian Zeus, offering swine's flesh on the altar of Zeus, which was erected on the altar of burnt offering (Dan. 11:31-32; 1 Macc. 1:41-64; 2 Macc. 6:1-11). These were to be offered on the twenty-fifth of every month, since that date was celebrated as the birthday of Epiphanes, hence the sacrifices were offered to him. All of this was a big mistake on Antiochus's part. He wanted to consolidate his empire around the Hellenic culture and religion, thinking that the Jewish religious eccentricities were party to the Ptolemaic dynasty. He never realized the significance of the Jewish religion. His actions sparked the Maccabean revolution begun at Modein by Mattathias (Dan. 11:32-35) and continued by his son Judas surnamed Maccabeus (see HELLENISM; MACCABEE).

Antiochus heard of the revolt and would no doubt have come in person to exterminate the Maccabees, but he had more serious troubles in Armenia and Persia, namely, insurrection and withholding of taxes (Jos. *Ant.* 12.7.2 §§293-95; Diodorus Siculus, *Bibl. Hist.* 31.17a; Appian, *Syrian Wars* 45). Consequently, in 165 B.C. he ordered LYSIAS, regent of the western part of his empire and guardian of his son (1 Macc. 3:32), to make an end of the rebellion and destroy the Jewish race (1 Macc. 3:32-36; Jos. *Ant.* 12.7.2 §§295-96). Lysias dispatched a large army under the command of Ptolemy, Nicanor, and Gorgias, followed by merchants who expected to purchase Jewish slaves (1 Macc. 3:38-41). However, Judas decisively defeated Gorgias at Emmaus, causing the Syrian soldiers to flee (1 Macc. 4:1-22; Jos. *Ant.* 12.7.4 §§305-12). In 164 Lysias personally led a larger army and attacked Jerusalem from the S but was completely defeated at Beth Zur (1 Macc. 4:28-35; Jos. *Ant.* 12.7.5 §§313-15). Judas, who had regained the entire country of Judea except the Acra in Jerusalem, refurbished and rededicated the temple, restoring the daily sacrifices in Kislev 25 (14 December 164)—exactly three years to the day of its desecration (1 Macc. 4:47-59; 2 Macc. 10:1-8; Jos. *Ant.* 12.7.6-7 §§316-26). This marked the commencement of the Jewish Feast of DEDICATION (or Lights; cf. Jn. 10:22).

Antiochus was further enraged to the point of madness upon hearing of Judas's successes. In his desperate need of funds, he attempted to plunder the temple of Nanaea/Artemis in Elymais but was unsuccessful, though he was able to escape with his life (unlike his father). He withdrew and died insane in Tabae (Gabae), Persia, in the spring/summer of 163 B.C. (Polybius, *Hist.* 21.9; Appian, *Syrian Wars* 66; Diodorus Siculus, *Bibl. Hist.* 31.18a; Jos. *Ant.* 12.9.1-2 §§354-61; 1 Macc. 9:1-29; 2 Macc. 6:1-17).

(5) Antiochus V, Eupator (173-162 B.C.), succeeded his father at nine years of age (Appian, *Syrian Wars* 66). He had been under the guardianship of Lysias, regent of the western part of the Seleucid empire (1 Macc. 3:32), but Antiochus IV on his deathbed appointed Philip as regent and guardian of Antiochus V. Upon hearing this, Lysias set Antiochus V up as king and named him *Eupatōr* ("born of a noble father"). Because of Judas Maccabeus's siege of the Acra, Lysias and the boy-king went S defeating Judas at Beth Zechariah (SW of Jerusalem) and laid siege to Jerusalem (6:28-54). Fortunately for Judas, Lysias heard that Philip was marching from Persia to Syria to claim the kingdom for himself and so Lysias was anxious to make a peace treaty with Judas. He guaranteed religious freedom but did not tear down the walls of Jerusalem (6:55-63). Lysias left for Antioch and Philip was easily defeated. In 162 Demetrius I Soter, second son of Seleucus IV, nephew of Antiochus IV, and cousin of Antiochus V, escaped from Rome (where he had been sent as hostage to secure the release of Antiochus IV), then seized and put to death both Lysias and Antiochus V (1 Macc. 7:1-4; 2 Macc. 14:1, 2; Jos. *Ant.* 12.10.1 §§389-90; Polybius, *Hist.* 31.11; Appian, *Syrian Wars* 46-47, 67; Livy, *Epit.* 46).

(6) Antiochus VI, Epiphanes Dionysus (148-142 B.C.), son of ALEXANDER Balas and Cleopatra Thea (daughter of Ptolemy VI). Demetrius II Nicator assassinated Alexander Balas in 145 and took over the Syrian throne. Since he was young and inexperienced, Jonathan Maccabeus, who was confirmed as high priest, demanded and received many concessions from him. Being weakened by these concessions and having troubles within his own army, a general of Alexander Balas named Diodotus TRYPHO claimed the Syrian throne for Alexander's son, Antiochus VI, in 145. Jonathan took advantage of the situation and sided with Trypho, who in turn made Jonathan head of the civil and religious aspects and his brother Simon, head of the military. However, Trypho was embarrassed by Jonathan's success in subduing the whole country from Damascus to Egypt, so by deceit he imprisoned Jonathan and later put him to death (143) and procured the assassination of Antiochus VI

by surgeons in an operation in 142 (1 Macc. 11:1-13:31; Jos. Ant. 13.4.7-13.7.1 §§109-219). (7) Antiochus VII, Sidetes (159-129 B.C.), second son of Demetrius I, had grown up in the Pamphylian city of Side, hence his surname. He heard that his older brother Demetrius II was captured by the Parthians in 139. In trying to gain a foothold in Syria, Antiochus VII asked for the allegiance of Simon by confirming to him immunities granted by other kings and adding the right to coin money (1 Macc. 15:1-9; Jos. Ant. 13.7.1 §223). Antiochus VII claimed the throne against the usurper Trypho and quickly defeated him in Antioch in 138. In trying to restore the Seleucid power in the W, he asked Simon to surrender his principal fortresses (1 Macc. 15:28-31), but Simon refused and defeated Antiochus VII's officer, Cendebaeus (1 Macc. 16:1-10; Jos. Ant. 13.7.3 §§225-27). After the death of Simon (135), Antiochus VII in person attacked Judea and besieged Jerusalem. Because of the shortage of food, Hyrcanus (see HASMONEAN) surrendered and made peace, which restored the Seleucid supremacy in the west (Jos. Ant. 13.8.2-3 §§236-248). In 130, with the assistance of Hyrcanus, Antiochus VII temporarily recovered Babylon from Parthia. In 129 Demetrius II came to Syria, having been released from prison by the Parthians (who were hard pressed) so that he might create a diversion in his brother's attack on them. In 128 Antiochus was killed in battle against the Parthians, and Demetrius II became the sole king for the second time, until 125 (Jos. Ant. 13.8.4 §253; Appian, *Syrian Wars* 68). The internal strife seriously weakened the Seleucids, for they never regained the provinces in the E.

(8) Antiochus VIII, Grypus ("hook-nosed"; 140-96 B.C.), second son of Demetrius II and Cleopatra (daughter of Ptolemy Philometor and former wife of Alexander Balas). Antiochus VIII became ruler in 124 but in 116 was attacked by his half-brother or cousin Antiochus Cyzicenus. Consequently, in 113 Antiochus VIII retired to Aspendus in Pamphylia (Appian, *Syrian Wars* 68-69; Jos. Ant. 13.10.1; 13.12.1. §§269-73, 325). In 111 Antiochus VIII returned and gained the greater part of Syria from Cyzicenus, the latter retaining the greater part of Coelesyria. The feud between the brothers was of great advantage to Rome in gaining a foothold in Syria, but it also aided the Jews in their move toward complete independence under John Hyrcanus. Antiochus VIII was assassinated in 96 by Heracleon, a king's minister (Jos. Ant. 13.13.4 §365). He was succeeded by his oldest son Seleucus VI Epiphanes Nicator.

(9) Antiochus IX, Cyzicenus (but Philopater on coins), reigned 113-95 B.C., second son of Antiochus VII and Cleopatra (daughter of Ptolemy Philometor and formerly married to Alexander Balas and Demetrius II), was reared in Cyzicus in Asia Minor, hence the surname (Appian, *Syrian Wars* 68). In 116 he defeated his half brother or cousin Antiochus VIII and became the sole ruler from 113 to 111. Upon the return of Antiochus VIII, Antiochus IX was able to retain only Coelesyria, while the former regained the greater part of Syria. Antiochus IX was captured, killed, and succeeded by his nephew Seleucus VI Epiphanes Nicator (Jos. Ant. 13.13.4 §366).

(10) Antiochus X, Eusebes ("pious"), reigned 94-83 B.C., son of Antiochus IX Cyzicenus. When Seleucus VI Epiphanes Nicator, son of Antiochus VIII Grypus, took over the throne in 95, he was challenged by Antiochus XI. Subsequently the other four sons of Antiochus VIII Grypus (viz., Antiochus IX, Philip, Demetrius III, and Antiochus XII) all attempted to wrest the throne from Antiochus X. After conquering Mesopotamia, Tigranes, king of Armenia, gained control over Syria in 83 and ruled over it by means of a viceroy until his own defeat by the Romans in 69 (Jos. Ant. 13.13.4 §§366-71; Appian, *Syrian Wars* 48). This internal strife weakened the Seleucid dynasty, a development that was beneficial to the Romans and made it possible for Alexander Jannaeus to conquer almost all of the land of Israel. Antiochus X's end in 83 is variously reported (Appian, *Syrian Wars* 49, 69; Jos. Ant. 13.13.4 §371).

(11) Antiochus XIII, Asiaticus, reigned 69-65 B.C., son of Antiochus X and Selene (daughter of Ptolemy Physcon who had been married successively to Ptolemy Soter, Antiochus VIII, Antiochus IX, and Antiochus X; see Strabo, *Geogr.* 16.2.3; Appian, *Syrian Wars* 69). When Lucullus of Rome defeated Tigranes of Armenia in 69, he assigned Syria to Antiochus XIII. In 65 Philip, grandson of Antiochus VIII, sought to claim the throne but was unsuccessful. Antiochus XIII appealed to Rome for help but POMPEY came to Syria and made it a Roman province in 63 B.C., which marked the end of the Seleucid dynasty (cf. Appian, *Syrian Wars* 49, 70; Plutarch, *Pompey* 39; Strabo, *Geogr.* 40.1a).

(12) The father of NUMENIUS, mentioned in 1 Macc. 12:16; 14:22; *Jos Ant.* 13.5.8 §169; 14.8.5 §146.

(13) Antiochus Epiphanes, son of Antiochus IV of Commagene, was engaged to marry DRUSILLA, youngest daughter of Agrippa I (see HEROD VII). The marriage was never consummated because, although Antiochus had promised Agrippa to embrace Judaism, he later changed his mind and refused to become a convert (cf. *Jos. Ant.* 19.9.1 §355; 20.7.1 §139).

H. W. HOEHNER

Antipas an'tee-puhs (Ἀντιπῶς G525, possibly short form of Ἀντιπατρος [cf. *Jos. Ant.* 14.1.3 §10]). (1) The name of several men in the Herodian family, especially a son of Herod the Great who was made tetrach of Galilee and Perea. See HEROD V.

(2) In the letter to the church in PERGAMUM, a Christian named Antipas is described as “my faithful witness, who was put to death in your city” (Rev. 2:13). Nothing more is known about him, although later legends arose concerning his martyrdom.

Antipater an-tip'uh-tuhr (Ἀντιπατρις, “fatherlike”). (1) Son of Jason, an ambassador sent by Jonathan MACCABEE to renew relationships with the Romans, Spartans, and others (1 Macc. 12:16; 14:22).

(2) The name of the father and of the eldest son of HEROD the Great (*Jos. Ant.* 14.1.3 §§8-11; 14.11.1 §300).

Antipatris an-tip'uh-tris (Ἀντιπατρις G526). The NT city that occupied the site of the OT Philistine city of APHEK, in the Plain of SHARON (1 Sam. 4:1; 29:1). The new city was built by HEROD the Great in 9 B.C. He named it Antipatris in honor of his father Antipater, who had been procurator

of JUDEA under Julius CAESAR. The modern name of the ruins is Ras el-Ain.

The site is marked by the great spring from which the name el-Ain comes. The stream that rises full-grown from this spring is the river Auja, the longest stream W of the Jordan River. Although its course to the Mediterranean is short, it flows through a fertile plain known as Kaphar Saba. Antipatris was on the main coastal road of Palestine, c. 25 mi. to the S of CAESAREA. From Antipatris the main road continued S to Lydda (see LOD), and a branch road went SW to JOPPA on the coast. Another road from Antipatris climbed E up the valley of AIJALON and then turned S to JERUSALEM. (Cf. M. Kochavi in *BA* 44 [1981]: 75-86.) Antipatris was the first city VESPASIAN captured after he moved out of Caesarea to begin the conquest of the PHILISTINE plain and the approaches to Jerusalem.

The only Bible reference to Antipatris is in Acts 23:31. In order to save PAUL's life, the military governor of Jerusalem ordered him to be taken on a secret night march under a large military guard from the Jerusalem barracks to Antipatris, c. a 40mi. march. This city was the military post (Mutatio) on the road between Jerusalem and Caesarea and, therefore, a logical resting place. The next day Paul was taken to the governor at Caesarea.

J. L. KELSO

antiphrasis. This term (from Gk. *anti* G505,

“against,” and *phrazō* G5851, “to tell, declare”) refers to a figure of speech in which something is said contrary to its normal meaning, usually for ironic purposes. Certain words acquire such a contrary meaning for euphemistic reasons. In Job 2:9, for example, the verb “curse” translates Hebrew *bārak* H1385, which normally means “bless.”

antitype. The Greek word *antitypos* G531 occurs twice in the NT (Heb. 9:24 and 1 Pet. 2:21; NIV, “copy” and “symbolizes” respectively). It signifies “a counterpart,” that is, something that corresponds to something else. Its use in theology refers to the fulfillment of a type (*typos* G5596, a term that occurs sixteen times in the NT). Persons, events, and things in Scripture, and especially in the OT, are often types of what later appear in the NT. The paschal lamb, for example, was a type, and Christ is its antitype. In all types and antitypes there is some sort of likeness. The earlier type is a rough draught, or sketch, of the later antitype. Adam was a “pattern [*lit.*, type] of the one to come” (Rom. 5:14), and so were Melchizedek, Abraham, Aaron, Joseph, Jonah, and others who prepared the way for the antitypes, most prominently Christ. See TYPOLOGY.

J. K. GRIDER

Antonia, Tower of. The great fortress built by HEROD the Great for the defense of the temple area and located at its NW corner. See also TEMPLE, JERUSALEM VII.D.

I. Introduction. This tower or castle was named by Herod the Great in honor of his old army associate and patron, Mark Antony. The name Antonia is not used in the NT, but the castle is referred to as “the barracks” (Acts 21:34 et al.). Antonia was erected on the site of an earlier fortress built by the HASMONEANS (Jos. *Ant.* 15.11.4 §403), then destroyed by POMPEY in 63 B.C. That citadel had in turn been preceded by a fortress erected by NEHEMIAH when he rebuilt Jerusalem (Neh. 2:8). SOLOMON had doubtless also built an earlier fortress at this site. The only hill that towered above the temple area was at its NW corner. The castle's W wall was built upon the cliff edge of the Tyropoeon Valley. The N wall was separated from the hill Bezetha by a deep moat. The S wall was on an escarpment that towered 75 ft. above the temple area (Jos. *War* 5.5.8 §§238-45). The terrain to

the E can only be conjectured. (On the view that the location of Antonia should be identified with the Haram esh-Sharif, see the critique by J. Murphy-O'Connor in *RB* 111 [2004]: 78-89.)

II. Description of Antonia. The fortress was roughly rectangular in form. The E–W length has been estimated at approximately 490 ft. and the N–S figure at c. 260 ft. Prominent high towers projected at each of the corners. They were said to be 75 ft. high, except for the SE one, which overlooked the temple and was 100 ft. high.

JOSEPHUS is the authority for the castle's interior. It seems to have served both as a palace and a barracks. Several stairs led down from the castle to the porticoes of the temple at its N end. There was said to have been a subterranean passageway from the castle to the Court of Israel, but it was for emergency use only. TITUS made his grand assault upon the temple area from the Castle Antonia.

In the old city of modern Jerusalem the street that begins at St. Stephen's Gate passes directly above the remains of the Castle Antonia. The street is approximately equidistant between its N and S walls. The Convent of the Flagellation and the Church of the Sisters of Zion are built above much of the N half of Antonia. Under the latter building can be seen a large area of the original central courtyard of the castle, which seems to have been c. 165 ft. square. The massive original paving stones, c. 1 ft. thick, are still in place. The channels cut in the stone pavement were used to carry rain water into the cisterns, which are still in use today. One can also see where the soldiers scratched their game patterns into the pavement, indicating that the soldiers' barracks were probably nearby.

III. Bible history. There are two theories concerning the place where Christ was tried before PILATE. Some scholars favor Herod's palace, which was at the NW corner of the city near the modern Jaffa Gate, but others prefer the Castle Antonia (see PRAETORIUM). Pilate and Christ could have stood on one of the balconies, with the mob in the courtyard described above. John speaks of the "Stone Pavement" as the site of the trial (Jn. 19:13; see GABBATHA). The traditional route known as Via Dolorosa assumes that the Castle Antonia was the site of the trial of Christ before Pilate.

PAUL was arrested in the temple courtyard after the mob had tried to lynch him. He asked for, and was granted, permission to speak to the crowd from the steps leading up from the Court of the Gentiles into the barracks (Acts 21:31—22:29). When Paul appeared before the Council the next day, he again had to be rescued and was rushed up the stairs into the barracks (22:30—23:10). He was then taken by night from the Castle Antonia under a military convoy to CAESAREA (23:23-35).

J. L. KELSO

© Dr. James C. Martin. "Reproduction of the City of Jerusalem at the time of the Second Temple—located on the grounds of the Holy Land Hotel, Jerusalem. Photographed by permission."

The Romans used the Antonia fortress, consisting of four towers, to keep watch over Jewish activities taking place on the temple courts. (Modern reconstruction; view to the SE.)

Antothijah an'toh-thi'juh. KJV form of ANTHO-THIJAH.

Antothite an'tuh-thit. KJV form of ANATHO-THITE.

Anub ay'nubh (ענויב H6707, meaning uncertain). Son of Koz and descendant of JUDAH (1 Chr. 4:8). There may be a connection between Anub and the town of ANAB.

Anus ay'nuhs. KJV Apoc. variant of ANNIUTH (1 Esd. 9:48).

anvil. The Hebrew term *pa'am* H7193, which has various uses, is found with the meaning "anvil" only in Isa. 41:7, where reference is made to the custom of workmen encouraging one another with their work. The metal anvil was driven into a block of wood or into the ground to keep it stable. It was used by various artificers: blacksmiths, silversmiths, tinsmiths, and shoemakers.

S. BARABAS

anxiety. This English term can be used to render several words, such as Hebrew *dē'āgā* H1796 and Greek *merimna* G3533. In both Testaments it is made unambiguously clear that the child of God has a heavenly Father who loves and cares for his own. God will allow nothing to befall his followers except what is for their good; they need not be anxious or fearful about circumstances, whether present or future. The man who trusts God is compared to a tree that does not fear heat and is not anxious in the year of drought, whose leaves always remain green, and does not cease to bear fruit (Jer. 17:8). Psalms 23 and 91 are classic examples of the freedom from anxiety of the godly Israelite who puts his trust and confidence in Yahweh.

In the SERMON ON THE MOUNT, Jesus said that his disciples were not to be anxious about food and raiment, because God, who looks after the birds of the air and the grass of the field, will certainly look after his children; he also said that they are not to be anxious about the morrow (Matt. 6:25-34). He rebuked MARTHA for allowing herself to be anxious and troubled about many things (Lk. 10:41).

PAUL admonished Christians, “Do not be anxious about anything, but in everything, by prayer and petition, with thanksgiving, present your requests to God” (Phil 4:6); and PETER urged them, “Cast all your anxiety on him because he cares for you” (1 Pet. 5:7). In 1 Cor. 7:32-34, where Paul balanced the advantages and disadvantages of the married and the unmarried states, he said that the unmarried do not have to worry about pleasing a spouse, but can give their undivided attention to the things of the Lord.

S. BARABAS

Apame uh-pay'mee (Ἀπόμη). A concubine of DARIUS, king of PERSIA, and daughter of the illustrious Bartacus. She was used as evidence of the great power of women over men, since the king's happiness depended upon her treatment of him. It is not certain whether she is a fictional character or an actual person (1 Esd. 4:29).

ape. The Hebrew word *qôp* H7761 appears only in the list of cargo brought to SOLOMON from either E Africa or, less likely, India (1 Ki. 10:22; 2 Chr. 9:21), and the translation “ape” is given qualified acceptance generally. Apes (more correctly monkeys) from Africa would probably be BABOONS or vervet monkeys; if from India, the word may refer to one of the macaques, of which the E has several common species. No monkeys seem to have been native to Palestine within recent geological periods. The nearest today is the sacred (or *hamadryad*) baboon of the Arabian coast; it was once found in Egypt, where it was sacred. (See *FFB*, 4.)

G. S. CANSDALE

Apelles uh-pel'eez (Ἀπελλῆς G593). A Christian in Rome to whom PAUL sent greetings, referring to him as one who was “approved in Christ” (Rom. 16:10). The reason for the approval is not given, but it is clear that Apelles had been tested and found faithful. The name was a common one among Jews at Rome (the Roman poet Horace mentions an Apelles in *Satires* 1.5.100).

Aphairema uh-fair'uh-muh (Ἀφείρεμα). KJV Apherema. One of three districts taken from SAMARIA and added to JUDEA by the king of SYRIA, Demetrius Nicator, an act subsequently confirmed by Demetrius II (Jos. *Ant.* 13.4.9; 1 Macc. 10:38; 11:34). It appears to be the same place as OPH-RAH, near BETHEL, and possibly was also known as Ephraim (2 Sam. 13:23; Jn. 11:54). See EPHRAIM (CITY). It is identified with the present ʿet-ṭaiyibeh, some 13 mi. NNE of Jerusalem.

Apharsachite, Apharsathchite uh-fahr'suh-kit, -suth-kit (אפרסאכית H10061, אפרסאחית H10062). These terms in the KJV are transliterations of Aramaic words in Ezra 4:9 (which has the longer form); 5:6; 6:6 (the last two references preserve the shorter form, which may be a different word). They refer to people listed among the signers of a letter in which complaint is made to the Persian rulers against the Jewish rebuilding of the temple. C. F. Keil (*Books of Ezra, Nehemiah and Esther* [1888], 66) would link them with the Pharathiakites who lived on the borders of Persia and Media (Strabo, *Geogr.* 15.3.12, *Paraitakēnoi*; cf. Herodotus, *Hist.* 1.101), while A. L. Oppenheim (*IDB*, 1:156) cites evidence to show that the words come from two Old Persian loanwords (*frasaka*, “investigator” [= cuneiform *iprasakku*], and *frēstak*, “messenger”). The latter approach is reflected in the NIV (and other modern translations), which translates both Aramaic terms as “officials.”

W. C. KAISER, JR.

Apharsite uh-fahr'si't (אִפְרָסִי'ת H10060). This term in the KJV transliterates an Aramaic word in Ezra 4:9 that probably should be translated “Persians” (perhaps the same as *pāras* H10594, written with a prosthetic *aleph*; cf. C. F. Keil, *Books of Ezra, Nehemiah and Esther* [1888], 66). It is also possible that this term (like APHARSACHITE, APHARSATHCHITE) is a title of officials.
W. C. KAISER, JR.

Aphek, Aphik ay'fek, ay'fik (אִפֵּק H707[אִפִּיק in Jdg. 1:31], perhaps “stream-bed” or “fortress”). A place name that appears in widely scattered areas of Palestine. (1) A city of the tribal inheritance of ASHER taken from the Canaanites (Josh. 19:30; Jdg. 1:31). The tribe was not able to drive out its inhabitants so they dwelt among them. The city was strategically located on the coastal highway connecting PHOENICIA and EGYPT. It is usually identified with Tell Kurdaneh, near the sources of the river Na^{aman} on the Plain of Acco, 3 mi. inland from the Bay of Haifa.

Aphek.

(2) A site located on the N boundary of the Canaanite territory adjoining “the region of the Amorites” (Josh. 13:4). The term AMORITES here apparently does not have a general connotation (as usually in the OT), but rather is a reference to the kingdom of Amurru, well known from HITTITE and Egyptian sources of the 14th and 13th centuries B.C. This Aphek is probably to be identified with modern Afqa (ancient Aphaca) in LEBANON, near the sources of the Nahr (River) Ibrahim, SE of Byblos (GEBAL, modern Jebeil). It was once a center of the Astarte-Adonis cult (see ASHTORETH).

(3) One of an important chain of cities on the Plain of SHARON (“level country” or “forested region”). It is to be identified with Tell Ras el-^{(Ain at the source of the Yarkon (see ME JARKON), just NE of JOPPA. It was a key point on the VIA MARIS. For this reason it is mentioned in many military campaigns. Its king was slain by JOSHUA and the Israelites during the conquest of Canaan (Josh. 12:18). It was the starting point for the PHILISTINE expedition that captured the ARK OF THE COVENANT and destroyed SHILOH, c. 1050 B.C. (1 Sam. 4:1). The PHILISTINES also assembled their forces at Aphek before the campaign that resulted in the death of SAUL at GILBOA (29:1).}

The Memphis Stela of Amenhotep II mentions Aphek in his second campaign against the Sharon and Jezreel Plains as one of the cities captured by him (c. 1440 B.C.). The SEPTUAGINT text of Josh. 12:18, according to Rahlfs’s edition, seems to indicate that the king of this city was called “the king of Aphek of the Sharon” (the MT names two kings, one of Aphek and one of LASHARON). It was part of the province of SAMARIA during the reign of ESARHADDON (681-669 B.C.). A letter apparently from the king of ASHKELON has been found requesting help of Egypt against the Babylonian army of NEBUCHADNEZZAR, which had already taken Aphek (c. 600 B.C.). Centuries later, HEROD the Great would build ANTIPA-TRIS on this site. (See further *NEAEHL*, 1:62-72.)

(4) A city in the N TRANSJORDAN district of BASHAN on a road from DAMASCUS through the JEZREEL Valley to BETH SHAN. It was near here that BEN-HADAD, the Aramean ruler, was defeated by the Israelites and fled into the city itself, where he sought mercy from King AHAB (1 Ki. 20:26-34). It was also here that a later Ben-Hadad (son of HAZAEL) was defeated by JOASH of Israel according to a prophecy of the dying ELISHA (2 Ki. 13:14-25). Some have identified this city with two distinct sites near the E shore of the Sea of Galilee: Fiq (Upper Aphek) and ^{(En-Gev (Lower Aphek).}
F. B. HUEY, JR.

Aphekah uh-fee’kuh (אָפֶקָה H708, perhaps “stream-bed” or “fortress”). One of the cities listed as part of a district of JUDAH (Josh. 15:53). It should probably be identified with Khirbet el-Ḥadab, some 4 mi. SW of HEBRON.

Apherema uh-fer’uh-muh. KJV Apoc. form of APHAIREMA (1 Macc. 11:34).

Apherra uh-fer’uh (Αφερρα). Ancestor of a family of SOLOMON’s servants who returned with ZERUB-BABEL (1 Esd. 5:34). His name does not appear in the parallel lists (Ezra 2:57; Neh. 7:59).

Aphiah uh-fi’uh (אֶפְיָהּ H688, perhaps “large forehead” or “sooty”). A Benjamite who was one of SAUL’s ancestors (1 Sam. 9:1).

Aphik. Variant of APHEK.

Aphrah. See BETH OPHRAH.

Aphses af' seez. KJV form of HAPPIZZEZ.

Apiru. See HABIRU.

Apis ay'pis (Ἄπις). A FERTILITY god in the form of a living bull, worshiped by the ancient Egyptians in MEMPHIS (see *DDD*, 68–72). There Apis was associated with Ptah, a creator god. Apis was also linked with OSIRIS, god of the dead. The combination Osiris-Apis (Egyptian *ws'ir ḥp*), brought over into Greek as Serapis, was worshiped in Egypt under the Ptolemies as well as in other countries (see PTOLEMY). Some have suggested that the Apis bull inspired the golden calf the Israelites made at Mount Sinai (Exod. 32:4-35) and the golden

© Dr. James C. Martin. The Cairo Museum. Photographed by permission.

A bull image of the Egyptian god Apis.

calves JEROBOAM set up after having visited Egypt (1 Ki. 12:28-29). See CALF, GOLDEN.

There may be an explicit reference to Apis in the OT. The SEPTUAGINT of Jer. 46:15 (= LXX

26:15) begins with the question, *dia ti ephygen ho Apis*, a reading followed by NRSV, “Why has Apis fled?” The Greek translators evidently interpreted the Hebrew consonants *nshp* as two words, *nās ḥap*, whereas the MT understands them as a single verb (niph'al of *sāḥap* H6085, “to wash away”). The NIV, following this latter interpretation and linking the verb with the next Hebrew word, translates, “Why will your warriors be laid low?” (cf. also KJV).

J. ALEXANDER THOMPSON

Apocalypse uh-pok'uh-lips'. See REVELATION, BOOK OF; also APOCALYPTIC LITERATURE; ESCHATOLOGY.

apocalypses, apocryphal. Purported revelations given to or by well-known biblical characters, but excluded from the CANON, are quite numerous. Such extracanonical OT apocalypses include *1–3 Enoch*, *2–3 Baruch*, *4 Ezra* (= *2 Esdras*), *Apocalypse of Adam*, *Apocalypse of Abraham*, *Ascension of Isaiah*, *Assumption of Moses*, *Sibylline Oracles*, and others (English translations in vol. 1 of *OTP*). Among the apocryphal NT books, there are apocalypses that bear the names of Bartholomew, James, Paul, Peter, Stephen, Thomas, and the Virgin (cf. *NTAp*, 2:542-752). In the NAG HAMMADI LIBRARY one finds additional apocalypses attributed to James, Paul, and Peter, as well as other books of a similar genre. See separate articles under these various names. See also APOCALYPTIC LITERATURE; APOCRYPHAL NEW TESTAMENT; PSEUDEPIGRAPHA.

A. K. HELMBOLD

apocalyptic literature. A type of Jewish and early Christian writing, the bulk of which stems from c. 200 B.C. to c. A.D. 100, containing visions or revelations from God concerning the imminent end of the present evil age and the final advent of God's kingdom. In its broadest sense the term *apocalyptic* (from Gk. *apokalypsis* G637, “uncovering, disclosure, revelation”) is applied to parts of the writings of the OT prophets—specifically to passages in Joel, Amos, Zechariah, and Daniel—as well as to portions of the NT (e.g., Mk. 13; 1 Thess. 4:13-18; the book of Revelation). It is customary, however, to use the term primarily with reference to a specific genre of literature that came into existence during the intertestamental period and that has remained outside the biblical canon. Much of this literature is included under the heading PSEUDEPIGRAPHA.

I. Examples of apocalyptic writings. Although apocalyptic has its roots in OT prophecy in general, the real prototype is the series of visions in Dan. 7-12. Indeed, the similarities between these chapters and apocalyptic literature more generally is one of the reasons many scholars date the book of DANIEL in the 2nd cent. B.C. For more information on the works treated below, see separate articles (also cf. vol. 1 of *OTP* for greater detail and for English translations).

The *Book of Enoch* (= *1 Enoch*, also known as the *Ethiopic Enoch*, since it is extant only in a fragmentary Ethiopic translation), is a composite work dating from c. 170 B.C. and following. It contains visions of world history and the history of Israel, from the time of ENOCH to the present day, and looks toward the impending end. It is by far the most important of the nonbiblical apocalypses. The second section of the book, the “similitudes” or “parables” of Enoch, deals with the times of judgment on the world, and gives assurance to the righteous concerning the certainty of the messianic hope. The Messiah is referred to by the title “the Son of Man.” The fifth section of the book contains, among other things, an “apocalypse of weeks”; here history is divided into ten “weeks” (i.e., periods of time of varied length, each marked by a momentous event, usually toward its end), seven belonging

to the past, and three yet to come. Although there is some question concerning the date of the final edition of the book—it may have been worked over by a Christian scribe—Enoch throws valuable light on pre-Christian Jewish theology. See ENOCH BOOKS OF.

The book of JUBILEES (c. 150 B.C.) is not, strictly speaking, an apocalyptic book; but it belongs to the same milieu and contains definite apocalyptic features. Its name is derived from its method of dividing history into “jubilee” periods of forty-nine years each; these, in turn, are subdivided into seven weeks of years. The course of history will lead to the messianic kingdom, which will come as a result of the gradual, spiritual development of mankind and a corresponding transformation of nature; during this time the forces of evil will be restrained and people will live to be a thousand years old.

Although parts of the SIBYLLINE ORACLES (from c. 150 B.C. onward) have a Christian origin, this work contains a number of documents of Jewish origin (books 3-5). Written in Greek by Hellenistic Jewish apologists who sought to imitate the pagan oracles, words are put into the mouth of a prophetess or Sibyl (identified as Noah’s daughter-in-law) that purport to predict the course of world history and the coming of the messianic age with its peace and prosperity.

The TESTAMENTS OF THE TWELVE PATRIARCHS (c. 140 B.C., with later Christian redaction) consist of the last words and testaments of the twelve sons of JACOB to their children. Each testament contains three elements: an account of the significant events in the life of the patriarch, an exhortation based on the foregoing, and a prediction of what will happen in the last days. The apocalyptic element is not very prominent; rather, the stress is laid on ethical admonition. The work is especially important because of its association of the messianic hope with LEVI as well as with DAVID.

The apocalyptic element in the PSALMS OF SOLOMON (c. 50 B.C.), though again not the most prominent feature of this work, is nevertheless significant. There are eighteen psalms in the collection, and two of them contain apocalyptic or messianic content. Chapter 17 gives a brief review of the history of Israel and describes the glories of the messianic era in terms reminiscent of the OT. Chapter 18 continues the same theme, centering on the Davidic MESSIAH, who will rule the nations with wisdom and righteousness. The author’s sympathies lie with the humble poor and oppressed, who are destined to share the glories of the kingdom and also the resurrection.

The *Assumption of Moses* (c. A.D. 6-30; see MOSES, ASSUMPTION OF), written originally in Aramaic, but extant only in Latin (itself a translation of an earlier Greek version), is only one part of a much longer work. According to R. H. Charles, possibly the greatest of students of apocalyptic literature, the longer work was the result of a conflation of a “testament” and an “assumption” (*APOT*, 2:407-9). The part that survives, in spite of its title, bears more the nature of the former than of the latter. Moses is portrayed as predicting the history of Israel from the time of the entry into Canaan to the time of the author. The text is somewhat dislocated, but it centers on the persecution under ANTIOCHUS Epiphanes (169-164 B.C.) and on a pronouncement concerning the coming kingdom of God and the end of the world.

The *Martyrdom of Isaiah* (first half of the 1st Christian cent.), extant only in Ethiopic, Latin (in part), and Slavonic (fragmentary), forms part of a work known as the ASCENSION OF ISAIAH. It contains a prediction of the prophet’s death by being sawed in two (cf. Heb. 11:37). The rest of the *Ascension* is more typically apocalyptic, but probably dates from a later time and is definitely Christian in character.

2 Enoch (1st cent. A.D.), also known as the *Book of the Secrets of Enoch* or the *Slavonic Book of Enoch*, is probably the work of a Hellenistic Jew of Alexandria (though there is some evidence of Christian influence). The first part of the book consists of Enoch’s vision of the seven heavens (on a

trip through them!), and a revelation of the history of salvation from the dawn of time down to Enoch's day, and on to the time of the flood. This is followed by the present age, which will last for seven millennia and will be brought to a conclusion by the final judgment. The last part of the book contains ethical admonitions directed toward Enoch's sons so that they may direct their lives accordingly. This latter section, along with parts of the *Testaments of the Twelve Patriarchs*, represents the high water mark of apocalyptic ethics.

The *Life of Adam and Eve* (before A.D. 70, see ADAM AND EVE, LIFE OF), also called the *Apocalypse of Moses*, is a Jewish work that contains a good bit of interpolation. It attempts to supplement the biblical record concerning the lives of ADAM and EVE. The small but significant apocalyptic element consists of a brief vision given to Adam of the giving of the law, the building of the temple and its destruction, the exile, the return and rebuilding of the temple; this is followed by a time during which "iniquity will exceed righteousness," to be ended by the coming of God to judge the wicked and to save and purify the righteous.

The narrative of the *Apocalypse of Abraham* (1st cent. A.D.; see ABRAHAM, APOCALYPSE OF) tells the story of ABRAHAM'S youth and conversion and subsequent attack upon idolatry. This is followed by an ascension to heaven and a vision of the events of the past and the future. The author is deeply concerned with the problem of evil, but he seems to leave it ultimately unresolved.

The *Testament of Abraham* (1st cent. A.D.; see ABRAHAM, TESTAMENT OF), to be distinguished from the previous work, consists of a series of visions or extraordinary experiences of Abraham immediately preceding his death. He is visited by the angel MICHAEL, caught up into the heavens, and given a glimpse of the final judgment of human souls. He also has various encounters with death in the form of a radiant angel. In his vision of "the world and all created things," Abraham is told that history will last for seven ages, each lasting for a thousand years (cf. *2 Enoch*). In contrast to other apocalyptic writings, there is no sense of impending judgment in this work. Its chief concern is with the future destiny of individual souls.

As it stands, *2 Esdras* (= *4 Ezra* or the *Apocalypse of Ezra*, c. A.D. 90-100; see ESDRAS, SECOND) is probably a mixture of Christian interpolations (2 Esd. 1-2, 15-16) and an original Jewish apocalypse (chs. 3-14). It records seven visions given to EZRA in Babylon. The first two deal with the twin problems of suffering and sin (the latter due to the "evil impulse" in people as a result of Adam's sin), and the signs that will herald the approach of the end. The third vision speaks of the appearance of the Messiah; he and all those with him will die and be raised after seven days. A mourning woman appears in the fourth vision and is comforted; suddenly she disappears and is replaced by the new Jerusalem. The fifth vision presents an eagle with twelve wings and three heads, a reinterpretation of the fourth kingdom of Dan. 7, and a review of history; the present age will be followed by the appearance of Messiah (symbolized by a lion), who will destroy the eagle and deliver the righteous. The Messiah again appears in the sixth vision, as a man who rises out of the sea, travels on the clouds of heaven, and destroys his enemies with the fire of his mouth. The seer is told in the final vision that he will be translated to be with "the Son" until the time of the end (which will come soon); under divine inspiration he dictates ninety-four sacred books (including the Scriptures), which had been destroyed, and then ascends to heaven. The book is replete with imagery and phraseology that appear also in the NT, especially in Revelation. It is also the only apocalyptic book included among the OT APOCRYPHA.

2 Baruch or the *Syriac Apocalypse of Baruch* (c. A.D. 100-130) is closely related to *2 Esdras*, and is probably dependent on the latter. The work begins with a discussion of the problems of suffering and evil. The answer given is this: the present evil age will soon be consummated by a time

of “twelve woes,” following which the messianic age will dawn; the appearance of Messiah will lead to the resurrection of the righteous and the destruction of the wicked. See BARUCH; BARUCH, APOCALYPSE OF (SYRIAC).

A number of the writings found at Qumran (see DEAD SEA SCROLLS) contain apocalyptic elements. The most important of these is the document known as *The War of the Sons of Light with the Sons of Darkness* or simply the *War Scroll* (1QM), which gives the plan for the final eschatological battle between the forces of good and evil. Although

Photographed by permission.

The *War Scroll* from Qumran is an apocalyptic writing that describes the battle between the Sons of Light and the Sons of Darkness at the end of days.

the details of the final battle are more realistically described here than in other apocalyptic works, there is no doubt that the book is a theological treatise rather than a military manual. The writer draws on Ezek. 38, updates this to the situation which exists in his day (i.e., the middle of the 1st cent. B.C.), and gives it a cosmic perspective. Other Dead Sea documents that include apocalyptic features are the *Genesis Apocryphon*, the *Book of the Mysteries*, and *Description of the New Jerusalem*. (Cf. also J. J. Collins, *Apocalypticism in the Dead Sea Scrolls* [1997].)

II. Historical background. Many factors concerning the historical milieu of apocalyptic literature are debated among scholars. All are agreed that the book of Daniel provided the prototype for this literary form and that apocalyptic writings arose out of a context of renewed Jewish nationalism, beginning with the Maccabean revolt (see MACCABEE). It is also generally agreed that the apocalyptic writings were written during times of intense persecution and crisis. As D. S. Russell has written, “It

is essentially a literature of the oppressed who saw no hope for the nation simply in terms of politics or on the plane of human history” (*The Method and Message of Jewish Apocalyptic* [1964], 17).

But how is this literature related to the various sects of JUDAISM? Is it representative of “mainstream” Jewish thinking? Or is it the literature of a “fringe” movement in Judaism? Does it stem from Palestinian Judaism, or from the DIASPORA? G. F. Moore, R. T. Herford, and others have minimized the place of apocalyptic in Jewish religion, arguing that it had little to do with normative Judaism. On the other hand, C. C. Torrey, W. D. Davies, D. S. Russell, and others have written in favor of the view that apocalyptic represents one of the most important developments in Judaism within the intertestamental period. Since (a) there was no such thing as “normative” Judaism prior to c. A.D. 70 (contra Moore) and (b) the extant literature is so extensive, it is probably safe to conclude that it was indeed an important feature of the Judaism of the period from 200 B.C. to A.D. 100.

Is the literature, then, to be identified with the PHARISEES (W. Bousset, R. H. Charles, S. Zeitlin), the ZEALOTS (R. T. Herford, in his earlier writings), or the ESSENES (K. Kohler, R. P. C. Hanson)? (No one argues in favor of identifying this body of literature with the SADDUCEES, since there is such great emphasis on the RESURRECTION and final judgment.) While it is certain that the Zealots drew some inspiration from apocalyptic writings, that the Essenes read and possibly even wrote some of them, and that there may have existed an “apocalyptic Pharisaism” (to use the phrase of Charles), it seems likely that the writers of apocalyptic literature were scattered throughout the various parties of Judaism. There is also good reason to regard the movement as having arisen in Palestine, rather than in the Hellenistic world outside (though the movement did spread to the Diaspora).

III. Characteristics of apocalyptic literature. There is much diversity among the apocalyptic writings. Nevertheless, there are certain general features that are characteristic of the literature as a whole and that justify the distinguishing of “apocalyptic” as a literary type: the presence of a cosmic dualism, visions and revelations; a contrast between the present evil age and the coming eschatological age; pessimism concerning the present age and optimism concerning the age to come; references and allusions to mythology, numerology, and animal symbolism; the idea of the unity of history and a goal toward which history is moving; the development of belief in life after death, and especially the resurrection of the righteous and the judgment of the wicked (there is no resurrection for the unrighteous dead); and the appearance of a transcendent figure identified as the SON OF MAN. Russell suggests four distinctly literary characteristics of apocalyptic: “It is esoteric in character, literary in form, symbolic in language, and pseudonymous in authorship” (*Method and Message*, 106).

A. Esoteric. The apocalyptic writings purport to be revelations of divine mysteries to certain illustrious individuals of Israel’s past, which were subsequently recorded in secret books for the instruction of God’s chosen remnant. The secrets are revealed to the seer in the form of a dream or vision, often in the context of a literal or spiritual translation to heaven. The vision may consist of a review of the history of the world up to the time of the assumed author, or it may take the form of prediction and outline the future destiny of the world and the coming of the KINGDOM OF GOD. Or it may describe the mysteries of the unseen world (that is, HEAVEN and HADES), the movements of the heavenly bodies, and the forces of nature. What is seen by the seer is written down, to be hidden away for many generations and faithfully preserved until the time of the end.

B. Literary. In spite of the visionary character of apocalyptic literature, it is quite clear that the

visions are, for the most part, literary creations by the author. That is to say, they are not the descriptions of actual ecstatic experiences, but rather self-conscious theological statements. While the OT prophets were first people who *spoke* the Word of God given to them and only afterward wrote down their messages, the apocalyptists were primarily *authors*. Closely related to this feature is the elaborate symbolism through which the various authors convey their messages.

C. Symbolism. Apocalyptic literature is marked by imagery and style that are striking to say the least. Some of the images are taken from the OT (esp. from Daniel). Some of it has its origin in ANE mythology, such as references to LEVIATHAN, BEHEMOTH, and “the dragon” (also alluded to in the OT); the use of animals to symbolize men and nations; allusions to “heavenly tablets” and astral phenomena; etc. In fact, the whole literature is marked by a carefully developed SYMBOLISM, which tends to suit its esoteric character. A study of this symbolism is important for an understanding of the book of Revelation in the NT, as well as the book of Daniel in the OT.

D. Pseudonymous. Apocalyptic literature is generally, though not always, pseudonymous. That is to say, the writers put their message into the mouth (or at least the pen) of some honored figure from ancient times (e.g., Enoch, Moses, Abraham, Isaiah, etc.). The reason for the adoption of PSEUDONYMITY is not entirely clear. The traditional explanation is that these writers had to attribute their writings to men of God prior to the time of Ezra (when, it was believed, prophecy had come to an end in Israel), in order to have them accepted as authentic revelations. Yet it is questionable whether anyone would have been deceived by this tactic. Another suggestion is that they adopted pseudonyms to avoid persecution by the authorities of the day (but why not simple anonymity?). Another explanation given by some is that pseudonymity was merely a literary custom with no attempt to deceive the reader. More recently, pseudonymity has been explained (by Russell) in terms of CORPORATE PERSONALITY, the peculiar time-consciousness of the ancient Hebrews, and the significance of proper names in Hebrew thought: the author identified himself and his message with the ancient seer in whose name he wrote, and wrote as his representative. Whatever the real reason for choosing the medium of pseudonymity, it seems probable that the name of the person in whose name the author wrote is related to the content of the book and, therefore, is not the result of an arbitrary choice.

IV. Biblical versus nonbiblical apocalyptic. Although the writings we have been discussing lie outside the canon of the Bible, they have their roots firmly embedded in the OT prophetic tradition. First, the authors are heirs to the prophetic view of history; alongside the biblical writers they speak in the name of the One who is sovereign over the whole of human history. Secondly, they call Israel to repentance and bring a message of comfort and encouragement to the faithful. Thirdly, they draw heavily on the visionary imagery of the prophets—chiefly Daniel, but also Joel, Zechariah, Isaiah, and Ezekiel.

Many scholars would classify the book of Daniel itself as apocalyptic in the same sense as the other writings discussed in this article. Conservative scholars, however, tend to emphasize the difference between Daniel (and also Revelation) and the later apocalyptic writings and to classify Daniel as “prophetic-apocalyptic.” Drawing attention to the tendency toward determinism, pessimism, and ethical passivity in noncanonical apocalyptic, G. E. Ladd stresses the contrast between biblical and nonbiblical apocalyptic books (*Jesus and the Kingdom* [1964], 75-82). It must be noted, however, that these features are not present to the same degree in all the extracanonical

writings; the *Testaments of the Twelve Patriarchs* and *2 Enoch* lay a greater stress on the ethical implications of ESCHATOLOGY than even Daniel and Revelation, and it is certainly an overstatement to suggest that in apocalyptic literature “the present and future are quite unrelated” or that the apocalyptists “lost the dynamic concept of the God who is redemptively active in history” (ibid., 89, 97). Without denying the differences, it is probably more helpful to emphasize the similarities between biblical and nonbiblical apocalyptic, especially as a literary genre. Daniel has links with the prophetic tradition in Israel that the other apocalyptists do not possess, but its ties with the apocalyptic tradition are equally close. The book of Revelation has its roots squarely in the latter tradition.

V. Apocalyptic and the NT. Although the eschatology of the NT writings is free from the mythological associations and other negative features of noncanonical apocalyptic, it does draw from the store of apocalyptic imagery and occasionally uses its literary forms. References to the PAROUSIA of the Son of Man (the name itself is apocalyptic!) and the coming of God’s kingdom in the teaching of Jesus are replete with apocalyptic images, as are also references to the resurrection and the final judgment in the letters of Paul. There are also passages such as “the little apocalypse” of Mk. 13 (cf. Matt. 24) and the description of “the man of sin” (2 Thess. 2:3 KJV). The chief representative is, however, the Revelation of Jesus Christ, commonly called the Revelation of St. John the Divine, from which this genre derives its name (Revelation = Gk. *Apokalypsis*).

The symbolism of Revelation is derived from three sources: the OT (the chief source), contemporary life in the Roman province of ASIA (esp. in Rev. 1-3, but also in the rest of the book), and Jewish apocalyptic literature. Symbols that Revelation shares with the latter include these: a woman, representing a people (ch. 12) and a city (ch. 17); horns, speaking of authority (5:6; 12:3; 13:1; 17:3; et al.); eyes, signifying understanding (1:14; 4:6; 5:6); trumpets, representing a superhuman or divine voice (1:10; 8:2; et al.); white robes, portraying the glory of the world to come (6:11; 7:9, 13-14; 22:14); and crowns, indicating dominion (2:10; 3:11; 4:10; et al.). The symbolic use of colors (white=victory; purple=kingship; black=death), numbers (seven=fullness or perfection; twelve=the eschatological perfection of the people of God; four=the visible world), angels (mentioned sixty-seven times), and visions (fifty-four times) also link Revelation with the apocalyptic tradition. Revelation stands apart from the other apocalyptic writings, however, in a number of ways: it is not pseudonymous; it contains no revelations of the mysteries of cosmogony, astrology, or the unfolding of ancient history since the beginning of the world; and it offers a specifically Christological conception of history.

(For further discussion, see P. Hanson, *Old Testament Apocalyptic* [1987]; J. C. VanderKam and W. Adler, eds., *The Jewish Apocalyptic Heritage in Early Christianity*, CRINT 3/4 [1996]; J. J. Collins, *The Apocalyptic Imagination: An Introduction to Jewish Apocalyptic Literature*, 2nd ed. [1998]; B. McGinn et al., eds., *The Encyclopedia of Apocalypticism*, 3 vols. [1998]; S. L. Cook, *The Apocalyptic Literature* [2003]; B. McGinn et al., eds., *The Continuum History of Apocalypticism* [2003]; S. M. Lewis, *What Are They Saying about New Testament Apocalyptic?* [2004].)

apocalypticism. See APOCALYPTIC LITERATURE.

Apocrypha. A group of books written during the last two centuries B.C. and the 1st cent. A.D. that are included in editions of the SEPTUAGINT and the VULGATE OT, but not in the Hebrew Scriptures. At

the Council of Trent in 1546, the Roman Catholic Church received these materials as canonical (except for 1 and 2 Esdras and the Prayer of Manasseh) and designated them *deuterocanonical*, that is, officially accepted as part of the canon on a second or later occasion. The term *apocrypha* is sometimes used more broadly of other inauthentic or noncanonical writings (see APOCRYPHAL NEW TESTAMENT; PSEUDEPIGRAPHA).

I. The concept of the Apocrypha. The word *apocrypha* (sg. *apocryphon*, from the Gk. adjective *apokryphos* G649, “hidden”) was used originally as a literary term with regard to books considered unsuitable for public reading because of their esoteric content. It was felt that the secret doctrines they enshrined would lose their authority if they were profaned by the gaze of the common people, an attitude particularly in evidence among the Greek Gnostics. After A.D. 70 the apocalyptic works fell into disfavor in Judaism, and the term *apocrypha* became equally debased. The esoteric nature of the “hidden” books actually worked against them, since the uninitiated believed that the secret lore was really heresy. The term thus came to mean “heretical, spurious,” and books of this nature were forbidden to be read either in public or in private. This situation had become normative by the 4th cent. A.D., since Athanasius (d. A.D. 373) and Rufinus (d. A.D. 410) spoke of apocryphal material in this manner. Some books in the NT canon were occasionally regarded as apocryphal, and Gregory of Nyssa (d. A.D. 395) put the book of Revelation into that category. In the 5th cent. the term was used to designate noncanonical rather than heretical works, as in the writings of JEROME (d. A.D. 420), and this usage has survived to modern times in Protestant thought.

II. The Apocrypha in Judaism. During the two centuries prior to the birth of Christ, a great many books were written by Jewish authors. Since it was only about A.D. 100 that the idea of a “closed” Hebrew canon was implemented, the problem of the canonicity of these compositions was not serious. These “outside books” were known in Jewish circles as “writings which do not defile the hands” and enjoyed considerable popularity, as shown by the large number of Hebrew and Aramaic works of this kind, some of which were recovered from Qumran (see DEAD SEA SCROLLS). The members of this Jewish sect made little serious effort at distinguishing between the canonical Hebrew writings and other works of a similar character, and this attitude undoubtedly reflected current practices in Judaism.

Most of the apocryphal compositions in circulation at that time were of an APOCALYPTIC, legendary, historical, or theological nature, and in addition to the OT Apocrypha included such works as the book of JUBILEES, the PSALMS OF SOLOMON, the story of AHIKAR, and other books from the intertestamental period that are sometimes styled *pseudepigraphic* (see PSEUDEPIGRAPHA). The popularity of much of this literature came to an abrupt end with the fall of Jerusalem in A.D. 70, and the apocalyptic writings in particular, in which so much hope had been placed, fell into outright disfavor with the collapse of the Jewish state. In addition, Christian compositions written in ARAMAIC were increasingly available, and when Christian interpolations began to appear in Jewish apocryphal works,

the designation of the “outside books” became an urgent matter. Some action in this area may have taken place c. A.D. 100, although the precise occasion, the supposed Synod of Jamnia, has been a matter of some scholarly debate (see JABNEEL). However, by the beginning of the 2nd cent. A.D., the excluded literature was no longer a problem to the Jews, particularly since by that time a substantial corpus of rabbinic literature had arisen to replace it. Interestingly enough, the apocryphal writings of Judaism survived more as the result of the activities of Christians than through any serious interest on the part of the Jews.

III. The Apocrypha and Christianity. At the beginning of the Christian era, the LXX was the text of Scripture used by Greek-speaking Jews (see SEPTUAGINT). When the Christian church came into existence, its members felt no particular urge to repudiate those familiar compositions found in the LXX canon that were not represented in the Hebrew Scriptures. Although there may be instances where certain NT writers reflected the imagery or phraseology of some apocryphal compositions, they never cited them either as inspired or as sources of spiritual authority. One of the great values of the Apocrypha for the Christians was the fact that it bridged the gap between the end of prophecy and the writing of the NT books, furnishing valuable historical, political, and religious information that would otherwise have been difficult to obtain.

A. The early church. Quite aside from the possibility that apocryphal writings were reflected in the NT (cf. Heb. 1:1-3; Wisd. 7:25-27), it seems clear that they were used for instructing believers in the early Christian period. The epistle known as *1 Clement* (c. A.D. 95) included quotations from the Wisdom of Solomon, while POLYCARP of Smyrna (d. c. A.D. 156) quoted from Tobit. TERTULLIAN (d. c. A.D. 225) and IRENAEUS (d. c. A.D. 200) cited certain books of the LXX canon as scriptural and were followed in this by CLEMENT OF ALEXANDRIA, ORIGEN, and Cyprian. JEROME (d. A.D. 420) regarded as apocryphal all those writings that stood outside the Hebrew canon, but in his Latin

translation (the Vulgate) he included them according to church practice, though not without some reservations. Jerome and Cyril of Jerusalem (d. c. A.D. 386) were the first to use the term Apocrypha for the excess of the LXX over the Hebrew canon. In his earlier writings AUGUSTINE (d. A.D. 430) accepted the traditional church view that the Apocrypha were canonical, but later he admitted to a difference between the Hebrew Canon and the “outside books.” Thus in the early church the degree in which the Hebrew canon was esteemed determined the attitude adopted toward the Apocrypha.

B. The Reformation. For the Reformers the Bible was the sole and supreme authority in matters of belief and conduct, raising questions as to the status of the Apocrypha in this connection. Luther gathered the “outside books” from Greek and Latin MSS and placed them at the end of his 1534 German translation under the heading of “Apocrypha.” The Roman Catholic Church responded quickly in the Council of Trent (1546) by acknowledging as canonical all of the Apocrypha except 1 and 2 Esdras and the Prayer of Manasseh. In the 1592 edition of the Vulgate, these three works formed an appendix to the NT. Calvin and his followers explicitly rejected any authority that the Apocrypha might have claimed or received, holding that the contents were not divinely inspired. After Luther’s day, translations of the Bible in various European languages segregated the Apocrypha, and after 1626 some editions of the KJV appeared without it.

C. Post-Reformation attitudes. The controversy regarding the canonicity of the Apocrypha ended in a stalemate, with the Roman Catholic Church holding that it was of equal inspiration and authority with the rest of Scripture, while Reformed tradition firmly rejected it as divinely inspired Scripture. The Church of England formularies (Article 6) recognized its use “for example of life and instruction of manners,” but the *Westminster Confession* (1.3) forbade it to be “in any otherwise approved, or made use of, than other human writings” (see P. Schaff, *The Creeds of Christendom* [1882], 3:490-91, 602). In modern times the value of the Apocrypha for both Judaism and primitive Christianity has been amply recognized, and the discoveries at Qumran have given new zest to studies of the intertestamental period and its massive literature (though interestingly enough, the Apocrypha are not represented significantly in MS discoveries at Qumran).

IV. Contents. The works commonly viewed as part of the Apocrypha are the following: 1 and 2 Esdras, Tobit, Judith, the Additions to Esther, the Wisdom of Solomon, Ecclesiasticus, Baruch, the Letter of Jeremiah, Additions to the Book of Daniel, the Prayer of Manasseh, and 1 and 2 Maccabees. Some LXX MSS include the quasi-historical books designated 3 and 4 Maccabees, but these belong properly to the Pseudepigrapha. (In addition to the summaries that follow, see the separate articles on each book. For an English translation of these works, see *The New Oxford Annotated Apocrypha*, 3rd ed., ed. M. D. Coogan [2001]. Cf. also R. H. Pfeiffer, *History of New Testament Times with an Introduction to the Apocrypha* [1949]; B. M. Metzger, *An Introduction to the Apocrypha* [1957]; M. E. Stone, ed., *Jewish Writings of the Second Temple Period*, CRINT 2/2 [1984]; D. J. Harrington, *Invitation to the Apocrypha* [1999]; A.-M. Denis et al., *Introduction à la littérature religieuse judéo-hellénistique (Pseu-dépigraphes de l’Ancien Testament)*, 2 vols. [2000]; L. DiTommaso, *A Bibliography of Pseudepigrapha Research 1850-1999* [2001]; D. A. deSilva, *Introducing the Apocrypha: Message, Context, and Significance* [2002].)

First Esdras. This work (called 2 Esdras in the Lucianic recension of the LXX, and 3 Esdras in the Vulgate) furnishes a parallel account of events recorded in Chronicles-Ezra-Nehemiah, with the

addition of an old Persian tale, the Debate of the Three Soldiers (1 Esd. 3:1—5:6). Thus the book covers by selection the history of Israel from the late preexilic period to about 444 B.C., when EZRA promulgated the law in the restored Jewish state. The parallels with canonical literature are as follows: 1 Esd. 1:20, 23-25 = 2 Chr. 35:1—36:21; 1 Esd. 2:1-11 = Ezra 1:1-11; 1 Esd. 2:12-26 = Ezra 4:7-24; 1 Esd. 5:7-71 = Ezra 2:1—4:5; 1 Esd. 6:1—9:36 = Ezra 5:1—10:44; 1 Esd. 9:37-55 = Neh. 7:73—8:13.

An indication of the popularity of this type of literature in the intertestamental period is seen in the fact that JOSEPHUS preferred 1 Esdras as his authority over the canonical books of Ezra and Nehemiah. The book is not a translation of the MT of Ezra-Nehemiah, however, though it was probably based on a closely related text from a family now known, from discoveries at Qumran, to have been circulating in Judea in the immediate pre-Christian period. Nor does 1 Esdras depend on the Hebrew text underlying the LXX translation of Ezra-Nehemiah, as shown by the divergence of readings and the variation in the chronology of the Persian kings. Perhaps 1 Esdras may even have been based on a Hebrew text that rivals the MT in intrinsic value. The date of the composition is as difficult to determine as its origin, but it is certainly later than the Persian period and perhaps emerged from 2nd-cent. B.C. ALEXANDRIA. It was in circulation in the time of Christ, since Josephus employed it as a source. The work is rather fragmentary, and whether it has survived as part of a more complete book is unknown.

The purpose of 1 Esdras is also problematic, since the history of the period was already known from canonical sources, and the errors and contradictions in it would hardly commend it to a serious student of Jewish history. Certainly the inclusion of pagan folklore would depreciate its value for orthodox Jews. The book opens in the preexilic era, but it goes on to describe the captivity, the return, and the frustrations relating to the rebuilding of the temple and city walls. The central section (1 Esd. 3:1—5:6) tells of a competition between three Persian soldiers to decide the most powerful thing in the world. The winner, who held truth to be the strongest, gained as a reward the return of the temple treasures and the rebuilding of the temple itself. The remainder of the narrative deals with the religious reformation of EZRA. Clearly the book cannot be taken seriously as history, and is at best a moralizing composition glorifying truth. See further ESDRAS, FIRST.

Second Esdras in the English versions is 4 Esdras in the Vulgate; it is also known as the *Apocalypse of Ezra*, though modern scholarship usually refers to it as *4 Ezra*. This work survives mainly in Latin and is not found in the LXX (in the latter, 2 Esdras corresponds to the canonical Ezra-Nehemiah). It is a Palestinian-Jewish apocalypse (see APOCALYPTIC LITERATURE) to which Christian material had been added, and the resemblance of it to parts of the NT commended it to the early church. It was quoted by certain Fathers, beginning c. A.D. 200 with CLEMENT OF ALEXANDRIA. The first two chapters, of Christian origin, can be dated c. 150, and the central apocalyptic portion was written perhaps fifty years earlier, since the writer apparently saw Jerusalem destroyed. The final two chapters may be dated c. 250 and are an appendix to the apocalypse, which is one of the latest sections of the Apocrypha.

The original work comprised seven visions, the first (2 Esd. 3:1—5:19) demanding a reason for the sufferings of Zion and continuing this theme into the second vision (5:20—6:34). The angel Uriel answers that this problem is incomprehensible to man, but that the coming age would bring salvation. The third vision (6:35—9:25) deals with the small numbers of the elect and the coming age of grace, a theme continued in the fourth vision (9:26—10:59) with the transformation of Jerusalem. The fifth vision (11:1—12:51) deals with the supplanting of Roman power by the Messiah, while the sixth

vision (13:1-58) comprises an adaptation of the Son of Man vision (Dan. 7). The final vision in 2 Esd. 14 describes legendary activities of Ezra the Scribe, continuing the theme of the first two chapters that speak of his background and work.

The dualistic and eschatological elements of the book were typical of ancient apocalyptic writers who were convinced that mankind was caught up in the inexorable struggle between good and evil. In 2 Esdras the evil will of man (cf. *Heb. yēšer H3671*) was held to be the principal cause of human wickedness, and the only hope for humanity was the inauguration by God of a new age of grace. The presence of a Messiah in Jewish apocalyptic was considered of secondary importance, and 2 Esdras is no exception to this tendency. While the book reflects the determinism of apocalyptic thinking generally, it estimated the human situation in realistic terms and manifested a firm belief in the banishment of evil through divine intervention. For the apocalyptic writers, Israel was righteous, and therefore they did not reflect that sense of moral and ethical crisis found in the canonical prophets. While there are certain bizarre and tedious elements in the book, it does in fact constitute a theodicy, endeavoring to justify the divine workings to man. See further ESDRAS, SECOND.

Tobit is a pious romance narrating the fortunes of a righteous captive of the Israelite exile and was a popular story in the intertestamental period. It was transmitted in three Greek recensions, as well as in Latin, Syriac, Ethiopic, and Hebrew versions. Fragments of Tobit in Hebrew and Aramaic were found among the MS deposits in the Qumran caves, and these suggest an Aramaic original. However, the language of composition is unknown, as is the place. A Palestinian background is possible, but Mesopotamia seems more probable, and the time of writing is not the Assyrian or Babylonian Captivity, but most probably c. 200 B.C. The book contains certain historical and geographical errors, such as the assumption that SENNACHERIB was the son of SHALMANESER (Tob. 1:15) instead of SARGON II, and that NINEVEH was captured by NEBUCHADNEZZAR and AHASUERUS (14:15) instead of by NABOPOLASSAR and Cyaxares. Again, the writer places Rages one day's journey from Ecbatana, whereas the distance takes two weeks by camel caravan.

The story narrated the privations of Tobit in exile, which culminated in the misfortune and shame of blindness. A young Hebrew woman named Sarah who lived in Ecbatana was also ill, and the angel Raphael was sent to heal them both. He joined Tobias, son of Tobit, on a journey to Media and instructed him to preserve the heart, liver, and gall of a fish they caught in the Tigris. On returning home he anointed Tobit's eyes with the fish gall, after which his sight was restored. The tale taught fidelity to the Torah and humility and obedience toward God, as well as the importance of discharging family and social obligations properly. Although unhistorical, it gives a useful glimpse of traditional Jewish piety in the 2nd cent. B.C., and throws interesting light on the growing doctrines of angels, demons, and spirits in the pre-Christian period. See further TOBIT.

Judith was another story that was extremely popular in intertestamental times and was accorded historicity by some early church fathers. Four different forms of an early Greek version have survived, all of them based on a lost Hebrew original. The fact that the chief character was a woman added to the appeal of the work, and the courageous nature of her exploits was in the tradition of other Israelite women who had managed at various times to stave off disaster by their counsel or cunning.

The story is set in the early days of the return from captivity and tells of the overthrow of Nebuchadnezzar's armies by Judith's guile. Because Judea had not helped Nebuchadnezzar in his war against Media, the province was put under siege. Judith left her native Bethulia to visit Holofernes,

the enemy commander, on the pretext of betraying military secrets. Having aroused the amorous interests of Holofernes, she was able to behead him while they were dining alone one night. She returned to Bethulia with his head, whereupon the besieged inhabitants launched an attack on the enemy, who retreated in disorder. Hymns of praise were then sung, and the nation enjoyed a period of peace.

The story fits readily into the time of the Maccabean uprising (2nd cent. B.C.; see **MACCABEE**), but cannot possibly be historical because of the glaring errors it contains. Thus Nebuchadnezzar is given an impossibly long reign, as is the ruler of Media, while the Assyrians and Babylonians are hopelessly confused and the armies are made to perform impossible feats of mobility. The story was intended to show that even the most desperate circumstances warranted faith in God, and that individual courage and enterprise were never to be discounted on such occasions. Judith herself typified the legalistic Pharisaic piety of the Maccabean period, but by her behavior showed her awareness that Israel's troubles were the result of sin. Submission to the divine will alone would bring salvation, and this attitude could be readily effected by obedience to the Law.

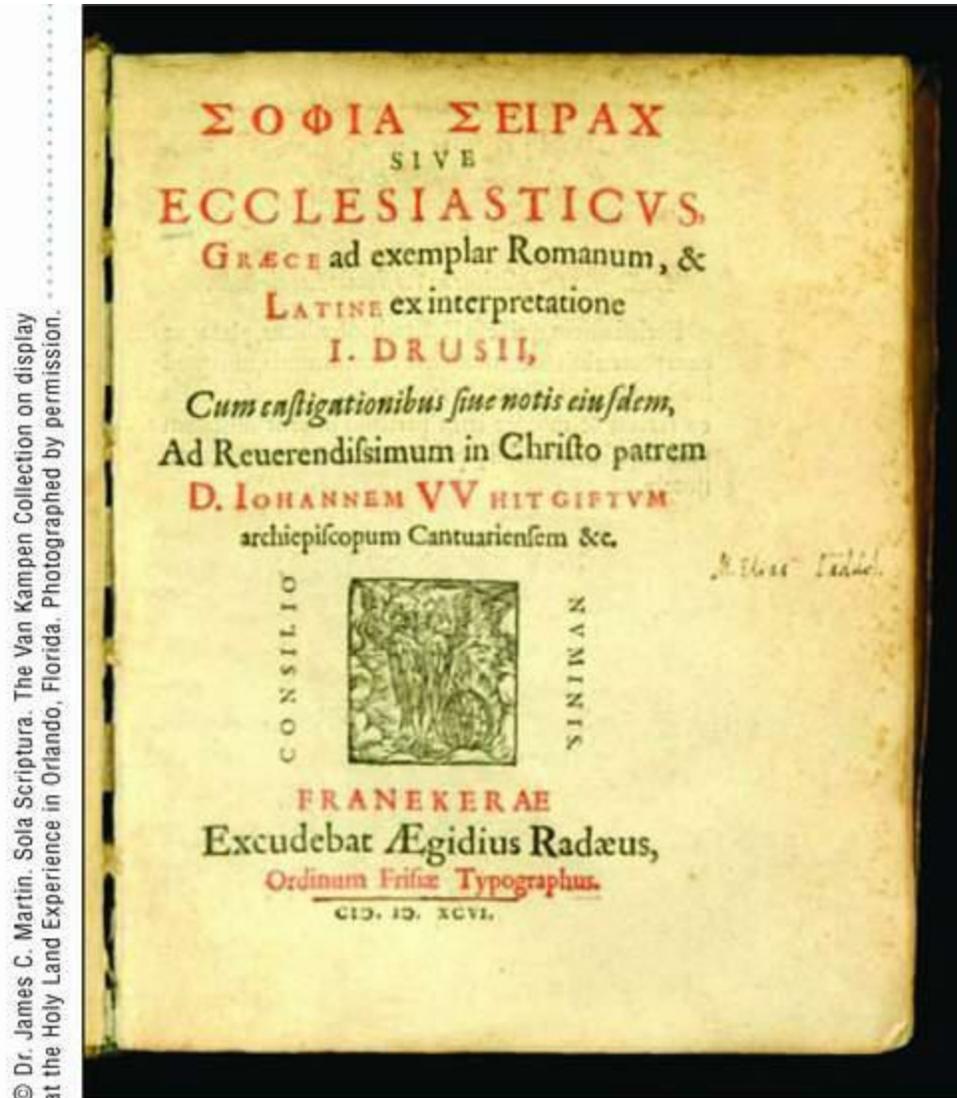

The **Additions to Esther** do not form a separate continuous narrative when taken together; they were meant to be inserted into the LXX text at various points. Of the six sections, the first, which prefixed the canonical **ESTHER**, deals with Mordecai's dream and his prevention of a plot against the king, while the second contains the royal edict for the destruction of Persian Jews and follows Esth. 3:13. The third consists of the prayers of Mordecai and Esther and was meant to follow Esth. 4. The fourth section describes Esther's audience with the king, supplementing Esth. 5:12, while the fifth, which follows Esth. 8:12, records the royal edict permitting Jewish self-defense. The final addition interprets the dream of Mordecai and furnishes a chronological note regarding the date when the letter concerning Purim was brought to Egypt. All the additions seem to have been written in Greek, and a diversity of authorship is quite possible. There is little likelihood that the Hebrew text was an abbreviated form of a larger book in Hebrew or Aramaic, of which the Greek was a translation, if only because the Additions contain too few Semitisms to require a Hebrew original. From the epilogue it appears that the book of Esther was translated into Greek in the 2nd cent. B.C., and presumably the Additions were prepared at that time. Contrasted with the canonical Esther, the Additions are marked by open references to God and by expressions of devotion, faith, and piety. See further **ESTHER**, **ADDITIONS TO**.

The **Wisdom of Solomon** was one of the most notable of the Hebrew gnomic compositions, having its roots deep in the teachings of the ancient Hebrew sages. Under the influence of Greek canons of thought, Wisdom of Solomon attained to a more formal presentation than other examples of this type of literature. The book was valued by patristic authors and found its way into a number of languages, including Coptic (Sahidic) and Armenian. Although purporting to be written by **SOLOMON**, the pseudonymous character of the book was recognized from early times. Attempts at that point to identify the author caused it to be credited variously to Philo Judaeus, Ben Sira, the Essenes, and the Therapeutae of Egypt. Modern views on authorship are affected by considerations relating to the unity of the work, with some scholars maintaining that the first nine chapters are from a different writer than the rest of the book. While diversity of authorship is certainly possible, it may be that the work was composed deliberately in two halves as a bifid, with the first section dealing with the theoretical aspects of wisdom and the second showing wisdom at work in the history of Israel.

While the author is unknown, an Alexandrian origin is most probable, and a date of composition between 150 and 50 B.C. seems to suit the content of the book best. If composed at **ALEXANDRIA**, the original language of Wisdom was almost certainly Greek, though some scholars have argued for a

Hebrew original of the first ten chapters. This latter view seems improbable because some of the least Hebraic concepts of the entire work occur in the first few chapters. In writing the book, the author may have been trying to rekindle zeal for God and the Hebrew Torah at a time of apostasy in Judaism, and may even have attempted to influence the Gentiles against the follies of idolatry.

The book exhorts all to pursue wisdom and deals with the blessings that will result, including righteousness, immortality, humility, prosperity, and justification in the day of judgment (Wis. 1:1—5:23). Without wisdom (hypostatized as a feminine celestial being), earthly rulers cannot govern properly, and Solomon was adduced as an example of how wisdom was bestowed through prayer (6:1—7:14). After enumerating the characteristics of wisdom, the author explains how they were communicated to the human mind (7:15—8:16). A subsequent prayer, which again hypostatizes wisdom, comprises an expanded form of 2 Ki. 3:6-9

An early edition (1596) of the apocryphal book of Ecclesiasticus or Wisdom of Sirach.

and 2 Chr. 1:8-10 (Wis. 8:17—9:18). The remainder of the book reviews OT history to illustrate the thesis that wisdom had helped the Jews consistently, as in Egypt (10:1-21), in the wilderness (11:1-26), and against Canaan (12:1-11). Polytheism comes in for scathing denunciation (12:12—15:19), being blamed for all the vices afflicting human society. Idols occasionally brought punishment on their worshipers (16:1-14), but in general what was friendly to Israel became punitive to her enemies (16:15—18:4). The humiliation of Egypt is continued by an elaborate account of the crossing of the

Red Sea (18:5—19:19), at which the book closes without reaching a conclusion.

The Platonic concept of the preexistence of the individual soul was upheld by the author, as was the theory that matter was eternal and evil. Stoic tenets in Wisdom include the four cardinal virtues and the idea of a world-soul (see STOICS). The immortality and resurrection of the soul are taught in Wisdom also, as is the final felicity of the righteous. In the book, wisdom is consistently personified and favored with omnipotence and omniscience, being regarded as active in the creation and subsequently serving as an intermediary between man and God. There are few messianic references in Wisdom, and the work is a demonstration of the universal and constant activity of God on behalf of his people. See further WISDOM OF SOLOMON.

One of the most valued intertestamental books is Ecclesiasticus, also known as the Wisdom of Jesus the Son of Sirach. The author, commonly referred to as Ben Sira, following Jewish usage, was a scribe of the old tradition who had conducted a school in Jerusalem for many years. During this time he compiled his book, parts of which have survived in Hebrew in MSS contained in the Cairo GENIZAH (a synagogue storeroom). He instructed young men orally, after the fashion of the ancient Hebrew sages, and wrote down his teachings to give them permanence, using the canonical Proverbs as a model. His thought was orthodox, giving no hint of Hellenic culture, and was Sadducean in emphasis. He wrote c. 180 B.C., since according to a preface his grandson migrated to Egypt in the reign of PTOLEMY Euergetes (170-117 B.C.).

The book is in two parts, comprising Sir. 1-23 and 24-50 plus a short appendix, ch. 51. The first section bases a successful life on reverence for God and observance of the law, while the second praises famous men of Israel, ending with Simon II, the high priest c. 200 B.C. The characteristic themes of PROVERBS are expounded and illustrated with examples from the experience of the author. Ecclesiasticus or “the Church Book” was highly valued in the early church and was sometimes cited by the rabbis as Scripture. The book is the last great example of Hebraic wisdom literature, and its typical stress is on the identification of wisdom with the law. See further ECCLESIASTICUS.

Baruch is a brief work attributed to the friend and scribe of Jeremiah, purporting to have come from the period of captivity and addressed to the Jewish deportees. It falls into three sections: the first (Bar. 1:15—2:10) is a confession; the second (2:11—4:4) is a plea for mercy and pardon, followed by a homily on wisdom; and the third (4:5—5:9) is a section of consolation and assurance. A good deal of literary skill is evident in the work, though its dependence on sections of Job, Daniel, and Isaiah are obvious. Baruch was read widely by the Jews of the DIASPORA and became part of the synagogue liturgy (cf. 1:14), surviving into the early Christian era. Synagogue usage would suggest an original Hebrew composition, and if the book is a unity, which many scholars dispute, it could have been written by 350 B.C. If it came from diverse hands, a 2nd cent. B.C. date of composition seems more likely. See further BARUCH, BOOK OF.

The **Epistle of Jeremiah** is a typical Hellenistic Jewish attack on idolatry, in the form of a letter from Jeremiah to the Babylonian exiles. Using the original letter of Jeremiah as a model (Jer. 29:4-23), the pamphlet demonstrates the carelessness of idols and the stupidity of worshiping them. It was written after 300 B.C. in good Greek and may have had an Aramaic original. See further JEREMIAH, EPISTLE OF.

The **Additions to Daniel** are found in the LXX and in the translation attributed to Theodotion (see SEPTUAGINT IV.C). To Dan. 3 were added the **Prayer of Azariah** (uttered in the fiery furnace) and the **Song of the Three Holy Children** (chanted as they walked about in the flames). Probably these compositions existed in a Hebrew original in the 3rd cent. B.C., the former perhaps originating in

Jerusalem. The Song has survived in Christian worship as the canticle *Benedicite omnia opera*. See further AZARIAH, PRAYER OF.

Prefaced to Daniel in Theodotion (c. A.D. 175), but following it in the LXX, was the story of **Susanna**. This beautiful and virtuous wife of a Babylonian Jew was caught by two elders while bathing, and they demanded that she submit to them or else be accused of adultery. Choosing the latter, she was condemned, but the youth Daniel obtained a retrial and exposed her accusers. The literary form of the story is probably from the 2nd cent. B.C. See further SUSANNA, HISTORY OF.

The tales of **Bel and The Dragon**, found at the end of the LXX Daniel, were designed to ridicule idolatry and cult worship. The first story shows Daniel exposing the priests of Bel for eating the food offerings that the god himself had allegedly devoured, as a consequence of which the king ordered the idol destroyed. The second tale recounts how Daniel was put in a lion's den for destroying a mighty cult dragon in Babylon. For six days Daniel was fed miraculously and on the seventh was released by the king. These stories comprise pious embellishments of the canonical Daniel and date from about 100 B.C. See further BEL AND THE DRAGON.

The **Prayer of Manasseh** is probably the best piece of literature in the entire Apocrypha, constituting a model of liturgical form and exuding the genuine air of religious piety. It claims to give the prayer mentioned in 2 Chr. 33:11-19, and its liturgical pattern was in existence c. 400 B.C. The ascription to King MANASSEH, however, is unhistorical, and the book may not be earlier than 250 B.C. The work lauds God's majesty (Pr. Man. 1-4), makes confession (vv. 5-10), seeks forgiveness (vv. 11-13), and concludes with a doxology (vv. 14-15). Sin was related to idolatrous practices, but repentance, forgiveness, and divine compassion were stressed. See further MANASSEH, PRAYER OF.

The book known as 1 Maccabees is a historical work covering events between 175 and 134 B.C., that is, the struggle with ANTIOCHUS IV, the wars that followed, and the achievement of Jewish independence. The period of Judas MACCABEE may have drawn on biographical material, and special sources may also underlie the traditions of Mattathias. After an introduction (1 Macc. 1:1-64), the defiance at Modein is described (2:1-70), followed by the activities of Judas (3:1—9:22), Jonathan (9:23—12:53), and Simon (13:1—16:24). The book thus describes the fortunes of a minority group struggling for independence and is of great value as a source that deals authoritatively with the turbulent history of pre-Christian Judaism. Although the book contains certain internal

Fresco representing the apocryphal story of Susanna (White Tower Museum, Thessaloniki).

inconsistencies, JOSEPHUS used earlier sections of it as source material in compiling his celebrated histories (*Antiquities* and *Jewish War*).

In **2 Maccabees** the reader passes from a fairly credible historical record to a work of an entirely different nature. It is a theological interpretation of some of the events of 1 Macc. 1-7, but does not continue the narrative beyond the campaigns and defeat of Nicanor, and shows how divine help for Judaism resulted consistently from timely intercession. The unknown author excerpted much of his book from a five-volume history by Jason of Cyrene, being sometimes known as the “Epitomist” in consequence. To him belong the prologue (2 Macc. 2:19-32) and the epilogue (15:37-39), and perhaps the letter to the Egyptian Jews (1:1—2:18). The dating of underlying source materials presents problems, but it seems that 2 Maccabees was in existence by A.D. 50. Internal textual disarrangements raise questions as to the integrity of the composition, and there has been much debate over the historical value of the letters and edicts that 2 Maccabees contains. There are also numerous disarrangements and discrepancies in chronological, historical, and numerical matters in the book, reflecting ignorance or confusion on the part of the epitomist, his sources, or both. The book stresses the sovereignty of God and his purpose for Judaism and reflects Pharisaic doctrines, particularly in eschatology. See further **MACCABEES, BOOKS OF**.

R. K. HARRISON

apocrypha, modern. This term refers primarily to a number of religious books—perhaps a dozen or more—mostly written since the middle of the 19th cent. and purporting to add to the revelation of the Bible. They claim to be based upon genuine documents of Christian antiquity, but every one has been shown by scholars to be a hoax. The supposed ancient documents upon which they pretend to be based have never been found; yet many gullible people continue to be persuaded of their genuineness. Most of them deal with the life of Christ, chiefly with the silent years. Some are written to support a particular doctrinal aberration, or to promote a hoax. Because of the fantastic claims that are made for them, Christian people should know something about them lest they be deceived. The following brief descriptions will give some idea of the nature of these fraudulent works.

The Unknown Life of Christ, published in 1894, and written by a Russian named Nicolas Notovitch, on the basis of information he said he received from the chief lama of a Tibetan monastery. It is claimed that Jesus spent the years between thirteen and twenty-nine in India, Tibet, and Persia, and then returned to Palestine to be put to death by Pilate. The monks at Tibet denied ever seeing Notovitch or knowing anything about the ancient MSS about Christ they allegedly showed to him.

The Aquarian Gospel, first published in Los Angeles in 1911. It was written by Dr. Levi H. Dowling through inner illuminations that he said came to him between two and six in the morning. The book gets its title from the strange notion that with the life of Christ the sun entered the sign Pisces and that it is now passing into that of Aquarius. Jesus is described as studying with Hillel, with the sages of India and Tibet, visiting the Magi in Persia, preaching to the Athenians, and being ordained for his work by a council of the seven sages of the world held at Alexandria.

The Crucifixion of Jesus, in the form of a letter written seven years after the crucifixion of Jesus by an unnamed Essene elder at Jerusalem to another Essene at Alexandria. It first appeared in Sweden in 1851. Joseph, John the Baptist, Nicodemus, Jesus, the angel at the tomb—all were Essenes. There was no resurrection; but Jesus was resuscitated by Essenes following his crucifixion and then lived for six more months before he died.

The Report of Pilate, by the Rev. W. D. Mahan, a Cumberland Presbyterian clergyman, first

appeared in 1879, but in 1884 the volume was enlarged to include reports of interviews with the shepherds, Gamaliel's interview with Joseph and Mary, Eli's story of the Magi, Herod's defense before the Roman senate for the slaughter of the innocents, and other similar journalistic scoops. The enlarged book was given a new title, *The Archaeological and the Historical Writings of the Sanhedrin and Talmuds of the Jews*. Later it was called *The Archko Volume* and *The Archko Library*. Scholarly investigation of the book's claims showed that Eli's story of the Magi was taken by Mahan verbatim (including typographical errors) from Lew Wallace's novel, *Ben-Hur*.

The Confession of Pontius Pilate, written originally as fiction by a Lebanese bishop in 1889. It appeared in English four years later, but without the preface, which indicated that it was intended as fiction. It tells the story of the arrival of Pilate as an exile in Vienne, of conversations he had there with an old friend about his relationship with Jesus, and of Pilate's remorse and suicide.

The Letter of Behan, published in Berlin in 1910. Behan, an Egyptian priest, wrote about Jesus to his friend Strato, once secretary to Tiberius, and told him about Jesus' training in rabbinic lore as a boy in Egypt, later returning to Palestine to be put to death. Behan himself traveled all over the Roman world and witnessed everything of note happening at that time—like the burning of Rome in 64, the fall of Jerusalem in 70, and the eruption of Vesuvius in 79.

The Twenty-ninth Chapter of Acts, published in London in 1871. It contains an account of Paul's journey to Spain and Britain, where he conferred with the Druids, who revealed to him their descent from the Jews who escaped from the Assyrian captivity in 722 B.C., and where he preached on Mount Lud, the future site of St. Paul's Cathedral. This work was composed to support the movement that circulates it.

The Letter from Heaven. This is a one-page document supposed to have been written by Jesus and found under a large stone at the foot of the cross. It appeared in Latin as early as the 6th cent. and has circulated in many languages since then, often appearing in the form of a broadside with the promise of blessing to its possessors. It has to do chiefly with the keeping of the Sabbath and commands of Jesus.

The Gospel of Josephus. This was supposedly written by Josephus just before he died and was intended by him to be the source from which all four canonical gospels were later drawn. The discoverer of the MS was an Italian, Signor Luigi Moccia, who later admitted it was a hoax; but in spite of his admission, many people continued to believe in its genuineness.

The Book of Jasher. This is a condensation of the first seven books of the OT. It was written by a Londoner named Jacob Ilive in 1751 and instantly exposed as a shameless literary forgery. This is, however, only one of many attempts to reconstruct the Book of Jasher mentioned in Josh. 10:13 and 1 Sam. 1:18.

The Description of Christ. This widely circulated document is probably as old as the 13th cent. and may have been based on the books of instruction written for the Greek miniature painters who illustrated medieval MSS. It is less than a page long and is a kind of idealized portrait of a 1st-cent. Jew. It appears in a letter supposedly written by the governor of Judea, Publius Lentulus, to the Roman senate. No official with this name is, however, listed with the Roman governors of Palestine.

The Death Warrant of Jesus Christ. This is a leaflet widely circulated in the United States, giving Pilate's warrant for the death of Jesus and enumerating the charges brought against him. It claims to be a translation from the Hebrew of a copper plate found in the Kingdom of Naples in 1810. Needless to say, no such copper plate has ever been produced.

The Long-Lost Second Book of Acts. This was written by Dr. Kenneth S. Guthrie, an Episcopalian clergyman and medical man, and published in 1904. It was written to support the claim

that the Virgin Mary and Jesus endorsed the doctrine of reincarnation. It presents Mary on her deathbed in the home of the apostle John, explaining her own successive incarnations. Jesus takes the dying Mary in his arms and tells of his own seven incarnations.

Oahspe, a huge book of 890 pages, written by Dr. John B. Newbrough in 1882. The author says it was mechanically written through his hands by some other intelligence than his own; while the publishers aver that it embraces “Evolution, Revolution, and Revelation” and claim that it is “the new American Bible.”

The Lost Books of the Bible. This book, published in 1926, is claimed by the publishers to include religious books deliberately kept out of the NT by the early bishops of the church who arbitrarily decided what should be included in the NT canon. It is actually nothing more than a reprint of an edition of the apocryphal NT that had been published in 1820, and an edition of the Apostolic Fathers that had appeared in 1737.

An examination of the credentials of these books shows that all of them are forgeries. The esoteric information they pretend to provide is palpably false and almost always contradicts the teaching of the Bible. Many people, however, have been and still are led astray by their sensational claims. (Cf. E.J. Goodspeed, *Modern Apocrypha* [1956].)

S. BARABAS

Apocryphal New Testament. The collective title given to a number of documents, ranging in date from the early Christian centuries to the Middle Ages and even into modern times, all similar in form to the NT books (gospels, epistles, acts, apocalypses) but never finally received into the CANON (NT). The *Apocalypse of Peter* and the *Acts of Paul* did enjoy a measure of temporary or local canonicity (the former is mentioned, with some reserve, in the MURATORIAN CANON; both are included in the catalog in the CODEX CLAROMONTANUS), but no others attained even to this level of recognition. The list of known apocrypha has recently been considerably increased by the discovery of a Gnostic library at NAG HAMMADI in Egypt, but not all the works it contains belong in this context.

The Greek word *apokryphos* G649 means “hidden” or “secret” (cf. Mk. 4:22; Col. 2:3), and was used by the Gnostics with reference to esoteric works, the contents of which were too sacred to be imparted to the uninitiated (cf. *TDNT*, 3:996ff.; see Gnosticism). Thus such Coptic works as the *Two Books of Jeu* and the *Apocryphon of John* contain stern injunctions against communicating them to any unauthorized person. The church, on the other hand, recognized only those books that were openly read in public worship, and since many of the apocryphal works were frankly heretical, the term fell into disrepute. The word is thus used in several senses: (a) in the original sense of “hidden, secret”; (b) of books not suitable for reading in public worship (though they might be read in private, cf. the Muratorian Canon’s comments on *Hermas*); (c) of books rejected as false and heretical. The modern use of the adjective *apocryphal* in the sense of “spurious” or “mythical,” “unworthy of credence,” is a further extension of meaning.

The technical modern use of the term appears to have developed on the analogy of the OT APOCRYPHA, and is in some respects unfortunate, since some of the latter do have a claim to recognition and are recognized in certain branches of the church. With the NT Apocrypha this is not the case. With the exceptions noted above, none of these works has ever been accorded recognition or authority in any branch of the Christian tradition. It is important to emphasize this point, since it is sometimes suggested that the canonical NT is the result of an arbitrary selection by the church from a large mass of documents that had an equal claim to recognition. Comparison of the apocryphal NT with the canonical books is in itself sufficient to reveal the inferiority of the former (cf. the comments

by M. R. James, *The Apocryphal New Testament* [1924], xiv-xvii). As James says, it is not a matter of “any one’s having excluded them from the New Testament: they have done that for themselves” (ibid., xii).

A further point to be noted is that in the course of its history the term has sometimes been applied to documents (such as the APOSTOLIC FATHERS) that strictly speaking are neither NT nor apocryphal at all. It is advisable that its use should be restricted to those writings that were not received into the canon, but which by form and content lay some claim to be in the same class with the canonical Scriptures.

Broadly speaking, the NT Apocrypha may be divided into two groups: books intended to propagate a particular kind of teaching, usually heretical; and those intended to make good the deficiencies, as they appeared to a later age, in the canonical reports of the activity of Jesus and his apostles. The significance of this literature does not lie in its content, often merely legendary and fictitious, but in the insights it provides into the popular Christianity of the early centuries, which was often on an entirely different level from the theological speculation and theorizing of the early Fathers. Authentic early historical tradition is scarcely to be expected, and is likely to be found only in the earliest documents, if at all. These writings provide a useful standard of comparison with the canonical books and show the difference between documents still controlled by authentic recollection of events and those in which inventive imagination has been given free rein.

Perhaps the best way to form an estimate of the character of these writings is to classify them according to their literary form and then to compare them with the corresponding canonical works. It should be noted that the title of a book is not necessarily an accurate description of its character and contents. The *Epistula Apostolorum*, for example, begins as a letter, but soon develops into a report of a dialogue between the risen Christ and his disciples, similar in form to several Gnostic “gospels.” The same is true also of the Nag Hammadi *Letter of James*.

Reference should be made to the AGRAPHA, sayings attributed to Jesus that are not recorded in the Gospels. These are for the most part isolated sayings quoted either in the NT (Acts 20:35; 1 Thess. 4:15) or by some early Father, although collections are known, including the famous OXYRHYNCHUS Logia (POxy, 1:654-55), preserved also in Coptic in the *Gospel of Thomas*. Of the numerous agrapha known, some are pure invention, others result from the transference to Jesus of material from another source, and still others are modifications or adaptations of genuine sayings; only a few of the agrapha have any claim to be considered authentic (see J. Jeremias, *Unknown Sayings of Jesus*, 2nd ed. [1964]).

(In addition to the summaries that follow, see the separate articles on many of these books. For an English translation, see *NTAp*; for a comprehensive bibliography, J. H. Charlesworth, *The New Testament Apocrypha and Pseudepigrapha: A Guide to Publications, with Excurses on Apocalypses* [1987]. See also H.-J. Klauck, *Apocryphal Gospels: An Introduction* [2003]; F. Lapham, *An Introduction to the New Testament Apocrypha* [2003].)

I. The apocryphal gospels. These may be classified under three heads: (a) the early texts, unfortunately for the most part fragmentary, in which alone we have any real prospect of finding the survival of genuine early tradition; (b) the Gnostic gospels and related documents; and (c) the infancy gospels and other later texts. (See J. K. Elliott, *A Synopsis of the Apocryphal Nativity and Infancy Narratives* [2006].)

A. The early texts. To the first group belong a number of papyrus fragments, the most important being

POxy 840, which reports a discussion in the temple court between Jesus and a “Pharisaic chief priest” named Levi, and Papyrus Egerton 2, which is of special interest because it is dated c. A.D. 150 and shows Johannine elements (with the Rylands Papyrus 457, this provides important evidence for the dating of the fourth gospel).

The Jewish-Christian gospels present a problem, since the patristic sources name three different titles, the *Gospel of the Hebrews*, the *Gospel of the Ebionites*, and the *Gospel of the Nazarenes*, and it is not certain whether these refer to one, two, or three documents, nor to which document the fragments quoted actually belong. As there are only fragments, it is difficult to form any real estimate of the character of these works, and it is dangerous to build far-reaching theories upon them. It may, however, be added that the *Gospel of the Hebrews* is always mentioned by the Fathers with a certain respect (H. Lietzmann, *Kleine Schriften* [1958], 2:71).

A *Gospel of the Egyptians* is quoted by CLEMENT OF ALEXANDRIA, who did not entirely disapprove of it; but since only his quotations are available, it is difficult to assess its character. It may have been the gospel of Gentile Christians in Egypt, while the *Gospel of the Hebrews* was that of the Jewish Christians; it appears to have been rather more Gnostic in character, and certainly was used by some Gnostic sects. A completely different work with the same title was found at Nag Hammadi. A fragment of the *Gospel of Peter*, previously known only from references in EUSEBIUS, was found in 1886; it is of interest for its original and unorthodox account of the passion and resurrection of Jesus. Finally, the *Epistle of the Apostles*, already mentioned, is in some respects similar to some of the Gnostic gospels.

B. The Gnostic gospels. A common feature of many Gnostic gospels and related documents is their presentation of revelations given to the disciples by the risen Christ in the period between the resurrection and the ascension, a period extended by the Gnostics from 40 to 550 days (or 18 months). The scene is usually a mountain, often the Mount of Olives; one or more of the disciples meet with Jesus, ply him with questions, and receive his answers. The subjects discussed include cosmology, usually in the form of a Gnostic reinterpretation of the Genesis creation story; the nature and destiny of man, and the future lot of various classes of mankind. Occasionally there is some kind of visionary experience. Some of these works (such as the *Apocryphon of John*) are associated with the names of particular disciples; others, like the *Sophia Jesu Christi* or the *Pistis Sophia*, have more general titles. In point of form, and occasionally even of content, it is sometimes hard to draw a rigid distinction between these texts and some of the later works in the previous group. Another type consists of writings ascribed to the founders of heretical schools, such as Cerinthus, Basilides, Marcion, and Mani; but in most cases only the titles exist, and it is not always certain that they represent separate and independent works (e.g., Marcion’s “gospel” appears to have been an expurgated version of Luke).

An important group is formed by the three “gospels” found at Nag Hammadi, the *Gospel of Truth*, the *Gospel of Thomas*, and the *Gospel of Philip*. None of these is strictly a gospel at all: the *Gospel of Truth* is a meditation on the theme of the gospel message, and the *Gospel of Thomas* a collection of sayings, while the *Gospel of Philip* appears to be composed of sayings and meditations strung together largely on a catchword principle, without much regard for coherence or systematic presentation. A more recent discovery elsewhere in Egypt is the *Gospel of Judas*, which gives a positive picture of Judas Iscariot.

From all these facts it is clear that, as already noted, the title “gospel” is no guarantee of the nature or content of these documents; and conversely, some Gnostic documents that do not bear this

title must be classed formally with the “gospels” of a Gnostic type.

C. The infancy gospels. These owe their origin to the desire, already mentioned, to make good the apparent deficiencies of the canonical Gospels and fill in the gaps in the story. In the oldest gospel tradition only those events are recorded of which the apostles were or could have been witnesses (cf. Acts 1:22-23); even in the fourth gospel, although the prologue takes us back to the absolute beginning of things, the actual story of Jesus and his mission begins with John the Baptist. Both Matthew and Luke, however, preface their accounts of the ministry by narratives of the birth and childhood of Jesus. Significantly, they differ up to the point when they begin to draw upon Mark and Q, thus showing that they have utilized separate and independent cycles of tradition. Some motifs have parallels in nonbiblical sources, but the primary interest is not narrative or imaginative, but theological and apologetic, and in comparison with later developments these narratives reveal a marked sobriety and restraint.

The infancy gospels are much more extravagant. Jesus is depicted as possessing miraculous powers even in childhood, and in the *Infancy Gospel of Thomas* he sometimes makes use of them in a way quite incompatible with the character presented in the canonical tradition (this work has no connection with the Coptic *Gospel of Thomas*). The *Protevangelium of James* is much less crude, and indeed its use of legendary material is comparatively restrained. This work was written mainly for the glorification of MARY MOTHER OF JESUS and carries the story back beyond the birth of Jesus to the miraculous birth of Mary herself and her upbringing in the temple. On the basis of these two documents, an extensive literature developed in later centuries, despite condemnation by the popes, and enjoyed a wide popularity. Reference may be made to the Arabic and Armenian infancy gospels, to Coptic literature relating to the birth of Mary, and to the Ethiopic *Miracles of Jesus*. A special importance attaches to the *Gospel of Pseudo-Matthew*, dating from the 8th or 9th cent., in which much of this material was presented in a more refined form. Its significance lies in the fact that these legends thus became common property and were able to exercise influence on Christian art and literature. It has indeed been said that in antiquity, the Middle Ages, and the Renaissance, these writings “exercised a stronger influence on literature and art than the Bible itself” (O. Cullmann in *NTAp*, 1:418).

Apocryphal accounts of the passion and resurrection of Jesus are less common. Apart from the *Gospel of Peter*, already mentioned, chief interest attaches to the *Gospel of Nicodemus*, otherwise known as *the Acts of Pilate*, which incorporates an account of Christ’s DESCENT INTO HADES and his triumph over the powers of the underworld. The literature relating to PILATE had a wide circulation in various languages. Also to be mentioned here is an Arabic text examined by S. Pines (*The Jewish Christians of the Early Centuries of Christianity* [1966]), who claims that it goes back to a Jewish-Christian source (contrast S. M. Stern in *JTS* 18 [1967]: 34-57). At all events it shows acquaintance with apocryphal motifs.

The primary significance of all these documents is that they serve as a foil to set off the comparative sobriety and restraint of the canonical gospels and reveal what can happen when imagination and legendary embellishment are allowed free play. Often they take over and expand or elaborate canonical material, but when they are original and independent they are seldom reliable. There is, therefore, little (if any) authentic tradition about Jesus that has not already been included in the NT.

II. The apocryphal epistles. These are comparatively few and some are not really epistles. The

Muratorian Canon mentions a letter to the Laodiceans and another to the Alexandrians, “forged in Paul’s name for the sect of Marcion.” The extant Latin work *Epistle to the Laodiceans* is a patchwork of Pauline phrases, although it is found in some MSS of the Bible; there is some doubt concerning its identity with the letter mentioned in the Muratorian Canon. The *Letters of Paul and Seneca*, known already to Jerome, are clearly intended to enlist the prestige and authority of the Roman philosopher in support of the Christian faith. A letter from Corinth to Paul and his reply (sometimes referred to as *3 Corinthians*) are now known to have formed part of the *Acts of Paul*, although they also circulated independently. The *Epistle of Pseudo-Titus* is a lengthy treatise in praise of celibacy that makes liberal use not only of biblical but also of apocryphal material. Finally, there is the correspondence between Christ and ABGAR, king of Edessa, first mentioned by Eusebius.

III. The apocryphal acts. More extensive, and more significant, are the apocryphal acts, and especially the five major works from the 2nd and 3rd centuries attributed to Andrew, John, Paul, Peter, and Thomas. In general it may be said that these were intended to supplement, rather than to replace, the canonical Acts by providing fuller information about the deeds of the apostles and in particular about their martyrdoms. These works testify to the high regard in which the apostles were held, as guarantors of the authentic gospel message and pioneers of the Christian mission; but at the same time their use of legendary motifs and their delight in miracle for its own sake, as a means of glorifying the apostles, place them in the category of romance rather than of history. The ascetic tendencies they frequently display again reflect the ideals of a later age. Such elements of authentic early tradition as they contain are usually borrowed from the canonical Acts or other NT sources. They belong to the realm of popular literature and show certain affinities with the Hellenistic novel; one may note, for example, the place given to the journeys of the apostles, the wonders they encounter (e.g., cannibals, talking animals, even obedient bugs!), and the emphasis upon their own miraculous powers. Here the apostles are closer to the Hellenistic wonderworker (the *theios anēr*) than to the NT apostle.

The state of preservation of these works varies; the *Acts of Paul*, for example, must largely be reconstructed from the extant fragments. In most cases some sections, and especially the martyrdoms, enjoyed a separate circulation, which sometimes led to their elaboration and expansion. Sometimes versions exist in different languages, and these vary considerably from each other. The important point, however, is their popularity and their influence on later writings. They were themselves the basis of, and often a quarry for, numerous later works. In time, similar *Acts* were composed for other apostles also: Philip, Matthew, Bartholomew, Simon and Judas, Thaddaeus, Barnabas.

IV. Apocryphal apocalypses. The one apocalyptic book in the canonical NT is the Revelation of John, although apocalyptic elements are to be found in other works (e.g., Mk. 13 and parallels; 2 Thess. 2:1–12). The early church shared to a large extent in the temper and thought world of Jewish apocalyptic and took over and adapted several of its documents, but there is a shift of emphasis: interest now centers in the return of Christ, and later on, with the delay of the PAROUSIA, in the world beyond, “heaven and its blessedness, hell and its miseries.” The *Ascension of Isaiah*, for example, derives its title from a vision describing the prophet’s ascent through the seven heavens; the work may date from the 2nd cent. A.D. Also from this century, since it was known to Clement of Alexandria, is the *Apocalypse of Peter*, which is significant both for the way in which it incorporates ideas of heaven and hell from non-Christian sources and also for its influence on later writing, down through the *Apocalypse of Paul* and other works to the *Divina comedia* of Dante.

It should be added that not all the works that include “Apocalypse” or “Revelation” in their titles are necessarily apocalyptic in the full sense; and, conversely, revelations of an apocalyptic character sometimes occur in writings that do not bear the title. Also to be mentioned are a few books of prophecy (sometimes neither NT nor apocryphal in the strict sense), notably the Christian portions of the *Sibylline Oracles* and the fragments of the *Book of Elchasai*. According to some scholars, Montanism stands in continuity with the early Christian prophets of the NT period, not with apocalyptic; but hostility aroused by Montanism may have carried with it an opposition to apocalyptic and to other forms of prophecy. his devotees in the ancient world. See also GREEK RELIGION. (See *DDD*, 74-77.)

Apollonia ap'uh-loh'nee-uh (^{Ἀπολλωνία} G662). There were several towns of this name, the most famous being Apollonia of Illyria, a terminal point on the VIA EGNATIA; it served as CAESAR'S base when POMPEY was encircled at Dyrrachium. The Apollonia of the NT is at the other end of the Via Egnatia, 27 mi. WSW of AMPHIPOLIS, somewhere between the Strymon and the Axios (modern Vardar). Its site is not certain, but PAUL and SILAS passed through the town on their way between THESSALONICA and PHILIPPI (Acts 17:1). (In addition, JOSEPHUS refers to a HASMONEAN city by that name [*Ant.* 13.15.4 §395; *War* 1.8.4 §166]; it is modern ^ἸArsuf, some 20 mi. S of CAESAREA.)

E. M. BLAIKLOCK

Apollonius ap'uh-loh'nee-uhs (^{Ἀπολλώνιος}). The name of several men mentioned in the books of MACCABEES, including a Syrian ruler killed in battle by Judas Maccabee (1 Macc. 3:10-12; identified as the governor of Samaria by *Jos. Ant.* 12.7.1 §287) and various other officials appointed by the Seleucids (1 Macc 10:69-77; 2 Macc. 3:5-7; 4:4, 21; 5:24; 12:2; 4 Macc. 4:2-14).

Apollophanes ap'uh-lof'uh-nee-z (^{Ἀπολλοφάνης}). A Syrian who, with his brothers Timothy and Chaereas, was slain in the fortress Gazara (GEZER) after its capture by the army of Judas MACCABEE (2 Macc. 10:37).

Apollo uh-pol'uhs (^{Ἀπολλῶς} G663, prob. an abbreviated form of ^{Ἀπολλώνιος} [cf. Codex D at Acts 18:24]; Douay has Apollo, in agreement with Vulgate). A gifted, scholarly, zealous preacher in the early Christian church (Acts 18:24-28; 19:1; 1 Cor. 1:12; 3:4-6, 22; 4:6; 16:12; Tit. 3:13). Apollo was a Jew from ALEXANDRIA (Acts 18:24), and he presumably grew up in that noted center of the Hellenistic world where Gentile and Jewish learning met and interacted. He possessed a keen mind and had received thorough educational training. He was a “learned” (NRSV, “eloquent”) man, possessing not only a well-stored mind but also a natural facility of speech. He had “a thorough knowledge of the Scriptures,” that is, a mastery of the OT. He was proficient in their use in teaching and debate. He had also developed the valuable trait of accuracy in study and teaching (18:25).

Apollo “had been instructed in the way of the Lord,” but his teacher is not known. He may have been a disciple of John the Baptist; CODEX CLARO-MONTANUS (D) adds that he had been instructed “in his native land.” His knowledge, however, was limited, for “he knew only the baptism of John.” He certainly knew enough to be convinced that Jesus was the Messiah. The statement that he “taught about Jesus accurately” implies that he did have a general acquaintance with his ministry and teaching but was uninformed concerning the outcome and spiritual results of Christ’s mission. Yet even this limited knowledge concerning Jesus produced “great fervor” in him, and he bubbled with enthusiasm and zeal to share it with others.

Upon his arrival in EPHEBUS, Apollo “began to speak boldly in the synagogue” (Acts 18:26). He had the courage to present his convictions to his Jewish audience. In the audience were two lay Christians, PRISCILLA AND AQUILA. They doubtless were impressed with the fervor of Apollo but noted his imperfect message. They brought him to their home and tactfully “explained to him the way of God more accurately.” That it included instruction in the significance of Christian BAPTISM may be assumed, but Luke gives no hint that Apollo was baptized. If he had received John’s baptism before Pentecost, his baptism, like that of the Twelve, would be accepted as valid.

The desire of Apollo to work in ACHAIA received the warm support of his fellow-Christians at

Ephesus, who gave him a letter of recommendation (Acts 18:27; Codex D adds the gloss that the decision of Apollos was made at the urging of certain Corinthians resident at Ephesus). The ministry of Apollos had great value for the Corinthian church, for he “was a great help to those who by grace had believed.” His powerful preaching strengthened the development of uninstructed believers. Thus Apollos “watered” the work that Paul had planted in CORINTH (cf. Acts 18:1-17; 1 Cor. 3:6). His dynamic apologetic ministry also aided the church in silencing Jewish opposition in that “he vigorously refuted the Jews in public debate, proving from the Scriptures that Jesus was the Christ” (Acts 18:28). The ministry went beyond the confines of the church, as he, through his skillful use of the OT Scriptures, aggressively pressed the claim that Jesus was the MESSIAH.

The strong ministry of Apollos at Corinth also produced some undesirable reactions in the church. Deeply impressed with his eloquent preaching, certain Corinthians began to make him the focus of partisan loyalty for one of the four factions into which the church divided (1 Cor. 1:12). In splitting the church over their favorite preachers, they forgot that all of them were “God’s fellow workers” (3:9). Paul’s rebuke of their factions (chs. 1-4) was not aimed at Apollos but at the Corinthians themselves (4:6). When Paul wrote this letter, Apollos was with him at Ephesus (16:12). The Corinthians had indicated a desire to have Apollos return to Corinth. Paul had urged him to return, but Apollos had refused to do so at the time in order to avoid reviving the party spirit in the church. That he had been made the center for one of their factions doubtless was as distasteful to Apollos as to Paul.

Nothing further is heard of Apollos until Tit. 3:13. Paul instructed Titus “to help Zenas the lawyer and Apollos on their way.” They had met Paul in some unnamed place. Since their journey was taking them through Crete, Paul apparently asked them to deliver his letter to Titus. It would seem that Apollos did not feel called to the pioneer work of planting new churches. He apparently devoted his efforts to the strengthening of those that had already been established. The apt suggestion of Luther that Apollos was the author of HEBREWS has found favor with a number of scholars. While plausible, the suggestion lacks proof.

D. E. HIEBERT

Apollyon uh-pol’yuhn (Ἀπολλύων G661, from ἀπόλλυμι G661, “to destroy”). Greek equivalent of ABADDON in Rev. 9:11.

apologetics. In the narrow sense, the term *apologetics* refers to a reasoned defense of the truth, a plea for the veracity of the character and purposes of God. In a broader sense, it means commending the faith, presenting grounds for Christian hope. Strictly speaking, the genre of apologetic writing was not developed until the 2nd cent. It became an academic discipline, under various names, in the 19th cent. However, there is considerable biblical material rightly deemed apologetical in form and substance.

It is noteworthy that the Bible nowhere presents technical theistic proofs for God’s existence, as one can find in the history of philosophy. This is not to say that there are no arguments for God’s truth in the Bible. The Psalmist tells us, “The heavens declare the glory of God” (Ps. 19:1). Paul’s letter to the ROMANS contains a defense of God’s ways in the face of the evil in the world. The absence of carefully worded demonstrations for God’s existence is due to the nature of REVELATION. God discloses himself with authority to a sinful humanity. The proper response to that self-disclosure is faith in this particular God, who has a name, and who acts in history: “And without faith it is impossible to please God, because anyone who comes to him must believe he exists and that he rewards those who earnestly seek him” (Heb. 11:6). God’s person and work are presupposed in

order to work out the philosophical implications, not the other way around. We are reminded of Anselm's words at the beginning of the *Proslogion*: "I do not seek to understand that I may believe, but I believe in order to understand."

I. The Old Testament

A. Background. Much of the substance of OT writing is polemical in nature. On the one hand, many different portions of the OT share certain cultural and even theological assumptions with the wider groups in the ANE. On the other hand, they often present an antithetical alternative to their worldviews. For example, Gen. 1-11 contains various parallels to texts from Mesopotamia and Egypt. Yet they can also be read as a critical commentary on the religions from those traditions.

In a similar way, the historical books, the prophets, and other writers drew on the themes from the local cultures, only to denounce their problematic side. This is an overall apologetic pattern. The men of Issachar, famously, "understood the times and knew what Israel should do" (1 Chr. 12:32; cf. Matt. 16:2-3). The prophets constantly subvert the very themes and images from the surrounding pagan cults to teach about redemption. Hosea, for example, makes considerable use of stock-farming and agricultural imagery, so prevalent in the local FERTILITY CULTS, to describe God's judgment, and then his love for his people (see Hos. 8:7-10; 9:10—11:11; 14:4-8). The Psalms often portray God's majesty using the foil of local religions. For example, Ps. 29 centers on the power, the authority of God's voice. His voice is higher than the storm, greater than the waters, able to break the cedars of Lebanon, greater than the arid desert. Besides being statements of God's sovereignty, the successive verses interact with pagan religion, which attributes ultimate supremacy to agitated waters, trees, and empty expanses.

B. The Pentateuch. In a certain way, the first five books of the Bible *are* an apologetic. They proclaim the promises of God to mankind, and then describe the repeated obstacles thrown in the way of those promises. But each time, the promises prevail and are even augmented. The Pentateuch asserts God's right to possess his people. God claims Israel to be his firstborn child, redeemed out of Egyptian slavery, emancipated from the pharaoh's usurped tutelage (Exod. 4:22-23; 14:24-31). Moreover, a slave in Israel was to be released upon demand (Deut. 15:13-14). Accordingly, the Lord requires Egypt to conform to this law. In due course Israel was to be constituted a theocratic nation, living in obedience to the Lord (Exod. 19:3-6). Even this great redemptive event was not to be an end in itself, for Israel was a light for the nations (Deut. 29:22; cf. Ps. 96:3; Isa. 56:3-8). There were provisions within the law for "aliens" who would live in the land and benefit fully from Israel's righteousness (Num. 15:14-16; cf. Josh. 8:35; 9:6-27). So apologetics to non-Israelites was in the purview right from the beginning.

The threats to God's promises occur not only against the specific oppression of the pharaoh, but against obstacles of all kinds: the constant menace of encroachment from rival religions and practices, the disbelief of the people, including leaders and patriarchs, and enemies from many corners. In answer to these obstacles, the Pentateuch sets forth an apologetic for the trustworthiness of God's promises. The first eleven chapters of Genesis give us a window on the prehistory of the world. The CREATION story is a polemic against various ANE views. "In the beginning God" is a radical statement about origins. Neither from chaos nor any preexisting matter does God create. Nor should God be confused with any creature. Placing the sun on the fourth day of the creation week, and describing it as a servant, along with other luminaries (Gen. 1:14-19), forcefully speaks against the

deity of RE, the Egyptian god. The purpose of creation of human beings is not to unburden the gods, as it is in the Sumerian and Babylonian creation stories, but to bless them and give them a high purpose (Gen. 1:26-31; 2:7-25).

Furthermore, the entire tenor of the book of Genesis contradicts the philosophy of HISTORY envisioned in many Mesopotamian accounts of origins. These generally portray a world moving toward improvement, whereas Genesis recounts a FALL from original goodness, followed by a steady decline into moral decadence, bringing judgment on the earth. Though frustrated by the fall (Gen. 3:14-19), the vocation of mankind is still to be fulfilled. The children of CAIN, generally the nonelect line, are able to raise cattle, build cities, play music, and work in metallurgy (4:19-24). However, the race of SETH will perpetuate the believing community, calling directly on God's name (4:25-26).

No absolute contrast is implied between culture and worship. But sin and corruption are such that a radical plan is set in motion: the salvation of believers through the seed of the woman. Despite BABEL, the nations would continue, and eventually produce a new humanity through Abram, the child of Terah (Gen. 11:27). Abram becomes ABRAHAM, the beginning of a new humanity. He would live in the land, and his children would be like the dust of the earth and the stars of the heavens (12:1-3; 13:16). The COVENANT with Abraham would be everlasting, ratified by God's maledictory oath (15:17; 17:1-14). Everything in his life seemed to make belief in God's promises impossible. His origins are humble. There was a famine in the new land (12:10). Canaanites were there (12:6). Though the land would be given to his descendants, SARAH, his wife, was barren (17:17-22). Various enemies threatened his tenure. Despite all of this, God's promises triumph. Abraham was found faithful. His descendants, beginning with his son ISAAC, and continuing through JACOB and the twelve tribes, would indeed become as numerous as the stars of heaven.

They too would face obstacles to God's promises. MOSES, the greatest of the OT figures, the mediator whose function was the distant echo of Jesus Christ's, gave up the riches of Egypt in order to lead his people to the promised land (Exod. 2:11-22; Heb. 11:23-28; Rev. 12:14). Through him the promises of God were fulfilled. By his name, "I am that I am," he would deliver his people (Exod. 3:14-15; 6:3). Though many obstacles would throw themselves in the way, Moses would lead the people out of Egypt and to the brink of Canaan, because the "I am" would accomplish it through him (cf. Matt. 28:20). No force of opposition, whether it be Lot's deceit, Jacob's treachery, the murderous plotting of Joseph's brothers, Israel's rebellion in the desert, can prevent the sure accomplishment of the promises.

Because of this pattern of promise and fulfillment, none of God's faithful children needs fear any obstacle, any trial. God's character is a final argument against all unbelief. God's people can therefore enjoy the assurance of God's promises and of his presence. Moses said to the Israelites, "Remember today that your children were not the ones who saw and experienced [God's mighty deeds] But it was your own eyes that saw these great things the LORD has done" (Deut. 11:2-7). If they disobey, though, dire consequences will follow (28:20-68). Nevertheless, even a disobedient people will be brought back by the grace of God, so that his promises will never be thwarted (30:1-10). The Pentateuch is a most powerful apologetic affirming the veracity of God's character in the face of opposition.

C. The Prophets. In a fundamental sense, the role of the PROPHETS of the OT is to remind Israel of its covenant obligations, as established in the Pentateuch. Accordingly, the normative form for a prophet was Moses, the standard for all subsequent seers (Deut. 18:15-19; 34:10). Closely tied to national affairs, they interpreted present and future events in the light of God's requirement. They were heralds

of God's Word. Very often they were called upon to denounce the unfaithful religious, political, and moral practices of Israel. Apologetics was at the heart of the prophet's task.

The content of prophecy centers on forthtelling and, in a more limited way, on foretelling. Often, their words are in the form of a law suit. Toward the beginning of Isaiah's prophecy, repentance and forgiveness are announced, despite the great corruption of the people. "Come now, let us reason together, says the Lord. Though your sins are like scarlet, they shall be white as snow" (Isa. 1:18). In effect, the Lord is calling Israel to stand trial. The verb that is translated "reason" (Heb. *yākaḥ* H3519) is used in the same sense as *šāpaṭ* H9149 in 43:26, "Review the past for me, let us argue the matter together; state the case for your innocence." Throughout many of the prophets the idea is that God, the judge, challenges Israel to defend itself. The challenge is ironic, because Israel has no case to make, though it might think so (cf. Job 23:7). It is also gracious ("Come, now," carries a tone of gentle invitation; cf. Matt. 11:28). Though the Lord had the right to condemn Israel, he forgets its sins, and sends his suffering servant to take the blame on himself (Isa. 58:8-10; cf. Exod. 17:5-7).

Neither nation nor idol can save Israel, but God can. Throughout the prophets one finds devastating critiques of false dependencies. They are made by human hands and cannot speak, yet people worship them (Isa. 44:6-20). Despite the unfaithfulness of Israel, God will return to them and bring them back to a place of blessing (Ezek. 16). He will judge the nations and save his remnant (Hab. 3:16-19; Zeph. 3:8-20). His anger is turned away from the true Israel because he himself will be their all-sufficient savior, their MESSIAH (Isa. 9:6-7; Joel 2:23-32; Hos. 14:4-8). The apologetic of the prophets issues in an ultimate promise, that of judgment and mercy being centered in the Messiah, who will come to make all things right.

The form of prophecy varied. At times it was by parables or allegories (Isa. 5; Ezek. 16; 23). One of the ways prophets "subverted" the unbelief of Israel, in order to challenge it, was by the use of stories that appeared at first unconnected with the accusation. For example, 2 Sam. 12:1-14 portrays NATHAN, the prophet, confronting DAVID, who had sinned by adultery with BATHSHEBA, the murder of UURIAH, her husband, and lying to his troops. Had he simply denounced the king, it is likely he would not have gotten through, such was David's stubbornness. So he told the story of a rich man with large flocks stealing from a poor man with only one ewe lamb, to make a meal with his friend. Upon hearing this, David was furious and pronounced his judgment. Nathan then only had to say that David was, in effect, the man. David saw it and repented. At other times prophets argued by "acted oracle." That is, they would use a living image and build a case for blessing or judgment upon it. For example, in 2 Ki. 13:14-20 we have the story of King Jehoash (JOASH) and the dying ELISHA . The king is anxious about the survival of Israel. The prophet directs him, first, to shoot an arrow toward the east, then to strike the ground with the remaining arrows, which he does only three times. Though he will have victory, it will be limited. In some of the more apocalyptic prophecies, visions of strange characters are vividly disclosed to the people in need of reproof or encouragement. For example, ZECHARIAH uses numerous images to uncover the sure fact that "my words and my decrees, which I commanded my servants the prophets, [did] overtake your forefathers" (Zech. 1:6). In the first chapter (vv. 8-17) he sees an angel, a figure of the messiah, mounted as a warrior on a red horse, present in the midst of myrtle, which represents God's people. His messengers, on flame-colored horses, report that the world is at rest and in peace. This is not as it should be, since Israel is attempting to return from exile, and the nations have no business being complacent. And so God will judge the nations, even as he brings real peace to Jerusalem.

D. Poetry. The poetic books of the OT put their own imprint on the biblical apologetic. In the Psalms

are often found echoes of the prophetic message, but personalized. The challenge of the nations becomes a matter of personal trust in God's purposes. Justice delayed provokes the questions, "why," and "how long, O Lord?" But justice delayed is not justice denied (Pss. 2; 46; 50; et al.). Though the faithful be persecuted, the destruction of the enemy is sure (Pss. 37; 73). The majesty and aseity (absolute self-existence) of God are constantly proclaimed, to the comfort of the believer and the confounding of the rebel (Pss. 14; 90; 93; 110). This apologetic is prayerful and emotional. The psalmist often pleads with God, praying for justice and for forgiveness of sins (Pss. 32; 69; 80; 130). He reasons that God has promised, and in the past he has proven himself faithful to the promise, so he should be counted on to come through again (Pss. 21; 34; 51; 78; 107). He knows that God is sovereign over the whole creation, and will therefore be sovereign over the life of the believer (Pss. 19; 29; 104). Fundamentally, the Lord is good and beautiful (Pss. 16:2, 6, 11; 50:2), and so, better than chariots (20:7), even "better than life" (63:2). Based on these convictions, the Psalms constantly appeal to all people, insiders and outsiders, to believe, to taste and see that God is good (34:8-11).

The WISDOM Literature is apologetic discourse *par excellence*. Here we have another case of writings that share much from the literature of the ANE. The PROVERBS, for example, have clear parallels in Egyptian *Sebayit* literature, didactic treatises that often direct a young man in the ways of the court, the rules of conversation, and the general principles for a prosperous life. The Egyptian idea of *ma'at* (roughly translated "justice," or "order") is that happiness can be achieved by conformity to a divinely established regimen in the universe. But in contrast, wisdom is an art, one that requires careful assessment of the world, the here-and-now. Whereas the ideal in Proverbs, Lady Wisdom (Prov. 1; 8-9), speaks in the first person, with a divine accent, *ma'at* is a distant deity, never speaking, only spoken about. ECCLESIASTES (Qohelet) likewise finds parallels in various ancient texts. The so-called Babylonian *Dialogue of Pessimism* (B. R. Foster, *Before the Muses: An Anthology of Akkadian Literature* [1993], 2:815-17; *ANET*, 600-601) examines the contradictions in life and questions the world's meaning, much in the same way as does Ecclesiastes. But its author ends in profound nihilism, whereas Qohelet is never finally pessimistic.

The Proverbs are a training manual for right living. One must learn to resist dame folly and cultivate lady wisdom. But wisdom cries out to the young man, or to any audience who would seek life. In other words, wisdom recommends herself, using apologetic argument. Wisdom will grace the head (Prov. 1:9); is like hidden treasure, but better than gold (2:4; 8:19); protects against folly (2:12); produces a sound mind (3:2; 4:1-8); a long life (4:10; 9:11); and ultimately leads one to God (2:5; 23:17). The source of wisdom is God himself (3:5; 9:10). Wisdom is God's intimate companion, who crafts the world (8:22-30). Unlike the Egyptian *ma'at*, which is an abstract order of justice, wisdom is personal, giving sound judgment to kings, and loving those who love her (8:14-17). Yet the ultimate proof of wisdom's superiority, the fundamental apologetic, is what she does for you (4:6-8). This is why wisdom is justified by her offspring (Matt. 11:19; Lk 7:35).

Qohelet is an apologetic that begins with the vanity of the world and its wisdom (Eccl. 1:2-11). Why be over-wise, it asks? (7:16) No one listens to the poor wise man, though he may save a city, or, like Issachar's children, may tell Israel how to behave (9:13-16). Wisdom is beyond us anyway (7:7-23). In a certain way, Qohelet is almost entirely negative. And yet, by implication, there is a brighter world on the other side, one in which meaningful life reigns (1:14). The author is a Solomonic figure, one who was once wise but then

Sixteenth-century drawing of Justin Martyr, one of the first Christian Apologists.

became apostate (*qōhelet* H7738 means “assembler,” and should likely not be ennobled by translations such as “Teacher” or “Preacher”). But, again, by implication, there is wisdom greater than Qohelet’s, for “a greater than Solomon is here,” one whose audience will be condemned by Solomon’s (Matt. 12:42; Lk. 11:31). Space prohibits commenting on the SONG OF SONGS, in which a young maid chooses the authentic love of a shepherd over the powerful advances of a Solomon.

The book of JOB qualifies as one of the most powerful apologetic pieces ever written. Both in form and content, it is *sui generis*. Like Ecclesiastes, it puts into question the idealism of the rule of wisdom, which implies that the God-fearing person will always live better. But unlike Ecclesiastes, there is in Job a fundamental resolution, a THEODICY. The book is less about the pain and suffering of the innocent than about the (agonizing) theological problem of the contradiction between living righteously and being chastised by the hand of God. Job complains bitterly against his condition, but never forsakes his God. Job’s friends, though full of a certain kind of wisdom, have given over to the pagan cosmologies that posit a rigid determinism in which good behavior is necessarily rewarded and evil behavior punished. Instead, when we fully recognize God’s greatness over his creation (Job 38-41), as even Job himself had not, no rational answer to the contradiction is needed.

II. The New Testament

A. Background. Like the OT, the NT has strong apologetical intent. Similarly, we find the authors both influenced by and critical of local philosophies and religious views. As to content, all of the themes found in the OT are reproduced, though with a specific new focus on the presence of Christ and the life in the Spirit. The NT is a defense of the KINGDOM OF GOD, which has come and is still

being spread, because of the person and work of Jesus Christ. As such, then, apologetics is intrinsic to the presentation of the kingdom of God, whose coming is the principal message of the NT.

There are two major groupings that received the message of the first generation of Christians. First, and most centrally, the gospel was addressed to a Jewish audience, or, more accurately, to a diversity of Jewish audiences. Judaism proper begins with the fall of the southern kingdom. It includes Samaritans, the HASIDEANS (Hasidim), and their offspring, the PHARISEES, the most scrupulous adherents to Jewish law. The most significant rival party to the Pharisees was known as the SADDUCEES. Theologically, they differed from them by denying the bodily resurrection, rewards and punishments, and predestination. Politically, they were closer to the central power than the Pharisees, up until the 1st cent. Other groups of Jews included the ESSENES, the Qumran community (see DEAD SEA SCROLLS), and the ZEALOTS. Apologetics in the NT often shares assumptions with some of these groups, while at the same time challenging some of their most cherished assumptions. We may remember Jesus' dialogue with the Samaritan woman, or his and the apostles' extensive interactions with the Pharisees and Sadducees. They also postured against various political theologies.

Paganism, in its various guises, is the other major audience for apologetics in the NT. It too considered the gospel an offense, though more for its unreasonable sounding philosophy (its "foolishness") than for erroneous messianic views (1 Cor. 1:22). According to ORIGEN, Celsus the Greek could not believe because, in his view, Christ on the cross was neither helped by his father nor could he help himself. There were sophisticated forms of pagan beliefs. In addition to classical Aristotelianism and Platonism, there were the EPICUREANS, who held to a materialism that desired peace of mind, not God, as the highest good, and the STOICS, who believed God to be a world-soul, and human life to be determined by forces that should not be resisted. More popular pagan philosophies were expressed in local religions of all kinds, usually with a background in Greek mythology, expressed in temple life, and often possessing a strong belief in MAGIC. The Roman authorities who ruled over Palestine often practiced some form of pagan religion, but were expected to acknowledge that Caesar was a demigod. The apostle Paul showed himself conversant with a number of pagan philosophies, and crafted his apologetic partly in the use of their terms, partly in a critique of their worldviews (Acts 17:16-31).

B. The Gospels. Each of the four Gospels unmistakably bears the mark of apologetics. Matthew no doubt has a catechetical character, ordered as it is by an alternating sequence of Christ's miracles and his teachings. But that is interwoven with an apologetic purpose, perhaps primarily to a Jewish readership. Accordingly, skepticism about Jesus' legitimacy was answered in the infancy story; questions about Jesus' residency in Nazareth rather than Bethlehem are answered by the descent into Egypt; the resurrection account includes the bribing of the guard, which would allay worries about the disciples stealing Jesus' body. But in broader terms, Matthew is concerned to show the many ways in which Christ fulfilled the OT Scriptures. In fact, the unbelief of much of Israel is explained in terms of prophecies. For example, parables were used as a way (among other things) to sort out true believers from those described by Isaiah, as "hearing but never understanding" (Matt. 13:14). Much could be said about the use of PARABLES as apologetic discourse: they are enigmas, whose solution "subverts" the wise listener into belief. Jesus interprets the Scriptures authoritatively, and "not as their teachers of the law," because he has come to fulfill the Law and the Prophets (5:17; 7:29).

Mark's gospel seems more obviously tailored to a gentile audience. More pared-down than Matthew, he is concerned to compel the reader to focus on Christ's dramatic presence, his passion,

and the response of faith needed to reckon with him. In short, it is an evangelistic book. The pivot point is the confession of PETER at CAESAREA PHILIPPI (Mk. 8:27-30), from which the story moves relentlessly toward the events of Jesus' last week. Mark is forthright in his descriptions of people's reactions to Jesus, but he is equally explicit about Jesus' own human emotions. He often names him the SON OF MAN, no doubt a reference to Dan. 7:13. No one can remain neutral before Mark's portrait of Jesus Christ.

Luke's gospel is clearly meant to defend belief in the KINGDOM OF GOD as universal. He announces his purpose at the beginning, in words resembling the historian's determination to get all the salient facts down and give an "orderly account" of the events everyone is discussing (Lk. 1:1-4). He wants his reader, the gentile Theophilus, to have a certainty about the contents. Like its second volume, the book of Acts, the Gospel of Luke is meant to prove that Christianity was not subversive, but is a true successor to the synagogue. This may be why he records that PILATE pronounced Jesus not guilty three times (23:4, 14, 22). He spends far more time than the other writers on the infancy of Jesus, which he compares at some length to JOHN THE BAPTIST.

Luke shows at every turn that divine intervention is the only explanation for all that happens. Like Matthew, he is concerned to show Christ in relation to the OT, but unlike him, Luke stresses the events as fulfilling Scripture, thus proving its universal truth, and is less concerned for various hermeneutical questions that could be raised (24:26-27). The child in SIMEON'S arms is "a light for revelation to the Gentiles and for glory to your people Israel" (2:32). The same prophet tells Mary, "This child is destined to cause the falling and rising of many in Israel, and to be a sign spoken against, so that the thoughts of many hearts will be revealed" (2:34-35). Jesus' very presence probes the heart and provokes a response.

John's gospel is in a category by itself. Like Luke, though, he announces his purpose in writing it: the signs that he records are written "that you may believe that Jesus is the Christ, the Son of God, and that by believing you may have life in his name" (Jn. 20:31). John is concerned throughout that the reader be assured of the veracity of all he records: "we have seen his glory," he tells us up front (1:14). This becomes especially so in the passion narrative. Mary is entrusted to John (19:26-27); he personally witnessed the flow of blood and water at the piercing of Jesus' side (19:35); he went into the tomb and saw the burial cloth (20:8). John writes that he saw many miracles not recorded in this gospel (20:30); but all that he does write is true (21:24-25).

John also is a careful theologian, noting many links of Jesus' teaching and miracles to the OT. From Jn. 1:1-3 (compared to Gen. 1:1), to NATHANIEL'S confession that Jesus is the fulfillment of Jacob's vision (1:50-51), to the temple discussions, on through to the many detailed ways in which OT texts can be applied to Jesus' death, this gospel functions clearly as an apologetic for the mirror of the OT in the NT. Furthermore, here Jesus often proclaims his divine origin and mission in the strongest terms. The famous "I am" passages are more than descriptions of his ministry; they are part of Jesus' ongoing claims to be identified with the "I am that I am" beheld by Moses at the burning bush (Exod. 3:14).

C. Acts. Jesus warned his disciples that they would be brought before the synagogues, rulers, and authorities for their faith. Yet he promised that a "defense" would be given to them by the HOLY SPIRIT in that hour (Matt. 10:19; Mk. 13:11; Luke uses the verb *apologeomai* G664, "to speak in defense," Lk. 12:11; 21:14). The book of Acts (sometimes using the cognate noun *apologia* G665) records numerous occasions when that warning became a reality (Acts 19:33; 22:1; 24:10; 25:8, 16; 26:1-2, 24). These opportunities for defense were all in connection with the apostolic proclamation

of the gospel of the kingdom from Jerusalem to the ends of the earth. The narrative moves from events in Jerusalem, with preaching to largely Jewish audiences, to the spread of the gospel to an increasingly gentile audience, ending in arrival of the apostle Paul in Rome, the quintessential gentile city.

Accordingly, the messages vary in their approach. Sermons geared to Jews argue more directly from Scripture than those aimed at Gentiles, though not exclusively so. Peter's first sermon explains the events of PENTECOST in terms of Joel's prophecy, and calls for faith and repentance to the Jews, but assures them that the promises are for them and those who are called from faraway (Acts 2:39). STEPHEN's speech to the SANHEDRIN is a recital of OT history as fulfilled in Christ, concluding with a prophetic accusation of the unbelief of the Palestinian Jews, earning him martyrdom (7:1-53). In the ensuing persecution, the church gradually spreads out to Samaria and to places far from Jerusalem.

PAUL, the newly converted Pharisee, could appeal to his training under the renown GAMALIEL as evidence that he knew "the law of our fathers" (Acts 22:3). In his defense before the Sanhedrin, he affirmed the resurrection of the dead, to the consternation of the Sadducees (23:6-8). But then he drew opposition from all Jews by claiming that the entire OT points to Jesus Christ. Indeed, much of the NT is a polemic against legalistic Judaism. The Messiah should not have had to die, and so Christ was a "scandal" to the Jews (1 Cor. 1:23). In a similar way, when he testified before rulers he adapted the message to fit the circumstance. Before FELIX, whose wife was Jewish, he spoke about "the Way" (24:10-21). Before Agrippa (see HEROD VIII) and FESTUS he spoke of the impossibility of opposing the risen Christ (26:2-29).

While offered "to the Jew first," Christianity eventually appealed more and more to Gentile audiences. Naturally, the message took on a different character. Preaching in LYSTRA (Acts 14:14-18) and in ATHENS (17:22-31), Paul's message was adapted to a pagan audience. Rather than building on OT redemptive history, he appealed to revelation that they could recognize, for example, the patience and beneficence of God as attested in the natural world (14:15-17; 17:25), or the inner contradiction between worshiping gold, silver, stone, and the altar "to an unknown god" (17:23, 29). While fully conversant with their local philosophies, even quoting poets like Epimenides and Aratus, he challenges their inconsistent philosophy of history (17:28). Ultimately, he calls them to recognize the living God, the one whose Son would judge the world (14:15; 17:30-31). Such messages to pagans are consistent with Paul's basic worldview, as set forth in Rom. 1:18-25. (See N. B. Stonehouse, *Paul before the Areopagus and Other New Testament Studies* [1957].)

D. The Epistles and Revelation. The authors of the letters were aware of their calling as defenders of the faith. To the Philippians, Paul says he is in prison "for the defense of the gospel" (Phil. 1:16; cf. 1:7). His life was bound up with defending the truth (2 Tim. 4:16). He exercised a ministry of *persuasion* (*peithō* G4275; see 2 Cor. 5:11; Acts 13:43; 26:28), aiming at *conviction* (*plērophoreō* G4442, Col. 4:12; cf. 1 Cor. 2:6, 10). Because of that, he and his coworkers "demolish arguments and every pretension that sets itself up against the knowledge of God, and we take captive every thought to make it obedient to Christ" (2 Cor. 10:5). The author of Hebrews insists that his readers "pay more careful attention" to the binding finality of the gospel message (Heb. 2:1-4). James warns his readers of the seductive reasoning that blames God for evil (Jas. 1:13-15).

At the same time, this apologetical tone is meant to encourage the believing community to face opposition and remain faithful. No doubt the *locus classicus* of apologetics is 1 Pet. 3:15, which tells believers to reverence Christ and always to be prepared "to give an answer to everyone who asks you to give the reason for the hope that you have." Peter is paraphrasing Isa. 8:12-13, which tells

Israel not to fear the conspiracy of the Assyrians, but to fear the Lord. Peter names Christ and then enjoins his readers to expect questions from outsiders about their hope. Not a formal, legal defense, this apology is in response to any inquiry (1 Cor. 9:3; 2 Cor. 7:11). Their *reply* (*apologia*) is a reasoned speech that gives an account of their deepest motive. Done in gentleness and humility, it carries the irony that one day (sooner than later, it is hoped) the outsiders, shamed into confession, will have to give account to Christ for their unbelief (3:16).

Finally, the Revelation is an apologetic in the apocalyptic mode. From beginning to end, it tells Christians of their ultimate victory in Christ, using veiled language from the OT and from highly symbolic metaphors. No doubt this was in part to keep Christians from being troubled by authorities. It is also because the language used is accessible to faith. The text is full of arguments for the assured reign of Christ despite all appearances to the contrary. It is attested by John with the same conviction as the Gospel of John (see Rev. 1:1-3, 9-19; 4:1-2; 5:1-6; 6:1, 12; 7:13-14; 10:1-11; 22:8-10). (See further F. F. Bruce, *The Defence of the Gospel in the New Testament* [1959]; B. Lindars, *New Testament Apologetic: The Doctrinal Significance of the Old Testament Quotations* [1961]; J. M. Frame, *Apologetics to the Glory of God: An Introduction* [1994]; S. B. Ferguson, *The Pundit's Folly: Chronicles of an Empty Life* [1995]; K. S. Oliphint, *The Battle Belongs to the Lord: The Power of Scripture for Defending Our Faith* [2003]; *ABD*, 1:302-7.)

W. EDGAR

apophthegm ap'uhf-them' (*ἀπόφθεγμα*, “a terse saying,” from *ἀποφθέγγομαι*, “to state an opinion plainly”). A term used by NT scholars to designate short stories in the Gospels that culminate with an important saying of Jesus (e.g., Mk. 2:23-28). Other terms used are *pronouncement story*, *paradigm*, and *chreia*.

apostasy. The abandonment of one's religion. The word is rarely found in the English Bible (e.g., Jer. 2:19 NRSV, where KJV and NIV have “backsliding”), and the Greek word from which it comes (*apostasia* G686) occurs only in Acts 21:21 and 2 Thess. 2:3. But the reality expressed by the word is found frequently. Israel's history was one of continual apostasy as the people deliberately turned away from the God who had redeemed them out of Egypt, and followed false gods and sinful ways. Consequently, God judged them and sent them into exile, although he never finally gave them up as a people, and left the way of repentance open to the nation. See ISRAEL, HISTORY OF.

In the NT apostasy occurs when people turn aside from following Jesus (Jn. 6:66) and deny him after having previously confessed him as Lord. It manifests itself in falling away from faith under persecution (Matt. 24:9-13), denying the DEITY OF CHRIST (1 Jn. 2:22), or living a life of open sin that denies the faith (2 Pet. 2:20). It is characteristic of the last days (2 Thess. 2:3; 1 Tim. 4:1; 2 Tim. 3:1, 5; 4:3-4; see ESCHATOLOGY). Many scholars restrict apostasy to the temporary backsliding of true believers or to the falling away of nominal believers from an outward profession, but others hold that alongside the statements on the eternal security of the believer must be placed others that seem to warn true believers against the possibility of failing to find entrance to the kingdom of God (Heb. 6:4-12; 10:26-39). (Cf. further G. C. Berkouwer, *Faith and Perseverance* [1958]; E. M. B. Green, *The Meaning of Salvation* [1965]; I. H. Marshall, *Kept by the Power of God* [1969]; S. Brown, *Apostasy and Perseverance in the Theology of Luke* [1969]; B. J. Oropeza, *Paul and Apostasy: Eschatology, Perseverance, and Falling Away in the Corinthian Congregation* [2000]; D. Kim, *An Exegesis of Apostasy Embedded in John's Narratives of Peter and Judas against the Synoptic Parallels* [2004].) See also PERSEVERANCE.

apostle. This term (Gk. *apostolos* G693, “one sent out”) functions as a title given to Jesus’ twelve disciples and to others in the NT.

I. Background and usage. In classical Greek this term (derived from the verb *apostellō* G690, “to send off”) typically refers to a “naval expedition, squadron,” and less frequently it means “messenger, ambassador.” It occurs in the SEPTUAGINT only in 1 Ki. 14:6 (part of a textually dubious passage), where it is used in a nontechnical sense to represent the Hebrew passive participle *šālūah* (from the verb *šālah* H8938, “to send”; cf. the Aramaic form *šēlīah* in Ezra 7:14). The idea of God sending his servants the prophets is frequent in the OT, and this Hebrew verb is normally translated by *apostellō* in the LXX.

In later JUDAISM the noun *šālīah* (“sent one, deputy”) was used to refer to those who acted as representatives or agents for others. (The MISH-NAH says regarding someone who makes an error reading the benedictions: “if he was the agent of the congregation it is a bad omen for them that appointed him, because a man’s agent is like to himself” [*m. Ber.* 5:5].) In particular it referred to accredited agents, often sent out in pairs, going from the authorities in Jerusalem to the DIASPORA. These men had authority for only a limited commission and were in no sense missionaries. (On the origin of the “apostle-concept,” see the review of research by F. Agnew in *JBL* 105 [1986]: 75-96.)

In the NT, Christ himself is described as an “apostle and high priest” in Heb. 3:1, where the phrase may imply a superiority to MOSES in the first role and to AARON in the second. The idea of the Son’s being sent from the Father is prominent in John, where *pempō* G4287 (“to send”) is used almost interchangeably with *apostellō*. The word “apostle” can be used in a general sense, as in a proverb that occurs only in this gospel (Jn. 13:16). It is used also to refer to messengers from the churches on two occasions (2 Cor. 8:23; Phil 2:25). There is also an interesting use of the word to describe God’s messengers to Israel (Lk. 11:49).

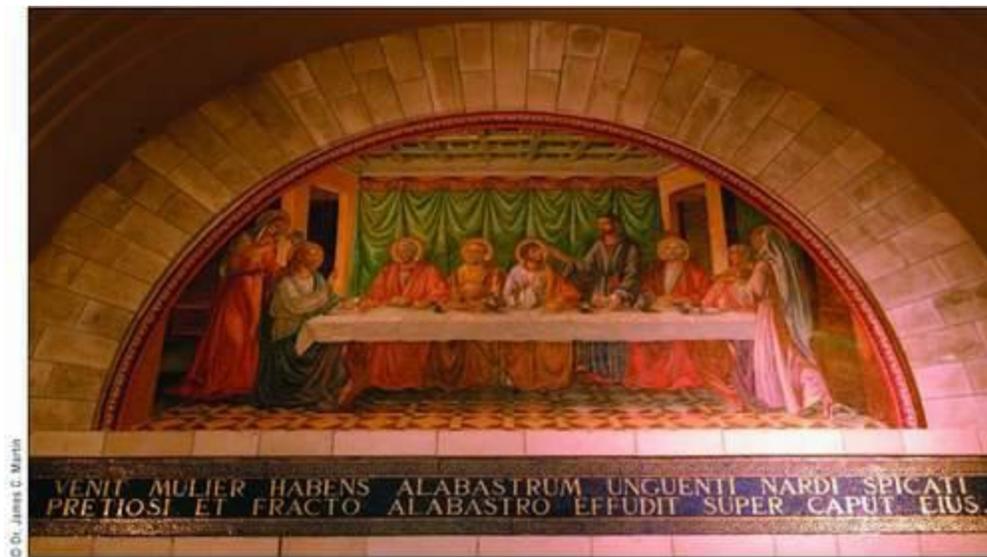

Altogether the word occurs ten times in the Gospels, twenty-eight in Acts, thirty-eight in the epistles, and three times in Revelation. In the majority of cases it refers to men appointed by Christ for a special function in the church. The Twelve and Paul are frequently in mind, but there are some instances where others are called apostles. James, the Lord’s brother, seems to be one (Gal. 1:19; 2:9; cf. 1 Cor. 15:7 and see JAMES II). BARNABAS is described as an apostle in Acts 14:4, 14, and he is associated with PAUL in the argument of 1 Cor. 9:6, but he is distinguished from the Jerusalem apostles (Acts 9:27). Silvanus (SILAS) and TIMOTHY can be associated with Paul under that title (1 Thess. 2:6). ANDRONICUS and JUNIAS (possibly Junia, a woman) also can be called apostles (Rom. 16:7).

II. The apostles and Christ. Jesus had a large, if fluctuating, number of disciples during his ministry, but not all of them were apostles. The Twelve were chosen out of a wider group (Mk. 3:13-19) and were to be with Jesus as disciples, but they were also sent out to preach and exorcize as apostles. Jesus gave them the title of “apostles” (Lk. 6:13), though at this stage the term may have been understood as neither exclusive nor permanent (cf. Matt. 10:2; Mk. 6:30). The apostles were able to act in the name of Christ (Mk. 9:38-41). Twelve were especially chosen because of the twelve patriarchs of Israel (Matt. 19:28), though there is some uncertainty about the exact list of names. Luke describes them regularly as “the apostles” (Lk. 9:10; 17:5; 22:14; 24:10), using terminology appropriate to the time of writing (cf. his use of “the Lord” in the gospel), while John avoids the

technical term completely, perhaps in order to avoid magnifying the office as opposed to the reality for which it stood.

The sources all agree that the Eleven (perhaps with others) were commissioned by the risen Christ to go forth with a mission to the world (Matt. 28:19-20; Lk. 24:48-49; Jn. 20:21-23; Acts 1:6-8; cf. Mk. 16:14-15). One of the first tasks was to find a replacement for the traitor JUDAS ISCARIOT, and MATTHIAS was chosen by lot to make up the number to twelve (Acts 1:15-26). Emphasis is laid on the divine choice (1:24). The apostleship of Paul was also due to the divine choice, and he was often at pains to point this out, both to emphasize the wonder of the grace of God and to maintain the authority of his own message (Gal. 1:1, 11-12, 15-17; cf. Rom. 1:1; 1 Cor. 1:1; 9:1; 15:8). There could be no substitute for a personal call from Christ to this service.

III. The apostles and the gospel. When the Twelve were sent out by Jesus during his ministry,

Mary anoints Jesus as the apostles are looking on. Painting from the Church of Lazarus in Bethany.

one of their tasks was to preach (*kēryssō* G3062, Mk. 3:14). This is one of their most prominent activities in Acts, and the basic form of the apostolic preaching is known as the KERYGMA (Gk. *kērygma* G3060). The qualifications for inclusion among the Twelve are laid down in Acts 1:21-22. It was necessary to be with Jesus from the time of John's baptism until the ascension and to be a witness of the RESURRECTION. This is the essential period of the saving events. The Gospels have John's baptism as their basic starting point (Matt. 3; Mk. 1; Lk. 3; Jn. 1), with some historical preliminaries in the case of Matthew and Luke and a brief theological introduction in the case of John. This was presumably also the starting point of the *kerygma* (Acts 10:37; 13:24). The Gospels close with Christ's departure (Matt. 28:16-20; Lk. 24:50-53; Jn. 20:17; cf. also Mk. 16:19), though this is not made fully explicit in John. The *kerygma* goes on past the ascension to speak of the presence of the HOLY SPIRIT (Acts 2:33 et al.), the knowledge of whose activity in the church seems to be assumed by the written Gospels. While it was necessary to have been present during all that period, particular stress is laid upon being a witness of the resurrection (Acts 2:32; 3:15; 13:31).

Paul could not be numbered among the Twelve, for he had not fulfilled all the conditions laid down. However, he had been a witness of the resurrection (Acts 26:16-18; 1 Cor. 9:1; 15:8), and the way in which he describes the appearance of Christ to him has suggested to some that he had a unique objective experience really belonging to the period before the ascension (most scholars, however,

would reject that inference). James, the Lord's brother, had likewise seen the risen Christ (1 Cor. 15:7), as had more than 500 others (v. 6). It was necessary for those who had not been among the disciples during the ministry to rely on the common tradition (*paraadosis* G4142) of the apostles concerning the events of that period. Paul, while claiming authority directly from Christ, nevertheless shows his dependence upon the tradition (1 Cor. 11:23-26; 15:1-5). This emphasis shows that he was concerned about the historical Jesus.

The apostles were not simply witnesses of facts, they were also interpreters of them. God had sent men to interpret his saving acts in the OT, particularly Moses, who had been a witness of and participant in the exodus (Ps. 103:7; Mic. 6:4). So there was a common apostolic teaching, and appeal was made to that even against the foremost apostles (Gal. 2:11). The preaching and writing of the apostles and their companions taken together therefore provide both the basic historical evidence and the norm of interpretation through which alone future generations could reach the facts about Christ.

IV. The apostles and the Spirit. The apostolic witness could be accomplished only in the Spirit. Their missionary journeys depended on him (Lk. 24:49; Acts 1:8). Their proclamation of forgiveness was effective through him (Jn. 20:22-23). They realized their full apostolic vocation only at Pentecost. It was the Spirit who was to teach them and remind them of Jesus' words (14:26). He was to lead them into all the truth about Jesus (16:13-15). The direct witness of the Spirit on the existential level was closely connected with the witness of the apostles on the historical (15:26-27). The ministry of the gospel is a ministry of the Spirit (2 Cor. 3).

Various forms of ministry, of which the apostolate was first, were gifts of the Spirit to the church (1 Cor. 12:28). The work of a true apostle was accompanied by signs and wonders and mighty works (2 Cor. 12:12), though such things are regarded as peripheral compared with Christian converts (1 Cor. 9:2). It is through the laying on of the apostles' hands that special manifestations of the Spirit come upon groups of people at significant stages in the missionary advance of the church (Acts 8:14-19; 19:1-7). There is no suggestion that these manifestations are permanent, and on one important occasion the outward signs are shown without the laying on of apostolic hands (10:44-48). (Cf. also C. K. Barrett, *The Signs of an Apostle* [1970].)

V. The apostles and the church. The apostolate was God's gift to the CHURCH and has a place of preeminence among the ministries (1 Cor. 12:28; Eph. 4:11). The church could be said to be founded upon the apostles and prophets (Eph. 2:20). They were given authority (*exousia* G2026, Mk. 6:7) and power (*dynamis* G1539, Acts 1:8) to be used not only in proclaiming the gospel to outsiders, but also for use in the church (Acts 4:33; 2 Cor. 10:8; 13:10). Besides their preaching, their functions were to teach (Acts 2:42), to heal (5:12), and to undertake certain administration (4:37, though with limits, 6:1-4). Their authority was shown in the exercise of DISCIPLINE (5:1-11; 1 Cor. 5:1-5) and of oversight (Acts 15:36; 1 Cor. 4:15-16). Major decisions that had to be made in the church were reached by a council of apostles and elders (Acts 15:6).

Paul tells us how areas of work were allotted, with his mission field being the Gentiles and that of James, Peter, and John being the Jews (Gal. 2:7-10). At first the Twelve stayed in Jerusalem (Acts 8:1), but in due course some at least seem to have gone further afield. There is no reason to suppose that the areas were strictly kept, as Paul was accustomed to preach first to the Jews (13:5 et al.), and Peter was the first to preach to Gentiles (ch. 10). As traveling representatives of Christ and of the universal church, they sought to open up new places to the gospel (Rom. 15:14-24). James, the Lord's

brother, seems to have had a resident ministry that distinguished him from others called apostles.

VI. Conclusion. It was through the apostles that Christ continued much of his work. Their position was unique and normative, and many of their functions were not transmissible. There is no evidence that their numbers were to be made up as the original loyal apostles died (Acts 12:2), nor that Paul should have taken the place of Judas, and James, the Lord's brother, the place of James son of Zebedee. They appeared at a turning point in history: through the Spirit, they both founded the church and, with their companions, left the NT for us. It is through them that we have to go to find the historical Jesus. It is to them that the appeal has been made with varying degrees of justification for "Catholic" order, "Evangelical" faith, and "Pentecostal" life.

R.E.NIXON

Apostles, Epistle of the. An apocryphal letter addressed by the eleven apostles (including NATHANAEL, and with Cephas distinguished from PETER) to the churches of the four regions of the world. The work is also known as *Testament of Our Lord in Galilee*. Nowhere mentioned in early Christian literature, it was completely unknown before the discovery in 1895 of a badly mutilated Coptic MS (the primary version where available). We also now have an Ethiopic version complete, as well as fragments in Latin.

Following an introduction, the document makes an emphatic affirmation of faith in Jesus as Lord and Savior, then gives a summary account of several incidents from the Gospels, including the story of Jesus and the teacher recorded in the *Infancy Gospel of Thomas* (see THOMAS, GOSPEL OF). The report of the resurrection appearance to the disciples develops into an extended discourse by Jesus, interrupted by questions from the disciples to which he replies. This discourse includes a prophecy of the conversion and missionary work of Paul (chs. 31ff.) and a curious interpretation of the parable of the wise and foolish virgins (chs. 43ff.), with admonitions regarding Christian conduct. For example, a man should admonish his neighbor without respect of persons if he sees him sin, or he is himself liable to judgment.

The revelation conveyed in the form of a postresurrection discourse is similar in type to some Gnostic documents (see, e.g., JOHN, APOCRYPHON OF), which present the same pattern of a dialogue between the risen Jesus and one or more disciples. Despite affinities with Gnosticism, however, this is not a Gnostic document; it expressly warns against the "false apostles," Simon and Cerinthus, "the enemies of our Lord Jesus Christ" (chs. 1, 7), and emphasizes the reality of Christ's body, in particular of his risen body (chs. 11-12). On the other hand, it stands at some distance from the NT and primitive Christianity. See also APOCRYPHAL NEW TESTAMENT.

The author was familiar with the gospel tradition, giving a special place to John, but his free handling of the Gospels and his use of nonevangelical material suggest that they have not yet reached full canonical status. The absence of evidence for knowledge of Pauline theology is remarkable in view of the place given to Paul. All this points to a 2nd-cent. date. C. Schmidt (*Gespräche Jesu*

[1919]) thought it was composed in Asia Minor between A.D. 160 and 170, but others argue for Egypt. M. Hornschuh (*Studien zur Epistula Apostolorum* [1965]) notes parallels with the Qumran literature, and dates it to the first half of the 2nd cent. (English trans. and introduction in *NTAp*, 1:249-84.)

R. McL. WILSON

Apostles, Gospel of the Twelve. A work first mentioned by ORIGEN (*In Luc.* hom. 1) immediately after the *Gospel of the Egyptians* and before those of Basilides, Thomas, and Matthias. Commenting on Lk. 1:1, Origen remarks that the church has four Gospels only, while the heretics have several. This statement, with the context in which it appears, sufficiently indicates the heterodox character of the book. Origen's testimony is echoed by several later writers, including Ambrose, Jerome, and Bede. The document is commonly identified with the *Gospel of the Ebionites*, of which fragments are preserved by Epiphanius. If this identification is incorrect, we know nothing about the work. (For details and literature, see *NTAp*, 1:374.)

The name is given also in various sources to a number of other works: (a) the *Kukean Gospel of the Twelve*, which may possibly be the Ebionite Gospel (see *NTAp*, 1:375); (b) a Manichean document, otherwise unknown; (c) a late Syriac document published by J. Rendel Harris. (The alleged *Gospel of the Twelve* published by E. Revillout in 1904 is simply a collection of Coptic fragments.) See also APOCRYPHAL NEW TESTAMENT.

R. McL. WILSON

Apostles' Creed, the. A statement of Christian faith used in the Western church and consisting of brief positive affirmations with no proofs and no explanations. Like other ancient creeds, the Apostles' Creed falls into three sections, following the Trinitarian order customary in baptismal rites (a catechetical device of almost universal use in the catholic church; cf. John Calvin's *Institutes of the Christian Religion*). It is probably based structurally on Matt. 28:19 and speaks of God the Father, Jesus Christ the Son, and the Holy Spirit. The major portion of the creed deals with Christ, followed by a series of clauses setting forth the work of the Holy Spirit. In contrast to some modern emphases, this ancient and universal creed says nothing about the life and teachings of Jesus, but it reflects the basic verities of the apostolic church.

The affirmations of the creed can be supported by NT evidence (contra A. Harnack, *The Apostles' Creed* [1901]), but the formula itself is not, of course, of apostolic origin. Its title is first found c. A.D. 390, and about this time the legend that it was the joint composition of the apostles appeared. The legend is a quaint one (comparable to that of the writing of the LXX), assuring that each of the twelve apostles contributed a special article. Thus Peter, it was reported, under divine inspiration began, "I believe in God the Father Almighty"; and Andrew (or was it John?) added, "and in Jesus Christ his only Son, our Lord"; James the Elder continued, "who was conceived by the Holy Ghost," and so it went throughout.

Many NT scholars now find creeds in germ in the NT record (cf. Matt. 28:19), and one may be reasonably certain that there were requirements laid down regarding the convert's grasp of the new faith. Paul stated that "no one can say, 'Jesus is Lord,' except by the Holy Spirit" (1 Cor. 12:3), and he wrote of a "form of teaching" to which new converts were "entrusted" (Rom. 6:17). Timothy was reminded of his "good confession in the presence of many witnesses" (1 Tim. 6:12), and this point is immediately related to "Christ Jesus, who while testifying before Pontius Pilate made the good confession" (6:13). Thus one may speculate that confessions existed and were made publicly. As to total content, there are only hints (cf. 2 Tim. 2:8; 4:1).

Early Christian writers and apologists show additions and variations to the baptismal formula of Matthew, but by the middle of the 2nd cent. the confession at baptism had begun to crystalize with certain freedoms of expression in IRENAEUS, TERTULLIAN, Novatian, ORIGEN, and others. The so-called Roman Form prevailed with time and took on new importance with the rise of controversies and heresies. It assumed more the character of a formal creed. It became known as the "Rule of Faith" and was created and formalized to check the license of heretical speculations on the Scriptures. The creed was to witness to the common faith as that faith arose out of the Scriptures.

The Received Form of the creed as it is known today is not its oldest or original form. There was a shorter and a longer form. The shorter form became known as the Old Roman Form, going back surely to the middle of the 2nd cent. (c. A.D. 140; a short form can be traced in England up to the time of the Norman conquest). The longer form is of much later date and its history is more obscure, probably because its increasingly wider usage gave rise to variance in wider areas of the church. For those acquainted with the Received Form today, the short or Old Roman Form is of interest as a stage in growth: "I believe in God the Father Almighty, and in Jesus Christ his Only Son our Lord, who was born of the Holy Ghost and Virgin Mary; crucified under Pontius Pilate, and buried; the third day he rose from the dead; he ascended into heaven and sitteth at the right hand of the Father, from thence he shall come to judge the quick and the dead. And in the Holy Ghost; the holy Church; the forgiveness of sins; the resurrection of the body; the life everlasting." (This form is quoted from the Greek of Marcellus of Ancyra, A.D. 341. The last clause is omitted in the Latin form preserved by Rufinus, A.D. 390.)

The Received Form appears throughout the centuries in a variety of interpretations, with additions and refinements; for example, the phrase "maker of heaven and earth" first appears in Greek in the year 650. By and large, however, the present form of the creed had been established by Faustus of Reiz c. 460. It moved to Ireland by the end of the 7th cent. and to England (possibly from the court of Charlemagne) by 850. By the 10th cent. it had largely replaced the shorter Old Roman Form. An 8th-cent. writer was the first to quote the creed exactly in its present form, but it did not hold its structure until later. The creed's history in other lands followed the same obscure pathway of tradition and practice. Such phrases as "he descended into hell" struggled even into modern times for an established place (see DESCENT INTO HADES). Variants such as "the resurrection of the body" for

“the resurrection of the flesh” became fixed in time, and the use of “Holy Christian Church” (most frequent Lutheran usage) continues to struggle with “Holy Catholic Church.” One may say, however, that by the 12th cent. the Received Form was everywhere used at baptisms in the West, and the practice of reciting the creed in daily services had become common. Both usages continue to this day. (See P. Schaff, *Creeds of Christendom* [1877], 1:14-23; 2:45–55. A very important treatment is to be found in vol. 1 of J. de Ghellinck, *Patristique et moyen-âge*, 2nd ed. [1949]; more recently, L. H. Westra, *The Apostles’ Creed: Origin, History, and Some Early Commentaries* [2002].)

A. H. LEITCH

apostolic age. The period of early church history during the life and work of the original apostles, extending from the day of PENTECOST (c. A.D. 30 or 33; Acts 2) to the death of JOHN THE APOSTLE (c. A.D. 100). The main sources for the period are the book of Acts and the NT letters.

I. The inauguration of the apostolic age. The success of Christianity in the apostolic age is due to the initial effusion of the HOLY SPIRIT upon Christ’s 120 disciples at the Jewish Feast of Pentecost in fulfillment of the prior divine promises (Joel 2:28-32; Matt. 3:11; Jn. 14:26; 16:7-11; Acts 1:8). The Holy Spirit became the “other self of the Christ” at Pentecost (H. Chadwick), indwelling the disciples for the completion of the work begun by Christ himself (Acts 1:1-2, 8). An analysis of this historic event (2:1-4) reveals a fourfold divine provision, as suggested by the symbolism employed: (1) “the blowing of a violent wind”—divine power (v. 2; cf. 1:8), (2) “tongues of fire”—divine purification (2:3; cf. Deut. 4:24; Isa. 6:5-8; 10:16; 30:27-30; Matt. 3:11-12; 5:22; Acts 15:1-9; Heb. 12:29); (3) “all of them were filled”—divine possession (Acts 2:4a); and (4) “began to speak in other tongues”—divinely inspired proclamation (v. 4b).

The advent of the Spirit at this time was most opportune. The importance of the Jewish temple in centralizing and unifying Hellenistic with Palestinian Judaism in the 1st cent. is emphasized by the vast patronage of the DIASPORA Jews. While JOSE-PHUS’s estimate of three million attending a single Passover is likely an exaggeration (F. R. Crownfield, *An Historical Approach to the New Testament* [1960], 230), it nevertheless points up the cultural and spiritual unity of all Judaism. Through the Spirit-animated witness of the apostles, 3,000 Jews, mostly Hellenists, were converted to Christianity (Acts 2:41), with an increase to at least 5,000 soon after (4:4). The genuineness and influence of this spiritual occurrence is attested by the quality of its converts (2:41-47; 4:32-37). With the return of the Hellenist converts to their respective locations (2:5-11) following Pentecost, they carried their witness with them and thus disseminated widely the gospel to such outlying centers as Damascus, Antioch of Syria, Cyprus, Cyrene, and even Rome (11:20). There were doubtless many other locations of which those recorded are representative.

II. The martyrdom of Stephen. At the outset, Christianity was recognized as only a new-life movement within JUDAISM. The Christians continued worshiping in the temple and observed the regular Jewish ceremonials (Acts 3:1). Little opposition was manifested by the Jews until Christianity was recognized as a distinct religion and the Hellenists, especially STEPHEN, began to suggest that Christianity was universal and that it would supplant Judaism, for which insinuations he became the first Christian martyr (ch. 7; 8:1). The full fury of Jewish persecution broke upon the Christians, but especially upon the Hellenists following Stephen’s martyrdom, and consequently the gospel spread afar through the witness of these dispersed Hellenist disciples (8:1, 4). Thus it was the martyrdom of Stephen that shattered the bars of legalistic Judaism and set Christianity free for its

universal mission. The apostles and Jewish Christians remained to constitute the Jerusalem mother church (8:1) and afford a central nucleus and base of authority for the church until the Roman siege of Jerusalem in A.D. 68.

III. The conversion of Saul. In the first stage of the apostolic age, Peter and Stephen dominated the scene (Acts 1:1—8:1); in the second, PETER, PHILIP, and BARNABAS were prominent (9:27; 12); but in the third, it was PAUL (chs. 13-28). With the conversion of Saul, the archenemy of Christianity (9:1-2), a new era dawned upon the young church. From vicious persecutor of the church because of the universal implications of its message, Saul became the great apostle to the Gentiles (Gal. 1:23). A period of peace and spiritual prosperity for the church followed Saul's conversion (Acts 9:31). Paul (his Roman name), himself a Hellenistic Jew with Roman citizenship from TARSUS in CILICIA, was educated in Jerusalem under the relatively liberal-minded GAMALIEL (22:3), and was thus better able to understand and appreciate the Hellenist stance than were the other apostles. Paul was present at the martyrdom of Stephen and approved his death sentence as well as that of other Christians (7:58; 8:1; 22:20; 26:10). He was possibly one of those from Cilicia who could not cope with Stephen's "wisdom or the Spirit by whom he spoke" (6:9-10). He was never able to free himself from the influence of Stephen's message and martyrdom. All of his recorded addresses reflect the influence of Stephen's arguments. With the conversion and subsequent leadership of Paul, the Christian gospel passed into its worldwide Gentile mission.

Early traditions place the stoning of Stephen in the area of what became known by the late 1890s as the Garden Tomb. Photo taken c. 1905.

The generous attitude of Rome toward the Christians was due to the allowance of freedom granted all approved religions within the empire. Judaism was such a religion, and since Christianity had flowered from Judaism, Rome appears not to have distinguished between the two initially (Acts 18:1-2, 12-17). Actually Christianity enjoyed the protection of Rome until about the time of Paul's first imprisonment under NERO, at which time the distinction between Judaism and Christianity became clearer, and the Christians became convenient scapegoats for Nero. The martyrdom of James under Herod Agrippa (12:1 -5) should probably be understood in the light of Herod's Jewish connections and his desire to curry favor with the Jews, rather than as a hostile act of Rome toward

Christianity (see HEROD VII).

IV. The Council at Jerusalem. The first general council of the Christian church occurred between the first and second missionary journeys of Paul (Acts 15). The principal issue was the condition required of the Gentiles for membership in the church. The decision reached by the council was one of the most momentous of all church history, as it saved the young movement from a Jewish-Gentile schism. It also established salvation by grace without legalism (for a fuller treatment of this subject see COUNCIL OF JERUSALEM).

V. The mission to the Gentile world. (1) Whatever social, economic, political or other implications the gospel may have had, the primary and distinctive aim of the 1st-cent. Christians was to make Christ known to all the world as Savior and Lord. Christ's universal lordship is linked inseparably with his saviorhood (110 times in Acts his lordship is emphasized).

(2) For the apostolic Christians the uniqueness of Jesus Christ as Savior and Lord was absolute (Acts 4:12).

(3) The responsibility for the universal witness was obligatory upon each believer, and not just upon the apostles and leaders.

(4) Apostolic methods were considered means to make Christ known, and never ends in themselves. Important items were: (a) personal witness to Christ through social intercourse; (b) miraculous acts of God that inspired faith in Christ as Savior; (c) preaching; (d) itineration; (e) charities; (f) church organization and supervision; (g) training of promising converts; (h) planting of the gospel in strategic centers; and (i) writing and circulation of Christian letters, from which all of the NT epistles came.

(5) Simplicity characterized Christianity in the apostolic era. There were no church buildings as such (Rom. 16:5; 1 Cor. 16:19; Phlm. 2), government was at a minimum, and generally WORSHIP was patterned after the informal synagogue.

(6) Christianity was considered to be a spiritual life movement rather than an organization or an institution. Christians were the people of the Way, "the new and living way" (Heb. 10:20).

(7) The full extent of the gospel outreach in the 1st cent. cannot be determined with certainty. However, some idea can be gained from the representatives of the fifteen nations mentioned as present at Pentecost, which included most of the Middle E and Rome (Acts 2:7-11). Paul's missionary journeys took him through Palestine, Syria, Cyprus, Asia Minor, Macedonia, Greece, and on to Rome. He further mentioned Illyricum (Rom. 15:19), and it is possible that he traveled to Spain (v. 24). Peter may have reached Babylon (1 Pet. 5:13), and there is a strong tradition that Thomas went to India. Paul boldly wrote to the Romans within thirty years of Pentecost: "...your faith is being reported all over the world" (Rom. 1:8), and to the Colossians: "All over the world this gospel is bearing fruit and growing" (Col. 1:5-6).

C.W.CARTER

Apostolic Constitutions and Canons (*Διαταγαὶ τῶν ἁγίων ἀποστόλων*). A late 4th-cent. collection of instructions that purports to have been written by Jesus' twelve disciples, James the brother of the Lord, and Paul (6.14). They were sent out by Clement "our fellow-minister" (6.18), with Barnabas and others. The work was probably compiled in SYRIA; its tendency is Arian and legalistic (shaving, mixed bathing, and the reading of pagan books are condemned in book 1).

The *Constitutions* are made up of eight books. The first six are similar to the DIDASCALIA APOS-

TOLORUM, though the amount of revision and change varies. The *Didascalia* is almost certainly a 3rd-cent. product. The author seems to have lived in the Syria-Palestine area. He may have been a bishop, and the work has subordinationist tendencies. The bishop is compared to the Father, the deacon to the Son, the deaconess to the Holy Spirit (2.26). The seventh book begins with reminiscences of the DIDACHE, with mention of the "two ways," followed by moral rules, the rules for worship, prayer formulas, and instructions about baptism. The major part of the eighth book is based upon the document now known as the APOSTOLIC TRADITION of Hippolytus, and concerns the qualifications of the clergy and procedures in worship. It closes with the eighty-five Apostolic Canons. These last were drawn from diverse sources, including synods and councils. (English trans. in *ANF*, 7:385-508.)

P. WOOLLEY

Apostolic Council. See COUNCIL OF JERUSALEM.

Apostolic Fathers (*Patres Apostolici*). A collection of early Christian writings (also referred to as Post-Apostolic or Sub-Apostolic) produced by authors thought to have been associated with the apostles.

I. Meaning of the term. Although apparently used by Severus, a Monophysite patriarch of Antioch from 512 to 518, the modern use of the term goes back to J. B. Cotelier, who published an edition of these writings in Paris in 1672, and to L.T. Ittig, who used the exact term in his Leipzig edition of 1699. Cotelier included in his edition the supposed writings of Clement of Rome, of Ignatius, and of Polycarp, three writers who belong to this group without question. He also brought into his volume the so-called *Epistle of Barnabas* and the *Shepherd of Hermas*. The status of these is not certain, for their authorship and exact date are more difficult to determine, but they are normally included in the group. The *Martyrdom of Polycarp*, a closely contemporary document, and the fragments from Papias, who flourished about 100-130, should also be recognized as properly within the collection. Finally, the *Didache*, or *Teaching of the Twelve Apostles*, recovered in the 19th cent., is, as far as present knowledge goes, rightly a member of the group.

E.J. Goodspeed, in his edition of the Apostolic Fathers (1950), included the *Doctrine of the Apostles*, found in a Latin version (1899), as an independent document, but it is perhaps better to consider it a basically Jewish source for the *Didache*, equipped with a Christian conclusion. In 1956 J. A. Fischer published a new edition of the Apostolic Fathers limited to Clement, Ignatius, and Polycarp, but with the addition of the fragment of *the Apology* of Quadratus. The addition was unfortunate. Quadratus may better remain with the apologists, persons whose purpose was distinctly apologetic and who were often writing at a later date than most of the Apostolic Fathers. The *Address to Diognetus* has usually been included with the Apostolic Fathers since the middle of the 18th cent. It too, however, has an apologetic purpose and is probably of later date. It is best omitted from the group.

The writings of the Apostolic Fathers are, then, constituted of the following documents. (1) The so-called epistles of Clement: *1 Clement*, written in Rome c. A.D. 95; *2 Clement*, which is really a sermon by a different author, perhaps originating in Rome c. 140. See CLEMENT, EPISTLES OF. (2) The epistles of IGNATIUS, written c. 115 to six churches and one individual: *Ephesians*, *Magnesians*, *Trallians*, *Romans*, *Philadelphians*, *Smyrnaeans*, *Polycarp*. (3) Two documents concerned with POLYCARP: his letter to the *Philippians*, c. 115, and the *Martyrdom of Polycarp*, c. 160. (4) The DIDACHE, probably from Syria c. 90. (5) The so-called *Epistle of Barnabas*,

Photographed by permission.

Codex Sinaiticus, a 4th-cent. MS of the NT that includes two books from the Apostolic Fathers.

probably from Egypt, c. 130. See BARNABAS, EPISTLE OF. (6) The *Shepherd of Hermas*, from Rome, c. 150. See HERMANS, SHEPHERD OF. (7) The quotations from PAPIAS of Hierapolis, c. 125. (See separate articles on these writings. Recent and valuable editions include M. W. Holmes, *The Apostolic Fathers: Greek Texts and English Translations*, 3rd ed. [2007, a revision of the 1891 work by J. B. Light-foot and J. R. Harmer]; and B. D. Ehrman, *The Apostolic Fathers*, 2 vols., LCL [2003].)

II. Characteristics. Aside from having been written in Greek, the only common bonds between the writings of the Apostolic Fathers are their relatively early date and their general agreement with majority opinion as it developed in the church. There are, however, certain characteristics that may be mentioned as widely applicable. (1) The writings are primarily directed to Christians rather than to outsiders. (2) They are to a considerable extent concerned with questions of a practical nature, having to do with the state, church government, morality, and the sacraments. (3) A high view of the divine person of Christ is pervasive. (4) Eschatology is not neglected or depreciated.

On the other hand, the form of the writings varies widely. There are (1) letters, both official and personal, (2) revelations, (3) a formal exhortation in the form of a letter, (4) a sermon, (5) a historical account, (6) moral and practical advice, and (7) exegetical fragments.

III. Significance. The first factor to note is that these writings follow immediately in time sequence after the writings included in the CANON (NT). Although some of them are found in certain MSS, such as CODEX SINAITICUS, which contain canonical books, there was never any widespread opinion that they were canonical writings. They help to close a gap between the NT and later writers.

In addition, the Apostolic Fathers provide information about the Christian church in the period immediately after the apostles. The subjects to which one or another refer include the officers of the church, its form of worship, its sacramental observances, its treatment by the civil government, its system of discipline, its ethical teaching, and its ultimate source of authority. The information needs, of course, to be subjected to the usual critical tests before its value can be ascertained.

IV. History of texts and their use. Clement, Ignatius, and Polycarp have not disappeared completely from sight at any time, though their use has varied. (1) *1 Clement* is the only document bearing Clement's name that we can declare with assurance to be the work of Clement of Rome in the last decade of the 1st cent. It was used by IRENAEUS toward the end of the 2nd cent. and was available for centuries thereafter. Little use was made of it during the later Middle Ages, but the Reformation brought it back into wider circulation.

(2) Ignatius's letters were referred to with some frequency until the 5th cent. The Monophysites tried to support their cause with quotations from them. By the 6th cent. forged letters and interpolations in the genuine writings had appeared. It was not until James Ussher (1581-1656) worked on their text that the genuine was distinguished once more from the spurious, although the discussion has continued into modern times.

(3) *Barnabas* and *Hermas* were neglected for centuries in the medieval period, though there is a Greek MS containing *Barnabas* dating from the 11th cent. A printed Latin *Hermas* appeared at Paris in 1513. *Barnabas* was printed at Oxford and in France in the mid-17th cent.

(4) The *Didache* appears to have dropped out of sight in the medieval period. Its Greek text was first printed in 1883 and made something of a sensation at the time.

V. Use of the Bible. References to the OT in the Apostolic Fathers often imply the use of a Greek version. Books that are not in the Hebrew canon are quoted as Scripture by Clement and Barnabas. As for the NT, Clement knew some of Paul, Hebrews, and probably Acts. Ignatius knew a collection of Pauline Epistles to which he constantly referred. Polycarp used all of the thirteen Pauline Epistles except Philemon, and possibly 1 Thessalonians and Titus. He referred to Ephesians as Scripture (Pol. *Phil.* 12.1). Material contained in all of the Gospels was used or referred to by one or more of the Apostolic Fathers, but it is not always clear whether oral tradition or a written gospel is being used. Barnabas certainly used Matthew.

VI. Theology. The Apostolic Fathers share the basic tenets of Christian theology. God is the Creator and the Redeemer. He will be the Judge of all men. Knowledge of God and salvation are through Christ, who is the Son of God. The strong Pauline emphasis on grace is missing. The blood of Christ was "poured out for our salvation" (*1 Clem.* 7.4). It is "incorruptible love" (Ign. *Rom.* 7.3). Clement used a trinitarian form: "as God lives and as the Lord Jesus Christ lives and the Holy Spirit" (*1 Clem.* 58.2). For Clement, the Holy Spirit was concerned with inspiration. The Spirit spoke in the OT, apostles were "equipped with the fullness of the Holy Spirit" (42.3), and Clement wrote "through the Holy Spirit" (63.2). Ignatius also employed a trinitarian form, "that...you may prosper...in the Son and the Father and the Spirit" (*Magn.* 13.1). Christ was born of the Virgin Mary (*Eph.* 18.2; 19.1); he rose on the Lord's Day (*Magn.* 9.1).

In Clement, Ignatius, and Polycarp the theology stands largely in the apostolic tradition. However, in Clement particularly the influence of classical pagan tradition is strong. The ethical tradition of paganism is visible. In Ignatius's letters and in *2 Clement* Gnostic terminology is used, but this does not prove the writers to be Gnostics. The influence of Judaism is stronger in *Barnabas*, the *Didache*, and *Hermas*.

VII. Impact. The writings of the Apostolic Fathers are not abstruse treatises but are closely connected with the actual problems of the church and its members in the 1st and 2nd centuries. Two subjects appear in the foreground: the government of the church and the personal morality of the

individual members.

In the area of government, apostles were disappearing from sight, and attention was paid particularly to bishops, elders, and deacons, to the meaning of these terms, and to the duties and relationships of the individual officers. The maintenance of the unity of the church was a highly important element in this connection. There was a strong emphasis on the bond of Christian love. The teaching of Scripture was often applied in this area by allegorical methods. The author of *2 Clement* (14.2) interpreted Gen. 1:27 as referring to Christ and the church. Christ is the male, the church the female. Papias seems to share this view.

In the area of ethics, personal duties were stressed. There was little, if any, attention to social problems. In the *Didache* much attention was given to worship and the sacraments, but this feature was not general throughout the other writings.

P. WOOLLEY

Apostolic History of Abdias. See ABDIAS, APOSTOLIC HISTORY OF.

Apostolic Tradition. A 3rd-cent. document containing an extensive description of Christian rites (particularly ordination and baptism). Originally composed in Greek, it is extant primarily in a Latin translation. At one time the document used to be known as the *Egyptian Church Order*, but R. H. Connolly (*The So-called Egyptian Church Order and Derived Documents* [1916]) argued that its author was Hippolytus of Rome (c. 170 to c. 236). Although this view has been widely adopted, some scholars believe that the work is a composite of diverse traditions. (See P. F. Bradshaw et al., *The Apostolic Tradition: A Commentary*, Hermeneia [2002].)

apothecary. KJV term for Hebrew *rāqah* H8379, a word that modern translations usually render with “perfumer” (e.g., Exod. 30:25).

See PERFUME.

Appaim ap’ay-im (אֵיִם H691, possibly “little-nosed” or “big-nosed” or “angry”). Son of Nadab and descendant of JUDAH (1 Chr. 2:30-31).

apparel. See DRESS.

apparition. The appearance of any visitor from the spiritual and supernatural world. In biblical context it refers to the appearance of a dead and disembodied person, a rare occurrence that mostly reflects popular belief. The dead SAMUEL uniquely appeared to SAUL (1 Sam. 28:13; see DIVINATION). The storm-tossed disciples thought Jesus was a “ghost” (*phantasma* G5753) when he appeared to them walking on the water (Matt. 14:26; Mk. 6:49). They feared that he was a spirit or ghost (*pneuma* G4460) when he joined their gathering after his resurrection, but Jesus pointed out that, unlike a spirit, he had flesh and bones (Lk. 24:37-39). There is no biblical evidence to support belief in the existence of ghosts as commonly understood.

N. B. BAKER

appeal. In ordinary speech, an appeal might be any resort to another party for an opinion or judgment in one’s favor. A man, for example, appealed to Jesus to persuade his brother to divide an inheritance

with him (Lk. 12:13). The OT provided no legal process of law for such a situation. There was only a division of jurisdiction in the hearing of easy and difficult cases (Exod. 18:26; Deut. 17:8-13).

In the NT attention is centered on the formal and legal appeal to CAESAR by the apostle PAUL. After Paul's arrest in Jerusalem, he was transported to CAESAREA, where he was held by FELIX the governor until FESTUS succeeded him. The Jews pressed charges against Paul, implying that he had acted against Caesar's interests. Unconvinced, Festus asked Paul if he would go to Jerusalem for trial. Paul, knowing that this hostile environment might be prejudicial to his interests, appealed to Caesar (Acts 25:11). Older Roman law had provided for appeal from one magistrate to another, or to a tribune of the people. This form of appeal had later been transferred to the emperor (*appellatio ad Caesarem*). Paul, as a Roman citizen, was entitled to appeal (cf. Acts 22:25-29). The procedure of PLINY the Younger, governor of BITHYNIA, may be cited (*Ep.* 10.96.4). In a letter to Emperor TRAJAN, he wrote of sending Christian citizens to Rome for a hearing in a time of persecution. Galba, however, when he was governor in Africa, did not honor the appeal of even a Roman citizen, but crucified him on the spot (Suetonius, *Galba* 7).

In the case of Paul, Festus was embarrassed. Paul had not been tried or convicted. He appeared innocent. What charges should he record for the appeal (Acts 25:25-27)? Festus laid the problem before King Agrippa, who visited him at this time, and another hearing was arranged for the king (see HEROD VIII). After Paul had pled his case at length, King Agrippa was so profoundly impressed that he declared Paul undeserving of sentence and said that he "could have been set free if he had not appealed to Caesar" (26:32). But Paul's appeal had removed the right of decision from Festus's jurisdiction, and Paul was sent to Rome. Once made, the appeal evidently could not be revoked.

N. B. BAKER

appetite. This term appears a few times in English versions of the Bible (e.g., Job 38:39 KJV; Num. 11:6 NIV), usually as a rendering of Hebrew *nepeš* H5883 (a word that can be translated in a variety of ways, such as "soul, life, person, desire, hunger," et al.). See also DESIRE.

Apphia af'ee-uh (Ἀπφία G722, meaning not known, but inscriptions indicate it is probably a native Phrygian name). A lady included in the salutation of Paul's letter to PHILEMON, designated "our [*lit.*, the] sister," probably in the Christian sense, indicating that she was a member of some prominence in the church (Phlm 2; KJV, following the TR, reads "our beloved Apphia"). Some have argued that she was Philemon's wife; others have suggested that she was his (biological) sister. If she was a member of the household, she would have been directly involved in the decision concerning ONESIMUS. Tradition says she was stoned to death under NERO, along with Philemon and ARCHIPPUS. November 22 is sacred to her memory in the Greek Orthodox Church.

D. E. HIEBERT

Apphus af'uhs (Ἀπφούς). An epithet applied to Jonathan MACCABEE, the fifth son of Mattathias (1 Macc. 2:5). The exact meaning of the word is not certain, but it is sometimes taken to mean "dissembler," perhaps because of the way Jonathan had deceived the tribe of Jambri, who had killed his brother John (1 Macc. 9:37-41). Others suggest the nickname means "favorite."

S. BARABAS

Appian Way ap'ee-uhn. The *Via Appia* was the first of the paved roads that were the supreme

engineering achievement of ROME. It was named after Appius Claudius Caecus, the censor, one of the first clear-cut personalities of Roman history. Begun in 312 B.C., the Appian Way ran from Rome to Capua, with a later extension to Beneventum and Brundisium. The road reached the latter town in 244 B.C., when a Roman colony was founded there. The width was 15 ft., the length 350 mi. The Appian Way is still traceable for many miles S of Rome and forms a striking memorial of Roman engineering skill. Long stretches of the paving are still intact. The first reaches of the highway were flanked with memorial structures and tombs, ruins of which survive. Christian sanctuaries that survive include the “Domine Quo Vadis?” chapel, near the junction of the road with the wall of Rome, the catacombs of St. Callixtus, and the basilica of St. Sebastian. PAUL must have traversed a part of the Appian Way on his journey from PUTEOLI to Rome (Acts 28:13-16).

Appius. See FORUM OF APPIUS.

apple, apple tree. To determine whether the fruit in question is truly an apple, the Hebrew word *tappûah* H9515 must be considered carefully, for it is also used as a name (see TAPPUAH). From the relevant passages (Prov. 25:11; Cant. 2:3, 5; 7:8; 8:5; Joel 1:12), it will be seen that the fruit was sweet, attractive, had a pleasing fragrance, was gold in color, had silvery leaves (or possibly this should read “silvery flower petals”), while its juice had rejuvenating properties. The tree that bore this fruit was tall and large enough to give plenty of good shade. It is difficult to understand, therefore, why so many writers and versions have identified the fruit as an apple. Apples are not indigenous to

Palestine, and the description given does not fit the rather small acid apples that were grown in other parts in those days.

The fruit could have been an orange (*Citrus sinensis*, but again this is not indigenous, though it grew in biblical days in India and China), for in Prov. 25:11 the description is “apples of gold in settings of silver,” and the orange does produce fruits and flowers simultaneously, and so the gold in silver is seen. It might have been the citron (*Citrus medica*), but this fruit is very acid and could not be described, therefore, as “sweet.” Those who say the fruit was a quince (*Cydonia oblonga*) are surely wrong, because though the quince is apple-shaped and golden, it is very acrid. The Arabs, however, enjoy the quince’s fragrance, which they say restores their strength.

The only fruit that fits the complete picture is the apricot (*Prunus armeniaca*). It grew in Palestine in OT days; the fruits are golden and nicely perfumed, the leaves are pale, and in Cyprus apricots are called “golden apples.” The apricot will grow to a height of 30 ft., and so gives good shade. The flowers are white with a pink tinge, and the pale leaves have their undersurfaces covered with down—hence “silvery.” (Cf. *FFB*, 92-93.) See also APPLE OF THE EYE; FRUIT.

W. E. SHEWELL-COOPER

apple of the eye. An English idiom denoting the pupil of the eye, which is precious and, therefore, most carefully guarded. In this phrase, the word “apple” normally renders the Hebrew word *ʾišwōn* *H413*, which etymologically may indicate “little man,” perhaps referring to the small image one sees when looking into another’s eye. The phrase is used of God’s care of his people (Deut. 32:10; Ps. 17:8; Zech. 2:8; in the last passage, the Heb. word is *bābā* *H949*, perhaps “gate”) and of the preciousness of the divine law (Prov. 7:2). The KJV uses the phrase also in Lam. 2:18, which refers to the literal eye.

S. BARABAS

apples of Sodom. A nonbiblical term sometimes applied to “the vine of Sodom” (Deut. 32:32). See VINE.

apricot. See APPLE.

apron. Where occurring in the English versions, this word refers to a brief covering material for the lower front of the body which ties around the waist. ADAM and EVE sewed fig leaves together and made aprons for themselves (Gen. 3:7; Heb. *ḥāgwōrā* *H2514*, “girdle, belt”; NIV, “coverings”). The other five times the same Hebrew word is used in the OT, it clearly signifies a form of girdle. Handkerchiefs or aprons were conveyed from PAUL’s body to heal the sick (Acts 19:12; Gk. *simikinthion* *G4980*). The Greek term, used only here in the NT, is borrowed from the Latin *semicinctium*, meaning “half girdle.” A large variety of workmen would wear such aprons to protect their clothes and perhaps to wipe their hands. Paul would wear an apron while working on tents (cf. 18:3). Because of the number of aprons suggested in Acts 19:12, it is probable that people brought their own handkerchiefs and aprons for contact with Paul and then took them away (rather than that the apostle was prepared to furnish as many as might be wanted).

N. B. BAKER

Aqabah, Gulf of ah’kuh-bah. Also Aqaba. The NE arm of the RED SEA bounded on the W by the SINAI Peninsula and on the E by the Land of MIDIAN (Arabian Desert). The Hebrew name *yām sūp*

H3542 + H6068 (“Sea of Reeds”) is used not only to refer to the Bitter Lakes region in the Nile Delta but also to refer to the Gulfs of Suez and Aqabah and possibly even to the RED SEA as a whole. A number of biblical references appear to refer to the Gulf of Aqabah under this name. SOLOMON’S seaport city of EZION GEBER (see also ELATH) situated on the Gulf is said to be on the Red Sea (1 Ki. 9:26).

During the wilderness wanderings, the Israelites were ordered to go from KADESH BARNEA into the wilderness by the way to the Red Sea (Num. 14:25; Deut. 1:40; 2:1). This would most naturally refer to the Gulf of Aqabah, and the circumstance of the earth swallowing KORAH and the other rebels fits with the geological phenomena of the ARABAH stretching N of the Gulf (see G. Hort in *Australian Biblical Review* 7 [1959]: 2-26). Similarly, after a second stay at Kadesh Barnea, Israel went by way of the Red Sea to go around EDOM, which lay E of the Arabah (Num. 21:4; Jdg. 11:16). The association of TEMAN in Edom with the Red Sea is probably another usage of the term for the Gulf of Aqabah (Jer. 49:21); Exod. 23:31 may provide another example.

aqueduct. SENNACHERIB of NINEVEH seems to have been the first to build an aqueduct. He carried a great irrigation canal across a tributary of the Atrush-Gomel, near modern Jerwan, on a 90-ft. bridge of five pointed arches over 30 ft. high. It was built of 20-inch cubes of stone with a channel sealed by mortar. The SILOAM tunnel, built by HEZEKIAH, was an aqueduct that showed a similar standard of engineering. Polycrates of Samos and the 2nd-cent. B.C. engineers of Hellenistic PERGAMUM also built efficient aqueducts, but of all ancient peoples the Romans produced the greatest hydraulic engineers and the finest aqueducts.

Remains of these great waterworks are to be found in all parts of the old domains of the empire.

Aerial view of an ancient aqueduct leading into Rome.

The Roman aqueduct bridges were built on a simple pattern. On a row of tall piers of stone or brick rose a series of small round arches. Above these lay the water channel of concrete, with an arched roof above it. Where the conduit crossed a deep depression, as at Segovia, Tarragona, or Smyrna,

two or three rows of arches were superimposed. The famous Pont du Gard at Nimes (ancient Nemausus) has three such arcades (see G. Hauck, *The Aqueduct of Nemausus* [1988]). These arcades or bridges were, of course, only part of the total system. They were conspicuous and have tended to survive, but tunnels and channels carried the water over most of its course. Only 30 mi. of Rome's 260 mi. of aqueducts that functioned in the 1st cent. were thus elevated. The rest ran in low conduits or underground. Nearly all of the Aqua Appia, the first of Rome's aqueducts, built by Appius Claudius Caecus (builder of the APPIAN WAY) was subterranean. It was begun in 312 B.C. and carried the water of the Anio 10 mi. into Rome.

Estimates of the volume of water delivered by aqueduct into imperial Rome vary, but a reasonable figure would be 200,000,000 gallons a day, a generous supply for 1,000,000 inhabitants. Costs were high, as an estimate of PLINY the Younger, governor of BITHYNIA in A.D. 112, shows. Pliny (*Ep.* 10.37) reported to TRAJAN that the city of Nicomedia, after spending "an immense sum" on an aqueduct, had been forced to abandon the work. Pliny suggested a reasonable alternative, efficient and soundly financed. In Palestine may be seen a considerable section of aqueduct used to supply CAESAREA with water, and a few traces of the aqueduct PILATE built in Jerusalem are left. He financed the scheme from the CORBAN fund and clashed seriously with the Jewish authorities (*Jos. War* 2.9.4). (See P.J. Aicher, *Guide to the Aqueducts of Ancient Rome* [1995]; A.T. Hodge, *Roman Aqueducts and Water Supply*, 2nd ed. [2002]; D. Amit et al., eds., *The Aqueducts of Israel* [2002].)

Aquila and Priscilla. See PRISCILLA AND AQUILA.

Aquila's Version ak'wi-luh, uh-kwi'luh (Ἀκύλας, "eagle"). This Greek translation of the OT is known from quotations in Jewish and Christian writings. Fragmentary remains can also be found as marginal notes in some MSS of the SEPTUAGINT, and a few continuous texts have come to light in palimpsests and other old MSS. ORIGEN included this version as the third column of the Hexapla and was in part guided by it in his asterisked additions to the LXX text. Aquila is said to have been the Emperor HAD-RIAN's brother-in-law, who from paganism moved to Christianity and thence to Judaism. He is identified by some with Onkelos, author of an Aramaic TARGUM, but this is not proven. Allegedly a pupil of Rabbi AKIBA, Aquila is thought by some scholars to exemplify the close adherence to the letter of Scripture inculcated by that Jewish sage. Recent scholarship, however, sees Aquila's work as the culmination of a translation technique that had been developing for a century or more. He accordingly used his wide learning in both Greek and Hebrew to produce a rigidly literal rendering in which every significant feature of Hebrew had a conventional equivalent. Words of the same root were rendered by words of the same Greek root, even where this decision was foreign to Greek usage. See also SEPTUAGINT IV. A.

J. N. BIRDSALL

Ar ahr (אֵר H6840, possibly "city"). A city in MOAB, E of the DEAD SEA. Two biblical statements (Num. 21:14-15 and 28) indicate that Ar was near the ARNON River, which may be the "boundary" mentioned in Deut. 2:18 (cf. also Num. 22:36). The SEPTUAGINT reads *Ēr* in Num. 21:15, but in v. 18 mistranslates with *heōs* G2401 ("until," evidently reading (*ad* H6330); in Deuteronomy it has *Sēir* (Deut. 2:9, 18, 29); finally, in Isa. 15:1 the LXX omits the name altogether (as well as the sister city of KIR). The Hebrew name has the same radical letters as the common word for city (אֵיר H6551; cf. IR-

MOAB). The suggestion that Ar was the capital of the Moabites is worth noting. Several passages (Num. 21:15; Deut. 2:9, 28) present the possibility that the term could refer to a larger region within Moab. Among various proposals, the modern site of el-Misna⁶ is a plausible suggestion for Ar's location, though J. M. Miller argues for Khirbet Balu⁶ (see *JBL* 108 [1989]: 593-95).

R.L.ALDEN

Ara air'uh (אָרָא H736, possibly "lion"). Son of JETHER (1 Chr. 7:38), listed among the "heads of families, choice men, brave warriors and outstanding leaders" of the tribe of ASHER (v. 40).

Arab (city) a'ruhb, air'uhb (אַרָבָה H742, possibly "ambush"). A city in the hill country of the tribe of JUDAH (Josh. 15:52); the site is uncertain, but it is usually identified with modern Khirbet er-Rabiyeh, 8 mi. SW of HEBRON.

Arab (people group). See ARABIAN.

Arabah air'uh-buh (עֲרָבָה H6858, "wilderness"). When this word is used with the definite article, as it most frequently is, it refers to the great rift valley running S from the Sea of Galilee, including the JORDAN Valley and the DEAD SEA, and extending all the way to the Gulf of AQABA. As such, it forms a major geographical area of the land of the Bible and certainly the most important feature of the relief of the land. In the KJV, the word is rendered as the proper name "Arabah" only in Josh. 18:18, elsewhere as "desert," "plain," "wilderness." Modern translations more consistently take it as a proper name.

Without the Hebrew definite article, the term can be used to refer to desert steppe land in general (e.g., Job 24:5; 39:6; Isa. 33:9; Jer. 17:6). In the plural it could refer to certain desert sections within

The Arabah.

the Arabah as a whole. Thus, for example, we have the “*plains of Jericho*” (Josh. 5:10; 2 Ki. 25:5; Jer. 39:5), indicating a section of the Arabah near that city; the “*plains of Moab*” (Num. 26:3; 31:12; 35:1; 36:13), meaning those parts of the Arabah belonging to MOAB; the “*fords of the wilderness*” (2 Sam. 15:28; 17:16), meaning the sections of the Arabah that coincide with parts of the wilderness of Judah. The Dead Sea is sometimes also referred to as the “*Sea of the Arabah*” (Deut. 4:49; Josh. 3:16; 12:3; 2 Ki. 14:25). The modern terms used are *Ghor* (“depression”) for the Jordan Valley portion of the Arabah and (*Arabah* or *Wadi el-Arabah* for that portion S of the Dead Sea. (On Amos 6:14, see ARABAH, BROOK.)

I. Geography. The Arabah as a whole is over 200 mi. in length and falls naturally into three geographical regions, namely, the Jordan Valley, the Dead Sea region, and the area S of the Dead Sea to the Gulf of Aqabah.

(1) The Arabah is well below sea level for much of its distance. Beginning at about 686 ft. below sea level at the Sea of Galilee, it slopes down to about 1,292 ft. below sea level at the Dead Sea. This is then the lowest spot on the face of the globe. The northern half of this part of the Arabah is about 12 mi. wide, forming a fairly fertile and well-watered plain, the water being provided by a

number of small streams, tributaries to the Jordan. The valley narrows for about 5 mi. just S of the halfway mark and for this stretch is infertile. From here the valley widens again, descending between steep scarps which, at JERICHO, are about 12 mi. apart. Then it gradually narrows again to a width of about 6 mi. at the N end of the Dead Sea. A number of fairly large streams contribute to the Jordan below the arid constriction, and it courses through fairly dense jungle at the bottom of a deep cut. The surrounding land is again very fertile, and PLINY the Elder mentions that besides many other products, more than forty-nine varieties of figs grow there.

(2) The Dead Sea region of the Arabah is some 50 mi. in length and about 10 mi. wide. There is just sufficient room for a road on each side of the Sea directly below the steep escarpments. The famous sites of Khirbet Qumran (see DEAD SEA SCROLLS) and MASADA are found on the W scarp, Qumran to the N and Masada some 30 mi. S opposite the peninsula of salt which extends into the Sea.

(3) The region to the S of the Dead Sea occupies a length of about 110 mi. For 6-8 mi. immediately S of the Sea there are large mud flats deposited by

© Dr. James C. Martin

A section of the Arabah, just N of the Gulf of Aqabah. (View to the NE.)

a number of streams cutting their way down the steep slope from the S. The plain of mud is known as the “Sebkah” while the slope itself is probably that referred to as the ascent of AKRABBIM (Josh. 15:3; NIV, “Scorpion Pass”). The streams are especially erosive during the rainy season, though considerable amounts of vegetation still flourish there. The floor of the valley continues to rise beyond the ascent of Akrabbim, reaching sea level at about 38 mi. from the Dead Sea. The highest point of the entire Arabah is reached about 18 mi. further to the S near the same latitude as that of the famous site of PETRA to the E. By this time the valley has broadened considerably, being 25 mi. wide in some places. As the floor of the valley descends again toward EZION GEBER, its width also decreases averaging perhaps 6 mi. A kind of funnel effect is thereby created for the winds that blow down the valley and that were used in the blast furnaces of the copper smelters at the head of the gulf. This long southern slope is generally very arid with only an occasional oasis, but in NABATEAN times it was partially irrigated and some agriculture was practiced there.

II. Geology. Geologically, the Arabah is but a portion of an enormous fault in the crust of the earth that extends from northern SYRIA southward between the LEBANON and ANTILEBANON mountains,

through the RED SEA and to the southeastern coast of Africa. For the portion of the Arabah that is below sea level, the W side is bordered more or less continuously with limestone cliffs rising 2,000 or 3,000 ft. above sea level. On the E side, however, sandstone and granite rocks border the valley to a height of 2,000 or 3,000 ft. and are then capped with limestone corresponding to that on the W side. Thus, a shift of from 2,000 to 3,000 ft. has occurred between the geological strata on opposite sides of the Arabah for this distance. (For more on the geology of the Arabah, see G. F. Wright in *ISBE* [1929], 1:212-13.)

III. Trade and commerce. The portion of the Arabah N of the Dead Sea was crossed by a number of roads, especially in the N half, where the tribe of MANASSEH held territory on both sides of the Jordan. The N-S roads in this area tend to run on the hills above the Arabah rather than in the valley itself. South of the Dead Sea, the Arabah was important commercially chiefly because of its port city, Ezion Geber. This was the main entrance to the land of Canaan and allowed trade with Arabia, India, and Africa. The road went N from Ezion Geber and had branches to the main highways of Canaan as well as to the KING'S HIGHWAY to the E.

While, as already noted, several parts of the Arabah did have some agricultural potential, its main economic asset was the presence of iron and copper, the only such deposits in all of Canaan. (For the locations of these deposits, see Y. Aharoni et al., *The Carta Bible Atlas*, 4th ed. [2002], maps 11 – 12.) It must have been the Arabah that the writer had more particularly in mind when he spoke of “a land where the rocks are iron and you can dig copper out of the hills” (Deut. 8:9). F. Frank and N. Glueck have discovered the ruins of a number of mines and refineries in the Arabah S of the Dead Sea. Many of the slag heaps are still discernible. While the refineries are impressive for the advanced engineering they display, the majority of the work was done by slave labor for at least part of the time. The mines were evidently operational as early as the time of Abraham, though their real wealth seems not to have been exploited until Solomon's time. The copper smelter and manufacturing center built by Solomon at Ezion Geber is the largest so far discovered. (Cf. N. Glueck, *The Other Side of the Jordan* [1970], chs. 3-4; *Rivers in the Desert: A History of the Negev* [1959], 153-63 and passim; B. MacDonald et al., *The Southern Ghors and Northeast Arabah Archaeological Survey* [1992].)

IV. History. While the geographical features of the Arabah would seem to make it a natural border, it did not ever serve as a genuine social or political boundary. The territory of Edom stretched across the Arabah into the area S of the NEGEV proper and was the scene of constant conflict with Israel, most probably because of the wealthy mines. In later times (after the 3rd cent. B.C.), the Nabateans controlled both sides of the Arabah. Rome's *Palestina Tertia* included Areopolis, Rabbath-Moab, and Petra to the E, Beersaba (Beersheba) and Elusa to the W.

The southern Arabah figures largely in the accounts of Israel's wanderings before entering the Promised Land. The Israelites seem to have journeyed from Kadesh Barnea down to Ezion Geber through a considerable portion of the Arabah and then turned N again to skirt the holdings of MOAB and EDOM (Deut. 2:8), having been refused passage through these domains (Num. 20:14-21; Jdg. 11:17). On the other hand, the list of desert stations given in Num. 33:37-49 refers to a direct route right through Edom and Moab, and the implication is that the Israelites crossed the Arabah some 20 mi. S of the Dead Sea. This may possibly refer to an earlier route.

The Arabah N of the Dead Sea included ABEL SHITTIM, the place of Israel's harlotry with the daughters of Moab (Num. 25). In this area also, MOSES did his final work (Deut. 1:1; Num. 32-36)

and JOSHUA crossed the Jordan and set up the first Israelite sanctuary in Canaan at GILGAL, a town in the Arabah. In later times too, ABNER fled through the Arabah N of the Dead Sea to MAHANAIM (2 Sam. 2:29); the murderers of ISH-BOSHETH went by way of the Arabah to bring the victim's head to DAVID at HEBRON (2 Sam. 4:7); and when ZEDEKIAH was taken by the Babylonians, he was fleeing toward the Arabah from Jerusalem (2 Ki. 25:4; Jer. 39:4). The Arabah also figures somewhat in the promises of the prophets. Thus Ezekiel declares that a stream will flow from the temple E and S and will make both the Dead Sea and the Arabah fresh and highly productive (Ezek. 47:1-12; cf. Joel 3:18; Zech. 14:8).

H. G. ANDERSEN

Arabah, Brook (Wadi) of the. The prophet AMOS predicted that the Lord would send a nation to oppress Israel “all the way from Lebo Hamath to the valley of the Arabah” (Amos 6:14 NIV). The Hebrew expression *naḥal hā'ārābā* is rendered variously: “the river of the wilderness” (KJV), “the Brook of the Arabah” (RSV), “Wadi Arabah” (NRSV, NJPS). The name is evidently intended to mark a southern limit (LEBO HAMATH being a northern boundary). Some scholars have identified the phrase with *naḥal hā'ārābîm*, “wadi of the willows/poplars” (Isa. 15:7), which is thought to be Wadi el-Hesa, on the SE end of the DEAD SEA (see ZERED and cf. Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 344). Others argue that “the Arabah” in Amos must refer to the low-lying area NE of the Dead Sea and that therefore it should be identified either with Wadi Qelt (which however is W of the JORDAN, just below JERICHO) or with Wadi Kefren (which runs E–W and is known as Wadi Abu Gharaba when it flows into the Jordan c. 3 mi. N of the Dead Sea; cf. H. Wildberger, *Isaiah 13-27* [1997], 122, 136). See also WILLOWS, BROOK (WADI) OF THE.

Arabattine air'uh-bat'uh-nee KJV Apoc. form of AKRABATTENE (1 Macc. 5:3).

Arabia uh-ray'bee-uh (עֲרָבָה H6851, “desert”; Ἀραβία G728). A large peninsula of SW Asia. See also ARABIAN, ARAB.

I. Biblical references. The term in Isa. 21:13 and Jer. 25:24 refers to the desert or steppe of the N, but elsewhere (2 Chr. 9:14; Ezek. 27:21; also 1 Ki. 10:15 and Ezek. 30:5, where MT has *ēreb*, “mixed people”) it includes the S also. NW Arabia is also called “the land of the east” (Gen. 25:6), that is, the country E of Palestine.

The term appears several times in the APOCRYPHA. Arabia in Jdt. 2:25 seems from the context to

© Dr. James C. Martin. The British Museum. Photographed by permission.

Cuneiform tablet from Nineveh containing the Annals of Ashurbanipal, which gives an account of this king's military campaign against Arabia and Elam.

be near DAMASCUS. In 1 Macc. 11:16 it refers to the kingdom of the NABATEANS, E and S of Palestine. “The dragons of Arabia” (2 Esd. 15:29) is probably a figurative expression for the Arabians who fought under Odenathus of Palmyra against the Sassanid Persians in the 3rd cent. A.D.

In the NT, PAUL uses this term twice. In Gal. 1:17 it is taken by most to refer to the Nabatean kingdom S of Damascus. Some think that Mount SINAI is intended, but this would probably have been stated more specifically. Paul follows the geography of his time by including Mount Sinai in Arabia (Gal. 4:25). The kingdom of SHEBA in S Arabia is called “the South” in Matt. 12:42 and Lk. 11:31.

II. Location and size. The peninsula of Arabia is bounded on the W by the Red Sea, on the S by the Gulf of Aden and the Indian Ocean, on the E by the Gulf of Oman and the Persian Gulf, and on the N by the Syrian Desert. Since it is surrounded on three sides by water, the Arabs call it *Jazīrat al-ʿArab*, “the island of the Arabs.” Arabia is the largest peninsula in the world. It covers about one million square miles, about one third the area of continental United States. The peninsula is roughly rectangular. The length of the W coast is about 1,450 mi., and the S coast is about 1,250 mi. long.

III. Divisions of Arabia. Greek and Latin geographers, following Ptolemy of Alexandria (2nd cent. A.D.), divided Arabia into three parts: (a) Arabia Petrea, named after the main city, PETRA, and

including E TRANSJORDAN, MOAB, EDOM, and Sinai; (b) Arabia Deserta, including the Syrian Desert; and (c) Arabia Felix, “Fortunate Arabia,” the SW portion. The Arab geographer Yaqut (13th cent. A.D.), in his dictionary called *Muʿjam al-buldān*, gives five divisions: Tihamah (the plain along the W coast), al-Hijaz (the mountains E of Tihamah), Najd (the central plateau), al-ʿArud, also called al-Hasa (the plain along the E shore), and Yemen (in the SW).

The following modern states now occupy the Arabian peninsula: Saudi Arabia covers most of the peninsula, especially the N, the W, and the central portions; Yemen is in the S; Kuwait, Qatar, the United Arab Emirates, and Oman occupy portions of the E. Some areas in the NW included in ancient Arabia are now parts of Syria, Jordan, and Israel.

IV. Physical features

A. Geology. The rocks of Arabia are of three main types and periods: the igneous and metamorphic rocks of the mountains of the W; the later sedimentary rocks (limestone, sandstone, shale) in the NE; and the comparatively recent lava beds in the NW. Under the sedimentary rocks of the NE is about one third of the world’s known supply of petroleum, first extracted in 1932 on the island of Bahrain and soon thereafter on the NE shore of the mainland.

B. Geography. Much of the coastline on the W and E is sandy, and there are no river mouths. Therefore, there are few good natural harbors, such as Aden in the SW and Muscat in the SE. SEPHAR (Gen. 10:30) is thought by some to be a harbor on the S coast. The most striking promontories are the Peninsula of Sinai (the scene of the Israelites’ wandering), Bab al-Mandab in the SW corner, Ras al-Hadd at the SE corner, Ras Musandam in Oman, and Qatar projecting into the Persian Gulf. The rim of mountains on the W and S coasts intercepts rainclouds, leaving the interior dry. The traditional Mount Sinai is 7,500 ft. high; mountains in MIDIAN rise to 9,000 ft.; the highest mountain in Yemen is 12,336 ft.; and al-Jabal al-Akhdar in Oman reaches 9,900 ft. above sea level.

Some mountains in the NW are extinct volcanoes, whose last eruption took place in medieval times. Some scholars interpret the smoke, fire, and earthquake of Exod. 19:18 as signs of an eruption, and therefore they wish to locate Mount Sinai in the volcanic area E of the Gulf of AQABAH. But the traditional Mount Sinai W of the Gulf of Aqabah is not a volcano. Some suggest that the Hebrew term *ḥārērîm* H3083 (“parched places,” Jer. 17:6) may refer to lava beds, which are called *ḥarrah* in Arabic. The mountains of the W coast are cut by many valleys, along which the caravans used to travel. Some of these valleys drain E into deserts, and the evaporation of freshets has left “salt flats” (Job 39:6; cf. Ps. 107:34; Jer. 17:6) in many parts of NW Arabia. Job 6:18 refers to the deserts of Arabia as “the wasteland.”

The deserts include the stony Syrian Desert in the N, the semi-arid central plateau called Najd, and sandy deserts. The Arabs call the sandy desert in the N al-Nufud, and that in the S al-Rabʿ al-Khali, “the Empty Quarter,” which covers about 230,000 sq. mi., the largest sand area in the world. Oases with occasional springs in the desert made possible the caravan trade. Some oases mentioned in the Bible are DEDAN, DUMAH, and TEMA. (Cf. R. H. Sanger, *The Arabian Peninsula* [1954].)

C. Meteorology. Arabia is dry and hot. Only in the SW, the S near the coast, and the SE is there enough rainfall for regular agriculture. Places in al-Rabʿ al-Khali may go rainless for as long as ten years. The average temperature on the W coast is about 90° F, but nights are chilly on the high central

plateau. Violent winds (Job 1:19) or whirlwinds (27:20-21), carrying dust (Isa. 17:13), are a terror to Arabians.

D. Water. Since rain is rare and irregular, there are no large lakes, except for Umm al-Jibal, about three-quarters of a mile long in central Arabia, and there is only one short river that always has water, Wadi Hajar in the S. Following occasional cloudbursts, torrents may sweep down the valleys; but these streams soon disappear, and those who seek water in the valleys are usually disappointed, like the Arab merchants of Job 6:13-20. Water from these sudden rains remains in the subsoil of some valleys, and Arab travelers dig to it with sticks, just as the Israelites did as they passed through Moab (Num. 21:16-17). Also the subterranean water sometimes comes to the surface in oases. In ancient times the scant rainfall was more efficiently preserved than at present by dams, reservoirs, canals, and terraces, most of which have now fallen into disrepair.

E. Mineral products mentioned in the Bible. GOLD is often mentioned as a product of Arabia (1 Ki. 10:2, 10, 15, 22; 2 Chr. 9:1, 9, 14, 21). The following places in Arabia are named as sources of gold: OPHIR (1 Ki. 9:28; 10:11; 22:48; 1 Chr. 29:4; 2 Chr. 8:18; 9:10; Job 22:24; 28:16; Ps. 45:9; Isa. 13:12); HAVILAH (Gen. 2:11-12); SHEBA (Ps. 72:15; Isa. 60:6; Ezek. 27:22); RAAMAH (Ezek. 27:22); and PARVAIM (2 Chr. 3:6). SILVER is also said to come from Arabia (1 Ki. 10:22; 2 Chr. 9:14, 21). The precious stones from Arabia (Ezek. 27:22) included ONYX from Havilah (Gen. 2:12). According to the *Letter of Aristeas* 119, there were COPPER and IRON mines in Arabia, probably in Edom. CORAL is mentioned (Job 28:18; Lam. 4:7), and the coral imported through Edom to Tyre (Ezek. 27:16) probably came from the reefs off the W shore of Arabia. The Great Pearl Banks off the NE shore of Arabia were the most important ancient source of PEARLS (Job 28:18; Matt. 7:6; 13:45; 1 Tim. 2:9; Rev. 17:4; 18:12, 16; 21:21).

V. Plants of Arabia mentioned in the Bible. FRANKINCENSE and other PERFUMES were the most valued products of Arabia in ancient times. These aromatic gums were carried by Arab traders (Gen. 37:25) from such places in Arabia as Havilah (2:11) and Sheba (1 Ki. 10:1-2, 10; 2 Chr. 9:1, 9; Isa. 60:6). The most important Arabian fruit tree is the DATE palm, whose fruit is a staple of Arabian diet and whose leaves, branches, fiber, and wood are also useful. The Israelites, as they wandered in the wilderness of Sinai, found seventy date palms at the oasis of ELIM (Exod. 15:27). Some have suggested that the MANNA (ch. 16) was the juice of the common Arabian tree, the TAMARISK, extracted and dropped by insects, but the biblical references imply a much larger quantity than the usual droppings from the tamarisks. The “shittim wood” (KJV) used in building the TABERNACLE and its furniture (Exod. 25:5, 10, 13, 23; 26:15, 26, 32; 27:1, 6; 30:1, 5) was from the ACACIA tree, which is common in Sinai. Mallow, broom, and nettles (Job 30:4, 7 NRSV) are typical desert plants of Arabia. “Thickets” (Isa. 21:13) of bushes are found at oases. According to the usual understanding of Ezek. 27:19, WINE was a product of UZAL, located probably in Arabia, but ancient Arabia imported rather than exported wine. ALMUG wood (1 Ki. 10:11-12) and EBONY (Ezek. 27:15) are said to come from Arabia, but these products of India and Africa were simply passed on by Arabian merchants.

VI. Animals of Arabia mentioned in the Bible

A. Domestic animals. The CAMEL is certainly the most important animal to the Arabians, who ride it, load it with goods to be transported, drink its milk, eat its meat, make leather from its skin, and weave

its hair into cloth. In the Bible the camel is often associated with Arabs and with places in Arabia: the Ishmaelites (Gen. 37:25; 1 Chr. 27:30); the Midianites (Jdg. 6:5; 7:12; 8:22, 26); the Amalekites (1 Sam. 15:3; 30:17); the QUEEN OF SHEBA (1 Ki. 10:2; 2 Chr. 9:1); the Hagarites (1 Chr. 5:21); Kedar (Jer. 49:29); and Hazor in the desert (Jer. 49:32). Arab nomadic shepherds, and particularly the princes of Kedar, sold SHEEP and GOATS to Tyre (Ezek. 27:21). CATTLE were owned by the Midianites (Num. 31:33, 38), but as these verses show, they were less common among the Arabs than sheep and goats. Asses (see ASS, DONKEY) are used by the Arabs for riding and for carrying smaller burdens, and they were among the possessions of the Midianites (Num. 31:28, 30, 34, 39) and the Hagarites (1 Chr. 5:21). The Arabian HORSE is famous for its speed, and it is described in Job 39:19-25, much as in Arabian poetry. Among Solomon's imports from Ophir were pet monkeys (1 Ki. 10:22; see BABOON), which may have been brought from India or Africa.

B. Wild animals. The section in Job 38:39—39:12 describes the following wild animals of NW Arabia: the LION (no longer found in Arabia), the mountain goat, the WILD ASS, and the WILD OX (now extinct). The Bible also refers to the following desert animals found in Arabia: the JACKAL and the HYENA (Isa. 34:13-14, in Edom); the WOLF (connected with Arabia by the LXX of Hab. 1:8 and Zeph. 3:3); the GAZELLE (Isa. 13:14); poisonous SERPENTS (Num. 21:6); and the flying serpent (Isa. 14:29; 30:6). This last is also located in Arabia by HERODOTUS (*Hist.* 2.75) and may be the Arabian *aym*, a viper that springs into the air. The ELEPHANT is not native to Arabia, and so the IVORY from Ophir (1 Ki. 10:22; 2 Chr. 9:21) and from Dedan (Ezek. 27:15 MT; NIV and NRSV have "Rhodes," following LXX) came originally from Africa or India and was transferred by Arabian traders.

C. Birds. Birds of Arabia mentioned in Job 38 and 39 include the RAVEN, the OSTRICH (last seen in Arabia in the wild state in 1941), the HAWK, and the EAGLE. Other birds are connected with Arabia in the Bible as follows: migratory QUAIL (which the Israelites ate in Sinai, Exod. 16:13; Num. 11:31), the OWL, and the KITE (both located in Edom, Isa. 34:15). The PEACOCKS brought by Solomon from Ophir (1 Ki. 10:22 KJV, NRSV) may have come originally from India, but the word may mean "baboons" (NIV, NRSV mg.), which are found in the mountains of SW Arabia.

D. Insects. NW Arabia is often the source of LOCUSTS, which attack countries to the W, such as Palestine (Joel 1; 2). Note that locusts in the time of Moses were carried into Egypt by an E wind, perhaps from Sinai (Exod. 10:13).

E. Marine animals. ONYCHA used in making the holy INCENSE (Exod. 30:34) was derived from a shellfish of the Red Sea. The leather used as one of the coverings of the tabernacle (26:14, "ram skins") and to make shoes (Ezek. 16:10) is thought by some to have come from the dolphin or the dugong (SEA COW) of the Red Sea. On coral and pearl oysters see IV. E above. See also FAUNA.

VII. Caravan routes. The main CARAVAN route for the transport of Arabian incense and products of Africa and India went through the mountains of W Arabia. Beginning in Sheba or Yemen (1 Ki. 10:1-13), the caravans went N from oasis to oasis, past Mecca, Medina, al-ʿUla (called Dedan in the Bible), Madaʿin Salih, and Tabuk to Maʿan near Petra. From there some caravans turned N to Damascus, and others went W to Gaza or Egypt. Other routes branched E to Iraq, like the one going from Madaʿin Salih and passing through Taymaʿ (called Tema in the Bible). From al-Jawf (called

Dumah in the Bible) a caravan route went NW via Wadi Sirhan to Transjordan.

VIII. Places in Arabia mentioned in the Bible. The Bible refers to many places in the ancient Arabia Petrea (see III.A above), which included Sinai, Edom, Moab, and E Transjordan. The following biblical places can be located with more or less probability in the peninsula of Arabia: BUZ, DEDAN, DUMAH, EPHAH, HAVILAH, HAZARMAVETH, HAZOR (Jer. 49:28), MASSA, MESHA (Gen. 10:30), MIDIAN, OPHIR, PARVAIM, RAAMAH, SABTAH, SEBA, SEPHAR, SHEBA, TEMA, UZ, and UZAL.

J. ALEXANDER THOMPSON

Arabian, Arab uh-ray'bee-uhn, ar'uhb (עֲרָבִי H6861; Ἀραβία G732). In the Bible, this term refers to the NOMADS who live in the deserts of ARABIA, especially in the northwestern part. They are also known by the general term “eastern peoples” (Jdg. 6:3, lit., “children of the east”). Some Arabian tribes mentioned in the Bible are the following: Amalekites, Buzites, Dedanites, Hagrites, Ishmaelites, Kadmonites, Kedarites, Kenites, Meunim or Meunites, Midianites, Naamathites, Sabeans, and Shuhites.

I. History of the Arabs in relation to the Bible

A. In the time of the patriarchs—Arabian tribes. The Arabs first appear in the Bible in the Table of NATIONS in Gen. 10 and in other early genealogies. Among the descendants of CUSH (10:7), the following are located in Arabia: SEBA, HAVILAH, SABTAH, SHEBA, and DEDAN. The descendants of JOKTAN, who was of the line of SHEM, include the following names that have been attached to places in Arabia: HAZARMAVETH, UZAL, SHEBA, OPHIR, and HAVILAH (10:25-29). The names of some of the descendants of NAHOR are associated with tribes or areas in N Arabia: Uz, Buz, KESED (the sing. of the name whose pl. is rendered Chaldeans; see CHALDEA), and HAZO (22:20-23). Of the descendants of ABRAHAM by KETURAH (25:1-4), Sheba is usually associated with S Arabia and the following with N Arabia: MEDAN, MIDIAN, SHUAH, and DEDAN. Most of the names of the descendants of ISHMAEL (25:13-16) refer to tribes or places in NW Arabia, namely: NEBAIOTH, KEDAR, DUMAH, MASSA, TEMA, and KEDEMAH. The Arab genealogists also trace their own ancestry back to Ishmael and Abraham.

The earliest biblical incident involving Israelites and Arabs is the selling of JOSEPH by his brothers to Arab merchants, who took him to Egypt and sold him there (Gen. 37:25-28; 39:1). These merchants are called Ishmaelites, which is a general name for Arabs, and they also are called Midianites (37:28), their specific Arab tribe (cf. Jdg. 6:1; 8:24).

B. In the time of Moses—the Midianites. MOSES, after killing an Egyptian, fled to MIDIAN, an area and a tribe in NW Arabia, and stayed there many years (Exod. 2:15). There he married ZIP-PORAH,

the daughter of Reuel (also called JETHRO), the priest of Midian. As a typical Arab, Reuel had flocks (2:16), and Moses adapted to Arab life by tending these flocks (3:1). After the exodus, the Israelites in the wilderness had to fight Arab tribes such as the Amalekites (17:8-15; see AMALEK).

At REPHIDIM, Jethro came to visit Moses and acknowledged: “the LORD [Yahweh] is greater than all other gods” (Exod. 18:11). That he participated in sacrifice to Yahweh and a sacred meal (18:12) is not sufficient evidence to prove, as some have held, that Yahwism was derived from the Midianites (or from the Kenites; see below). Jethro did advise Moses to appoint subordinate administrators and judges to hear ordinary cases, presumably as was done among the Midianites (18:13-23). Therefore, the administrative and judicial organization of Israel had an Arab model.

HOBAB, the son of Reuel, finally consented to accompany the Israelites to guide them through the wilderness (Num. 10:29-32). Hobab and his descendants among the Israelites are called KENITES (Jdg. 1:16; 4:11), a tribe, perhaps of metal workers, associated with the Midianites. Later Midianites joined with the Moabites in opposing the passage of the Israelites through TRANSJORDAN (Num. 22:4). PHINEHAS, a priest, killed COZBI, a Midianite princess, and the Israelite who had taken her into his tent (ch. 25). The Israelites defeated the Midianites and killed their five kings (31:8).

C. In the time of Gideon—Midianite raids. The Midianites, with Amalekites and “eastern peoples” (that is, people of the Arab country E of Palestine), made raids in Israel with camels (Jdg. 6:1-6). As in the later Arab *ghazw*, or *razzia* (“raid”), the Midianites seized animals and produce and then returned to the semi-desert land E and S of the Jordan. GIDEON and his band chased the Midianites away and killed two of their princes (7:25) and two of their kings (8:21). The two princes OREB and ZEEB had animal names (“raven” and “wolf,” respectively), which were common among pre-Islamic Arabs.

D. During the United Kingdom of Israel—Sheba. Both SAUL (1 Sam. 15:1-33) and DAVID (30:1-20) defeated the Amalekites, who were making raids into southern Palestine. It was natural that David should choose an Arab, OBIL, to take care of his camels and another Arab, Jaziz the Hagrite, to superintend his flocks (1 Chr. 27:30).

In the 10th cent. B.C. the S Arabian kingdom of Saba, biblical SHEBA, controlled the trade between Arabia and the countries of the eastern Mediterranean. The SABEAN trading caravans carried not only the spices of Arabia but also products of Africa and India. The capital of Sheba was Marib. Since Palestine was a natural northern terminus for the Sabeans’ trade, SOLOMON had important commercial relations with Arabia. From EZION GEBER he sent out fleets to Ophir, perhaps in S Arabia. These trading vessels returned with gold, almug wood, and precious stones (1 Ki. 9:26-28; 10:11).

The QUEEN OF SHEBA (named Bilqīs in Arab tradition) visited Solomon (1 Ki. 10:1-13), not only to hear his wisdom, but also to trade. The spices, gold, and precious stones she brought on camels were typical Sabean merchandise. The text says that she “gave” these things to Solomon, but she received things in return, and therefore it amounted to a commercial transaction except in name. Assyrian sources refer to several Arabian queens, who evidently occupied an important place in Arabian society. Solomon received tribute in gold and silver from “the kings of Arabia” (2 Chr. 9:14), probably chiefs in the northwestern part of the peninsula. (See A. Jamme, *Sabaean Inscriptions from Mahram Bilqīs (Marib)* [1962].)

E. During the kingdoms of Judah and Israel—Kedar. An Arab king, Gindibu, provided a thousand

warriors on camels to help King AHAB of Israel and others in resisting the Assyrian invasion at the battle of Qarqar in 854 B.C. This battle, not mentioned in the Bible, is described in the annals of SHALMANESER III of Assyria (*ANET*, 278-79). JEHOSHAPHAT king of Judah (873-849 B.C.), like Solomon, had a fleet at Ezion Geber for trade with Arabia (1 Ki. 22:48). The same king received tribute from the Arabs in the form of sheep and goats (2 Chr. 17:11). The MEUNITES, who some think were Minean Arabs, joined with the Moabites and Ammonites in an unsuccessful expedition against Jehoshaphat (2 Chr. 20:1 NIV, following LXX; MT has “Ammonites”). Arabs, with PHILISTINES and Ethiopians (see ETHIOPIA), attacked JEHORAM, king of Judah (849-842 B.C.), and carried away his treasures, his wives, and most of his children (21:16-17). UZZIAH, king of Judah (785-734 B.C.), defeated the Arabs of GUR BAAL and the Meunites (26:7). MEUNIM in 1 Chr. 4:41 NRSV is another spelling of Meunites, but some translate the word here as “dwellings” (cf. JB). Some of these Meunim were living in Transjordan and were wiped out by Simeonites in the reign of HEZEKIAH of Judah in the latter part of the 8th

These Assyrian panels from a palace in Nineveh (c. 640 B.C.) depict Arab soldiers in flight.

cent. B.C. At the same time other Simeonites went to Mount SEIR (Edom) and killed and replaced Arab Amalekites living there (1 Chr. 4:42-43).

Conquests of N Arabian tribes by the Assyrians is implied in Isa. 21:13-17. Records of several Assyrian kings (TIGLATH-PILESER III, SARGON, and SEN-NACHERIB), tell of their victories over the Arabs and tribute from them. During the period of the divided kingdoms of Israel and Judah, KEDAR was the dominant Arab tribe in N Arabia (21:16). In the Assyrian records of this period “Arabs” and “Kedarites” are interchangeable. The Kedarites made raids in Palestine-Syria, but ASHURBANIPAL, king of Assyria (669-627), repulsed them. Jeremiah predicted that NEBUCHADNEZZAR, king of Babylonia (605-562 B.C.), would subjugate Kedar, and recently discovered portions of the Babylonian Chronicle record this conquest of N Arabia (Jer. 49:28-29).

F. Persian Period—Kedar, Mineans, Qataban, Hadramaut. According to Xenophon (*Cyropaedia* 7.4.16), CYRUS king of Persia subdued the Arabs, and there were Arab soldiers in Cyrus’s army, which took Babylon in 539 B.C. (7.5.13; cf. Dan. 5:30-31). The BEHISTUN INSCRIPTION of DARIUS I lists Arabia as one of the Persian provinces. Arabs furnished camel-riding troops for the expedition against Greece organized by XERXES I, the Ahashuerus of the book of Esther (Herodotus, *Hist.* 7.86).

In the time of NEHEMIAH, GESHEM the Arabian tried to prevent the Jews from rebuilding the walls of Jerusalem (Neh. 2:19; 6:1-2, 6). At el-Ula, biblical Dedan, deep in northern Arabia, an inscription is dated in Geshem's time. An inscription on a silver bowl from Tell el-Maskhuṭah, near the northeastern border of Egypt, calls Geshem the king of Kedar, a title implying suzerainty over northwestern Arabia (see F. M. Cross, "Geshem the Arabian," in *BA* 18 [1955]: 46-47).

During the Persian period the economic and political dominance of Saba (biblical Sheba) in S Arabia came to an end, and other kingdoms rose to power and controlled the spice trade. About 400 B.C. the Mineans, perhaps the biblical Meunim, were dominant in S Arabia. Their capital was Qarnaw, now called Maṣīn. Another kingdom in S Arabia was Qataban, whose capital was Timna^ʿ. The kingdom of Ḥaḍramaut, corresponding to Hazarmaveth in Gen. 10:26, extended along the southern coast of Arabia. Its capital was Shabwat, present-day Shabwah. (See G. Caton-Thompson, *The Tombs and Moon Temple of Hureidha (Hadhrumaut)* [1944]; W. Phillips, *Qataban and Sheba* [1955]; J. Pirenne, *Le royaume sud-arabe de Qataban et sa datation* [1961]; R. L. Cleveland, *An Ancient Arabian Necropolis, Objects from the Second Campaign (1951) in the Timna^ʿ Cemetery* [1965].)

G. Hellenistic and Roman periods. The NABATEANS were the dominant tribe in northwestern Arabia from the 4th cent. B.C. until the 1st cent. A.D. The statements in Obad. 7 and Mal. 1:3-4 probably reflect the expulsion of the Edomites from SELA (later called PETRA by the Nabateans). Arabs helped in the defense of GAZA against ALEXANDER THE GREAT (Arrian, *Anab.* 2.25.4). Alexander went on to subdue Arabia, that is, the NW portion (Livy, *Hist.* 15.9). According to Polybius (*Hist.* 5.71), Arabs helped ANTIOCHUS III to win Palestine from the Ptolemies in 198 B.C. (cf. Dan. 11:15-16).

In the APOCRYPHA, Nabateans (1 Macc. 5:25) and Arabs (5:39) are often synonymous. The Arabs sometimes sided with the Jews in their struggle for independence (9:35), but at other times with the Syrians (5:39; 2 Macc. 12:31). The first known king of the Nabateans was ARETAS I, who refused asylum to JASON the runaway Jewish high priest about 169 B.C. (2 Macc. 5:8). In 145 B.C. an Arabian prince, Zabdiel, cut off the head of Alexander Balas, who had held the Seleucid throne for five years (1 Macc. 11:17). Another Arab, Imalkue, brought up Alexander Balas's son, Antiochus VI (11:39-40).

The Nabateans frequently clashed with the later Maccabean rulers of the Jewish state (see MACCABEE; HASMONEAN). About 90 B.C. the Nabatean king Obedas I defeated Alexander Jannaeus at GADARA in GILEAD when the latter was trying to conquer Arab territory (Jos. *Ant.* 13.13.5). Under Aretas III (87-62 B.C.) the Nabatean kingdom reached its greatest extent. He forced Alexander Jannaeus to give him Moab and Gilead (13.14.2), took over Damascus (13.15.2), and intervened in Jewish affairs, supporting Hyrcanus II as the Jewish ruler against the latter's brother, Aristobulus II (14.1.4; 14.2.1-3). The Nabateans opposed the Roman intervention in Palestine under POMPEY, and a Roman general, Scaurus, blockaded Aretas in Petra until he paid money to the Romans (14.5.1). In 31 B.C. HEROD the Great fought battles against the Arabs and finally defeated them (15.5).

During much of NT times Aretas IV (9 B.C. to A.D. 40) was the Nabatean king. Herod Antipas married the daughter of this Aretas, but divorced her to marry HERODIAS (Jos. *Ant.* 18.5.1; Matt. 14:3). Because of this and a disputed boundary between their dominions in the country of Gamalitis, Aretas attacked and defeated Herod Antipas. The Arabians who heard PETER at PENTECOST (Acts 2:11) were probably Jews from Nabatean areas, SE of Palestine. The governor of Damascus under Aretas set guards at the city gates to seize PAUL, probably at the request of Jewish leaders, but the apostle escaped over the city wall (2 Cor. 11:32-33). During the second half of the 1st cent. A.D., the

Romans gradually took over the areas that had been controlled by the Nabateans. The Romans forced Malichus II, the Nabatean king (A.D. 40-70), to give up control of Damascus. Malichus also was obliged to contribute Arab soldiers to help the Romans in suppressing the Jewish revolt in A.D. 67 (Jos. *War* 3.7.9). (Cf. also J. Starcky, "The Nabataeans: A Historical Sketch," in *BA* 18 [1955]: 84-106; N. Glueck, *Deities and Dolphins: The Story of the Nabataeans* [1965].)

II. Arab culture and the Bible. The Arabs speak Semitic languages, as suggested by their descent from Shem (Gen. 10:25-30). The angular S Arabic script developed from the Sinaitic ALPHABET, and the earliest datable Sabean inscription comes from the 8th cent. B.C. From S Arabic the following scripts developed: Lihyanic, beginning in the 7th cent. B.C.; Thamudic, beginning in the 5th cent. B.C.; and Safaitic, beginning about A.D. 100. The Nabatean script was derived from ARAMAIC and led to the N Arabic that prevails today. See LANGUAGES OF THE ANE II.B; WRITING.

According to Gen. 16:12, Ishmael would be "a wild donkey of a man" (alluding to the Ishmaelites' wandering in the Syrian desert to the E) and his hand would be "against everyone" (perhaps referring to the many raids of the Arabs on the fertile lands bordering the Syrian desert). Among the cultural features of the Arabs mentioned in the Bible is that they lived in the wilderness, the semi-desert plateau of NW Arabia (Jer. 3:2). Their homes were tents (Pss. 83:6; 120:5; Jer. 49:29). They used camels for riding and carrying baggage (Gen. 37:25). From S Arabia their merchant caravans brought spices, gold, and precious stones (1 Ki. 10:2); they sold sheep and goats from N Arabia to the Phoenicians (Ezek. 27:20-22); they transferred products of Africa and India to Mediterranean lands (1 Ki. 10:22); and they also dealt in slaves (Joel 3:8). Jeremiah, like HERODOTUS (*Hist.* 3.8), mentions that they cut the corners of their hair, leaving a tuft on top as bedouins still do (Jer. 25:23; 49:32). The Midianites wore gold earrings (Jdg. 8:24), like some bedouins today, and hung crescents on the necks of their camels (v. 21). The crescent always has been popular in Arabic art and has become the symbol of Islam.

The Arabs, called "the men of the East" in 1 Ki. 4:30, were famous for their WISDOM. The wise sayings of AGUR and of LEMUEL, two kings of Massa in N Arabia, are preserved in the last two chapters of Proverbs. The homes of JOB and his friends and most of the animals mentioned in that wisdom book are located in NW Arabia. The sons of HAGAR, that is the Ishmaelites, are called "seekers of wisdom" in Bar. 3:23.

Recent excavations have uncovered impressive monuments illustrating the material culture of S Arabia. Noteworthy are the great temple of the Sabean moon-god Ilumquh at Marib, large dams and canals for irrigation, statues in stone and bronze, and jewelry. On the stone monuments of S Arabia are carved thousands of memorial, historical, and religious inscriptions. The Nabateans carved spectacular tombs and temples in Greco-Roman style from the colored sandstone at PETRA. Some of their pottery was remarkably thin and beautifully painted. Their inscriptions are found on rocks in many parts of NW Arabia.

III. Ancient Arab religion. The general Arabian word for "god" was ¹*il* (like Heb. ¹*el* H445) or ¹*ilah* (like Heb. ¹*ēlôah* H468), but the ancient Arabians were polytheists. One of their most important deities was the moon-god called Ilumquh by the Sabeans, Wadd by the Mineans, ¹Amm by the Qatabanians, and Sin by the Ḥaḍramautians. The moon-god's consort was the sun-goddess Shamsi, and their son was ¹Athtar, the morning star. The gods of Adumatu (biblical Dumah) in the 7th cent. B.C., as noted by the Assyrians, were Atarsamaim, Dai, Nuhai, Ruldaiu, Abrillu, and Atarquruma.

Atarsamaim is perhaps the same Arabian goddess called Alilat (“the goddess”) by Herodotus (*Hist.* 1.131), and *hanilat* (also meaning “the goddess”) in a 5th-cent. Kedarite inscription. According to the Babylonian TALMUD (*b. Ta’an.* 5b), the Kedarites also worshiped water. This comment may refer to the veneration of sacred wells, such as Zamzam at Mecca. Deities of the Nabateans included Dushara, the supreme god; Allat, the mother goddess; Hadad, the storm-god; Atargatis, the fish-goddess; and Gad, the god of luck. Gods in Safaitic inscriptions include Dushara, Allāt, Gad-(Awidh, and Ba(alsamīn. Pagan Arab gods mentioned in the Koran are al-Lāt, al-(Uzza, and Manāh, considered as three daughters of Allah, the supreme god (53.19-20) Wadd, Suwā(, Yaghūth, Ya (ūq, and Nasr (71.23). Arabians fear demons called jinn (72).

Some of the religious practices of the ancient Arabians were similar to those of the Hebrews. Both people practiced CIRCUMCISION and pilgrimage. The Arab priest (*kāhin*), like his Hebrew counterpart (*kōhēn* H3913), not only performed sacrifices, but also used the sacred lots (cf. URIM AND THUMMIM) to learn the divine will and the future. Some think that the *lw*’ who served in the temple at Dedan is related in name and function to the biblical Levite. The Arabian *mslm* (“sacrifice”) is from the same root as the Hebrew *šelem* H8968 (“peace/fellowship offering”). The Arabian incense used in worship included several spices, like the sacred incense of Exod. 30:34. A pillar before the temple at Sirwah was called *knt*, “firmness,” like the pillar called JAKIN, “it is firm,” in front of Solomon’s temple (1 Ki. 7:21).

J. ALEXANDER THOMPSON

Arabic Gospel of the Infancy. One of the later infancy gospels (see APOCRYPHAL NEW TESTAMENT I.C). It combines into one account various stories about the birth of Jesus, the flight into Egypt and the events that took place there, and the miracles wrought by the boy Jesus. The birth story (chs. 2-9) is based on the *Protevangelium of James*, the section about the miracles (chs. 36-53) on the *Infancy Gospel of Thomas* (see JAMES, PRO-TEVANGELIUM OF; THOMAS, GOSPEL OF). The narrative of the flight into Egypt (ch. 9) begins from Matt. 2:13-14, but the miracles of this section have no canonical basis, although the description of the demoniac in ch. 14 draws upon Mk. 5:1-5. These wonders in Egypt and in Bethlehem are wrought through contact with the child, his clothes, or even his bath water; a notable feature is the prominent role played by Mary. Part of the book is contained in Syriac in the *History of the Blessed Virgin Mary* (ed. E. A. W. Budge [1899]), and it is possibly of Syriac origin. Its translation into Arabic made these legends available to Muslims, and some passed into the Koran. (English trans. in *ANF*, 8:405-15; extracts in *NTAp*, 1:460-61.)

Arad (city) a'rad, air'ad (עֲרָד H6866, possibly “wild ass” or “fugitive”). A city in the NE NEGEV some 17 mi. S of HEBRON. Arad occupied an excellent strategic position in the middle of a wide, gently rolling plain. The city was a center of civilization as early as the fourth millennium B.C. and again in Abrahamite times (some argue, however, that this Canaanite Arad should be identified with Tell el-Milh, c. 8 mi. SW of Tell 'Arad; see Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 201). The archaeological evidence also implies that it was built of stone and brick, with defensive walls by the 10th cent. B.C. Near the NW corner of the fortress stood a sanctuary whose design was similar, but not identical, to that of the nearly contemporary Solomonic TEMPLE.

The city of Arad is mentioned only four times in the OT (Num. 21:1; 33:40; Josh. 12:14; Jdg. 1:16), though there is versional evidence for it in another passage (Josh. 15:21); see EDER (PLACE) #2. In the KJV it is twice taken incorrectly for the name of a king (Num. 21:1; 33:40). According to Num. 21:1-3, the “king” (or chieftain) of Arad joined

Arad.

Aerial view of ancient Arad (looking N). The Early Bronze (2600 B.C.) lower city is encompassed by a massive wall. The Israelite fortress is situated on the upper area of the tell.

battle with the Israelites, the latter being victorious and calling the place Hormah (“destruction”). (Cf. Z. Herzog et al. in *BASOR* 254 [Spring, 1984]: 1-34; D. Ussishkin in *IEJ* 38 [1988]: 142-57.) Numerous fragmentary OSTRACA in Hebrew and Aramaic, dating from the 10th to the 4th cent., have been discovered at the site; they provide significant paleographical data and make intriguing, but uncertain, historical allusions (see Y. Aharoni, *Arad Inscriptions [1981]*; *ABD*, 1:336-37; *NEAEHL*, 1:75-87).

Arad (person) a’rad, air’ad (עֲרָד *H6865*, possibly “wild ass” or “fugitive”). Son of Beriah and descendant of BENJAMIN (1 Chr. 8:15).

H. G. ANDERSEN

Aradus air’uh-duhs (Ἀραδός). The Greek name of the OT city of ARVAD on the coast of PHOENICIA (1 Macc. 15:23).

Arah (person) air’uh (אֲרָח *H783*, possibly “he wonders” or “ox”). (1) Son of Ulla and descendant of ASHER, included among the “heads of families, choice men, brave warriors and outstanding leaders” (1 Chr. 7:39-40).

(2) Head of a family that returned from the EXILE with ZERUBBABEL (Ezra 2:5; Neh. 7:10; 1 Esd. 5:10 [KJV, “Ares”]). The numbers of those who returned vary in these passages. He is possibly the same person identified as the father of Shecaniah (Neh. 6:18).

Arah (place) air’uh (עֲרָח *H6869*, perhaps “bulrush”). Possibly a Sidonian city (Josh. 13:4). The MT reading, *mē’ārâ* (MEARAH, KJV, NRSV), should perhaps be vocalized so as to read *mē’ārâ*, “from Arah” (so NIV; cf. LXX *enantion Gazēs*, “before Gaza,” apparently reading *mē’azzâ*). No city by the name of either Arah or Mearah is known.

Aram (country), Aramean air’uhm, air’uh-mee’uhn (אַרָם *H806*, “high, exalted”; gentilic אֲרָמִי *H812*). Also Aramaean. Some English translations, including KJV, follow the SEPTUAGINT (*Syria*

G5353, *Syros G5354*) and render the Hebrew terms with “Syria” and “Syrian.” Contrast ARAM (PERSON). The Arameans were an important Semitic ethnic group living in the regions of MESOPOTAMIA and SYRIA in various tribes and settlements (2 Sam. 8:5-6; 1 Ki. 20:20-21; 1 Chr. 2:23; 19:10, 12, etc.; Amos 1:5; 9:7; Isa. 7:2, 4-5, 8; 9:12; 17:3; Jer. 35:11; Ezek. 16:57; 27:16). The name Aram is used also to refer to the land of the Arameans (Num. 23:7; 2 Sam. 15:8; Hos. 12:12; it may be used of the people and their land together, especially in reference to kings or gods of Aram, as in Jdg. 10:6; Isa. 7:1; et al.). The land area thus designated is quite indefinite geographically, referring to whatever area was most heavily populated by the Arameans at any time. In the OT, the area covered generally begins NE of Israel, includes DAMASCUS and a large portion of what is now Syria, and extends into the upper Tigris-Euphrates Valley. In patriarchal times, Aram referred to the Mesopotamian region, while during the monarchy it referred more specifically to Damascus and surrounding areas. The word is used frequently in compounds that indicate more precise localities (e.g., Aram Naharaim and Aram Maacah in 1 Chr. 19:6; see also PADDAN ARAM).

I. Earliest references. The word *Aram*, as the name of a region or of a state, first appears in the 23rd cent. before Christ, in a cuneiform inscription of the Akkadian King Naram-Sin. The interpretation of this inscription is not absolutely certain; however, in the following centuries the term appears in various cuneiform tablets.

As early as the 3rd millennium B.C. there is evidence of nomads called Sutû coming from deserts of N ARABIA and raiding the civilizations of Mesopotamia. The Sutû are also mentioned in the TELL EL-AMARNA letters, along with the Ahlamû (Akhlamu), and make their debut in Assyrian sources at the time of Arikden-ili (1319-1308 B.C.). The Ahlamû are mentioned in an Amarna letter alluding to the king of Babylon. During this same period their presence is attested in or near Assyria, at Nippur and even at Dilmun. Shalmaneser I (1274-1245 B.C.) defeated the HURRI-ANS and their HITTITE and Ahlamû allies, while Tukulti-Ninurta I (1244-1208 B.C.) claimed that he conquered MARI, Hana, and Rapiqu on the Euphrates and “the mountains of the Ahlamû.” There seems to be some connection of the Sutû with the Aramu, Kaldu, and Ahlame, but the precise relationship is not clear. The terms Ahlamû and Aramean are juxtaposed in an inscription of Tiglath-Pileser I (1115-1077 B.C.) in which he recorded his encounter with the Ahlamû-Arameans who came from the desert areas (*ANET*, 275a). Like other Semites, the Arameans made their first appearance in history as NOMADS.

Aramean funerary inscription dated to the 7th cent. B.C.

In the Table of the NATIONS (Gen. 10), Aram is listed as the son of SHEM and the father of Uz, Hal, Gether, and Mash. The Bible refers to NW Mesopotamia as ARAM NAHARAIM (Gen. 24:10) and PADDAN ARAM (25:20; 28:5). The OT associates the patriarchs with the Arameans (24:3 –10; 25:20; 27:43; 28:2-5; Deut. 26:5), and references to cities like HARAN and NAHOR (Gen. 24:10) connect the patriarchs with the Balikh Valley in northwestern Mesopotamia.

II. Aramean States. The area of Aram never developed into one great empire but rather consisted of several small, independent states in Syria and N Palestine. Some of these are mentioned in the OT (2 Sam. 10: 6-8), and the most outstanding

Aram.

was DAMASCUS, a state that eventually embraced most of Syria except for the Phoenician coast. This state was conquered by DAVID, but it won independence before the end of SOLOMON's reign and became, in relation to Israel, the most important Aramean kingdom. It is commonly referred to in the OT simply as Aram.

By the 12th cent. B.C., Arameans are mentioned by name among other W Semitic tribes living W of Assyria, between the W bank of the Euphrates and Palmyra in the Syrian desert. They had apparently established a number of strongholds, which suggests they had been there for some time. During the 12th cent. B.C., the ANE underwent significant shifts of power, with the result that the Hittite empire broke up into smaller kingdoms; the Egyptian power and influence in Syria and Canaan declined; and the MITANNI kingdom slowly disintegrated. This situation gave the Arameans their opportunity, and they streamed into border areas of the Mesopotamian kingdoms and moved westward to settle throughout northern and southern Syria, where they settled especially around Tadmor (Palmyra) and Damascus. Tiglath-Pileser I (1115-1077) fought a series of campaigns against

them, but could not prevent their taking possession of whole areas of his dominion.

By the 11th cent. the Arameans had succeeded in establishing small kingdom states, and from the 10th cent. originated the earliest texts in ARAMAIC. The Arameans attained their highest degree of political importance in the 11th and 10th centuries B.C., thanks to the decline of the Assyrian empire during that period. Adad-apal-iddina (1067-1046 B.C.) was an Aramean raised to the throne of Babylon by the Assyrians, perhaps in the hope of diverting the Aramean influx toward southern Iraq. On the other front of Aramean expansion, to the W, there arose at this time in CILICIA the state of Sam'al. Other states were founded around ARPAD and ALEPPO, at Hama, and to the S on the borders of the Hebrew kingdoms. Thanks to the OT there is considerable information on two of these, Zobah and Damascus, which were conquered by David but regained their independence after the kingdom divided.

Despite the force of their expansion, the Arameans were never able to organize their conquests, or even, in general, their own states. The Arameans never attained an effective political unity, and their divisions into little local kingdoms, which was further determined by the multitude of heterogeneous elements with which they came into contact, was the decisive element of their weakness. Saul, David, and Solomon fought against the Aramean kingdoms that lay across the northern frontier of Israel: Aram ZOBAB (Ps. 60, title), BETH REHOB (2 Sam. 10:6), ARAM NAHARAIM (Ps. 60, title), GESHUR (1 Chr. 2:23).

III. Aram, Israel, and Assyria. After the decline of Solomon's empire, hostilities continued between Israel and the Syrians (Arameans) some 150 years. In general, Aram-Damascus was able to take advantage of the division between Israel and Judah. The strength of Aram was largely retained by BEN-HADAD II of Damascus, who absorbed the satellite kingdoms into a single united Aram-Damascus. He initiated two unsuccessful campaigns against Israel, then reached an agreement with King AHAB, who joined the anti-Assyrian coalition formed of twelve kingdoms of the area. This alliance, however, needed an imminent threat from Assyria to hold it together. When that danger seemed to have lessened, the Syria-Israel alliance collapsed and Ben-Hadad II attacked again and inflicted a decisive defeat on the combined forces of Israel and Judah (852 B.C. at RAMOTH GILEAD, 1 Ki. 22:1-35).

Assyria attempted to clear the invaders out of Mesopotamia, and during the first half of the 9th cent. the Assyrian kings waged war against the strongholds of Aramean power in Mesopotamia. SHALMANESER turned his attention to Syria and, after a series of incursions, inflicted in 841 B.C. a severe defeat upon a coalition of Aramean states with which the king of Israel had allied himself. The defeated states apparently did not lose their independence for some decades to come.

Adad-Nirari III (810-783 B.C.) launched new campaigns against Aram, and in 802 B.C. the city of Damascus was besieged and the king was forced to pay tribute to the Assyrians, along with Israel. By the time the Assyrians were forced to turn their attention to events nearer home, the back of Aram's strength was broken and decline followed. Damascus fell an easy prey to JEROBOAM II (786-746 B.C.) of Israel. Later it became independent under the new Aramean king, REZIN (c. 740-732 B.C.), but he could not restore its old supremacy.

In the 8th cent. B.C., Assyria once more took up the offensive. In 743 B.C. Arpad, which the inscriptions found at Sujin reveal was opposed to Assyria, fell to TIGLATH-PILESER III (744-727). Next it was the turn of Sam'al, where a certain Azriyau had seized power and was raising an anti-Assyrian coalition. This usurper was conquered and put to death in 738, and the throne was restored to the legitimate king, Panamuwa II (his son Bar-Rekub records these events in his inscriptions).

Further S Damascus was reduced to the state of an Assyrian province in 732. Hana, after a last attempt at rebellion, was overthrown by SARGON II (721-705).

For almost two centuries the northern kingdom of Israel and the Aramean state of Damascus were in close relationship—for good or evil—but Assyrian power, which for over a half century had begun to loom as a threat to Syrian independence, finally overwhelmed both nations. By this time, however, the Arameans had won a linguistic victory, inasmuch as the Aramaic language had become widely spread throughout the FERTILE CRESCENT. Some Assyrian kings employed Aramean scribes, and during the siege of Jerusalem by SENNACHERIB (c. 701 B.C.) Aramaic could be used as a diplomatic mode of exchange by non-Arameans. Inscriptions in Aramaic from this period have been found in widely scattered places.

Many Aramaic documents were found in ELEPHANTINE in Egypt, where a Jewish colony flourished in the 5th and 4th centuries B.C. Beginning with the 4th cent. B.C., Aramaic was adopted by some Arabs and evolved into NABATEAN, which was used at PETRA. A Palestinian form of the language was used by Jesus, and other dialects, including Syriac, were spoken throughout the ANE in Roman times. Aramaic has had a continuous tradition to the present time.

IV. Significance. The Arameans, whether merchants, peasants, shepherds, soldiers, or bandits, were originally nomads and contributed nothing really significant to the ANE civilization except their language. It appears from their inscriptions that they worshiped both Sumerian-Akkadian and Canaanite deities, such as Adad, El, Sin, Anat, and others. They apparently lacked originality in the field of arts and simply followed the traditions of the countries where they settled. The kings of Damascus employed Phoenician sculptors and ivory carvers, and Sam'al under its new masters retained all the features of a Neo-Hittite city. Archaeological excavations at Tell Halaf (Guzana) revealed the palace of an Aramean ruler who probably lived at the beginning of the 9th cent. B.C. This palace was a structure decorated with orthostats, perhaps cruder than the contemporary sculptures of northern Syria, and with strange-looking, almost morbid statues that, on analysis, display a mixture of Mesopotamian, Hittite, and Hurrian influences, as would be expected in such an area as this, where three cultures converged. A feature of the palace was the colonnaded portico. The entrance gateway was flanked by two great lion figures, and there were many sphinxes. Also found at Tell Halaf were a collection of statues, and pylons carved in relief. Aramean art, before the Hellenistic period, had a rough provincial aspect. Although it possessed a few features of its own, it may generally be classified within the artistic tradition of Asia Minor and Mesopotamia. Aramean art work can be frequently identified by its custom of representing the human face with the beard shaved above and below the lips.

The significance of the Arameans for biblical research is great, however, when one considers the Aramean background of the patriarchs as well as the close relations of the northern kingdom of Israel with the Arameans of Damascus. (Cf. M. F. Unger, *Israel and the Aramaeans of Damascus* [1957]; M. Sokoloff, ed., *Arameans, Aramaic, and the Aramaic Literary Tradition* [1983]; W. Pitard, *Ancient Damascus* [1987]; P. E. Dion, *Les araméens à l'âge du fer* [1997]; E. Lipiński, *The Aramaeans: Their Ancient History, Culture, Religion* [2000]; P. M. M. Daviau et al., eds., *The World of the Aramaeans* [2001]; S. Hafthórsson, *A Passing Power: An Examination of the Sources for the History of Aram-Damascus in the Second Half of the Ninth Century B.C.* [2006].)

L. L. WALKER

Aram (person) air'uhm (אָרָם H806, "high, exalted"). (1) One of the five sons of SHEM and the

father of Uz, Hul, Gether, and Mash in the Table of the NATIONS (Gen. 10:22-23; cf. 1 Chr. 1:17); regarded as the ancestor of the Arameans. See ARAM (COUNTRY), ARAMEANS.

(2) Son of Kemuel and grandson of NAHOR, ABRAHAM'S brother (Gen. 22:20-21).

(3) Son of Shemer and descendant of ASHER (1 Chr. 7:34).

(4) Son of Hezron, included in the GENEALOGY OF JESUS CHRIST (Matt. 1:3-4 KJV, NRSV; Lk. 3:33 KJV [NRSV, "Arni"]). Here the name represents the Greek *Aram* G730 [not in NIV], which however refers to Ram (Heb. *rām* H8226; see Ruth 4:19 and 1 Chr. 2:9-10). See RAM (PERSON). Accordingly, NIV reads "Ram" in both NT passages, but the Lukan genealogy is textually uncertain at this point, where many scholars prefer the reading ARNI (thus NRSV).

H. G. ANDERSEN

Aramaic language air'uh-may'ik. The term *Aramaic* (ʾārāmî, from ʾārāmî H811, 1 Ki. 18:26 = Isa. 36:11; Ezra 4:7; Dan. 2:4) is derived from the pre-Hellenic name of SYRIA; see ARAM (COUNTRY), ARAMEANS. (The NIV uses the term also to render Gk. *Hebraisti* G1580, Jn. 5:2 et al., because Aramaic was the primary language of the Hebrews in NT times.) Aramaic belongs to the NW branch of the Semitic languages, in contrast to E Semitic (e.g., Assyrian) and S Semitic (e.g., Ethiopic). Within the NW branch it is distinguished from Canaanite (e.g., Hebrew, Phoenician, Ugaritic). See LANGUAGES OF THE ANE.

The periods and dialects of the language may be summarized as follows: (1) *Old Aramaic*, preserved in inscriptions from the 9th to the 7th cent. B.C. (2) *Imperial (Official) Aramaic*, the language of the Persian Empire (6th–4th cent. B.C.), attested in the papyri from ELEPHANTINE and other documents discovered in Egypt and Palestine; biblical Aramaic (portions of Ezra and Daniel) probably belongs in this category as part of a developing Babylonian literary dialect. (3) *Middle Aramaic*, from the 3rd cent. B.C. to about A.D. 200, including Palmyrene and Nabatean inscriptions, the Aramaic texts from Qumran, and Targums Onkelos and Jonathan; some scholars place biblical Aramaic (esp. the portions in Daniel) during this period. (4) *Late Aramaic*, from the 3rd to the 13th cent. of our era; during this period many scholars have distinguished a "Western" form (including the Jewish Aramaic of the Palestinian Targums and of Talmud Yerushalmi) and an "Eastern" form (e.g., Syriac, Mandaic, and the Aramaic of the Babylonian Talmud). (5) *Modern Aramaic*, still spoken primarily by some Christian groups in Turkey, Iraq, and Iran.

I. History. Already in Abraham's time (2000 B.C.) the Arameans controlled HARAN and the surrounding area of PADDAN ARAM, and there the family of TERAH became Aramaic-speaking. Even after ABRAHAM had migrated to CANAAN and adopted the language of that region, it was an Aramaic-speaking REBEKAH whom ISAAC married; the same was true of LEAH and RACHEL, the wives of JACOB. Their father LABAN ("the Aramean," Gen. 25:20) is quoted as giving to the rock-cairn of Gilead the Aramaic name JEGAR SAHADUTHA, "rock-pile of witness," while Jacob called it GALEED, a Canaanite/Hebrew name that has the same meaning (31:46-47). Thus the Hebrews had close contact with Aramaic language and culture even in patriarchal times.

Although the Arameans never possessed a mighty empire, they enjoyed the privilege of imposing their language on the whole ANE. This was no doubt partly due to the fact that they used the alphabetic system of WRITING in contrast to the cumbersome CUNEIFORM (syllabic) system used in writing Akkadian. As early as the 8th cent. B.C., the Aramaic language competed with Akkadian and thereafter gradually spread throughout the ANE. About the middle of the 1st millennium B.C., when the Achaemenian monarchs of PERSIA looked for a tongue that could be understood by all their

subjects, they chose Aramaic, which became the lingua franca of their vast empire. Aramaic attained its maximum diplomatic prestige in the Persian empire, where it was used as the interprovincial language from India to Egypt between the 6th and 4th centuries B.C.

The civilization of the Arameans was basically nothing more than a clearing house for the cultural productivity of the stronger states about them, and their language was the instrument of a work of cultural assimilation and dissemination, which went far beyond the limits of their local history, and became an element of ANE civilization. The Greeks and Romans were familiar with the ANE to a great extent through the Aramaic sources, and it was to a significant degree that Babylonian, Persian, and Hebrew elements were transmitted to Christianity via Aramaic, and through Christianity to the W. At the same time Aramaic was instrumental in transmitting Greek culture to the E, especially philosophy, which became known to many Arabs through the medium of Aramaic. It was during the Hellenistic period that the differences between the various popular Aramaic dialects became more pronounced, and some of these later became distinct literary languages.

Samaritan contract for the sale of a Hebrew slave; written in Aramaic in black ink on a papyrus scroll (375-335 B.C.). From a cave in Wadi Daliyeh, E of Samaria.

After the EXILE, the Jews used the Aramaic script in the writing of their Hebrew language (see ALPHABET) and also used the Aramaic language itself more than previously. Eventually Aramaic replaced Hebrew to such an extent that the translation of the Hebrew Bible into Aramaic became necessary. These translations into Aramaic were made orally in the synagogues, and their oral preservation led in due course to the written TARGUM. Aramaic then soon became the common language of postbiblical JUDAISM, as reflected in the MISH-NAH, MIDRASH, and TALMUD.

Christianity arose in an Aramaic milieu, a fact reflected even in some features of NT Greek (see GREEK LANGUAGE). The churches of Asia, such as the Nestorian, produced a vast literature in Syriac, a form of Aramaic. Paganism also survived in an Aramaic environment; thus the MANDEANS of Babylonia preserved their holy books in their own Aramaic dialect. Finally, the Islamic Conquest in the 7th cent. A.D. doomed Aramaic. Since then Arabic has generally displaced the Syriac-Aramaic dialects, which are now spoken by only a few thousand persons (many of them known as Assyrian Christians) in the Middle East and in some North American immigrant communities.

II. Early Aramaic literature. One of the oldest extant Aramaic inscriptions is that of King Zakir

(Zakkur) of HAMATH, written about 820 B.C. on the pedestal of a statue dedicated to the god Iluwer. The early-8th-cent. inscription of Panammu, king of Ya^ludi (i.e., Sam^lal, modern Zenjirli) shows such “Canaanisms” as ^lnk (rather than ^lnh) for the pronoun “I” and ntn (rather than yhb) for the verb “to give.” Some have deduced that even in the 9th and 8th centuries words were freely borrowed from Canaanite in the Aramaic of that period and that therefore borrowing could take place in the reverse direction, from Aramaic into Hebrew, long before the time of the exile and restoration (if so, no sound argument as to lateness of composition of any purportedly preexilic book of the OT can be based on the mere presence of Aramaisms in the text). It is also true, however, that in these early centuries the linguistic distinctions among NW Semitic languages were less obvious than in the later periods.

From Panammu’s son, Bar-Rekub (in the late 8th cent.), comes a short autobiographical inscription, where the author speaks of himself as king of Sam^lal. He emphasizes his loyalty to the Assyrian emperor, TIGLATH-PILESER III, and also speaks highly of the fine palace he has built or renovated for the benefit of his own dynasty. From Sudshin (or Sujin) near Cilicia comes a longer inscription (the Sefire stela, over four columns in length), likewise from the 8th cent., celebrating the prowess of a King Mati^lel, and containing a suzerainty treaty. It includes a number of peculiarities in spelling, such as the use of “Canaanite” *šin* instead of *tau* in certain words (e.g., ^lšr, “place”).

In 1993, an Aramaic inscription dating to c. 800 B.C. was discovered at Tel Dan; this find created great interest because it appears to refer to “the house of David” and to “the king of Israel,” although some have questioned this claim (cf. G. Athas, *The Tel Dan Inscription: A Reappraisal and a New Interpretation* [2003]). Other recent discoveries include the bilingual (Aramaic and Neo-Assyrian) Fakhariyah inscription from the 9th cent. B.C., written in a script that sheds light on the development of the alphabet, and the DEIR ^lALLA texts from the 8th cent. B.C., which record a vision of BALAAM in a dialect that some however regard as Canaanite rather than Aramaic.

In the 7th cent. we have an interesting letter written around 650 B.C. from the city of ASSHUR in Assyria by a certain Bel-etir to his brother Pirawur, discussing the provisions to be furnished to certain slaves, and also alluding to political developments during this period when Shamash-shum-ukin, as king of Babylon, was rebelling against his brother ASHURBANIPAL, king of Assyria. On a bas-relief discovered in Nerab near ALEPPO, an inscription was recorded by a priest named Sinzirban, containing the customary curse upon anyone who would tamper with this monument to the deceased. It too uses *shin* for *tau* in ^lšrk (“your place”), as well as *šadde* for *ṭet* in the verb *nšr* (“preserve”).

By far the largest body of nonbiblical Aramaic literature from the pre-Christian era was discovered at the island of ELEPHANTINE in the extreme S of Egypt. Apart from a fragmentary Aramaic version of the BEHISTUN INSCRIPTION and the Tale of AHIQAR, virtually all of these documents—letters, wills, contracts, conveyances of property—were composed by a military colony of Jews stationed on this island outpost (then known as Yeb), beginning with the reign of DARIUS I of Persia in the first half of the 5th cent. (the earliest dated document is from 497 B.C.). No document bears a date later than 400 (A. Cowley, *Aramaic Papyri of the Fifth Century B. C.* [1923], 129, text no. 35), but some of the undated or fragmentary instruments undoubtedly came from the 4th cent.

These papyri afford a fascinating picture of what life was like for a Jewish colony maintaining their community life and customs so far away from their ancestral homeland. Even at that early date there seem to have been serious episodes of anti-Semitism on the part of the local populace, notably when a detachment of Egyptian militia destroyed completely the temple to Yahweh that the Jews had built on Yeb (Cowley, *Aramaic Papyri*, no. 30). Much to their distress, moreover, the hierarchy in

Jerusalem showed no sympathy or interest when they were appealed to for assistance in restoring this sanctuary; they apparently felt that there could be no legitimate sanctuary outside of Jerusalem.

Linguistically the Elephantine Papyri belong to the same dialect of Imperial Aramaic as do the passages in Ezra and Daniel that some scholars date much later than the 5th cent. There are some regional differences, however, such as the tendency in biblical Aramaic to defer the verb until later in the clause than was true in Egypt and the W. In the matter of the shift from *zayin* to *dalet* (coming from original *dhal*), the Elephantine documents definitely favor retention of *zayin*; but there are already a fair number of examples of the shift to *dalet* in such words as 𐤆𐤃 (“seize”) and *dky* (“clean, innocent”). Thus we see the transition to a change that had apparently taken place already in Eastern Aramaic in the late 6th cent. B.C., judging from Daniel and Ezra.

A precisely dated funerary inscription (455 B.C.) was found at SARDIS in ASIA MINOR, composed in somewhat ungrammatical Aramaic on a funerary stela erected by the family of Mani, and invoking the curse of Artemis “of Coloë and of the Ephesians” upon any who would disturb the family tomb. Another interesting 5th-cent. inscription comes from TEMA in N Arabia, memorializing the piety of a certain Salm-shezib, who introduced the worship of an image of the god Salm into Tema and set aside valuable date-palm groves for the support of his sanctuary.

III. Biblical and postbiblical Aramaic. Not all of the OT was written in Hebrew. Most of Ezra 4-7 and all of Dan. 2-7 were written in Aramaic. In addition there is one verse in Jeremiah entirely in Aramaic (Jer. 10:11). In NT times a Palestinian dialect of Aramaic was spoken by the Jews, especially in GALILEE. Several brief Aramaic quotations from Jesus have been preserved in Greek transcription, especially in the Gospel of Mark, such as *Talitha koum* (“Maiden, arise,” Mk. 5:41) and *Ephphatha* (“Be opened,” 7:34). Best known is the cry from the cross, *Elōi elōi lema sabachthani* (“My God, my God, why have you forsaken me?” 15:34; cf. Matt. 27:46), a quotation from Ps. 22:1, indicating that even when the Bible was quoted, it was common to use an Aramaic translation rather than the Hebrew original.

Other Aramaic expressions occur outside the Gospels, notably MARANATHA (i.e., *māran* ^ʾ*ātā*, “Our Lord has come,” or else *māranā tā*, “Come, O Lord!”) in 1 Cor. 16:22, and ABBA (^ʾ*abbā*, “Father!”) in Rom. 8:15 and Gal. 4:6. Apart from direct quotations there are many statements quoted from the Lord in Greek that show an Aramaic background (cf. M. Black, *An Aramaic Approach to the Gospels and Acts*, 3rd ed. [1967]), and some have thought that the grammatical eccentricities of Revelation are best explained as the result of a literal translation from an original Aramaic text.

In regard to Dan. 2-7, the reason for the composition of this material in Aramaic rather than Hebrew seems to be found in their subject matter. Since he was a high public official in Babylon, rather than a resident of Palestine, Daniel’s prophetic writings were of general public interest, especially those that pertained to the affairs of the Babylonian Empire and its future destiny. It is only natural that these six chapters should have been couched in a language serving as the *lingua franca* of the capital and of the empire generally. The subject matter of the other chapters, on the other hand, was of special relevance to the Jewish people, or else was of such a nature as to be kept confidential from the Gentile public. Therefore this material was kept in Hebrew. As far as the Aramaic chapters of Ezra are concerned, they consist largely of international correspondence originally composed in Aramaic. Since Ezra’s Jewish public was perfectly conversant with Aramaic after their long captivity in Babylonia, there was no need to translate these communications into Hebrew.

It is highly significant that the Aramaic material in Daniel contains about fifteen words of probable Persian origin, largely pertaining to administration and government, yet it does not contain a

single loanword from Greek except for the names of three musical instruments. This evidence cannot be squared with any theory of 2nd-cent. composition of Daniel (i.e., after 160 years of rule by a Greek-speaking government), although they fit well with a final recension of Daniel's memoirs by the author himself at about 530 B.C. In view of the failure of the SEPTUAGINT of Daniel to translate correctly some of the Persian terms, it can be inferred that these had long since passed out of use by the 2nd cent. B.C., and the Greek-speaking translators could only guess at their meaning. The early cast of the language is further demonstrated by its use of internal-vowel-change passives (e.g., *honḥat*, hophal of *nḥt* H10474) instead of the passive-reflexive prefixes *hit-* or *ḥit-*, which already by the time of the GENESIS APOCRYPHON were used exclusively to express passivity. (In this connection it should be noted that the Hebrew chapters of Daniel likewise contain Persian loanwords, but none whatever from Greek.)

By far the largest Aramaic document discovered in the Dead Sea caves was the *Genesis Apocryphon*, which is generally dated about mid-first cent. B.C. Only five columns are tolerably complete and legible. Column 2 contains a midrashic type of narrative concerning the remarkable appearance of the infant MOSES, which led LAMECH to question his wife as to whether he was really the child's father. Columns 19-22 relate ABRAHAM'S adventures in Egypt and SARAH'S temporary detention in the pharaoh's harem (in which she was kept from defilement because of a grievous illness afflicting the king and all his family). Her charms are glowingly described, feature by feature and limb by limb. From the linguistic standpoint it is most significant to observe the contrasts between this composition and the Aramaic material in Daniel. For example, the *Apocryphon* adds a final *nun* to the third plural perfect of *final-aleph* verbs (such as *ḥtwn* instead of *ḥtw*, "they came"), a form not hitherto known to occur prior to the TALMUD. Similarly, the compound preposition *bdyl* ("on account of") is never found in biblical Aramaic or in the Elephantine Papyri, but is characteristic of later Aramaic. Many other examples could be cited to add to the cumulative result that the Aramaic of the *Apocryphon* is significantly later than that of Daniel and Ezra. Thus the Maccabean dating for Daniel is not compatible with this linguistic evidence.

The Aramaic TARGUMS have been preserved in a written form no earlier than A.D. 200 (the Targum of Onkelos on the Pentateuch); the Targums on the Prophets and the Writings are later yet. They consist of a translation or paraphrase of the Hebrew original (which already in the time of Ezra was understood only imperfectly by the common people) into the Aramaic that became the vernacular of the Jews from the late 5th cent. and onward. In the SYNAGOGUE services it became customary for every Hebrew reading of the TORAH to be followed by an interpretation into Aramaic. Eventually these renderings assumed a sufficiently standard form to be consigned to writing. In the early 3rd cent. A.D. Aramaic was used also in many portions of the MIDRASH, which was a doctrinal and homiletical commentary on the Torah (the HALAKAH) and on the OT as a whole (the HAG-GADAH). The Midrash arose between 100 B.C. and A.D. 300, when it assumed definite written form. The portion of the TALMUD known as the GEMARA was almost entirely written in Aramaic; the Palestinian Gemara dates from about A.D. 200, and the Babylonian from 500 or a little later. In Christian circles the eastern dialect of the EDESSA region was written down in a new type of alphabet, resembling Arabic more than the "square Hebrew" alphabet in use until the 2nd cent. A.D. Grammatically it was quite close to the Aramaic used in Palestine, but it developed some special traits of its own and became known as Syriac. (See the general survey by K. Beyer, *The Aramaic Language* [1986].)

IV. Linguistic features. Like Hebrew, Aramaic belongs to the NW Semitic language group, and there are close resemblances between the two, but the differences are significant. For example, the original

Semitic consonant **t̥** (pronounced like *th* in *think*) shifted to **š** in Hebrew but to **t** in Aramaic. Thus the word for “three” was *thalāthun* in Arabic, but in Hebrew *šālōš* H8993, and in Aramaic *tēlāt* H10760 (several other Semitic consonants developed differently in Aramaic from the way they did in Hebrew). There are also some vowel differences: (a) Aramaic preserved the original Semitic accented *ā*, which in the Canaanite dialects shifted to *ō*; (b) pretonic *a* was lengthened to *ā* in Hebrew, but in Aramaic it was reduced to a *shewa*.

In regard to morphology, the function expressed in other languages by the definite article (e.g., the preceding *ha-* of Hebrew) was indicated in Aramaic by the long final *-ā* of the so-called emphatic state; thus “the king” was *malkā* (Heb. *hammelek*). The masc. pl. absolute ended in *-în* rather than in *-îm*; thus, “kings” was *malkîn* (Heb. *mēlakîm*). Differences in verbal inflection were numerous. For example, the first-person singular perfect form is *kitbēt* (Heb. *kātabtî*), and the third-person masculine plural imperfect has a final *nun*, *yiktēbûn* (Heb. *yiktēbû*). As far as the verbal stems are concerned, the most obvious distinctive of Aramaic is its use of a prefixed *hit-* to express reflexive and passive ideas; for example, *hitgēzeret*, “[a stone] was cut” (hithpeel of *gēzar* H10140, Dan. 2:34). Aramaic also used a prefix to form the infinitive construct, such as *miktab*, “to write” (Heb. *kētōb*). Apart from matters of morphology, Aramaic vocabulary differs from Hebrew markedly in the commonest words of everyday speech, such as “come” (*ʾātâ* H10085, for Heb. *bo* > H995) and “see” (*ḥāzâ* H10255, for Heb. *rāʾâ* H8011).

G. L. ARCHER

L. L. WALKER

Aramaic versions. See TARGUM; VERSIONS OF THE BIBLE, ANCIENT.

Aramean. See ARAM (COUNTRY), ARAMEAN.

Aramitess air’uh-mi-tes (אֲרַמִּיָּתָא, fem. of אֲרַמִּי H812). Term used by KJV with reference to the concubine mother of MAKIR, the father of GILEAD (1 Chr. 7:14; NIV, “Aramean”). See ARAM (COUNTRY), ARAMEAN.

Aram Maacah air’uhm-may’uh-kuh (אֲרַם מַעַכָּה H807). Alternate name of MAACAH (1 Chr. 19:6). See also ARAM (COUNTRY), ARAMEAN.

Aram Naharaim air'uhm-nay-huh-ray'im (אֲרָם נַחְרַיִם H808, "Aram of the [two] rivers"). This name occurs five times in the Hebrew Bible. The SEPTUAGINT renders it twice as *Mesopotamia G3544* (Gen. 24:10; Deut. 23:4), once as *Syria G5353* (Jdg. 3:8), and twice with a combination of the two nouns (1 Chr. 19:6; Ps. 60, title). The KJV accordingly translates it as MESOPOTAMIA in all these references except the last one. The name refers to the same general area as PADDAN ARAM, which is bounded by the upper EUPHRATES on the W and the river HAVOR (Khabur) on the E; it includes the city of HARAN, where TERAH settled after leaving UR (Gen. 11:31). Aram Naharaim is identified as the place to which ABRAHAM's servant went in search of a wife for ISAAC (Gen. 24:10) and as the home of BALAAM son of Beor (Deut. 23:4). After the death of JOSHUA, Israel was delivered into the hands of CUSHAN-RISHATHAIM king of Aram Naharaim for eight years (Jdg. 3:8-10), and the Ammonites later hired horsemen and chariots from Aram Naharaim against DAVID (1 Chr. 19:6; cf. title of Ps. 60). (See R. T. O'Callaghan, *Aram Naharaim* [1948].) See also ARAM (COUNTRY), ARAMEAN.

H. G. ANDERSEN

Aram Zobah air'uhm-zoh'buh (אֲרָם צוֹבָה H809). Alternate name of ZOBAB (Ps. 60, title; cf. 2 Sam. 10:6-8; 1 Chr. 19:6). See ARAM (COUNTRY), ARAMEAN; HAMATH ZOBAB.

Aran air'an (אֲרָן H814, possibly "wild goat"). Son of Dishan (Gen. 36:28; 1 Chr. 1:42), who was a son of SEIR and a HORITE chief (Gen. 36:20-21). Some scholars believe that Aran is a variant of OREN.

Ararat air'uh-rat (אֲרָרָט H827). A country in the region of ARMENIA, in eastern ASIA MINOR, its center being Lake Van.

I. History. The name Urartu, in a somewhat altered form, Uruaṭri, is found in Assyrian sources in the 13th cent. B.C. as a designation of one of the Nairi lands to the N of ASSYRIA against which SHAL-MANESER I (1274-1245 B.C.) fought. TIGLATH-PILESER I (1115-1077 B.C.) also names Uruaṭri among his enemies in the N. None of these notices would lead one to believe that as yet the petty princes of the area had coalesced into a political unit. Rather, the local rulers of the area were tribal leaders, whom the Assyrians occasionally attacked for booty. The booty obtained from the Nairi lands rarely included valuable items, but rather livestock. Especially prized were the riding horses of the Nairi lands. Shalmaneser III (858-824 B.C.) is the first to mention a king of a united kingdom of Urartu, named Arame, who resided in Arzashkun. Several of Shalmaneser's campaigns are depicted on the bronze gates of Balawat.

In the year 832 B.C., Shalmaneser ordered a second attack on Urarṭu by his general Dayyān-Ashur. Now his opponent was no longer King Arame, but a King Sarduri (the Assyrians call him Sheduri). Sarduri was sufficiently skilled in guerrilla tactics to avoid a pitched battle with the superior Assyrian army. So Dayyān-Ashur returned with plunder but without decisively crushing Sarduri or taking him captive. This Sarduri (I) is the first king of whom Urartian inscriptions are known. His capital was

Mount Ararat.

no longer Arzashkun, but Tuspa, which he founded and fortified. Proudly he wrote on his fortification wall: “I am Sarduri, son of Lutipri, king of kings, who received tribute from all kings.” By his adoption of the typical Assyrian titulary “king of kings, king of the universe,” Sarduri deliberately denied Assyrian suzerainty and claimed full equality with Assyria. From the name of Sarduri’s father, Lutipri, it is clear that a new dynasty had succeeded that of King Arame, with a new center at Tuspa.

The period of Assyrian weakness following the death of Shalmaneser gave Urartu time and opportunity for refortification and expansion. Under the kings Ispuini, Menua, Argisti, and Sarduri II, Urartian influence expanded to the W, threatening Assyrian provinces in N Syria. Under Shamshi-Adad V (823-811 B.C.), the Assyrian general Mutarris-Ashur led an expedition to the coast of the Black Sea, during which he sought to hinder the westward expansion of Urartu and claimed to have plundered 200 villages and towns of the Nairi king Uspina (= Ispuini), but now the Urartians seized the initiative. From 818 to 816, Shamshi-Adad V had to launch new campaigns in order to defend established Assyrian provinces in the Upper Tigris region against Urartian attacks.

Until as late as 714, the kings of Urartu were able to control Ardini (= Mussassir), which was right in the Assyrian heartland, and to build there a temple for their chief deity Khaldi and his wife Bagmastu. Even Adad-nirari III (809-782), who boasted that he had penetrated to the Caspian Sea and subjugated all of the Nairi lands, can only have touched the outermost periphery of Urartu. In the W, Menua’s domain reached to the bend in the Euphrates and the borders of Malatya. In the NE he pressed over the Araxes and carried the battle to the territory of E Armenia. He clearly challenged the Assyrian sovereignty over the Mannai land around Lake Urmia.

The situation changed under TIGLATH-PILESER III (745-727), who defeated Sarduri II at Arpad in 743. The Urartian alliance of N Syria, SE Anatolia, and Urartu was dissolved. Sarduri escaped to his capital Tu(ru)spa, which Tiglath-Pileser was unable to capture in 735. In his eighth year (714) King SARGON II of Assyria captured Mussassir, a city ruled by Urzanu, a vassal of Rusa, king of Urartu. Rusa and his allies, the kings of Tabal (TUBAL) and Mushki (MESHECH), were now threatened by a new power, the CIMMERIANS (OT GOMER). After the Cimmerian threat had faded, the SCYTHIANS (OT ASHKENAZ) and the Medes (see MEDIA) took their place to press on Urartu. Although the 7th-cent. kings of Urartu (Argisti II, Rusa II, Sarduri III) were still able to build new citadels, their kingdom ceased to exist as an independent political unit after a series of Median (Madai) attacks in the early 6th cent. B.C. (Cf. P. E. Zimansky, *Ecology and Empire: The Structure of the Urartian State* [1985].)

II. Ararat in the OT. According to Gen. 8:4, NOAH's ark came to rest, after the waters of the flood subsided, on "the mountains of Ararat" (the singular name "Mount Ararat" is not a biblical or historical designation). See FLOOD, GENESIS. Ancient Christians believed that the ark landed in the S, near the Mesopotamian plain (a Nestorian monastery called Cloister of the Ark was built on one of the peaks), but the highest mountains in the vicinity, which the receding waters would have first exposed, are in the N (Urartu). A tradition that arose around A.D. 1100 identifies the site with a high elevation named Masis (Büyük Ağrı Dağ in Turkish), and this is the area that is claimed to have preserved the remnants of Noah's ark.

According to 2 Ki. 19:37 and Isa. 37:38, two sons of SENNACHERIB, called ADRAMMELECH and SHAREZER in the OT, killed their father and fled to the land of Ararat (Urartu). This statement is partially confirmed by the Babylonian Chronicle (1 iii 34–38). The extra details given in the OT are by no means improbable or tendentious. In Jer. 51:27–28, the association of Ararat, Minni (Maneans), Ashkenaz (Scythians), and Medes accords with the military situation of the early 6th cent. B.C., when Urartu, Maneans, Scythians, and Medes were all active.

H. A. HOFFNER, JR.

Aratus air'uh-tuhs (Ἄρατος, "prayed for"). A Greek poet. Born about 315 B.C. at Soli (Soli) in CILICIA, Aratus studied at ATHENS and was a friend of Zeno, the founder of Stoicism (see GREEK RELIGION AND PHILOSOPHY II.A.; STOICS). Of his many poems, the only one extant is the *Phaenomena*, a treatise on astronomy, which was still popular in NT times. PAUL at Athens quoted from its fifth line (Acts 17:28) a phrase Aratus had adapted from a poem by another Stoic poet, CLEANTHES.

K.L. MCKAY

Araunah (Ornan) uh-law'nuh, or'nuhn (אֲרֻנָּה H779 in 2 Sam. [Ketib אֲרֻנָּה and אֲרֻנָּה in 2 Sam. 24:16, 18; with def. art. in v. 16], אֲרֻנָּה H821 in 1–2 Chr. [Orna in LXX throughout], possibly the Hurrian term for "lord"). The Jebusite (see JEBUS) from whom DAVID purchased the threshing floor as a site for an altar (2 Sam. 24:16–25; 1 Chr. 21:18–28; 2 Chr. 3:1) to stop the plague that broke out when he numbered the people. (The theological significance of David's sin is probably given in 1 Chr. 27:23–24, which states that David was not to number Israel "because the LORD had promised to make Israel as numerous as the stars in the sky.")

The name of the owner of the threshing floor is most certainly of HURRIAN origin. The interchange of the letters *r* and *w* reflects the Hurrian spelling of *irwi* (from Nuzi) and the Ugaritic spelling of *iwri* (C. H. Gordon, *Ugaritic Textbook* [1965], 19, 116). The appearance of the definite article in 2 Sam. 24:16 and the appositional phrase "the king" (24:23) are evidences that the Hebrew writer understood both the meaning and the significance of this Jebusite with whom David was dealing. The suffix *-nâ* reflects the ARAMAIC "emphatic" or "determined" state, which functions like a definite article; thus the Hebrew text in v. 16 actually has what amounts to a double definite article if this understanding of the text is correct. (H. B. Rosen, in *VT* 5 [1955]: 318–20, suggests that the name is of HITTITE derivation from *a-raw-wan-ni* or *a-ra-u-wan-ni*, "aristocrat.") The LXX *Orna* and Chronicles *Ornan* appear to be true Hebrew formations derived secondarily from the original foreign name.

The prophet GAD was sent to the penitent David with the instruction that he should purchase the threshing floor from Araunah the Jebusite. Although the Jebusite, father of four sons, offered to give it

to David without charge, David insisted on paying him. The price in 2 Sam. 24:24 is given as 50 shekels of silver, but in 1 Chr. 21:25 as 600 shekels of gold. These differences, if not a copyist's mistake, may indicate two prices for two items: (a) in Samuel, 50 shekels of silver for the oxen (translating, "so David bought the threshing floor, and the oxen for fifty shekels of silver"), and (b) in Chronicles, 600 shekels of gold "for the site." Alternatively, David may have made two purchases of land: an original plot of ground on which to erect an altar, and afterward the whole hill of MORIAH for the larger price. The temple was later built on this spot (2 Chr. 3:1). (For the view that Araunah was the Jebusite king of Jerusalem, to be further identified with URIAH the Hittite, see N. Wyatt in *Studia theologica* 39 [1985]: 39-53.)

W.C. KAISER, JR.

Arba ahr'buḥ (only in the name אַרְבַּע אֲרָבָה H7957, "city of Arba [= four]"). The ancestor of the Anakites (see ANAK) and the greatest hero of that race. In the book of Joshua he is described as "the greatest man among the Anakites" (Josh. 14:15) and "the father of Anak" (15:13; 21:11). He was the founder of the city named for him, on the site of which HEBRON was built (21:11). At the time of the conquest JOSHUA gave CALEB the city of Hebron as his inheritance because of his confidence that God would enable him to drive out the Anakites (14:6-15). See KIRIATH ARBA.

Arbathite ahr-'buh-thit (אַרְבָּתִי H6863). A native of the ARABAH or, more likely, of BETH ARABAH. It is the designation given to ABI-ALBON, one of David's "Thirty" (2 Sam. 23:31, named Abiel in 1 Chr. 11:32).

Arbatta ahr-bat'uh (only in the form Ἀρβαττοῖς). KJV Arbattis. A district of Palestine from which SIMON MACCABEE brought to Jerusalem some Jews who were in danger of attack by Gentile forces (1 Macc. 5:23). It cannot be identified with certainty, but it may well be the same as Narbata (Jos. *War* 2.14.5 §291) and ARUBBOTH.

Arbattis ahr-bat'is. KJV form of ARBATTIA.

Arbela ahr-bee'luh (only in the form Ἀρβηλοῖς). A place in GILGAL along BACCHIDES's line of invasion from SYRIA to JUDEA (1 Macc. 9:2). The site

Remains of the cave homes of Arbela in Galilee (southern face).

has been identified with BETH ARBEL in GILEAD (the modern village of Irbid, c. 20 mi. SE of the S tip of the Sea of Galilee). However, JOSEPHUS says that Arbela was in GALILEE (*Ant.* 12.11.1), the same village from which later HEROD dislodged the robbers that were plaguing the countryside (*Ant.* 14.15.4-5; *War* 1.16.2ff.; *Life* 37). J. A. Goldstein (*I Maccabees*, AB 41 [1976], 378) accepts Josephus's reading and emends the text in 1 Maccabees on that basis. If so, the site in question is not in Gilgal but close to the W shore of the Sea of Galilee.

Arbite ahr'bit (אֲרִיבַי H750, apparently gentilic of אֲרָבָה H742). This term was probably applied to the inhabitants of ARAB in S Judah (Josh. 15:52). The epithet is used to describe PAARAI, one of David's "Thirty" (2 Sam. 23:35). The parallel list reads "Naarai son of Ezbai" (1 Chr. 11:37). See discussion under EZBAI.

Arbonai ahr-boh'ni. KJV Apoc. form of ABRON (Jdt.2:24).

arch. Incorrect term used by KJV in Ezek. 40:16-36 with reference to the porches of the temple gates. See PORCH.

archaeology. As a branch of historical research, archaeology has taken shape over the past century and a half, and its definition must take account of the widening incidence of its raw material and the sources of its evidence. In the mid-19th cent., when archaeology was staging its first triumphs, both the explorer and his public thought of the subject in terms of the major memorials of human culture: Layard's huge Assyrian bulls rising out of the sand... "Priam's treasure," gathered furtively into Frau Schliemann's shawl at Troy... the uncovering of buried Delphi... Today the objects of human curiosity and scientific examination are vastly more widespread. As the writer of this article has put it elsewhere:

"Man tells his story in the election slogan scratched on a Pompeian wall, in a scrap of potsherd marked with a candidate's name, in the redwood chips of a Pueblo cave, in the split moa bones of a New Zealand swamp, in the papyrus remnants from a Fayum rubbish heap, in the brown stain of

Roman ditch and posthole in a London cellar, in gravestone and inscription, in coins lost and buried, in his own frail bones laid at last in Roman catacomb, Danish bog, or Saxon burial barge, in house foundations, and in time-defying trench and earthwork. Man's footprints are inevitable and manifold, and it is to the credit of the modern world that man has learned to trace, to recognize, and to read the story thus recorded" (E. M. Blaiklock, *The Archaeology of the New Testament* [1970], vi).

What, then, is archaeology? Definition can be too comprehensive and become, in the process, description. For example, when, at the beginning of the 20th cent., awareness of the complex nature of the subject was growing, the *Century Dictionary* said: "Archaeology is that branch of knowledge which takes cognizance of past civilizations and investigates their history in all fields, by means of the remains of art, architecture, monuments, inscriptions, literature, language, customs, and all other examples which have survived." R. A. S. Macalister, on the other hand, is too brief and circumscribed in his definition: "Archaeology is the branch of knowledge which has to do with the discovery and classification of the common objects of life."

A brief but adequate definition might be: "Archaeology is that branch of historical research which draws its evidence from surviving material traces and remains of past human activity." Such a statement allows room for the increasing scope of such investigation, as modern techniques render significant hitherto neglected evidence. From air photography to carbon 14 dating, archaeologists have multiplied and improved their tools and methods in a hundred ways. Nor has the refinement of both theory and practice reached the end of its development.

The extent to which such research has thrust back the frontiers of historical knowledge is apparent in every sphere. In New Zealand, the land where these words were written, the whole picture of the Polynesian occupation of the area was transformed by the examination of the fragile debris on the campsites of the "moa-hunters." Since Heinrich Schliemann's enthusiasm gave Troy and Mycenae back to western knowledge in the 19th cent., and Arthur Evans, at the beginning of the 20th, revealed what lay beneath the soil of Crete (see GREECE III and IV), a succession of archaeologists of increasing skill and effectiveness have given back to history the whole complex of Aegean and Central Mediterranean civilizations, which are not without reference to the archaeology of the lands of the Bible.

When Samuel Johnson remarked in his pontifical fashion over two centuries ago that "all that is really known of the ancient state of Britain is contained in a few pages, and we can know no more than the old writers have told us," he was representing the attitude of the day. To be sure, Roman London lay beneath his feet, with part of its surviving wall within five minutes walk of his house, but the 18th cent. had not learned to read the record in the soil. Awareness of this kind had a slow growth.

The same was true with the Bible and the lands where its action took place. Before archaeological research transformed the situation, the supplementary sources for the history contained in the OT and NT, and the only nonbiblical sources for the early history of the lands concerned, were four. HERODOTUS, the "father of history," the brilliant and widely traveled Greek who lived from c. 484 to c. 420 B.C., is easily the most important of the four. He introduced his story of the Persian assault on Greece, which was finally repulsed a few years before his birth, with two or three informative books on Babylon, Egypt, and the ANE, lands which he visited and summarily investigated. Second comes the fragmentary history of Berosus, a Babylonian priest who lived between 330 and 250 B.C., and who wrote a history of Babylon in Greek. Third, Manetho, an Egyptian priest of the same period, wrote for PTOLEMY II a history of Egypt in Greek, of which some portions survive. Finally there was Flavius JOSEPHUS, the Jewish priest and guerrilla leader who

became secretary to VESPASIAN and who wrote, in the last decades of the 1st cent. of our era, two large volumes on the history of the Jews right up to his own time. It was an invaluable record, uncritical and turgid in style. This is the sum total of extraneous aid to understanding before the rise of archaeology.

The raw material of archaeology

A. Occupation debris. On many ancient sites the soil is rich in the discarded remains of human occupation. In the permanent camping sites of the first Polynesian occupants of New Zealand, the changes of diet may be traced over centuries from the vast bones of the moa, the prehistoric bird that was hunted to extinction, to smaller sea birds, fish, and then shellfish. The analysis of midden heaps in the garrison forts along Hadrian's Wall can be made to tell the story of Britain's peace and war, the failure of communications with the legionary base, with outposts reduced to living on local game and repairing cheap pottery, and times of ease when issues of coal from distant mines came over peaceful roads. A Bronze Age group who formed a part of the early population of N Italy is called the people of the Terramare. The word is plural, and *terramara* is simply rustic Italian for a deposit of black earth, the matured compost prized by the peasantry as fertilizer, and equally regarded by the archaeologist as evidence of a site likely to yield fragments of ancient tools, to reveal burial customs, and offer other evidences of a primitive culture.

The midden may contain almost anything. A nine-foot heap of oyster shells near Blackfriars Bridge reveals the position of an eating house in Roman London and the Roman fondness for the bivalve from the Essex coast. In Egypt, S of Cairo, the town rubbish heap is likely to contain papyri

surviving in the rainless sand, and so to provide evidence of life and language in Egypt of Ptolemaic or Roman days (see section G, below). Organic material has its value. Even charred or rotted wood can be dated by measuring the decay of the radioactive carbon 14, an ingredient in all living things, while pollen grains, visible under the microscope, are evidence of flora and climatic change.

B. Human remains. Burial customs have preserved much of value. Mummified remains of Egyptian royal persons, Norse skeletons from Greenland, and frozen bodies discovered by Russian archaeologists in the arctic latitudes of Siberia have yielded recognizable corpses for medical investigation. The crushed skeletons in a fallen house and the mutilated human remains in a well at GEZER are eloquent testimonials to facets of Canaanitish life. More important are the contents of tombs: urn burials, Saxon and Norse ship burials, mound burials, beehive Mycenaean tombs, the amazing burial pits of UR, Tutankhamen's treasure-packed tomb, and the PYRAMIDS all have their story to tell, and

These skeletal remains and basket coffin were discovered in Tarkhan, Egypt, and date to c. 2950 B.C.

not infrequently surrender their objects of usefulness or art to the modern investigator.

C. Objects of art. On stone, bronze, silver, gold, or gems, cut crudely or with refinement and sophistication, people have left a record of their love of beauty and interest. The goldsmith's work found from Ireland to the Crimea, the filigree art of Ur and the Sumerians, bronze mirrors from Corinth, and carved gems from Crete reveal features of the human mind, and not infrequently depict or

illustrate human activities. From the cave drawings of Neolithic peoples to the exquisite gold reliefs of the Vaphio Cups, and on to modern times, human beings have left records of all that they have loved and made. Lost, buried, or hidden materials of this order are prime archaeological material. Greek vase painting has thrown notable light on Greek drama. The murals of Egypt, Crete, and Assyria are pictures of life and history.

D. Pottery. The study of pottery, an almost universal object of human manufacture that can commonly be dated with a large measure of accuracy, is an important feature of archaeology. Pottery is the investigator's chief key to chronology. The merest fragment of broken earthenware is of significance, and the archaeologist takes great pains to record and classify the exact level, place, and relationship of his finds. Pottery varies from the round vessels of the "beaker people," the first recognizable inhabitants of Britain, to the beautiful vases of the Athenians, but in all its forms it has a tale to tell. See POTTER.

E. Buildings. The efforts to find housing tell a human story. From the traces of the wattle huts, where the slave gangs lived, to the pyramids they built to house the royal dead; from the brown stains of Roman postholes in legionary camps to the fluted columns of the Parthenon where Athena stood in the dim shrine; from the chariot stables of MEGIDDO and HAZOR to the synagogue of CAPERNAUM; Roman-British villas, the forerunners of the manor houses, Stone Age huts below the successive strata of Phoenician, Greek, Roman, and Crusader occupation from Byblos (GEBAL) and BAALBEK to TYRE, structures humble and magnificent,

Pottery and building remains of the Burnt House, a priestly estate in Jerusalem destroyed by the Romans in A.D. 70.

sacred and secular—architectural memorials reveal human beliefs, problems, preoccupations, techniques, and industry.

F. Inscriptions. All INSCRIPTIONS on stone, metal, or pottery form part of the human record. They are infinitely varied, and from the marked jar seals of the Aegean civilization to the Nestorian Monument of China, from the ROSETTA STONE to the NAZARETH DECREE, from the BEHISTUN INSCRIPTION to AUGUSTUS's autobiographical Monumentum Ancyranum, the record of epigraphy is contemporary

history, brief because of the physical limitations of such records. The reading of such abbreviated and allusive material, with its decipherment, is an additional skill. The study of graffiti (e.g., the wall scratchings of Pompeii) is a difficult branch of this same study.

G. Written documents. PAPYRUS documents from Egypt range from Pharaonic to Islamic times. The durable writing material manufactured from the river plant, the *cyperus papyrus*, in ancient Egypt does not rot in the dry conditions that prevail S of Cairo, and multitudes of fragments, as well as many entire rolls, have survived. Unearthed from tombs, crocodile cemeteries, and the occupation debris of Nile Valley towns, the papyri have provided data of the utmost variety. In particular they have illuminated the language and background of the NT, though papyri of biblical relevance go back, in fact, to the ELEPHANTINE papyri, which throw light on the Persian period in Egyptian history and on the book of Nehemiah. Letters in large number reveal

This ostracon from Arad is a letter that reads in part: "To Eliashib. And now, issue from the wine 3 baths. And Hananyahu has commanded you to Beersheba with 2 donkeys' load and you shall wrap up the dough with them. And count the wheat and the bread..."

common life in significant centuries and form important comment on the epistles of the Bible.

Other writing materials fall under this head. The CUNEIFORM inscribed tablets of ASSYRIA AND BABYLONIA, dug up in thousands in both imperial areas, have recovered a whole literature with all that it reveals of human life and thought. The famous TELL EL-AMARNA letters, which so strikingly reveal the state of Palestine before the Hebrew invasion, are clay tablets of this sort.

Inscribed potsherds (OSTRACA) also fall in this category. Broken pieces of pottery, which

abounded in every ancient town, were used for brief letters. The LACHISH letters, found by J. L. Starkey in 1934, are documents of this order. LEATHER was used for writing; the mass of documents from the Qumran caves, which astonished the world in 1947, were written on prepared leather. Ancient PERGAMUM specialized in the manufacture of this material, hence, it was called *pergamena carta*, or PARCHMENT.

H. Tools and weapons. From antler picks found in Neolithic flint mines to weapons of bronze and iron that reveal the transitions of the eras to which metallurgy has given names, the record of human activity, belligerent and peaceful, is written in implements of war and peace. In 1952 the cut shape of a Mycenaean dagger was picked up by photography on a stone face in Druidic Stonehenge to throw puzzling light on that ancient monument. The identification of the peculiarly characteristic Aegean weapon formed the interest of the strange discovery.

I. Coins. Whole tracts of Roman history depend upon the record of coinage. COINS, as nothing else, provide vital information on the easternmost kingdom of Alexander's successory states. Coinage traces the progress of Mediterranean trade with India. Numismatics is another expert branch of knowledge for which the activities of the archaeologist provide the abundant raw material. It covers many significant centuries and areas and is of prime importance in dating.

J. Botanical remains. The significance of pollen grains in occupation debris has been mentioned above. Wood, even charred remnants of burning, provides, in the growth rings of such long-lived trees as the redwoods of California, a dendrochronological record of occupation and climatic change. From the corn fragments in the Pueblo caves to the traces of pine cones used as aromatic altar fuel in the Carrowburgh mithraeum of Northumberland, the fragile remains of flora, identifiable by modern techniques, leave a message for the trained investigator.

K. Cult objects. Much of this material might be classified under art. The first recognizable piece of human sculpture, for example, is a bear in a Pyrenaean cave, molded in mud and marked by the thrusts of stone spears. Neolithic art was an aid to sympathetic MAGIC. To kill in effigy aided the hunt. The FERTILITY CULTS, which may be traced from the Stone Age to the end of the pagan centuries, have left figurines, such as those found commonly in Canaanitish sites, and phallic emblems, crude or sophisticated, like those that have left fragments on Delos. It is sometimes difficult to distinguish cult objects of the figurine or model type from children's toys, of which examples are found. The "ram caught in a thicket," which is a striking example

Cultic stela with a figure of a bull's head discovered in Bethsaida and dating to the 9th-8th century B.C.

of Sumerian art, is doubtless a cult object. So, in fact, are the major surviving or recorded triumphs of Greek sculpture, the “idols” of anthropomorphic worship. Little, in fact, may be listed here that is not also art, unless it be such objects as the meteoric stone, which passed for ARTEMIS’s image in EPHEBUS, “fallen from heaven.”

L. Earthworks. Fortifications built of stone may be classified under buildings, but there are distinctive types of walls built for defensive purposes, for example, those of the HYKSOS, which provide a key to historical understanding. The manifold stratification of the defenses of JERICHO is light upon the continued but changing occupation of that ancient site. But fortifications and communications need involve no superimposition of material. The fortifications of the Maori are visible in terracing around the volcanic cones of Auckland, and Roman camps have left their ramparts all over the empire. Parallel with Hadrian’s stone wall across England runs the earth vallum and the associated military road, visible even on the ground, but conspicuous from the air. Earth which has once been disturbed never retrieves its original texture. In the burial pits of the kings of Ur the earth still falls away from the cut sides, although the spoil was no doubt returned almost immediately to the excavation. The texture of the matting that lined the earth wall for the ceremony of burial was still

distinguished when the pits were opened. The superimposed plan of Celtic and Saxon fields can be seen from the air, and Roman roads are visible long after the paving has disappeared. Mining operations, from the Mendip country of Somerset to Sinai, have left the visible marks of human interference with the soil. It is all grist for the archaeologist.

II. The methods of archaeology. Implicit in the foregoing sections is some account of archaeological method. The discovery and classification of the raw material, the artifacts, the remnants of building, utensils, tools, and the manifold marks of human activity and occupation involve a wide variety of technical and scientific skills. The use of air photography for the mapping and interpretation of road and ground plans, the overlaying patterns of agriculture and land division (e.g., in successive periods of Celtic and Saxon occupation in Britain), and for the identification of other forms of soil disturbance was a practice perfected by O. G. S. Crawford between the world wars.

The botanist has aided chronology by his study of pollen grains under the microscope and by his investigation of the growth rings of trees; the geologist by his study of varves, the sequences of water-laid gravel; the zoologist by his identification of animal bones; and the physicist by his “carbon dating.” The photographer and the skin-diver are indispensable members of any team of archaeologists. The discovery of submerged material—for example, the host of sunken galleys in the Mediterranean, and whole towns, such as Heliki on the Corinthian Gulf swallowed by tidal wave and land subsidence in the early 4th cent. B.C.—has enlisted the support of the diver. Such underwater archaeology may be the way to SODOM and GOMORRAH, if indeed these cities lie beneath the southern end of the DEAD SEA.

Much material lies visible and ready for investigation, and excavation has become an exact and highly sophisticated process. The archaeologist no longer digs at random, driving pit or trench into massed material of human occupation, as did the

Volunteers excavate the area of the Essene Gate in Jerusalem.

amazing but prescientific Schliemann at Troy. A *tell*, as the hills of the Middle E which mark the sites of ancient towns are called, is squared and trenched with care and precision, each layer of occupation being dated by pottery and the other methods of chronological investigation. Both at Jericho and Ur, where the size of the tell precluded the complete removal of the accumulated material layer by layer,

a shaft, sunk through the mass to bedrock level, proved the most efficient method of investigation.

At Ur, 59 ft. of archaeologically productive material had been built up prior to the first dynasty three full millennia B.C. Visitors to Jericho can look down the great shaft sunk in the mound of the world's most ancient city and see the tangle of human occupation over thousands of years, a stratified record meaningful to the trained eye of the archaeologist.

Barrows and tombs sometimes require excavation as methodical and skilled. Sometimes, as in the royal graves of Egypt, the actual discovery of the concealed grave is the major task of the explorer, who is aided by the insight of the skilled detective as truly as by the exact knowledge of the historian.

The archaeologist never knows whose aid he may need, quite apart from that of linguist, historian, epigraphist, and papyrologist. The unrolling of the granulated bronze roll from Qumran, and the identification of the concreted lump of silver beside one of the female dead in the royal grave of Ur, which turned out to be a rolled silver band, required the skills of sophisticated metallurgy and chemistry. The calcined papyrus rolls from the libraries of Herculaneum have been a particularly difficult challenge. An Italian firm perfected a technique for the lifting and relaying of mosaic floors, a trade secret it has refused to reveal. The lifting and removal of some Neolithic paddles from a Yorkshire swamp, which thousands of years of submersion had reduced to the consistency of mud, required technical skill of the highest order.

Simple ingenuity is sometimes the first requirement. Casts of the vanished dead have been recovered by pouring plaster of Paris into holes in the ash of Pompeii. The form of a harp was recovered from Ur by the timely observation of a hole in the spoil and the infusion of melted wax. ("Spoil" is waste material from making excavations.) Sometimes mere patience is called for. The assembly of thousands of pieces of colored plaster, fallen from the wall of a large lower room in the Romano-British villa of Lullingstone in Kent, established the existence of the Christian chapel in the building by the fresco of three praying figures. The assembly of a similar jigsaw puzzle from the multitudinous fragments of some of the DEAD SEA SCROLLS has taken decades. The ceramics expert has long since learned patience in putting together the shattered fragments of vases.

III. The scope of biblical archaeology. The theme of the Bible is not confined to Palestine. That little land, comparable in size to Vermont or Wales, is part of the rim of territory around the Mediterranean from whose fusion of cultures the Western world and Europe sprang. The story of the Bible began at the eastern end of this long rectangle where the twin rivers Tigris and Euphrates join to run into the Persian Gulf, and where Ur, the Sumerian seaport, lay at the nodal point of the world's trade routes over desert, mountain, and sea. And when the last apostle laid down his pen in Ephesus near the end of the 1st cent. of the Christian era, the church was established in Rome, the ruler of all the territory where the story of the Bible took shape and form. Rome gathered her million people on the Tiber, near the western end of the same long rectangle of lands.

In the intervening centuries the history of Palestine was part of the history of all the lands which formed the history of the Inland Sea and the Middle E. Palestine was so placed that the tides of human life found confluence there. The land was a watchtower from where alert and sensitive spirits could observe the pageant of mankind and develop that deep insight and historical wisdom which is part of the message of the OT to the world. George Adam Smith makes this point with some eloquence:

"But how could such a people be better framed than by selection out of that race of mankind which have been most distinguished for their religious temperament, and by settlement on a land both near to, and aloof from, the main streams of human life, where they could at once enjoy personal

communion with God and yet have some idea also of his providence of the whole world; where they could at once gather up the experience of the ancient world and break with it into the modern? There is no land which is at once so much a sanctuary and an observatory as Palestine; no land which, till its office was fulfilled, was so swept by the great forces of history, and was yet so capable of preserving one tribe in national continuity and growth; one tribe learning and suffering and rising superior to the successive problems these forces presented to her, till upon the opportunity afforded by the last of them she launched with her results upon the world” (G. A. Smith, *Historical Geography of the Holy Land*, 25th ed. [1931], 112).

The archaeology of the Bible cannot therefore be confined to the little land that drew its European name from the PHILISTINES, a western people, European intruders on the Levantine coast. They were the first of many to meet the ancestors of the Hebrew people in the first confrontation of E and W in recorded history. Canaanite and Phoenicians were invaders who had followed the same path as the Hebrews around the Fertile Crescent (see CANAAN; PHOENICIA). EGYPT played a part in the history of Palestine for a significant thousand years. ASSYRIA AND BABYLON, like GREECE and ROME centuries later, poured through and over Palestine and in turn absorbed the scattered Jews. The HITTITES penetrated Palestine without conquest from the time of Abraham. Samaria and Judea were, for a time, satrapies of the vast Persian empire (see PERSIA), just as later they were administrative districts of Rome.

Biblical archaeology, therefore, fuses with the archaeology of the lands that played a part in the unfolding of the Hebrew story and the history of the founding of the Christian church, which is its consummation. Picture a triangle, its long base to the N, slightly distorted. Its bent line runs from well over two thousand miles from Rome, to PHILIPPI and to Hattusa, capital of the Hittites, then bends

Important archaeological sites in Palestine.

slightly S from this mid-point to pass through NINEVEH, capital of SENNACHERIB, to SUSA, capital of the Persian kings. The eastern side runs SW to find a southern point at Aswan, where a Jewish garrison served Persia just after Nehemiah's day and left their papyrus records on the island of Elephantine. Run a line from here to Rome and the triangle is complete. Geographically it contains the archaeology of the Bible, the OT and the NT, from the catacombs where the first Christians were leaving their memorials before the last apostle had finished writing the last gospel, to Ur where Abraham first grasped the message of the one true God, and reaching S to contain the rubbish heaps of the Nile Valley towns with their masses of significant papyri.

Within the irregular figure lie the remains of seven empires: Egyptian, Hittite, Assyrian, Babylonian, Persian, Greek, and Roman, or those significant parts of them which had a place and part in the story of the Bible. A score of kingdoms, principalities, and city-states, a score of peoples came and went and left memorials of their culture meaningful for the study of the Bible in the same area.

Historically, the theme that archaeology illustrates covers two full millennia, the twenty or more centuries that lie between Abraham's Ur and Paul's Rome, and its unearthing is mainly the work of the last hundred years. The next section will cover that story, and the reader should take note that a general article cannot cover the material exhaustively. The contributions of archaeology to the

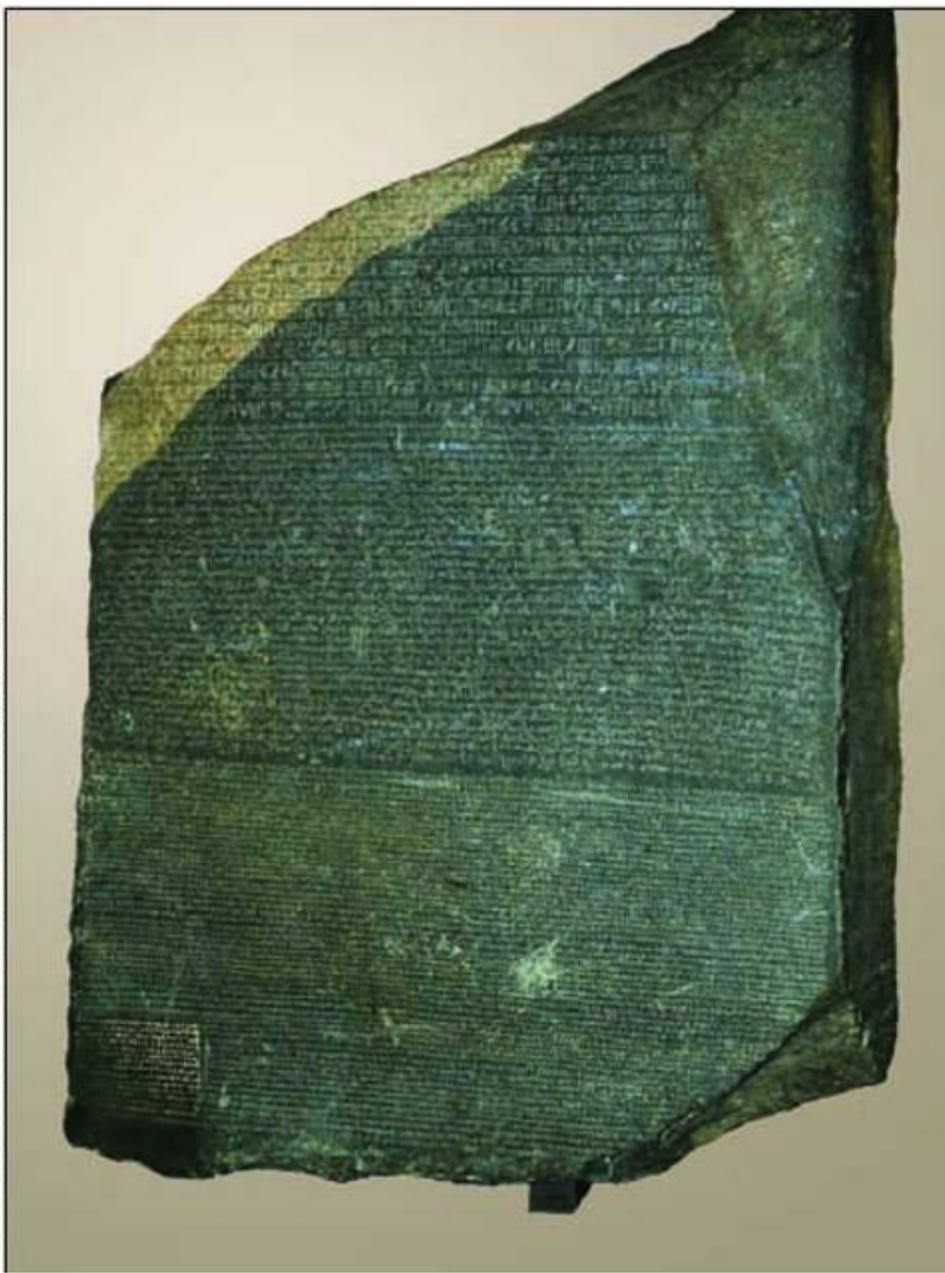

understanding of the Bible are manifold—historical, geographical, literary, theological, and linguistic. Details will be found under many heads. The present task is introductory, detail illustrative rather than exhaustive, and the aim is to survey the ground from relevant vantage points.

IV. The history of biblical archaeology. It is difficult to pinpoint the beginning of biblical archaeology. W. F. Albright, in an informative discussion (*The Archaeology of Palestine* [1960], ch. 2), traces a genuine scientific interest in the archaeological remains of Palestine back to travelers of the 16th cent. It is true that the spirit of exact inquiry, together with careful observation and recording, is no monopoly of the more modern era. Johann Zuallart and Johann van Footwyck, travelers of the closing years of the 16th cent., both produced drawings that demonstrate an interest in ancient monuments, recognizably modern. In the middle years of the 17th cent., the Roman Pietro della Valle produced an account of travels in Palestine that contains true archaeological description. He was followed by such perceptive travelers as Henry Maundrell, Adrian Reland, and Bishop Pococke. Reland's handbook (*Palestine Illustrated by Ancient Monuments*) is certainly a landmark. It was published in 1709. To Albright's longer list the name of A. Bosio might well be added. This scholar's book on the catacombs of Rome was published in 1632, anticipating de Rossi's monumental work by over two centuries. If the study of subterranean Rome is part of biblical archaeology, as indeed it is, Bosio's name deserves a place on the list.

For the most part, however, those who thus described the memorials of the biblical past were of the order of Shelley's "traveller from an antique land." They sensed the romantic impact of the great fragments of dead and vanished civilizations, but missed their scientific and historical significance. Rose Macaulay has collected some of their comments in her fascinating book, *The Pleasure of Ruins*, and there is no reason why the scientific archaeologist should miss or despise this deep source of human interest. Austen Layard, a genuine, if primitive, archaeologist, was such a romanticist, in the true spirit of his age.

Napoleon's expedition to Egypt in 1798 may be set down as the beginning of scientific archaeology. The French conqueror was rightly convinced that Egypt was the strategic key to the Mediterranean, as indeed it always has been. He also saw the land as an essential stage on the road to India. Both reasons inspired conquest. Contemporary France was experiencing at the time something of a scientific revival, and the unprecedented step was taken of attaching a scholarly deputation to Napoleon's military staff. It included the remarkable draughtsman, D. V. Denon. Some gratitude is due to Napoleon for this rare and timely realization that Egypt was a land of old renown, as well as a military base for the domination of the Mediterranean and the E. It is to this new spirit that the world owes the discovery and preservation of the ROSETTA STONE. Napoleon's concern for the protection and copying of

The Rosetta stone, key to deciphering Egyptian hieroglyphics.

this bilingual inscription is on record and is entirely to his credit. The stone became a British prize of war, but it is appropriate that a Frenchman and an Englishman are associated in the decipherment that opened the Egyptian hieroglyphic script (see WRITING).

The date 1830 is another landmark in archaeology. With the pictorial script successfully deciphered, Egyptology could begin, and the archaeology of Egypt has numerous contacts with that of the Bible. Consider only the Amarna letters and the light they throw on the chaotic conditions in Palestine prior to the Hebrew invasion. It is irrelevant, in this restricted survey, to trace Egyptology's astonishing six generations of progress through Belzoni, Lepsius, and Mariette, to Petrie, Breasted, Carter, and Egypt's own Department of Antiquities of today. In an account of biblical archaeology, however, it should not be forgotten that the vast bulk of the papyri come from Egypt. The names of Grenfell and Hunt, together with that of Adolf Deissmann, must be mentioned in this connection. Documents directly and indirectly relevant to the study of the NT range from the LOGIA of Christ, discovered at the turn of the 19th cent., to the so-called *Gospel of Thomas*, published in 1959.

The great empires of the N and the other river system, Babylon and Assyria, must similarly find

mention. Paul Botta's digging at Nineveh in the 1830s and Austen Layard's excavations on Babylonian sites the following decade are not without relevance to the biblical theme. Georg Friedrich Grotefend and George Smith must not be overlooked in Babylonian studies, nor Henry Rawlinson's decipherment of cuneiform in 1850, nor Robert Koldewey's excavation of the mighty city of Babylon. Diggers like Layard and Koldewey, indeed the great Schliemann at Troy, were almost as destructive in their investigations as the first looters of Pompeii and the perennial robbers of Etruscan and Egyptian tombs, but these were early days, and the rough-handed pioneers were at least conscious of the significance and magnitude of the task upon which they were engaged. They have their place in the archaeological calendar.

On the outer periphery of the northern empires lay the Hittites of Asia Minor, an Indo-European people. The story of their recovery by archaeological investigation, by the reconstruction of their history, and by the decipherment of their script is somewhat outside the orbit of biblical archaeology or it would be necessary to add the names of A. H. Sayce, William Wright, Karl Humann, Felix von Luschan, and Hugo Winckler to the founders' roll.

Crete and the Minoan Empire lay similarly on the periphery, and the story of Sir Arthur Evans and the excavations he began on the long Aegean island in the first year of the present century is a romance of discovery, ingenuity, and scholarship as astonishing as any which surround the unearthing of the other great contemporary civilizations. The Philistines may have come from Crete, and doubtless there is work still to be done in relating the story of the collapse of Minos's empire to the great upsurge of Philistine power in the old colony of the Gaza Strip, which challenged the first monarchs of Israel. The Cretan Linear B script, deciphered as late as 1953, has thrown no light on the history of either Crete or the Philistines.

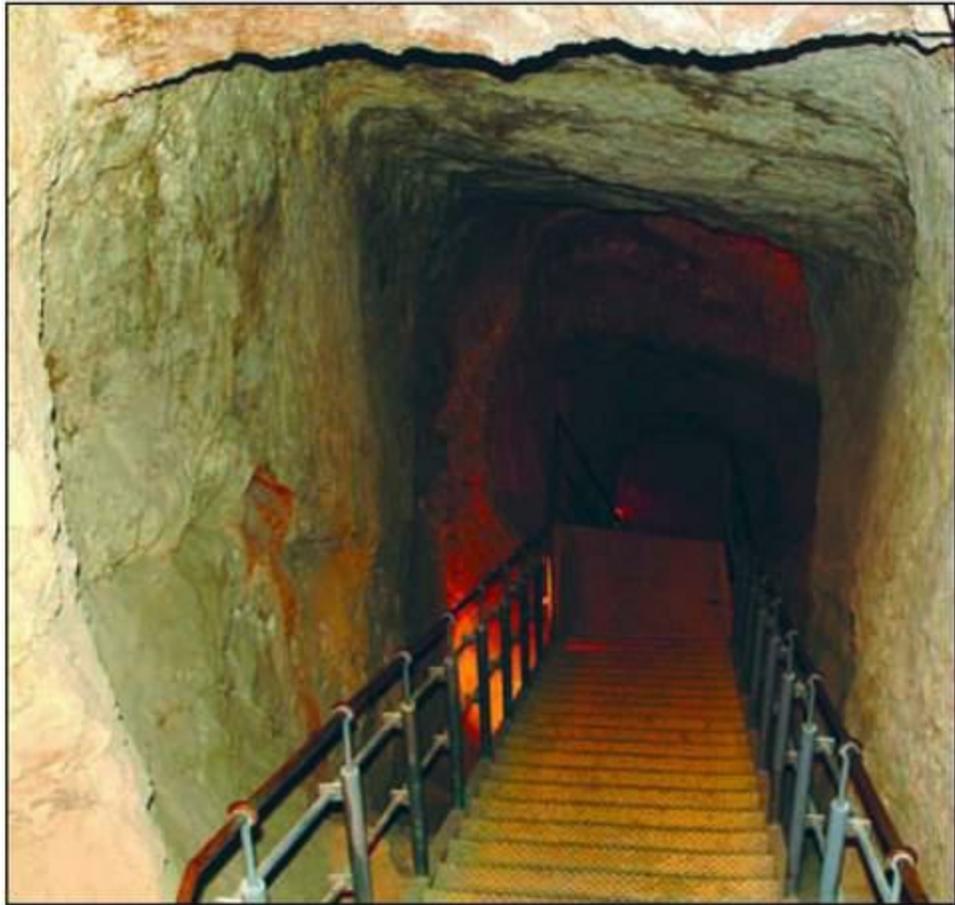

Behind the Babylonian culture lay that of the Sumerians, as well as the string of towns and petty princedoms of the long Euphrates Valley. The relevant portion of the story of Sumerian archaeology, and the excavation of Ur in particular, will be mentioned later, but it is necessary to mention that De Sarzec's first explorations in the area lay between 1877 and 1881.

Albright, in the useful chapter already mentioned, lists many names from this period, men whose perceptive explorations contributed to the emerging study of biblical archaeology. Seetzen, the first scientific explorer of the Transjordan area, the discoverer of Caesarea Philippi and Gerasa, and Burckhardt, the Swiss who found Petra, were busy in Bible lands between 1800 and 1812. In 1838 the American theologian Edward Robinson, a thoroughly trained Semitist and geographer, performed notable service by his wide identification of ancient place names. He was accompanied and aided in his work and travels by his pupil Eli Smith. Titus Tobler, the Swiss, a scholar of similar preoccupations, is quoted thus by Albright: "The works of Robinson and Smith alone surpass the total of all previous contributions to Palestinian geography from the time of Eusebius and Jerome to the early nineteenth century." Geography, it is needless to stress, was at this time the essential prerequisite for the archaeological investigation of Palestine.

The year 1865 must be set down as the next important date. In this year a fund and a society were founded in London for the purpose of surveying and mapping Palestine and excavating its important sites. From 1865 to 1936 this society published a *Quarterly Statement* devoted to biblical archaeology, a publication continued from 1937 as the *Palestine Exploration Quarterly*. Charles Warren was the first archaeologist to be financed by this fund. Although his digging at Jerusalem was clumsy in the light of later techniques, Warren laid the foundations for all later work on the topography and history of the city.

For six full years, from 1872 to 1878, the same fund kept a British team permanently in the field

making an inch-to-a-mile survey of western Palestine. The two leaders were C. R. Conder and H. H. Kitchener. The latter, the famous soldier Lord Kitchener of Khartoum, suggested by his presence that the War Office was not entirely without interest in the work of archaeologists. Subsequently, the wartime careers of such famous figures as T. E.

© Dr. James C. Martin

Staircase leading to the top of Warren's Shaft. Lieutenant Charles Warren is credited with the discovery of this opening, which some have thought was used by the Jebusites to supply water for Jerusalem.

Lawrence and, in less flamboyant fashion, Stanley Casson are other illustrations of a secondary service for the trained archaeologist, and the usefulness in contexts of modern history of a thorough exploration of historic lands.

The French, meanwhile, were not idle. While Warren was excavating along the line of the Jerusalem walls, Charles Clermont-Ganneau was using his position in the French consular service in Palestine to make considerable contributions to biblical archaeology. In 1870 he found, and sent to the Louvre, the famous MOABITE STONE. In 1871 he unearthed the tablet bearing the inscription that barred Gentiles from the court of the temple. These are only two of his material contributions to archaeology. His scholarly writings are no less important.

Generally the 1870s were fruitful years for archaeology. In 1870, and over the following few busy years, Heinrich Schliemann excavated Troy and Mycenae and laid deep foundations for classical archaeology. The main lesson of the astonishing discovery of Troy by this German genius was that a mound (Arab. *tell*, Heb. *tel*), was likely to be the accumulated ruins and occupation debris of an ancient inhabited site. Also in 1870, the American Palestine Exploration Society was founded, and it immediately set to work to complement the British survey of western Palestine by a similar survey of the eastern part of the land.

To this point the names of Clermont-Ganneau and Robinson had been highest on the roll of

honor. In 1890 a third was added, that of a thirty-seven-year-old Englishman, Flinders Petrie. Petrie came to Palestine trained by ten years' work in Egypt, where he had already learned to record systematically and in detail every find on a site. He had also glimpsed the possibility of using pottery for dating. In his excavations at Tell el-Hesi, Petrie reduced this invaluable idea to a time system. He was able to demonstrate that pottery could form a sequence and provide a key to the chronology of the stratified remains in any ruin mound. This fruitful discovery has been elaborated with the utmost sophistication and is now an indispensable skill for any archaeological investigation. The last decade of the 19th cent. is significant for its invention, establishment, and general recognition.

The same decade saw further excavation at Jerusalem by F.J. Bliss, the American who was the first scholar of importance to recognize the value of Petrie's pottery dating, along with his associate A. C. Dickie. William Mitchell Ramsay, professor of humanities at Aberdeen, was simultaneously busy with his epigraphical, geographical, and archaeological explorations in Asia Minor, and was writing the authoritative books that established so decisively the historical accuracy of Luke and the meaning of obscure chapters in the Apocalypse.

At the turn of the century, the Irish archaeologist R. A. S. Macalister began work in Palestine. Financed by the Palestine Exploration Fund, this notable scholar excavated several tells, including GEZER, where he spent no less than seven seasons (1902-1909). Three large volumes, published finally in 1912, described this vast undertaking and established another significant milestone in the history of scientific archaeology.

While Macalister was busy at Gezer, a German expedition began the excavation of JERICHO. To this point, except for a somewhat inefficient investigation of MEGIDDO, the Germans had done little in Palestine. Their great archaeological names remained those of Schliemann and Dörpfeld, the investigators of Troy. But now a joint German-Austrian team descended on Jericho. They worked from 1907 to 1909, under Ernst Sellin and Carl Watzinger, and, though their dating proved to be largely inaccurate, a start had been made on the world's most ancient inhabited site. It is also noteworthy that Jericho saw, along with SAMARIA, which was simultaneously explored, the first recognizably modern archaeological team with its trained specialists, its meticulous photography, surveying, systematic filing, and scientific analysis of every scrap of archaeological material and every shred of evidence. George Andrew Reisner and C. S. Fisher, who conducted the exploration of Samaria for Harvard, must be added to the list of notables.

The First World War interrupted operations. Its outcome, however, established the British in Palestine. The land again was open. In 1920 the British Mandatory Government set up a Department of Antiquities, headed by John Garstang of Liverpool University. Fifteen amazingly fruitful years in Palestine followed, until mounting disorder and the darkening shadows of the tragic thirties slowed the work. The Second World War necessarily interrupted it. The years of the brief British peace in Palestine were those of Garstang's continuation of the work at Jericho, of W. F. Albright's notable work in the land, and of Père Vincent's beneficent activity. Roads and transport eased the archaeologist's task. There was unprecedented cooperation and team work. Palestinian prehistory began to take shape.

Flinders Petrie, after a lapse of thirty-seven years, returned to Palestine in 1927 and made major contributions to knowledge. A joint British, American, and Hebrew University team continued the excavation of Samaria from 1931 to 1935. The Wellcome-Marston expedition, financed by the Palestine Exploration Fund, spent six seasons, 1932 to 1938, on LACHISH. It was here that J. L. Starkey lost his life in 1938, the victim of an Arab bandit and of an emerging phase of tragic disorder in Palestine. The Lachish letters, with their light on Jeremiah, were Starkey's latest find. But for his

tragic end, Starkey would have proved as great a genius as the archaeology of Bible lands has produced. Ten campaigns under the auspices of the University of Pennsylvania, always a notable promoter of archaeological research, fall in these halcyon fifteen years. BETH SHAN was the principal site. The University of Chicago worked simultaneously on Megiddo, continuing until 1939, when the collapse of the world's tense, uneasy peace again drastically interrupted all such research and exploration.

The list of names and projects is far from exhaustive, and this is no place to attempt more than an outline of the theme. The interrupted task was begun again in a bitterly divided Palestine under Jordanian and Israeli authorities. Miss Kathleen Kenyon's work at Jericho is ample demonstration that even well-dug sites still have much to yield. Finds like the DEAD SEA SCROLLS of 1947, and the associated excavation of Qumran, show that spectacular results are still a possibility. A considerable number of actually identified sites of ancient occupation still await competent excavation and examination in the narrower compass of ancient Palestine. Science and the spade still have much to give, and a most encouraging feature is the emergence of archaeological consciousness and scientific skill in the new nations of the Middle E.

Biblical archaeology, however, is wider than that of Palestine, and a few paragraphs are necessary on cognate activities. The great years of activity between the two world wars were notable the world over, as well as in the sphere of the present theme, for archaeological activity and achievement. The immense and beneficent popularization of the subject dates from those years. Two events beyond others awakened the general public to the new science and its fascinating human interest. In 1922

James Biberkraut in the early 1950s, opening the *Thanksgiving Scroll* from Qumran.

Howard Carter discovered in the Valley of the Kings the amazingly rich tomb of a minor pharaoh, Tutankhamen. The newspapers, headed effectively by the sophisticated *London Illustrated News*, found that archaeology could command the headlines. The second event, in a more restricted sphere, was the publication in 1924 of the earlier volumes of the authoritative and scholarly *Cambridge Ancient History*, which first demonstrated to an intelligent public how vastly archaeology was transforming the study of history.

To follow the theme then, on a slightly wider orbit, a few of the more notable areas of

investigation between the two world conflicts may be briefly mentioned. Fuller details may be sought in individual articles.

The Euphrates Valley was explored in the late twenties and early thirties, with Leonard Woolley's excavation of UR (1928) as one of the highlights of discovery. Archaeology has gone far to reconstruct the whole history of the Sumerian river civilization, that essential prelude to the story of the Hebrew people. Light has been thrown on all the homelands of the migrating tribes, from Canaanite to Hebrew, who plied or followed trade, retreating fertility, or spiritual aspiration around the sharp curve of the Fertile Crescent.

In the early thirties, excavations were begun at Tell Hariri, near the Euphrates in SE Syria, where A. Parrot uncovered a considerable portion of the ancient city of MARI. He found a mass of clay tablets inscribed in a Semitic dialect that cannot have been very remote from the Hebrew spoken by the patriarchs. Associated discovery has made history aware of the intense Semitic activity in those same centuries around Haran, Abraham's staging post on his road to Palestine. The tablets have also thrown light on much OT custom and practice.

Similarly, and even more strikingly, the tablets from Nuzi, or to give the site its modern name, Yorgha Tepe, near Kirkuk in Iraq, illustrate the stories of the patriarchs. The PATRIARCHS obviously acted within the contemporary framework of law, practice, and custom. The stories of Sarah, Abraham, Hagar, Esau's birthright, the deathbed blessing, Laban and Jacob, Judah, and Tamar find abundant illustration in these documents. The site was investigated by Chiera and his colleagues of the American Schools of Oriental Research from 1925 to 1931.

The year 1928 saw a chance discovery on the N Syrian coast near Latakia. No fewer than twenty-two seasons' excavation took place here and at nearby Ras Shamra, the ancient UGARIT. A multitude of Canaanite cuneiform texts, literary and religious, have been discovered and deciphered there together with architectural, artistic, and epigraphical remains. Their linguistic, historical, and religious value is immense.

This outline of the major events in the history of biblical archaeology has naturally had most to say on matters relevant to the OT, which so heavily depends upon archaeological evidence. It would be difficult to write a coherent history of the archaeology of the NT. The OT, after all, finds a center in the story of one race. The NT tells the story of a world movement and activities extending from Jerusalem and Antioch to Rome. The NT is also a document of Greek literature and Roman history. Archaeological events relating to the understanding of the NT have already found incidental mention above. The long and unfinished story of the exploration of the catacombs, whose hundreds of miles of galleries in the tufa rock under Rome are part of the history of the early Christian community; the discovery and interpretation of the Egyptian papyri, a story of scholarship extending from Grenfell and Hunt to Gilles Quispel; Ramsay's work on the ruins, geography, coins, and inscriptions of Asia Minor—all these are chapters in the story.

Cities like EPHESUS, PERGAMUM, ANTIOCH OF SYRIA, CORINTH, and THYATIRA have an archaeological history of their own, large parts of which are relevant to the NT. Isolated discoveries, like those of the Qumran community and the NAZARETH DECREE, have a place in the account and a significance in interpretation and apologetics of inestimable importance. The archaeology of the NT has demanded no staging of expensive and scientifically conducted projects of excavation. Its material often has been fortuitously discovered, or mingled, like the story of the church itself, with the raw material of ancient world history. It is piecemeal, and sifted from a greater mass. Its relevance will find some reference in the next section.

V. The relevance of archaeology in interpretation. It remains to summarize the significance of archaeological discovery in the INTERPRETATION of the Bible. Inevitably the theme has emerged under earlier headings, but it will be convenient to recapitulate and to survey it separately in conclusion.

If it is assumed, as it may be, that the earliest written records of the OT, ultimately incorporated in the Pentateuch, were Sumerian and dated back possibly to Abraham, it is clear that the Bible is a collection of literary and historical documents covering more than twenty centuries. The fact is some measure of the interpreter's task. The first essential must always be to determine what the writer originally sought to communicate and to whom he first directed his communication. That is why all information which provides contemporary comment on social, political, or cultural backgrounds, which elucidates literary form and convention, explains language, or throws light on habits of thought and speech is relevant to interpretation.

In the case of the OT, such information is chiefly archaeological. Around the whole sweep of the Fertile Crescent, the remains of peoples, cities, and empires—epigraphical, architectural, artistic, and of every other sort of which archaeology takes widening and increasingly expert notice—have elucidated and illuminated the text of Scripture from Genesis to the minor prophets. The NT, a too little regarded document of Roman history, and contemporary with wide literary activity in Greek and Latin, has been somewhat less completely dependent upon records and remains of archaeological provenance. Epigraphy and papyrology, however, both of which derive their basic material from archaeological investigation, have richly illuminated and explained its meaning. Illustrations for both the Testaments may be conveniently marshaled as follows.

A. The confirmation of biblical history. Events recorded in Scripture are a part of ancient history. The central theme of the Bible is the history of that stream of human activity which, in a great outworking purpose, found its consummation in the NT, the Messiah, and the church. That stream did not flow in an isolated channel but mingled with the interweaving currents of universal human

Fragment from the Sennacherib Prism. This inscription confirms biblical history as it provides details of how the Assyrian king laid siege to Jerusalem and held Hezekiah "like a bird in a cage."

history, and is understood better when it is seen as part of a more complex whole.

It is, for example, no longer possible to dismiss the stories of Abraham, Isaac, and Jacob as folklore of the sort invented by emerging peoples to explain their origins. Canny Greeks of southern Italy, for example, marking the rising star of a dynamic Rome, built the saga of Aeneas out of tenuous fragments of history and of myth. Abraham and Aeneas stand in far different categories. The conformity of the patriarch's migration to the known pattern of folk movements around the northern edge of the deserts is too strikingly demonstrated to be dismissed as legend (although some recent writers have claimed that the parallels are not valid).

The Hebrew and Philistine infiltration into Palestine, told in the Bible with that selection of incident which highlights personality or reinforces a spiritual lesson, is vivid in the glowing archaeological record. The piecemeal movement of the new cultures; the Hebrew overlaying of a base Canaanitish civilization, its checks and progress; the inevitable confrontation of the two intruders, European and Asiatic, on the line of central Palestine; the passage from bronze to iron that marked the Hebrew triumph over the Philistines; the emergence of Hebrew power; the climax of Solomon's Golden Age—in all this developing theme archaeology marches with the Bible story, confirming its accuracy in a thousand details.

Samaria, with the tragic division of the land, inherited the rich Phoenician trade that had brought wealth to Solomon, and fragmented ivory in the ruins of Ahab's palace speak of the transference of prosperity and the corruption of a dominant minority who knew how, as Amos chided, to corner and appropriate the wealth of the land.

Assyrian art, uncovered in the palaces of the great empire, as vividly illustrates the grim nature of the northern threat to Israel's prosperity. The cruelty and arrogance of the invaders lives strikingly in fresco and inscription. The ancient Hebrew of the SILOAM inscription is light on Isaiah's earlier theme, how Judah was spared the visitation that fell upon Israel, and how the faith of a prophet and a king preserved a nation. A century later another prophet had a far different role to play, and Jeremiah's somber message divided the land. Archaeology, with continuing relevance, appears again with confirmatory comments and illustration. The LACHISH potsherds, discovered in the 1930s, reveal the agony of the tension between those who believed that Jeremiah spoke with authority and those who thought that he undermined morale.

NT illustration of archaeology's confirmation of history could be found in the NAZARETH DECREE with its light on the proclamation of the resurrection of Christ. Or perhaps for the present purpose, it may be confined to the less well-known theme of PILATE and his coinage. Much of the action in the story of Christ's trial centers in the personality and record of the procurator. He is known from three stories in Josephus, one in Philo, and the gospel records. All three literary sources agree in representing him as arrogant, contemptuous of his subjects, outmaneuvered by them, and essentially a coward.

It is curious to find the story confirmed by numismatics. COINS are archaeological sources. The procurators had the right to issue small coinage in Palestine, but it was considered a duty, in designing coins that would be in the hands of the people, to avoid deliberate offense. Coins were always far more significant in ancient times than they are today. They were a means of instruction and information and were studied for what they had to say. The Roman emperors had a strong appreciation for the propaganda value of coinage, and their use of this device for influencing opinion forms an interesting chapter in the archaeology of ancient coins.

The story of Christ and the tribute money shows that the emperor's portrait, with the offense

involved, was current in Palestine, but the silver denarius was issued as tribute money and was accepted as such. It was a different matter to mint a common copper coinage that ran contrary to Jewish sentiment, which Pilate did, committing again and on a daily universal scale, far more maliciously and subtly, the planned insults to Jewish feeling that Josephus and Philo record.

Valerius Gratus, Pilate's predecessor, had issued coins harmlessly adorned with palm branches or ears of corn, familiar enough Jewish symbols, but as early as A.D. 29 Pilate issued copper coins bearing the *lituus* or pagan priest's staff and the *patera* or sacrificial bowl—two symbols of the imperial cult that were bound to be obnoxious to the Jews. It was calculated provocation, but safe, because the coin users were insulted individually and the coinage did not produce collective demonstrations of hostility. The story of the tribute money shows that the Jews had a bad conscience about coins. They had accepted the imperial coinage and were carrying about its implied idolatry. Individually they endured the new piece of arrogance and said nothing. Sejanus, who was probably Pilate's protector, fell in A.D. 31, and, significantly enough, the issue of the provocative coins ceased. In the British Museum is a coin of Pilate that has been over stamped with a palm branch by FELIX, no man of principle, but more careful in his policy toward the Jews.

It is to be observed in all these cases that archaeology underlines the essential truth and soundness of the biblical record. It therefore enables the historian to tread with firmer foot where reliance on the bare statement of Scripture lacks extraneous support or amplification. This was the conclusion reached in the classic case of W. M. Ramsay, whose researches in Asia Minor led a frank skeptic to a firm championship of Luke as a pure historian.

B. The provision of background. Inevitably illustrative material grouped under this head might also be relevant above, but it may be convenient to classify a few examples of archaeological discovery that throw light on fact or practice, which elucidate culture or exemplify the application of biblical law or custom, without providing the direct confirmation of statement that was illustrated briefly in the earlier paragraph.

Legal codes, for example, from the middle five centuries of the 2nd millennium B.C. not only reveal how truly Israel moved with the tide of contemporary history in the first attempts to organize life and activity under the sovereignty of law, but also how differently the people of the Bible conceived the task, weaving their code and system with the concepts of a lofty and monotheistic religion.

Detail often is strikingly illustrated. The legal documents from Nuzi, for example, throw light on Abraham's attempts to establish his succession and on Jacob's dealings with Laban in a manner that marks the documents, or the oral or written tradition on which they rest, as authentically contemporary. The symbolic transfer of a shoe referred to in the little idyll of Ruth (Ruth 4:7-8) is mentioned in the Nuzi texts. The transaction seems to have been invented to establish a firm foundation in legality for an action or process that might be thought uncovered by some firm form of legislation.

It is in this sphere of interpretation that future archaeological work is especially likely to provide more information. The Ras Shamra tablets, for example, have some reference to the seething of a kid in its mother's milk, a practice inexplicably forbidden twice in the OT (Exod. 34:26; Deut. 14:21). There were obviously pagan implications, and the Mosaic prohibition is an illustration of that awareness of surrounding paganism which led the Hebrew law to make its major provisions for the safety of the firstborn, a not unlikely object of human sacrifice in vicious codes. The Sumerian object of art, the "ram caught in the thicket," which is a treasure in the British Museum, also awaits

explanation of the sort that could easily be forthcoming. Abraham's prompt recognition of divine direction when the animal was thus revealed suggests some law of sacrifice relating to the situation.

Discoveries in themselves unimportant may also serve to illustrate a passage of Scripture in a manner that lifts an impersonal provision into a realm of human interest and activity. For example, from the guardroom of an ancient fortress on the seacoast near Tel Aviv, an interesting letter has come to light. More than twenty-six centuries old, it is the earliest Hebrew letter known. It is scrawled on a broken piece of pottery, the writing material most readily available to ordinary folk. Papyrus was difficult to obtain, and expensive. On the other hand, any village street or rubbish dump was littered with broken shards of pottery (the Lachish letters, similarly found in a guardroom, are of this order).

Seeking to file a complaint with the commander of the local garrison, a peasant during the reign of the good King JOSIAH (c. 630 B.C.) picked out a suitable piece of earthenware and inked his troubles upon it: "Let my lord commander hear the case of his servant!...While thy servant was finishing the storage of grain with his harvesters, Hoshaiah son of Shobai came and took thy servant's mantle...And all my companions will testify on my behalf..." (*ANET*, 568). There is no doubt about the general purport of the letter. Someone by legal process had made away with a poor man's most necessary possession. It was, moreover, a vulnerable possession. On the Black Obelisk of Shalmaneser the attendants of Jehu wear knee-length garments with a fringed edge that envelopes the body completely. Such were the cloaks of the Hebrews, and little was worn beneath them. Obviously they were not designed for working, and under the hot harvest sun would be laid aside. The opportunity for confiscation by some disgruntled creditor was easy. When night came, the poor harvester would look for the garment that covered him from the night's chill, only to find it missing.

The book of Ruth again illustrates such a situation. Boaz lay covered by his cloak at the end of the heap of corn in the fields of Bethlehem. Ruth, who claimed his protection in her widowhood, crept secretly under the ample edge of the garment at his feet. Awaking at midnight, the startled farmer found her there. "Who are you?" he asked. "I am your servant Ruth...Spread the corner of your garment over me, since you are a kinsman-redeemer" (Ruth 3:9).

Note the humanity of the law for debt. A cloak could be named as guarantee, but if claimed in forfeit by the moneylender, it was to be returned at sunset. "If the man is poor, do not go to sleep with his pledge in your possession. Return his cloak to him by sunset so that he may sleep in it. Then he will thank you, and it will be regarded as a righteous act in the sight of the LORD your God" (Deut. 24:12-13). The law is even more vividly expressed in its earliest form: "If you take your neighbor's cloak as a pledge, return it to him by sunset, because his cloak is the only covering he has for his body. What else will he sleep in? When he cries out to me, I will hear, for I am compassionate" (Exod. 22:26-27). Without the cloak a man was said to be naked.

The peasant's letter may be an illustration of the flouting of the law of Moses and the confident appeal to authority of a common man on such grounds; and perhaps it sheds a mellow light on the goodness of Josiah in a time of renewing and return to old traditions. It shows also that in Josiah's reign the power of Israel had been thrust through the coastal plain, a widening of frontiers of which historians were previously quite aware. It is another tidemark in the ebbing power of the Philistines, whose high flood in Saul's day had filled the valleys of the Shephelah and flowed N to Galilee.

C. Illumination of text and language. Two illustrations will suffice to show how archaeological discovery has illuminated the meaning of words and established textual integrity. The first is the contribution of the DSS. Textually these documents are of some importance. They have cleared up

some textual corruptions and thrown light on minor difficulties of interpretation. Until 1947, for example, the oldest text of Isaiah was dated A.D. 895. A major item among the DSS is an Isaiah MS a full thousand years older. It has some interesting features. There is, for example, no break between Isa. 39 and 40. In the light of this, the theory first propounded in 1892 by Bernhard Duhm that there were three Isaiahs, conflated and fused in the 1st cent., will not easily stand. Here is a book, dated at the latest about the end of the 2nd cent. B.C., which obviously knows nothing about it.

Also, some individual texts have been notably cleared up. Consider Isa. 21:8, which in the KJV is quite obscure: "And he cried, A lion: My lord, I stand continually upon the watchtower in the daytime." It should be realized that Hebrew was originally written in consonants only; the vowels were inserted later. "Lion" in Hebrew, with the proper vowels, is *laryēh*, but the Isaiah scroll has *hr'h*, which vocalized as *hārō'eh* means "he who sees (saw)." Some early copyist vowel-pointed the word wrongly and produced "a lion." Read then: "And he who saw cried: My Lord..." Sense is restored to a tormented text.

There is another mistranslation due to a similar copying error in Isa. 49:12. The older English versions (KJV, ASV) speak of "the land of Sinim" (*sīnīm*), which could refer only to China. To the disappointment of those who cherish so far-flung a text, the scrolls show that the reading should be "Syene" (*sēwēnīm*), that is, modern Aswan in Upper Egypt. The addition of the word for "light" in 53:11 (where the scroll follows the LXX rather than the MT) is another important variant. Most of the differences, however, are of little textual significance. The conclusion is that the Isaiah Scroll, by and large, demonstrates the astonishing accuracy of the text that has been transmitted.

The second group of illustrations under this head is provided by the nonliterary papyri. From this corpus of documents in the Common Dialect of Greek comes a mass of knowledge on the daily speech of the people for whom the NT was written. In competent hands like those of Luke and Paul, it was not an ungraceful language. It was capable of poetry, as many passages in both writers reveal. It was flexible and expressive and, as Moulton put it, in the "full stream" of contemporary Greek. Its vocabulary again and again throws light on expressions in the NT epistles and has added a considerable list to the Greek lexicon.

Some selected illustrations only: "I have all, and abound" (Phil. 4:18 KJV). Why should *apechō* *G600*, meaning usually "to keep off" in classical Greek, be used here or in Matt. 6:2, 5, 16, "they have their reward"? Matthew's meaning was plain enough by comparison with the other Gospels, but why such a strange word? There was no answer until hosts of bills were found in the rubbish heaps of an Egyptian town—only some of them paid. The formula for receipt was the verb in question—"he is quit." Matthew was again at the receipt of customs when he penned his verse. Whimsically he pictured the hypocrite's bill, his claim on God, paid in full in earthly glory, spot cash. "He is quit," he wrote. And Paul said, "I give you a receipt in full for all your kindness." How much more vivid the passage becomes by the recovered metaphor.

A document reveals that the word *hypostasis* *G5712* in Heb. 11:1 (KJV, "substance"; NRSV, "assurance") was a technical term for "title deed." Title deeds give secure possession of that which is not necessarily seen, and thus faith firmly places in our hands the unseen wealth of a spiritual world. Again, when the Jews of Thessalonica complained that "these men who have caused trouble all over the world" had arrived to disturb their peace (Acts 17:6), they used a verb Paul himself employed of those who were "agitating" the folk of Galatia (Gal. 5:12). This is the same word (*anastatoō* *G415*) used by a spoiled boy in a letter to his father when he quotes his mother sarcastically: "He upsets me," the poor woman had said.

The new light from the papyri suggests, in consequence, numerous more exact renderings. For

example, read “originator” or “author” for the KJV’s “captain” (Heb. 2:10), and “disputing” for “doubting” (1 Tim. 2:8). Examples might be multiplied, but enough have been cited to show that, with the discovery of the papyri, the language of the NT has truly risen from the dead.

A further small group of linguistic elucidations, with special reference to Luke, may be called from both epigraphy and the papyri. For example, when Paul crossed from Asia into Europe, Luke, his chronicler, on bringing the story to Philippi, described the town as “the first of the district” (*prōtē meridos*, Acts 16:12). Even Hort, a first-rate scholar, marked this as a mistake, since the Greek word *meris* G3535 appeared never to be used for “region.” The Egyptian papyri, however, revealed that Luke’s Greek was better than that of his editor. The word, it now appears, was quite commonly used for “district” in the 1st cent., and especially in Macedonia.

Luke also called the local officials of Philippi “magistrates” (Acts 16:20 et al.); the Greek is *stratēgos* G5130, referring to a PRAETOR. The term seemed incorrect until inscriptions established the fact that the title was a courtesy one for the magistrates of the Roman colony; as usual Luke used the term commonly employed in educated circles. On the other hand, referring to the city officials of

Tomb of Augustus	Rome	Lk 2:1
Mamertine Prison	Rome	2Tim 1:16-17; 2:9; 4:6-8
Appian Way	Puteoli to Rome	Acts 28:13-16
Golden House of Nero	Rome	Cf. Acts 25:10; 1Pet 2:13
Arch of Titus	Rome	Cf. Lk 19:43-44; 21:6,20

Thessalonica, Luke twice used the technical term *politarchēs* *G4485* (Acts 17:6, 8). Since the term was unknown elsewhere, the critics of the historian once dismissed the word as yet another mistake. Today it can be read high and clear in an arch spanning a street of modern Salonica, and sixteen other examples occur. A similar story of vindication could be told of the title *prōtos* *G4755*, applied in Acts 28:7 to the governor (“chief man”) of Malta.

VI. Conclusion. Finally, it should be stressed again that this general article is designed to be

introductory and illustrative, to establish points of view, and open avenues for more detailed study. Manifestly, archaeological material in detailed relevance to the theme will be found under a large number of headings and in a great variety of articles on historical, literary, and exegetical themes. Special information should be sought in such places. A conspectus has value in that it opens up the theme, establishes its scope, and leads by its allusiveness to further study.

E. M. BLAIKLOCK

VII. Biblical archaeology since 1975. This brief supplement will continue the themes of selectivity and introduction that E. M. Blaiklock outlined some thirty years ago. Focusing on biblical archaeology, a term that was in sharp dispute at that time, it will be possible to examine only the most significant discoveries and changes in the field that have affected the interpretation of the biblical text.

In 1975 thousands of cuneiform tablets from the 3rd-millennium-B.C. Syrian city of EBLA promised to expand our understanding of the early biblical world of Genesis, even as the monographs of J. Van Seters and T. L. Thompson called into dispute any historical memory of these texts. The tablets proved disappointing in terms of biblical archaeology, but more texts and whole new archives have been published that contribute more substantially to our understanding of this period. The challenge to the patriarchs persists, but sociological analyses, enhanced onomastic studies of Amorite sources, and the important changes brought by new publications of the 18th/17th-cent. N Syrian Mari texts have called for a reevaluation of much of the evidence of that era. Reigning assumptions about what Middle Bronze Age (MBA) enclosed nomads do and don't do, especially in terms of their relations with settled groups, have been called into question.

Outside of the territory of ancient Israel, important archives and individual texts have been discovered and published from many periods. Thus at the 13th-cent. Syrian city of EMAR, texts have been found that describe the installation of a religious official by anointing with blood and oil and that detail the religious festivals of the city through six months of the year. Neither of these has occurred previously outside of the Bible, where critical scholars have traditionally assigned them to a much later date. Elsewhere, the 9th/8th-cent. Aramaic/ Assyrian bilingual inscription from Tell Fakhariyah in northern Syria reveals the synonymous usage of the Aramaic cognates for "image" and "likeness" in Gen. 1:26-28, as well as the likely meaning for the cognate to EDEN as a well-watered place. Although the reading from the Ugaritic text that describes boiling a kid in its mother's milk has been shown to be doubtful, other texts from this Late Bronze Age (LBA) city and its northern neighbor of ALALAKH have been found to identify boundaries not unlike those of Josh. 13-21 and to provide a model for the structure of that whole book as a land grant (see R. S. Hess in *Interpreting the Old Testament: A Guide for Exegesis*, ed. G. Broyles [2001], 201-20).

From N to S, dominant features of the archaeology of Palestine will be identified regionally. A. Biran's decades-long excavations of Tel Dan have yielded a MBA arched gate, an Iron Age gate with a plaza and elders' benches, and a high place for the kings of Israel with side rooms and artifacts. See DAN (PLACE). Most significant was the July 1993 discovery of a 9th-cent. Aramaic stela containing what appears to be the earliest clear reference to (the house of) David. A. Ben-Tor's excavations at the acropolis of HAZOR yielded additional Bronze Age cuneiform tablets, including a small administrative text containing what may be the earliest reference to Nazareth. The burnt layer that excavators have identified with Israel's invasion of Josh. 11 reveals (divine?) images defaced by the (aniconic?) conquerors.

Near the north shore of the Sea of Galilee, R. Arav's excavations at Tel BETHSAIDA revealed at

first a Roman period village he identified with the apostle Peter's home town. Beneath this he uncovered the largest Iron Age city in the region, very likely the GESHUR whose royal daughter was the mother of Absalom. Near the gate was found an inscribed stela with evidence for a lunar cult. In western Galilee, Rosh Ha-Zayit demonstrated contemporary connections between Phoenicia and the northern kingdom of Israel. Roman period excavations at SEPPHORIS and BETH SHAN provide evidence for a flourishing Hellenistic culture in Galilee at the time of Jesus. On the edge of the Golan Heights, NE of the Sea of Galilee, the 1st-cent. A.D. village of Gamla served as the northern counterpart to MASADA in the Jewish revolt against Rome. It also preserves a rare example of a 1st-cent. synagogue that was not built into preexisting structures (such as those at Masada and Herodium).

South of the JEZREEL Valley, the central hill country where Israel first settled was explored by A. Zertal (Manasseh) and I. Finkelstein (Ephraim). Their regional surveys provided dramatic evidence of a demographic shift from the few population centers of the LBA to the nearly 300 villages of the Iron Age, c. 1200 B.C. This constitutes the clearest evidence for the settlement of early Israel in the region and for the simple, egalitarian village life pictured in the books of Judges through 1–2 Samuel. The Bull site east of DOTHAN with its bronze bovine figurine and the strange aniconic altar-like site on Mount EBAL both date to about the 12th cent. and may suggest religious practices of the hill country peoples. Paleozoological studies of the diets of this region have demonstrated the virtual absence of pig bones throughout the hill country of the Iron Age in contrast to contemporary Philistine sites on the coastal plain. L. E. Stager's excavations of ASHKELON have uncovered a huge MBA glaciis with a room at the gate containing a small calf model coated with silver, perhaps not unlike the golden calf of the exodus and the calves of later Israel. The work of M. Dothan and S. Gitin at EKRON (Tel Mique) has found more than one hundred olive oil processing installations—evidence for significant growth in the 7th cent. after Sennacherib transferred the Shephelah to Ekron—and a monumental inscription of the city's ruler. Tel Qasile, in the suburbs of Tel Aviv, contains distinctive Philistine temple architecture and dwellings with Aegean-style hearths in the center of the room.

E. Mazar's round-the-clock excavations south of the temple mount uncovered new evidence for the continual occupation of the site. South of these excavations, Y. Shiloh's digging in the City of David yielded dwellings from before the Babylonian destruction, including a room containing about a hundred bulla that originally sealed documents of Jeremiah's time. Further explorations of Warren's Shaft and the area around the Gihon Spring yielded remarkable defense towers guarding the spring during the monarchy. West of the temple mount, N. Avigad's work identified Jerusalem's northern defenses during the monarchy and in the postexilic era.

To the SW, G. Barkay's explorations of burial caves in Ketef Hinnom (the grounds of the Scottish church) resulted in J. Hadley's discovery of two small silver scrolls from the late 7th cent. B.C. or earlier. When unrolled they were found to contain paleo-Hebrew texts of the Aaronic benediction (Num. 6), the earliest biblical texts ever found. J. Monson's study of the Solomonic temple as described in 1 Kings has found the closest architectural parallels with the 10th/9th-cent. N. Syrian temple at Ain Dara. Although the Solomonic temple has left no architectural remains, the small ivory pomegranate that surfaced in Jerusalem with the text, "Belonging to the tem [ple of Yahw]eh, holy to the priests" (A. Lemaire), remains its single likely artifact.

East of the Jordan River the ongoing work of the Madeba Plains Project, conducted by Andrews University and a consortium of colleges, has explored many new Iron Age sites and some LBA ones (Tall al-Umayri et al.), questioning earlier objections that the region was uninhabited when Israel first appeared.

Southward, Iron Age forts have been identified in the Negev. Historical geography has located

many sites in S Judah, including Khirbet el-Qom as Makkedah (D. A. Dorsey) and Tell es-Safi as Gath (A. F. Rainey). Further S, the 800-B.C. inscriptions of the northeast Sinai site of Kuntillet (Ajrud connect Yahweh with Asherah in Samaria and in the Teman desert. A similar text from a contemporary burial site at Khirbet el-Qom suggests that this belief was also known in Judah. In the southern Israeli Negev, native (Midianite?) copper miners of the 13th cent. worshipped at an Egyptianized tent shrine in the Timna Valley (B. Rothenberg). As a tent shrine, it resembled Israel's tabernacle.

Inscriptions from within Palestine have significantly increased in number. There is now evidence for texts from every century from LBA onwards. They occur in both rural and urban contexts in every area of the country. The 11th-cent. village of Izbet Sarta (biblical Ebenezer?) yielded an ostrakon with an alphabet in proto-Hebrew script (M. Kochavi) and demonstrated an interest in reading and writing among villagers. By the late monarchy, ostraca became outnumbered by Hebrew seals with names and patronyms. These now number well over a thousand and represent the most significant extrabiblical evidence for the names of kings (Ahaz, Hezekiah, et al.), officials (Baruch the scribe), and citizens of 8th and 7th cent. Israel and Judah. The Yahwistic elements in more than ninety per cent of those names bearing theophoric elements suggests the dominant role of this deity.

More controversial is the authenticity of seals and other antiquities not found in controlled archaeological excavations, and this shares in the increasingly pressing ethical questions regarding the present trade in antiquities from the Middle E. Questions of authenticity have been raised by other inscriptions, such as the James ossuary. Dated to the 1st cent. A.D., the inscription on the box identifies it as the final resting place of James, son of Joseph and brother of Jesus. This last phrase, unusual in ossuary inscriptions, has been challenged. Less controversial are the DSS and other texts of the Judean Desert (Masada, Murabba'at, and Wadi Daliyeh). Although discovered earlier, their full publication has been more recent. The result has been important contributions to OT textual criticism, Hellenistic period social life, and the religious beliefs and practices of Qumran.

R. S. HESS

A Chronological Table of ARCHAEOLOGISTS AND THEIR WORK

[The following chronological survey covers persons and events relevant to the study of the Bible, its historical background and context, and the elucidation of its meaning. It necessarily covers much territory, for the lands of the Bible encompass a wide arc from Italy to Egypt. It is not, however, a complete register of Egyptian, Aegean, Hittite, or Classical archaeologists, though in all these spheres of study aspects of historical and linguistic importance have biblical significance. Names and events on the fringes of this theme have been included here and there, where it is felt that some special stimulus given to archaeological exploration, some notable public attention, or the development of some major technique of investigation has had its repercussions in biblical studies.]

1717 The Society of Antiquaries set up in London. It received a royal charter in 1751 and issued its first volume of *Archaeologia* in 1770.

1798 A curious side effect of Napoleon Bonaparte's occupation of Egypt was an awakening of interest in the land of the Nile. An amazing band of savants accompanied the French army, and Vivant Denon's vast *Description de l'Egypte* was a direct result of the invasion, which Nelson's fleet shattered at Aboukir Bay.

1799 The Rosetta stone, with its trilingual inscription that provided the key to the decipherment of Egyptian hieroglyphics, was discovered in August, 1799, while the French were repairing fortifications N of the town of Rosetta. The name of one Boussard is associated with the find, but whether this was a French officer of the engineers who died in 1812, General A.J. Boussard, or a sapper of the same name whose pick unearthed the stone, is not clear. The stone was taken to Cairo where Napoleon had it copied, and ultimately reached the British Museum as a trophy of war (E. A. W. Budge, *The Rosetta Stone in the British Museum* [1929]).

1805 Ulrich Jasper Seetzen discovered Caesarea Philippi, Ammon, and Gerasa (Jerash).

1811 The Arab geographers knew where **Babylon** was, and among European travelers, Benjamin of Tudela, a Jewish rabbi, visited and identified the site in 1173. Other Europeans mention it in the 16th, 17th, and 18th centuries. In 1811 **C. S. Rich**, the first

British consul at Baghdad, excavated and mapped part of the ruins. Babylonian archaeology began at this point.

1812 Johan Ludwig (or Louis) Burckhardt (1784-1817), the Swiss explorer, discovered **Petra**, the “rose-red city half as old as time.” The discovery has no great direct biblical significance. No important monuments antedate the middle of the 1st cent. B.C., and no pottery is older than Hellenistic. The strange place has, however, inspired a long list of travelers and travel-writers (listed in G. L. Robinson’s *Sarcophagus of an Ancient Civilization* [1930]; Katherine Sim, *Desert Dweller: The Life of Jean Louis Burckhardt* [1969]).

1815 Lady Hester Stanhope (1776-1839), who, after the death of her uncle William Pitt, and Sir John Moore, lived in self-chosen exile in a Druse village near Sidon, made an attempt to unearth statuary at **Ashkelon**.

1817 The date marks the second visit to Egypt of the Italian **Giovanni Battista Belzoni**, with which the modern search for the tombs of the pharaohs may be said truly to begin. Belzoni was also the first to enter the great temple of Ramses I at Abu Simbel, in this year (C. Clair, *Giovanni Belzoni: Strong Man Egyptologist* [n.d.]).

1822 Jean-François Champollion, working on material supplied by the Rosetta stone and the Philae obelisk, finally gave a voice to the Egyptian monuments by deciphering the hieroglyphic inscriptions. (In 1828 came the second general survey of the monuments under Rosellina and Champollion.)

1833 Sir Henry Creswicke Rawlinson (1810 – 1895) went to Persia as a young officer in this year to organize the Shah’s army. He became interested in the cuneiform texts that had already commanded some constructive attention from Niebuhr (1778), De Sacy (1788) and Grotefend (1802). In 1837 Rawlinson, now a colonel, deciphered part of the trilingual inscription of Darius I on the Rock of Behistun. In 1842 Rawlinson, at considerable risk, and with the help of “a certain Kurdish boy,” copied the whole inscription. His published works (1846, 1850, 1854, 1861 – 1884) are the foundation of our knowledge of cuneiform and consequently of the history of Babylonia and Assyria.

1838 Modern exploration of Palestine and its historical geography began in this year when **Edward Robinson** and **Eli Smith** traveled through the country describing it and identifying biblical sites. Robinson was a Massachusetts teacher of Hebrew, and Eli Smith a Syrian missionary. It was the happiest of combinations. Robinson’s work was an immense stimulus. He was not the first to criticize the ecclesiastical traditions of the land; Jonas Korte had done so with vigor in 1741, in his *Reise nach dem gelobten Lande*. Robinson, however, led the way toward an unhampered scientific topography. He was ably followed by **Titus Tobler**, who had first come to Palestine in 1837. “The works of Robinson and Smith,” wrote Tobler in 1867, “surpass the total of all previous contributions to Palestinian geography from the time of Eusebius and Jerome to the early nineteenth century.” The German was followed by a Frenchman, Victor Guérin, who began a great mapping project

in 1852. Such work was basic for future archaeology (see R. A. S. Macalister, *A Century of Excavation in Palestine* [1925], 23ff.). Robinson's work extended to 1852.

1842 Paul Emile Botta (1802 – 1870) appointed French Consul at Mosul. Acting on advice of Julius Mohl, secretary of the French Asiatic Society, he began exploration in December of that year on the mound of Koujunjik opposite Mosul. Local tradition had identified the two tells of Koujunjik and Neby Yunus on the E of the Tigris with Nineveh, and travelers, from the 12th-cent. Benjamin of Tudela to Carsten Niebuhr in 1766, recorded the tradition. Claudius James Rich (see above) in the first quarter of the century began measurements. Deflected from this task in March of 1843, Botta turned to another site and discovered Khorsabad and the palace of Sargon II. Joined by M. E. Flandin in May of 1844, Botta was able to demonstrate the rich field he had discovered by sculptures dispatched to Paris in 1846. In 1849/1850 the two explorers published their results in five massive volumes. Victor Place, in 1851, continued the two explorers' work, sent many fine antiquities to France, all of which were lost in the Tigris, but made a competent plan of the site. Botta had opened the way to Nineveh but found Khorsabad. Assyriology began.

1845 Austen Henry Layard (1817 – 1894) began excavations at the tell of Nimrud (ancient Kalah) on 8 November 1845. He discovered the palaces of Ashurnasirpal, Shalmaneser II (rebuilt by Tiglath-Pileser II), Adadnirari, and Esarhaddon. The famous **Black Obelisk** of Shalmaneser was found in the royal palace. Layard's shipment of the vast statuary of the Assyrian palaces to the British Museum was a feat of transport rivaling the removal of the so-called "Cleopatra's Needle" to London. Layard resumed work at Koujunjik in 1849 and discovered Sennacherib's palace. Vast masses of material relevant to biblical studies were recovered, notably the slabs depicting the king's siege of Lachish, and innumerable clay tablets (the Royal Library of Nineveh). This discovery was repeated in the N palace (Layard unearthed the S palace) by Hormuzd Rassam, Layard's assistant. Since Ashurbanipal, the principal collector of such documents, had also stored Babylonian records, these rich finds laid the basis for the study of the history of two ancient empires. Layard finished his work in April, 1851. Rassam made his discoveries in the next two years. It was in December, 1853, that he discovered the palace of Ashurbanipal. Sir Henry Layard's *Nineveh and Its Remains*, first published in 1849, was edited and republished by H. W. F. Saggs (1970). Layard was a prolific archaeologist but belongs to the prescientific era, preoccupied with museum loot.

1848 F. de Saulcy cleared a site at Jerusalem known as "the Tombs of the Kings"—later shown to be the tombs of the kings of Adiabene.

1849 Karl Richard Lepsius (1810 – 1884) published in this year the results of Prussian expeditions to Egypt (1842 – 1845)—twelve volumes of *Denkmäler aus Aegypten und Aethiopien*.

1850 August Ferdinand François Mariette (1821 – 1881) went to Egypt in search of Coptic MSS. He discovered the Sarapeum (catacomb of the sacred bulls of Apis) at Saqqara. He established the Bulaq Archaeological Museum, which later became the National Museum at

Cairo. He was a great preserver of antiquities gathered from Saqqara, Tanis, Karnak, Abydos, Medinet Habu, Deir el-Bahri, the nucleus of the fine Cairo Museum. He was the virtual founder and director of the Antiquities Dept., 1858 – 1881. In 30 years he excavated and found 15,000 monuments from Memphis to Karnak in 37 sites. He excavated the temple of Edfu in 1860 and the temple of Hatshepsut at Deir el-Bahri in 1858, and partially cleared the temple of Abu Simbel in 1869.

In 1850 **W. F. Loftus**, who succeeded Rassam at Nineveh, visited the biblical Erech (modern Warka) and other sites in the Euphrates valley. (Excavation at Erech had to await the three German expeditions of 1912 – 1913, 1928 – 1939, 1954 – 1959.) Loftus wrote of his visit in 1858, *Travels and Researches in Chaldaeia and Susiana*.

1859 Constantin Tischendorf discovered the **Codex Sinaiticus**.

1863 J. T. Wood began his notable exploration of Ephesus for the British Museum. He began on 2 May 1863, and on 2 May six years later came upon the temple of Artemis. The clue was an inscription of Trajan's day. Wood's work, concluded in 1874, was picked up thirty years later, under the same auspices by David G. Hogarth. (The Austrian Archaeological Institute conducted excavations in 1898 – 1913, 1926 – 1935, and 1954.)

1864 Giovanni Battista De Rossi (1822 – 1894) began his study of the Roman catacombs in 1841. He recognized, as none of his predecessors had done, the necessity for a thorough knowledge of literary sources for the interpretation of the archaeological data. The three epoch-making volumes of his *Roma sotterranea cristiana* were published 1864 – 1877.

1865 The foundation of the **Palestine Exploration Fund** in this year did much to promote archaeological research. Its major aim was to survey ancient Jerusalem, but between 1871 and 1878 the workers of the Fund surveyed most of western Palestine. The published results in a monumental work were basic for future archaeology.

1867 Two years after the establishment of the Fund, Lieutenant (later Sir) **Charles Warren**, a young British artillery officer, was sent, amply financed, to investigate Jerusalem. Warren lacked expertise. His work was done in largely prescientific days, but he accomplished much valuable clearance, and his wrong datings have been rectified. Warren, followed by Captain Charles Wilson, laid valuable foundations for the future archaeology of Palestine and especially the topography and history of Jerusalem. He was also the first to look at Jericho. (See R. A. S. Macalister, *A Century of Excavation in Palestine* [1925], 30 – 40, 97, 128, 177, 185; W. F. Albright, *The Archaeology of Palestine* [1960], 26 – 27.)

1870 Charles Clermont-Ganneau (1846 – 1923), an orientalist of genius, came to the French consular service in Palestine in 1867, and in 1870 sent the Moabite Stone to the Louvre. In 1871 he discovered the famous notice prohibiting Gentiles from intrusion into the temple court. He identified the site of Gezer, not to be excavated for another thirty years. In 1870 the American **Palestine Exploration Society** was also founded to undertake the survey of

Transjordan. The project was abandoned for lack of funds. (This was also the notable year in which Heinrich Schliemann discovered Troy—a tremendous lesson to historians on the folly of not taking tradition, recorded in literature, seriously. Schliemann and his successor Dörpfeld showed that a tell is a ruin, a fact not sufficiently noticed in Palestine. Schliemann repeated his triumph at Mycenae. See Macalister, *A Century of Excavation*.)

1872 The Palestine Exploration Fund sent a British party to Palestine to make an inch-to-mile survey of Western Palestine under the leadership of **Claude Regnier Conder** (1848 – 1910) and **Horatio Herbert Kitchener** (1850 – 1916—later Lord Kitchener of Khartoum and British War Minister until his death by enemy action in the First World War). This survey was indispensable basic work for archaeologist and geographer. Few significant ruins were overlooked. Conder's *Memoirs* were published in 1880. His archaeological publications include *Tent Work in Palestine* (1878); *Syrian Stone Law* (1886); *Altaic Hieroglyphs and Syrian Inscriptions* (1887); *The Tell el Amarna Tablets* (1902); *The City of Jerusalem* (1909).

1873 In 1872, among the 25,000 inscribed tablets from the libraries of Ashurbanipal and the temple of Nabu, a Babylonian account of the deluge (Epic of Gilgamesh) was identified, and the British Museum reopened excavations under **George Smith**, Rawlinson's one-time assistant, originally an engraver who turned out to be an Assyriologist of extraordinary talent. The *Daily Telegraph* financed the expedition and Smith began work at Nimrud in April. In May he moved to Koujunjik and found "a vast picture of utter confusion and destruction," the result of Layard's looting of the site, and its ruthless quarrying by the builders of the Mosul bridge. By astounding good fortune, Smith discovered almost immediately the missing portion of the deluge story, with the untoward result that the *Daily Telegraph* declared that the mission was accomplished and cut off funds. Smith returned to London, but in 1874, with tardy finance from the British Museum, he was back at **Koujunjik** only to meet with ignorant resistance from a new local governor. In April he closed his trenches with a haul of 3,000 tablets. His *Assyrian Discoveries* and *The Chaldaean Account of Genesis* stirred great interest, and in 1876 he was on a third expedition, a time of frustration that cost him his life.

1877 Ernest de Sarzec worked at Lagash. Among his finds were the statues of the early governors and the Victory Stela of Eannatum. Ernest de Sarzec was French vice-consul at Basra. He was a man with an eye to business and sold the material from Telloh (Lagash) to the Louvre for a very large sum. Rassam (of Nineveh fame) also plundered the tell, and other clandestine diggers followed, scattering the antiquities of Lagash all over the world. The Louvre acquisitions did, however, awaken the world to Sumerian archaeology. De Sarzec continued his work in the seasons 1880 – 1881, 1889, 1893 – 1895, and 1900. He died in 1901 but was succeeded by Captain Gason Cros (see M. A. Beek, *Atlas of Mesopotamia* [1962]).

1878 Hormuzd Rassam resumed work for the British Museum at Nineveh. There was a considerable haul of tablets, a clay prism containing the annals of Ashurbanipal, and four barrel-shaped cylinders with accounts of the campaigns of Sennacherib.

1879 Rassam did some investigations of the ruins of Babylon, discovering some important hoards of tablets and possibly identifying the Hanging Gardens.

1881 Sir Gaston Camille Charles Maspero (1846 – 1916), lecturer on Egyptian archaeology at the Écoles des Hautes Études from 1869, and later professor at the Collège de France, discovered many royal sarcophagi at Deir el-Bahri, and continued clearing work on the temple of Karnak. His most important publication was *Histoire ancienne des peuples de l'orient classique* (1894 – 1900).

Sir William Matthew Flinders Petrie (1853 – 1942) began his career as an Egyptologist and scientific archaeologist at this time, with work on the Giza pyramids and at Tanis for the Egypt Exploration Fund. See 1890 for his more relevant work in Palestine.

1882 Edouard Naville began his long career as an Egyptian archaeologist. His work had no great biblical relevance, unless John Garstang's theory of the early date of the exodus be followed. This would perhaps bring Princess Hatshepsut, whose temple Naville excavated, into closer relation with the story of Moses. This year saw W. Dörpfeld join Schliemann at Troy.

1884 M. Dieulafoy (following W. K. Loftus and succeeded by J. de Morgan, R. de Mequenem, and R. Ghirshman) excavated the royal buildings of Susa (Shushan, the palace).

1887 A peasant woman, grubbing for compost in the ruins of Akhenaten's town at Tell el-Amarna, unearthed the priceless **Tell el-Amarna Letters**. Many were destroyed in transit but enough remained in the British and Berlin Museums to throw unique light on Egypt's foreign and Palestinian policy during the reign of the pacifist Pharaoh, Akhenaten (see *ANET*, 483 – 90; *DOTT*, 38 – 45; J. Baikie, *Life in the Ancient East* [1923], 30 – 49).

1888 John P. Peters, leading an American expedition along with Haynes and Hilprecht, discovered 20,000 tablets at Nippur, greatly enlarging our knowledge of Babylonian sacred literature. (American expeditions, sponsored by the University of Pennsylvania, have worked there in 1880 – 1890, 1893 – 1896, 1899 – 1900, 1948, 1949, and every other year to 1958 with remarkable results for Sumerian history. See H. V. Hilprecht, *The Excavations in Assyria and Babylonia* [1904], 289 – 577, and various University of Pennsylvania publications.)

1890 This important year saw **Flinders Petrie** (see above, 1881) appear on the scene in Palestine. Petrie spent six weeks on the mound of Tell-el-Ḥesi in SW Palestine, making vertical sections and noting the level at which every potsherd was found. He thus succeeded in establishing the essential principles of stratigraphy and the use of pottery to date and distinguish levels of occupation. Conder derided the method, but F. J. Bliss, who spent the next three years on the Tell el-Ḥesi site, confirmed Petrie's principles. The Petrie-Bliss chronology of 1894 proved correct as far back as 1500 B.C. The French

School of Biblical and Archaeological Studies was founded in this year (see Albright, *The Archaeology of Palestine*, 29 – 30 et passim).

1894 This was the year in which **Sir Arthur Evans** (1851 – 1941), who for ten years had been the keeper of Oxford's Ashmolean Museum, began work in Crete, excavated Knossos, and found the Cretan script (not deciphered until 1953). He presented the world with the Minoan civilization, not without importance in the history of the Philistines. From 1894 to 1897, **F.J. Bliss** and his architect, **A. C. Dickie**, did remarkable work at Jerusalem. This was followed (1898 – 1900) by work on sites in the Shephelah (Tell es-Safe, Tell Zachariyeh, Tell el-Judeideh, Tell Sandahan—the Hellenistic Marissa). This work saw the appearance in Palestinian archaeology of **R. A. S. Macalister**, a brilliant Irish archaeologist. Their published report in 1902 was notable for its scientific competence.

1895 **Bernard Pyne Grenfell** (1869 – 1926), with his colleague, **A. S. Hunt**, began their search in the Fayum for Greek papyri. Grenfell and Hunt commenced the investigation at Oxyrhynchus, 120 mi. S of Cairo, in 1875, and it was in this year that they discovered the first page of the *logia* of Christ. With Grenfell and Hunt the science of papyrology was born. The word was first used in 1898. In 1889 to 1890 Flinders Petrie had discovered papyri (some of them literary, including Plato and Homer, for example) at Gurob in the Fayum, and about the same time the British Museum acquired a parcel of papyri from Sir Ernest Wallace Budge. Sir Frederick Kenyon (1863 – 1952) had written about the papyri in 1890 and 1891. It was, however, Grenfell and Hunt who made the greatest and most momentous discoveries, and opened the way to over half a century of momentous finds that have added vastly to the classicist's knowledge of ancient Greek literature, to the NT scholar's knowledge of the common Greek dialect, and to the historian's knowledge of the ANE, especially Egypt over 3,000 years of its history. The literature on the subject is voluminous, but one or two books may be selected for special notice. **Adolph Deissmann** (1866 – 1937) was the first to make philological use of the new material from the papyri (*Bible Studies* [1901], and his notable *Light from the Ancient East* [1910]). **James Hope Moulton** (1863 – 1917), following Deissmann's approach, produced the brilliant *Grammar of New Testament Greek: Prolegomena* in 1906, a landmark. Popular studies of early vintage, but still of value, are Camden W. Cobern's *New Archaeological Discoveries* (1917 – 22) and James Baikie's *Egyptian Papyri and Papyrus Hunting* (1925).

1895 This year also marked the highest point in the work of **Sir William Mitchell Ramsay**, professor of humanity at Aberdeen from 1886 to 1911 (1851 – 1939). Ramsay was an epigraphist of note, a geographer, and classical historian. His archaeological work in Asia Minor established the reputation of Luke as a historian and made notable contributions to the understanding of the Acts of the Apostles and Revelation. His books, published during the last decade of the 19th cent., include *The Historical Geography of Asia Minor*, *The Church in the Roman Empire*, *The Cities and Bishoprics of Phrygia*, *The Seven Churches*, *Saint Paul the Traveller and Roman Citizen*, *Was Christ Born at Bethlehem?* His work leaned heavily on archaeological discovery, much of it his own.

The same year saw A. E. P. B. Wiegall excavating the mortuary temple of Thutmose III at

Thebes, and discovering the tomb of Prince Yuya and his wife Thuyu, parents of Akhenaten's queen, Tiye. (A. E. P. Weigall's *Life and Times of Pharaoh Akhnaton*, which ran through many editions between 1910 and 1934, is still a classic.)

1896 G. M. Legrain began his notable work on the Karnak temple (see Baikie, *A Century of Excavation in the Land of the Pharaohs*, 123ff.).

1897 J. de Morgan's work at Susa (see 1884). In association with Petrie he had already done good work in Egypt. These excavations continued until 1912 and in 1901 unearthed the stela bearing Hammurabi's Code. The year 1897 also saw the publication of Sir George Adam Smith's monumental *Historical Geography of the Holy Land*.

1898 M. Loret discovered in the Valley of the Kings the tomb of Amenhotep II, son of Thutmose III—unique because it was the first tomb containing intact the body of the pharaoh—a foreshadowing of Tutankhamen, a generation later.

1899 In this year **Robert Koldewey**, working for the Deutsche Orient-Gesellschaft, began his many years of systematic excavation at Babylon. When Koldewey began his work in March, nothing serious, apart from some preliminary work by Rassam, had been attempted. When Koldewey, in 1912, published a preliminary account of his investigations, he estimated that he was halfway through his task. The English edition, *The Excavations at Babylon*, appeared in 1914. Excavations continued at Lagash (Telloh) in this and succeeding years by Stephen Langdon.

1900 George L. Robinson discovered the “high place” of Petra. Robinson's 1930 publication has already been mentioned (see 1812).

1901 Captain Gaston Cros continued work at Telloh (Lagash).

1902 R. A. S. Macalister began his excavation of Gezer, working alone save for his efficient foreman, Yusif Kan'an. Warran had first investigated the site, and it had been first located by Clermont-Ganneau in 1871 – 1874. The Gezer excavation, which covered seven years, until Macalister's appointment to a chair of archaeology in Dublin, was “a model of economy...but stratigraphy and photography were neglected; surveying and levelling were utterly inadequate; the architectural aspects of the dig were dealt with only sketchily” (Albright, *The Archaeology of Palestine*, 31). When the three massive volumes of Macalister's report appeared in 1912, “a monument of bee-like industry,” they were hailed justly, Albright continues, “as a monumental achievement...But almost everything in them had to be redated and reinterpreted.” The famous Gezer Calendar was dated several centuries too late because of an erroneous ceramic chronology. Macalister was under heavy disadvantages. To comply with Turkish law he was compelled to employ the “strip method,” in which a site is cut strip by strip, the rubble from each successive strip being dumped into the preceding one. Further research is thereby precluded.

Hammurabi's Code was discovered by the French. Also in 1902, the Austrian biblical scholar Ernst Sellin began a three-year survey of Tell Taanach with small results. The stratigraphy was neglected. This, however, was the first excavation to be carried out in the more northerly part of Palestine, the ancient kingdom of Israel.

1903 G. Schumacher, an architect long resident in Palestine, who had received his initial training under Sellin, was placed in charge of a two-year investigation of Megiddo by the Deutscher Palästina-Verein and the Orient-Gesellschaft. The well-known Jeroboam Seal was discovered at this time.

1904 David G. Hogarth worked at Ephesus for the British Museum, studying in particular the sanctuary of Artemis.

1905 James Henry Breasted's *Ancient Records of Egypt* appeared in Chicago in September; also his *History of Egypt*, of which the 2nd ed. (1945) showed the striking advances in Egyptology.

1906 Hugo Winckler (1863 – 1913), a German Assyriologist who had worked at Sidon in 1903 – 1904, got a Turkish *firman* to dig at Boğazköy. A British archaeologist had identified Texier as this site, but the Germans were on good terms with the Turks at this time thanks to the undertaking (in 1899) of the Deutsche Bank to build the Berlin-Baghdad railway. The Kaiser had already been patron of Schumacher's archaeological activities and was similarly influential in sending Winckler to work in Anatolia. In the seventies of the century, A. H. Sayce had identified the area of Hittitology, but it was left to the German archaeologist to open up the theme. The literature discovered at Boğazköy was in a language not deciphered until a decade later by Hrozny, the Czech. An excellent popular account of the discovery of the Hittite Empire is given by C. W. Ceram in his *Narrow Pass, Black Mountain* (1956).

In 1906 the important 5th-cent. Aramaic papyri from the island of Elephantine, opposite Aswan in the Nile, were revealed. The first body of documents, mainly legal, was acquired from dealers and published by Archibald H. Sayce and Arthur Cowley in 1906 (*Aramaic Papyri Discovered at Assuan*). The second, and more important batch, was recovered by a British Museum expedition on the site of the Jewish temple on the island, and was published by Eduard Sachau in 1911 (*Aramäische Papyrus und Ostraka*). Publications on the theme are, in fact, voluminous. The third lot, much like the first, was actually found in 1893, and came to light in the Brooklyn Museum. They were published by Emil G. Kraeling in 1953 (*The Brooklyn Museum Aramaic Papyri*).

1907 Herman Thiersch, Herman Kohl, Carl Watzinger, and Ernst Sellin concluded a survey of the synagogues of Galilee. Kohl and Watzinger had been engaged on the clearance of the temple complex of Baalbek, one of the consequences of the Kaiser's spectacular visit to Palestine in 1898. The synagogues had attracted H. H. Kitchener's attention during the

Survey of Palestine, but this was the first investigation down to foundation level. Kohl and Watzinger published their authoritative *Antike Synanogen in Galilaea* in 1916.

In 1907 a joint German-Austrian expedition began two years' work on Jericho under **Ernst Sellin** and **Carl Watzinger**—at last, says Albright, “a properly staffed major excavation.” The report, published in 1913, was rich, full, accurate, and properly illustrated. The stratigraphy was well handled, but dating was not perfect. The year 1907 also saw the first publication of Père A. H. Vincent, the admirable Dominican archaeologist, discoverer of the Bethesda Pool and the Antonia Tower.

1908 A turning point in Palestinian archaeology was marked by the excavation of Samaria in this year and 1910 – 1911 by **D. G. Lyon**, **C. S. Fisher**, and **G. A. Reisner**. Thanks to the millionaire Jacob Shiff, this Harvard expedition was superbly conducted. Reisner himself, says Albright, was “an archaeological genius worthy of standing beside Robinson, Clermont-Ganneau and Petrie.” He had worked for a decade in Egypt and combined the expertise of Petrie, Dörpfeld, and Koldewey, along with “his native Middle-Western practicality and knack for large-scale organization” (*The Archaeology of Palestine*, 34). The two large volumes of the report did not appear until 1924.

1909 **Duncan Mackenzie** was invited by the Palestine Exploration Fund to direct the excavation of Beth Shemesh. He brought to the task an admirable knowledge of Aegean pottery, and so was able to identify the significant masses of Philistine pottery, first identified by Herman Thiersch in the previous year, which emerged on the site. The First World War interrupted Mackenzie's work.

1910 From 1910 to 1914 **Howard C. Butler** led a magnificently equipped expedition to Sardis, the ancient capital of Lydia.

1913 The site of Shechem was investigated in the two years before the First World War by Sellin and Watzinger (work was resumed in 1926 – 1928, 1932, 1934) for the German Society for Scientific Research. It was demonstrated that Shechem was Balatah and was occupied until A.D. 67 when it was probably destroyed by Vespasian, who razed the adjacent Samaritan temple on Mount Gerizim (see Albright, 247 – 48).

1917 The conquest of Palestine by the British in the First World War opened a golden age of archaeology. The Palestine Department of Antiquities was founded, headed by **John Garstang** of Liverpool University, and **W. F. Albright** appeared on the scene. He was in Palestine during the fifteen years from 1920 to 1935, when disorders began.

1918 The distinguished Assyriologist **R. Campbell Thompson**, then on the Intelligence Staff of the British Expeditionary Force in Iraq, began to dig at Eridu (Tell Abu-Shahren) for the British Museum, and opened an important chapter in Mesopotamian archaeology (see Patrick Carleton, *Buried Empires* [1939]).

1919 Promptly with the conclusion of hostilities the archaeologists were at work again, especially in lands which remained under British control. New and notable figures, such as Albright and Woolley, were in the field and some special events call for notice. In 1919 **Clarence Fisher** was at work at Memphis, the ancient capital of Egypt, where Petrie had worked for seven years. **H. R. Hall**, now near the end of his life, continued his Sumerian archaeology at Tell al-^(U)baid. **A. S. B. Wace** was doing remarkable work at Mycenae in 1920, the year in which J. H. Breasted published the Edwin Smith Surgical Papyrus, a 17th-cent. B.C. copy of an original of the middle 3rd millennium. **Pierre Montet**, in the French mandated territory of Syria, discovered at Byblos, the ancient Phoenician cedar port, the tomb of King Ahiiram. Excavations at Byblos (modern Gebel) had begun in 1919 under **Maurice Dunand**. In 1921 **T. Eric Peet** was working at Tell el-Amarna with Woolley. From 1921 to 1923 **C. S. Fisher**, **A. Rowe**, and **G. M. Fitzgerald** worked at Beth Shan on behalf of the Oriental Institute of the University of Chicago (the work was carried on in the years 1925 – 1928, 1930 – 1933, and covered 5,000 years of history).

1922 In 1922 and 1923 **Albright** was working at Gibeah (Tell el-Ful) and Kiriath Sepher (Debir). He made large contributions to the knowledge of Iron Age pottery. The great lesson of his work was that good results are dependent mostly on meticulous care in digging.

The year 1922 was remarkable for two events that brought archaeology to the attention of the world as nothing else had done. The tomb of Tutankhamen was discovered by **Howard Carter** in the Valley of the Kings, and the Indus Valley Culture of Harappa and Mohengo-Daro was revealed by **John Marshall** (see P. Carleton, *Buried Empires* [1939], 141ff.).

In Palestine **A. Schmidt** and **H. Kaer** worked at Shiloh. The year 1922 must also be set down as the beginning of **Sir Charles Leonard Woolley's** epoch-making excavations at Ur. The ruins of Abraham's city, known as el-Muqayyar, were first looked at by the English archaeologists Loftus and Taylor in 1854 and by Hall immediately after the First World War. Woolley's systematic exploration was carried competently on from 1922 to 1934 under the auspices of the British Museum and the University of Pennsylvania. Woolley's classic *Ur of the Chaldees* was published in 1929. His progressive reports appeared annually over the years of the excavations in *The Antiquaries Journal*. Woolley had been in charge of the British Museum's exploration of Carchemish until the outbreak of hostilities in 1914.

1923 Excavations at Kish (Tell el-Uheimir), 8 mi. E of Babylon, unraveled much Sumerian history. It was an extremely rich site. Professor Stephen Langdon's report (*Excavations at Kish*) was published in the following year—the same year as Langdon's Sumerian writings were appearing in the first volume of the *Cambridge Ancient History*.

W. J. Pythian-Adams and **John Garstang** worked at Ashkelon, and five years' work on the Ophel hill at Jerusalem was undertaken by **Macalister**, **J. Garrow Duncan**, and **J. W. Crowfoot**.

1924 David M. Robinson was working on Pisidian Antioch. A monograph on the Roman sculptures of this imperial bastion of Roman defense in Asia appeared two years later (*The Art Bulletin* [1926 – 27], 5 – 69). The publication of the early volumes of the *Cambridge Ancient History* in this year was a milestone. This was the year Sir Mortimer Wheeler had in mind when he spoke of archaeology's being discovered “not only by the public but by the professors.” The discovery of Tutankhamen's tomb, and particularly the archaeological section of the *London Illustrated News*, had awakened the world, and occasioned Wheeler's ironic priority.

1925 The Nuzi documents with their flood of light on the patriarchal age attracted notice at this time. Nuzi is Yoghlan Tepe, a tell 150 mi. N of Baghdad, near the hill country of S. Kurdistan. It was excavated in 1925 – 1931 by a joint expedition of the American School of Oriental Research in Baghdad and by Harvard University. (E. Chiera and E. A. Speiser wrote first about the site and its significance in *AASOR* 6 [1926]: 75 – 90; see also Richard F. Starr, *Nuzi* [1939].)

E. L. Sukenik gave some attention to the tangled problem of the walls of Jerusalem in this year.

Remarkable advances in Palestinian prehistory marked the middle twenties. In 1925 a young Englishman, F. Turville-Petrie, examining two caves above the Galilee lake, found the first traces of Palestinian prehistoric man (Dorothy Garrod followed up this work in 1928 to 1934 and established the outlines of what came to be known as the Natufian Culture).

Also in 1925, Fisher left the University of Pennsylvania and joined the staff of the Oriental Institute of the University of Chicago. His first task was the direction of the Megiddo excavations. Over fourteen years, until ill health forced Fisher's retirement, and at immense cost, this famous and fruitful site (till then only cursorily examined by the German expedition) was completely investigated. P. L. O. Guy and Gordon Loud succeeded Fisher, but only a part of Megiddo was thoroughly examined. In 1925 Horsfield and Crowfoot began a clearance of Gerasa (modern Jerash) that was continued for nine years.

1926 In this year the American School of Oriental Research in Jerusalem (founded in 1900) began the excavation of Tell en-Naṣbeh (the biblical Mizpah). The work was directed by Fisher's disciple W. F. Badè, and a thorough excavation was completed. The two-volume report of the nine years' digging came out over the name of C. C. McCown in 1947, a model for all such publications. Simultaneously a second project under M. G. Kyle and W. F. Albright worked on Tell Beit Mirsim, SW of Hebron, the ancient Kiriath Sepher or Debir (four campaigns between 1926 and 1932). An important result of this expert dig was the establishment of a clear pottery sequence, a standard basis for future Palestinian archaeologists. (Palestinian chronology, in confusion when Albright began digging at Gibeah [Tell el-Ful] in 1922, was greatly clarified by Pythian-Adam's work at Askelon and by the continued digging at Gibeah and Tell Beit-Mirsim [1926] and Bethel [1934]—all the work of Albright—and by Reisner's work at Samaria [published in 1924], and by Shipton of Megiddo.)

1927 J. W. Crowfoot continued his work on the Ophel hill of Jerusalem (in succession to Macalister and Garrow Duncan). The work ended in 1928. The same archaeologist did important work at Samaria, a side result of which, along with Kathleen Kenyon's work, went far to stabilize the chronology of Palestine. In other spheres of archaeology not irrelevant to biblical studies, E. A. Speiser was busy at Tepe Gawra (also 1931 – 1939), Tell Billah (also 1931 – 1939), and Khafaze (also 1930 – 1936); A. Gabriel at the desert city of Tadmor (the ancient Palmyra); and Walter B. Emery in Egypt. Emery's career was to extend for a generation with some distinguished finds. At Saqqara, in 1936, he excavated the intact tomb of Hemaka, vizier of a king of First Dynasty, then the tomb of Sabu, a nobleman of the same period, in 1937, and the tomb of Aha. In Armant, he excavated the temples and tomb of the sacred bull, discovered and cleared First Dynasty tomb of Pharaoh Ka-a at Abydos, and found a funerary boat thought to be that of Pharaoh Udimu of Fifth Dynasty, in 1955. He continued his work at Saqqara and found the mastaba tomb of Queen Her-Neit of First Dynasty in 1956, then began extensive excavation of the 12th-cent. fortified town of Buhen in the Sudan in 1958, 1959, 1960.

In 1927 E. **Gjersted** did notable work at Enkomi, Lapethos, and Vouni in Cyprus.

1928 Elihu Grant began a series of five campaigns at Beth Shemesh with aid from Fisher. The principal addition to knowledge was in the period of Israelite occupation between the 12th and 9th centuries B.C. With the able assistance of **G. E. Wright**, the chronology was clarified in time for the report. E. **Chiera**, working at Nuzi (as also between 1930 and 1932) identified the Hurrians. (The same archaeologist worked at Khorsabad in 1928 and 1929.) From 1928 to 1937 M. Rostovtzeff and others continued the work at Dura Europos first begun six years earlier by F. Cumont for the French Academy. From 1928 to 1934 **J. D. S. Pendlebury**, Director of Egyptian Exploration Society excavations, was working at Tell el-Amarna, and in 1928 **T. Wiegand** worked on the Pergamum Asklepeion, a task which occupied the next three years. P. L. O. Guy, now in the third season at Megiddo, discovered the famous royal stables.

1929 Dorothy Garrod, a Cambridge prehistorian, began her six years' work on Palestinian caves, notably on Carmel. She worked under the joint auspices of the British School of Archaeology at Jerusalem and the American School of Prehistoric Research, leading to some knowledge of the so-called Natufian Culture (see Albright, *The Archaeology of Palestine*, 52ff.). Horsfield was at work at Petra, C. F. Schaeffer making his remarkable finds at Ras Shamra (Albright, 187), and the Jesuits beginning on Teilat el-Ghassul in the Jordan valley in the same year. The Jesuits conducted eight campaigns up to 1938 (Albright, 45).

1930 Theodore D. McCown, with **C. S. Fisher**, continued working at Gerasa and on the Carmel caves (with Dorothy Garrod; see Albright, 169 – 70). **G. L. Robinson** discovered Petra's "high place." **John Garstang**, Director of the Palestine Department of Antiquities, began six years' work at Jericho. The work had been initiated by the Germans Sellin and

Watzinger in 1913, and was continued (1952 – 1958) by Kathleen Kenyon. Garstang discovered the first Neolithic urban culture (see J. B. Garstang, *The Story of Jericho* [1948]).

1931 Ernest Herzfeld was at work at Persepolis, and **A. Maiui** at Pompeii and Herculaneum; **O. R. Sellers** with **W. F. Albright** was working at Beth Zur, a site of interesting Maccabean remains, commanding the road from Jerusalem to Hebron. The British-American-Hebrew University project at Samaria—a four-year dig—began in 1931, and was to continue under **J. W. Crowfoot**, who began where Reisner left off and with much more exact chronology. **M. E. L. Mallowan** appeared on the scene with work at Nineveh. He was to work extensively in this area for more than thirty years. The excavation of the *agora* at Athens began in this year and extended to 1939. It was directed for the American School of Classical Studies by Oscar Broneer. The Chester Beatty Papyri were discovered.

1932 G. E. Ederkin worked on the site of Syrian Antioch. Excavations continued there until 1939 without producing significant evidence for the apostolic period. On behalf of the Wellcome Expedition, **J. L. Starkey** (Petrie's pupil) began excavations at Lachish. The work went on for four years until the tragic death of the notable archaeologist at the hands of an Arab bandit in 1938. The major find was the Lachish Letters with their light on Jeremiah. The Dura synagogue (A.D. 244) was found almost intact by the French-American expedition in this year (Albright, 175-76). In 1932 and 1933, **R. W. Hamilton**, of the Palestine Department of Antiquities, worked on a Bronze Age II site at the foot of Carmel on the coastal plain—Tell Abu Hawam. Importance of the Nazareth Decree, in the Louvre for half a century, was recognized by M. Rostovtzeff in this year.

1933 Roman Ghirshman began five years' work on Tepe Siyalk. **P. Dikaias** was busy in Cyprus. **Mme Judith Marquet-Krause** began an important excavation at Ai, a work interrupted by the untimely death of the archaeologist after two seasons' work. **Charles Morey** continued work at Syrian Antioch, aided by **Richard Stillwell**. In this year, **Andre Parrot**, excavating Tell Harari, near the Euphrates in SE Syria, began uncovering Mari, a project that extended to 1960. The literature discovered was of immense biblical importance. In 1933 the rabbi archaeologist **Nelson Glueck** began his thirteen-year survey of Transjordan from Aqabah to the Syrian border, patiently identifying and dating the sites in an almost untouched area (see Albright, 44, 76 – 78). Glueck's remarkable book (*The Jordan*) was published in London in 1946—with a second edition nine years later.

1934 Hetty Goldman began work at Gozlu Kule (ancient Tarsus). Two volumes of her report appeared in 1950 and 1956. The task covered four seasons. Excavations at Bethel were conducted by **J. L. Kelso** and **W. F. Albright** in this year. **J. H. Steckweh** brought the German project at Shechem (Balatah) to a close—a work initiated by E. Sellin in 1913 and resumed by him in 1926. The work had been a badly organized project interrupted by Germany's troubles and by tension in the party. In a brief season Steckweh cleared up much detail and salvaged valuable results (Albright, 45 – 46; also the article in Avraham Negev's *Archaeological Encyclopedia of the Holy Land* [1972], 257).

1935 J. W. Black was working at Samaria, **Erich Schmidt** at Persepolis, and **Gordon Loud** at Megiddo succeeded by P. L. O. Guy. Two seasons later the famous Megiddo ivories were discovered. The archaeological reports, as the article on Megiddo shows, are extensive and cover a generation. A further season of the joint expedition at Samaria (1931 – 1933) was undertaken this year. C. H. Roberts published papyrus fragments of John's Gospel, now in John Rylands Library at Manchester.

1936 The large Jewish town and necropolis of Beth Shearim saw begun a four-year project under B. Mazar for the Hebrew University and Israel Exploration Society. Here B. Maisler and his colleagues found an important Jewish cemetery.

1937 Nelson Glueck excavated at a Nabatean cemetery on Jebel et-Tannur, SE of the Dead Sea (Albright, 165).

1938 J. L. Starkey was murdered early in the year. It was symptomatic of a gathering darkness, and **Lancaster Harding** and **Charles H. Inge** carried on briefly at Lachish, but the troubles of seven years were bringing to a close the greatest decade of archaeology yet known.

1939 Just before the Second World War broke out, the immensely expensive Megiddo exploration was brought to an end, though in 1941 Yigael Yadin, a new great name appearing in the story, did some work on the site—and also at Hazor. Yadin was the son of E. L. Sukenik, who had already worked on many sites in Palestine, concentrating on Jewish tombs and synagogues. At intervals between 1925 and 1940 he had investigated, along with L. A. Mayer, the location of the third wall of Jerusalem, discovered by Robinson a century earlier. The turbulent years preceding the formation of the State of Israel in 1948 delayed the launching of post-war projects in Palestine, save that in 1946 French excavation began at Tell el-Farak, NE of Nablus. Post-war inflation set a limit on funds and the size of the project.

1947 At the end of this year (November 23), **E. L. Sukenik** of the Hebrew University of Jerusalem received the first information over the telephone about the famous **Dead Sea Scrolls**. The acquisition of these priceless documents, accidentally discovered during the preceding winter (1946/1947) by bedouin is told in John C. Trevers' 1965 publication, *The Untold Story of Qumran*. The Scrolls were, in Albright's opinion, "the greatest manuscript discovery of modern times...an absolutely incredible find," and they have evoked a great mass of writing. In 1947 **John Cook** was working at Smyrna.

1948 Robert Braidwood worked at Qalat Jarmo in NE Iraq on a number of prehistoric villages. Anthropologists may find them relevant in the outline account of human prehistory in the first four chapters of Genesis. Braidwood's work continued at intervals to 1958. Excavations in Israel, as Israeli archaeology promptly began work, were undertaken at Tell Kasileh near Tel Aviv (1948, 1949). They were directed by B. Mazar on behalf of the Israel Exploration Society and the Tel Aviv Museum. Excavations at Joppa began in the

same year and continued to 1950, and in 1952 and 1955 by J. Kaplan for the Jaffa Museum.

1949 Taking up Layard's work of over a century before, the British School of Archaeology in Iraq spent twelve years (1949 to 1961) in tracing Calah's history from prehistoric to Hellenistic times (see M. E. L. Mallowan, *Nimrud and its Remains*, [1962]). **R. de Vaux** began his digging on the Essene sites of Qumran and 'Ain Feshka.

1950 The seven-year investigation of the cemetery under St. Peter's in Rome began under the direction of **Ludwig Kaas**. The excavation at Dibon in Moab by William Merton for the American School at Jerusalem began. They covered seven seasons. In this and the following years, J. L. Kelso and J. B. Pritchard worked on Roman Jericho. Explorations by the American Foundation for the Study of Man (1950 – 1953), followed by those of the University of Louvain (1951, 1952), brought to light much Sabeian art and the 8th cent. B.C. temple of the Moon Goddess at Marib.

1951 **G. L. Harding** and **Ronald de Vaux** came into possession of the first Bar Kokhba documents, but the source was undisclosed to them.

1952 Copper rolls from the Dead Sea caves, sent to Manchester College of Technology for unrolling, gave clue to the Qumran community. Work that was to extend to 1958 was begun at Jericho, sponsored by the British School of Archaeology in Jerusalem, by the Palestine Exploration Fund, in collaboration with the American School of Oriental Research in Jerusalem and the Royal Ontario Museum. **Dr. Kathleen Kenyon** was in charge, and this was to prove the most complete exploration of the ancient site yet undertaken. **Nelson Glueck's** exploration of the Negev began in 1952. **Roman Ghirshman**, who had worked at Tepe Siyalk from 1933 to 1937 and at Susa from 1946, began in 1952 his eight-year task of clearing the elaborate ziggurat of the Elamite city of Chaga-Zambil, in Iran.

1953 **Joseph P. Free**, sponsored by Wheaton College, Illinois, began a series of campaigns at Dothan. Excavation reports are to be found in *BA* and *BASOR* over many succeeding years.

1954 Pages were added to Mycenaean archaeology by **Carl Blegen's** work at Pylos. **Kurt Bittel** did notable work at Boğazköy. This scholar had been at work for some score of years on the Hittite Empire, its language and script. His work lies, like some other themes here listed, only on the periphery of biblical archaeology, but a popular account of both Bittel's and Bossert's work, and the decipherment of Hittite, is to be found in C. W. Ceram's *Narrow Pass, Black Mountain* (1956). This was a year of some activity, with **Zakarie Goneiun** busy at Saqqara, **Andre Godard** at Persepolis, **Richard Haines** at Nippur (where he discovered the Inanna temple), **Philip Hammond** at Petra, **Kamal el Mallakh** at Giza, **Jean Perrot** at Tell Abu Matar, near Beersheba, **Heinrich Lenzen**, for the German Archaeological Society, at Warka (ancient Erech), **Seton Lloyd** at Beycesultan, **J. A. Puglish** at Rome. **Y. Aharoni** opened the first of his four digs at Ramat Rahel (1954, 1959, 1960, 1963) on behalf of the University of Rome and associated Israeli institutions. Five occupation levels from the Iron Age to Christian and Arab times were distinguished. **A. J.**

B. Wace was beginning a decade's work at Mycenae.

1955 Emil Kunze was at work at Olympia. The Greek games (Pythian at Delphi, Isthmian at Corinth, and Olympic at Olympia in the western Peloponnese) are relevant to biblical archaeology only for the imagery they supplied for Paul and Hebrews. **S. Yeivan** continued the vigorous Israeli work at Caesarea, where **Antonio Frova**, the Italian, uncovered the theater in which, in 1960, a stone bearing a fragmented inscription of Pontius Pilate was found. The excavation of Hazor by Y. Yadin began this year, extended to 1958, and was continued in 1968. It was undertaken on behalf of the Hebrew University and revealed the ability of a new, locally trained generation of Israeli archaeologists. The Jordan Department of Antiquities commissioned P. J. Parr to clear and restore monuments at Petra. A Roman villa, uncovered in Kent, at Lullingstone, contains evidence for Christianity in 3rd cent. Britain (G. W. Meates, *Lullingstone Roman Villa* [1955]).

1956 In this year, the next, and in 1962, 1964, and 1966, Shechem was excavated by **G. E. Wright** on behalf of the McCormick Archaeological Expedition, and **J. B. Pritchard** began important work at Gibeon. It was carried on in 1957, 1959, 1960, and 1962 by the same archaeologist on behalf of the Museum of the University of Pennsylvania. At Caesarea, **M. Avi-Yonah**, for the Hebrew University, excavated synagogue ruins. (The troubles of Israel following the Suez crisis of this year held up many projects, especially those under the widening sponsorship of local institutions of learning.)

1957 B. Ravani worked at Tiberias. He excavated the baths at this ancient spa.

1958 Harvard and Cornell Universities, in cooperation with the American Schools of Oriental Research, began new excavations at Sardis (see *BASOR* 154 [April 1959]: 1 – 35). **Franz Mittner** was working at Ephesus, and **N. Zori** at Beth Shan.

1959 A four-year dig, resuming interrupted work, was begun at Caesarea. **Saul S. Weinberg** was at work in Corinth. In 1959 UNESCO first broached the project of an international effort to lift and save the great temples of Abu Simbel from the forthcoming inundation of the Aswan High Dam. At immense expense this was accomplished (see A. S. McQuitty, *Abu Simbel* [1965]; Burckhardt had first discovered this temple in 1812).

1960 A three-year research project at Caesarea in underwater archaeology worked on the Roman port. A. Negev, on behalf of the National Parks Authority, worked on the Crusader town. In the third season of excavations at Shechem by the Drew-McCormick Expedition, the Bronze Age beginnings of the town were revealed (see addendum to article in *IDB*, 4:315). In this year the Israel Exploration Society made a thorough exploration of the Dead Sea caves, and **Y. Yadin**, in charge of one of the four teams, made a significant discovery behind En Gedi. He used a helicopter to photograph the area and located a Roman camp that led to the discovery of the Bar Kokhba relics in the caves below (see, for a readily accessible account, Ronald Harker, *Digging up Bible Lands* [1972], 96 – 108). The exploration was fruitfully resumed in March, 1961.

1961 Paul Lapp excavated at Araq el-Emir, 1961 to 1963, and at Taanach in 1964. He was Director of the Jerusalem School of the American Society for Oriental Research (1961 – 1964). In a cave N of Jericho he found important papyri from Samaria (722 B.C.) in 1963. James Mellaart worked at Iconium (modern Konya) from 1961 to 1963.

1962 H. F. Squarciapino worked at Ostia, the Tiber port of Rome, in 1962. He discovered a 4th-cent. A.D. synagogue, the oldest found in W Europe. In 1962 and 1963 the Roman theater was excavated at Petra by the Princeton Theological Seminary under the direction of **P. Hammond, Jr.** From 1962 to 1967 **Yohanan Aharoni** Professor of Biblical Archaeology at Tel Aviv University, along with **R. Amiram**, excavated on behalf of the Hebrew University and the Israel Exploration Society at Arad; and, for the Department of Antiquities and Museums, **M. Dothan** worked at Ashdod. Both seasons extended until 1967. Simultaneously (until 1968) **Kathleen Kenyon** continued working at Jericho for the British School of Archaeology at Jerusalem, and **W. G. Dever** for the Hebrew Union College.

1963 In this and the two succeeding seasons, **Y. Yadin** organized and completed his mass archaeological assault on Masada.

1964 J. Callaway worked at Ai and **K. Schoonover** at Et Tell.

1965 Mamphis, the easternmost town of the central Negev, 25 mi. E of Beersheba, was excavated by **A. Negev** for the Hebrew University and Parks Administration. The work covered three seasons. (The site had been visited by E. Robinson in 1838 and E. H. Palmer in 1871. C. L. Wooley and T. E. Lawrence drew a plan of the ruins in 1914 and a final survey was made in 1937 by G. G. Kirk and P. L. O. Guy.)

1967 The Six Days' War brought many historic sites into Israeli control—for example Old Jerusalem, and the whole of the Sinai Peninsula. In Sinai, during the brief period of Israeli occupation from 1956 to 1957, a detailed survey of sites was conducted and published in a magnificent book called *God's Wilderness*, by Beno Rothenberg (1961). A fine scroll from the Dead Sea (8.6 meters long) was bought by **Y. Yadin** from an Arab dealer who could be located only after the occupation of Jordanian Jerusalem. It was a manual containing religious rules, architectural notes on how the temple at Jerusalem should be built, and a mass of other directions. A plan for mobilization was oddly similar to that put into operation exactly 2,000 years after the concealment of the writings.

1968 In this year **B. Mazar** began the excavation of the S wall of the temple mount on behalf of three Israeli institutions (the decade's work on this difficult site is detailed in K. Kenyon's *Royal Cities of the Old Testament* [1971], 39, 43, 45, 61, 110, 111, 114). In this year, during building operations at Givat Ha-Mivtar, NE of Jerusalem, the ossuary of Yehohanan Ha-Gaqol, a man who had been crucified, was discovered.

1969 N. Avigad began excavations in the Jewish Quarter of the Old City of Jerusalem where remains of a magnificent Hellenistic villa have been revealed; and S. Weinberg, on behalf of the Museum of Art and Archaeology of the University of Missouri, began work at Tel Anafah in the Hula Valley.

E. M. BLAIKLOCK

[For various reasons, chronological recording becomes difficult from this point. Moreover, since the initial publication of this encyclopedia, activity in many areas relevant to biblical archaeology has increased vigorously, and space constraints make it impossible to provide a full account. The supplement to the main article (section VII, “Biblical archaeology since 1975”) summarizes some of the major developments that have taken place during the past three decades. Readers interested in greater detail may wish to consult such periodicals as *Biblical Archaeologist* and *Biblical Archaeology Review*, which provide up-to-date reports on discoveries as well as discussion regarding the interpretation of the data.]

archer. The main tactical offensive unit of ancient armies was the archer. Archers developed their skills from childhood with stronger bows at longer and longer distances until their proficiency was assured. The laminated bows made of glued layers of animal hide and thin layers of wood pulled at upward of one hundred pounds, and the missiles thus powered could easily pierce all but the strongest armor. Ancient bows and arrows and jagged holes in armor have been excavated from a number of areas of the Mediterranean coast. In numerous accounts in the Scripture archers are foremost in the heat of battle,

Panel from a palace in Nineveh (c. 640 B.C.) depicting an Assyrian archer shooting arrows from a chariot.

and their victims included several of the kings of Israel (1 Sam. 31:3; 2 Sam. 11:24; 1 Chr. 10:3; 2 Chr. 35:23). The English term *archer* translates Hebrew *rab H8043* on three occasions (Job 16:13;

Prov. 26:10 [disputed]; Jer. 50:29); elsewhere several phrases are used, some of which contain the term *qešet* H8008, “compound bow” (e.g., 1 Sam. 31:3; 1 Chr. 10:3). See ARMOR, ARMS; WAR.

W. WHITE, JR.

Archevite ahr'kuh-vit (אַרְכֵיטִי H10074, gentilic derived from a place name; cf. Heb. אֶרֶךְ H804). This term in the KJV transliterates an Aramaic name referring to people from the Babylonian city of ERECH (Uruk). Along with the Persians, Babylonians, Elamites, and others, they were transplanted by ASHURBANIPAL (Osnappar) to the cities of Samaria and other parts of the province (Ezra 4:9 – 10).

Archi ahr'ki. KJV alternate form of ARKITE (Josh. 16:2).

Archippus ahr-kip'uhs (Ἀρχιππος G800, “master of the horse”). A Christian worker included in the salutation of the letter to PHILEMON (Phlm. 2) and exhorted in Col. 4:17. From the association of his name with Philemon and APPHIA, it is generally assumed that Archippus was the son, or possibly brother, of Philemon. The description “our fellow soldier” indicates his aggressive participation in the Christian warfare. The reference may be to some past joint conflict with PAUL during his Ephesian ministry or to a current battle of Archippus with the Colossian heresy.

Paul instructed the COLOSSIANS to say to Archippus, “See to it that you complete the work you have received in the Lord” (Col. 4:17). This comment naturally connects Archippus with the Colossian church. From the context some have inferred that he ministered in neighboring LAODICEA. He possibly had pastoral oversight of the churches in the Lycus Valley during the absence of EPAPHRAS. Paul’s exhortation to Archippus through the church is his own approval of that appointment. The injunction, resembling that given TIMOTHY (1 Tim. 4:16), need not imply dereliction of duty; it is a sympathetic concern that with earnest watchfulness he fulfill his difficult assignment.

John Knox (*Philemon among the Letters of Paul*, rev. ed. [1959], ch. 3) suggested an ingenious reconstruction of the circumstances. He held that Archippus was the principal addressee of the letter to Philemon, that the Colossian church met in his house, and that he was the owner of the slave ONESIMUS. He regarded Philemon as the overseer of the churches of the Lycus Valley, residing in Laodicea. The letter to Philemon, which Knox equates with the letter mentioned in Col. 4:16, was first sent to Philemon to gain his backing for Paul’s request to Archippus to “complete the work,” that is, to return Onesimus to him as a missionary aide. This reconstruction is dubious. Knox’s view would be strengthened by reversing the position of Archippus and Philemon (cf. W. G. Rollins, *JBL* 78 [1959]: 277 – 78). This change would make the second singular pronoun consistently refer to Philemon and account for the church “in your house” rather than “his house.” Knox’s understanding of Archippus’s “work” as the release of Onesimus is inadequate, which from the context is clearly a service committed to him in the church. The common view that makes Philemon the real recipient of the letter and owner of the slave is most satisfactory.

According to tradition Archippus, along with Philemon and Apphia, was stoned to death at Chonae, near Laodicea. A tradition that includes him among the Seventy (cf. Lk. 10:1) is not credible.

architecture. The art and science of building, by which human beings have sought to enclose space

that is both habitable and an artistic expression of human endeavor.

1. The development of architecture
 1. Anatolia and the West
 2. Mesopotamia
 3. Egypt
 4. Palestine
2. Style
3. Materials and techniques

I. The development of architecture. Architecture has constantly reflected the basic character of its structural materials, as in the ubiquitous mud brick of Mesopotamia's alluvial plain. But certain forms also indicate inability to rise above imaginative limitations or to control completely the basic structural materials. Nevertheless, their artistic use does occur in the decorative motifs of the more permanent stone and brick.

The enclosure of space appeared first in the provision of shelter for the family by means of the round plan. When rectangular framing was learned, rectangular plans prevailed in the 7th millennium B.C. at Budur, Anatolia, placing the center of beginnings of architecture in ASIA MINOR (A. Badawy, *Architecture in Ancient Egypt and the Near East* [1966], 128). After urban groups emerged, the palace was developed when the king figure arose, c. 3000 B.C. (K. Kenyon, *Archaeology in the Holy Land* [1960], 41 – 42). Architecture obviously requires peace and political stability for its development, both secured through the peaceful medium of a settled community undisturbed by the vicissitudes of contemporary times. Architecture was also affected by cultural and religious influences, by infiltration of style through trade and migration, and by new rulers who felt free to adapt the local culture to their own tastes.

A. Anatolia and the West. Archaeology indicates that the architectural process had its earliest observable beginning in Anatolia at Hafilar near Budur in the 7th millennium B.C. (J. Mellaart in *The Illustrated London News* [Apr 8, 1961]; Badawy, *Architecture*, 205). Already the rectangular plan showed an early solution of roof framing by tree pole beams. Foundation problems were solved by the use of larger stones as base courses for upper walls. Enlargement of the house was evident in the 6th millennium with the appearance of two-story houses, using a post system of supports for the second floor (Badawy, *Architecture*, 128), and by the appearance of the plano-convex brick, a more versatile construction material than rubble stone. A regression in the next millennium was seen in houses consisting frequently of only one room and an anteroom.

Incipient urban development emerged also at Hafilar in the 6th millennium B.C. in the grouping of houses around a rectangular open space (Badawy, *Architecture*, 122 – 23), occurring also earlier at JERICHO. True towns, however, arose only in later times. Plan types show the usual contrasts between the poor and affluent: the one-room-anteroom versus the multi-roomed homes of the latter. Other Old HITTITE houses featured two rooms for larger houses, achieved by repeating these two rooms in groups of two or more. This two-room plan persisted into the 2nd millennium, still using the posts of earlier times for roof supports. Thicker brick walls of later houses indicate longer ceiling spans. The entrance vestibule disappeared. About 1500 B.C. a new plan appeared consisting of smaller rooms located back of a larger room, repeated as series to provide a larger house (Badawy, *Architecture*, 130; R. Naumann, *Architektur Kleinasiens* [1955], Fig. 421). Models showed awnings,

porticoes, and windows.

Troy (level IIc) produced the earliest known palace in western Anatolia, the *megaron* style of a large, central room approached through an entry to the SW. Mid-2nd millennium Boğazköy provided a splendid example of a defensive palace constructed on the highest point within its own walls with subsidiary buildings for royal, governmental, and defensive functions. Slightly earlier, Yarimlim's palace at Tel Atchana (17th cent. B.C.) revealed a "zoned" arrangement of ceremonial, residential, and dependency rooms about a central court with an access corridor on the E side. Niqmepa's plan (15th – 14th cent. B.C.) was the same, but in several stories. Prominent was the use of a monumental *bīt hilāni* flanked by side towers (the Assyrian term is applied to a type of architectural style characterized by a broad room with an opening portico and subordinate rooms on the sides). As the earliest known example, it may indicate the area of its origin. Doubled halls occurred back of the *bīt hilāni*, and a movable hearth on rails provided heat in winter.

CARCHEMISH and Sarr'al (Zenjirli) were the more important towns of the 1st millennium, the former an oval with the inner citadel forming the NE quarter on its hill overlooking the EUPHRATES. Sarr'al was round with an oval-shaped citadel, the outer wall having three equidistant gates. The citadel had four "quarters" on different levels. (Anatolian towns were generally oval, while Syrian towns were round.) The two palaces at Sarr'al had the usual *hilani* and the usual summer and winter quarters.

Sanctuaries in earlier Anatolia were a "nature" type, dedicated primarily to the weather god, reflecting the harsher Anatolian climate. Eflatun Pınar had an altar platform at the northern end of an artificial lake (Badawy, *Architecture*, 134), its face bearing carved representations of Hittite deities. At Yazılıkaya a converted cleft became a roofless grotto, with propylea (entrance gate complex) and secondary rooms. Similar to the Hittite palace, a remarkable example of palace influence on temple construction is seen in Temple I of Boğazköy (14th cent. B.C.), the temple lying within a court formed by ranks of long, narrow storage rooms on all sides. At Tel Tayinat is found a plan reminiscent of Solomon's temple, with porch, antecella, and cella (8th cent. B.C.), which formed the basic elements of later Greek temples. (See further S. Lloyd, *Early Anatolia* [1956].)

B. Mesopotamia. The period about 4700 B.C. saw the spread of village culture through upper MESOPOTAMIA and toward the W (cf. Kenyon, *Archaeology*, 58 – 59), but true urban culture appearing near the Persian Gulf (Badawy, *Architecture*, 80 – 81) was characterized by streets radiating from a central plaza, though oval-pattern walls were the natural enclosures of irregular urban plans. City orientation was thereafter NW-SE, with the temple in the northerly quarter facing NE to use the breezes from that direction for cooling. Its encircling wall served defensive purposes as well. An improved axial layout occurred in cities of later eras: UrIII, Nippur (Dyn III), and Larsa (20th – 17th cent. B.C.) exhibited irregular plans, while Borsippa (pre-18th cent. B.C.), Khorsabad (8th cent. B.C.), and Babylon (6th cent. B.C.) illustrated axial plans developed to facilitate religious festivals (Badawy, *Architecture*, 83).

Houses in Mesopotamia were constructed first of reeds, as can be seen in the terra-cotta offering stand of UR (C. 2000 B.C.) found at ASSHUR, showing a two-storied structure, the second set at the back of the roof terrace. Soon wattle-and-daub technique appeared (Badawy, *Architecture*, 85). From one-room plans of earliest times, plans with several rooms developed, arranged around an open, inner court notable for frequent drains, usually of stone.

The historical period (c. 3000 B.C. onward) provided at Tepe Gawra a plan, largely symmetrical, of *liwan* (recessed covered area, open on one side) flanked by smaller rooms

accessible from inside, and to the left, a rectangular hall roofed with a brick vault, fronting on an open, enclosed court. The symmetry extended into later times. Tel Asmar (25th cent. B.C.) formulated a nonsymmetrical plan of entrance hall and vestibule to the left, observable by kitchen peepholes, and a living room beyond having a hearth and mud bench, with reception hall and a suite of bedrooms and service rooms arranged clockwise around the living room. Generally, roofs seemed to be gabled.

The Ur III Period (c. 2110 – 2000 B.C.) introduced the inner court about which rooms were arranged, frequently in two stories, the second served by a wood balcony on wood posts. This plan had become “centered” by 1970 – 1698 B.C., and chapels frequently were included. In later eras house plans became irregular in size and layout, the streets being the irregular, open traffic ways in front of houses. Wall profiles became “sawtooth” in order to “straighten up” the exterior line. In the time of the Neo-Babylonian kingdoms larger houses had a more formal symmetry with subtle arrangement of reception area and private quarters.

Palaces. One of the earliest PALACES is that of King Mesilim (c. 2600 B.C.), which consisted of the residence and an annex, the former having a passageway all around, consisting of a square courtyard with shallow rooms on three sides and a block of rooms on the E or fourth side. Urnammu’s palace (c. 2100 B.C.) used the same court layout with shallow rooms grouped about it, coupled with a series of smaller courts and rooms. MARI (C. 2000 B.C.) provided a huge palace complex that is significant for the introduction of a large square court with a shallow, broad throne room or reception room on the S side, which arrangement became characteristic of later Babylonian palaces.

The Cassites used a court system connected to a central transverse hall surrounded in turn by rooms, as at Dur Kurigalzu (Taha Baqir, *Iraq*, Supp. 1943 – 1944, Fig. 52). Sargon’s palace at Khorsabad was a citadel with palace, the latter with rooms grouped about courts according to function, making for a more random appearance. NEBUCHADNEZZAR built his palace by the river near the ISHTAR gate on a terrace twelve meters high. It was a series of courts surrounded by smaller sized subsidiary rooms. The main court fronted the throne room on the S, which was backed up by smaller rooms. This whole block was surrounded by a continuous corridor on three sides. At the N end of an eastern court group was a series of massive walls that some have suggested were foundations of Nebuchadnezzar’s hanging gardens described by JOSEPHUS and Diodorus (Badawy, *Architecture*, 96).

Temples in Mesopotamia, derived from pre-Sumerian times from quite small cellae, became in later times elaborate, well-planned, sophisticated structures. Two types were used. One was a symmetrical, T-shaped plan with an open court containing the altar and surrounding rooms, as in Temple D at Uruk (29th cent. B.C.). The second type showed a plan with cella at the side of a raised court, having a side doorway at one end, with the altar and niche for the idol at the opposite end, as in the “White Temple” (28th cent.; cf. Badawy, *Architecture*, 100). Later Kafajah (c. 2300), with a rectangular plan, featured an outer wall, another oval wall within at a higher level, and within this at the rear a temple set on an elevated platform.

In the Neo-Sumerian era (Ur III) the ZIGGURAT came prominently into use with the “high” temple on top where the god was said to alight. Access was by the monumental stair. The “lower” temple, at the base of the ziggurat, where the god was believed to dwell between advents, featured a court and a broad shallow room at its back, the so-called “Hurrian” cella, also occurring in the Innana temple at NIPPUR (18th cent. B.C.). The ziggurat of Urnammu at Ur is the largest and most impressive for ascent.

In the later eras of Ur, layouts became precise and harmonic in proportion, namely, Ningal’s temple, where the peak of Babylonian architecture was reached (Badawy, *Architecture*, 105). The

Cassites restored and remodeled temples of previous eras, reverting to the long, deep cella of the Sumerians, supporting the idea that they attempted to revive Sumerian culture. A characteristic plan (Innana, Uruk, 15th cent. B.C.) features a deep cella, antecella, and corner bastions, reminiscent of Solomon's temple in Jerusalem. The Assyrians (13th – 12th cent.) inherited the Hurrian and Sumerian cellae, and also a third, the broad, shallow cella seen at Kar-Tukul-ti-Ninurta (12th cent.). In late Assyrian times the deep cella with a more prominent rear alcove predominated. In Neo-Babylonian times Sumerian types disappeared, and at Babylon, Esagilla was situated in its own court formed by surrounding buildings. The generally square temple had an eastern entrance to an antecella leading to the cella on axis, both broad, a combination on the Sumerian axial layout. The broad cella was also general for the lower temple of the ziggurat.

C. Egypt. Though starting its architecture later, Egyptian remains present striking examples of beauty of form and decoration, as well as a certain fixation of form and style due to religious restrictions (Badawy, *Architecture*, 70 – 71). No evidence from EGYPT is available on houses before 5000 B.C., since probably they have been buried under annual inundations of the NILE. Later construction in stone, however, indicates that woven reed mats hung on bundled reeds were the early wall and structural system. Next a mud-daubed reed technique appeared and, though denied by some, proof of borrowing from Mesopotamia is demonstrable (cf. however, R. W. Ehrich, ed., *Chronologies in Old World Archaeology* [1965], 14 – 15).

Earliest indications regarding houses occur at Merimde (5th millennium B.C.), presenting one type of oval-shaped stone work for night use, roofless with floors below ground level, the occupant sleeping in a crouched position, and a day shelter of dome-shaped reed construction woven on a wood pole skeleton. The grouping of some along a curving street suggests a seeking for urban development. Similar settlements occurred at El Omari, Tasa, Badari, and Hemaniya (Badawy, *Architecture*, 11). In the era 3700 – 3200 B.C. (Badarian period) came the important development of rectangular wattle-and-daub structures and the creation of sun-dried brick.

Old Kingdom houses at Saqqara contained an entry hall, a living room and bedroom in two longitudinal strips. Other plans had dependencies of storerooms and work rooms, showing progress to the sixth dynasty. Middle Kingdom principal evidence for houses came from the preplanned cities as at El Lahun, with rooms predominantly narrow, rigidly laid out in strip fashion. One sophisticated row plan featured a three-strip arrangement with a large court at the N end of the center strip with private quarters in back. Orientation was to the N in all eras, with a roof device to direct the prevailing breeze inward for cooling effect (see A. Badawy in *JNES* 17 [1958]: 123, Fig. 1), causing access to the house to be from the S side of the street.

In the New Kingdom at TELL EL-AMARNA W, artisans' living quarters were oriented E-W, with a western front courtyard, a hypostyle hall, the kitchen, and bedrooms to the E for cool sleeping rooms. Roof terraces with awnings were served by a staircase from the kitchen. The typical Amarna house, however, was the villa with its family garden plot, dependency houses and main house approached through a hypostyle hall; it included a clerestory-lighted central hall as living room, with private quarters beyond. Wall paintings of the monuments indicate that some houses occasionally had three stories, and occasionally basements. The late period retained the tripartite arrangement of entry, living quarters, and private quarters, mostly two-story as at Medinet Habu (cf. U. Hölscher, *The Excavation of Medinet Habu*, 5 vols. [1934 – 54], 5:4 – 16, Figs. 3 – 20).

Palaces were built in Egypt only after 3000 B.C., one at Abydos (29th cent. B.C.) with its upper palisade wall of alternate recesses imitating an earlier wooden wall. From the 27th cent. came a

palace with a high, prominently slope-faced wall enclosing a central court, with service rooms against them and a separate walled enclosure for the main quarters. A double gateway was flanked by bastion towers with vertically channeled faces (Badawy, *Architecture*, 30). After a long gap in palace building, the palace of Amenhotep III at Malqata (14th cent.) presented a rectangular layout of a great audience hall, columned hall behind and rectilinear harem quarters beyond. Kitchen and other dependencies occurred against a S palace. The arrangement is like the tripartite house plan. In the Late Period, Apries's palace at Memphis is similar to residences at El Lahun of 1,300 years previous, but arranged on an axial passageway through what is believed to be a peristyle court northward to a second court.

Temples remain the most imposing elements in Egyptian architecture, with a typically basic enclosure. Earliest forms were small one-room reed shrines. Later on arose the sun temple, the cult temple of a particular deity, and the mortuary temple. Chief examples of the cult temple began with, among others, the Giza Sphinx temple. Amenemhat III built a temple (19th cent. B.C.) with three successive cellae preceded by a transverse vestibule. In the empire period, temple building was concentrated at Thebes, with the temples of Karnak and Luxor resulting. Karnak presents a gigantic series of open and covered courts extolling the grandeur of the age. In later times processions of the gods within the courts of Karnak developed on a station arrangement.

Basic elements of the cult temple include an axis, an entrance pylon, a hypostyle hall, a sanctuary and additional courts, and a naos. Its axis was usually oriented perpendicular to the Nile. Basic elements of the sun temple included an altar and an obelisk to represent the connection to the deity, all within an enclosure open to the sky, but no cult statue or naos. The chief deity was Aten or RE. Examples are those of Pharaoh Neuserre at Abu Gharab (2450 B.C.), of AKHENATEN at HELIOPOLIS (Amarna era), symmetrical in plan, and the sun temple of RAMSES II at Abu Simbel (Badawy, *Architecture*, 38 – 42).

Mortuary temples developed from the chapel at the E end of the mastabas. By the fifth dynasty the mortuary temple had become a complex of many rooms arranged around a pillared hall. Chief example from the empire period is the temple of Queen Hatshepsut at Deir el Bahari (Thebes), featuring a series of terraces at the base of rocky cliffs, where first appeared the proto-Doric fluted columns without curved tapers. That of Ramses III at Medinet Habu (12th cent. B.C.) is more like the usual cult temple, formed of halls on axis with flanking rooms. The portrayal of the king's deeds on the walls was done to display his political influence. Mortuary temples were built before the decease of its pharaoh.

Pyramids. The most remarkable monuments to the power and abilities of the Egyptian pharaohs were the PYRAMIDS at Giza, completed by the end of the fourth dynasty. Two general types

© Dr. James C. Martin

The Giza pyramids and sphinx are representatives of early Egyptian art and architecture.

were found: the stepped type as at Saqqara and the geometric as at Giza. Both were formed by slices of rubble inclined inward, with the geometric type faced with prismatic blocks (Badawy, *Architecture*, 51 – 52). In the First Intermediate Period, the pyramid was separated from the tomb and became a mere symbol. (See I. E. S. Edwards *The Pyramids of Egypt*, rev. ed. [1985], ch. 8.)

D. Palestine. Mesolithic JERICHO produced the earliest houses in Palestine c. 7000 B.C. (Kenyon, *Archaeology*, 42 – 44), well-built, round, probably domed, floors below ground level, and built of plano-convex bricks, one of the earliest occurrences of this brick. Strangely enough, in the Late Neolithic period (5th millennium B.C.) free-standing houses of plano-convex brick on stone foundations occur (ibid., 65), along with the round plan, though some plans suggest a rectangular shape.

In the Chalcolithic Period roofing by wood timbers appeared, and, commonly enough, gabled in the next millennium as shown by the house urn of Kodeirah (Badawy, *Architecture*, 157). In the Early Bronze Age an apsidal form of house plan briefly appeared (c. 2300) as at MEGIDDO, an import from the Aegean area. Now also the typical Palestinian house of mud brick or rammed earth on rough rubble emerged, rectangular in shape with a lefthinged door in the middle of the long side.

In the Middle Bronze Age the house had more rooms, often arranged around a court, perhaps reflecting Mesopotamian influence. At Tell Beit Mirsim one house had a room large enough to require center posts. Living quarters were generally on the second floor. Decline set in at the Israelite conquest, with earlier Canaanite houses reoccupied or crudely rebuilt, with an occasional house showing a court and flanking rooms. Contact with the Phoenicians later provided improvements in techniques for public buildings but not for private houses. In the Babylonian and Persian periods Greek influence, as well as Mesopotamian and Egyptian forms, came in through their trading posts along the sea coast.

Palaces of note did not occur in Israelite Palestine until the 10th cent. B.C. First was the House of the Forest of Lebanon (1 Ki. 7:1 – 12), a hypostyle with wood columns of LEBANON cedar (Badawy, *Architecture*, 160), and later the palace of AHAB at SAMARIA. At UGARIT from the era of the Middle Egyptian Kingdom appeared a palace featuring a scriptorium, stable, and military governor's

residence. At Hama near the monumental gateway to the citadel are the remains of a columned vestibule leading to three

This Neolithic (c. 6,850 B.C.) stone tower discovered in Jericho is one of the oldest architectural structures discovered to date.

groups of transverse rooms, with upper residential quarters accessible by a stairway (ibid., 163).

Temples. Jericho's mound provides one of the earliest sanctuaries, from the early 8th millennium (Kenyon, *Archaeology*, 41 – 42). The cultic high places are represented by Babed-Dhra E of the Dead Sea. An early example of the antecella and cella occurred in the Early Bronze Age shrine at AI (c. 28th cent. B.C.). In the Middle Bronze Age the cellae became deep, with porch and antecella open to the outside, frequently flanked by towers. In Israelite times more TEMPLES appeared. BETH SHAN'S tell provides a temple (10th – 9th cent.) featuring an antecella and raised rear cella reached by a stair to the side (cf. the *dēbîr* H1808 ["inner sanctuary"] of Solomon's TEMPLE; see also Kenyon, *Archaeology*, 251).

Elsewhere in Palestine chief examples of temples appeared at Byblos (GEBAL) from Egyptian Dynasty II, similar to the tripartite layout of Egyptian cult temples, and a strictly Phoenician type. UGARIT excavations revealed two temples, one to BAAL and a second to his father DAGON from the Middle Egyptian Kingdom similar in plan to the Byblos style temple. Each had a court with altar, an antecella, and broader cella beyond containing an offering stand. The Byblos Reshef temple employed the antecella and raised cella (Badawy, *Architecture*, 167–68).

Cities. The earliest indication of urban development in Palestine, if not in the whole Middle E, is found at JERICHO in the grouping of settlers about the shrine from c. 7800 B.C. By the year 7000 a tower more than 30 ft. high (Kenyon, *Archaeology*, 44) and a defensive wall had been built, showing troublous times. By c. 6500 a settlement appeared at Seyl Aqlat near PETRA. About 3000 ARAD in the NEGEV developed a triangular-shaped city plan with an enclosing stone wall and bastions (Badawy, *Architecture*, 150). Tell Beit Mirsim (23rd cent.) presented an oval-shaped wall with a few N–S streets. Similar layouts appeared in the Late Bronze Age at Megiddo. City orientation is suggested in Num. 35:4 – 5; although the cardinal points of the compass are given, it does not follow that the city was rectangular; rather, simple travel around the city is indicated. A significant feature of Palestinian

towns was the effort to provide water supplies within the city walls: Jerusalem and Megiddo had vertical shafts; El Gib and Gezer had tunnels with stairs.

Important towns beside Jericho include Gezer, Byblos, Tyre, and Ugarit. GEZER was occupied from Neolithic times (7000 – 5000 B.C.). In the 20th cent. its inner enclosure developed to provide three gates and took on a foot-shaped outline. In the Late Bronze Age a new wall was built with thirty towers. Byblos (see GEBAL) showed contact with Mesopotamia c. 3000, as seen by the Jemdet Nasr seals in the lowest strata (Badawy, *Architecture*, 154), thus revealing the fact of intercommunication and influence on what was done there. Close ties with Egypt may be seen from early dynastic times down to the empire period. Cretan influences appeared 2100 – 1900. The principal street curved NW from the central plaza toward the wall. Remains show that secondary streets crossed the main street at irregular intervals. TYRE lay on an island which originally was two, later joined by King HIRAM (c. 969). In later times a companion city was built on the mainland. UGARIT in the Late Bronze Age had an irregular outline with irregular streets. Excavations indicate occupation as early as the Mesopotamian Pre-Pottery era. The city wall was rebuilt c. 1800. After 1380 several large residential areas developed, separated by generally parallel streets. Houses frequently had cesspools and a well; a basin occurred in each court which also frequently had an awning.

II. Style. The matter of style was a result of the use of materials in a particular fashion and thus it varied with the use of different materials. Although both in Egypt and Mesopotamia the earliest construction was of woven reeds, yet even these developed a primitive elegance. Out of the following wattle-and-daub technique a wall form of slightly inclined character arose, repeated in the later mud brick dwellings, giving the walls an attenuated character. A persistent element of Egyptian stone work was the graceful cavetto cornice derived from earlier drooping reed shapes. The stone bundle papyriform column of Saḥure was modeled on the earlier bundled reed columns, a pleasant variant to the round open papyriform column of Karnak. The evidence from the Pyramid Age presented a frank expression of the power of stone as a superior architectural material. Relief was supplied in the fifth-sixth dynasties by copying plant forms.

After the First Intermediate Period a noticeable realism appeared in the artistic adornment of the monuments. Though a clear decay may be seen, and though a certain vitality derived from spatial treatments, as in Queen Hatshepsut's mortuary temple, it was not arrested by Amarna but accelerated as is evidenced by a certain "inelegance" of artistic decoration. The forces of decadence appeared in the later colossal architectural examples, and the imitative archaism of the Saite period is mere copying of earlier examples. Egyptian architecture was able to survive for its long period by being based on 8-to-5 height-base proportions of the isosceles triangle and a square related to it. Amarna adopted a series 3, 5, 8, 13, 21, etc.

Mesopotamia, lacking a good building stone, turned to a combination of timber and brick, using plaster as a decorative material (cf. Gen. 11:3). Technicians soon developed the true brick arch for arches, vaults, and domes. Crenelated parapets finished wall tops in imitation of mountains. Mesopotamian architecture suffered by contrast to Egyptian, for the dark brick crumbled to the gray of the earth. Though symmetry dominated at first, later on orthogonal demand prevailed and a certain rigidity predominated. Decorative techniques included the extensive use of plaster, painted and plain. In various eras stone slab wainscots lined the walls, illustrating in graphic detail the story of conquest, as in the palace of TIGLATH-PILESER III (8th cent B.C.).

Strangely enough, in Palestine, where a good white limestone was available, stone was never used except in the Solomonic era, the lack indicating a people unfamiliar with this technique who

were native to other areas without stonework. (Cf. J. Van Seeters, *The Hyksos* [1966], 17 et passim.) Against brick work elsewhere the prevailing mode was rubble stone set in mud and sometimes plastered. Solomon's temple and palace and Ahab's palace at Samaria were almost the sole Israelite achievements. The significant contribution of northern Israel to architectural art was the proto-Ionic capital developed from the Mesopotamian sacred tree.

III. Materials and techniques. The most important step beyond reed construction was the shaping of mud into a suitable building material, either by hand or (later) by a mold. Though the true arch in mud brick was developed in Egypt, this fact never released Egypt from the post-and-lintel style of stone construction (Badawy, *Architecture*, 66). Yet most houses were built of mud brick. The abundance of labor and stone made for installation of unfinished blocks finished in place. Pyramids were constructed by the use of earth ramps (ibid., 63), and face blocks were dressed after placing. Lebanon cedar was imported for beams for temples, but date palm trunks served as roof beams for the poorer houses that had roofs of brush and reeds plastered with mud and then whitewashed. Egyptian machines seemed never to have included more than the sledge, simple pulleys and windlasses, the crowbar, and ropes.

In Mesopotamia BITUMEN became the universal mortar. Burnt BRICK was used for protective facing. Drainage channels and expansion joints to drain interiors of structures and relieve pressures were developed. Timber (see WOOD) was imported into Egypt and Mesopotamia, usually from Lebanon, for roof construction, but poorer houses were roofed like those in Egypt. STONE was reserved for the bull colossi, for wainscots and the like in Mesopotamia. For resistance to earthquake shock in Syria and Palestine a system of wood timbers was employed between stone courses (1 Ki. 6:36). Some doors were made of stone with pintle projections to fit into sockets in sill and lintel; others were fashioned of wood with an edge post installed the same way. In Mesopotamia stone door sockets were frequently inscribed by the king-builder.

Smith, *The Art and Architecture of Ancient Egypt*, 3rd ed. [1981]; S. B. Downey, *Mesopotamian Religious Architecture: Alexander through the Parthians* [1988]; H. Frankfort, *The Art and Architecture of the Ancient Orient*, 5th ed. [1996].)

H.G.STIGERS

archives. Archives were common among the nations of the ANE from the 2nd millennium B.C. onward. The Babylonian and Assyrian kingdoms kept chronicles of their royal deeds as did the Persians (Esth.2:23; 6:1). Temples and palaces had rooms for storage of such records. The location of Persian archives included ECBATANA (Ezra 6:2, KJV Achmetha) and BABYLON (where the CYRUS Cylinder was found). Ezra asked that the royal "archives" (lit., "house of the treasures") in Babylon be searched, and as a consequence the royal memorandum was found (Ezra 5:17). The Israelites stored their sacred Scriptures in the temple, where the law of Moses was found (2 Ki. 22:8). At a later time the chamber of the scribe Elishama served as an archival room (Jer. 36:20). In Egypt in even later times storehouses were built in connection with the synagogues (see GENIZAH), and these have provided MSS of great importance for biblical textual criticism.

H. G. STIGERS

Arcturus ahrk-toor'uh. One of the brightest stars in the sky, found in the constellation Boötes. It is

the KJV rendering of the Hebrew terms (*āš* H6933 (Job 9:9) and (*ayiš* H6568 (38:2), both of which are now usually understood as a reference to the constellation of the Great Bear (Ursa Major or Big Dipper). See ASTRONOMY III.

Ard ahrd (אָרְדִּים H764, possibly “hunchbacked”; gentilic אֲרִיטִים H766, “Ardite”). Listed among the “sons” of BENJAMIN in Gen. 46:21, but identified more specifically as a son of BELA and therefore as Benjamin’s grandson in Num. 26:40 (cf. 1 Chr. 8:3, ADDAR).

Ardat ahr’dat (Vulg. *Ardat*, but the spelling varies in the MSS). KJV Ardath. A field where EZRA is said to have communed with God and received a vision (2 Esd. 9:26). Its location is unknown.

Ardite ahr’di’t. See ARD.

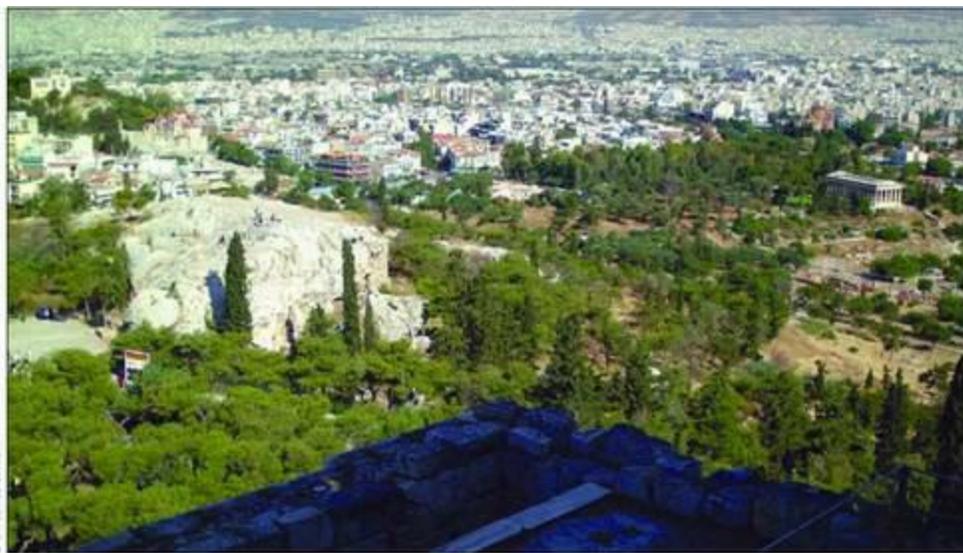

Ardon ahr’don (אֲרֹנִים H765, possibly “hunchbacked”). Son of CALEB (apparently by AZUBAH) and descendant of JUDAH (1 Chr. 2:18; LXX, *Orna*).

Arel uh-ree’li (אֲרֵלִים H739 [possibly variant of אֲרִיִּלִּים H791; see ARIEL], gentilic אֲרֵלִיטִים H740, “Arelite”). Son of GAD and ancestral head of the Arelite clan (Gen. 46:16; Num. 26:17).

Areopagite air'ee-op'uh-gīt (Ἄρεοπαγίτης G741; cf. AREOPAGUS). Epithet with which DIONYSIUS is identified in Acts 17:34 (so most translations; NIV, “a member of the Areopagus”).

Areopagus air'ee-op'uh-guhs (Ἄρειος πάγος G740, “hill of Ares,” also known as “Mars’ Hill”; Ares was the Gk. god of war, corresponding to Mars in the Roman pantheon). A large, irregular outcropping of limestone about 380 ft. high. It lies NW of the ACROPOLIS, to which it is connected by a low, narrow saddle, and overlooks the agora, the marketplace of classical and Hellenistic ATHENS.

The archaeological evidence from the Areopagus is much less plentiful than the literary references to it. There are two unhewn stones on the summit. On one, the stone of outrage, stood the accuser. On the other, the stone of ruthlessness, stood the accused. There are also a few cuttings that may have served as the foundations of a building or as platform for altars. On the S side near the top is a flight of fifteen hewn steps that lead from the connecting saddle to the top. On the NE slope four late Helladic tombs were cut into the soft rock. Foundation walls of an elliptical building of the Geometric period have been uncovered on the NW

Looking from the Acropolis in Athens, we see the Areopagus (the limestone outcrop also known as Mars’ Hill) with the agora or : market place below it. (View to the N.)

slope. The large quantity of votive material in and around it suggests that it was an early religious site, perhaps the sanctuary of Areia, an early cult name for Athena. (Areia has been offered as an alternative etymology for the name Areopagus; another suggestion is Arai, “Curses,” referring to the Cave of the Furies on the slope of the hill.)

The Court of the Areopagus presumably met on the hilltop in earliest times. At first it exercised control over all matters pertaining to the city. According to tradition it was originally convened to try cases of murder. The first case tried before it was that of Ares (hence the name of the hill according to the ancients), for the murder of Helirrhothios, who attempted to rape his daughter. The most famous case, immortalized in the *Oresteia* of Aeschylus, was that of Orestes, who was charged with the murder of his mother, Clytemnestra. Athena intervened in a tie vote to save him from the avenging furies and thus established the superiority of law and reason over revenge in Athens. (Cf. I. T. Hill, *The Ancient City of Athens* [1953].)

Under the Athenian constitution the court lost most of its ancient powers but retained jurisdiction in cases of homicide. By the 1st cent. of the Christian era, it exercised a general censorship in matters

of religion and education. The court was made up of all archons who after their term in office were able to prove themselves free of official misconduct in accordance with the provisions of the law.

Although the court originally met on the hilltop, by the 5th cent. B.C. judicial trials were probably heard in the Stoa Basileios at the NW corner of the agora. This building was connected with the duties of the Archon Basileios, who was responsible in matters of religion. An annex of the Stoa was used to hear cases where privacy was important. Presumably the court met on most occasions in the Stoa, but for the sake of ceremony moved to the hilltop to pronounce sentence. The reason for the change of location was probably the exposed situation of the Areopagus. The velocity of the wind there is very great on clear days as well as in inclement weather. It is often difficult to stand there and even more difficult to hear. The name Areopagus survives today as the title of the Supreme Court of Greece.

PAUL's visit to Athens is recorded in Acts 17:15 – 34. Because of his teachings regarding Jesus and the resurrection, he was taken before the Court of the Areopagus. It is presumed that the court was exercising its right of censorship on the religious life of the community. The account suggests that the proceedings were in the nature of a hearing rather than an actual trial. Paul, a foreigner and a teacher, was examined to determine if he should be allowed to circulate freely in the city. The hearing probably took place in the Stoa Basileios, since reference is made to a surrounding crowd (vv. 19 – 22, 33), which could not be successfully accommodated on the hilltop.

No comment was made about the official response of the court to Paul's presentation of the gospel. Two converts were mentioned by name, DIONYSIUS, a member of the court, and a woman, DAMARIS. Others, unnamed, were also said to have believed. (The remains of the church of St. Dionysius the Areopagite are visible on a ridge on the N slope of the hill.)

A. RUPPRECHT

Ares air'eez. KJV Apoc. form of ARAH (1 Esd. 5:10).

aretalogy. This term (from Gk. *aretē* G746, “virtue, excellent deed”) is used by modern scholars to refer to the celebration and enumeration of the miracles performed by a god (cf. the term *Epiphaneiai*, which refers to collections of divine appearances and supernatural deeds). Stories of divine miracles were very common in antiquity; especially popular were those attributed to the great healer ASCLEPIUS, son of APOLLO. In Hellenistic times, Oriental cults competed for converts by publicizing the mighty deeds of their respective gods. Supernatural cures were also attributed to philosophers and shamans (cf. the *Life of Apollonius of Tyana*, written by Flavius Philostratus, who died c. A.D. 245). Using the term somewhat loosely, some scholars regard the praise of wisdom in Prov. 8 (and other comparable literature) as a form of aretalogy. In NT studies, it is sometimes argued that the Gospels grew out of collections of Jesus' miracle stories and that therefore the gospel genre is a counterpart (or critique) of Greco-Roman aretalogical traditions. (Cf. H. C. Kee, *Miracle in the Early Christian World* [1983].)

Aretas air'uh-tuhs (Ἀρέτας G745, from Nabatean *Hariṭat*). It is possible that Aretas is a dynastic name, for it was borne by several kings of the NABATEANS, a people of northern ARABIA whose capital was the rockcut stronghold of PETRA (the SELA of the OT). Aretas I (mentioned in 2 Macc. 5:8), the first known Nabatean king, appears in history in 169 B.C., in which year he held MOAB, a fact that reflects a dynamic thrust up the northern caravan routes toward the vital center of DAMASCUS. Aretas III in 85 B.C. actually occupied this ancient city and nodal point of the trade routes of the

FERTILE CRESCENT. It is interesting to note thus early in history a military goal of Nabatean expansion (it appears again in the story of PAUL). In a westward direction, Aretas II appeared in the region of GAZA in 96 B.C., another thrust toward a vital trade route that failed because of the tough defense of Alexander Jannaeus (see HASMONEAN II.C).

It was Aretas IV whose “ethnarch” is said to have guarded Damascus in order to arrest Paul (2 Cor. 11:32). The statement raises a problem, for Damascus at the time appears to have been part of the Roman province of SYRIA. Obviously some details of local history are lacking, for the statement in the Corinthian epistle must be taken seriously. Some have suggested that the Emperor CALIGULA, who succeeded TIBERIUS in A.D. 37, gave Damascus to Aretas in accordance with his policy of promoting client kings. One of the early acts of Caligula was to depose HEROD Antipas, Aretas’s old foe, and expand the kingdom of his friend Herod Agrippa I, who had already received, by the same imperial favor, the tetrarchy of Philip and Lysanias (Jos. *Ant.* 18.6.10 §237). It is not improbable that Caligula similarly bestowed territory on the determined Nabatean foe of the Herodian family. All that is lacking is positive historical evidence or documentation. To say that no known facts impede the theory is not enough, striking and suggestive though it is that there are no surviving imperial coins of Damascus between the years A.D. 34 and 62.

Furthermore, whatever Caligula may have done to promote or confirm Nabatean control in Damascus, the year 37 seems too late for the conversion of Paul and raises difficult problems in the chronology of the apostle’s life (see CHRONOLOGY OF THE NT). Several other explanations of the Pauline statement are preferable. The absence of distinctive imperial coinage for the twenty-eight years from A.D. 34 to 62 may indicate that the Romans recognized a Nabatean area of influence in the city, which had been for two centuries a goal of their expansion. The Romans were realists and adaptable administrators, and on this turbulent frontier of their dominions they may have been prepared to recognize certain alien privileges in return for a measure of collaboration. Aretas IV was an experienced and able ruler who had been confirmed in his tenure of power by Augustus in A.D. 9, and who held his throne for a significant thirty-one years. This suggestion fits in with that of F. F. Bruce, who writes: “More probably the ethnarch was Aretas’s representative in Damascus, who looked after the interests of the many Nabataean subjects in the city while it was under Roman rule” (*The Acts of the Apostles: The Greek Text with Introduction and Commentary*, 3rd ed. [1990], 242).

Another not unlikely suggestion is that Damascus was in Nabatean hands briefly and illegitimately during the period of Aretas’s hostilities against Herod Antipas. Aretas was Antipas’s father-in-law. It must have been at least as early as A.D. 23 that Antipas met in Rome his evil genius, HERODIAS, wife of his half-brother Philip (see discussion under HEROD V.B.2 and VI). It is difficult to say who was primarily to blame for the notorious liaison JOHN THE BAPTIST castigated, but Antipas had the audacity to take Herodias back to Palestine as his *de facto* queen. Herod’s rightful queen, the daughter of Aretas IV, was apprised of her husband’s audacious infidelity before the guilty couple reached Palestine, and she made a prompt flight to the Transjordanian fortress of MACHAERUS and thence to Petra, her father’s stronghold. Antipas, therefore, returned home to find a troublesome frontier war on his hands. He was forced to appeal to Rome for help, and Tiberius, who took a serious view of the trouble on the eastern frontier and asked for nothing more from procurators, collaborators, and client kings in that area than the stable maintenance of peace, handed over the task of intervention and pacification to Vitellius, the governor of SYRIA. (Cf. G. W. Bowersock, *Roman Arabia* [1983].)

No clear account of operations can be given. It is known that Vitellius was governor of Syria from A.D. 35 to 37, and that he was heavily preoccupied with the Parthian problem on his NE

marches. It may be supposed that a Nabatean incursion into the Damascus area, in pursuance of old military instincts to occupy the trade routes in all contexts of war, was an annoying diversion to which he did not take kindly. On the other hand, it may have been Aretas's illegal intrusion that prompted Tiberius to dispatch the legions of Syria against him. At any rate, the affair dragged on until Tiberius died in 37, at which time Vitellius pulled in his legions (Jos. *Ant.* 18.5.1 – 3 §§109 – 24). It may be supposed that Aretas withdrew or rendered his occupation unobtrusive until its accomplished fact was recognized by Caligula. This again borders on the realm of conjecture; it does emerge, however, that it is impossible to use Paul's surprising reference to Aretas's presence and hostility in Damascus as a dating point in any Pauline chronology. The occasion involved is likely to have been before A.D. 35, and the action against Paul may indicate Jewish sympathies on the part of Aretas's daughter. (For a different approach, see D. A. Campbell in *JBL* 121 [2002]: 279 – 302.)

E.M.BLAIKLOCK

Areus air'ee-uhs. KJV Apoc. form of ARIUS (1 Macc. 12:20).

Argob ahr'gob (ארגוב H758 and H759, prob. “mound” [from ארגב H8073, “clod of earth,” with prosthetic *ʾaleph*]). (1) A region in BASHAN (Deut. 3:4, 13 – 14; 1 Ki. 4:13) in the kingdom of OG containing “sixty cities,” but possibly distinguished from the “settlements of Jair” (see HAVVOTH JAIR), which belonged to GILEAD (cf. Num. 32:41; Jdg. 10:4; 1 Ki. 4:13; in contrast, Deut. 3:14 seems to be corrupt, because the phrase *wayyiqra' ʾōtām*, “he called *them*,” lacks an antecedent, and *ʾet-habbāšān*, “the Bashan,” is introduced abruptly into the text). The location of Argob is fixed by Deut. 3:4, 13 – 14, which supply the western border as the territory of the Geshurites and Maacathites (i.e., the present Golan heights), and by the rendering of *Targum Pseudo-Jonathan*, Trachona (Aram. *ʾtrkwn*), possibly from Gk. *trachōn*, “rugged, stony”; cf. TRACONITIS), referring to the whole southern part of Bashan, from the eastern edge of el-Leḡa (Trachon), about 20 mi. S of DAMASCUS, to approximately Nahr er-Ruqqad. However, the precise location is disputed. (Cf. J. Simons, *The Geographical and Topographical Texts of the Old Testament* [1959], 8 – 9, 124, 129; M. Ottosson, *Gilead: Tradition and History* [1969], 111 – 12.)

(2) An uncertain text (2 Ki. 15:25) leaves the question open whether the names Argob and Arieḥ refer to men or places. If they are men, it cannot be determined whether they were fellow-conspirators with PEKAH or victims slain with PEKAHIAH. AS early as 1886, B. Stade (in *ZAW* 6 [1886]: 160) had suggested that the phrase “Argob and Arieḥ” in the MT was a gloss on 2 Ki. 15:29 that a scribe mistakenly (because of the repetition of “Gilead”) included in v. 25. If so, Argob would be the region discussed above (1), and Arieḥ may be a reference to Havvoth Jair. (See also M. Geller in *VT* 26 [1976]: 374 – 77, who proposes the translation “near eagle and lion,” i.e., between the guardian statues of Pekahiah's palace.)

W. C. KAISER, JR.

Arianism. See ARIUS #2.

Ariarathes air'ee-uh-ray'theez (Ἀριαράθης). Also Arathes, Ariathes. King of CAPPADOCIA (163 – 130 B.C.). He was driven from his throne by the Syrian king Demetrius Soter because, in conformity with the wishes of Rome, Ariarathes had declined a proposal to marry the sister of the Syrian king. In 158 he fled to Rome, but later was restored to the throne. In 139 the Romans wrote letters to him and other eastern kings in favor of the Jews (1 Macc. 15:22). This was the result of an embassy sent to

Aridai air'uh-di' (אֲרִידַי H767, a Persian name of uncertain meaning). One of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:9).

Aridatha air'uh-day'thuh (אֲרִידַתָּא H792, a Persian name of uncertain meaning). One of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:8).

Arieh air'ee-uh (אֲרִיֵּה H794, "lion"). Possibly a man who was assassinated along with PEKAHIAH and Argob (2 Ki. 15:25). For other interpretations of the text, see ARGOB #2.

Ariel (person) air'ee-uhl (אֲרִיֵּל H791, possibly "lion of God"; see also ARELI). (1) One of the leaders sent by EZRA to IDDO and to the temple servants (NETHINIM) in CASIPHIA, with an order to bring attendants for the house of God (Ezra 8:16 – 17; called "Iduel" in 1 Esd. 8:43).

(2) The SEPTUAGINT of 2 Sam. 23:20 reads "the two sons of Ariel of Moab" (in 1 Chr. 11:22, "the two Ariel[s] of Moab), but here the Hebrew term *'āriēl* H738 may not be a proper name (NIV translates, "two of Moab's best men [KJV, lionlike]"; cf. *'er'ēl* H737 in Isa. 33:7).

W. C. KAISER, JR.

Ariel (place) air'ee-uhl (אֲרִיֵּל H790, possibly "altar hearth of God" or "lion of God"). (1) A symbolical designation for JERUSALEM (Isa. 29:1 – 2, 7), possibly suggested by metonymy as the place where the altar of God with its worship was located. Those who identify this name with "God's hearth" suppose that the word comes from a root *'rh* "to burn" (on the analogy with the Arabic *'iryat*, "hearth"). If this is the correct root, then the *lamed* would be an affirmative (cf. GKC §85s). Various commentators, following the Isaiah TARGUM, favor this view and point to Ezek. 43:15 – 16, where the term (also *har'ēl* H2219 in v. 15a [KJV mg., "Harel"]) refers to an altar of four cubits with four horns on its corners. (Line 12 of the MOABITE STONE has the words *'r'ldwdh*, which possibly should be translated "the altar hearth of David"; but see J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions* [1971], 1:76.) Less likely is the view that the word means "God's lion" (cf. 2 Sam. 23:20; Isa. 33:7). One other possibility is "the light of God" (cf. Heb. *'ōr* H240 and Akk. *Urr(um)*; in Ugar. the word is found in the *a-class*, *'ar*).

W. C. KAISER, JR.

Arimathea air'uh-muh-thee'uh (Ἀριμαθαία G751; some editions, Ἀριμαθαία). Also Arimathaea. The native town of Joseph, a member of the SANHEDRIN who, after the crucifixion, obtained the body of Jesus and placed it in his own unused tomb (Matt. 27:57 – 60; Mk. 15:43; Lk. 23:50 – 53; Jn. 19:38; see JOSEPH #14). Arimathea is mentioned in the NT only in connection with this story. The exact site is uncertain, but it is thought to be identical with the modern Rentis, 20 mi. NW of Jerusalem, in the hills of the SHEPHELAH area. It may be the same as the OT RAMATHAIM, where the prophet SAMUEL lived (1 Sam. 1:1; but see RAMAH #3). It is mentioned in 1 Macc. 11:34 (*Rathamin*; cf. *Jos. Ant.* 13.4.9 §127, with several orthographic variants), where it is said that Demetrius II gave to Jonathan MACCABEE three Samaritan toparchies, including Arimathea (145 B.C.).

Arioch air'ee-ok (אֲרִיּוֹךְ H796, possibly a Hurrian name). (1) An ally of KEDORLAOMER king of ELAM, who with three other kings led a punitive expedition against the kings of Sodom, Gomorrah, Admah, Zeboiim, and Bela in Palestine (Gen. 14:1, 9). Victorious over the allied army of these five Palestinian kings, Kedorlaomer's forces were, nevertheless, put to flight by the armed retainers of Abram the Hebrew (see ABRAHAM).

The proposed identifications of these kings have not been widely accepted. Difficulties are phonological and chronological, those of the latter variety being the more problematic. If the account is to be taken seriously as historical tradition, all rulers identified with the biblical names should be contemporaries of each other and of Abraham (19th or 18th cent. B.C.). The district over which Arioch ruled is called ELLASAR in the OT. Some have seen in this name a Hebrew spelling of Akkadian *āl Larsa* ("city of Larsa") and have identified Arioch with Eri-Aku, a variant spelling of the name of Warad-Sin, king of Larsa c. 1830. His reign ended about thirty years before that of HAMMURABI of Babylon (identified by some with biblical AMRAPHEL).

Others identify biblical Ellasar with the city of Ilanzura, mentioned in HITTITE texts and the MARI archives and located between CARCHEMISH and HARAN. Some support for this interpretation might be found in the GENESIS APOCRYPHON 21.23, which gives Arioch's realm as CAPPADOCIA (*kptwk*). If the biblical TIDAL should then be identified as one of the HITTITE rulers named Tudhalia, two of the four kings would hail from Anatolia (ASIA MINOR). The name Arioch, if it be disassociated from Eri-Aku, may be the HURRIAN name Arriwuk, which was borne *inter alia* by the fifth son of Zimri-Lim, king of Mari (c. 1779 – 61 B.C.). Several scholars, however, believe that Ellasar corresponds to ASSHUR (cf. F. M. Th. Böhl, *Opera minora* [1953], 45 – 46); if so, Arioch should perhaps be identified with Tukulti-Ninurta I (see M. C. Astour in *Biblical Motifs*, ed. A. Altmann [1966], 65 – 112, esp. 83).

(2) A second biblical Arioch (Aram. *ʾaryôk* H10070) is the captain of NEBUCHADNEZZAR's bodyguard (Dan. 2:14 – 15, 24 – 25), who was commanded to execute the "wise men" who had failed to interpret the royal dream.

(3) A king of the Elymeans (Jdt. 1:6).

H. A. HOFFNER, JR.

Arisai air'uh-si (אֲרִיסַי H798, Persian name of uncertain meaning). One of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:9).

Aristarchus air'is-tahr'kuhs (Ἀριστάρχος G752, "best ruler"). A Thessalonian Christian who was a close companion of PAUL. All the NT references doubtless relate to the same man (Acts 19:29; 20:4; 27:2; Col. 4:10; Phlm. 24). Aristarchus first appears in the account of the riot at EPHESUS, where he and GAIUS, as "Paul's traveling companions," were seized by the mob and rushed into the theater (Acts 19:29), but seem to have been released unharmed. He and SECUNDUS apparently were the official delegates from the Thessalonian church accompanying Paul to Jerusalem with the collection (Acts 20:4).

Aristarchus was also present when Paul's ship left CAESAREA on the trip to Rome (Acts 27:2). W. M. Ramsay contended that he could only have accompanied Paul as his slave (*St. Paul the Traveller and the Roman Citizen*, 14th ed. [1920], 315 – 16). It is not certain, however, that he went all the way to Rome with Paul. He may have been going home and stopped off at MYRA (Acts 27:5),

as J. B. Lightfoot suggested (*St. Paul's Epistle to the Philippians* [1868], 34 – 35). But he was with Paul in Rome when the apostle wrote Colossians and Philemon. In Phlm. 24 he is designated as a fellow worker, but in Col. 4:10 he is called “my fellow prisoner,” a title also given EPAPHRAS (Phlm. 23). Perhaps the two alternated in voluntarily sharing Paul’s imprisonment. From the grouping of the names in Colossians, Aristarchus seems to be of Jewish origin. Some see an allusion to Aristarchus in Paul’s comment about “the brother who is praised by all the churches for his service to the gospel” and who “was chosen to accompany” the apostle in carrying the offering of the Gentile churches (2 Cor. 8:18 – 19). According to tradition he was martyred in Rome under NERO.

D.E. HIEBERT

Aristeas, Letter of air’is-tee’uhs (Ἀριστείας). The title given to a document purporting to be an eyewitness account of the circumstances that led up to the translation of the Jewish Scriptures into Greek (i.e., the origin of the SEPTUAGINT). Although commonly called the *Letter/Epistle of Aristeas* (the MSS have simply *Aristeas to Philocrates*), the literary form is that of first-person narrative. The author, an officer of the court of PTOLEMY II Philadelphus (285 – 246 B.C.), tells the story of his mission as an emissary of the Egyptian king to Eleazar, “the High Priest of the Jews,” in Jerusalem, in order to arrange for the “Jewish laws” to be translated into Greek for inclusion in the library of ALEXANDRIA. Seventy-two translators competent in Hebrew and Greek are requested and supplied for the task. Following seven nights of banqueting, during which the translators answer seventy-two questions put to them by the king, the work of translation is carried out in the course of seventy-two days.

Although the historical data contained in the work were once accepted at face value, it has been recognized for centuries that, whatever traditions may lie behind the narrative, it is essentially fictitious. Twice (§§28, 182) the author betrays the fact that he belongs to a later age, and he is guilty of a number of striking anachronisms. This work belongs to a larger group of Jewish apologies that attempted to commend Judaism and its way of life to Gentiles by demonstrating the antiquity and moral superiority of its traditions and doctrines. The author is undoubtedly a Jew (or at least a PROSELYTE) of Alexandria who uses a favorite device of the Jewish apologists of the DIASPORA and writes under the guise of a Greek pseudonym. (See S. Jellicoe, *The Septuagint in Modern Study* [1968], 29 – 58; N. Fernández Marcos, *The Septuagint in Context* [2000], ch. 3.)

Various dates between 200 B.C. and A.D. 50 have been suggested for the origin of the “epistle.” A date around the middle of the 2nd cent. B.C. seems most probable. The work is of historical value primarily because it contains views concerning the origin of the LXX that were held at the time it was written and that were repeated, embroidered, and elaborated by subsequent Jewish and Christian authors. (Gk. text ed. by H. St. J. Thackeray in H. B. Swete, *An Introduction to the Old Testament in Greek*, 2nd ed. [1914], 533 – 606. For a recent English translation with introduction and notes, see *OTP*, 2:7 – 34.)

W.W. CASQUE

Aristeas the Exegete. Also referred to as Aristeas the Historian. Our knowledge of this Jewish writer, who lived perhaps around 100 B.C., comes solely from a brief summary of part of his work, *Concerning the Jews*, preserved by EUSEBIUS (*Praep. Ev.* 9.25.1 – 4, quoting Alexander Polyhistor). This summary is itself a synopsis of the book of Job that has points of contact with the SEPTUAGINT addition to the epilogue (Job 42:17b-e in Rahlfs’s *Septuaginta*). The author of the *Letter of Aristeas* (§6; see ARISTEAS, LETTER OF) says that he had previously written a document relating facts about the

Jews, and some scholars have attempted, without success, to establish a connection between that statement and the work of Aristeeas the Exegete. (English trans. and introduction in *OTP*, 2:855 – 57.)

Aristides, *Apology of* a'ruh-sti'deez (Ἀριστείδης). A work by a Christian Athenian philosopher named Marcianus Aristides, who, according to EUSEBIUS (*Eccl. Hist.* 4.3), was a contemporary of another Athenian writer, QUADRATUS, both of whom addressed their “apologies” for the Christian religion to Emperor HADRIAN. A century later JEROME wrote that he was familiar with the work, but after this date Aristides faded from view until the 19th cent.

A Latin translation of a fragment of an Armenian version of the *Apology* was published in 1878. In 1889 J. Rendel Harris of Cambridge University discovered a Syriac version of the entire work, and two years later he published the Syriac text with translation into English. J. A. Robinson then showed that the greater part of the *Apology* is contained in *The History of Barlaam and Josaphat*, extant in many Greek MSS and numerous translations (J. R. Harris, *The Apology of Aristides on Behalf of the Christians*, with appendix by J. A. Robinson [1893]). The whole work consists of seventeen chapters. It is an important witness to the nature of Christianity in the first half of the 2nd cent., and has points of contact with the *Shepherd of Hermas* and the *Didache*, which come from about the same period. (English trans. in *ANF*, 9:259 – 79.)

S. BARABAS

Aristion (Ἀριστίων). A Christian contemporary with PAPIAS, from whom this church father received information about the sayings of the Lord. EUSEBIUS (*Eccl. Hist.* 3.39.4) quotes Papias as saying, “If anyone came who had followed the presbyters, I was accustomed to inquire about the sayings of the presbyters, what Andrew or what Peter had said [*eipen*], or Philip or Thomas or Jacob or John or Matthew or any other of the Lord’s disciples; and what Aristion and the presbyter John, the disciples of the Lord, say [*legousin*].” The precise meaning of Papias’s statement has been a matter of dispute from the time of Eusebius. The major question is whether Papias is making a distinction between JOHN THE APOSTLE and “the presbyter John,” or whether they are one and the same.

Whatever the answer, it is clear that Aristion was associated with “the presbyter John” and that he was a contemporary of Papias. Eusebius interprets Papias to mean that, although he had received the words of the apostles second-hand, “he had actually heard Aristion and the presbyter John” (*Eccl. Hist.* 3.39.7); modern scholars tend to regard Papias’s statement as ambiguous. Nothing more is known about Aristion. A 10th-cent. Armenian NT MS attributes the longer ending of the Gospel of Mark to “the presbyter Ariston,” but little significance should be attached to this information. Aristion is sometimes confused with ARISTO OF PELLA.

S. BARABAS

Aristobulus air'is-tob'yuh-luhs (Ἀριστοβού- λος G755, “best advisor”). (1) A Jewish priest and teacher of PTOLEMY, the king to whom Judas MACCABEE sent letters (2 Macc. 1:10). He is sometimes identified with Aristobulus the Peripatetic philosopher, tutor of PTOLEMY VI Philometer (180 – 146 B.C.) and head of the Jerusalem community in Alexandria (Euseb. *Praep. Ev.* 8.10; 12.12). He wrote a book for heathen readers explaining the laws of Moses and showing that the Peripatetic philosophy was dependent upon the Mosaic law.

(2) Aristobulus I, the eldest son of John Hyrcanus I and the first of the Hasmoneans to assume the title of king. When Hyrcanus died, he passed the government to his wife and the high priesthood to

Aristobulus. Aristobulus starved his mother to death, killed his brother Antigonos, and imprisoned three other brothers. He compelled the Itureans to adopt Judaism as their religion. He reigned only one year (105 – 104 B.C.) and died of a painful disease. (Cf. *Jos. Ant.* 13.11.1 – 3 §§301 – 23; J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 312 – 18.) See HASMONEAN II.B.

(3) Aristobulus II, the younger son of Alexander Jannaeus. Alexander (d. 78 B.C.) had willed the throne to his wife ALEXANDRA, who ruled until 69 B.C. Just before she died, Aristobulus raised a revolt against her to secure the throne for himself. After her death he fought with his brother, Hyrcanus II, the legitimate successor of Alexandra. The Idumean king, Antipater, the father of HEROD the Great, favored Hyrcanus, as did also ARETAS the Arabian king. The brothers tried by gifts of money to get the support of the Roman general Scaurus, who was then in Syria. When POMPEY the Great appeared in Syria, they sought his support. Many Jews told Pompey they wanted neither of them. Because Aristobulus was unwilling to await a decision, Pompey seized him, captured Jerusalem, and made the country a tributary to Rome, thus ending Jewish independence. Hyrcanus II was recognized as high priest, without the title of king. Aristobulus and his children were taken to Rome as a part of Pompey's triumph. The Hasmonean dynasty was at an end, after almost eighty years (142 – 63 B.C.). In 57 B.C. Aristobulus escaped from Rome and tried to recover his former kingdom, but he was defeated and returned as a prisoner to Rome. After the civil war broke out, Julius CAESAR freed Aristobulus to send him to Syria against the forces of Pompey, but when Pompey's friends heard of this plan, they poisoned Aristobulus (49 B.C.). (Cf. *Jos. Ant.* 14.1 – 7; J. C. VanderKam, *From Joshua to Caiaphas: High Priests after the Exile* [2004], 340 – 45.) See HASMONEAN II.F.

(4) A grandson of Aristobulus II and a brother of MARIAMME, wife of HEROD the Great. When Aristobulus was only seventeen years of age, Herod appointed him as high priest, but because Aristobulus was popular with the Jews, about a year later Herod had him “accidentally” drowned while he was bathing (c. 35 B.C.). (Cf. *Jos. Ant.* 15.2.5 – 15.3.3. §§23 – 56.)

(5) The younger of two sons born to Herod the Great by Mariamme. After the execution of Mariamme in 29 B.C., Herod sent the boys to Rome for their education. When they returned, he was afraid that they would avenge the death of their mother.

Remains of one of the swimming pools at Jericho where Aristobulus (brother of Mariamme) may have been drowned by order of his brother-in-law, King Herod.

Herod's own sister and brother plotted against them, so that Herod brought back to his court a son named Antipater by his first wife Doris. Herod's fears were so roused by these enemies that he had his sons strangled. Aristobulus had four children. One, named Herod, became king of Chalcis; another, Herod Agrippa I, became king of all Palestine (A.D. 41 – 44); a third was HERODIAS, the wife of the tetrarch Herod Antipas; the fourth was Aristobulus (see below, 6). (Cf. *Jos. Ant.* 16.1 – 2; 16.4; 16.11.)

(6) Son of #5 above. Little is known about him. He plotted against his brother Herod Agrippa I; later he tried to dissuade the governor of Syria from putting up a statue of CALIGULA in the temple in Jerusalem (*Jos. Ant.* 18.6.3 §§151 – 54; 18.8.4 §§273 – 78).

(7) Great-grandson of Herod the Great. He inherited the Kingdom of Chalcis (between Damascus and Phoenicia) from his father (also named Herod), and in A.D. 55 received parts of Armenia. He married SALOME, daughter of Herodias. (Cf. *Jos. Ant.* 18.5.4 §137; 20.8.4 §158.)

(8) A man whose family is greeted by Paul in Rom. 16:10. Nothing more is known about him, but one tradition says he became bishop of Britonia (modern Montonedo, Spain), and another one regards him as a brother of BARNABAS who was part of the seventy disciples, who founded a church in Britain, and whose daughter married PETER. (For the view that Aristobulus was not a Christian, see P. Lampe in *The Romans Debate*, ed. K. P. Donfried, rev. ed. [1991], 222; cf. also NARCISSUS.)

(9) A Jewish Alexandrian philosopher who lived probably in the 2nd cent. B.C. Portions of his work, referred to as *Explanations of the Book of Moses*, have been preserved by CLEMENT OF ALEXANDRIA and EUSEBIUS. In these quotations, Aristobulus deals with such topics as the date of Passover, the nature of God, and the Sabbath. He claims that Plato and Pythagoras made use of the writings of Moses. In several respects, he seems to anticipate the work of PHILO JUDAEUS. (English trans. and introduction in *OTP*, 2:831 – 42.)

S. BARABAS

Aristo of Pella a-ris'toh (^{Ἀρίστον ὁ Πελλαῖος}). A 2nd-cent. Christian apologist who may have been the author of a lost work, *Disputation between Jason and Papiscus concerning Christ*. Its allegorical interpretation is defended by ORIGEN (who refers to the work, without mentioning the author's name, in *Contra Celsum* 4.52). EUSEBIUS (*Eccl. Hist* 4.6.3) attributes to him a history of the war waged by HADRIAN against the Jews.

Arius air'ee-uhs (^{Ἀρειος}, “devoted to Ares, war (1) King of Sparta (1 Macc. 12:7, 20), said to have written a letter in which he affirmed that the Spartans and the Jews were brothers descended from Abraham (cf. v. 21).

(2) An ascetic pastor of Baucalis Church in ALEXANDRIA (born c. A.D. 250). Arius preached and propagated, with words set to popular tunes, that Christ was a created being whose substance was different from God's. The ensuing dispute with Bishop Alexander led the Emperor Constantine to convene the ecumenical council of Nicaea in 325. In opposition to Arianism, Athanasius's view that Christ was eternal and of the same substance as God was adopted by this council (its decision became the forerunner of what is today known as the Nicene Creed). After the death of Arius in 336, his cause was taken up by an extreme party (known by modern scholars as “Neo-Arians”), whose views seemed to win the day in a double council that met in 359. The orthodox position, however, was reaffirmed at the Council of Constantinople in 381, after which Arianism faded.

E. E. CAIRNS

Arkite ahr'kīt (עֲרָקִי H6909 and אֲרָקִי H805). This name serves as the rendering of two different Hebrew words. (1) The term *arqî* refers to an inhabitant of the Phoenician town of Arka/Irqata (modern Tell Arqa, about 12 mi. NE of Tripoli, Lebanon, and about 4 mi. from the Mediterranean Sea). Arkites are mentioned in the genealogy of NOAH as descendants of CANAAN (Gen. 10:17; 1 Chr. 1:15). Arka was taken by TIGLATH-PILESER III in 738 B.C. The Romans called it Caesarea Libani, and the Emperor Alexander Severus was born there.

(2) The term *arkî* (spelled “Archite” by KJV and other versions) refers to a clan mentioned in connection with the allotment of the descendants of JOSEPH; these Arkites inhabited ATAROTH, between BETHEL and Lower BETH HORON (Josh. 16:2; here KJV has “Archi”). Its most famous member was HUSHAI, the adviser of DAVID and later of ABSALOM (2 Sam. 15:32; 16:16; 17:5, 14; 1 Chr. 27:33).

ark of bulrushes. See BULRUSHES, ARK OF.

ark of Noah. A vessel (Heb. *tēbâ* H9310) that God ordered NOAH to build for the purpose of preserving through the time of the flood a remnant of the human race, together with two each of all animals (Gen. 6:14 – 16; see FLOOD, GENESIS). It was built of GOPHER wood, sometimes rendered “pine,” but usually “cypress,” a material resistant to decay. The specifications called for a size of 300 cubits in length, 50 in width, and 30 in height. It was to have rooms (or “nests”) and was to be caulked with bitumen or asphalt. The length of a cubit is commonly believed to be about 18 inches. If the short cubit of 17.5 inches is used, the displacement can be shown as 19,940 tons, and if the 22.5 inch cubit is used, as much as 43,000 tons (see WEIGHTS AND MEASURES LA). The dimensions are entirely practical for good capacity and stability.

Nothing is said concerning the ark’s shape, but it must be visualized as only a floating craft, with no propulsion or control. The door had to be sufficiently large for embarking animals, and the window description is somewhat ambiguous, but is usually taken to be a continuous feature, running around the vessel, under the roof. A parallel description is found in the Sumerian-Babylonian story of Utnapishtim. At the conclusion of the flood, the ark rested upon the mountains of ARARAT (Gen. 8:4). (See further *ABD*, 4:1123 – 31, s.v. “Noah and the Ark.”)

Warning of the flood was given 120 years beforehand, with directions to construct the ark (Gen. 6:3, 13 – 14; cf. 2 Pet. 2:5). The NT uses Noah’s ark (Gk. *kibōtos* G3066, “wooden box”) and the flood as examples of coming judgment and salvation of a remnant (Matt. 24:38, 39; Lk. 17:27; 1 Pet. 3:20; Heb. 11:7).

M.H.HEICKSEN

ark of the covenant. Also “ark of the testimony.” A wooden container, the central object in Israel’s preexilic sanctuary.

I. Name. The Hebrew noun *’ăarôn* H778, used almost 200 times in the OT for the ark of the covenant, means “box, chest” (e.g., a money chest, 2 Ki. 12:9, 10; 2 Chr. 24:8 – 11; or even a coffin, Gen. 50:26), suggesting from the outset the ark’s primary function as a container. The OT further identifies the ark under two significant types of attributive phrases.

First, because of its close association with deity, it is called “the ark of God” more than thirty

times (e.g., 1 Sam. 3:3). Similarly, Ps. 132:8 speaks of it as “the ark of your might [*ōz* H6437]”; hence when Ps. 78:60 – 61 (NRSV) says that God “abandoned his dwelling at Shiloh” and “delivered his power [*ōz*] to captivity, his glory [*tip'eret* H9514] to the hand of the foe,” such terminology would identify the ark (note that NIV supplies the words “the ark of” to make the reference clear). However, other attempts (e.g., *IDB*, 1:225 – 26) to discover the ark concealed within references to God’s might (cf. Pss. 96:6; 105:4) seem far-fetched, except as these latter verses were later quoted by DAVID when bringing the ark to Jerusalem (1 Chr. 16:11, 27). Because it reveals the presence of deity, thirty-one times it is called “the ark of the covenant of the LORD,” that is, of Yahweh (Deut. 10:8 et al.; see GOD, NAMES OF).

Second, the term is linked to redemption. Most significant is the title “ark of the covenant [*bērît* H778]” (five times, e.g., Josh. 3:6) or “ark of the covenant of the LORD” (twenty-eight times, e.g., Num. 10:33; Josh. 3:3; cf. Josh. 3:11; Jdg. 20:27; see COVENANT, REDEMPTION). The ark contained the two tablets of the Decalogue (see TEN COMMANDMENTS), which constituted the documentary basis of God’s redemptive covenant with Israel (Exod. 34:28 – 29). Note Moses’ stress upon the written form of God’s pledge to save his own people, and of their required response in belief and obedience (24:4, 7). Moreover, since this redemption involved the life blood of the Redeemer (24:8), the NT speaks appropriately of the death of the one who makes a “will” (*diathēkē* G1347 in Heb. 9:16 – 17; KJV, “testament”) and hence of the “ark of his testament” (Rev. 11:19 KJV).

Some modern critics have sought to eliminate as redactional interpolations all the earlier OT references to this covenant or testament (cf. *HDB*, 1:149); but the term, though missing from certain SEPTUAGINT verses (e.g., 1 Sam. 3:3 – 5), appears in indisputably ancient passages, both MT and LXX (e.g., Num. 10:33; 14:44; 2 Sam. 15:24). A corresponding early title appears fourteen times in the phrase, “ark of the Testimony” (*ēdūt* H6343, “sign, reminder,” Exod. 25:22 et al.). “Testimony” denotes the two stone tablets (31:18; 32:15) placed within the ark (25:16, 21) as evidence of the redemptive covenant (cf. the interchange of testimony and covenant in Exod. 31:18; Deut. 9:11). Attempts, therefore, to rule out covenant terminology in favor of some more general title, such as “ark of God,” violate the biblical contexts and rest on unprovable theories of the evolution of Hebrew religion and of conflicting source-strata within the PENTATEUCH (cf. M. H. Woudstra, *The Ark of the Covenant from Conquest to Kingship* [1965], 60–83).

II. Form. Ancient analogies to the ark have been sought in tent-shrines (Morgenstern), model temples (May), chariots for deities (Torczyner), squared thrones (Kristensen), or even coffins for the gods (Hartmann); but Scripture describes the ark (Exod. 25:10 – 16; Deut. 10:1 – 2) as a unique vessel: “the repository of the covenant-tablets” (K. A. Kitchen in *NBD*, 81).

The ark’s pattern, as revealed to Moses at Mount Sinai, appears in Exod. 25:10 – 22. Made of ACACIA wood, the ark was rectangular, two and one-half cubits long (c. 45 in.) and one and one-half cubits (c. 27 in.) wide and high (v. 10). Gold-plated inside and out, with a gold molding (KJV “crown”, v. 11), it was supported by four feet, each with a golden ring (v. 12), into which carrying poles of gold-plated acacia wood were permanently inserted (vv. 13 – 15).

The MERCY SEAT (*kappōret* H4114, “place of propitiatory atonement,” Exod. 25:17; NIV, “atonement cover”) was a covering plate of pure gold that corresponded to the dimensions of the ark. At its two ends and facing each other were two hammered gold CHERUBIM with wings overshadowing the plate and with their faces toward it (vv. 18 – 20; Heb. 9:5). The cherubim (angels) were presumably human in appearance (cf. Ezek. 1:5), not pagan sphinxes forming a throne (as suggested by F. M. Cross in *BA* 10 [1947]: 45 – 68); they conveyed the idea of heavenly majesty (Ezek. 1:10).

The ark was built by BEZALEL and OHOLIAH (Exod. 31:6 – 7; 37:1 – 9), assisted by other skilled

Reconstruction of the ark of the covenant.

Israelites (36:8), on Moses' orders (Deut. 10:3). It was to be set within the veil in the most holy place of the TABERNACLE (Exod. 26:33), the mercy seat placed upon it (26:34), and anointed with the rest of the tabernacle (30:26). Facing both the ark and the veil stood the altar of incense (30:6, 27), though this latter came, in time, to be more closely associated with the ark's own inner sanctum (1 Ki. 8:22). Modern scholars have increasingly granted that an ark of some sort may go back to the time of Moses (cf. *IDB*, 1:225), but many would still insist on the ark's tradition as totally separated from that of the tabernacle (cf. G. von Rad, *Old Testament Theology* [1962], 1:235).

III. Function. Like the tabernacle of which it was a part, the ark's form was derived from that meaningful pattern revealed to Moses on the mount (Exod. 25:9, 40); it was an embodiment of covenantal redemption ordained in heaven (Heb. 8:5). Furthermore, while its dependence upon the concept of the covenant insured unity for the intended functions of the ark, salvation's richness belies von Rad's insistence (*Old Testament Theology*, 1:238) that it is "inconceivable that the throne should also have at the same time served as a container." Like sacraments today, it could both contain memorials to past redemption and also mediate God's grace to the present.

The initially declared purpose of the ark (chest) was to hold the "Testimony" to God's salvation (Exod. 25:16). Specifically, this meant the stone tablets, the Decalogue (Deut. 10:5). Later Moses' full "Book of the Law" was placed "beside the ark of the covenant" (31:26); hence there is a possible connection between the recovery of the lost law book in the days of JOSIAH and the restoration at that time of the ark to its proper place in the temple (2 Chr. 34:14; 35:3). In addition, Moses ordered Aaron to put an omer (c. two quarts) of MANNA in a jar and to place it "before the LORD...in front of the Testimony" (Exod. 16:33 – 34) as a memorial to God's provision. In the NT, Heb. 9:4 suggests that, with the passage of time, the golden jar came to rest inside the ark. After the revolts of KORAH and his associates, when God vindicated the authority of Moses and Aaron by causing the latter's staff to bud forth buds and almonds, God told Moses also to put this staff "in front of the Testimony, to be kept as a sign...[against] their grumbling" (Num. 17:10). Although it came to reside within the ark (Heb. 9:4), only the two tablets were to be found there by the time of Solomon (1 Ki. 8:9).

Beyond containing memorials to what God had already done, the ark served as well as a sacramental sign of his continuing covenantal activity. Four aspects call for comment.

(1) THEOPHANY. AS God had appeared on Mount Sinai, so he promised that his visible presence would abide with his people when they resumed their migration. The glory cloud in which he had wrought deliverance at the exodus (Exod. 13:21; 14:19 – 20) would regularly appear between the wings of the cherubim over the mercy seat of the ark (25:22; cf. 40:34; 2 Sam. 6:2; Ps. 80:1). The ark thus became more than a mere symbol or pledge of God's presence; it became a "chariot" (1 Chr. 28:18) for real theophanies, paralleling the function of the actual angelic cherubim (Ps. 18:10). To be "before the ark" was equivalent to being "before Yahweh" (Num. 10:35; Josh. 6:8).

On the other hand, one cannot identify Yahweh with the ark (cf. W. Eichrodt, *Theology of the Old Testament* [1961], 1:105), which would be crass idolatry, or confine him to it as his abode (R. H. Pfeiffer in *JBL* 45 [1926]: 220) or throne (Eichrodt, 1:108). Yahweh existed prior to the ark, voluntarily initiated its construction, and graciously chose to appear over this "footstool" (1 Chr. 28:2). He continued to exist apart from the ark, despite the above mentioned recent interpretations (*IDB*, 1:225), for "before Yahweh" need not imply "before the ark" (1 Sam. 7:2, 6). Finally, he could exist in open opposition to the ark and repudiate it (4:3 – 11): its sacramental value was temporary and ceased when Israel lapsed into the error of those who consider it "a vessel which guarantees the presence of God" (L. Köhler, *Old Testament Theology* [1957], 121 – 22). Yet, when approached in the proper spirit, the institution of the ark is found to correspond to that of the LORD'S SUPPER: as a seal of "participation," communion, with his contemporary presence in the sanctuary (1 Cor. 10:16), and as a type of his ultimate presence in heaven (Heb. 8:5; 9:24).

(2) REVELATION. The God who is present is also the God who speaks and acts. He had from the outset promised to communicate his specific laws to Moses from "between the two cherubim that are over the ark" (Exod. 25:22). The first such revelation proved to be the book of Leviticus (Lev. 1:1), and God continued to address Moses in an audible voice from above the mercy seat (Num. 7:89). Answers to inquiries were granted to Aaron as the one who wore the URIM AND THUMMIM (Num. 27:21), presumably the high-priestly breastplate with its stones that sparkled in the presence of the ark's glory cloud (Lev. 16:2).

(3) PROVIDENCE. Even without such inquiry, however, God acted through the ark for the guidance and the protection of his people. His lifting up of the cloud became the signal for Israel's wilderness advance (Num. 10:11; see below, IV.A), and it was the ark that went before the tribes "to find them a place to rest" (v. 33). God's presence became also a means for scattering the nation's enemies (v. 35). Note the ark's functioning as a palladium at Jericho (see below, IV.B) and being designated by the name of Yahweh of Hosts (or armies, 2 Sam. 6:2; cf. 1 Sam. 17:45). Yet J. Morgenstern's attempt (*The Ark, the Ephod, and the "Tent of Meeting"* [1945]) to identify the ark with Arab tent-shrines, regularly carried into battle and assigned certain oracular functions, appears ill-advised, for the ark's use in battle seems to have been exceptional.

(4) ATONEMENT. Once every year, however, the ark achieved its ultimate sacramental significance in the Day of Atonement service (Lev. 16:2). After insuring his personal safety through a protecting cloud of incense before it (v. 13), Aaron would sprinkle the ark's cover, or mercy seat, seven times: first with the blood of a bull, slain as a sin offering for himself, and then with that of a goat for the people (vv. 14 – 15), so as to cleanse Israel from all its sins before the LORD (v. 30). In pictorial fashion, grace (the blood of the testament) thus became an intervening cover between the holiness of God (the glory cloud) and the verdict of divine justice upon the conduct of man (the Decalogue underneath). See ATONEMENT, DAY OF.

IV. History

A. Wilderness. The components of the ark were brought to Moses at Mount Sinai at the beginning of the second year of the exodus (Exod. 39:35; 40:17). After the tabernacle had been erected, Moses assembled the ark and placed it within the sanctuary (40:21 – 22); the cloud of God’s glory then filled the tabernacle (v. 34). Moses appointed the Kohathite Levites, under Aaron’s son Eleazar, to be responsible for the ark (Num. 3:31 – 32; cf. Deut. 9:25). Before it should move, however, the priests were always to cover it with the inner veil, a skin covering, and a blue cloth (Num. 4:5 – 6); and the Kohathites could not touch the ark itself, on pain of death (v. 15). See KOHATH.

Seven weeks later God’s cloud arose (Num. 10:11), and Israel departed from Sinai. While the tabernacle as a whole occupied a central spot in the column (2:17), the ark preceded it by three days’ journey, serving as a guide for Israel’s camping sites (10:33). Jewish tradition has indeed assumed two arks, one for the broken stone tablets, which then preceded the main body (Woudstra, *The Ark*, 91, 96 – 99); but Deut. 10:1 appears to summarize the making of the one ark and not to suggest a second, constructed after the golden calf incident. Formal prayers accompanied each journeying and resting of the ark: “Rise up, O LORD! May your enemies be scattered...Return, O LORD, to the countless thousands of Israel” (Num. 10:35 – 36). Far from demonstrating an idolatrous identification of Yahweh with the ark, these prayers actually underline the uncontrollableness, but also the righteous hope, of God’s abiding presence. The ark remained behind, in Israel’s camp at KADESH, when the presumptuous were defeated at HORMAH (14:44 – 45). Moses had warned them, “Do not go up...for the LORD is not among you” (v. 42).

B. Conquest. On important occasions, such as the entrance into Canaan, the ark might be carried by priests (Josh. 3:3; 4:10; cf. Deut. 31:9; 1 Ki. 8:3) or as a joint undertaking by priests and Levites (2 Sam. 15:24; 1 Chr. 15:11 – 12). At the very time, therefore, that these priests reached the banks of Jordan, God caused its waters to be stopped up at ADAM (Josh. 3:15 – 16). The ark then led Israel into the stream bed and stood at midpoint until the nation had crossed over (v. 17). It further participated in the fall of JERICHO, when for seven days it was carried about this frontier city before Yahweh caused its walls to collapse (6:12 – 16, 20). Moreover, Joshua prayed before the ark during the AI campaign (7:7).

The ark first rested, apparently, within the tabernacle at Israel’s camp at GILGAL (Josh. 4:19; 9:6; 14:6); but God later ordained a more central location at SHILOH (18:1; cf. Jer. 7:12). It had also been present at Joshua’s renewal of Israel’s covenantal obedience to Yahweh at Mount E BAL and Mount GERIZIM (Josh. 8:33). Though Joshua subsequently summoned a national assembly at nearby SHECHEM, “under the oak near the holy place [*miqdāš* H5219, not necessarily “sanctuary”] of the LORD” (Josh. 24:26; cf. Gen. 12:6 – 7; 35:2 – 4), there is no indication that the ark or tabernacle was ever located there.

C. Judges. In time, a house (Jdg. 18:31) or “temple” (1 Sam. 1:9; 3:3) came to be constructed for the ark at Shiloh, where annual pilgrimage feasts centered (Jdg. 21:19; 1 Sam. 1:3). The boy SAMUEL slept in this temple (1 Sam. 3:3), though presumably not in the inner sanctuary where the ark rested, since he failed to associate the voice that he heard with that of God (v. 7). At some earlier period, as an emergency measure, the ark was moved S from Shiloh to BETHEL on the Benjamite border during the war against GIBEAH (Jdg. 20:26 – 27), its theophanic character justifying the offering of sacrifice before it (21:4; cf. Exod. 20:24). Evidence is lacking for other claimed transfers of the ark to other

locations, such as to BOCHIM (Jdg. 2:1 – 5; cf. *ISBE* [1929], 1:245). The commonly expressed critical theory of “lottery-box” arks to be found at numerous local sanctuaries (R. H. Pfeiffer, *Religion in the Old Testament* [1961], 74) is quite untenable, for it is based on the unwarrantable assumption that later scribes willfully corrupted the text.

The pagan theory of having God “in a box,” as if the presence of the ark would automatically guarantee salvation (1 Sam. 4:3, 7), was dispelled once and for all when the PHILISTINES captured the ark at the first battle of EBENEZER, c. 1080 B.C. (vv. 10 – 11). But while Israel’s loss was dramatically illustrated by the name ICHABOD (v. 21, derived from *’î H364* and *kābôd H3883*, “no glory”), PHILISTIA learned to its sorrow that God’s *kābôd* (lit., “weight”) was still associated with the ark, as he punished their treatment of it with “heavy” (*kābēd H3877*) judgments on both their gods and their people (5:11).

Finally, after a seven months’ captivity in ASHDOD and EKRON (1 Sam. 6:1), the ark was returned to Israel, accompanied by symbolic guilt offerings of gold (v. 11). God’s effective presence was twice more demonstrated, first as he compelled the cows that were hitched to its new wagon to abandon their own calves in order to drag it to BETHSHEMESH on the NW border of Judah (v. 12), and then as he struck down some of the inhabitants for irreverently looking inside it (v. 19). The ark was thereafter moved 10 mi. farther inland, to KIRIATH JEARIM, where a certain ABINADAB consecrated his son ELEAZAR to care for it (7:1). No attempt was made to restore it to the tabernacle; during the twenty years of his judgeship (v. 2; cf. *HDB*, 1:399), 1063 – 1043 B.C., Samuel stressed direct repentance toward God rather than the sacramental ark, whose presence Israel had abused.

D. Kingdom. SAUL generally neglected the ark (1 Chr. 13:3), though he did have it with him and called for it just prior to the battle of MICMASH, 1041 B.C. (1 Sam. 14:18). DAVID, however, after his capture of Jerusalem in 1003 B.C., had the ark brought to his new capital (2 Sam. 6; 1 Chr. 13; 15). Indeed, while the Philistines’ innovation of a cart might be excused through ignorance, the Israelites’ failure to observe the precise Pentateuchal instructions for carrying it could not; and Abinadab’s descendant UZZAH was struck down for his resulting sacrilege, even though well-intentioned (2 Sam. 6:6).

After a three months’ delay at the house of the Levite OBED-EDOM (2 Sam. 6:11), the ark was conducted with joy and sacrifices to a tent (v. 17; cf. 11:11), a “lowly abode” (Woudstra, *The Ark*, 121), with curtains (7:2), that David had temporarily erected for it on Mount Zion (Ps. 3:4; 9:11). The high priest ABIATHAR was made responsible for the ark (1 Ki. 2:26) and a sacrificial service (1 Chr. 16:1), and an organization of Levitical singers and doorkeepers was instituted under ASAPH and Obed-Edom (6:31 – 48; 16:4 – 6, 37, 38). Certain great Psalms seem to have been composed for the occasion and for its subsequent celebration (Pss. 24:7 – 10; 132:8). No hint, however, exists of any annual Babylonian style “enthronement festival” for Yahweh: sentiments such as “God has ascended amid shouts of joy” (Ps. 47:5) express rather his reign over all the earth (vv. 6 – 7; cf. Ps. 11:4; Hab. 2:20). Subsequently, during ABSALOM’s revolt, ZADOK and Abiathar sought to bring the ark to David in his flight from Jerusalem (2 Sam. 15:24); but the king refused to treat it as a talisman or palladium, placing instead his trust directly in God (v. 25).

While SOLOMON, too, had sacrifices offered before the ark in its temporary shelter (1 Ki. 3:15), his greatest achievement was to carry out his father’s plans for erecting a permanent temple on Mount MORIAH, to the N of ZION (1 Chr. 22:19; 28:2, 11, 19; 2 Chr. 3:1). The ark with its cherubim cover was placed within the inner sanctuary (1 Ki. 6:19), overshadowed by two huge, gold-plated, olive wood cherubim, 15 ft. in both height and wingspread (vv. 23 – 28). Upon its installation, the glory

cloud filled the house, just as it had filled the tabernacle (8:1 – 11); and Solomon repeated the old wilderness prayer, “Now arise, O LORD God, and come to your resting place” (2 Chr. 6:41). Here the ark remained, with only its poles visible (5:9). Despite a temporary removal under the apostate King MANASSEH (35:3; cf. 33:7), it so remained until its presumed destruction when NEBUCHADNEZZAR burned the temple in 586 B.C.

E. Later references. The postexilic second temple had no ark (Jos. *War* 5.5), though today’s Jewish synagogues are equipped with “arks,” located on the side facing toward Jerusalem and designed to hold the TORAH. Even before the fall in 586 B.C., Jeremiah had predicted that in days to come the ark would no longer be sought (Jer. 3:16), because all Jerusalem would eventually become the throne of Yahweh (v. 17), the symbolism of the ark being replaced by direct faith in God under the new covenant (31:31 – 34). As the climax to biblical history, in a vision of the new heavens after God’s final judgment (Rev. 11:18), John saw “the ark of his covenant” (v. 19), indicative of the ultimate accomplishment of that testamentary redemption for which it had consistently stood. (For a summary of research, see F. M. Cross in *Colloquium on Temples and High Places in Biblical Times*, ed. A. Biran [1981], 70 – 90; cf. also C. L. Seow, *Myth, Drama, and the Politics of David’s Dance* [1989].)

J.B.PAYNE

ark of the testimony. See ARK OF THE COVENANT.

arm. The Hebrew word for “arm” is used about eighty times in the OT (*zērôa*⁶ H2432, Gen. 48:24 et al.); the corresponding Greek word occurs three times in the NT (*brachiōn* G1098, Lk. 1:51; Jn. 12:38; Acts 13:17). Only in rare instances is the word used literally (Jdg. 15:14; 16:12). Almost invariably it has a metaphorical sense, usually as a symbol of strength and power. Since God is omnipotent, the “arm of God” is frequently referred to as a symbol of his might, as in Yahweh’s question addressed to Job, “Do you have an arm like God’s, and can your voice thunder like his?” (Job 40:9). To “make bare the arm” implies the revelation of strength, as in Isa. 52:10: “The LORD will lay bare his holy arm in the sight of all the nations, and all the ends of the earth will see the salvation of our God.”

Since a warrior stretches out his arms when he really exerts himself, the “outstretched arm” signifies an exhibition of great power, and the phrase often is used of God in the OT, as when he commanded Moses to say to Israel, “I will redeem you with an outstretched arm and with mighty acts of judgment” (Exod. 6:6). By his outstretched arm God created the earth with human beings and animals on it (Jer. 27:5). Only rarely is God’s arm stretched out for individuals (2 Chr. 6:32). Sometimes God’s “holy” arm is exerted, pointing to the righteousness of his acts of power: “Sing to the LORD a new song, for he has done marvelous things; his right hand and his holy arm have worked salvation for him” (Ps. 98:1). God is sometimes compared to a warrior who smites with his arm: “with your strong arm you scattered your enemies” (Ps. 89:10).

The “arm of flesh” symbolizes merely human help, which is weak compared with God’s might: “Cursed is the one who trusts in man, who makes flesh his arm” (Jer. 17:5; NIV, “who depends on flesh for his strength”). To break the arms of the wicked is to render them powerless (Job 38:15; Jer. 48:25; Ezek. 30:21). The “withered” arm symbolizes complete powerlessness (Zech. 11:17). God’s arm exerted in behalf of his people symbolizes protection: “He gathers the lambs in his arms and carries them close to his heart” (Isa. 40:11); “The eternal God is your refuge, and underneath are the

Armageddon ahr’muh-ged’uhn (Ἄρμαγεδών *G762*, usually derived from הר *H2215* and מגידו *H4459*, “mountain[s] of Megiddo”). Also Harmagedon. According to Rev. 16:16, “the place that in Hebrew is called Armageddon” is the scene of the final battle between the forces of Christ and of Antichrist before the SECOND COMING. Eberhard Nestle (“Har-Magedon,” in *HDB*, 2:304 – 5) traces the history of attempts to locate this place and asserts, “Upon the whole, to find an allusion

Looking N over Megiddo into the Jezreel Valley.

here to Megiddo...is still the most probable explanation.” Arguments have been made that it is the same as the Valley of Jehoshaphat (Joel 3:12; see JEHOSEPHAT, VALLEY OF); that it is the valley of ESDRAELON in northern Palestine, where many of Israel’s battles were fought; or that it reflects the pagan notion that there is a mountain where the gods assemble (Isa. 14:13 – 14).

These theories—and there are others—are all relatively modern. Ancients of whom we have record today advocated none of them. By NT times, MEGIDDO had long been a forgotten ruin. There is really little except an interesting similarity of sound to connect this reference with the Canaanite city of Megiddo, famous in Egyptian annals and at one time fortified by Solomon. It has been pointed out by various scholars that Armageddon is the mobilization point for the final battle, not necessarily the scene of it. Hence the river EUPHRATES mentioned as the point of access for eastern kings is a more likely point. This northern entrance to Palestine for oriental invaders is familiar to all readers of ancient history, sacred or profane. Furthermore, the site of Megiddo would not likely be regarded as a mountain (contrast Mount TABOR, to the N and in plain view of Megiddo). No evidence has been produced that ESDRAELON, the valley of N Palestine on the S edge of which lies Megiddo, was ever called by the name of that town. Some therefore have argued that the reference is to the nearby Carmel range (see CARMEL, MOUNT).

In spite of these problems, most scholars, noting that the LXX term for the ancient battleground of Megiddo is *Magedōn* in several passages (Josh 12:21; Jdg 1:27 [A]; 2 Ki. 9:27; elsewhere usually *Mageddō*), believe that some such identification is likely, though the name may be symbolic. (On the etymology of the term, see H. K. LaRondelle in *AUSS* 27 [1989]: 69 – 73; on the location, see W. Shea in *AUSS* 18 [1980]: 157 – 62.)

Armenia ahr-mee'nee-uh. An upland region in western Asia (SE of the Black Sea and SW of the Caspian Sea), earlier occupied by the kingdom of Urartu (see ARARAT). The transition in name is illustrated by the inscription of DARIUS at BEHISTUN (late 6th cent. B.C.), in which the province is named *arminiya* in the Old Persian but *uraštu* in the Babylonian version; the Aramaic version from Elephantine has ʾrṣṭ. "Armenia" is used by the KJV to render Hebrew ʾārārat H827 (only 2 Ki. 19:37 = Isa. 37:38), where "Ararat" (for Urartu) is preferable.

T.C.MITCHELL

Armenian Gospel of the Infancy. A late and secondary compilation, ultimately dependent on the *Protevangelium of James* and the *Infancy Gospel of Thomas*, but greatly amplified. It derives from a Syriac original, but the date of this source is doubtful (see JAMES, PROTEVANGELIUM OF; THOMAS, GOSPEL OF). The Nestorians toward the end of the 6th cent. translated a *Gospel of the Infancy* from Syriac into Armenian, but it was probably not the present text. M. R. James (*The Apocryphal New Testament* [1924], 83) wrote that there is "little of ancient flavor in the book, and it does not seem to preserve any details, which are not to be found elsewhere, of the old tradition." One feature of interest is the appearance of Eve as a witness to the VIRGIN BIRTH (ch. 9). (Complete French text in C. Michel and P. Peeters, *évangiles apocryphes*, 2 [1914]; cf. *NTAp*, 1:457.)

R. McL. WILSON

Armenian version. See VERSIONS OF THE BIBLE, ANCIENT.

armhole. This word, in the obsolete sense of "armpit," is used twice in the KJV (Jer. 38:12; Ezek. 13:18) to render the Hebrew term ʾaššicirc;l H723 ("joint," also used in Ezek. 41:18 as a unit of measurement).

armlet. An ornamental band circling the upper arm, as a bracelet would do on the lower arm or wrist. The English term is used by some versions to render Hebrew ʾešʾādâ H731 (Num. 31:50; 2 Sam. 1:10; for the latter passage, NIV renders "band"). The NRSV uses the term also in Isa. 3:20 for Hebrew šēʾādâ H7578 (NIV, "ankle chains").

Armoni ahr-moh'nz' (אַרְמוֹנִי H813, "palatial" [i.e., born in a palace] or "my citadel"). One of the two sons of SAUL by his concubine RIZPAH (2 Sam. 21:8). DAVID delivered the brothers (and five grandsons of Saul) to the Gibeonites (see GIBEON) to satisfy their vengeance (vv. 1 – 9).

armor, arms. Defensive tools to protect the body in battle, along with offensive weapons of any kind with which to launch a military attack. General terms for military equipment and weapons are used in both Hebrew (e.g., *kēlî* H3998, *nešeq* H5977) and Greek (e.g., *hoplon* G3960 [always pl. in *NT*], *panoplia* G4110). Additional terms are used for individual pieces of equipment.

1. General description of soldiers in the Bible
2. Stone Age weaponry

 1. Armed units among the Israelite people

2. Units in the army
3. Fortified cities and towns and siege
4. OT armor and arms
 1. Offensive weapons
 2. Defensive equipment
5. Armor and arms of the NT period
 1. Units in the army
 2. The Roman soldier

I. General description of soldiers in the Bible. A general picture of the OT and NT soldier can be gathered from 1 Sam. 17 and Eph. 6. In the former passage the PHILISTINE warrior GOLIATH is depicted as wearing a bronze helmet, a coat of scale armor, and greaves (i.e., protective pieces) for his legs, with a bronze javelin “slung on his back,” and carrying a spear made partly of wood and partly of iron, and a sword encased in a scabbard attached to his body, probably by a belt (1 Sam. 17:5 – 7, 51). His large shield was carried by an attendant (1 Sam. 17:7, 41). The soldier pictured in Eph. 6:11 – 17 is one in full armor, having on a belt or girdle, a breastplate or coat of mail, shoes or sandals, and a helmet, and wielding a sword and shield. The military equipment worn by these two soldiers consists basically of similar articles. The differences in construction, material, and shape of the various items will be observed in the following discussion.

II. Stone Age weaponry. Early man in the Stone Age used a number of different tools and weapons to aid him in the search and preparation of food, and in protection against his enemies. This is evidenced by archaeological remains found, as in the case of the Neolithic or New Stone Age. In the early records of Genesis, there is evidence that death-dealing weapons were in use, as implied in the statements of CAIN (Gen. 4:14) and LAMECH (4:23 – 24). To use ancient JERICO as an example, archaeology has uncovered evidence of a Palaeolithic hand-ax and of a civilization of hunters in the Mesolithic period about 8000 to 7000 B.C. At this time there was in use at Jericho a well-constructed stone tower with defenses, the last phase of which shows a date of Pre-Pottery Neolithic A (c. 7000 B.C.; see K. M. Kenyon, *Archaeology in the Holy Land* [1960], 41, 44, plates 7, 8; Y. Yadin, *The Art of Warfare in Biblical Lands* [1963], 1:116). The Pre-Pottery Neolithic B state (c. 6000) also shows evidence of warfare and defense (cf. mass burials and also arrowheads, Kenyon, 49, 52 – 56). Although Pottery Neolithic Jericho (c. 5000) does not demonstrate as developed a civilization as the earlier periods (Kenyon, 67 – 68), no doubt the inhabitants used similar implements for food and warfare. The tools and weapons of the people of nearby 4th-cent. B.C. Teleilat Ghassul (near the N end of the Dead Sea) are considerably different from those of Jericho; note two copper axes of simple form found here (Kenyon, 73, 75; cf. also W. F. Albright, *Archaeology of Palestine* [1961], 65 – 66).

By the Early Bronze period (3000 – 2000 B.C.) there was further development in fortifications of towns and of weapons, as is evidenced by the copper weapons from Jericho and Tell el-Hesi, including the socketed ax head, crescent-shaped tanged cutting ax head, and the rectangularly shaped ax blade (Kenyon, 119 – 20; Yadin, 1:143, 149). Also an Egyptian carved ivory handle of a flint knife (c. 3000) depicts boats (Egyptian arc shaped and Mesopotamian with high stern and prow) and soldiers with spears and leather shields. The bow, long spears, maces (i.e., limestone and copper heads for clubs), boomerangs, double-headed axes, and forkheaded arrows also appear on representations from this period, together with the socketed ax head (Yadin, 1:116 – 26).

The two-and four-wheeled Mesopotamian battle chariot showed up at about 2800 B.C. In a

limestone stela the king of Lagash of Mesopotamia (c. 2500) is pictured as leading a heavily armed phalanx of soldiers who wear metal helmets and carry heavy rectangular shields with metal studs and heavy spears. In another scene the same king riding in a chariot, with a quiver, light javelins, battle-axe, sickle, and sword, leads metal-helmeted soldiers carrying long spears and socketed axes. The swords (made of gold, silver, copper, or bronze, or even iron) of this 3rd millennium are more like daggers that would be used for stabbing. In the 24th and 23rd centuries B.C., in siege against fortified cities, the Egyptians are depicted as using mobile scaling ladders and battering poles; in the late 3rd millennium they employed shallow and semicircular ax heads pierced with holes to secure them to the haft (Yadin, 1:146 – 47).

III. Old Testament armed units

A. Armed units among the Israelite people. In the early period of seminomadic life, ABRAHAM and his 318 “trained” men showed considerable military ability in pursuing and routing a combined army of several peoples (Gen. 14:13 – 15). Although not stated, it is to be assumed that for that decisive victory Abraham and his men must have had at least some simple weapons of stone and bronze. Israel in the exodus from Egypt shows systematic organization of a military type (cf. Num. 2:1 – 34), depicting a people marching under arms (Exod. 13:18, “armed for battle”). That JOSHUA and the Israelites, functioning as a national or seminational military unit, included among their weapons the sword is suggested by Joshua’s confrontation with the divine figure depicted as holding a drawn sword in his hand (Josh. 5:13). Prominent in Joshua’s military engagement against Jericho were his “armed men” who marched before the priests (6:9); and the sword and other weapons like it were evidently an important part of Israel’s weaponry in its conquest of the land of Canaan (cf. reference to smiting the enemies “with the edge of the sword,” Josh. 10:28 – 39 NRSV).

Following the conquest, Israel became sedentary and pursued its agricultural pursuits. Thus military forces were organized in a more informal way under various judges (Jdg. 3), with several tribes sometimes raising an army, as in the case of GIDEON (6:35; 7:24). In the time of SAMUEL, Israel became “king-conscious” (1 Sam. 8), and subsequent to Saul’s anointing as monarch (ch. 10), Saul began to gather from the tribes of Israel an army to fight against such as the Amalekites (1 Sam. 15:4 – 7) and the Philistines (1 Sam. 17:2, 11; 28:4). Later DAVID (cf. 2 Sam. 6:1) and subsequent kings also raised military forces.

B. Units in the army. The numbers in the fighting force of a seminomadic sheik like Abraham would, of course, be small (cf. Gen. 14:14 – 15), and the troops mustered among Israel would at times be limited as compared to the enemy (see Josh. 4:13; Jdg. 4:10); at other times the forces were of considerable size (cf. Jdg. 5:8; 2 Sam. 24:8, 9). See ARMY.

The military units of Israel were based on the society structure, with the clan unit of a 1,000 being prominent (*ʿelep* H548, Jdg. 6:15; 1 Sam. 10:19; its commander was called *šarʿelep*, “leader of a thousand,” 1 Sam. 17:18; 18:13). Such units could be divided into groups of 100 (1 Sam. 22:7; cf. Jdg. 7:16) and of 50 men (1 Sam. 8:12). These Israelite forces with their inferior equipment and limited training were, without the help of the Lord, at a disadvantage in facing the fortified cities of the enemy (Deut. 1:28), their ironclad chariots (Josh. 17:16 – 18; Jdg. 1:19; 4:13; 1 Sam. 13:5; 2 Sam. 1:6) and their heavily armed military champions like Goliath (1 Sam. 17:4 – 7). Compensating for this disparity, Israel’s military leaders would rely on small groups of specially chosen men (Exod. 17:9; Num. 31:3, 4; 1 Sam. 13:15) and on surprise attacks (14:1 – 23). (See R. de Vaux,

Ancient Israel [1961], 214 – 18.)

Beside the clan and specially picked groups, Israel and others sometimes depended for military victory on the prowess of one or several champions, as in the case of the battle between David and Goliath (1 Sam. 17). The champion was sometimes called *’iš-habbēnayim* (lit., “the man between two,” vv. 4, 23). De Vaux (*Ancient Israel*, 218) observes that this term is not found again except in the *War Scroll* from Qumran (see DEAD SEA SCROLLS), but there having a different meaning, “light infantry.” Sometimes a small group of men from each of two sides were to decide a battle (2 Sam. 2:12 – 17). In these early days mercenaries could be hired for military action (Jdg. 9:4). David had his 400 men (1 Sam. 22:2) and later 600 (25:13) who shared with him the spoils of the battle (30:21 – 25). Later evidence of the professional soldier with action by the national army of Israel is seen in 1 Ki. 20:15 – 20.

The national conscripted army of Israel can be seen in various periods of her history, as is evidenced in certain passages (Num. 1:3; Deut. 20:5 – 9; 24:5; Jdg. 7:3; 2 Chr. 25:5 – 6; cf. de Vaux, *Ancient Israel*, 225 – 28). Of particular importance in OT times were the war chariot units, possessed by such as the Canaanites and the Philistines (Josh. 17:16 – 18; Jdg. 1:19; 1 Sam. 13:5; et al.), but these were really not used in Israelite service until the time of David (2 Sam. 8:4). Solomon expanded this part of Israel’s military force as is evidenced by his fourteen hundred chariots, some of which he seems to have imported from Egypt (1 Ki. 10:26 – 29).

In this period Egyptian chariots carried two men, one to drive and the other to fight (Hittite chariots carried two or three men; Assyrian, three or four), whereas the Israelite chariots had three persons, the driver or charioteer (1 Ki. 22:34), the combatant, and the *šālīš H8957* (the “third” man or captain, 9:22; 2 Ki. 10:25, cf. de Vaux, 222 – 24; Yadin, 1:186 – 96). At about 1000 B.C. the ANE began to show mounted cavalry, as is seen in the Assyrian army in the 9th cent. B.C., although chariots predominated. Early representation of mounted horsemen come from about 1400, although regular military cavalry began to appear only near the end of the 2nd millennium B.C., one man at this period being pictured as armed with a bow (Yadin, 1:218 – 21), and a cavalryman on a relief from Tell Halaf depicted with a shield and possibly a sword (*ANEP*, 164).

The Egyptians and Israelites did not use cavalry in the earlier part of the 1st millennium B.C., except for mounted scouts (2 Ki. 9:17). Foreign mounted cavalry are those described in Ezek. 23:6, 12 (Assyrians); Ezek. 38:4 (those of Gog); and Neh. 2:9 (Persian). However, in the time of Isaiah some of the people of God did rely on Egyptian chariots and horsemen (Isa. 31:1); and SENNACHERIB, king of Assyria, ironically castigated Judah for trusting in Egypt for these armaments when he offered to supply 2,000 horses if Judah could mount them with riders (36:8). In the Maccabean period (see MACCABEE) the Jews mustered only foot soldiers against foreign cavalry and mounted elephants (1 Macc. 1:17; 6:30 – 31; 8:6; 2 Macc. 11:4; 13:2, 15). In the time of SIMON MACCABEE (136 – 135 B.C.) the Jews did field a relatively small cavalry unit (1 Macc. 16:4, 7). HEROD the Great had only 6,000 cavalry but 30,000 infantry (see de Vaux, 224 – 25). In the NT period the apostle PAUL was accompanied from Jerusalem by seventy Roman horsemen, besides soldiers and spearmen (Acts 23:23).

C. Fortified cities and towns and siege.

Archaeology shows evidence of early fortification of Palestinian towns as exemplified by the tower and defense wall of c. 7000 B.C. at Jericho (Kenyon, *Archaeology in the Holy Land*, 44, plate 7; Yadin, *Art of Warfare*, 1:116 – 17). Subsequently, important cities of Canaan were fortified by encircling ramparts (broad embankments or protective walls against which could be built a glacis,

i.e., a smooth surface sloping to the outside) and towers and gates. The OT witnesses to cities of this type, heavily fortified (Num. 13:28) “up to the sky” (Deut. 1:28), “with high walls and with gates and bars” (3:5; see de Vaux, *Ancient Israel*, 229 – 36.) Against such fortifications the ancients used siege arms and armor.

Late 2nd-millennium-B.C. reliefs show fortified cities attacked by warriors armed with spears and so-called epsilon tang-type axes and defended by rectangular shields (Yadin, 1:230 – 31). Although long-range bows and slings could be employed (cf. the Benjamites, Jdg. 20:15 – 16), heavier arms were used in siege warfare. Early reference to such equipment can be seen in the “siege works” of Deut. 20:20. In the prophecy of TYRE’s ruin, NEBUCHADNEZZAR is depicted as setting up a siege wall and mound against the town and attacking it under the protection of a “roof of shields,” using “battering rams” against the walls of the city, and axes or rams with pointed heads (*ḥereb* H2995; cf. Exod. 20:25 where it clearly means a chisel tool), to break down the towers (26:8 – 9). In Ezekiel’s mock siege of Jerusalem he is called upon to picture in miniature the “siege works” (NRSV, “siege wall”), building the encircling mound or trench and setting against it the “battering rams” (4:2), the last of which could be made from trees growing in the vicinity of the besieged city (cf. Deut. 20:19 – 20). The trees could also be used to help make the ramp (*sōlēlâ* H6149, “mound”) up which siege machines and rams could be brought (Jer. 6:6).

UZZIAH at Jerusalem is said to have “made machines designed by skillful men for use on the towers and on the corner defenses to shoot arrows and hurl great stones” (2 Chr. 26:15; cf. also de Vaux, 236 – 38). Details of such siege building and equipment can be seen in some of the Assyrian King SENNACHERIB’s (704 – 681 B.C.) bas-reliefs concerning the siege of LACHISH (Yadin, 2:428 – 37). In the NT period Jesus predicted that Jerusalem would be surrounded by armies (Lk. 21:20) and that an embankment or palisade (*charax* G5918) would be built all around her (19:43).

IV. Old Testament armor and arms. In addition to the larger weapons of siege warfare, the individual soldier was equipped offensively and defensively for military encounter.

A. Offensive weapons. A general term for military equipment is *nešeq* H5977; it is used, for example, in 2 Ki. 10:2 with reference to weapons available at Samaria, and in Ezek. 39:9 for the weapons to be burned with fire (the specific items mentioned in this verse are “the small and large shields, the bows and arrows, the war clubs and spears”). The same Hebrew word is used in Neh. 3:19 to indicate a place in Jerusalem where weapons were stored (“armory”).

A simple type of weapon might be the rod or staff (*maqqēl* H5234), used as an aid in journeying (Gen. 32:10), but apparently also as a military weapon (Ezek. 39:9, with *yād* H3338 [NIV, “war clubs”; NRSV, “handpikes”]). Another word for staff (*šēbet* H8657) could refer to a rod used as a less powerful but effective weapon against a spear (2 Sam. 23:21; 1 Chr. 11:23 [NIV, “club”]), and even to a shaft or dart, three of which Joab thrust into the heart of Absalom (2 Sam. 18:14 [NIV, “javelins”]). A third term used of the traveler’s staff (*maṭṭeh* H4751, Gen. 38:18) could indicate a warrior’s instrument (1 Sam. 14:27, 43), and could also stand for arrows or spears (Hab. 3:9, 14). A weapon somewhat similar is represented by two words (*mapēs* H5151, lit., “shatterer,” Jer. 51:20; *mēpīs* H5138, lit., “scatterer,” Prov. 25:18). Possibly it was something like the ancient mace, a rod with a ball of limestone or some other material on the end, to be used as a club (Yadin, 1:118 – 25). Compare the ancient battle axes in such varieties as double-headed, four-pronged, flat epsilon, crescent-shaped, etc. (Yadin, 1:118 – 19, 122, 136, 149 – 50).

The sling (*qela*^c H7845) was a simple but effective weapon in warfare, used by David in his

single combat with the Philistine Goliath (1 Sam. 17:40, 50). Also Uzziah in preparing military weapons for his army provided “slingstones” (2 Chr. 26:14). It is to be remembered that in an earlier day 700 Benjamites were known to be expert left-handed slingers (Jdg. 20:16). On a 10th-cent.-B.C. Tell Halaf orthostat is depicted an ancient slingman (Yadin, 2:364).

The soldier’s main weapon for offensive combat was the SWORD (*ḥereb* H2995), which was sometimes used as a symbol of war (Isa. 51:19; Ezek. 7:15; et al.). The Hebrew word could refer to both the dagger and the sword, since the difference was basically one of length. As dagger, the term is used of the instrument EHUD wielded in stabbing EGLON, king of MOAB (Jdg. 3:16, 21 – 22). Such dagger weapons were used in the 2nd millennium B.C. by the Egyptians and by the Assyrians of SARGON’S time (721 – 705 B.C.; Yadin, 1:216 – 17; 2:421, 424 – 25). In ordinary military use, the term would refer to the sword, such as Gideon’s weapon (Jdg. 7:14, 20) and those used by David and his men (1 Sam. 25:13; cf. also Ezek. 5:2). This sword was probably a relatively short one of twenty-one inches or more.

The Egyptians in the middle and end of the 2nd millennium B.C. had a relatively long-bladed sword, as did the SEA PEOPLES and the Assyrians, the latter having a shorter one as well (Yadin 1:208 – 9, 334 – 35; 2:340 – 41, 384 – 85, 426). It may be that the Israelites used only a short sword (de Vaux, 241), but the Philistine Goliath no doubt had a long one (1 Sam. 17:51) and, because of its unusual character, it was later wrapped up in a cloth and stored at NOB with the vestments of the priest (21:8, 9). The sword is spoken of as being two-edged (Ps. 149:6; cf. Heb. 4:12), and when not in use, it was kept in a sheath (1 Sam. 17:51; 1 Chr. 21:27) and fastened to the belt or girdle (2 Sam. 20:8), all of which were sometimes removed when not in use (1 Sam. 25:13). The instrument was sharpened for battle from time to time (Ps. 7:12). In one instance (Ezek. 26:9), the same term is employed for a tool like an ax (cf. NRSV) to be used in demolishing stone.

The “javelin” (*kîdôn* H3959), such as Goliath carried slung on his back (1 Sam. 17:6), was apparently viewed as a weapon in the hands of foreigners (cf. Jer. 6:23; 50:42) and seems to have been rarely employed by Israelites (the only recorded example is Josh. 8:18 – 26). The term occurs in the *War Rule* in Qumran with reference to a sword one-and-a-half cubits long and four finger-breadths wide (perhaps under the influence of the Roman *gladius*, a sword longer and broader than the *ḥereb* and suspended from a cross-belt slung between the shoulders). Other details in the Qumran document, however, seem to be picturing the *kîdôn* as a scimitar (or curved blade or sickle) type of weapon, examples of which have been found depicted on monuments and found in excavations (de Vaux, 241 – 42; Yadin, 1:172,204 – 5,350).

In the spear-lance category, several terms are used. (1) The *rōmah* H8242 was a pointed staff or pike used in personal battles or encounters (cf. Num. 25:7 – 8) and employed in making self-inflicted wounds (1 Ki. 18:28). It is listed with other weapons (2 Chr. 11:12; Ezek. 39:9). In the *War Rule* this instrument is depicted as seven or eight cubits long, but probably in OT times its length was about the height of a grown man (de Vaux, 242). (2) The *ḥānîṭ* H2851 seems to have been a shorter and lighter instrument of war, which could be used as a javelin (1 Sam. 18:10 – 11). As a counter-balance to the weight of the head (of metal), the wooded shaft was weighted with iron on the other end, which end could then be stuck in the ground when not in use (1 Sam. 17:7; 26:7) and be employed as a club on occasion (2 Sam. 2:23). Specimens of this lance have been found in excavations. It was wielded by such as King Saul (1 Sam. 19:9), David, Goliath, and the temple guards (2 Chr. 23:9). The size and construction of Goliath’s lance called for special comment (17:7; 2 Sam. 21:19), and it was equipped with a looped leather thong attached to the shaft to aid in distance throwing (de Vaux, 242). (3) The term *qayin* H7802 is used of the large and heavy weapon wielded

by the giant ISHBI-BENOB (2 Sam. 21:16). Many examples of javelins and spears are shown by Yadin (1:156 – 57, 166, 169, 174, 185, 215; 2:352 – 53, 355, 411, 420). Some spear and javelin heads have tonged (or hooked) projections for better attaching them to the wooden shafts, and some were socketed. Some are shown to be short, a little longer than arms' length, and others almost a man's height and longer. Examples of javelins or spears with the looped leather thongs and weighted butt end are also to be seen. (4) The *šelāh* H8939, some sort of projectile (cf. the verb *šālāh* H8939, "to send"), is to be understood, when found in a military context, only in a general sense as a handwielded "weapon" or "missile" (2 Chr. 23:10; 32:5; et al.).

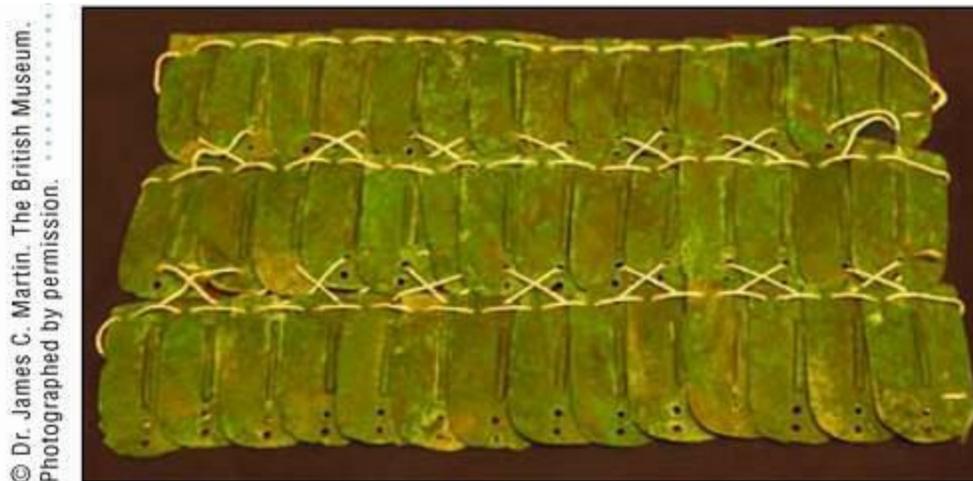

The bow was a very ancient instrument. It shows up in a 1900-B.C. Egyptian painting from Benihasan as being carried by a caravan of Semites on their way to Egypt. Their bow is a well-developed one with a curved spring in it and attached string, and one man is shown wearing a quiver around his neck (Yadin, 1:166 – 67). From a single piece of pliable wood drawn taut by a string, the bow developed into a composite instrument of long-range effectiveness, composed of wood, horns, and tendons, sometimes nicely decorated with designs, ranging in length from half the height to the full height or more of a man (1:80 – 81, 150 – 51, 199; 2:334 – 35, 384 – 85). The OT bow (*qešet* H8008), along with the quiver, was used by ESAU for hunting (Gen. 27:3); for battle purposes JACOB used it in fighting the AMORITES (48:22). Israel used it to some degree in the conquest of Canaan (Josh. 24:12). At least the kings and leaders of Israel used the bow, for example, JONATHAN (1 Sam. 20:20), DAVID (Ps. 18:34), JEHU (2 Ki. 9:24), and JOASH (2 Ki. 13:15). That there was a body of ARCHERS, probably professional, is evidenced by Isa. 21:17 and by the discovery of personally inscribed names on arrowheads coming from 1300 – 900 B.C. (de Vaux, 243; cf. Yadin, 2:353). Arrows (*ḥēṣ* H2932) made of wood with metal heads are mentioned in the OT, as is seen in the scene in which Jonathan shoots the arrows beyond David (1 Sam. 20:36), and in the story of Jehu, who "drew his bow with all his strength, and shot Joram between the shoulders, so that the arrow pierced his heart" (2 Ki. 9:24 NRSV). Arrows and quivers, often highly decorated, are depicted in the monuments (Yadin, 1:164 – 65, 235; 2:348 – 49; et al.).

B. Defensive equipment. The body of the ancient soldier was fairly well protected to ward off the offensive weapons wielded against him. One of the most effective defense "weapons" was the shield or buckler, expressed by two basic Hebrew words: the *māgēn* H4482 was a round-shaped shield commonly used (cf. Jdg. 5:8; 2 Ki. 19:32; et al.; see reliefs of the Assyrian attack on Lachish in Yadin, 2:430 – 37; cf. also 2:340 – 41, 418 – 19, and Cant. 4:4 – 5). The *šinnâ* H7558 was a larger shield that covered the whole body, such as that carried by Goliath's attendant (1 Sam. 17:7, 41), and a group of which could be used to raise a protective roof over the heads of attackers (Ezek. 26:8; cf. the Assyrian whole-body shield, Yadin 2:442 – 43). For effectiveness in battle, this large shield was used along with the long spear or pike (cf. 1 Chr. 12:8; 2 Chr. 11:12; et al.). The contrast between the two types of shield is pictured in 2 Chr. 14:8, which says that the army of Judah was equipped with the *šinnâ* and the long spear, whereas the Benjamites wielded the smaller *māgēn* and the bow. Shields were made of leather (cf. 2 Sam. 1:21, "the shield of Saul—no longer rubbed with oil"; Yadin 1:116) and of wicker material, and could be bossed and ornamented (Yadin, 2:407, 420 – 21; 386 – 87; 216 – 17). Another word for shield is the rare *šelet* H8949, which is used for David's shields of gold (2 Sam. 8:7 = 1 Chr. 18:7) and evidently represents an instrument somewhat parallel to the *māgēn*, with which it is associated in Cant. 4:4. The *sōḥērâ* H6089 may have been some sort of a buckler (so NRSV in Ps. 91:4; but NIV, "rampart").

The term for HELMET is spelled both *kôba'* H3916 (1 Sam. 17:5, Goliath) and *qôba'* H7746 (v.

38, David tried one on), reflecting a foreign derivation. In Jer. 46:4 and Ezek. 27:10 this helmet is associated with foreign troops, but in 2 Chr. 26:14 UZZIAH is said to have provided them for all his army. Archaeology freely evidences the use of helmets, made of metal or leather, but sometimes constructed of mail; in shape, they could be horned, conical, crested, feather-topped, and ornamented (Yadin 1:134 – 35, 150, 192 – 93, 340; 2:340, 368, 420).

The term for “coat of mail” or “scale-armor” also shows evidence of foreign origin (note the spelling variation between *sryôn* H6246 [Jer. 46:4; 51:3] and *širyôn* H9234 [1 Sam. 17:5 et al.]). The equipment worn by people in a construction project (Neh. 4:16) was probably more exactly a breast armor, which at times must have had appendages (cf. 1 Ki. 22:34, where an arrow is said to have struck between *haddēbāqîm* [*debeq* H1817, “appendage, scale”] and *hdšširyān* [variant spelling of *širyôn*; NRSV, “the breastplate”]). Goliath’s coat of mail, made of scale-like plates of bronze (1 Sam. 17:5), may have been like that introduced by the HURRIANS in the first half of the 2nd millennium B.C. and made of plates sewn on cloth or leather (de Vaux, 245). The Egyptians wore scaled armor of this type, as did also the Assyrians (Yadin, 1:192, 196, 240; 2:393, 398).

Bronze scale armor dating to the 9th-7th cent. B.C. Its source is uncertain, but similar scales were worn by Assyrian soldiers.

The soldier also wore a BELT or girdle (*ḥăgôr* H2512), the article given by Jonathan to David with other military equipment (1 Sam. 18:4). JOAB is pictured as wearing a soldier’s garment over which he wore a girdle with an attached sheath carrying a sword (2 Sam. 20:8; cf. such belts in Yadin, 2:420 – 24, et al.). Little is said about greaves (*ishâ* H5196; 1 Sam. 17:6, Goliath wore bronze ones). ANE monuments show the soldier barelegged (Yadin, 2:388, 422 – 23, et al.); he is pictured also as barefooted or sandaled (Yadin, 2:333, 388), or, as in the case of some Assyrian warriors of the Sargon-Sennacherib period, with shoes or boots laced up toward the knee (Yadin, 2:333, 388, 422 – 29). The Hebrew word for “boot” (*šē’ôn* H6007, used only in Isa. 9:5) is probably a loan word from Akkadian (*šêenu*, “shoe, leather-sandal”).

V. Armor and arms of the New Testament period. The NT has comparatively little to say about this subject.

A. Units in the army. According to Acts 23:23, 32, the military contingent to accompany PAUL from JERUSALEM toward CAESAREA was composed of 200 soldiers or infantrymen (*stratiōtēs* G5132, used also in Matt. 8:9; 27:27; Jn. 19:2; Acts 10:7; et al.), 200 spearmen (*dexiolabos* G1287, a light-armed

soldier, possibly “bowman”), and 70 horsemen (*hippeus* G2689). The commander who sent this unit with Paul is called *chiliarchos* G5941 (Acts 23:22), which means strictly a leader of 1,000 soldiers, but also an equivalent to the Roman military tribune, the commander of about 600 men (see Jn. 18:12). The NT speaks also of the *hekatontarchēs* G1672, CENTURION, an officer of lower rank (cf. also Matt. 8:13; Lk. 7:6; et al.). Of course, there were also military imperial governors like PILATE (Matt. 27:2), FELIX (Acts 23:24), and FESTUS (26:30).

B. The Roman soldier. Polybius (*Hist.* 6.22 – 23) describes the Roman soldier as wearing a helmet, a breastplate of brass or chain mail to cover especially the heart, and greaves; and as carrying a javelin, a sword hanging from the right side of the waist, and a shield, either one circular and about 3 ft. in diameter, or one about 2.5 ft. wide by 4 ft. in length. This description corresponds generally with Paul’s metaphorical statement (Eph. 6:14 – 17) about the Christian armor, composed of the girdle and the sword (*machaira* G3479, cf. also Matt. 26:47, 51; Jn. 18:11; et al.), the breastplate (*thōrax* G2606, cf. 1 Thess. 5:8; see also Rev. 9:9), the helmet (*perikephalaia* G4330), the shield (*thyreos* G2599, a long, oblong shield), and shoes. Another word for sword, *rhomphaia* G4855, represents a large broad sword used by barbaric peoples, especially the Thracians, but in Rev. 2:12 (cf. 1:16) it simply means “sword.” There is also a reference to the spear or spear point, *louchē* G3365 (Jn. 19:34). See WAR.

W. H. MARE

armor-bearer. A personal servant who carried additional weapons for the commanders of Israel’s armies (Heb. *nōsē’ kēlīm* H5951 + H3998, “carrier of arms”). Armor-bearers are mentioned some eighteen times in the OT with reference to such commanders as ABIMELECH (Jdg. 9:54), JONATHAN (1 Sam. 14:7 – 17), King SAUL (1 Sam. 16:21; 31:4 – 6), and JOAB (2 Sam. 18:15; 23:37; 1 Chr. 11:39). Another of their duties was to slay those wounded in the onslaught of their masters. While the chieftains threw the heavy javelins and shot the arrows, the armor-bearers used clubs and thick swords to dispatch the enemy wounded. Several kings of Israel were either killed by them or pleaded with their own armor-bearers to kill them. They seem to have been rendered unnecessary after the CHARIOT was introduced and are no longer mentioned after the time of King DAVID. See ARMOR, ARMS.

W. WHITE, JR.

armory. This term translates the Hebrew phrase *bēt kēlāyw* H1074 + H3998 (“his house of weapons,” 2 Ki. 20:13 = Isa. 39:2) and the terms *nešeq* H5977 (Neh 3:19, elsewhere usually rendered “weapons”) and *ôṣār* H238 (Jer. 50:25; NIV, “arsenal,” elsewhere usually rendered “storehouse, treasury”). The development of BRONZE and IRON weapons, and the introduction of the HORSE and CHARIOT in WAR, necessitated a specialized division of labor for both armorers and their arsenals. One important location was the “Palace of the Forest of Lebanon” (1 Ki. 7:2 – 12; 10:16 – 17). Certain arms were stored in the temple compound (2 Ki. 11:10), and in the later days of the commonwealth, arsenals were located around Jerusalem (2 Ki. 20:13; Neh. 3:19). See ARMOR, ARMS.

W. WHITE, JR.

arms. See ARMOR, ARMS.

army. This English term occurs in Bible versions primarily as the rendering of Hebrew *šābā’* H7372 and *ḥayil* H2657; cf. also Greek *strateuma* G5128 (Matt. 22:7 et al.).

I. The patriarchal period and the conquest of Canaan. During the patriarchal age, the wandering in the desert and the conquest of Canaan, the tribes of Israel did not develop an independent military organization. As disputes about water resources and pasture areas were common events, and clashes between clans or even tribes were an organic part of life, there was no need for such an organization in this society. Usually every adult male was a trained warrior (“from twenty years old and upward, everyone able to go to war,” Num. 1:30 NRSV), carrying his own arms day and night. At a time of danger each family or clan had only to gather its men and be ready in a short time to meet the enemy. Such was the case with Abram, who “led forth his trained men, born in his house, three hundred and eighteen of them, and went in pursuit as far as Dan” (Gen. 14:14 NRSV). Later in this passage (v. 24 NRSV) the term for “young men” is used (*naʿar* H5853; cf. 2 Sam. 2:14). It is interesting to note that the same designation is used by the Egyptian King RAMSES II with reference to a special Canaanite corps serving in his army at the Battle of Kedesh (KADESH ON THE ORONTES) in 1180 B.C. (cf. Y. Yadin in *JPOS* 21 [1948]: 110 – 16).

The number of the trained men mentioned in Gen. 14 (318) is not common. Actually the size of the military units was completely dependent on the size of the clan or the tribe from which they were taken. For this we have an artificial fixed scheme: the largest unit mentioned in the Bible is the ten thousand (*rēbābā* H8047, cf. Deut. 32:30), which would have been derived from a coalition of a few tribes. The smaller unit was the thousand, though the Hebrew term (*ʿelep* H548) is often used to designate a CLAN (e.g., Jdg. 6:15).

It seems therefore that the concept “thousand” in the Bible has two meanings: the first and

Wooden painted model of the Egyptian army during the Middle Kingdom (c. 2040 – 1640 B.C.). Discovered in Assuit, Egypt.

simple one stands for a regular military unit with a fixed number of warriors that might be divided into smaller units of hundreds or tens (i.e., units derived from the smaller parts of the tribe—the houses). The other appears as the equivalent term for a clan or a family (in the context of military duties); but in this case the number of soldiers was not fixed: it varied according to the size of each tribe. For instance, the family of the Danites sent only “six hundred men...armed with weapons of war” (Jdg. 18:11). Few scholars believe that the three hundred men chosen by GIDEON also were taken from his own family. As already stated, war played an important role in the tribe’s life, and as

so was conducted according to well-established laws, initially perhaps unwritten, but well known to each of the tribe's warriors. A later echo of these laws is to be found in Deuteronomy, announcing the cases when certain people could be dismissed from fighting (Deut. 23:1 – 15).

In war, the leadership among the Israelites was usually the same one that governed them in time of peace: the ELDERS of the tribe or the clan. It seems that often, at a time of danger, new officers, who did not stem from this leadership but were able warriors, were elected. Such an officer might be the *ʿallup H477* (“chief,” Gen. 36:15 – 43; Zech. 9:7; 12:5 – 6), a title found in Ugaritic texts too, and derived from the word *ʿelep* (“thousand”), which as already pointed out indicates a military unit. These officers had also the right to divide the spoil of war among the members of the clan, and in time of peace took care of military training, which was an important part in a man's education. According to 1 Chr. 12:24 – 38, it seems that each Israelite tribe had its own chosen weapon in which it specialized.

When summoned, every warrior came with his own arms and supplies sufficient for a few days. If war lasted longer than that, supplies were sent to the individual soldiers by their families at home (1 Sam. 17:17 – 18). A similar military system was established at that time also among the Canaanite inhabitants of the country, although they were dwelling in city-states. Even the size of their military units was the same, except that they were fixed according to the size or richness of the individual cities and not the size of the tribes. Tablets found in the city of MARI testify that when a few towns united in a coalition against a common enemy, they were able to send to war corps that numbered up to ten thousand men. A well-known example is the Canaanite coalition that fought the Egyptian King THUTMOSE III (1468 B.C.) near MEGIDDO, where more than three hundred Canaanite “kings” assembled together. Usually the Canaanite corps numbered between three hundred and one thousand men alone. Little cities were able to summon only a few hundred soldiers, the basic unit being ten.

Although similar in number, the organization of the Canaanite army was superior to that of the Israelites for several reasons. The Canaanites were under the absolute rule of kings who kept regular units of hired soldiers. These men were able to devote all their time to military equipment such as CHARIOTS. They also had developed an elaborate system of logistics.

II. The period of settlement and the judges.

With the beginning of the settlement, conditions changed. The wandering tribes found themselves inhabiting cities and villages they had to defend, and the military problems were quite different. They were still divided into tribes, but ties became loose, each tribe now primarily engaged in solving its own problems. Old institutions failed to unite the tribes in face of a common enemy, and this situation is clearly reflected in DEBORAH's song (Jdg. 5). The sense of loyalty to the family or clan became stronger, and soon clashes between the tribes themselves ceased. In course of time, people were more and more identified with their cities and villages; indeed, they are named by their cities, and not by their tribe (Jdg. 20:15; 1 Sam. 31:11).

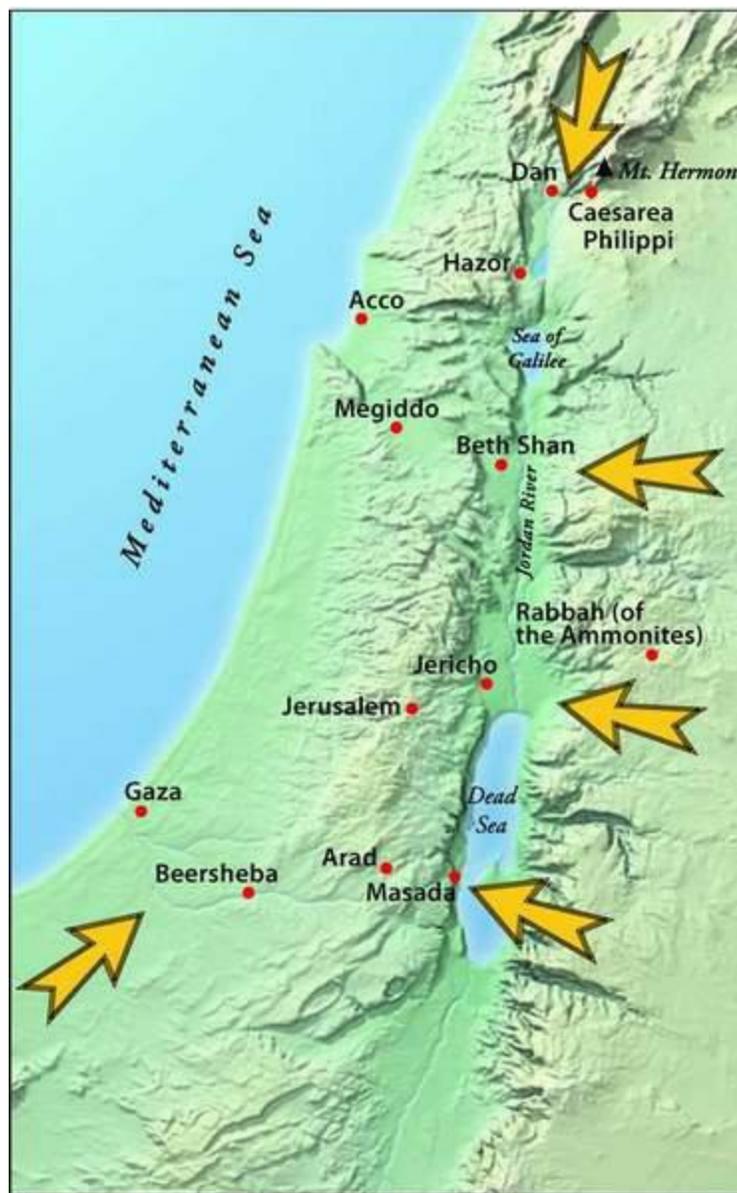

Soon it became obvious that against the Canaanites and the PHILISTINES with their developed military system and superiority of arms (IRON), stronger military organization was badly needed. Consequently, and for a short period, the institution of the judge was born. These new military charismatic leaders who relieved the earlier ones in time of distress, depended completely on personal courage and ability in battlefield, and solved the problem of a proper leadership. They were not able to change the general situation of the army, which, as in the previous period, was still in the stage of a militia, and could be summoned only for a short period. Moreover, the judges were not able to unite all the forces of the tribes even in the time of great danger, and usually they depended

upon their own tribe or upon a few others who dwelt in the immediate neighborhood. This situation is clearly reflected by the phrase: “In those days Israel had no king; everyone did as he saw fit” (Jdg. 17:6).

Under the steady military pressure of the Philistines, it became clear that good military leadership alone without a proper army would not save the nation. The necessity for permanent and central rule, which alone would be able to build such an army, was recognized by all. We are told that the demand for a king came from among the people, against the will of SAMUEL (1 Sam. 8:4 – 5). The transition period between the judges and the kings is symbolized by the leadership of SAUL. This first king started his career as a typical charismatic judge by showing his military talent in the war against the Ammonites, but later was appointed king by Samuel. He soon turned to build a regular army corps, probably enlisted from the tribe of BENJAMIN. This unit initially numbered about 3,000 men (13:2) but was steadily increased (14:52).

III. The period of the United Kingdom. It was not until the days of DAVID and SOLOMON that a standing army was created. David developed the first regular unit that he inherited from Saul and turned it into a well-organized and efficient tool, with which he gained a large territory for Israel and defeated all his enemies. Solomon completed the task by adding some new corps, as units of war chariots.

The biblical sources testify that David’s army was composed of two different parts: the regular army and the militia. The regular army itself was built from two different groups, each of them derived of different ethnic elements. The first group was Israelite and developed from out of the band that gathered around David while he was wandering in the Judean border lands. Many of them were from his own family: “David left Gath and escaped to the cave of Adullam. When his brothers and his

Invasion routes.

father's household heard about it, they went down to him there. All those who were in distress or in debt or discontented gathered around him, and he became their leader. About four hundred men were with him" (1 Sam. 22:1 – 2). This band increased later to six hundred people (1 Sam. 23:13; 27:2); they wandered with him, raided villages and little towns, and lived on the plunder collected there, later becoming the core of the regular army. At the head of this band stood a little group numbering no more than thirty men called the "heroes" or "mighty men" (Heb. *gibbôr* H1475), who were the military elite (cf. B. Mazar in *VT* 13 [1963]: 310 – 20). These men were later appointed to the highest posts in the regular army and in the militia as well (2 Sam. 23:9; 1 Chr. 11:12). Together they formed the military institution called the "Thirty," which served probably as the council of war (2 Sam. 23:23). The second group serving in the regular army was composed of hired non-Israelite mercenaries (Kerethites, Pelethites, and Gittites). These people served as the king's bodyguard, and were used mainly in time of internal clashes against the king's personal enemies, since he could always depend on their loyalty (2 Sam. 15:18).

David did not fail to reorganize the bigger part of his army, the militia: "This is the list of the Israelites—heads of families, commanders of thousands and commanders of hundreds, and their officers, who served the king in all that concerned the army divisions that were on duty month by

month throughout the year. Each division consisted of 24,000 men” (1 Chr. 27:1). It should be emphasized that although the number twelve is used here again as the basic number for division, it is obviously not based on the twelve tribes of Israel, but on a territorial scheme. Each unit composed of 24,000 men served one month every year. At time of danger it was rather easy to gather all of them, as their staff officers were regular army men who served the king during the whole year. When gathered, it should have been an enormous army for those days.

The reorganization of the militia could be accomplished only after an overall numbering. This task was given to JOAB (2 Sam. 24). “Joab reported the number of the fighting men to David: In all Israel there were one million one hundred thousand men who could handle a sword, including four hundred and seventy thousand in Judah” (1 Chr. 21:5). The numbering was actually forced on Joab who, being a regular army officer, did not like the militia. Other numberings took place in the time of JEHOASHAPATH (2 Chr. 17:14) and AMAZIAH (25:5), and were probably practiced until the end of the Judean kingdom.

Solomon, who inherited a well-developed army from his father, added to it some new units, among them corps of war chariots and horsemen (1 Ki. 10:26). He was also the first Israelite king who systematically fortified the main cities of the kingdom. Three of the city gates he built have been discovered in the excavations of HAZOR, MEGIDDO, and GEZER (9:15).

IV. The period of the kingdoms of Israel and Judah. With the division of the kingdom the army was divided too. In Judah it was based on the people of the tribes of Judah and Benjamin, and in Israel on the people of the other ten tribes. We have no evidence about general changes in the organization of the two armies. It seems that both of them were divided into the same two parts as in the previous period: a regular army and a militia. The main power of the two armies continued to be—at least in the first years—the corps of war chariots. For this hypothesis we have good evidence not only in the biblical sources, but also in the Assyrian documents and archaeological finds. A cuneiform tablet dated to the reign of SHALMANESER III, king of Assyria, describes the battle near the Syrian city of Qarqar (853 B.C.), which was conducted against a coalition of twelve Syrian kings. Among them appears AHAB of Israel, who brought with him about 2,000 war chariots, more than all the other kings together. (It seems that this formidable army included also that of the kingdom of Judah, as the kings of the two countries were allies, 2 Ki. 3:7; but even so this number is quite impressive).

After Y. Yadin’s new excavations at Megiddo (see *BA* 33 [1970]: 66 – 96), it became evident that the famous stables discovered there earlier (with places for 450 horses or 150 chariots), which were previously connected with Solomon, are in fact from the days of Ahab. Biblical sources preserved also some titles of the officers who served in these corps, as that of ZIMRI, “commander of half his chariots” (1 Ki. 16:9 NRSV). At the end of the 9th cent. B.C., the chariot corps were defeated, so that in the days of King JEHOAHAZ nothing was left “except fifty horsemen, ten chariots and ten thousand foot soldiers, for the king of Aram had destroyed the rest and made them like the dust at threshing time” (2 Ki. 13:7).

The destruction of the main fighting power of the two kingdoms had driven the armies out of the open battlefield, where they used to meet their enemies in the previous period. The main military efforts were now concentrated in fortifying the walls of the cities to prepare them for long siege. Fine examples of this work were uncovered in the excavating of many Israelite and Judean cities. In a few of them (Hazor, Megiddo, Gezer, Gibeon, and Jerusalem) elaborate water systems were also found. The archaeological finds bear evidence also to a logistic system practiced in the last days of the Judean kingdom as to the collecting of supply into the king’s storage cities. These are jar handles

stamped with the Hebrew word *lmlk* (“to the king”) above the royal emblem and the name of the city.

The other units of the armies of the two kingdoms were organized as they probably were in the days of David and Solomon. Each of them divided into little units of a regular army with some mercenaries and the militia. An interesting new bit of evidence about the mercenaries was discovered in the excavations at Tell ARAD, a Judean southern border fortress about 19 mi. E of BEERSHEBA. Here was found a Hebrew ostrakon (see OSTRACA) dating to the 8th cent. B.C. in which certain soldiers are referred to as *ktym* (inhabitants of CYPRUS), an apparent reference to Greek mercenaries (see Y. Aharoni in *BASOR* 197 [Feb. 1970]: 16 – 42; *ANET*, 569; J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions* [1971], 1:51). Another new witness to the existence of Greek soldiers in Judah (dating to the end of the 7th cent. B.C.) was found in a little Judean fortress on the sea coast not far from ASHDOD, called now “Mezad Hashavyahu,” where most of the pottery discovered consisted of imported E Greek vessels. In this place also was found a Hebrew ostrakon containing a letter of complaint sent to the captain (*šr*) of the fortress by one of the Judean soldiers who served under him (cf. J. Naveh in *IEJ* 10 [1960]: 129 – 39; *ANET*, 568).

Because of a unique Assyrian relief found at NINEVEH, we have the opportunity to glance at the Judean army in time of war. This relief describes the storming of the city of LACHISH at 701 B.C. by the armies of SENNACHERIB, king of Assyria. The Judean soldiers are depicted fighting from above the walls and the gate of the besieged city. The rare Assyrian relief is until now the only extant document in which one can see the dress and weapons (including one war chariot) of the Judean army in the biblical period. Relying on this description, R. D. Barnett (in *IEJ* 8 [1958]: 161 – 69) tried to prove that Judean soldiers were later enlisted into the bodyguard of the Assyrian king.

Another valuable glimpse into the everyday life of the Judean army at that time is given by some ostraca discovered in the excavations at Arad and Tell Beersheba, which were at that time southern border posts of the kingdom. These ostraca deal with small cargoes of supply sent with little groups of soldiers. Each of them, even in the smallest quantity, was carefully recorded, and the record was kept in the fortress office (see *ANET*, 568 – 69). There exists also another Hebrew ostrakon, this time from the city of Lachish, found in the room inside the city gate, and addressed to its military officer. It is a letter written at the time when the Babylonian army was approaching the region in the last days of the kingdom. In the letter the officer is informed that the neighboring city of AZEKAH already had been captured by the enemy (see *ANET*, 322).

V. Postexilic period. After the fall of Israel and Judah, the country was divided into many satrapies ruled first by the Assyrians and later by the Babylonians and the Persians. There is no doubt that in this period the army units who were stationed here were but part of the general military organization of these empires. It is also evident now that the existence of Jewish troops did not end with the fall of their independent kingdom. This evidence is drawn from the well-known ARAMAIC papyri found at ELEPHANTINE in Egypt, dating to the 5th cent. B.C. The papyri reflect the life of a Jewish military colony, formed probably already by the Assyrians, but surviving until the end of the 5th cent. B.C., when destroyed by the Egyptians. The soldiers were organized in a unit called *dgl* (“battalion, detachment”) that was under the command of a Persian officer (cf. A. Cowley, *Aramaic Papyri of the Fifth Century B.C.* [1923], 10 – 11 et al.). The same term (which is also common in Qumran) is used in an ostrakon found at Arad, written in Aramaic script and dating also to the end of the 5th cent. B.C.; it seems therefore logical to assume that another Jewish unit was stationed in this desert post.

At any rate, a revival of the Jewish army eventually took place, but not before the country regained its independence during the period of the HASMONEANS. First it existed as scattered guerrilla

bands, and later—under John Hyrcanus—as paid soldiers, Jewish and Gentile alike (Jos. *War* 1.2.5 §61; 1.5.4 §117). In the year 63 B.C. Palestine was conquered by the Romans, who brought with them their own army. For a short period they let their vassal kings, HEROD and his successors, keep their private little armies, in part composed of hired Thracians, Germans, Gauls, and Greeks (*War* 1.33.9 §670). This army ceased to exist after the first war against the Romans (A.D. 69 – 73).

The last war fought by a Jewish army against the Romans was in the year A.D. 132, when the second rebellion under the leadership of BAR KOKHBAH took place. About this war and the army who fought it, we are now in the possession of important new evidence, discovered in the sensational excavations in the Judean desert. (See further W.W. Tarn, *Hellenistic Military and Naval Development* [1930]; Y. Yadin, *The Art of Warfare in Biblical Lands in the Light of Archaeological Study* [1963]; L. Keppie, *The Making of the Roman Army* [1984]; T. R. Hobbs, *A Time of War: A Study of Warfare in the Old Testament* [1989]; R. Drews, *Early Riders: The Beginnings of Mounted Warfare in Asia and Europe* [2004].) See also WAR.

E. STERN

Ama ahr'nuh (Vulg. *Arna*). One of the ancestors of EZRA (2 Esd. 1:2), apparently corresponding to Zerariah (Ezra 7:4).

Aman ahr'nuhn (אָמָן H820, possibly “ibex” or “quick”). A descendant of DAVID through Hananiah, son of ZERUBBABEL (1 Chr. 3:21). According to the NRSV (which follows LXX), Arnan was the son of Rephaiah and the father of Obadiah, but the precise relationship is left ambiguous by the NIV (following the MT, which says lit., “the sons of Rephaiah, the sons of Arnan, the sons of Obadiah”). See REPHAIAH.

Ami ahr'ni (אָמִי G767 [not in NIV]). Son of Hezron, included in Luke’s GENEALOGY OF JESUS CHRIST (Lk. 3:33 NRSV). However, the Lukan genealogy is textually uncertain at this point. The NIV, following CODEX ALEXANDRINUS and many other witnesses, which read *Aram* G730, translates “Ram” (KJV, “Aram”; see Matt. 1:3; Ruth 4:19; 1 Chr. 2:9 – 10). See A RAM (PERSON) #4; RAM (PERSON).

Amon ahr'nuhn (אָמוֹן H818, possibly “rushing [stream]”). A river (modern Wadi el-Mujib) beginning in the hills of northern ARABIA and flowing some 20 mi. westward to enter the DEAD SEA opposite EN GEDI. A network of tributaries referred to as the “valleys of the Arnon” in the biblical narrative (Num. 21:14 RSV) add to the flow. For most of its journey, the river now courses through a deep gorge some 2 mi. wide at the top and only some 100 ft. wide at the bottom. The steep banks, rising in places to 1,700 ft., are limestone capped with basalt.

The Arnon is first mentioned in the biblical record as forming the boundary between MOAB and the AMORITES (Num. 21:13). It also formed

© Dr. James C. Martin

Looking NE into the valley of the Arnon River (Wadi el-Mujib).

the southern boundary of the territory assigned to REUBEN (Deut. 3:12). Israel was commanded to cross the Arnon from S to N and take its first territorial possessions there (Deut. 2:24). The MOABITE STONE indicates, however, that Moabites lived N of the wadi by the time of OMRI (see *ANET*, 320), thereby implying either incomplete or impermanent settlement by Israel. The river was evidently forded in many places, and there are still traces of an old Roman road and bridge to be seen.

H.G.ANDERSEN

Arod air'od. See ARODI.

Arodi air'uh-di (אֲרֹדִי H771; gentilic אֲרֹדִי H772, Arodite"). Son of GAD and eponymous ancestor of the Arodite clan (Gen. 46:16; Num. 26:17; in the latter passage, MT reads *'āaôod* [cf. KJV, NRSV, Arod"], but "Arodi" is supported by several ancient versions).

Aroer uh-roh'uhr (אֲרֹעֵר H6876 [often אֲרֹעֵר], prob. "juniper"; gentilic אֲרֹעֵרִי H6901, "Aroerite"). (1) An ancient city E of the JORDAN on the N bank of the river ARNON about 14 mi. from the DEAD SEA and known as Aroⁱr in modern times. Initially it indicated the southern limit of the AMORITE kingdom of SIHON and was taken by Israel under MOSES (Deut. 2:36; 3:12; 4:48; Josh. 12:2). Aroer (along with other conquered cities) was evidently repaired by the descendants of GAD (Num. 32:34) before being assigned to REUBEN (Josh. 13:7, 16; Jdg. 11:26 [MT *'ār(ōr)*; cf. 1 Chr. 5:8). It was one of twenty towns that JEPHTHAH took from the Ammonites (Jdg. 11:33; see AMMON). JOAB'S cen for DAVID began at Aroer (2 Sam. 24:5). In the days of JEHU, HAZAEL, the powerful Aramean king, took

the city from Israel (2 Ki. 10:33). Also about this time, MESHU, king of MOAB, “built Aroer and... made the highway in the Arnon (valley)” (MOABITE STONE, line 26; see ANET, 320). Aroer evidently remained Moabite until the time of Jeremiah, who prophesied against it (Jer. 48:18 – 20). Aroer, along with Damascus and Ephraim, is also condemned by Isaiah (Isa. 17:2 MT, contra NRSV; if MT is correct here, this Aroer may refer to a different, unknown city in SYRIA). (See further NEAEHL, 1:92 – 93.)

(2) A city near RABBAH (Josh. 13:25; Jdg. 11:33). The site has not been positively identified; some think it is the same as #1 above.

(3) A city in the NEGEV some 20 mi. SE of BEERSHEBA and known today as Khirbet (Ar)arah. David shared his Amalekite spoils with the people of Aroer (1 Sam. 30:28). Two sons of “Hotham the Aroerite” were among David’s mighty warriors (1 Chr. 11:44); however, some argue that the allusion here is to a site in TRANSJORDAN, thus #1 or #2 above. (See NEAEHL, 1:89 – 92.)

H.G.ANDERSEN

Arom air’uhm (Αρομ). Ancestor of some exiles who returned with ZERUBBABEL (1 Esd. 5:16). The name is not found in the parallel lists (cf. Ezra 2; Neh. 7).

aroma. See ODOR.

aromatic cane. This phrase is the NRSV rendering of *qēnēh-bōsem* H7866 + H1411 in Exod. 30:23 (NIV, “fragrant cane”; lit., “cane of spices”). The aromatic cane (*Andropogon aromaticus*) is not the sugar cane as people know it today, but a grass that gives out a strong smell when bruised and that has a taste of ginger. Cows and goats like it, but when eaten it can taint their milk and even their flesh. When processed, it produces an oil called ginger grass. It is similar to the lemon grass (*Andropogon schoenanthus*) found in Palestine, as well as ARABIA and INDIA. There would have been no difficulty in importing the ginger grass to Palestine, for there was a regular caravan traffic between the two countries. It is thought that the QUEEN OF SHEBA brought King SOLOMON large quantities of spiced cane (1 Ki. 10:2, 10, where the word “spices,” *bōsem*, may indefinitely refer to *Andropogon aromaticus*). It must be remembered that she brought the SPICES, presumably, from ETHIOPIA, where the canes would have grown well.

The NRSV uses “sweet cane” in three passages. In one of them it renders Hebrew *qāneh haṭṭōb*, lit “the good [precious] reed” (Jer. 6:20; NIV, “sweet calamus”). In the other two, the word *qāneh* ‘ appears by itself (Isa. 43:24; Ezek. 27:19; NIV, “[fragrant] calamus”); cf. also Cant. 4:14, where both versions use “calamus”). The native or wild cane found throughout Palestine in streams and ditches is *Saccharum biflorum*, and this could have been the one mentioned. Many students feel, however, that the plant referred to was the true *Saccharum officinarum*, that is, sugar cane. The ancient Hebrews probably did not make sugar from this plant, but it was chewed or used in its natural form for sweetening drinks and food. HONEY was, of course, the chief sweetener in the OT days. See also FLORA (under *Gramineae*).

W. E. SHEWELL-COOPER

Arpachshad ahr-pak’shad. See ARPHAXAD.

Arpad ahr’pad (ארפד H822, meaning uncertain). KJV also Arphad (Isa. 36:19; 37:13). The name of

a province and its chief city located in the northern region of SYRIA near the city of HAMATH, with which it is invariably associated in the Bible. The modern Tell er-Refad, 25 mi. N of ALEPPO, most probably marks the site today. The violent history of Arpad led to its being used as a proverbial expression attributed to the Assyrians (2 Ki. 18:34; 19:13; Isa. 10:9; 36:19; 37:13). The city was overrun by the Assyrians in 740 B.C. under TIGLATH-PILESER III and in 720 B.C. by SARGON II. The inability of Arpad and Hamath to withstand such attacks led to the Assyrian claim that Israel too would not be able to stand.

T.McCOMISKEY

Arphad ahr'fad. KJV alternate form of ARPAD.

Arphaxad ahr-fak'sad (אַרְפַּכְשָׁד H823, derivation uncertain; Ἀρφαξάδ G790). Also Arpachshad (only in OT). (1) Son of SHEM and grandfather of EBER (Gen. 10:22 – 24; 11:10 – 13; 1 Chr. 1:17 – 18,24; Lk. 3:36). The birth of Arphaxad is the first recorded birth after the flood. Many suggestions have been made concerning the nation of which he was the progenitor. The terminal letters (*kšd*) suggest to some the Kasdim or CHALDEANS. Others identify the name with Arrapkha (Kirkur) in Assyria. The first suggestion has merit, since Assyria is already represented in the Table of NATIONS in the person of ASSHUR (Gen. 10:22; if Arphaxad is regarded as the progenitor of the Assyrians, that would mean that the Chaldeans are not represented at all in the Table of Nations).

(2) The name of an otherwise unknown, and possibly fictional, ruler of the Medes (Jdt. 1:1).

T. McCOMISKEY

array. This English noun, as part of a larger phrase, is often used in the KJV to translate the Hebrew verb (*ārak* H6885 (“to put, prepare, arrange”) when it occurs in military contexts (e.g., 1 Sam. 4:2, “And the Philistines put themselves in array [NIV, deployed their forces] against Israel”). On the basis of archaeological finds, such as representations of armies in the fields and formations of miniatures, as well as an Egyptian tomb of the twelfth dynasty at Assiût, it is known that ancient warriors were well-drilled and highly organized in mass movements and tactics. A number of words in both OT and NT refer to specific types of military groups. See ARMY; WAR.

W. WHITE, JR.

array, holy. This phrase is used by the ASV and RSV to render Hebrew *hadērat-qōdeš* in four passages (1 Chr. 16:29; 2 Chr. 20:21; Pss. 29:2; 96:9; KJV, “the beauty of holiness”; NIV, “the splendor of his holiness”; NRSV, “holy splendor”). The phrase is used always in connection with the public WORSHIP of Yahweh and seems to mean that in such worship it was necessary that the priests dress in proper attire. For such an occasion only dress that would honor him would be suitable; anything else would dishonor him. Some have suggested that it is Yahweh himself who is depicted as being clothed with the beauty of holiness.

S. BARABAS

arrogance. See PRIDE.

arrow. See ARMS, ARMOR.

arrow-snake. Name given sometimes to the *Coluber najadum* (or similar species), referring to a SERPENT that coils itself and darts forward. The term is used by the NJPS and other versions to render Hebrew *qippôz* H7889, which occurs only once (Isa. 34:15), but this word more probably refers to an OWL. The KJV mg. has “arrow snake” as an alternate rendering of *šēpîpōn* H9159 (Gen. 49:17); see VIPER.

Arsaces ahr'suh-seez (Ἀρσάκης). An Old Persian name borne by several Medo-Persian kings. It was also the name of the founder of the PARTHIAN empire (c. 250 B.C.) and was then assumed as a title by subsequent Parthian kings. The Arsaces who is said to have captured the Seleucid ruler Demetrius II (1 Macc. 14:2-3; cf. 15:22) was Mithridates I. (Cf. also Jos. *Ant.* 13.5.11 §186. Appian, in *The Syrian Wars* 67, confuses this Arsaces with the earlier ruler Phraates.) The Parthian dynasty of the Arsacidae became one of Rome's greatest threats. See PERSIA III.E.5.

W. WHITE, JR.

Arsareth ahr'suh-reth. KJV Apoc. form of ARZARETH (2 Esd. 13:45).

arsenal. See ARMORY.

Arsiphurith ahr-sif'uh-rith (Ἀρσιφουριθ). KJV Azephurith. A man whose 112 descendants returned to Jerusalem with ZERUBBABEL (1 Esd. 5:16 NRSV, but see the text and apparatus in A. Rahlfs, *Septuaginta*, and in R. Hanhart, *Esdrae liber I*, *Septuaginta* 8/1 [1974], 90). This name is thought to be a textual corruption for *Ariphos*, that is, HARIPH (Neh. 7:24 = Jorah in Ezra 2:18).

art. This article is limited to a survey of the processes and achievements of the Syro-Palestinian area in biblical times, though the influence of peripheral areas and times will be noted. Primary concern is with painting, carving, engraving, and sculpture, as well as the temporal progression of decorative themes and patterns, leaving the objects decorated to separate consideration, since these are the vehicles, not the art element itself. See also ARCHITECTURE; SEAL; TEMPLES.

5. Conclusions

I. Art before 3000 B.C. The Syro-Palestinian area did not have the support of a well-founded, native civilization by which to produce a significant art. In spite of this lack, however, three examples of preliterate, prehistoric art of startling character require consideration.

A. Linear art. At Teleilat Ghassul (c. 3600 – 3400 B.C.) was unearthed a splendid example of linear art in polychrome fresco, the central feature being a large, eight-armed design arranged around a circular center filled with an eight-pointed star. Encircling the star is a field containing stylized dragons with other figures of geometric character. A second fresco portrays a bird in very natural posture, an equal for which it is scarcely possible to find in Egypt. A third composition presents a group of three figures, the dress of one indicative of royalty, possibly a worship scene. The star design suggests derivation from the painted pottery of Tell Halaf (see GOZAN), where similar designs were applied to the inside of shallow bowls and platters, indicating migration of the art form into the Jordan Valley.

B. Sculpture. JERICHO has produced an example from c. 6500 B.C. of near sculpture (G. Garbini, *The Ancient World* [1966], 70 – 71) for rewarding contemplation in a series of plastered skulls characterized by extremely sensitive modeling of the plaster in imitation of the planes of the face, reminiscent of oriental features. Formation of the eyes by cowrie shells adds the necessary touch of realism and indicates the perceptive imagination of this ancient artist. A slightly later painted terracotta head was already indicative of a decadent trend but represented a unique occurrence of terracotta as an art form. From the Amuq Plain in SYRIA came a

Plaster mask with shells for eyes. This work of art from Jericho dates to around 6500 B.C.

steatite figurine from the early part of the Neolithic Period (L. Woolley, *The Art of the Middle East* [1961], 104). It is remarkable for its quite literal character, though of steatopygous form.

C. Carving. It should be noted that the earlier Natufians of Palestine, c. 8000 B.C., were not unconscious respecting artistic endeavors and frequently adorned the bone handles of their sickles with carved animal heads (W. F. Albright, *Archaeology of Palestine* [1960], pl. 10). Other artistic Natufian efforts are revealed in carved bone neck (K. Kenyon, *Archaeology in the Holy Land*, 5th ed. [1985], pl. 4), a singular arrangement in pairs of shapes like golf club heads, but beautiful in form.

D. Pottery. This art form came to Jericho with the Pottery Neolithic A people (Kenyon, *Archaeology*, 62), having a distinctive slip ware style of decoration of chevrons and triangles, with red slip burnished (i.e., polished), forming an attractively decorated ware of good contrast and quality. These examples indicate an early and high level of artistic ability indicative of excellent creative thought in both real and abstract design. While a wealth of examples from the period has not been unearthed, meagerness should not be used to conclude that they were unproductive of pleasing art. What was lacking was an age that could provide the necessary leisure time for thought and achievement. See POTTERY.

II. Art from 3000 B.C. to the Israelite conquest. The date of 3000 B.C. is taken as a demarcation, since it is generally accepted as the beginning of the historical period.

A. Influences in Syria. One of the earliest occupied sites along the Phoenician coast was Byblos (GEBAL). Its earliest contact with one of the greatest of the art worlds, Egypt, occurred in the time of Snefru (third dynasty, c. 2615– 2565 B.C.). Contact with Mesopotamia took place some three centuries later in the era of westward expansion under Sargon I (2360 – 2305). After each initial

contact, traffic both ways was regular and at times intense. However, having no central government, the Syro-Palestinian area could not produce a distinctive art form of its own; it remained basically an imitative area. Egypt's influence in Syria is evidenced by the presence of vases with gold lids found in Byblos, the lids bearing cartouches of Thinite pharaohs. At Tell el-Judeideh, near AL LAKH, were found six bronze statuettes from c. 2700, and Mesopotamian cylinder seals were found with them. The style of dress of the statuettes is distinctly Syro-Anatolian, but the presence of the seals indicates a casting process from SUMER, the lost wax method (H. Frankfort, *The Art and Architecture of the Ancient Orient* [1959], 134). After 2000 a new life appeared in the area when the AMORITES invaded the lands.

The primary motifs in twelfth-dynasty (1991 – 1786 B.C.) coastland Syro-Palestine were Egyptian, as evidenced in art objects found in Byblos, both those made in Egypt and native copy works. This influence continued strongly down through the eighteenth dynasty and into the Ramesside Age (D. Harden, *The Phoenicians* [1962], 180). Of lesser influence was Mesopotamia, evidenced by the glyptic art of cylinder and stamp seals, but showing a mixture of Egyptian tendencies. The shift toward Assyrian motifs in the 1st millennium B.C. points up the fact that art forms generally reflect the art of the stronger ruling power (ibid.). When the HITTITE people were in control, their costumes and attributes were present. HURRIAN domination is indicated by the prominent white-on-dark painted pottery.

About the beginning of the 2nd millennium B.C., two silver figurines of grotesque shape were produced, a completely local product, without evidence of Egyptian influence. Slightly later two copper statuettes appeared, one a standing god, another a seated goddess, showing Hurrian influence in UGARIT, under Hurrian control (Woolley, *Art of the Middle East*, 108). Both the silver and copper figures appear modeled in the round from the front, while from the side they show a flat back, necessitated for bending to produce the seated figure (ibid., 103). The flatness indicates that the figures were intended to be viewed from the front, a "convention." The idols were provided with inlaid eyes, and indications are that the idols were goldleafed. Headdresses are Hurrian.

Cretan influences are seen in the presence of Middle Minoan (early 2nd millennium B.C.) polychrome pottery as indicated by spiral designs on a fragment of a silver bowl. It was in the 15th and 14th centuries, however, that Mycenaean influence became clearly evident in the presence of quantities of Mycenaean pottery. It was in the latter half of this period that Egyptian influence appeared again with the reestablishment of its power up to the Euphrates. An example is a gold-encased copper statuette of BAAL dating from the 15th cent. and like Byblian work. The gold dish and gold bowl from Ugarit of the 15 – 14th cent. represent an extremely skillful workmanship (Woolley, *Art of the Middle East*, 115). From the 14th cent. comes a stela of the weather god that reveals an imitation of the Egyptian motif of the king overcoming his enemies.

From the Early Bronze "obelisk" temple of Byblos a multitude of bronze figurines, both in the round and flat, demonstrate the capabilities of the smith, but are of low artistic quality. A gilt bronze statuette with left arm extended is capped with a Hurrian miter of divinity, having finely worked features but with flattened torso in obvious contrast to cruder attempts. The attitude of the body is otherwise Egyptian. Certain other statuettes appear to be direct copies.

The arts of PHOENICIA as a native skill are not distinguished in general, are notably inferior, and are characterized by a monotonous tedium due to uninspired copying. Rare originality is exhibited in the Ugarit gold dish, thus emphasizing the average efforts exhibited elsewhere, which indicate the existence of almost a pattern book of examples.

B. Sculpture. In Phoenicia sculpture cannot be known as other than crude. The silver figurine of Ugarit (Woolley, *Art of the Middle East*, 112) is illustrative. The statue of Idrimi of Alalakh (15th cent. B.C.) is primitively executed in angular squarish lines, with attenuated chin and glaring eyes reminiscent of Sumerian styles. An attempt to produce a standing figure in the Egyptian manner of the “colossus of Byblos” is disconcertingly primitive. The bust of King Yarim-lim of Alalakh (18th cent.) is, however, finely executed and shows evidence of use of the best technical knowledge of late Sumerian craftsmanship.

C. Carving. Cylinder seal carving in Syria reached a high degree of perfection and often surpassed its Mesopotamian models, indicating that the Amorites did not destroy completely the culture, though many mounds show destruction at the time of their advent. IVORY carving came into great prominence in the latter half of the 2nd millennium B.C. Chief examples come from MEGIDDO and Byblos, with the crested griffin being an import from Crete by the Aegeans (Frankfort, *Art and Architecture*, pls. 148 – 49). Other examples reveal Mesopotamian influences, while still others exhibit influence from Egyptian styles. Excellent taste and handicraft are exhibited, surpassing at times in line and form their inspirations, the artists meanwhile adapting and developing a style of their own.

D. Pottery. In Palestine proper at the beginning of the Early Bronze Age, burnishing (smoothing of the surface) reached a high peak of finesse (Proto-Urban A, Tell el-Farah are earlier examples). Another method of decoration was the use of bands of red and brown, with veining in use in the N areas, designated grain wash, as if done by a coarse hair brush. In the S the bands were solid. In Syria at the beginning of the period, the Khirbet Kerak red-and-black burnished ware dominated the scene (Kenyon, *Archaeology*, 124 – 29). At the time of the Amorite invasion, a new pottery characterized by incised patterns of straight and wavy lines appeared (*ibid.*, 136).

About 1600 B.C. a distinct break in pottery appeared (beginning the Middle Bronze period) with a progressive dissociation of pottery from Syrian forms as the truly native Phoenician styles began to develop. A prominent and widespread characteristic is the ubiquitous deep red slip, highly burnished, while in many cases others have a combed finish. In the Middle Bronze II era, however, distinct changes occurred. The burnished red slip had started to die out and a burnished cream slip appeared. In addition, there appeared the black background decorated with chalk filled punctures. The Late Bronze period ushered in a bichrome, black-and-red painted pottery distinguished by friezes divided into panels ornamented with birds and fishes (Albright, *Archaeology of Palestine*, 96, 98, fig. 21), which reflected Hurrian influence. In the latter half of the period, Mycenaean pottery with its distinctive polychrome banded ware and pilgrim flask “target” pattern helped to date the era (1400 – 1230 B.C.; *ibid.*, 100, fig. 22).

III. Israelite era to the exile. This period begins, according to archaeologists (Kenyon, *Archaeology*, 206), in the 13th cent. B.C. Within the period 1400 – 1200 no complete break in the Palestinian culture appeared (*ibid.*, 209). However, when Late Bronze I moved into Late Bronze II (c. 1480), there was a deterioration, but no break. On the other hand, destruction did tell its story during this period. For instance, Megiddo VIII terminated about 1350, according to destructive signs, and VI was divided by destruction, but the culture continued; these signs were not necessarily indicative of Israelite conquest (*ibid.*, 212ff.). From the 14th cent. onward, destruction overtook many cities and general decline of culture followed.

A. Influence of the second commandment. It has been held by some that the second commandment (Exod. 20:4 – 6) forbids artistic endeavors, whereas it actually forbids the practice of IDOLATRY *through* the use of idols or other means. The fact that CHERUBIM were embroidered into the inner veil of the tabernacle (Exod. 26:31), that the walls of Solomon's temple were carved with figures of cherubim and palm trees (1 Ki. 6:29), and that both tabernacle and temple had figures of cherubim at the mercy seat in the Holy of Holies indicates that the second commandment did not preclude the production of art works.

One should look for other causes for the low level of artistic efforts among the Israelites as compared with the Phoenicians. One should give consideration to Israel's lack of technical and artistic abilities. Only BEZALEL (Exod. 35:30 – 35) appeared to have the requisite basic technical skills that were filled out by God's special gift of the Holy Spirit both for increased capabilities and the teaching of others. The need for technical competence ceased after the completion of the tabernacle, and their lives as slaves in Egypt, and nomads for forty years after the exodus, did not create any growth of technology. In the days of David and Solomon recourse was taken to hire Phoenicians of TYRE for fine and monumental building knowledge and skilled artisans (see BUILD, BUILDING, TEMPLE, JERUSALEM). The emphasis of the Scriptures is otherwise against the great and the grandiose so that the Israelites would not be like the other nations around them and then turn away from God.

B. Art in Israel. Stimuli in Israel during the premonarchical period were not toward development of artistic achievement, for this time, when everyone was doing what was right in his own eyes, was characterized by disintegrative forces. For a distinctive art to develop there must be a central government under whose auspices leisure time may encourage meditation or the development of an art form, which Israel did not have. This occurred only briefly in the era of David and Solomon.

In the era after the temple, except for the ivory carvings of Samaria, artistic endeavor was still lacking in Israel (Judah and Israel), due to the fact that the labor lavished on the temple and the palaces of the kings of Israel and Judah apparently drained the artistic and technological capabilities of the Hebrews (see ARCHITECTURE for the postSolomonic period). Leaving the temple to separate consideration, a survey of Israelite art to the fall of Jerusalem in 586 B.C. is next for consideration.

The era of Solomon was filled with construction projects: the temple, his house of the forest, building of store cities, and the outpost of Palmyra (TADMOR, 1 Ki. 9:18). The division of the kingdom brought an end to the opportunity for developing a significant art style. Decorative features of idolatrous shrines at Tell el-Far^{ah} (TIRZAH) and from TRANSJORDAN show the use of scroll-topped columns, the so-called tree-of-life motif. Slightly later were the proto-Ionic scroll form capitals in Samaria of the Ahab era with a more foliate type found on a stone slab at Ramat Rahel. Examples in Syria of strikingly similar decorative features show the northern influence on Palestinian art (C. Roth, ed., *Jewish Art [1961]*, 86).

From ancient KARNAIM (Amos 6:13) came a basalt sculpture of a lion in the round, already showing Assyrian influences in execution of the mane, from the late 9th or early 8th cent. It is likewise reminiscent of the lion gates of the Syro-Hittites of earlier times. One feature of monumental art lacking in Israel was the statue of the kind at, or carved on, the city gate, found frequently on Syro-Hittite art and at Assyrian palaces, the famous bull *colossi*. Only the head from Megiddo, in frontal style with large staring eyes, approached this sort of representation, and beyond this, little has appeared (Roth, *Jewish Art*, 98).

Of the plastic arts, denunciatory passages in the prophets describe them as sheet overlays of gold

or silver nailed to a wooden base (Isa. 40:19 – 20; 44:9 – 20; Jer. 10:3 – 5), familiar from archaic Greece, ceasing after the 7th cent. B.C. Pottery techniques, either by casting or by wheel, supplied an innumerable number of Astarte (ASHTORETH) figures, such as the “pillar Astarte” wheel made from Lachish, having large, almond shaped eyes and hair arranged in curls, which reflected a much older Egyptian style. From Lachish came a greatly stylized clay figure of a man on horseback, in many respects only suggestive of the actual shape of the living forms. Such is the common man’s art (Roth, *Jewish Art*, 101).

For glyptic art, inspiration came from two directions. Down to the time of Ahab, seals had been mainly a “blob” type, but improvements came at this time in their content and execution. One source of inspiration was from N Syria, as represented in the well-known lion “seal of Shema, servant of Jeroboam.” The treatment of mane and belly hair, open mouth, and well defined body muscles betrays N Syrian styles, derived from Assyrian examples.

The second source of inspiration is evidenced in the reproduction of seals with Phoenician motifs and characteristic treatment where strong Egyptian influence is discernible through Phoenician techniques. Judean seals improved on these sources to the extent of elegance of representation and style of script used, as is shown on the Yaazanyahu seal from Tell en-Nasbeh (Roth, *Jewish Art*, 107).

C. Temple decoration. Carved wood liners of the interior walls were accented with gold leaf, and the doors were similarly treated. Some concept of the character of the carving may be gained from consideration of the Samaritan ivories of the next century. With Egyptian influences strong in Phoenicia, one could look for a tendency to the low relief characteristic of much of the monumental decorative style of Egypt. Carving in wood and overlaying with gold was characteristic Phoenician art (Roth, *Jewish Art*, 85). See TEMPLE, JERUSALEM for a description of the architectural features of Solomon’s temple.

D. Carving. As the crude terra-cotta figurines displayed the poor man’s art, the rich man’s art was particularly the carved ivory inlays, especially those from Samaria. Of the two royal courts, Jerusalem and Samaria, only the “ivory house” of Ahab in Samaria (1 Ki. 22:39) is mentioned, though doubtless ivory ornamentation was not unknown in Jerusalem, for Sennacherib reported ivory among the booty he carried off in Hezekiah’s fourteenth year. The ivories from Ahab’s palace are the flat-plaque type to be applied as inlays to either wall paneling or furniture, as examples from other areas attest. Style is in low relief and in some cases was developed with glass inlays (cf. Woolley, *Art of the Middle East*, 118) or paste to intensify the effect of the carving. Others were additionally decorated with gold.

Motifs were varied, being of two classes. One is designated Syrian. Examples include two female sphinxes on either side of a sacred tree, the faces wholly Syrian in style; an unguent vase showing a female with Asiatic features; a woman’s head with coiffure and circular crown was wholly Syrian. A second class was designated Phoenician, an example being “the woman at the window” who had an Egyptian wig (Harden, *The Phoenicians*, 61). This example from Arslan Tash, N Syria, is paralleled by another from the same, depicting a female with attributes of the Egyptian goddess Isis. The feature of embodying Egyptian elements but done in a manner inferior to better Egyptian models betrayed them as Phoenician. They were fashioned by Phoenician craftsmen or were booty carried off by the Assyrians.

Over the hundred years from the late 9th to the 8th cent. a large repertory of motifs developed,

and even something of outstanding character, such as the lioness attacking a young Negro, a lapis-inlaid ivory from Nimrod. In general the artist was in complete command of his medium and exhibited a better-than-ordinary sense of composition. Certain characteristics of technique and form in the examples of the Syrian and Phoenician ivories reflect the techniques of some of the 14th and 13th cent. Mycenaean work that became known to Syria through the Ugarit gateway.

E. Pottery. Hebrew pottery in the monarchical period developed little by way of decoration other than a simple geometric design. While seals did carry artistic designs, pottery did not, perhaps because the seal carver may have been a foreigner while the potter was a native Hebrew working under a strong restraint imposed by a faulty interpretation of the second commandment. A few decorative examples have survived, however. Tell Qasileh furnishes the illustration of a spirited, shaggy horse, and Lachish yields a pot bearing an incised drawing of two rather crude but graceful gazelles nibbling at a lotus flower (Roth, *Jewish Art*, 110), the sacred tree motif from an earlier era.

A remarkable experiment outside the Hebrew area was shown in the Philistine anthropoid coffins. These were cylinders of baked clay, with a lid formed at the area of the head and shoulders and a face modeled on it (cf. G. E. Wright in *BA* 22 [1959]: 55, 61). Those from BETH SHAN show a certain stylization but a rather crude artistic execution. From the pottery found with these and the sarcophagi in other areas, the users were the Philistines who came from the Aegean, revealed by the style of decorations of their characteristic pottery (*ibid.*, 62), thus showing the entrance of this decorative influence into the Hebrew cultural periphery, which the latter never adopted.

F. Painting. Ezekiel was familiar with the distinctive monumental wall paintings of the Assyrians (Ezek. 23:14 – 15), and perhaps implied the emulation of them in Judah, but no examples have appeared, probably because of the many destructions on the land.

IV. Jewish art to A.D. 70

A. Influence of the exile. Data on the art of Israel in the Persian era is meagre; information from the Bible does little to suggest style during this era. The struggle to erect a viable state, though a vassal one, absorbed the country's energy. Attempts to decorate show through, almost incidentally, in the scathing remarks of Haggai about the invidious paneled decoration of homes while the temple lay in waste (Hag. 1:4). There is even less data respecting the rebuilt temple or its decoration, except a recognized and greatly inferior character.

Other influences began to be felt, a forerunner of later events. Greek trading posts in increasing numbers were established along the coast, and distinctive Greek pottery began to appear as far inland as Tell en-Naṣbeh. This "invasion" of Greek culture reached its climax under ALEXANDER THE GREAT, but the collision with Jewish attitudes did not occur for another 150 years. An example of Ptolemaic decorative art is seen in the Tobiad palace at Araquel-Amir in Transjordan (Roth, *Jewish Art*, 123), distinguished by the use of the Greek Doric order entablature with Corinthian columns and a shorter second story decorated with the monumental lions reminiscent of Assyrian styles.

B. Maccabean-Hasmonean era. Typical HASMONEAN decoration may be seen on the base of the temple candelabra depicted on the Arch of Titus in Rome; the dragons have animal faces while the prototype of the temple of Apollo at Didyma has human faces. JOSEPHUS testified that the table of showbread had typical Greek legs, that is, ending in lion paws (Roth, *Jewish Art*, 126). Coins of the

period show a crudeness that later (after A.D. 300) gave way to designs quite like the Attic standards for artistic achievement. In the Hasmonean era occurred a sudden shift from human representation to ritual symbols, and plants as fruit motifs. Among the first were coins depicting the temple and the ark within (A. Muehsam, *Coin and Temple* [1966], pls. V-XI).

C. New Testament period. HEROD the Great was a hellenized Edomite fully committed to the values and propagation of Greek culture. The art of the period was characterized by the introduction of the human form into art expression in Judean and Palestinian areas and even of figures from the repertory of Greek and Roman divinities. One school of Rabbinic thought, that of HILLEL the elder, did not object to the use of human figures for ornamental purposes. Grecian architectural forms began to be used on sepulchres (Roth, *Jewish Art*, 199ff.). Josephus recorded that the royal porticoes of Herod's temple used the Corinthian style columns as its principal decorative motif. A fragment of stucco decorative work of the vault of the Huldah Gate passage from Ophel to the temple area shows a series of squares with varied patterns associated with rosettes and grapevines.

Herod built numerous other architectural monuments in Judea, one of the best being at CAESAREA, the remains suggesting the ornamentation to be the classic Greek system. His palace complex at MASADA featured structures on several levels, one being the Corinthian column characteristic of the royal portico. Josephus's description of Herod's palace in Jerusalem (*War* 5.4.4) indicates the blending of eastern and western influences.

D. Principles of Style. These are determined from decorative elements found on tombs, sarcophagi, and ossuaries. One example is the floral decoration of the tympanum of the cave of Jehoshaphat in Jerusalem. Freedom and stylization combine in a single example. The tympanum of the tombs of the Sanhedrin differs in that the whole area was filled, indicating a *horror vacuity* but excellent technical execution in incised high relief, a system exclusively Judean of the period. Ossuaries of the next era, the 1st cent. A.D., perpetuated this style, and it reflected carving in wood. In all cases the pattern was geometrical or floral, as in the use of the acanthus leaf. Another expression was the shift from the strictly geometrical pattern of petals arranged daisy-like inside a circle to a pattern with the petals carved so that the tips all pointed in the same direction around the circle, somewhat tangential to it, showing an imaginative adaptation of the oriental "whirling wheel." Thus there arose an ability

Various geometric and floral designs are exhibited on this ossuary from Jerusalem that may be as early as the 1st

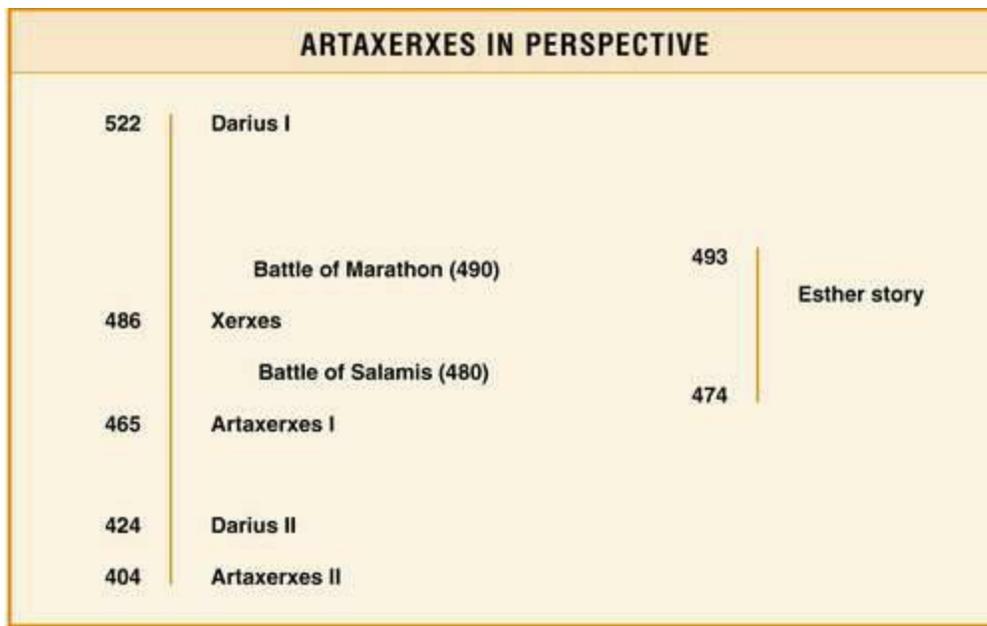

to take several elements and easily and pleasingly transform them into a single compositional group. Coupled with it is the display of such themes on a plain, unadorned background, the better to emphasize the design, in contrast to the oriental mode of using an entire surface between borders.

V. Conclusions. Syria-Palestine did not produce a particularly enduring art at any age. Lying as it did between two great political powers of Egypt and Mesopotamia, it was robbed of the economic basis for enduring productions. Where given an opportunity, however, distinctive examples were produced, but lacking the economic base of longterm political quietude, stopped short of intimated perfection. Israel's debacle in A.D. 70 similarly brought an end to a flowering art form. (In addition to the works mentioned in the body of the article, see S. Moscati, *Historic Art of the Ancient Near East* [1963]; P. Amiet, *Art of the Ancient Near East* [1980]; A. Mazar, *Archaeology of the Land of the Bible, 10,000 – 586 B.C.E* [1990]; D. Collon, *Ancient Near Eastern Art* [1995]; E. Stern, *Archaeology of the Land of the Bible. Volume II: The Assyrian, Babylonian, and Persian Periods, 732–332 BCE* [2001].)

H.G. STIGERS

Artapanus ahr'tuh-pay'nuhs (Ἄρτάπανος). A Jewish writer who lived in Egypt probably in the 2nd cent. B.C. CLEMENT OF ALEXANDRIA (*Strom.* 1.23 §154; trans. by J. Ferguson in *The Fathers of the Church*, 85:137) refers to him as the author of a work entitled *Concerning the Jews* and mentions one story included in it. EUSEBIUS (*Praep. Ev.* 9.18,23, 27, quoting summaries by Alexander Polyhistor) has preserved three sections from the work, dealing respectively with Abraham, Joseph, and Moses during the time they were in Egypt. Artapanus places special emphasis on Moses, who is identified with the Greek figure Mousaeus, reputed teacher of Orphius. Moses is said to have invented boats and other devices; the Egyptian priests referred to him as the god Hermes. (For an English trans. and introduction, see *OTP*, 2:889 – 903.)

Artaxerxes ahr'mh-zuhrk'seez (𐤀𐤓𐤕𐤁𐤁𐤓𐤕𐤁𐤓 H831; Aram. 𐤀𐤓𐤕𐤁𐤁𐤓𐤕𐤁𐤓 H10078 [both with spelling variations]; from Pers. *Artakhshathra*, "Arta's Kingdom"; LXX Ἄρταξέρξης). There were three Persian kings with the name of Artaxerxes, but external evidence indicates which of the three was NEHEMIAH's patron. The ELEPHANTINE papyri show that in 408 B.C. SANBALLAT was an old man whose work as governor of Samaria was to all intents and purposes in the hands of his two sons (E. Sachau, *Aramäische Papyrus und Ostraka* [1911], 1:29). This means that the Artaxerxes in whose reign Nehemiah lived must have been Artaxerxes I (464 – 424), since obviously Sanballat was then in the prime of life. It would be impossible to identify the reigning

© Dr. James C. Martin. The British Museum. Photographed by permission.

Inscribed bowl of Artaxerxes I (5th cent. B.C.). The inscription reads: Artaxerxes, the great king, king of kings, king of countries, son of Xerxes the king, of Xerxes son of Darius the king, the Achaemenian, in whose house this drinking-cup saucer made of silver was made.

king with Artaxerxes II or III. Therefore, in making EZRA overlap Nehemiah, the Chronicler intended to place Ezra also in the same reign. Ezra came to Jerusalem in 458, that is, the seventh year of Artaxerxes I (Ezra 7:7), and Nehemiah in 445, the twentieth year of the same reign (Neh. 2:1). (See J. S. Wright, *The Date of Ezra's Coming to Jerusalem [1958]*, 5 – 6.)

This means, then, that the Artaxerxes of the books of Ezra and Nehemiah was Artaxerxes I Longimanus, the son and successor of XERXES I (the Ahasuerus of Ezra 4:6 and the book of Esther). He is probably the Artaxerxes of Ezra 4:7 – 23, but this identification presupposes that vv. 6 – 23 are somewhat parenthetical, providing further information on the subject of opposition from a later period (for a defense of such an understanding of that problematic passage, cf. Wright, *Date of Ezra*, 17 – 26). It should be added that several years after the events of Ezra 4:7 – 23, Artaxerxes was generous

to the Jews in general and to Ezra and Nehemiah in particular. The latter was even the royal cupbearer. It was probably Artaxerxes' decree (445 B.C.) permitting Nehemiah to return to Jerusalem as governor of civil affairs and to rebuild the walls and fortifications (Neh. 2) that marked the beginning of the seventy "weeks" of Dan. 9:24 – 27 (cf. J. F. Walvoord, *Daniel* [1970], 252). (See further A. T. Olmstead, *History of the Persian Empire* [1948], 232, 289 – 90, et passim; E. M. Yamauchi, *Persia and the Bible* [1990], ch. 6; P. Briant, *From Cyrus to Alexander: A History of the Persian Empire* [2002], chs. 14 – 15.)

K.L.BARKER

Artemas ahr'tuh-muhs (Ἄρτεμᾶς G782, contracted form of Ἄρτεμίδωρος "gift of Artemis"). One of two men whom PAUL contemplated sending as a replacement for TITUS on CRETE (Tit. 3:12). He must have been a coworker of considerable ability and experience. Tradition makes him bishop of LYSTRA.

Artemis ahr'tuh-mis (Ἄρτεμις G783, meaning uncertain). A goddess worshiped throughout the Greek world. Artemis may have had a pre-Hellenic origin, perhaps at EPHESUS, in which city her cult was undoubtedly grafted on to that of an Asiatic FERTILITY goddess (cf. Acts 19:24 – 27; the name Diana, used in KJV, is the Roman counterpart of Artemis). It may be significant that the name yields no clear Greek meaning, and it is idle to speculate on the form and shape of the original concept of the deity and her functions. In historical times her sphere was the uncultivated earth, the forests, and the hills. Homer gave her the title, "lady of wild things," the virgin huntress, armed with bow and arrows.

© Dr. James C. Martin. The Istanbul Archaeological Museum. Photographed by permission.

Artemis was widely venerated as the goddess of the forests and of hunting. This statue from Cyrene dates to the 2nd cent. A.D. and is a replica of an earlier Hellenistic work.

Other functions were acquired. For example, her role as a city goddess was the result of her popularity among women because she was invoked in childbirth. Etiological myths accounted for this office by stories of Artemis's horror at her mother's birth pains, or by the quite contradictory tale that after Leto had borne her painlessly on the island of Ortygia, she herself fulfilled an obstetric function at the subsequent birth of her twin brother APOLLO on the island of Delos. The most probable explanation of Artemis's function as a goddess of birth is that, in spite of her classical virginity, in ultimate origin she was one of the many mother goddesses of the pre-Hellenic world.

Some forms of her ritual seem to have involved the simulation of beast shapes. For example, in one part of Attica little girls in saffron dresses, imitating perhaps the pelt of a bear, danced before her image and were said to "play the bear." Does this suggest that the original form of the deity was animal? At Halae a pretense of human sacrifice was made by drawing a few drops of blood from a man's throat with a sword, and this may very well represent an original prehistoric practice and a recollection of some horrifying ritual of fertility worship. It was the Artemis cult of a barbarous people of the Tauric Chersonese (the Crimea) that gave rise to the simulated sacrifice at Halae (this cult was allegedly introduced by Orestes, the hero of Euripides' *Iphigenia in Tauris*). (See further

DDD, 99 – 105; OCD, 182 – 84.)

At Ephesus, where, as above mentioned, the cult of Artemis was merged with that of an Anatolian fertility goddess, a mighty temple, one of the Seven Wonders of the World, was built. Here some cult object, possibly a meteoric stone, was associated with Artemis (Acts 19:35). Amazons, the warrior maids of Asia Minor, are said to have founded the cult of the Ephesian Artemis, and certainly the girls who served the temple were dressed in short skirts with one breast bare, huntress-fashion. Coins and surviving images seem to depict Ephesian Artemis as many-breasted, but the multiple protuberances may be stylized bunches of grapes or figs, symbols of fertility (other interpretations have been suggested). The shrine in Ephesus had become a tourist attraction and an economic asset in the days of the city's commercial decline. The ire of the silversmiths who made little models of the temple for tourists and pilgrims is told in the brilliant Acts narrative. See also GREEK RELIGION AND PHILOSOPHY.

E. M. BLAIKLOCK

artificer. This English term is used a few times by the KJV to translate the Hebrew noun *ḥārāš* H3093 (e.g., Isa. 3:3; in the NT, cf. the term *technitēs* G5493). It refers to the expert craftsman in any of the major mediums of art, such as stone, wood, metals, gems, or clay. According to the biblical record, TUBAL-CAIN was the first of this guild (Gen. 4:22). Jewelers and metal workers of various skills worked on the furnishings of the temple (1 Chr. 29:5) and were sufficiently numerous to occupy a section of the city of Jerusalem (1 Chr. 4:14; Neh. 11:35). Masons and carpenters were employed in the restoration of the temple under Josiah (2 Chr. 34:11). Silversmiths and goldsmiths found making idols a profitable business (Hos. 11:2; Acts 19:24, 38), though it was forbidden under the Mosaic law (Deut. 27:15). The artificers and craftsmen formed an important segment of the middle class in Hebrew society who were deported to Babylon at the time of the exile. See also CRAFTS; OCCUPATIONS V.C.

J. L. KELSO

artisan. See CRAFTS; OCCUPATIONS.

Arubboth uh-ruhb'ith (ארובות H749, pl. form of ארבה H748, a word referring to a lattice or window). KJV Arubboth. A town in one of the twelve administrative districts from which provisions for SOLOMON's household were obtained by BEN-HESED, an official of Solomon's court (1 Ki. 4:10, mentioned with "Socoh, and all the land of Hephher"). The site is now identified by various scholars with Khirbet el-Ḥammam, 17 mi. NW of SHECHEM and thus within the hill country of MANASSEH (cf. Z. Kallai, *Historical Geography of the Bible* [1986], 50). The name may be preserved in the nearby town of Arrabeh. It is thought that ARBATA was the form of the name in the Maccabean age (1 Macc. 5:23; cf. also Narbata in Jos. *War* 2.14.4 §291).

Arumah uh-roo'mah (ארומה H777, "lofty"). The town in which ABIMELECH, the son of Jerubbaal (GIDEON), lived after he had been driven from SHECHEM (Jdg. 9:41; NRSV also reads "Arumah" as a conjecture in v. 31 [MT *bētārmâ*; NIV, "under cover"]). The site is identified with modern Khirbet el-Ormah, 5 mi. SE of Shechem.

Arvad ahr'vad (ארבד H770, derivation uncertain; gentilic ארבדי H773, "Arvadite"). The most

northerly town in PHOENICIA, situated on a rocky island called now Ruad (opposite the coastal town of Tartus, Syria). The island lies a short distance off the Syrian coast directly opposite CYPRUS. In Greek and later sources it is called Arados/Aradus. In ancient times it was heavily built over to spite its diminutive size of less than a mile in circumference. Arvad ruled over much of the neighboring coast for centuries. Although few surface remains are extant, various scenes of Aradus appear on Assyrian reliefs (the Bronze Gates of SHALMANESER III, 858 – 824 B.C.) and Arvadite coins. The city is first mentioned in TELL EL-AMARNA as *arwada* (Letters 101, 105, 109); in the records of TIGLATH-PILESER I (1114 – 1076 B.C.) it is called *armada*, while subsequent annals usually spell it as *aruada* (e.g., Aššurnasirpal II, Annal III, et al.). The city is mentioned only twice in the OT as a place that supplied sailors and soldiers for TYRE (Ezek. 27:8, 11). Its inhabitants, the Arvadites, are also mentioned in the Table of NATIONS as descendants of CANAAN (Gen. 10:18; 1 Chr. 1:16). (Cf. D. Harden, *The Phoenicians* [1963], 23 – 28, 48 – 52, 166 – 67, 191 – 210.)

W. WHITE, JR.

Arza ahr'zuh (אֲרָזָה H825, perhaps “pleasing” or “woodworm”). The steward of ELAH, king of Israel, at the palace in TIRZAH, where ZIMRI murdered the king during a drinking debauch (1 Ki. 16:9 – 10).

Arzareth ahr'zuh-reth (Lat. *Arzareth* or *Arzar plus et*). KJV Arsareth. A region beyond the EUPHRATES River to which the Assyrians supposedly took the ten tribes after the destruction of the northern kingdom, and from which it was expected that they would return in the last days (2 Esd. 13:45). This name (the first part of which appears to reflect the Hebrew word *ʿereṣ* H824 (“land”), may be a reference to “the country of Ararat,” but more probably it corresponds to the Hebrew phrase “another land” (*ʿereṣ aḥeret*, cf. Deut. 29:28 [MT v. 27]).

Asa ay'suh (אָסָא H654, perhaps “healer” [BDB] or “gatherer” [Noth, *IPN*, 181]). (1) Son of ABIJAH and third king of JUDAH after the division of the kingdom (1 Ki. 15:9 – 24; 2 Chr. 15 – 17). (2) Son of Elkanah and father of Berekiah, listed among the Levites who resettled in their towns after the EXILE (1 Chr. 9:16). The rest of this article treats only King Asa of Judah.

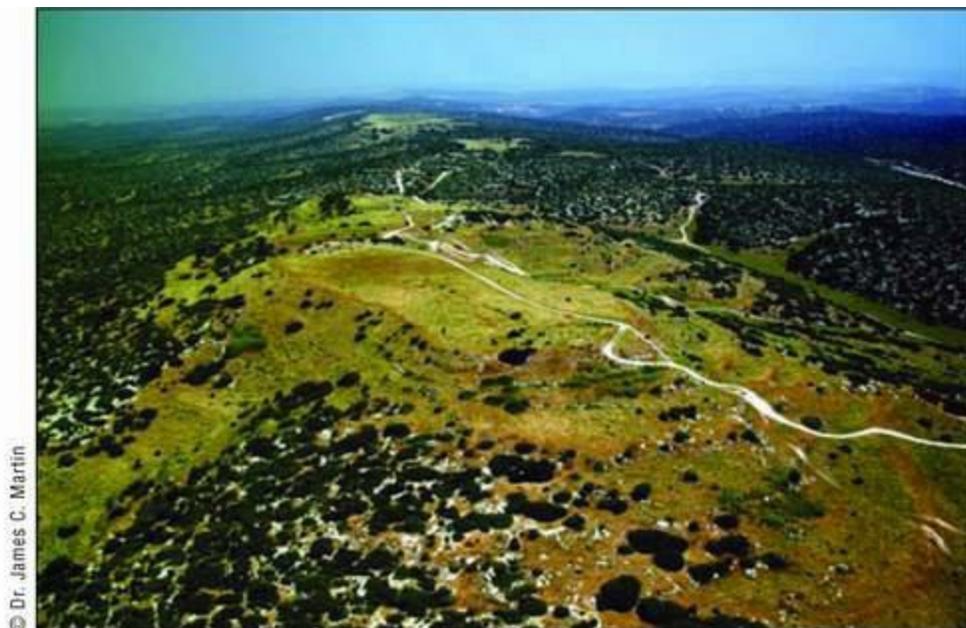

I. Family. His mother MAACAH (1 Ki. 15:10) is named also as mother of Abijah, Asa's father (15:2; cf. 2 Chr. 11:2 – 21; 13:2). Some resolve this problem by emending “son” (1 Ki. 15:8) to “brother”; however, Maacah may have remained queen mother after Abijah's short reign (taking *ʿēm* H562, “mother,” in v. 10, to mean “grandmother”; cf. NIV).

II. Chronology. Asa reigned from the twentieth year of JEROBOAM I to AHAB's fourth (i.e., 911/10 to 870/69 B.C., according to E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, rev. ed. [1983], 83 – 87). A chronological problem centers on the war with BAASHA of Israel, who according to the consistent synchronisms (1 Ki. 15 – 16) died in Asa's twenty-sixth year. The chronicler records ten years of peace (2 Chr. 14:1), a covenant in the fifteenth year (15:10 – 15), and Baasha's attack in Asa's thirty-sixth year (16:1). In 15:19 the sentence “there was no more war until the thirty-fifth year” (“more” is an addition) seems, from the context, to qualify purposely the information in 1 Ki. 15:16. The suggestion that “thirty-fifth” and “thirty-sixth,” in the chronicler's source, were reckoned from the division, and that Asa's political success in 896/95 was the reason for Baasha's action (Thiele),

requires an almost impossibly rapid sequence of events (while “the thirty-sixth of Asa’s reign” implies surprising lethargy on the part of Baasha). It is also difficult to believe that Asa, in 896, turned at once to the Syrians for help; this problem arises equally with KD’s emendation, “fifteenth... sixteenth.” W. F. Albright (in *BASOR* 87 [Oct. 1942]: 23 – 29), to preserve the reading in 2 Chr. 16:1, would shorten REHOBOAM’s reign (emending, e.g., 12:13; 13:1); the logic of this solution is dubious.

III. Religious policy. Asa gave up the pagan cults supported by Rehoboam and Abijah, confiscating to the temple their dedicated treasures (1 Ki. 15:15). His victory at MARESHAH enabled him to go further (2 Chr. 15); encouraged by Azariah son of Oded, he renovated the altar in the temple court and held a great assembly to make a fresh covenant with the Lord, using booty (presumably from the southern campaign) for sacrifices. This revival, following his military success, drew supporters from Israel. Asa even deposed the queen mother for her idolatry. His policy toward the HIGH PLACES is not clear; 2 Chr. 14:3 mentions the abolition of high places (but as related to “foreign” cults), whereas in 1 Ki. 15:14 = 2 Chr. 15:17, they are said to have survived. The persistence of (Yahwistic) shrines is often noted in Kings.

IV. Military campaigns. The chronicler relates Asa’s victory at Mareshah over a large invading army under one ZERAH the Cushite, leading to a thanksgiving ceremony in his fifteenth year (2 Chr. 14:9); he also remarks (v. 1) that Asa’s reign began with ten years of peace. According to KD, a series of campaigns in the S was implied; Mareshah may have been the culmination of a five-year war, or else

Asa’s victory over Zerah took place here in the region of Mareshah (Tell Sandahannah; view to the NNE).

some years were needed to exploit the victory and reoccupy the Gerar-Beersheba area. Certainly the war resulted in southward expansion, carried on by JEHOSHAPHAT (note the adherence of Simeonites, 2 Chr. 15:9; Amos 8:14 mentions a cult at Beersheba). The presence of Ethiopians and Libyans in Zerah’s army (2 Chr. 16:8), and of nomads in the region (14:15), may indicate that SHISHAK had set up a buffer state after his invasion (W. F. Albright in *JPOS* 4 [1931]: 131 – 61, esp. 146 – 47). Identification of Zerah with Shishak’s successor Osorkon I has been proposed, but in that case one

would have expected him to be described in Chronicles as “king of Egypt.”

The statement in 1 Ki. 15:16 that “there was war between Asa and Baasha...throughout their reigns” can hardly mean all-out campaigning (cf 15:6; 2 Chr. 12:15). Abijah's victory left to Asa a temporary settlement, a frontier N of BETHEL, and a hostile neighbor. Asa's successes impelled Baasha to definite action; he began by occupying RAMAH, well inside the frontier and on the ridge leading to Jerusalem. To counter this threat, Asa purchased the help of BEN-HADAD I of Aram, who invaded Galilee and drew off Baasha. Asa reoccupied Ramah, dismantled the works, and used the material to fortify GEBA and MIZPAH (cf. Jer. 41:9). The call-up of every able-bodied man in Judah for this task is especially noted.

Ramah is the modern er-Ram; Isa. 10:29 suggests a site SW of Geba and near GIBEAH. Mizpah might well be Tell en-Naṣbeh, on a defensible spur commanding the approach to Ramah (F.-M. Abel, *Géographie de la Palestine* [1933–38], 2:388–89, locates Geba here); this would secure the northern boundary of BENJAMIN (Josh. 18:21 – 24). W. F. Albright (in AASOR 4 [1924]: 90 – 103) argues strongly for identifying Mizpah with Nabi Samwil, being in sight of Jerusalem (see 1 Macc. 3:46) and making better sense in the narrative of Jer. 41 (v. 14 supports this argument, but his remaining evidence is less positive). The two theories go with two views of Asa's action; Albright's position, ultra-defensive, involves pulling back from Ramah to Nabi Samwil and Gibeah (read for Geba, 1 Ki. 15:22; the third fort appears to have been hastily reconstructed). It is more probable that, pursuing a defensive strategy, Asa followed up Baasha's retreat by seizing strong frontier positions. Geba would then be modern Jeba^c, overlooking the Wadi es-Suweiniṭ eastward.

V. Closing years. Reliance on Syrian help earned a reproof from the prophet Hanani; Asa reacted harshly to this and to some popular opposition (2 Chr. 16:10). His last years were marked by sickness (prob. dropsy) and loss of faith, but he was greatly honored at his funeral. According to Thiele, Jehoshaphat was coregent during his father's last four years. (Asa appears in Matthew's GENEALOGY OF JESUS CHRIST as *Asaph*, Matt. 1:7 – 8; see ASAPH #5.)

J. LILLEY

Asadiah as'uh-dz'uhs. KJV Apoc. form of HASADIAH (Bar. 1:1).

Asael as'ay-uhl. KJV Apoc. form of ASIEL (Tob. 1:1).

Asahel as'uh-hel (אֶשָׁחֵל H6915, "God has made"; cf. ASAIAH). (1) Son of ZERUIAH (DAVID's sister) and brother of JOAB and ABISHAI (1 Chr. 2:16). As one of David's thirty mighty men (2 Sam. 23:24), he was made commander of a division of 24,000 soldiers in David's army (1 Chr. 27:7). Asahel was noted for bravery and fleetness (2 Sam. 2:18; 23:24). In the Battle of GIBEON he pursued ABNER, the commander of ISH-BOSHETH's troops, to kill him. Abner was aware that the hour had arrived for David to lead the nation, and that contention among the military leaders could only be a detriment to the best interests of the nation; thus he slew Asahel, after warning him, in vain, to forbear (2 Sam. 2:18 – 23). As it turned out, David's accession to the throne was delayed. When Abner finally effected the union of the nation under David, it cost him his life. At HEBRON, ironically enough, in the gate of this city of refuge, years after Gibeon, Joab slew Abner to avenge Asahel's death (2 Sam. 3:26 – 27). Some scholars have found fault with the statement in 1 Chr. 27:7, which mentions Asahel as the fourth of David's monthly captains (even though Asahel had died before David became king). However, this verse appears to take notice of a posthumous honor to Asahel, who was represented by his son ZEBADIAH.

(2) A Levite sent by King JEHOSHAPHAT to instruct the people throughout the realm in the law of Moses (2 Chr. 17:8).

(3) A Levite overseer of the temple who supervised the offerings during the reign of HEZEKIAH (2 Chr. 31:13).

(4) The father of a certain Jonathan who opposed EZRA the scribe when the latter told those who had returned from the EXILE to divorce their non-Jewish wives (Ezra 10:15; however, the Vulg. of this verse, as well as the LXX and the Vulg. of 1 Esd. 9:14, say that Jonathan supported Ezra). This Asahel may be the same as the AZAEL mentioned in 1 Esd. 9:34 NRSV.

C. L. FEINBERG

Asahiah as'uh-hz'uh. KJV alternate form of ASAIAH (2 Ki. 22:12, 14).

Asaiah uh-zay'yuh (אֶשָׂיָה H6919, "Yahweh has made"; cf. ASAHEL). (1) Son of Haggiah and a descendant of MERARI. He is listed among the Levites whom DAVID put in charge of the MUSIC in the tabernacle. He also had a part in bringing the ARK OF THE COVENANT from the house of OBED-EDOM to Jerusalem (1 Chr. 6:30; 15:6, 11).

(2) A clan leader of the tribe of SIMEON (1 Chr. 4:36). He assisted in dispossessing the inhabitants of GEDOR during the reign of HEZEKIAH (vv. 38 – 40).

(3) An official under King JOSIAH; he was part of the deputation sent by the king to consult HULDAH the prophetess regarding the book of the law found by HILKIAH (2 Ki. 22:12, 14 [KJV, "Asahiah"]; 2 Chr. 34:20).

(4) The firstborn of the SHILONITES; he and his family were among the first to resettle in Judah after the Babylonian captivity (1 Chr. 9:5 NIV and most versions; the TNIV reads "Shelanites" on the basis of Num. 26:20). The designation "the firstborn" (*habbēkôr*) in this context is unusual; note that Neh. 11:5 reads "Maaseiah son of Baruch" (*ma'ăšēâ ben-bārûk*). See MAASEIAH #16.

Asaias uh-say'yuh (Ἀσαιας). One of the descendants of Annan who agreed to put away their foreign wives (1 Esd. 9:32 [KJV, "Aseas"]; apparently corresponds to ISHIAH in the parallel list, Ezra 10:31).

Asana uh-sah'nuh. KJV Apoc. form of ASNAH (1 Esd. 5:31).

Asaph ay'saf (אֶסָפָה H666, “gatherer” or “[God] has added”). (1) The most prominent person bearing this name was the son of Berakiah, of the Levitical family of GERSHON, who headed the service of MUSIC in the reigns of DAVID and SOLOMON (1 Chr. 6:39; 15:17, 19; 16:5; 2 Chr. 5:12). Superscriptions of twelve psalms (Pss. 50 and 73 – 83) indicate Asaphic authorship. On the basis of the contents of these poems, it has been suggested that there were two Asaphs, one who composed Pss. 50, 73, 76, 78 and possibly 75, 77, 82, all in David's time. However, Pss. 74, 79, and probably 83 fit the time of the Babylonian EXILE. The style of Asaph is distinctive, forceful, and spiritual. He is referred to as a prophet and poet (2 Chr. 29:30; Neh. 12:46).

Asaph was one of David's three musicians along with HEMAN and ETHAN (or JEDUTHUN). Asaph is first mentioned in connection with the transfer of the ARK OF THE COVENANT to Jerusalem from the

© Dr. James C. Martin

Hittite basalt relief depicting a musical procession.

home of OBED-EDOM (1 Chr. 15:16 – 19). He led the service of music in the tent where the ark was kept (1 Chr. 16:4 – 7, 37). The other chief musicians performed the same ministry at GIBEON (16:41 – 42). With Heman and Jeduthun he was under the king's direct supervision (1 Chr. 25:6).

Four of Asaph's sons conducted under him and participated in the dedication of the temple (2 Chr. 5:12). The “sons of Asaph” are mentioned as choristers in the temple (1 Chr. 25:1 – 2; cf. 2 Chr. 20:14). The office seems to have been hereditary. From all indications, in addition to leading the singing and sounding the cymbals before the ark, Asaph headed a school of music, where his children were said to number 148 (Neh. 7:44). The sons of Asaph do not appear to be very prominent before the exile. Some 128 members of his family returned from Babylon (Ezra 2:41) and served in Zerubbabel's temple (3:10). The sons of Asaph of later times formed a guild and were prominent in the revivals of the nation's faith. They shared the ministry of music with the descendants of KORAH in the later period of OT history.

(2) The father of Joah, who was the recorder under King HEZEKIAH (2 Ki. 18:18; Isa. 36:3, 22).

(3) An officer under ARTAXERXES Longimanus of Persia (465 – 445 B.C.) who was designated as the keeper of the king's forest in Palestine (Neh. 2:8).

(4) The name Asaph in 1 Chr. 26:1 is probably an abbreviation or a scribal error for Ebiasaph

(cf. LXX and 9:19; see ABIASAPH).

(5) The earliest Greek MSS read “Asaph” in the Matthean GENEALOGY OF JESUS CHRIST (Matt. 1:7–8, *Asaph*), but the reference is certainly to ASA (*Asa*, a secondary reading found in most witnesses). It is not clear why Matthew would have spelled the name as he did.

C.L.FEINBERG

Asaramel uh-sair’uh-mel (*Ἀσαρομελ* many MSS read *Σαρομελ*). A name of uncertain origin on the inscription set up in memory of SIMON MACCABEE and his brothers (1 Macc. 14:28 [LXX v. 27]; KJV, “Asaramel”). The second part of the name seems to represent the Hebrew words (*am*)*ēl*, “people of God.” The first part may reflect Hebrew *ḥāṣēr* H2958 (in which case the name refers to a location, “the court of God’s people”) or *śar* H8569 (thus a title applied to Simon, “prince of God’s people”).

L.L.WALKER

Asareel uh-sair’ee-uhl. KJV form of ASAREL.

Asarel as’uh-rel (*אשרל* H832, possibly “God has bound [with a vow]” or “God has filled with joy”). KJV Asareel. Son of Jehallelel and descendant of JUDAH (1 Chr. 4:16).

Asarelah as’uh-ree’luh (*אשרלה* H833 [variant *שרלה* H3777], possibly “God has bound [with a vow]” or “God has filled with joy”). One of the sons of ASAPH who assisted their father in the prophetic ministry of MUSIC (1 Chr. 25:2; RSV, “Asharelah” [following some Heb. MSS], while other scholars emend the text so that the name reads “Asarel”). The pattern into which the sons of Asaph fall in 1 Chr. 25:9 – 14 indicates that Jesarelah, who was the head of the seventh company of temple musicians appointed by lot under David (v. 14), should be identified with Asarelah.

Ascalon as’kuh-lon. KJV Apoc. form of ASHKELON (1 Macc. 10:86 et al.).

ascension of Christ. The EXALTATION OF CHRIST to the presence of the Father in glory after his RESURRECTION from the dead.

I. Anticipations in the OT. Three men in the OT have unusual circumstances recorded with regard to the end of their life on earth: ENOCH (Gen. 5:24), ELIJAH (2 Ki. 2:11; LXX *analambanō*, see below), and MOSES (Deut. 34:6). Rabbinic legends of later JUDAISM considerably embellished these statements into ascensions that took these people to heaven without dying. Similar legends grew around other lesser personages, such as ELIEZER (Gen. 15:2; 24:1 – 67), Pharaoh’s daughter (Exod. 2:5 – 10), JABEZ (1 Chr.4:10), and EBED-MELECH (Jer. 38:7 – 13). There were also stories of temporary translation into heaven of ABRAHAM, ISAIAH, BARUCH, and EZRA. These may bear resemblance to the experience of PAUL, who recalls how he was “caught up to the third heaven” (2 Cor. 12:2 – 4).

Such rabbinic stories, as well as the accounts of communications between heaven and earth (as in Gen. 28:12; Isa. 14:12 – 14), doubtless helped form the background of the apostles’ understanding of the event, but hardly paralleled in any sense the ascension of Christ. Perhaps the clearest anticipation in the OT is found in the Royal Psalms (Pss. 2, 18, 20, 21, 45, 61, 72, 89, 110, 132) and

others, which look forward to the exaltation of David's Son to a position of universal authority. In particular, Ps. 110:1 is quoted in Acts 2:34 and in Heb. 1:13; 10:12 – 13 with reference to Christ's ascension. Similarly Ps. 16:8 – 11 is quoted in Acts 2:25 – 33, and Ps. 68:18 in Eph. 4:8).

II. The Gospels and Acts. Anticipatory references to the coming ascension are found in the narrative of Lk. 9: “They spoke about his departure [*exodos H2016*], which he was about to bring to fulfillment at Jerusalem” (v. 31); “...the time approached for him to be taken up [*analēmpsis G378*] to heaven” (v. 51). John makes repeated references to the coming time when Jesus would be “glorified,” an inclusive word signifying the whole process of death and resurrection, but also ascension (7:39; 12:16,23; 13:31 – 32; 17:5).

Jesus spoke repeatedly of going to his Father (Jn. 7:33; 14:12, 28; 16:5, 10, 28), and on one occasion specifically of his ascending (*anabainō G326*, Jn. 6:62). Though Jn. 12:32 refers primarily to his being “lifted up” on the cross, many see a further reference to Jesus' ascension. In the apocalyptic discourses, Jesus spoke of coming again on the clouds and in great glory with the angels—words that clearly anticipate his prior return to heaven (Matt. 16:27; 24:30; Mk. 8:38; 13:26 – 27). It was his similar statement on oath to the high priest that convicted him of blasphemy (Matt. 26:64). After his resurrection he referred again to his coming ascension (Jn. 20:17).

The Gospel of Mark records (in the textually doubtful ending) that the Lord “was taken up [passive of *analambanō G377*] into heaven and he sat down at the right hand of God” (Mk. 16:19). Luke tells us that it was while he was in the act of blessing his disciples that he left them and that he “was taken up [passive of *anapherō G429*] into heaven” (Lk. 24:51, although this clause is missing in some early witnesses).

But the only detailed account of the ascension is that given in Acts 1:6–11. While the compressed narrative of Luke's gospel suggests that the Lord ascended on the evening of resurrection day, Luke makes clear in his second volume that it was actually forty days later. The location was on the BETHANY side of the ridge of the MOUNT OF OLIVES (Lk. 24:50; Acts 1:12). He repeated to the disciples the promise of the gift of the Holy Spirit, bringing power for worldwide witness (Acts 1:8), and then, in their full view, “he was taken up [passive of *epairō G2048*] and disappeared from sight in a cloud” (v. 9). While they gazed upward, two angelic messengers told them, “This same Jesus, who was taken [*analambanō*] from you into heaven, will come back in the same way you have seen him go into heaven” (v. 11).

The speeches in Acts reveal that the essence of the apostles' preaching was that the same Jesus who went about doing good and mighty deeds, and who died in accordance with God's plan, was raised from the dead (of which the apostles, and all in Jerusalem,

© Dr. James C. Martin

Tower of the Church of the Ascension on the Mount of Olives. (View to the N.)

are witnesses, Acts 2:32), and ascended to heaven, where he is now seated at God's right hand. From there he has bestowed the gift of the HOLY SPIRIT, and will one day come to establish his kingdom. Foundational to their experience of the living Christ was the fact of the ascension (2:33 – 36; 3:20, 21; 7:55 – 60). It was the ascended Christ in glory who appeared to Saul (9:3 – 5; 22:6 – 8; 26:13 – 15).

III. The Epistles and Revelation. Paul's personal experience of Christ started from his recognition of the ascended Lord. The SECOND COMING of Christ is the main theme of his letters to the Thessalonians. Believers are waiting "for his Son from heaven, whom he raised from the dead" (1 Thess. 1:10), who "will come down from heaven, with a loud command" (4:16). In Romans and 1 Corinthians Paul lays stress mainly on the resurrection, but he clearly thinks of that event as leading to Christ's present exaltation (1 Cor. 15:20 – 28, 47 – 49; Rom. 1:4 – 5; 6:9). Christ who was raised from the dead is now at the right hand of God, making intercession for us (Rom. 8:34).

In Ephesians there is particular emphasis on the ascension as that which makes Christ supreme authority over all things, especially to the CHURCH (Eph. 1:20 – 23). Believers share with Christ "in the heavenly places" (2:6). The ascension is closely connected with the gifts of the exalted Lord to his church (4:7 – 12). In Phil. 2:6 – 11 the supreme exaltation of Christ is shown to follow his deep humiliation. Now Christians are citizens of heaven, from where they await the Savior (3:20). The only reference in the pastoral epistles to the ascension is in what seems to be an early Christian hymn, "He was revealed in flesh... taken up in glory" (1 Tim. 3:16).

The ascension of Christ and his present work at God's right hand are central to the theme of the epistle to the Hebrews. This truth implies that he holds a position of supreme authority (Heb. 1:3 – 13). He "who has gone through the heavens" is now our great high priest (4:14), the forerunner who has entered within the veil for us, a high priest after the order of MELCHIZEDEK (6:19, 20). As such, he maintains in heaven an eternal ministry of intercession on our behalf (7:24 – 25; see INTERCESSION OF CHRIST). This heavenly ministry of the ascended Christ is the central thought the writer wishes to emphasize (8:1). Christ now serves in the eternal tabernacle, the real (as opposed to the shadowy earthly) holy place, where he has obtained eternal redemption for us (9:11 – 14, 24). The present

session of Christ at God's right hand indicates the sufficiency of the one single sacrifice for sins he offered, and the assurance of his ultimate victory when all enemies are subdued before him (10:12 – 14).

The only reference in Peter is 1 Pet. 3:22. Here the author invites those who suffer to consider Christ, who also suffered and died, but was raised from the dead, and is now at God's right hand. The Apocalypse repeatedly refers to the living Christ who is in heaven, who also is working in the churches and in the world, and who will come again in triumph to reign (Rev. 1:7, 13 – 20; 5:5 – 13; 14:1 – 5; 19:11 – 16). The connection of this Christ with the One who lived and died (1:18; 2:8; 5:6) shows that such a picture of the exalted Lord necessarily involves his prior ascension.

IV. Objections. It is argued that the picture of a body ascending contravenes the law of gravity. However, the real problem is that we know so little of the Lord's resurrection body. It was different from the body laid in the tomb, yet essentially the same. Thus the resurrected Lord could be seen, touched, handled, recognized; he could eat and drink; yet he could also appear and disappear, enter a room when the doors were shut. There is no greater problem in the ascension than in the resurrection.

A second objection is that the account seems to suggest that heaven is located a short distance above the earth; modern science makes such a picture untenable. But surely this criticism takes the narrative in too literal a sense. The language is symbolic. We should picture Christ as transferring, not from one position to another, but from one condition to another. As C. S. Lewis comments, "Perhaps mere instantaneous vanishing would make us feel more comfortable... But if the spectators say they saw first a short vertical movement and then a vague luminosity (that is what 'cloud' presumably means here as it certainly does in the account of the Transfiguration) and then nothing—have we any reason to object?" (*Miracles* [1947], 186). Perhaps the contemporary scientific mind would prefer to think, in Einsteinian terms, of matter transformed into enormous energy, but would this not also be but a symbol of a reality beyond adequate expression in terms taken from the physical universe?

Luke's writing throughout is that of the careful historian who verified his facts from original written sources and from direct interrogation of eyewitnesses (Lk. 1:1–2). For an event that stands as the critical junction point between his two volumes and is essential for the theme of Acts—namely, the continuity of Jesus' deeds and teachings in his ascended state (Acts 1:1, 2)—it would be incredible that he should not verify the details of their experience firsthand from the surviving apostles. Our knowledge of the bodily appearances of the risen Lord to his disciples through the weeks subsequent to the resurrection is based on solid historical evidence; it is equally dependable that these bodily appearances came to an end, when our Lord at the ascension reassumed his position of supreme authority "at God's right hand."

V. Significance. The exaltation of Christ to the right hand of God meant for him the clear demonstration of his victory (Eph. 4:8) and the resumption of his immediate fellowship in glory with the Father (Jn. 17:5) in the place of honor (Ps. 110:1), power (Acts 2:33), and eternal joy (Ps. 16:11). In some sense at least, because of his willingness to suffer and die, the ascension leads him into greater glory than he had in his pre-incarnate state. God has now "hyperexalted" him (*hyperypsoō* G5671, Phil 2:9).

The ascension of Christ does not mean for Christians his physical remoteness, but his spiritual nearness (Matt. 28:20). It issued in our Lord's present life in heaven for us. It enabled him to send forth the Holy Spirit (Jn. 16:7; Acts 2:33) to convict the world of sin (Jn. 16:8), and to indwell his

disciples (Jn. 14:17), giving power for witness (Acts 1:8; 4:8, 31), and creating a new and radiant fellowship (Acts 2:42 – 47; 2 Cor. 13:14; Phil 2:1 – 2). The ascension meant that Christ took his perfect manhood with him into glory. Now, in the heavenlies, he does not continue to offer his blood (W. Milligan, *The Ascension and Heavenly Priesthood of Our Lord* [1891], 266). The sacrifice for sin has been made once for all (Heb. 7:27; 9:12; 10:10 – 14). But as our high priest who understands our human temptations, he is able to sympathize (Heb. 4:1 – 5), succor (2:18), and save (7:25). By virtue of the ascension he is now head of the church (Eph. 1:20 – 23; Col. 1:17) and Lord of all (Phil 2:11). He is our advocate with the Father (1 Jn. 2:1), ever interceding for us (Rom. 8:34; Heb. 7:25). His presence in heaven assures us that we shall follow (Heb. 6:18 – 20), and we await his coming again to receive us to himself (Phil 3:20 – 21; 1 Thess. 4:16 – 17; Heb. 9:28). (Cf. also H. B. Swete, *The Ascended Christ* [1910]; P.J. Toon, *The Ascension of our Lord* [1984].)

D.G.STEWART

Ascension of Isaiah. Also known as the *Martyrdom and Ascension of Isaiah*. The title *Anabatikon Ēsaiou* (The Ascension of Isaiah) was used as early as the 4th cent. by the Christian writer EPIPHANIUS (*Panarion* 40.2). ORIGEN (*Comm. on Matt.* at 13:57) called the work *Apokryphon Ēsaiou* (The Apocryphon of Isaiah). Two other titles given to the complete work, *Diathēkē Hezekiou* (The Testament of Hezekiah), and *Horasis Ēsaiou* (The Vision of Isaiah), apply only to sections within the document. Evidently the work was well known in early Christian centuries, since it was mentioned by several church fathers. In modern times it came to light in 1819 when R. Laurence published an Ethiopic MS (E¹) of part of it.

I. Unity. Most modern scholars think the work is a composite of three major sections joined by editorial additions: (1) the *Martyrdom of Isaiah* 1.1—3.12; 5.1 – 16; (2) the *Testament of Hezekiah* 3.14—4.18; and (3) the *Vision of Isaiah* 6.1—11.40. Needless to say, scholars disagree on the exact limits of a given work, especially in ch. 1, which some consider editorial additions; others regard this chapter as part of the *Martyrdom* (1.7 – 13 seems to be used by PseudoChrysostom, *Opus imperfectum in Matthaëum*). A. Dillmann (*Ascensio Isaiae* [1877]) thought that an edition combined the early Jewish martyrdom with the Christian visions, and that the *Testament* was added later. R. H. Charles (*The Ascension of Isaiah* [1900]) thought that there were three independent works combined by the final edition. J. A. Robinson (*HDB*, 2:500) believed a Christian author had added his own material to the *Martyrdom* (cf. H. H. Rowley, *The Relevance of Apocalyptic*, 3rd ed. [1963], 124n.). Some have carried this tendency even further, denying the unity of both the *Martyrdom* and the *Vision*. On the other hand, defenders of the unity of the entire work (except 11.2 – 22) have not been wanting (e.g., F. C. Burkitt, *Jewish and Christian Apocalypses* [1914], 45ff., 72ff.).

II. Authorship. Little is known concerning the authorship of the *Ascension of Isaiah*. The contents would indicate that the section known as the *Martyrdom* originated in Jewish circles, while the *Testament of Hezekiah* and the *Vision of Isaiah* seem to have come from Christian circles. C. C. Torrey (*The Apocryphal Literature* [1945], 133 – 35) regarded the entire composition as Christian, and this view has been defended recently (e.g., by E. Norelli, *Ascensio Isaiae: Commentarius* [1995]). R. H. Charles (*APOT*, 2:158) points out that the following passages are understandable only on the basis of a Semitic background. In 2.1 the clause “Manasseh [*mnšh*] ...did not remember [*nšh*, lit., ‘forgot’]” reflects a play on the sound of the words. In 1.8 the proper name Malchira may be a derivative of *mlky r'* (“my king is evil”). The “wooden saw” (*priōn xylinos*) he

thinks is a mistranslation of 5.11 (*mšwr*^r, a saw for sawing wood). It seems impossible to go beyond these general statements regarding authorship.

III. Date. The complete work as it now stands probably did not exist prior to the latter part of the 2nd cent. of our era. G. T. Stokes (in *Dictionary of Christian Biography*, ed. W. Smith and H. Wace, 4 vols. [1877 – 87], 3:300) dates the completed work in the 3rd cent. Most scholars would date parts of it as early as the 1st cent. Charles pointed out that the *Martyrdom* was known to the writer of the *Opus imperfectum* and to the church fathers Ambrose, Jerome, Origen, Tertullian, and probably Justin Martyr (*Dial.* 120.14 – 15); it is even possible that it was known to the anonymous author of Hebrews (cf. Heb. 11:37). On the grounds that 2nd-cent. Christians would not be likely to circulate a Jewish work, Charles dates the *Martyrdom* in the 1st cent.; R. H. Pfeiffer (*IB*, 1:424) dates it even earlier. A date toward the end of the 1st cent. is also likely for the *Testament of Hezekiah* (cf. the allusion to NERO in the description of the antichrist [4.2 – 4], and the apparent reference to 3.17 – 18 in *4 Bar.* 9.20). The *Vision*, on the other hand, is usually dated around the middle of the 2nd cent., although the evidence for such a conclusion is hardly definitive.

IV. Text. Various MSS and versions of the work, in whole or in part, have been discovered. Basically, they seem to fall into two groups, stemming from two Greek forms that go back to the 3rd cent. and that Charles labeled G¹ and G². The latter Greek text is actually attested in a papyrus fragment (dated to the 5th or 6th cent.) that contains most of 2.4—4.4; it has also been preserved in translations of the *Vision* (one Latin and two Slavonic MSS). G¹ is preserved only in translation, primarily in a reliable Ethiopic version (attested in several MSS), which is in turn the basis for all modern translations; moreover, one Latin MS preserves 2.14—3.12, and some Coptic fragments have been published. A substantial reworking of G¹ known as the “Greek Legend” is extant in a 12th-cent. MS., but it has only limited value. (English trans. and introduction in *OTP*, 2:143 – 76. Cf. also *NTAp*, 2:603 – 20.)

V. Content. The *Martyrdom of Isaiah* is a sermonic account or MIDRASH of 2 Ki. 21:16. In it Isaiah prophesied events in the reign of MANASSEH, including Isaiah’s own martyrdom. Manasseh would be a follower of Beliar (BELIAL) and be indwelt by Sammael/Satan (an equation also found in Jewish and Gnostic texts; see GNOSTICISM). After Hezekiah’s death, Manasseh led his people into apostasy, encouraging witchcraft, fornication, and lawlessness (2.1 – 8). When Isaiah fled to the mountains, Belchira, the false prophet, found him and accused him before Manasseh of (1) prophesying the destruction of Jerusalem, (2) claiming that he was God (cf. Exod. 33:20, contra Isa. 6:5), and (3) calling Jerusalem “Sodom” and its rulers “Gomorrah” (3.1 – 12). Belchira (Malchira) tempted Isaiah to recant by promising the prophet his freedom and the reverence of the king and people. Isaiah did not yield and so died a martyr by being sawn asunder. This legend of Isaiah’s fate seems to be attested in JUSTIN MARTYR, TERTULLIAN, and the TALMUD (*b. Yebamoth* 49b; *b. Sanhedrin* 10.2).

The *Testament of Hezekiah*, an apocalyptic section, contains a vision that Isaiah reported to King HEZEKIAH. It reveals the descent of the Beloved (a term for the MESSIAH found throughout *the Ascension of Isaiah*) from the seventh heaven, his incarnation, earthly career, crucifixion, resurrection, and ascension. Then follows a sketch of early church history, revealing apostasy before the SECOND COMING of Christ. There would be unworthy leaders and pastors. The OT prophets would be ignored (as in Gnostic heresy). Beliar would assume a royal form and be guilty of matricide (4.2.;

cf. Nero). Beliar acts like Christ by performing miracles and, like Yaldabaoth in Gnostic myth, calls himself God (4.6). He erects an image of himself to be worshiped and demands sacrifice. His reign is said to last three years, seven months, and twenty-seven days (1332 or 1335 days, 4.11 cf. Dan. 12:12). After this the Lord and his angels return and defeat Beliar and his hosts. Then follows a messianic reign for those living and sharing in the first resurrection. Afterward there is a second resurrection and the judgment of the godless who are annihilated by fire. This section of the *Ascension of Isaiah* resembles Rev. 13 (cf. Mk. 13; 2 Thess. 2:1 – 12), which some commentators have viewed as a reference to Nero. Common elements are the destruction of ANTICHRIST by Christ, the first resurrection of only the righteous, and their participation in the messianic kingdom, a second resurrection, and judgment by fire. However, in the *Testament* the righteous, without physical bodies, dwell in the seventh heaven.

The last section, the *Vision of Isaiah*, has linguistic similarities to the preceding one, but its general content is more Gnostic. In a vision Isaiah is taken into the seventh heaven—the abode of God, the Beloved (Christ), the Holy Spirit, and the righteous dead (in spiritual bodies). Beneath the seven heavens is the firmament wherein dwells Sammael/Satan, ruling over the earth and physical bodies (which, in typical Gnostic fashion, are evil). The *Vision* gives a Docetic account of Christ's birth (without labor after two months of pregnancy). See DOCETISM. Christ does not reveal his identity. When Christ is grown he performs miracles. His death on the cross is secured by Beliar. The *Vision* recounts his descent into hell, resurrection, stay on earth for 545 days (again a Gnostic conception), and the commissioning of the Twelve. After his ascension to the seventh heaven, he is seated at the right hand of the Great Glory, with the Holy Spirit on the left hand.

This vision is the cause of Manasseh's execution of Isaiah. The *Vision* closely parallels the typically Gnostic, perhaps Ophite, drama of the descent of the Redeemer from heaven. In the Gnostic myth a preexistent Christ descends from the seventh heaven. He is disguised as a resident as he passes down through seven successive spheres. A virginborn Jesus becomes the receptacle for the Christ. At the moment of crucifixion, Christ leaves Jesus who is put to death. Christ assists Jesus to rise in a spiritual resurrection. He receives knowledge, stays with his disciples for 545 days and teaches them the mysteries. At his ascension he is seated at the right hand of Yaldabaoth, where he welcomes those who knew him in the flesh when they put off their earthly bodies. (See J. Knight, *Disciples of the Beloved One: The Christology, Social Setting and Theological Context of the Ascension of Isaiah* [1996].)

A.K. HELMBOLD

Ascent of Blood. See ADUMMIM.

ascents, song of. A term found in the titles of Pss. 120 – 34 and probably indicating that they were especially appropriate for pilgrims “going up” to Jerusalem to worship. See MUSIC, MUSICAL INSTRUMENTS VI.D.

asceticism. The practice of severe self-denial and austerity, usually as a means of religious improvement. The Bible includes some examples of a rigorous lifestyle (cf. JOHN THE BAPTIST), but it also condemns regulations that involve a “harsh treatment of the body” (Col. 3:20 – 23; cf. 1 Tim. 4:3). Both within and outside the Christian church, asceticism has often been fueled by a nonbiblical, dualistic philosophy that views the body in negative terms, for example, as a prison from which the soul needs to be released. See also DUALISM; GNOSTICISM.

Asclepi US as-klee'pee-uhs (Ἄσκληπιός). Also Asclepios, Asklepius. (1) One of the heroes of Homer's *Iliad* and the most prominent god of healing in Greek mythology, known to the Romans as Aesculapius. According to one tradition, he was the son of APOLLO. Asclepius was reputed to have worked great acts of healing, including raising a man from the dead. During the ancient church

The medical symbol of Asclepius.

period, the miracles attributed to Asclepius were used by pagans to attack the Christian faith. (See *OCD*, 187 – 88.)

(2) A document partially preserved in Coptic in the NAG HAMMADI LIBRARY (NHC VI, 8). Consisting of a dialogue in which Hermes Trismegistus expounds the mystery of true saving knowledge to Asclepius, it was originally known as *The Perfect Dialogue*, a lost Greek work that was probably written before A.D. 400 and that was part of the HERMETIC WRITINGS (see also GnosticisM). The Coptic version includes only sections 21 – 29 of the original, but the document is preserved in its entirety, also under the title *Asclepius*, in a free Latin translation from the Greek (for an English trans. of the Coptic fragment, see *NHL*, 330 – 38).

Aseas as'ee-uhs. KJV Apoc. form of ASAIAS (1 Esd. 9:32).

Asebebia as'uh-bee'bee-uh. KJV Apoc. variant of SHEREBIAH (1 Esd. 8:47).

Asebia uh-see 'bee-uh. KJV Apoc. form of HASHABIAH (1 Esd. 8:48).

Asenath as'uh-nath (אֲסַנַּת ⁶⁶⁴, “she belongs to [the goddess] Neit”). Also Aseneth. Daughter of POTIPHERA, priest of ON. The pharaoh gave her to JOSEPH as a wife, and she became the mother of EPHRAIM and MANASSEH (Gen. 41:45, 50; 46:20). Asenath is a subject of interest in Jewish tradition, especially in the apocryphal work JOSEPH AND ASENATH, according to which she renounced her heathen religion and became a worshiper of Yahweh when she married Joseph.

Aser ay'suhr. KJV Apoc. and NT form of ASHER (Tob. 1:2; Lk. 2:36; Rev. 7:6).

Aserer ay'suh-ruhr. KJV Apoc. variant of SISERA (1 Esd. 5:32; NRSV, “Serar”).

ash. The KJV rendering of ^{ʾōren} H815, which occurs only in Isa. 44:14 (“he planteth an ash”; NIV, “[he] planted a pine”). The only apparent reason for such a translation is the name *aran*, given to a kind of mountain ash in Arabia (*Fraxinus Ornus*, a flowering ash). It is more probable that the tree is the Aleppo PINE, a coniferous evergreen; thus the Hebrew term may really mean “conifer.” The NRSV renders CEDAR (Akk. *ērīnu*; cf. BDB, 75). Another possibility is “laurel” (*Laurus nobilis*; cf. HALOT, 1:90).

W. E. SHEWELL-COOPER

ashamed. See SHAME.

Ashan ay'shuhn (עָשָׁן ^{H6941}, prob. “smoke,” perhaps suggesting a desolate place). A town in the SHEPHELAH, possibly the same as BOR ASHAN (1 Sam. 30:30). Ashan was originally assigned to the tribe of JUDAH (Josh. 15:42). Later it was either transferred to SIMEON or considered a border town on the boundary line of both tribes (19:7), and was finally designated a Levitical city of refuge (1 Chr. 6:59). On the basis of this last reference, many scholars follow the SEPTUAGINT and emend the text in Josh. 21:16 to read “Ashan” instead of AIN. The location of Ashan is uncertain. It has been identified with modern Khirbet (Asan, 1.5 mi. NW of BEERSHEBA (cf. IDB, 1:248), and with Tell Beit Mirsim, some 12 mi. SW of HEBRON. Some have argued that a distinction should be made between a Judahite and a Simeonite Ashan (the latter located in the NEGEV).

Asharelah ash'uh-ree'luh. RSV form of ASARELAH.

Ashbea. See BETH ASHBEA.

Ashbel ash 'bel (אֲשָׁבֶל ^{H839}, derivation disputed; gentilic אֲשָׁבֶלִי ^{H840}, “Ashbelite”). Second son of BENJAMIN (1 Chr. 8:1; listed as third in Gen. 46:21) and the progenitor of the Ashbelite clan (Num. 26:38). Some scholars equate Ashbel with JEDIAEL (1 Chr. 7:6).

Ashchenaz ash'kuh-naz. KJV alternate form of ASHKENAZ.

Ashdod ash'dod (אֲשְׁדוּדָה H846, perhaps “fortress”; gentilic אֲשְׁדוּדִי H847, “Ashdodite” [KJV, “Ashdothite” in Josh. 13:3]; Ἀζωτος G111 [in Joshua, LXX has Ἀσעדωθ with spelling variations]). One of the five major PHILISTINE cities (cf. 1 Sam. 6:17) that were located on the coastal plain. Three of these were on or near the coast, and Ashdod was the northernmost of them, about 10 mi. N of ASHKELON. By NT times there may have been two towns with this name, for JOSEPHUS speaks of both a coastal Azotus (*Ant.* 13.15.4 §395) and an inland one (*en tē mesogeio*, *Ant.* 14.4.4 §§75 – 76; cf. *War* 1.7.7 §156).

In the time of Israel’s conquest of the land of Canaan under JOSHUA, Ashdod was inhabited by the ancient Anakim people (see ANAK) and was assigned to the tribe of Judah along with other Philistine towns (GATH, EKRON, and GAZA, Josh. 11:22; 15:45 – 47). However, Judah did not actually occupy it at that early time, since Josh. 13:1 – 3 indicates that the Philistines were still in possession of the area. In the Israelite-Philistine struggles at the time of ELI the priest (1 Sam. 1 – 4), Ashdod figured prominently as the place to which the victorious Philistines took the Israelite ARK OF THE COVENANT. When the image of their heathen god DAGON in his temple at Ashdod was humiliated before the ark of the Lord, and many of the people died of serious illness, the captured sacred ark was sent to other Philistine cities (5:1 – 12). After further suffering from the plague, the rulers of Ashdod and the other Philistine cities sent the ark back to Israel with a trespass offering of gold (6:1 – 18).

Ashdod does not seem to have been controlled by Judah until the days of UZZIAH (c. 783 – 742 B.C.), who fought the Philistines and conquered the city (2 Chr. 26:6). Amos (c. 760 – 745) no doubt included these events in his prophecy against Ashdod (Amos 1:8; 3:9). Ashdod a little later had independence again, for according to Assyrian annals, the town is said to have revolted in the time of SARGON II (721 – 705). After this uprising, which evidently took place about 711, Sargon ordered Azuri, the local king of Ashdod, deposed, and he set up a younger brother, Ahimiti, in his place. Then when the local townspeople, whom Sargon calls HITTITES, continued the revolt under a self-appointed Greek named Iamani (i.e., Ionian) or Iadna, the Assyrian ruler marched on Ashdod, conquered it,

Ashkelon and Ashdod.

and punished it and Gath and Ashdudimmu (meaning “Ashdod by the Sea,” a place that became more important later than inland Ashdod; cf. remarks above on two Ashdods in Christian times). Iamani, the Greek, fled to the territory of Musru, which was under Ethiopia’s control. Ethiopia then surrendered the Greek to the Assyrians. Thus Ashdod and the surrounding territory became Assyrian (*ANET*, 286). It was in the light of this background that Isa. 20:1 – 6 warns Judah against getting involved with Ashdod, because Ethiopia would not support the cause against Assyria.

In the time of SENNACHERIB (704 – 681 B.C.) Ashdod, under a king named Mitinti, was still subject to Assyria, paid its tribute, and was given some of the towns that were being ruled by the king HEZEKIAH (*ANET*, 288). Another king of Ashdod, Ahumilki (Ahimilki), paid tribute to ESARHADDON (680 – 669) and to ASHURBANIPAL (668 – 633) as Assyria made campaigns against Egypt, Syria, and Palestine (*ANET*, 291, 294). Further, HERODOTUS (*Hist.* 2.157) states that the Egyptian King Psammetichus I (663 – 610) took Ashdod (he calls it Azotus) after a twenty-nine-year siege and later NEBUCHADNEZZAR conquered Ashdod and took its king prisoner, whom he mentions as being at his Babylonian court (*ANET*, 308). Likely the Ashdod remnant left was that group prophesied about, at least in part, by two Hebrew prophets (Zeph. 2:4; Jer. 25:20), and whose descendants were no doubt

a part of that group of Ashdodites who opposed the rebuilding of Jerusalem under NEHEMIAH and from whom some Jews had taken heathen wives (Neh. 4:7; 13:23 – 24). In the earlier days of DARIUS I (522 – 486), Zechariah prophesied about the further degradation of Ashdod (Zech. 7:1; 9:6).

Information about Azotus (as Ashdod was known in Greek sources) under the Egyptian Ptolemaic and Syrian Seleucid kingdoms is meager, though the city is probably alluded to in two early coins (Hebrew name in Greek letters; see *HJP* [1893], 2/1:77 n. 94a). Evidence from the books of the MACCABEES, in which there are frequent references to the Azotus district (1 Macc. 14:34; 16:10), shows that the area succumbed to Jewish power. Judas destroyed its altars and images (5:68) and Jonathan burned the temple of Dagon and the city with fire (10:84; 11:4). JOSEPHUS relates that Azotus belonged to the Jewish region in the time of Alexander Jannaeus (c. 104 – 78 B.C.; *Ant.* 13.15.4 §395).

Subsequently POMPEY rebuilt and repopulated Azotus and other cities of the whole area (*Jos. Ant.* 14.4.4 §75; *War* 1.7.7 §156; cf. also under Gabinius, *War* 1.8.4 §166). Later it came under HEROD the Great's control, who then willed it to his sister Salome (*Ant.* 17.8.1 §189; *War* 2.6.3 §98); she in turn probably willed it to the Empress Livia, the wife of Augustus (cf. *Ant.* 18.2.2 §31; *War* 2.9.1 §167). There seems to have been a considerable Jewish population in Azotus in the 1st cent. A.D., because Vespasian placed a garrison there during the Jewish War before the fall of Jerusalem (*War* 4.3.2 §130). The only NT reference to Azotus is in connection with PHILIP's preaching mission up the coast to CAESAREA (Acts 8:40). (See further *NEAEHL*, 1:93 – 102.)

W.H.MARE

Ashdodite, Ashdothite ash'duh-dit, -thi't. See ASHDOD.

Ashdoth-pisgah ash'doth-piz'guh. See PISGAH.

Asher ash'uhr (אָשֵׁר *H888*, “happy, fortunate” [possibly a popular etymology if the name was originally related to a deity; cf. ASHERAH]; gentilic אֲשֵׁרִי *H896*, “Asherite”; Ἀσῆρ *G818*). KJV Apoc. and NT, Aser. (1) Eighth son of JACOB, and the second by ZILPAH, the handmaid whom LEAH had given to Jacob because of her own barrenness. Asher was born in PADDAN ARAM in MESOPOTAMIA and was the full brother of GAD (Gen. 30:9 – 13; 35:26). At his birth Leah exclaimed, “How happy I am! The women will call me happy”; therefore the boy was named Asher (30:13). When Asher went down to Egypt he had four sons, Imnah, Ishvah, Beriah, and Ishvi, as well as a daughter, Serah (Gen. 46:17; 1 Chr. 7:30).

The name Asher has been confirmed as an authentic NW Semitic personal name in an Egyptian papyrus of c. 1750 B.C., but in the papyrus it is the name of a female slave. It is now thought improbable that inscriptions of Seti I (1303 – 1290) and RAMSES II (1290 – 1224) mention Asher as a vanquished tribe in Canaan, for the place name ^lisr as it appears in these Egyptian texts would represent the Hebrew consonants ^lsr (not ^lsr as would be the case if the Israelite tribe of Asher were intended; see K. A. Kitchen in *NBD*, 92). This conclusion would also eliminate the reference in Seti's inscription as a factor in calculating the date of the exodus. See EXODUS, THE II.

(2) The term Asher in the Bible usually refers to the tribe of which Asher son of Jacob was the progenitor. His descendants multiplied so that at the time of the exodus from Egypt the tribe numbered 41,500 fighting men (Num. 1:41). Before the invasion of Canaan this number had increased to 53,400. In blessing the tribes of Israel, Moses said, “Most blessed of sons is Asher; / let him be favored by

his brothers, / and let him bathe his feet in oil” (Deut. 33:24). Consisting of five main families (Num. 26:44 – 47), Asher shared the blessings, trials, and responsibilities of the wilderness wanderings (1:13; 2:27; 7:72; 13:13). In the course of the Israelite journey through the desert, flanked by the tribes of DAN and NAPHTALI, the position of Asher was to the N of the Tent of Meeting (2:25 – 30). After Israel left Mount Sinai, Asher served as rear guard together with Dan and Naphtali (10:25 – 28). From the ranks of Asher, Sethur served as a scout to explore the land of Canaan (13:13).

In the division of the territory of Canaan among the tribes of Israel, Asher was assigned by JOSHUA the fertile strip of coastland N of Carmel (see CARMEL, MOUNT) up to the N of SIDON, and eastward to the western slopes of the Galilaeen hills (Josh. 19:24 – 31, 34). To the S the Carmel range served as the common border with MANASSEH, the Galilean hills separating Asher on its SE border from ZEBULUN, and on its NE side from Naphtali. Accurate detailed determination of the tribe’s area is impossible, but a description of the boundaries is given in Josh. 19:24 – 31 (cf. Jdg. 1:31 – 32; Josh. 17:10 – 11). Archaeologists are not able to identify most of the places mentioned. See TRIBES, LOCATION OF.

The Levites descended from GERSHON were assigned four cities in the territory of Asher (1 Chr. 6:62, 74 – 75). Ahihud had the responsibility of allotting the land of Asher to the people of the tribe “for inheritance” (Num. 34:27). Their territory was an especially well-watered and fertile land that included some of the finest olive groves and orchards in the country. Moses’ statement in Deut. 33:24 concerning Asher, “let him bathe his feet in oil,” is a reference to the tribe’s prosperity as a result of the OLIVE groves. This area is still renowned for its olive industry.

Asher does not occupy a prominent place in Israel’s history. No significant leader is known to have come from the tribe, and Asher could not control her coastal cities. Asher apparently never overcame Phoenician dominance (Jdg. 1:31 – 32). It did not join in the battle against SISERA, the captain of JABIN, who ruled the neighboring territory to the E (4:2). Later the tribe did come to the aid of GIDEON against the Midianites (6:35; 7:23). At DAVID’s coronation at HEBRON, 40,000 of Asher’s fighting men were present (1 Chr. 12:36), but the name of the tribe is missing from other lists of his reign (27:16 – 22). SOLOMON ceded some of Asher’s cities to the Tyrian HIRAM (1 Ki. 9:11 – 14). Apparently, the only Asherite of any significance was the prophetess ANNA, who praised God at the presentation of Jesus in the temple (Lk. 2:36). Many scholars are of the opinion that Asher was the least “Israelite” of all the tribes, not only because the tribe was geographically remote, but also because it failed to dominate the Canaanites culturally as well as politically in an effective manner. See also ASHURI.

(3) According to some scholars, Asher in Josh. 17:7 may be a reference to a town rather than to the tribe. If so, the site is unknown, although the modern village of Teyasir (c. 11 mi. NE of SHECHEM on the road to BETH SHAN) has been suggested.

A. C. SCHULTZ

Asherah uh-shihr’uh (אֲשֵׁרָה H895, also אֲשֵׁרָה derivation uncertain). A Canaanite deity, goddess of the sea and the consort of EL; this name is used normally with the definite article (the fem. pl. form *’ăšērôt* is found in Jdg. 3:7 et al.). The same Hebrew term can also refer to the sacred wooden poles associated with her cult (usually masc. pl. form *’ăšērîm*). The KJV translates this word with “grove,” following the SEPTUAGINT (which most frequently renders it with *alsos*, “grove”; but see 2 Chr. 15:16; 24:18). The MISHNAH explained Asherah as a tree that was worshiped, and the meaning “tree, grove” will often fit the context, but there are other passages where such a rendering is unsuitable.

An examination of the contexts reveals the following: the object was made of wood (Jdg. 6:26),

The inscription on this plaque reads: Uriyahu the rich wrote it. / Blessed be Uriyahu by YHWH, / for from his enemies by his strength, / he has saved him / by Oniyahu / and by his asherah.

manufactured (1 Ki. 14:15), planted (Deut. 16:21), erected (1 Ki. 14:23; 2 Ki. 17:10), burned (Deut. 12:3; 2 Ki. 23:6, 15), cut down (Exod. 34:13; Deut. 7:5; Jdg. 6:25, 28, 30; 2 Ki. 18:4; 23:14; 2 Chr. 14:3; 31:1), overthrown (Mic. 5:14), destroyed (2 Chr. 34:4). With it were associated incense stands (Isa. 17:8), altars (Jer. 17:2), high places (2 Chr. 17:6), and other images (2 Chr. 34:4). It is twice called an “abominable image” (NRSV, 1 Ki. 15:13; 2 Chr. 15:16; NIV, “repulsive Asherah pole”). Women wove hangings for the Asherah (2 Ki. 23:7). See also HIGH PLACE; PILLAR.

Prior to the discovery of UGARIT, the deity Asherah was sometimes confused with ASHTORETH (Astarte). In the Ugaritic texts, however, Asherah is referred to as Athirat (also Elat) and is described as the progenitress of several gods, including BAAL, who was also associated with her (cf. Jdg. 3:7; 6:26 – 30; 1 Ki. 18:19; 2 Ki. 23:4). The TELL EL-AMARNA tablets preserve the personal name Abdi-Ashirta (“Servant of Asherah”), and other Akkadian texts from Mesopotamia mention the deity Ashratum (consort of Amurru). This goddess appears also in various other ANE sources.

Asherah is not mentioned in connection with the PATRIARCHS, but the Israelites were commanded to cut down or burn the Asherim of the Canaanites; they also were forbidden to plant any tree as an Asherah beside the altar of the Lord (Exod. 34:13; Deut. 12:3; 16:21). Unfortunately, the Israelite invaders appropriated for their own religious worship the “high places” of the Canaanites and also adopted Asherah (1 Ki. 14:23; 2 Ki. 17:10, 16; Isa. 17:8; 27:9; Jer. 17:2; Mic. 5:13 – 14). GIDEON was told to destroy his father’s Asherah pole (Jdg. 6:25 – 26). The deity is not associated with the kings of the monarchy, but later, after the kingdom split, she is mentioned in connection with both the northern and southern kingdoms. King MANASSEH even introduced Asherah into the temple at Jerusalem (2 Ki. 21:3, 7); subsequently, JOSIAH brought the image out of the temple and burned it (23:4). (Cf. W. L. Reed, *The Asherah in the Old Testament* [1949], 1 – 116; John Day, *Yahweh and the Gods and Goddesses of Canaan* [2000]; J. M. Hadley, *The Cult of Asherah in Ancient Israel and Judah: Evidence for a Hebrew Goddess* [2000]; DDD, 99 – 105.)

Asherim uh-shihr'im. See ASHERAH.

Asherite ash'uh-rit. See ASHER.

Asheroth uh-shihr'oth. See ASHERAH.

ashes. Several Hebrew words are used to designate the products of combustion. The most common term is ^{ʾēper} H709, used especially as a sign of mourning and penitence (2 Sam. 13:19; Esth. 4:1; Job 2:8; 42:6; Dan. 9:3); similarly, it may designate humiliation or abasement (Gen. 18:27; Job 30:19; Lam. 3:16; Ezek. 28:18). Destruction may be implied in Mal. 4:3. In other instances ashes are grouped with DUST to emphasize symbolically one's humiliation (Gen. 18:27; Job 30:19). Dust alone or with ashes also symbolizes worthlessness (Gen. 18:27; Isa. 44:20), and the phrase "proverbs of ashes" (Job 13:12) refers to worthless sayings. The NT equivalent for this term is *spodos* G5075, used in connection with mourning (Matt. 11:21; Lk. 10:13) and with ritual cleansing (Heb. 9:13).

The word *dešen* H2016 designates the ash residue left from burning fatty sacrifices (Lev. 1:16; 4:12; 6:10 – 11). This residue included remains of both fuel and fat. The same word designates the remains of a burnt corpse (Jer. 31:40), thus acquiring something of a technical significance. Its use with respect to King JEROBOAM's altar (1 Ki. 13:1 – 5) indicates the nature of the sacrifices made there: they were like those offered in the temple, used at BETHEL with the purpose of rendering it unnecessary for Israelites to travel to Jerusalem. Jeroboam thus sought to tie people to himself (cf. 12:26 – 30), but such altars were contrary to Yahweh's words to him (11:36 – 38).

Finally, the term (^{āpār} H6760 ("dust")) is used of the ashes of the red heifer (Num. 19:17; see HEIFER, RED). The fact that the blood was burnt with the body of this animal gave the ashes a sanctity providing for their use in cleansing. They were used to effect the purification of one who had touched a dead body. (The KJV uses the word "ashes" also in Exod. 9:8, 10, where the Hebrew term is better rendered "soot," and in 1 Ki. 20:38, 41, where the word really means "bandage" or "headband.")

H. G. STTGERS

Ashhur ash'uhr (^{אַשּׁוּר} H858, possibly "black"). KJV Ashur. Son of HEZRON, descendant of JUDAH, and "father of Tekoa," which probably means that he was the founder or leader of the village of TEKOA (1 Chr. 2:24; 4:5). Some scholars, on the basis of the SEPTUAGINT reading (in 2:24), argue that Ashhur was the son of CALEB and that he was the same person as (or a brother of) Hur (v. 19). (The name Ashhur is not to be confused with ASSHUR.)

Ashima uh-shi'muh (^{אַשִּׁמָּה} H860, possibly Aram., "the name"). A deity worshiped by the inhabitants of HAMATH who had settled in SAMARIA (2 Ki. 17:30). Some have thought that the name is a corruption of ASHERAH, the Canaanite mother goddess. Others associate it with Eshmun, the chief god of SIDON. Since some female deities are referred to as Name-of-Baal in extrabiblical sources, it is possible that Ashima (if it reflects an Aramaic formation of *šum* H10721, "name") designated any of the Semitic goddesses thought to be consorts of BAAL (see also ASHTORETH). In Amos 8:14, the NRSV reads, "Those who swear by Ashimah of Samaria," which involves a slight emendation of the Hebrew (MT) ^{ʾašmat}, from ^{ʾašmâ} H873, "shame").

Ashkelon ash'kuh-lon (אֲשְׁקֶלוֹן H884, meaning uncertain; gentilic אֲשְׁקֶלוֹנִי H885, "Ashkelonite" [Josh. 13:3; KJV, "Eshkalonite"]). An ancient Canaanite city situated on the Mediterranean sea coast about midway between ASHDOD and GAZA. It is mentioned in classical and biblical literature as one of the five cities of the PHILISTINES. The earliest mention of the city is in certain EXECRATION TEXTS from the 12th dynasty of the Egyptian Middle Kingdom; the name is written in hieratic characters and scratched on a small figurine (c. 1800 B.C.), probably representing the local ruler who was to be rendered hapless before Egyptian might through the ritual smashing of his image.

The city is mentioned in two letters from the cuneiform cache of TELL EL-AMARNA: NO. 287 written by Abdiḥiba, ruler of Jerusalem, and No. 320 written by a certain Widia of Ashkelon. Both were addressed to the pharaoh whom they served in the period (1400 – 1350). The city revolted and threw off the overlordship of the pharaoh RAMSES II after his defeat at the hand of the HITTITES under Muwatallis, and then Ramses had to recapture Ashkelon. In 1282 he recorded the event on the walls of his great temple at Karnak. Apparently the faithful following of the subject princes of Syria-Palestine was not assured, because in 1230 MERNEPTAH again reconquered the town and recorded the event on his famous stela from his temple W of Thebes. This is the inscription that contains the earliest mention of Israel yet discovered in Egyptian sources.

It is not known when the city was overcome by the Indo-European Philistines, but Ashkelon was in their hands from Joshua's time until well into the period of the Israelite monarchy (Josh. 13:3; Jdg. 1:18 [where the MT, but not the LXX, states that the tribe of Judah took the city]; 1 Sam. 6:17; 2 Sam. 1:20). The prophets inveighed against Ashkelon and her pagan inhabitants (Jer. 25:20; 47:5 – 6; Amos 1:8; Zeph. 2:4, 7; Zech. 9:5). The westward expansion of Assyria under the rule of TIGLATH-PILESER III ("Pul" in 2 Ki. 15:19 and 1 Chr. 5:26) caught the petty states of SYRIA, and Ashkelon was conquered in 734 B.C. But the cycle of conquest and rebellion took its course, and SENNACHERIB set out from his palace in NINEVEH in 701 against Sidka, the king of Ashkelon, who was defeated and carried off to captivity in Assyria. The Assyrians set one of their puppet rulers on the

Figurine of a kneeling worshiper discovered at Ashkelon.

throne of the city and both ESARHADDON (c. 677) and his successor ASHURBANIPAL (c. 667) collected tribute from their vassals.

The city was the victim of all the conquering hordes that poured down upon the remains of the Assyrian empire after the rise of Persia. In time it was overrun by the Scythians (Herodotus, *Hist.* 1.105), the Chaldeans, and finally the Persians. Ashkelon became completely hellenized after ALEXANDER THE GREAT, and it became known as *Askalōn* (from which the English word *scallion*, through Latin, is derived, since the city was famous for its onions). The large Jewish population appears to have sided with the Maccabees, and having subsequently made peace with Rome, it was declared a free area (see MACCABEE). In the rebellion of A.D. 66 the Jews attacked Ashkelon and were thrown back in a furious assault (Jos. *War* 2.18.1; 3.2.1 – 2).

The city had a vivid history during the Islamic period and the Crusades. It was excavated by the Palestinian-Exploration Fund 1920 – 22. Further explorations were undertaken by L. Steger and D. Esse in 1985 (see *IEJ* 37 [1987]: 68 – 72; *NEAEHL*, 1:103 – 12).

W. WHITE, JR.

Ashkenaz ash'kuh-naz (אֲשְׁכְנַז [BHS, אֲשְׁכְנַז] H867). KJV also Ashchenaz. Son of GOMER and

grandson of JAPHETH (Gen. 10:3; 1 Chr. 1:6). He was the eponymous ancestor of a people mentioned by Jeremiah in association with ARARAT and MINNI (Jer. 51:27). Probably Ashkenaz is to be identified with the SCYTHIANS, a people who had settled near Lake Urmia in the region of Ararat (Urartu) in the time of Jeremiah. The Assyrian texts mention a tribe called the Ashkuza who, allied with the Manneans (Minni), fought against the Assyrians. The Scythians were a crude and warlike people who contributed to the unrest of the Assyrian empire and whose name became a synonym for BARBARIAN (cf. Col. 3:11). Their conquest of the CIMMERIANS (Gomer) is cited by HERODOTUS (*Hist.* 4.11 – 12). The name Ashkenaz is used with reference to Germany in Medieval Hebrew, and thus today the term *Ashkenazi* refers to Yiddishspeaking Jews from central and northern Europe (in contrast to *Sephardi* [see SEPHARAD], which designates someone who descends from the Jews who lived in Spain).

T. E. McCOMISKEY

Ashnah ash'nuh (אֲשָׁנָה H877, derivation uncertain). The name of two cities of the tribe of JUDAH, both in the SHEPHELAH. Their sites are unknown. One of them (Josh. 15:33, listed between Zorah and Zanoah) may be at Aslin, near the edge of the maritime plain of Judah, though another suggestion is Khirbet Wadi Allin, SE of BETH SHEMESH. The second town named Ashnah (v. 43, listed between Iphtah and Nezib) may be Idna, some 8 mi. WNW of HEBRON.

Ashpenaz ash'puh-naz (אֲשַׁפְּנָז H881, perhaps Old Pers., “[keeper of the] inn”). The name (or title) of NEBUCHADNEZZAR’s “palace master” (Dan. 1:3 NRSV; lit., “chief of his eunuchs”), responsible for bringing to Babylon certain Hebrew youths for training. See EUNUCH. The SEPTUAGINT (i.e., the Old Greek, not Theodotion) uses the curious name *Abiesdri* here (and in v. 11 for Heb. *melšar* H4915, “the guard”; KJV, “Melzar”).

Ashriel ash'ree-uhl. See ASRIEL.

Ashtaroth ash'tuh-roth (עֲשֵׁתְרוֹתַי H6958, from the name of the Canaanite goddess, Ashtoreth; gentilic עֲשֵׁתְרוֹתִי H6960, “Ashterathite”). (1) A city in northern TRANSJORDAN, near ancient EDREI and N of the village of JAIR. It was the home of OG, king of BASHAN (Deut. 1:4 [KJV, “Astaroth”]; Josh. 9:10; 12:4; 13:12), and the site of the theft of horses mentioned in TELL EL-AMARNA Letter 197, where the name of the town is transcribed in cuneiform as *aštar-te*. After the Israelite conquest, Ashtaroth was allotted to the half-tribe of MANASSEH and settled by the descendants of MAKIR (Josh. 13:31). It was then given to the Levite clans descended from GERSHON (1 Chr. 6:71; cf. also Josh. 21:27, where BE ESHTARAH may be a scribal mistake for Ashtaroth). One of David’s mighty men was Uzziā the Ashterathite. Most scholars identify Ashtaroth with ASHTEROTH KARNAIM, modern Tell (Ashtarāh, some 20 mi. E of the Sea of Galilee.

(2) The KJV and other versions use the form “Ashtaroth” also to transliterate the plural of ASHTORETH (*aštōret* H6956), the Canaanite goddess (Jdg. 2:13 et al.). The NRSV has “Astartes,” while the NIV renders it “Ashtoreths.”

W. WHITE, JR.

Ashterathite ash'tuh-ruh-thz't. See ASHTAROTH.

Ashteroth Karnaim ash'tuh-roth-kahr-nay'im (עֲשֵׁתֶרֶת קַרְנַיִם H6959, “Ashtaroth of the [two] horns”). A city inhabited by the REPHAITES, located on the KING'S HIGHWAY and sacked by four kings under the leadership of KEDORLAOMER in ABRAHAM'S time (Gen. 14:5). It seems probable that the name refers to the city of ASHTAROTH and was so designated because of its proximity to the city of KARNAIM (modern Sheikh Sa'd, c. 23 mi. E of the Sea of Galilee; see Amos 6:3).

H. G. ANDERSEN

Ashtoreth ash'tuh-reth (עֲשֵׁתֶרֶת H6956). The OT Hebrew name of the Canaanite goddess otherwise known as Astarte. The plural form (*aštārōt*) is transliterated as Ashtaroth in the KJV and other versions (Jdg. 2:13 et al.)

I. Name and character of the goddess. The spelling of the name of this goddess, whose worship was widely practiced throughout the ANE, is confused because of the practice of the writers of the OT (or the MT scribes) to supplant the original vowels with those of another, usually derogatory, word. The original name in Canaanite was probably (*Ashtart* (cf. Ugar. *ʿšrt*, Akk. ISHTAR, Gk *Astarte*), but the vowels of the word *bōšet* H1425, “shame,” were apparently infixed, thus preventing the ascription of any magical power or praise to the pagan deity. The worship of mother goddesses in the ANE and elsewhere in the old world is evidenced by the frequency of small FERTILITY CULT figurines excavated from sites as early as the Lower Paleolithic. The earliest written documents from Mesopotamian SUMER mention the goddess as Inanna, whose shrine and cult-center at Uruk (ERECH) stretches back before the protoliterate period of southern Iraq to the 4th millennium B.C.

According to various extant Sumerian legends, Inanna was the consort of the shepherd god Dumuzi (cf. TAMMUZ, Ezek 8:14), for whom she wept at his seasonal death. A revealing set of myths consists of the nearly identical Sumerian and Akkadian versions of *Inanna/Ishtar's Descent to the Nether World*. In this story Inanna (or Ishtar, whichever cultural manifestation is chosen) goes down into the underworld realm of the goddess of death, the condemned, and the underworld itself. This goddess, Ereshkigal or Irkalla, deprives Inanna of all her ritual garments and imprisons her as an impaled corpse.

The Akkadian version tells vividly the results of this deprivation upon the normal course of human and animal reproduction: “Since Ishtar went down to the Land of No Return, upon the heifer the bull does not leap, the ass does not impregnate the jenny. In the street the youth does not know the maiden” (author's translation). This sexual aspect of the worship of the mother goddess appears to have carried over into every culture of the ANE where her cult was practiced. Notice that the Hebrew word for “lambs” in a few passages that stress productivity (Deut. 7:13; 28:4, 18, 51) is the plural of (*ašteret* H6957 (which may mean “offspring, increase”), possibly reflecting an earlier belief that Ashtoreth/Asstarte was responsible for the fertility of the flocks (there is no evidence, however, for the old suggestion that she was envisioned as a ewe).

Another feature of this worship in Sumer and later BABYLON was the annual ritual marriage held in connection with the national *akītu* festival, which was part of the New Year's celebration. Many ancient sources and primary CUNEIFORM texts affirm that at this rite a temple priestess/prostitute enacted with the king the marriage of Dumuzi and Inanna. The equation of Inanna with Ishtar is proven by the interchangeability of the names in the various versions of the myths and the parallel use of their titles (e.g., TELL EL-AMARNA Letter 23, where the name of the goddess is glossed with the descriptive

phrase *ištar bêlit šamē*, “Ištar, Queen of Heaven,” the precise translation of Inanna). In time, cuneiform literature utilized the name Ishtar as a general noun for “goddess.” Even the Egyptians mention her name on several stelae of the Middle Kingdom period and thereafter frequently in the papyri of the New Kingdom. In Syria-Palestine she is depicted in art with Egyptian garments and attributes.

II. Ashtoreth among the Canaanites. The people of Israel must have come in contact with the cult of Ashtoreth as it existed among the other Asiatics and W Semites of Egypt. After the exodus they were in constant conflict with the worship of the fertility and vegetation deities of the natives of Syria-Palestine. The goddess Attart appears frequently in the tablets from Ras Shamra (UGARIT); she is a foremost character in some eleven contexts. She is the companion of BAAL in several epics and has numerous appellations: Attart of the Field, Attart the Majestic, Attart Name-of-Baal. In a list of offerings to various shrines, a temple in her honor is included. While her charm and appeal are often compared to the goddess ANATH, both are goddesses of combat and battle. Anath is more often associated with Baal in the Ugaritic texts, whereas Attart is much more prominent in later Phoenician times. However, the interchange of functions and attributes is a common feature of the development of ANE pantheons. The polar attributes of these deities, love and war, are shown in their artistic representations, which show at all dates certain characteristics drawn from the prehistoric figures. Although the cult practices and rituals, as well as the depiction of the goddess, were always reminiscent of the earlier and cruder forms, yet her comprehension in the minds of her devotees reached extraordinary heights of poetry and drama, some aspects of which were later sublimated by the Hebrews to the worship of Yahweh.

III. Ashtoreth in the Old Testament. It is possible that in the OT, as in certain of the Ugaritic legends, a male deity Ashtar was involved who, like Ashtoreth, had astrological significance. The place of this male deity in the Canaanite pantheon is as yet unclear. The name Ashtoreth appears in the singular only in 1 Ki. 11:5, 33; 2 Ki. 23:13; the more common plural form is sometimes found with the plural of Baal (e.g., Jdg. 10:6). It was common for each local town in a system of archaic religious states to have a “Lord and Lady”; such formulas occur frequently, as in the case of the complete mixing of Yahweh and Baal in Jdg. 8:33, where the Israelites were worshipping BAAL-BERITH, “Lord of the Covenant.”

Throughout history the Jews were constantly tempted to worship this pagan goddess and attend her rituals, and it was this forbidden practice that finally led to Israel’s captivity and the seventy years in Babylon. There is no doubt, from the nude statuettes with exaggerated breasts and pudenda and the frequent association of sexual license mentioned by both biblical and classical authors in connection with Ashtoreth, that her rituals were offensive to the Jews at many points. Her cult was kept alive well into the Christian era and was probably finally eliminated by the spread of Islam throughout the ANE in the early Middle Ages. (See W. F. Albright, *Yahweh and the Gods of Canaan* [1968]; J. Day, *Yahweh and the Gods and Goddesses of Canaan* [2000]; *DDD*, s.v. “Astarte,” 109 – 14.) See also ASHERAH.

W.WHITE, JR.

Ashur ash’uhr. See ASHHUR and ASSHUR.

Ashurbanipal ash’uhr-ban’uh-puhl (*Assyr. Aššurbān-apli*, “Ashur has created an heir,” traditionally

identified with  HI0055, "Osnappar," Ezra 4:10). King of ASSYRIA, 669 to c. 626 B.C.

I. His reign. In May 672 B.C. ESARHADDON publicly designated Ashurbanipal to be the crownprince and future ruler of Assyria, while his twin brother Shamash-shum-ukin was given the same office in Babylonia. Among the vassal kings present to endorse this agreement would have been MANASSEH (Akk., *Minsē*) of Judah. In 669 Ashurbanipal came to the throne in NINEVEH and continued operations against Egypt, the northern and eastern tribes (Cimmerians and Mannans), Elam, the Arabs, and Babylonia. Campaigns in the latter country followed the revolt of Shamash-shum-ukin, who interfered with the direct control Ashurbanipal exercised over the strategic centers of NIPPUR, ERECH, and UR. These dated their documents by the years of the Assyrian king's reign. Ashurbanipal advanced to support the beleaguered garrisons and defeated the Elamites, cutting off Babylon from its supporting tribesmen. Babylon itself fell after a two-year siege, and Shamash-shum-ukin committed suicide in his burning palace. In 640 ELAM was invaded and SUSA (Shushan) sacked, some of its inhabitants being exiled to SAMARIA (Ezra 4:10).

The end of Ashurbanipal's reign is obscure, for few contemporary records and references are extant after 639 B.C. The aging monarch seems to have withdrawn to HARAN, leaving one son, Ashur-etil-ilāni, in control of Assyria proper, and another, Sin-shum-lishir, to oppose the new Chaldean dynasty led by NABOPOLASSAR in 626. The general decline of the Assyrian authority at this time was perhaps the cause and opportunity for the defection of the outlying vassal states, including Egypt and Judah, which now took steps to assert their independence.

II. Operations in the West. On accession, Ashurbanipal continued the expedition against Egypt on which his father had died. The primary aim was to defeat the Nubian TIRHAKAH. The latter, however, retreated to Thebes, and the Assyrians contented themselves with restoring the local Assyrian governors in the NILE delta and capturing the rebel leaders. At this time Ashurbanipal claims to have received tribute, as had his father, from twenty-two kings of Syro-Palestine including Ba'al, king of Tyre; Manasseh, king of Judah; Qaushgabri, king of Edom; Musuri, king of Moab; Sili-Bel, king of Gaza; Mitinti, king of Ashkelon; Ikausu, king of Ekron.

Soon Egypt interfered again in Palestinian affairs and Ashurbanipal dispatched a punitive force in 664/3 against Tirhakah's successor Tandamane (Tanut-Amun), who abandoned MEMPHERIS and was besieged in THEBES, which was sacked. The destruction of Thebes (No-Amun) was described in Nah. 3:8 – 10 and used as an example of what would happen to Nineveh in its turn. Egypt was shown to be an unreliable ally, a "bruised reed" (2 Ki. 18:21 KJV). Ashurbanipal, relieved of pressure in the N by his alliance with Gyges of Lydia, now turned to punish Arvad and Tyre and left a reinforced garrison at Gezer. In later operations he plundered the Arabs of Kedar, Moab, Edom, and N Arabia, thus effectively isolating the small hill state of Judah from whom, according to one list, he exacted ten minas of silver as tribute.

III. The scholar. Ashurbanipal claimed to be able to read and write the CUNEIFORM script. At Nineveh he amassed copies of Babylonian literary texts, including the epic of creation, hymns, omens, and other traditional and scientific works that formed a royal library representing 6,000 or more

This cuneiform text is known as the Autobiography of Ashurbanipal; it recounts his early life and education prior to being crowned king.

texts. He also built extensively at his capitals of ASSHUR and Nineveh, decorating the palace at the latter site with new style sculptures portraying his military and hunting successes. (For relevant documents, see *ANET*, 294 – 300; cf. also A. K. Grayson in *CAH*, 3/2, 2nd ed. [1991], 142 – 61.)

D.J. WISEMAN

Ashuri ash'uh-ri (אֲשֻׁרִי H856). Also Ashurite. The name of a region or of a people group in N Israel over whom ISH-BOSHETH, the son of SAUL, ruled in his brief reign of two years (2 Sam. 2:9). If the term refers to a place, its location is unknown. The reading “Geshurites” (Vulg. and Syr.), though accepted by some scholars, is probably incorrect, since it appears that GESHUR was independent at that time (2 Sam. 3:3; 13:37); neither can the name refer to the Assyrians (who had not yet occupied any part of Canaan) or to the Arabian ASSHURITES (Gen. 25:3; these inhabited regions outside of Israel). The TARGUM interprets the name as a reference to the tribe of ASHER, and some scholars agree by emending the text to read “Asherites.” It has also been suggested that the term refers to a western enclave of this tribe (cf. D. Edelman in *PEQ* 117 [1985]: 85 – 91).

Ashurite ash'uh-rit. See ASHURI; ASSHURITES.

Ashurnasirpal II ash'uhr-nas'uhr-puhl (Assyr. *aššur-našir-apli*, “Ashur has guarded the heir”). King of ASSYRIA 884 – 859 B.C., son of Tukulti-Ninurta I, and father of SHALMANESER III. Although Ashurnasirpal continued the practice of raiding the tribes to the N (Mushki) and E of Assyria to keep the trade routes open, his main aim was the revival of Assyrian influence in the W. He invaded BitAdini, an Aramean state between the rivers Balih and EUPHRATES (cf. 2 Ki. 19:12; Ezek. 27:23; Amos 1:5). In a major expedition in 877 via CARCHEMISH and the ORONTES, he reached the Mediterranean and took tribute from TYRE, SIDON, Byblos (GEBAL), and Amurru (see AMORITES). This led directly to the subsequent marches to the W and to Israel by his successors.

Ashurnasirpal built extensive walls, temples, and a palace at Kalhu (CALAH, Gen. 10:11 – 12). The palace was decorated with bas-reliefs and paintings

Alabaster stela of Ashurnasirpal II discovered in Nimrud (9th cent. B.C.). It depicts the king with symbols of various gods, and includes a cuneiform inscription detailing his achievements.

describing his wars and hunts. A stela recounts the foundation of the city in 879 B.C., when 69,579 people were feasted for ten days (this figure is consistent with the number of inhabitants of NINEVEH as estimated in Jon. 4:11). The majority of these were the prisoners of war used in the construction work who formed the nucleus of the population. (Texts and translation in A. K. Grayson, *Assyrian Rulers of the Early First Millennium B.C.*, 2 vols. [1991 – 96], 1:189 – 397.)

D.J. WISEMAN

Ashvath ash'vath (עֲשׂוּתָהּ H6937, perhaps “blind” or “unintelligent”). Son of Japhlet and descendant of ASHER (1 Chr. 7:33).

Asia ay'zhuh (Ἀσία G823, derivation uncertain). The ancient Greeks used this term in a general way to refer to the lands E of them, that is, the blunt peninsula later known as ASIA MINOR, as well as the

countries beyond it. (According to HERODOTUS, *Hist.* 4.45, many thought that Asia was named after the wife of Prometheus.) In the NT this name refers invariably to a Roman province that comprised nearly one-third of the W end of Asia Minor. To the NE lay BITHYNIA; to the E were GALATIA, LYCAONIA, and PISIDIA; to the SE, LYCIA. Such a description is geographical rather than political; the grouping of these areas within the Roman provincial system varied from time to time.

Asia was the richest and best endowed part of the great peninsula. It contained the whole western coastline and the adjacent islands. Its great cities were ancient seats and centers of Hellenic and Hellenistic civilization, with its science, philosophy, and literature. Its hinterland extended back over the old river valley trade routes to the heights of the Anatolian plateau. It was an area rich in natural resources and established industry. Its woolen fabrics, particularly from LAODICEA, were world famous. It had great harbors like that of SMYRNA, and from remote times had controlled the western termini of great arteries of trade and commerce that drew wealth from the central highlands and the depths of continental Asia.

Asia became a Roman province by an unexpected series of events. The western end of Asia Minor had always been subject to change. From the imperial days of the HITTITES to the heyday of PERSIA and the Seleucid successor empire of ANTIOCH OF SYRIA, authority centered further E and had found it difficult to control the European end of the peninsula. The independent Greek communities, with sympathies across the AEGEAN, may have been a factor in this unstable situation. The Athenian support of the Ionian revolt against Persia is an illustration from the middle of the 5th cent. B.C. But simple remoteness from the seat of power is sufficient explanation. The revolt of CYRUS, described in Xenophon's *Anabasis*, and the troubles of NEHEMIAH described in the OT are illustrations of this principle of imperial government (Edmund Burke dilated upon it in a speech urging moderation in dealing with the American colonists).

Out of the changing patterns of control and independence which the situation produced, the kingdom of PERGAMUM emerged in the 4th cent. B.C. to give something like two hundred years of comparative political stability. Under the Attalid line of kings (see ATTALUS), Pergamum was strong, prosperous, and firmly governed. Its rulers in the 2nd cent. were called upon to make fateful decisions. The eastern end of the Mediterranean was becoming aware of the growing power and significance of Rome. In her long quest for a stable frontier, Rome had been drawn into the Greek peninsula only to find that the Aegean Sea was no surer frontier than the Adriatic had proved. ANTIOCHUS III of Syria was as acutely aware of the fact as the Romans. He had watched the fall of the buffer area of metropolitan Greece with anxiety and was alarmed at the eastward flow of Roman power. Hence, he made a preventive thrust into Greece to anticipate Rome's establishment in old Hellenic territory as early as 190 B.C. With characteristic determination Rome met and frustrated his attack and finally defeated the king at Magnesia, deep in his own domains.

But it was obvious enough to the Roman Republic that Asia Minor was a broad land bridge reaching ominously W toward Europe. It was clear, too, that the stable frontier she sought was still elusive. After Magnesia, Rome overawed Bithynia, Galatia, and Pergamum, kingdoms that lay uncomfortably between the two rival powers; it also immunized the naval power of Rhodes, which in a maritime sense lay in a similar position of peril, and made her presence and her pressure felt along the whole tract of territory E of the Hellespont and the Bosphorus. Rome was moving inevitably E. She had far to go.

In 133 B.C., Attalus III, last of the kings of Pergamum, recognizing the drift of history, solved his vexed problem of a successor by bequeathing his kingdom to the Roman people. He stipulated that Pergamum and other Greek cities in his realm should be free from tribute, but the wealth of the area

still made it worthwhile for Rome to take up the legacy with alacrity. It was constituted the province of Asia. This was the worst period of Republican moral decadence, and the Roman officials and *publicani* fell on the rich land like vultures.

After half a century of suffering, a white-hot hatred of Rome found sanguinary expression when Mithridates rose against the Republic in 88 – 84 B.C. Over 80,000 Italian residents of Asia were massacred in one day. This situation explains the relief with which Asia accepted the rule of the emperors, when Rome's recurrent constitutional crises brought from the ruins of the Republic and its broken system the disguised, and finally patent, autocracy known popularly as the Empire, but more accurately as the Principate. Under the convenient fiction of partnership in authority, by which the provinces were divided into imperial and senatorial, Asia became a senatorial province with a proconsul, resident at EPHESUS, as its governor.

Tranquility returned, and no part of the Roman world was more dedicated to the power that made such comparative peace possible. Asia enthusiastically took up the state cult, the worship of the emperor and Rome (see EMPEROR WORSHIP). For the first two centuries of the Christian era, Asia was perhaps the most prosperous part of the empire. Fine monuments and noble ruins, together with the eulogies of Dio Chrysostom and Aelius Aristides, and a wealth of significant coinage survive as evidence. The 3rd cent. brought decadence and a reorientation of the province, portentously, toward Constantinople rather than toward Rome. Roman history was moving E in another sense.

Asia was a complex of city territories, some of them maintaining the independence they had held since the days of the Pergamene kingdom. Urban councils and magistrates under a governor managed their affairs, often with the help of an officer

Asia Minor

appointed by the emperor. Nine administrative districts appear to have functioned, and unity was served by a *Koinon* or *commune Asiae*, a general assembly of all the cities in the province, which met consecutively in the chief urban centers each year and provided for the maintenance of the cult of Rome and Caesar.

PAUL's work at Ephesus established the Christian church in the province and secured the

primacy of this city. It was from Ephesus that JOHN THE APOSTLE administered the group of Christian communities to which he wrote his cryptic letters. This primacy of the great center of ARTEMIS worship was illustrated in A.D. 431 when the Third General Council of the church met in Ephesus, no doubt in the building whose ruins still stand near the great theater. Besides the seven churches of the apocalyptic letters, other Asian churches are mentioned or implied in the NT, for example, at TROAS, COLOSSE, and HiERAPOLis. The number increased greatly in the 2nd and 3rd centuries. (Cf. Pliny the Elder, *Natural History* 5.23 – 44 §§93 – 151; A. H. M.Jones, *The Cities of the Eastern Roman Provinces*, 2nd ed. [1971], ch. 2.)

E. M. BLAIKLOCK

Asia Minor. The phrase *hē mikra Asia* (the Little Asia) was first used after NT times to denote the westernmost part of the Asian continent, that is, the peninsular mass between the AEGEAN Sea and the River EUPHRATES, and roughly equivalent to modern Turkey. It is also known as Anatolia (from Gk. *anatolē* G424, “rising [of the sun],” i.e., “east”) and as the Levant (though the latter term usually includes the other countries bordering on the eastern Mediterranean Sea). In the 2nd millennium B.C., the heartland of Asia Minor was the center of the great HITTITE empire, but the area was also home to various other people groups. During the 1st millennium B.C., it was frequently the scene of wars and political changes. By NT times, it had been organized into provinces under the Roman empire. See separate articles for the regions within Asia Minor mentioned or alluded to in the Bible: ASIA (which in the NT refers only to the westernmost Roman province), BITHYNIA, CAPPADOCIA, CARIA, CILICIA, GALATIA, LYCIA, LYDIA (PLACE), MYSIA, PAMPHYLIA, PISIDIA, PHRYGIA. Note also the articles on specific cities, such as ANTIOCH OF PISIDIA, EPHEBUS, PERGAMUM, TROAS, et al. (See S. Dmitriev, *City Government in Hellenistic and Roman Asia Minor* [2005].)

Asiarch ay’zhee-ahrk(Ἀσιάρχης G825). The word is used by the ASV and RSV as a straight transliteration of the Greek term in Acts 19:31 (NRSV, “officials of the province of Asia”; cf. also NIV). Similar officials are found in other provincial contexts; T. Mommsen (*The Provinces of the Roman Empire*, 2 vols. [1886], 1:344 n., 346, 347 n.) mentions Galatarchs, Syriarchs, and Bithyniarchs. Little is known about this office, although it appears possible that the title was permanent, and that once a citizen had held the office, he continued to bear the honorary title. It is likely that a number of Asiarchs were in EPHEBUS at the time of PAUL’s clash with the guild of the silversmiths. Perhaps they functioned collectively, with the year’s incumbent performing the duties of the office. Nor is it quite clear whether there was one Asiarch for each of the cities that formed the *Koinon* (community) of ASIA, the league of cities whose main function was the proper ordering and maintenance of the worship of Rome and the emperor. No part of the empire was as dedicated to EMPEROR WORSHIP as Asia. No doubt a certain power and dignity was attached to the office of Asiarch to which inscriptions bear testimony.

The puzzling feature of the story of the riot is the question of why the Asiarchs should seek to protect Paul from the devotees of ARTEMIS. Could it be that there was a certain tension at the time between the custodians of the imperial cult and the followers of Artemis, including those vested interests, religious and economic, that had grown up around the vast temple? W. M. Ramsay’s comment is perceptive: “their friendly attitude is a proof both that the spirit of the imperial policy was not as yet hostile to the new teaching, and that the educated classes did not share the hostility of the superstitious vulgarity towards Paul...The eclectic religion which was fashionable at the time regarded new forms of cult with equanimity” (*St. Paul the Traveller and Roman Citizen*, 14th ed.

[1920] 281). In other words, Luke's point in dwelling on the story is the same as that which he makes again and again in his book, that Christianity was not subversive. Like GALLIO, FELIX, FESTUS, and Agrippa II (see HEROD VIII), the Asiarchs add the weight of their testimony to Luke's contention that Paul was no rebel, nor was his teaching a menace to the Roman system.

E. M. BLAIKLOCK

Asibias as'uh-bi'uhs (ΑΣΙΒΙΑΣ). One of the descendants of PAROSH who agreed to put away their foreign wives in the time of EZRA (1 Esd. 9:26). He is called "Malkijah" in the parallel passage (Ezra 10:25 NIV, following MT), but there the SEPTUAGINT has *Asabia*, thus NRSV, "Hashabiah." See MALKIJAH ##4 – 6.

Asideans as'uh-dee'uhs. See HASIDEANS.

Asiel as'ee-uhl (עֲשִׂיֵּל H6918, prob. "God has made" [but see HALOT, 2:893]). (1) A Simeonite whose great-grandson, Jehu, is listed as a clan leader in the days of King HEZEKIAH (1 Chr. 4:35; cf. vv. 38 – 43).

(2) One of five scribes trained to "write rapidly" and commissioned to record the apocalyptic vision of EZRA on "many writing tablets" (2 Esd. 14:24; Latin, *Asihel*).

(3) An ancestor of TOBIT (Tob. 1:1, *Asiēl*).

Asipha uh-sif'uh. KJV Apoc. form of HASUPHA (1 Esd. 5:29).

Askalon as'kuh-lon. NRSV Apoc. form of ASHKELON (1 Macc. 10:86 et al.).

Asklepius. See ASCLEPIUS.

Asmodeus az'moh-dee'uhs (ΑΣΜΟΔΑΙΟΣ perhaps from Pers. *Aesma Daeva*, the Zoroastrian wrath demon). Also Asmodaeus. An evil spirit who plays an important role in the book of TOBIT. According to the account he fell in love with Sarah, the only daughter of Raguel of Ecbatana, and slew her seven successive husbands on their wedding night. His power over her was broken by Tobias, who, with the help of the angel Raphael, used a fish's liver and heart to drive Asmodeus away (Tob. 3:8, 17; 8:1 – 3). Some believe that the concept of Asmodeus is derived from ZOROASTRIANISM, with which the Jews became familiar during the exile. Asmodeus was prominent in later Jewish legend, especially in connection with Solomon. He appears in Milton's *Paradise Lost* 4.168 – 71.

Asmonaeon az'muh-nee'uhn. See HASMONEAN.

Asnah as'nuh (אֲנָחַס H663, perhaps "thornbush"). The head of a family of temple servants (NETHINIM) who returned from the EXILE with ZERUBBABEL (Ezra 2:50; 1 Esd. 5:31, LXX *Asana*, KJV "Asana").

Asnappar as-nap'uhr. KJV form of OSNAPPAR (ASHURBANIPAL).

Asom ay'suhm. KJV Apoc. form of HASHUM (1 Esd. 9:33).

asp. This English term is used by the KJV and other versions to translate most instances of Hebrew *peten* H7352 (e.g., Isa. 11:8) and the one NT instance of Greek *aspis* G835 (Rom 3:13). The Hebrew term probably refers to the cobra (cf. NIV), mainly the Egyptian, but also the closely related black-necked, or spitting, cobra. All references make clear that the reptile is venomous. In ancient Egypt the bite of the asp was used for suicide, suggesting that it belonged to the neurotoxic group (cobras), which kill quickly, rather than to the haemotoxic group (VIPERS), whose venom may take days to kill. Cobras have long been the traditional subject of snake charmers in Asia and Africa (cf. Ps. 58:4 – 5; in fact, all snakes are permanently deaf, and the charmer holds their attention by the movement of his pipe, not by its sound). See also SERPENT.

G. S. CANSDALE

aspalathus as-pal'uh-thuhs (ἀσπάλαθος). See CAMEL'S THORN.

Aspatha as-pay'thuh (אַסְפָּתָא H672, perhaps from a presumed Pers. name, *Aspa-pati*, “master horseman” [cf. R. Zadok in *ZAW* 98 [1986]: 105 – 10, esp. 107]). One of the ten sons of HAMAN who were put to death by the Jews (Esth. 9:7).

asphalt. See BITUMEN.

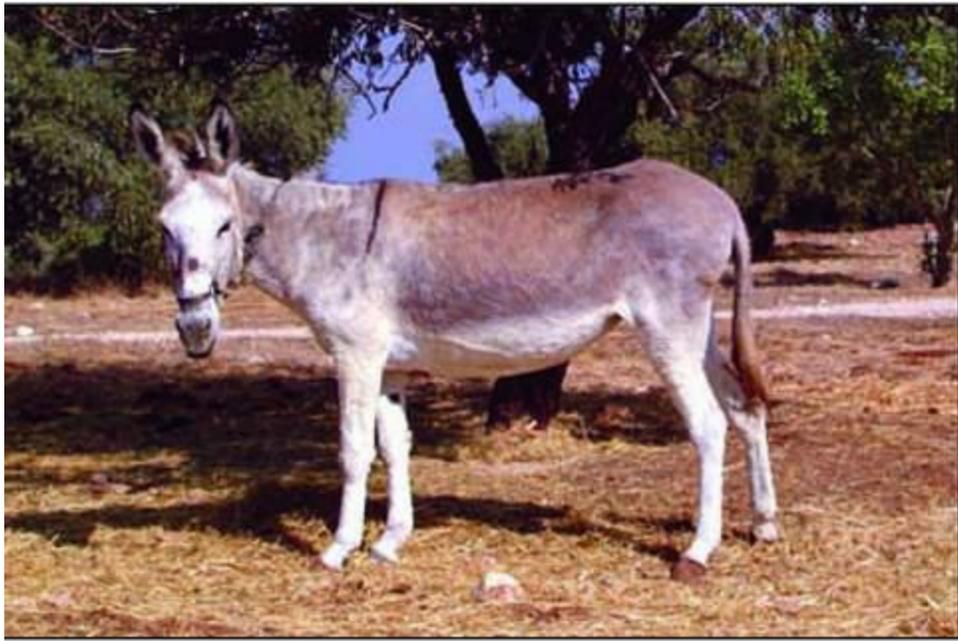

Asphar as'fahr (Ἀσφάρ). A pool in the wilderness of TEKOA where Jonathan MACCABEE and his brother Simon encamped after fleeing from Bacchides (1 Macc. 9:33). Some scholars identify the site with modern Khirbet ez-Za'faran, about 5 mi. E of BETH ZUR.

Aspharasmus as-fair'uh-suhs (Ἀσφαρασσός). One of the leaders who returned from the EXILE with Zerubbabel (1 Esd. 5:8; called MISPAN in Ezra 2:2 and MISPERETH in Neh. 7:7).

Asriel as'ree-uhl (אַסְרִיֵּל H835, meaning uncertain; gentilic אֲשֵׁרִיִּלִּי H834, “Asrielite”). Son of GILEAD, great-grandson of MANASSEH, and eponymous ancestor of the Asrielite clan (Num. 26:31; Josh. 17:2). In 1 Chr. 7:14 (KJV, “Ashriel”) he is described as the son (NIV, “descendant”) of Manasseh through an Aramean concubine.

ass, donkey. The rendering of various Hebrew and Greek terms: *’ātôn* H912, “female donkey”; *ḥāmôr* H2791, “[male] donkey”; *’îr* H6554 [only Gen. 49:11] and *’ayir* H6555, “[young male] donkey, stallion”; *’ārôd* H6871, “wild ass”; *pere’* H7230, “wild ass”; *onos* G3952, “[male or female] donkey”; *onarion* G3942, “[young] donkey”; *pōlos* G4798, “foal [of any animal]”). The English term *ass* is a very old word (from Latin *asinus*, prob. through Celtic), now generally obsolete except in biblical, figurative, and zoological usage. *Donkey*, a recent term (1785) of uncertain origin, has replaced it entirely for the domestic form. *Colt* is the young of a member of the horse tribe, almost synonymous with *foal*. *Heass* and *she-ass* are still used occasionally for male and female, correctly referred to as *stallion* and *mare*. *Jackass* is sometimes heard, and hence *jennyass* or *jenny*, more rarely. (See *FFB*, 5 – 7.)

I. Origin. The donkey is derived from the N African wild ass (*Equus asinus*), which once existed in

The donkey was a common mode of transportation and an important agricultural asset in antiquity.

several races from Somalia through the Libyan desert to Morocco. Three of these races survived into the Roman period: one in NW Africa; another in Nubia, between the NILE River and RED SEA; the third in Somalia. The first of these is extinct and the second probably so; the third is now protected and just survives. Ancient Egyptian evidence suggests that the donkey may have been used first in Libya, but its main development was in the Nile Valley, and the Nubian race is probably its main ancestor. Its domestication began at least in the early dynastic period (early 3rd millennium B.C.) and perhaps many centuries earlier than that. It is listed as being sent from Libya as tribute, and illustrated on panels c. 2650 B.C. As happened with other species also, domestication probably was attempted in several different areas, with subsequent mixing of the stock.

II. Description and uses. Gray and brown are the most common body colors, but there are true albinos, with no shoulder stripe, black, piebald, and skewbald. A few varieties may lack the vertical stripe on the shoulder, but most have both this and the clearly marked line along the back. The widespread legend that this stripe, forming a cross, dates from the Lord's entry into Jerusalem is pure fancy; this feature is inherited from the wild ancestor. Donkeys have now developed into many varieties, some as large as a thoroughbred horse, with others smaller than Shetland ponies. The home of the Nubian wild ass is semidesert mountain, so that it is both sure-footed and able to manage on poor forage. In contrast, the horse came from grassy plains, so it needs easier going and better food. For this reason the horse never replaced the donkey in hill country or even around the desert edge, and for many centuries the donkey has been the basic transport of poorer people, both nomadic and settled. Donkeys carried the loads and, at least for part of the journey, the women and children; the men seldom rode. In this way an average of 20 mi. a day could be maintained. The donkey spread slowly across Europe and did not reach Britain until medieval times (c. 10th cent.); although donkeys may still be seen widely in western Europe, they are used for serious working in only a few areas, including Ireland.

III. History of the donkey in Palestine and Mesopotamia. The donkey first appears in the biblical record at Gen. 12:16 among the gifts that Pharaoh gave Abram (ABRAHAM), but this was not Abram's first meeting with a donkey. The spread into Asia may have been slow, but there are records from Tell Duweir and Jericho during the early 3rd millennium B.C., and soon after this from all over Palestine and Syria. It is still uncertain when and where the donkey reached Mesopotamia. Tablets from Chagar Bazar (c. 1800 B.C.) list three different breeds and their rations, which proves it had been there for some time. This detail is important, for it relates to Abram and his journey from UR to CANAAN. The first part of the journey would have been from the EUPHRATES or TIGRIS Valley to HARAN, lying in the watershed between them. The stage across Syria to Palestine includes large stretches of near desert, which could not possibly be crossed by a large family party without the use of transport animals. Until the CAMEL came into service shortly afterward, pack donkeys were used for these desert crossings. (Cf. F. E. Zeuner, *A History of Domesticated Animals* [1963], ch. 15.)

IV. Importance to the Hebrews. The capacity to survive in hard, rough country made the donkey especially valuable in E Mediterranean lands. It had a range of uses, including grinding corn by using the grindstone (Matt. 24:41) and pulling simple plows; the OT gives no real evidence for the donkey pulling any wheeled vehicle (in Isa. 21:7, the KJVs "chariot of asses" should be "riders on donkeys"). Even a light wooden plow was more than one animal could manage efficiently, and since many households owned only one donkey, it was—and still is—usual to harness an ox and a donkey together. This was forbidden by the Mosaic law (Deut. 22:10), perhaps primarily for its moral lesson, but it was also humane, for these two have different gaits and do not work comfortably in a common yoke. Like all members of the horse tribe, the donkey was unclean for meat under the Mosaic law, because it has single hoofs and is not a ruminant. It was thus a measure of the people's desperation that a donkey's head was sold for eighty shekels (thirty-two ounces) of silver when BEN HADAD besieged SAMARIA (2 Ki. 6:25).

V. Significance in the biblical narrative. The main Hebrew words for "donkey" are not sharply differentiated in their usages, but *'ātôn* is found mostly in two incidents: the story of BALAAM (Num. 22) and the incident regarding the donkeys that belonged to SAUL's father (1 Sam. 9 – 10). Throughout the OT the donkey is portrayed as one of the basic possessions of the ordinary Hebrew, and out of 138 occurrences only a dozen are other than wholly literal. The many detailed instructions about the treatment of donkeys (e.g., Exod. 21:33) emphasize this point. There are also at least four injunctions about the safety of donkeys (Exod. 23:4 – 5, 12; Deut. 22:4), perhaps primarily because a poor owner's living depended on his single donkey, but there is also a humane content quite foreign to general sentiment in Arab lands today. The status of the donkey has changed little through the ages; it finds few mentions in NT, but it is notable that the Lord twice comments on the kind treatment of livestock, including donkeys (Lk. 13:15; 14:5).

Large numbers of donkeys are sometimes mentioned (e.g., Job 42:12, "a thousand"), but in most cases the word is singular, (e.g., Job 24:3, "they drive away the orphan's donkey"), giving the impression that the ordinary folk had just one. However, it was not thought undignified for wealthy men to ride on donkeys, and on two occasions it is specifically recorded that sons of the current judge of Israel did so (Jdg. 10:3 – 4; 12:13 – 14). Many similar cases are recorded (e.g., 2 Ki. 4:22). There is some evidence that in Palestine and surrounding countries it was correct in peacetime for a king to ride on a donkey, perhaps because the horse was so closely associated with war (cf. Zech. 9:9, echoed in Matt. 21:5). The use of donkeys on ceremonial occasions continued in some Muslim

countries; until the middle of the 20th cent., the family of the Sultan of Zanzibar rode on donkeys in processions. For four centuries the English word *ass* has been a metaphor for stupidity, but there is no hint of such a use in either OT or NT, even in two proverbial contexts (Prov. 26:3; Isa. 1:3). See also HORSE; MULE; WILD ASS.

G. S. CANSDALE

Assabias as'uh-bi''uhs. KJV Apoc. form of HASHABIAH (1 Esd. 1:9).

Assalimoth uh-sal'uh-moth. KJV Apoc. form of SHELOMITH (1 Esd. 8:36).

Assanias as'uh-ni''uhs. KJV Apoc. form of HASHABIAH (1 Esd. 8:54).

Assaphioth a-saf'ee-oth (Ἀσσαφίωθ). Head of a family of temple servants (NETHINIM) that returned from the EXILE (1 Esd. 5:33 NRSV [KJV, "Azaphion"]; called "Hassophereth" in Ezra 2:55).

Assar. See TEL ASSAR.

assarion (ἄσσάριον G837). The Greek term corresponding to the Roman *as*, a copper coin worth four quadrans and approximately one-sixteenth of a denarius (one day's wage for a laborer). The word, normally translated "penny," is used in the NT to signify a paltry amount (Matt. 10:29; Lk. 12:6, NIV "two pennies," could accurately be rendered "an hour's work").

assassins. This NRSV term (Acts 21:38; NIV, "terrorists") translates Greek *sikarios* G4974 (from Lat. *sicarius*, meaning "dagger man, murderer"). It was a name given to, and borne by, fanatical Jewish nationalists who stood in the Maccabean tradition (see MACCABEE). Members of the band carried, hidden in their cloak, a dagger about the size of a Persian scimitar and curved like a Roman *sica*. Bold, courageous, and unscrupulous, bitterly opposed to the Roman overlords and to all collaborators with them, they mingled in the crowds (esp. on feast days), watched for an opportunity to wield their concealed weapons, and did not hesitate to kill even in open daylight. Roman rulers in Palestine had a healthy respect for them, and their bodyguards had to be on the constant alert against them. The very name *Sicarii* inspired terror in the countryside.

It is not known at what precise point in history they came on the scene, although JOSEPHUS traces their origin as far back as the onerous census levied in the governorship of QUIRINIUS (cf. Lk. 2:2). He wrote: "In those days the *Sicarii* banded together against those who consented to submit to Rome and in every way treated them as enemies, plundering their property, rounding up their cattle, and setting fire to their habitations, protesting that such persons differed not at all from Gentiles, by betraying in so cowardly a manner the hard-won liberty of the Jews and admitting their preference for the Roman yoke" (*War* 7.8.1).

There are occasional references to them in the historical record. A quisling, Jonathan, the son of the high priest Annas, was killed by them in cold blood. It appears that in A.D. 7 Judas the Galilean collected a band of the *Sicarii* and laid plans for an organized rebellion at Sepphoris, 4 mi. distant from Jesus' boyhood home at NAZARETH. The uprising was ruthlessly suppressed, and 2,000 of the rebels were crucified. It may be that the Lord had some early knowledge of them. They were active during the governorship of FELIX, who took strong measures against them; thus, Captain CLAUDIUS

LYSIAS sought to identify the apostle PAUL with an Egyptian leader who led 4,000 *Sicarii* into the wilderness (Acts 21:38). These men who took the law into their own hands played a leading role in the Jewish Wars. They held MASADA for a time and from that vantage point plundered the area. They eventually shifted their operations to Egypt and Cyrene and there continued their tactics of terror. See WAR, JEWISH; ZEALOT.

J. H. BRATT

assembly. See CONGREGATION.

Assembly, Great. See SYNAGOGUE, GREAT.

assembly, mount of. See CONGREGATION, MOUNT OF THE.

assembly, solemn. This phrase in the KJV and other English translations is the rendering of the Hebrew term (*ăṣārâ* H6809 (also (*ăṣeret*), which implies the ceasing of work for a festive occasion (e.g., Num. 29:35; Deut. 16:8). It is normally used of sacred feasts, although in Jer. 9:2 (MT v. 1) it refers simply to an assemblage or crowd. The KJV also uses the phrase once (Zeph. 3:18) to translate the common Hebrew term *mô'ēd* H4595 (usually, “appointed time,” as of a sacred season). The passage as a whole (Zeph. 3:8 – 20) is a comfort to the faithful in Israel. Therefore, as with all such promises, it refers to the coming of the MESSIAH and the institution of his kingdom (cf. Dan. 8:19 in reference to the end of the old covenant). The rendering “solemn assembly” is not wholly without merit, as long as the time of its appointment is maintained as the most important aspect of its meaning.

W. WHITE, JR.

Asshur ash'uhr (אֲשׁוּר H855, meaning uncertain). KJV and TNIV Ashur. One of the three sons of SHEM (Gen. 10:22; 1 Chr. 1:17; not to be confused with an Israelite named ASHHUR). His name was borne also by the patron deity, people, territory (cf. Gen 2:14), and capital city of ASSYRIA (out of almost 140 occurrences of the name in the OT, all but half a dozen or so are usually rendered “Assyria” or “Assyrians”). Asshur son of Shem was considered to be the founder of the Assyrian nation, whose king list refers to the earliest founders as tent-dwellers in the southern and western deserts (cf. Gen. 10:11). The name of the national god (often spelled Ashur) is not found in the Bible, although some see allusions to it (e.g., Num. 24:22 – 24; Ps. 83:8). It occurs as an element in many personal names (e.g., ASHURBANIPAL, ESARHADDON) and may well account for the name given to the capital city.

The ruins of the city of Asshur (modern Qala^(at Sherqat) lie c. 56 mi. S of Mosul (NINEVEH) on the W bank of the TIGRIS River, bordering the great desert. Excavations by H. Rassam in 1853 and by the Deutsches Orient-Gesellschaft under R. Koldewey and W. Andrae (1903 – 14) reveal occupation of an archaic ISHTAR temple in Sumerian levels and during the Sargonic period, after it had

This gypsum block from Asshur (Ashur) is referred to as a foundation document; on it King Erishum I (c. 1900 B.C.) gave an account of the restoration of a temple dedicated to the Assyrian deity Ashur.

probably fallen to Sargon of Agade c. 2350 B.C. About this time the city is named in Old Assyrian texts, and from that time until it fell to the Medes and Babylonians (614 B.C.) it held an important place as a religious and political center. ShamshiAdad I built a temple to the god ENLIL, while the older shrine with its distinctive twin-towered ZIGGURAT dedicated to Anu and Adad was constantly renovated. A library of Middle Assyrian documents, including religious and legal texts collected by TIGLATH-PILESER I (1100 B.C.), is the primary literary source for this period of history. The graves of Neo-Assyrian kings and the New Year festival house built for the annual ritual outside the main city have also been uncovered.

D.J. WISEMAN

Asshurim ash'uh-rim. See ASSHURITES.

Asshurites ash'uh-ri'ts (אֲשׁוּרִים H857). Also Ashurites, Asshurim. An Arabian tribe descended (along with the LETUSHITES and LEUMMITES) from ABRAHAM and KETURAH through DEDAN (Gen. 25:3). They are not related to ASSHUR and the Assyrians.

Assideans as'uh-dee'uhns. See HASIDEANS.

Assir as'uhr (אֲסִירָהּ H661, possibly "captive"). (1) Son of KORAH and descendant of LEVI (Exod. 6:24; 1 Chr. 6:22).

(2) A son of Ebiasaph (see ABIASAPH) and grandson of #1 above (1 Chr. 6:23, 37). Some scholars believe these genealogical lists are textually corrupt and that there was only one Assir.

(3) According to the KJV, a son of Jeconiah (i.e., J EHOIACHIN, 1 Chr. 3:17), king of Judah. Most scholars, however, regard the Hebrew word here not as a proper name, but as an adjective (cf. NIV, "Jehoiachin the captive").

ASSOS as'os (Ἄσσος G840). Also Assus. A strategic strongpoint and city on the Gulf of Adramyttium in MYSIA, facing S toward the island of Lesbos. It is the modern Bahram Köi. Assos controlled the coastal road, over 20 mi. of which PAUL journeyed on foot (Acts 20:13 – 14), while his traveling companions rounded Cape Lectum by sea. The geographer Strabo (*Geogr.* 13.1.57) described the fortifications of the port. Its defenses and public buildings lay on a steep hillside rising to over 700 ft., terraced in a unified architectural scheme and connected with the artificial harbor beneath by a long stairway. Considerable remnants are visible, and some fine sculptures from Assos' temple of Athena are housed in Paris.

In the 4th cent. B.C. the port was the headquarters of a school of Platonic philosophers, among whom the great Aristotle was numbered. CLEANTHES, the Stoic, was born there. The ancient harbor has disappeared and is now cultivated ground, but the port still functions. Assos was part of the domain of the Pergamenian kings (see PERGAMUM) and later a port of the province of ASIA. Paul made his way from TROAS to ASSOS on foot for reasons not detailed in Luke's narrative. It may be supposed that, deeply burdened by the responsibilities of his Jerusalem journey and the growing evidence of global and united Jewish opposition both to the gospel and to Rome, he sought solitude for thought and meditation. (E. Yamauchi, *The Archaeology of New Testament Cities in Western Asia Minor* [1980], ch. 1.)

Assuerus. azh'yoo-er'uhs. KJV Apoc. form of AHASUERUS (Tob. 14:15).

Assumption of Isaiah. See ASCENSION OF ISAIAH.

Assumption of Moses. See MOSES, ASSUMPTION OF.

Assumption of the Virgin. In Roman Catholic doctrine, this term refers to that “privilege” of MARY, MOTHER OF JESUS, by which, having completed the course of her earthly life, she was “assumed” body and soul into heavenly glory. It is based on an apocryphal legend, the oldest evidence for which consists of 4th-cent. patristic quotations. (For a translation of the primary documents, see J. K. Elliott, *The Apocryphal New Testament* [1993], 691 – 723.) Catholic biblical scholars today readily admit that there is no explicit reference to the assumption of Mary in the NT. They will even say that neither the NT nor any other early source (such as the APOSTOLIC FATHERS) gives us any genuinely historical information about the life of Mary subsequent to the episode mentioned in Acts 1:14. Most Catholic scholars now make it clear that Mary's assumption is not to be understood as historical fact, and they admit that what kind of existence is implied, and where, is not easy to determine. Nevertheless, Pope Pius XII in his 1950 encyclical *Munificentissimus Deus* used his infallible teaching authority to make the dogma of the assumption *de fidei* for all Roman Catholics. He insisted that in some sense the Scriptures must be seen as the ultimate foundation of the dogma. Catholic biblical scholars have thus sought implicit support for this teaching in the pages of the NT.

Mary's assumption is broadly based on 1 Cor. 15:14 – 22, which speaks of the basis for the resurrection of all Christians. Two other verses, however, traditionally have been used as the foundation for Roman Catholic thinking about the assumption: (1) In Lk. 1:28 (where Mary is addressed by the angel as being “full of grace”) the term “grace” is interpreted in Aristotelian-Thomistic categories. This verse “anticipates” Mary's assumption because fullness of grace raises Mary beyond such imperfections of ordinary humanity as the grave. (2) In Lk. 1:42, the words “God's

blessing is on you above all women” (NEB) are seen as specifically achieved in her assumption. Other verses frequently seen as offering implicit support for the dogma are Rev. 12:1 (where devotional piety saw Mary as the “woman clothed with the sun”) and Gen. 3:15 (where Mary is seen as the woman whose seed will bruise the serpent’s head). Catholic writers also have meditated upon the idea of Mary as the new EVE (the old Eve was the first to experience death; the new Eve was the first to be delivered from death by Christ). For patristic and later theological developments, and for the debate over the death of Mary (*transitus Mariae*), see W. Burghardt, *The Testimony of the Patristic Age Concerning Mary’s Death* (1957), and T. O’Meara, *Mary in Protestant and Catholic Theology* (1965). Protestants, too, see the dogma of the assumption as a result of postbiblical devotional piety and can even appreciate the factors that led to its rise. But no matter how much Christians may revere Mary, Protestants will insist that such a dogma should not be treated as a doctrine of the Christian faith. L. R.

L.R.KEYLOCK

Assur as’ uhr. (1) KJV alternate form of ASSHUR (Ezra 4:2; Ps.83:8; NRSV and NIV, “Assyria”). (2) KJV Apoc. form of ASUR (1 Esd. 5:31).

assurance. The Christian doctrine of assurance is an essential ingredient of personal FAITH. Faith is the kind of knowledge of God in Christ that carries within it an absolute confidence that what it knows is surely true, and therefore, completely trustworthy and reliable. PAUL knew whom he had believed, and was therefore persuaded that Christ was able to keep what Paul had committed to him, against the day of destruction (2 Tim. 1:12).

Because the content of the assured knowledge of faith is good news, assurance is a profound sense of relief and a buoyant sense of joyous freedom. Faith is confident of the good news that God in Christ has once and for all, and in a manner that cannot be undone, overcome sin, death, judgment, and hell, and provided a freedom from the past that justifies and forgives and opens up the future to eternal life. The believer, therefore, experiences a joyful sense of liberation. Assurance is the quiet joy and joyous cry that nothing can separate the believer from the love of God in Christ. Knowledge without assurance is a contradiction in terms, as faith without certainty would be spiritual torture. The Christian who believes that faith is a risk, a leap in the dark, a decision made against the odds, is of all men most miserable, for it is then himself, his life, and his future which is at stake, being suspended on a hairline of uncertainty between heaven and hell, life and destruction. Nor does faith, understood as a human decision, carry the needed assurance, for the assurance is then grounded merely in a human action.

The assurance that characterizes Christian faith derives not from the believer, nor from his believing action, but from the object in which it believes. Nor does assurance rest on extrabiblical evidence. The certainty and absolute confidence that adheres in faith derives rather from the nature of that word of God to which the Holy Spirit bears witness. The word of God imparts to faith its knowledge, and no less that word imparts the quality of its own inherent certainty and truthfulness. There is no adequate external evidence to support faith. Faith rests upon that internal evidence of the word of God that gives rise to faith, and by which the knowledge and assurance of faith is shaped and informed. It is the word that creates faith, and it creates faith in its own image.

In actual life, however, the believer is often anxious, vacillating between faith and doubt. The joyous, liberating assurance of faith is often lacking in the true believer’s life. He is often caught between storms without and doubts within. This lack of assurance does not flow, however, from the

nature of faith, but from his disbelief and faithlessness. Therefore, he often must cry, “I do believe; help me overcome my unbelief” (Mk. 9:24). But being a believer he lives by faith not by sight, by faith in God’s history in Jesus Christ and not by his own internal or external experiences. Though the night of struggle be long, he knows that joy will come in the morning. Even when the judgment of God is upon him, he cries, “Though he slay me, yet will I trust in him” (Job 13:15, KJV), as did Christ himself on the cross.

J.DAANE

Assyria and Babylonia uh-sihr’ee-uh, bab’uh-loh’nee-uh. Two ancient kingdoms of MESOPOTAMIA. While Babylonia, the southern kingdom, occupied the plain between Baghdad and the Persian Gulf, Assyria was generally bounded on the W by the Syrian desert, on the S by Babylonia, and on the N and E by the Armenian and Persian hills. The name of Assyria was also used to refer to the Assyrian empire, which reached its zenith in the 8th to 7th cent. B.C. and included Babylonia, ELAM, MEDIA, SYRIA, PALESTINE, and ARABIA, along with S ANATOLIA, CILICIA, and EGYPT.

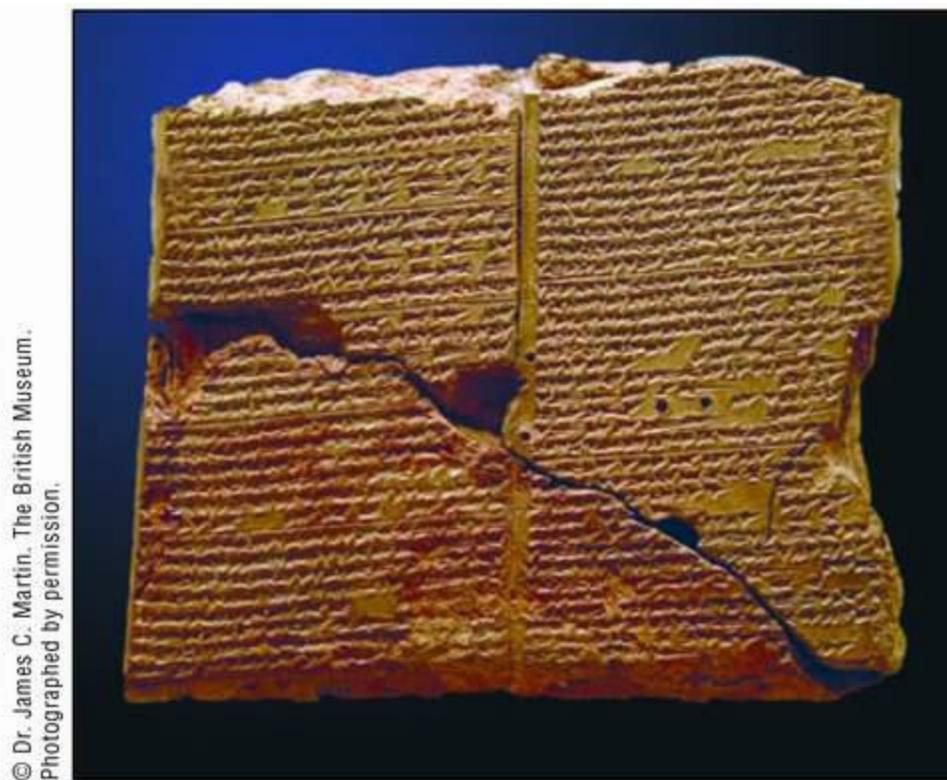

Both Assyria and Babylonia enjoyed a long and impressive history. They shared a common Semitic language known as Assyro-Babylonian or Akkadian. An advanced civilization developed in Babylonia around 3000 B.C., and Babylonia remained more or less the cultural center of Mesopotamia until the 6th cent. B.C. Thus the two civilizations have much in common and are, in some ways, inextricably linked. Politically, however, power oscillated back and forth between them, Assyria being generally the leading power, especially in the period 900 – 600 B.C. This is the period in which Assyria figures prominently as an invader and oppressor in the biblical narrative, where Assyria is always carefully distinguished from Babylonia. See also ASSHUR; BABYLON.

4. Social life

I. Physical geography. The most important physical features of both Assyria and Babylonia are, of course, the TIGRIS and EUPHRATES river systems. Life in both kingdoms depended heavily upon the flow of the rivers and, in many cases, was at the mercy of the rivers. They figured largely in economic, social, and religious life. Vast irrigation and canal networks from ancient times are discernible in both areas.

Babylonia consists mainly of alluvial deposits from the two great rivers, and in its more southerly parts near the Persian Gulf it is very marshy. Assyria, on the other hand, is on a higher, and therefore drier, plateau. This plateau is broken by a number of ridges and secondary rivers. It lacks water for a considerable part of the year, and were it not for the canals, little of the rich and varied plant life cultivated there in ancient times could have survived. The climate of Assyria is a strongly continental one, the summer heat being oppressive, while the winter can bring frost and snow. Only a comparatively small portion of Assyria is habitable, and the wilderness regions provided an abundance

This cuneiform document, known as the Synchronistic History, deals with the relations and boundaries between Assyria and Babylonia from the 14th to the 8th cent. B.C.

of wild animal life which, according to many of the ancient texts, was the object of many hunting expeditions. The rivers provided a stock of fish, and the general landscape was suitable for grazing sheep, goats, and cattle. The mountains of Assyria provided ample building materials and also contained rich mineral deposits that were more or less systematically exploited by the ancients.

The main cities of Assyria were ASSHUR (often spelled Ashur; modern name, Qal'at Sharqat), the ancient capital, then NINEVEH or Ninua (Qyunjiq), CALAH (also Kalakh or Kalhu, now Nimrud), Arba'ilu (Irbil), Kakzu (Sadawah), Arrapkha (Kirkuk), MARI (Tell el-Hariri), HARAN (Harran), and Nasibina (Nesibin).

II. History

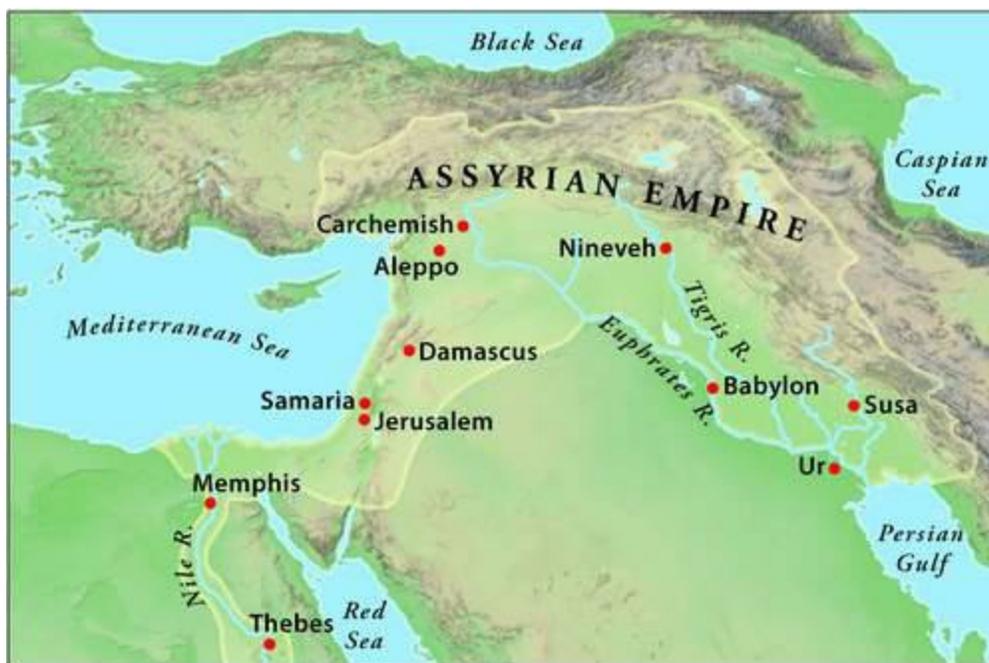

A. Prehistoric period. According to archaeological evidence, villages based on agriculture and shepherding seem to have developed first in the foothills of the Zagros mountains in Assyria. One of the earliest sites is Jarmo (c. 5000 B.C.), whose earliest existence was prior to the invention of POTTERY. A more advanced culture called Hassuna (after the site by that name) then spread over all of Assyria, and this was followed by the Tell Halaf culture, known for its use of COPPER and beautifully painted pottery. The Tell Halaf culture spread through Assyria and as far W as the Mediterranean. Tell Halaf culture, along with the similar Samarra culture somewhat to the SE, was replaced by the so-called Ubaid culture, which extended from the Persian Gulf to the Mediterranean.

While actual human settlements appear to be earlier in Assyria than in Babylonia, Gen. 10:11 – 12 does inform us that Asshur, Nineveh, and Calah, where pottery from the Hassuna to the Ubaid periods (c. 5000 – 3000 B.C.) has been found, were founded by immigrants from Babylonia. The origin of the actual population of Assyria is disputed, but southern influence seems to be inescapable, and there is also evidence of influence from the western deserts and the northern hills. There is little doubt that the Sumerians were present at Asshur by 2900 B.C. See SUMER.

Following the Ubaid period, the N and the S underwent different development. While the S took strong steps toward what is called the protoliterate period, the N passed through the Gawra and Ninevite stages of her prehistory with little innovation. Some building activity by kings of the Akkadian dynasty in the S took place in Assyria. In particular, we may mention that Sargon (c. 2350) built up Nineveh, and a building inscription of Amar-Suⁿen of UR (c. 2040 B.C.) has been found in Asshur.

B. Early period (to 900 B.C.) Not until the fall of the empire of Ur does Asshur really emerge from prehistory, however. According to an Assyrian king list, Assyria was now governed by independent rulers. Of the first thirty kings on this list, nothing is known from other sources, but beginning with the thirty-first king, Ilu-shuma, Assyria is brought to some measure of prominence. Outstanding among the various achievements was the establishment of trade colonies in Anatolia centered on Kültepe (near Caesarea Mazaca in Turkey). Tin and textiles were exported to Anatolia in exchange for silver. These colonies continued for some seventy years into the reign of Shar-um-kin I, the thirty-fifth king on the list. The thirty-seventh king in the list is called Naramsin and is probably to be identified with the king of that name ruling over Eshnunna.

The next king was dethroned by Shamshi-Adad (1813 – 1781 B.C.), who came from Terqa on the middle Euphrates and who had already conquered Mari. Shamshi-Adad built temples in Asshur and

The Assyrian Empire.

established Shubat-Enlil as a new capital. The reigns of Shamshi-Adad in Assyria and HAMMURABI in Babylon overlapped for a period of about ten years. The death of Shamshi-Adad was a setback for Assyria and was to the advantage of Hammurabi. Shamshi-Adad's oldest son, IshmeDagan, succeeded him as the fortieth king in the list, and he evidently suffered defeat at the hands of neighboring peoples. Through various military operations, in fact, Hammurabi was, for the last ten years of his reign (c. 1800-c. 1760), able to rule over the entire area from the Persian Gulf to Mari and the Zagros mountains including Asshur. Hammurabi's united kingdom continued more or less intact for five generations of the dynasty which he founded, but eventually it broke up and Asshur regained independence.

Little is known of Assyria for approximately the next two centuries except that probably part of it, at least, was under the rule of the MITANNI kingdom. The letters of Pharaoh Amenhotep IV (AKHENATEN, c. 1360 B.C.) of Egypt found at TELL EL AMARNA speak of a system of great powers including Egypt, Mitanni, the HITTITE kingdom, Babylonia, and most probably also Assyria. Ashur-uballit I was the Assyrian king of the Amarna period, and together with the Hittites he destroyed the Mitanni kingdom and thereby established Assyrian rule in northern Mesopotamia. For the centuries following this time, rivalry between Assyria and Babylonia is characteristic. From Ashur-uballit down to about 1200 B.C., Assyria was the more powerful of the two, and Ashur-uballit played an active role in Babylonian politics.

Three very powerful kings followed Ashuruballit in the 13th cent. B.C., namely Adad-nirari I (1308 – 1275), Shalmaneser I (Shulman-asharid, 1275 – 1245), and Tukulti-Ninurta I (1245 – 1208). All three of these kings conducted significant military campaigns, and each was, in his own way, an empire builder. Adad-nirari and Shalmaneser both fought against the western part of northern Mesopotamia and won these areas as part of their empires. Tukulti-Ninurta gained a decided victory over the Kassite kingdom in Babylonia and evidently ruled over Babylonia for a time himself. He built a new palace in Asshur and later established a new capital across the Tigris from Asshur.

Assyrian power waned for a time after the death of Tukulti-Ninurta but was revived again by the rise of TIGLATH-PILESER I (Tukulti-apil-ešarra, 1115 – 1077 B.C.). Tiglath-Pileser expanded the bounds of the Assyrian empire further than any other leader before him, reaching as far W as the coast

of SYRIA, having successfully defeated various Aramean tribes. After the death of Tiglath-Pileser, Assyrian power once again declined, and during this time the Arameans in the W were able to found a kingdom centered on Damascus and were even able to put pressure on the borders of Assyria. See ARAM (COUNTRY).

C. Neo-Assyrian period (c. 900 – 612 B.C.). Assyria rises again, however, under the leadership of Ashur-dan II (933 – 910), Adad-nirari II (910 – 889), and Tukulti-Ninurta II (889 – 884). Ashurnasirpal II (Ashur-nasir-apli II, 884 – 859) and Shalmaneser III (Shalman-Asharid II, 859 – 824), in particular, led Assyria in a new period of expansion.

ASHURNASIRPAL subjugated the Aramean tribes of Mesopotamia and campaigned not only to the Mediterranean coast but also northward and into the Zagros mountains in the E. From this point on, Assyria exerted a continuous pressure on the W, and this eventually brought her into conflict with Israel. Ashurnasirpal built a new capital at Calah (Nimrud); his palace, decorated with the first known Assyrian relief art, was one of the first to be excavated in the 19th cent. More than 50,000 captives were used for the building of Calah, and besides artists, trained men also were employed in maintaining a park and various gardens.

SHALMANESER III, Ashurnasirpal's son, was able to hold the gains previously made and to advance the empire further. Of particular interest for OT studies is his confrontation with a coalition of ten kings headed by Bar Hadad I (prob. biblical BEN HADAD II, throne name Adad-¹idri, i.e., Hadadezer) of DAMASCUS at Qarqar in 853 B.C. The Assyrian annals note that AHAB of Israel supplied 2,000 chariots and 14,000 men for the battle (*ANET*, 278 – 81). Not until after the death of Ben Hadad and Ahab was Damascus seriously besieged, and even then it was not taken. JEHU of Israel, along with other rulers, had to pay tribute to Shalmaneser (*ANET*, 281). Shalmaneser also conducted campaigns in the N and seized an opportunity to meddle in Babylonian affairs, making tributary the Arameans dwelling near the Persian Gulf.

Near the end of Shalmaneser's reign, his eldest son led a revolt against him, but the revolt was suppressed by his second son, Shamshi-Adad V, who ruled for a time (824 – 810 B.C.). Shamshi-Adad died young and his widow, Sammuramat (classical Semiramis), assumed control until their son, Adadnirari III (810 – 782), was of age. Assyria made little real advance under the leadership of Adad-nirari. He built a new palace at Calah, and affairs were generally peaceful there. By attacking HAZAEL of Damascus in 804, Adad-nirari relieved Israel of the attacks of Aram (2 Ki. 12:17; 2 Chr. 24:23 – 24) and also probably enabled JOASH to recover certain towns previously lost to Hazael (2 Ki. 13:25).

Adad-nirari died young and without descendants, which created some difficulty over succession. Thus there was some internal dissension in Assyria during the reign of Shalmaneser IV (781 – 772 B.C.), whose control was thereby weakened. He continued the policy of pressure against Damascus, and this may have contributed to JEROBOAM II's ability to expand the border of Israel to the "entrance of Hamath" (see 2 Ki. 14:25 – 28 RSV; NIV, L EBO HAMATH). Asshur-Dan III suffered a painful defeat in the N, an event marked by an ominous eclipse of the sun in 763, a date which therefore became important in Assyrian chronology.

In 745 B.C., TIGLATH-PILESER III (2 Ki. 15:29; 16:7 – 10), otherwise known as Tiglath-Pileser (1 Chr. 5:6; 2 Chr. 28:20) or Pul(u) (2 Ki. 15:19; 1 Chr. 5:26), usurped the Assyrian throne and ruled for eighteen years. He was the son of Adad-nirari III and was able to establish a vast empire reaching from the Persian Gulf to the Armenian mountains and including Syria and Palestine. In a manner more or less typical of various Assyrian rulers, Pul deported conquered peoples and thereby established a

strong central administration. The history of Pul's exploits is somewhat fragmentary, but the Assyrian Eponym Canon lists for us the primary events.

Pul's first expedition was directed against the Arameans in Babylonia, and with some struggle, the Chaldean chief, Marduk-aplaiddina (MERODACHBALADAN) submitted. He campaigned against the N Syrian city states under Urartian rule beginning in 743 B.C. ARPAD was besieged for three years, and during this time Tiglath-Pileser collected tribute money from CARCHEMISH, HAMATH, TYRE, Byblos (GEBAL), REZIN of Damascus, MENAHEM of Samaria (see 2 Ki. 15:19 – 20), and other rulers. Interestingly, Menahem hoped his vassalage to Assyria would strengthen his own position, but in fact, because of it, Israel was eventually annexed to Assyria. Northern Syria was eventually organized as an Assyrian province called Unqi, and "Judeans" are mentioned as captives settled in Ullubu. They were probably taken after the death of Azariah (UZZIAH) of Judah, who for a time controlled some Aramean states in S Syria (2 Ki. 15:7).

With mounting opposition to Assyria, TiglathPileser again marched into the W (734 B.C.) and plundered various Phoenician seaports, imposing heavy tribute payments on ASHKELON and GAZA. The army stopped only at the "River of Egypt," and Rezin of Damascus, AMMON, EDOM, MOAB, and AHAZ of Judah all paid tribute (2 Chr. 28:19 – 21).

Judah began to receive attacks from Rezin of Damascus and PEKAH of Israel, along with Edomites and Philistines (2 Ki. 16:5 – 6; 2 Chr. 28:17, 18), but received little help from Assyria. When Damascus fell to the Assyrians in 732 B.C., Metenna of Tyre capitulated, and all of Israel was taken. TiglathPileser evidently arranged for the replacement of Pekah by HOSHEA on the throne of Israel (cf. 2 Ki. 15:30). Tiglath-Pileser lent some assistance to Ahaz, for which he probably had to make some concessions (2 Ki. 16:7 – 16). He extended his rule over ARABIA, the SABEANS, and Idibail (cf. ADBEEL, Gen. 25:13), and built a palace for himself at Calah.

SHALMANESER V (727 – 722 B.C.; throne name, Ululai) continued the same policy of war in the W as did his father, Tiglath-Pileser III. The most outstanding event of his reign was the failure of Hoshea of Israel to pay tribute after listening to promises of help from Egypt (2 Ki. 17:4). This resulted in the siege of Samaria by Shalmaneser, and according to the Babylonian Chronicle, the resistance of the city of Shamarⁱⁿ (Samaria?) was broken after three years (cf. v. 5). According to 2 Ki. 17:6, the king of Assyria who defeated Samaria took Israelite captives to the region of the upper Euphrates and Media. Interestingly, SARGON II, the successor of Shalmaneser V, claims the fall of Samaria in 722 B.C. as his own victory, and it may be that Shalmaneser and Sargon together completed the capture of Samaria (v. 6 seems to permit this reconstruction).

Sargon II (722 – 705 B.C.), who succeeded Shalmaneser V, begins the last dynasty of Assyria. This dynasty is referred to as the Sargonid dynasty and, besides Sargon, includes Sennacherib, Esarhaddon, and Ashurbanipal. These four kings were outstandingly gifted, and under their rule, the Assyrian empire reached its absolute zenith. The annals of the kings, the Babylonian Chronicle, and certain state letters found at Nineveh, serve as sources for the history of the Sargonids.

Sargon fought many wars to enlarge the empire, and in particular he records that over 27,000 people were deported from the region of Samaria. The exact date cannot be determined, but the event broke Israel as an independent nation. The southern kingdom of Judah under HEZEKIAH was able to survive longer by paying tribute.

Sargon met the Egyptian armies of Raphia and defeated them there. Nevertheless, the Palestinians continued to lean on Egypt for support, and the events of this time figure largely in the prophecies of Isaiah. The Philistine towns of Ashdod and Gath were sacked by Sargon in 715 B.C., and he claims also to have subjugated Judah, though the OT does not refer to this event. Sargon

campaigns further in Syria and Cilicia and also against the Mannai. In the S, Sargon invaded Elam and sacked Susa and called himself “governor” of Babylon. Sargon first lived at Calah in Assyria, but in 713 he began building a new palace at Dur-šarrukin, “fortress of Sargon” (Khorsabad). Before he could complete the palace, however, he died in a campaign in Iran in 705. The palace with its many reliefs and inscriptions has been excavated.

SENNACHERIB (Sin-ahhe-eriba; 705 – 681 B.C.) succeeded to the throne upon his father’s death and immediately became involved in suppressing revolts within Assyria itself. His other expeditions reached as far W as Cilicia, where Tarsus was captured in 698 B.C. Sennacherib differed from his father mainly in his attitude toward Babylonia. MERODACH-BALADAN (Marduk-apla-iddina) seized power in Babylonia in 703 B.C. with the help of Elam, but within a short time Sennacherib was able to defeat the coalition of Elamites, Babylonians, and Chaldeans. MerodachBaladan fled. Sennacherib then installed a man of his own choosing on the Babylonian throne. It was probably during his short reign that MerodachBaladan asked HEZEKIAH for help, a suggestion that Isaiah deplored (2 Ki. 20:2 – 19). In 701 Sennacherib marched W through Syria to besiege Sidon and then S to attack Ashkelon. He also conquered Lakhish (LACHISH) at this time (2 Ki. 18:13 – 14). The date of his attack on Jerusalem is not certain, but it seems probable that it was also at this time. According to both the biblical evidence (2 Ki. 19:35) and HERODOTUS (*Hist.* 2.141), the Assyrians attacked suddenly and withdrew.

Further operations were carried out in Babylonia in the years following 700 B.C. Sennacherib had to suppress revolts there and, in order to punish the Elamites for the help they had given the Babylonians, he had Phoenician and Ionian sailors manning Syrian and Assyrian ships as they sailed down the Tigris and Euphrates for the attack on ELAM. The war went on for several years with varying fortunes until Babylon was finally conquered in 689 B.C. The city was looted, destroyed, and flooded by a diversion of the river. It remained a wasteland for the remainder of Sennacherib’s reign, and the god MARDUK was taken to Asshur.

Early in his reign, Sennacherib abandoned Duršarrukin and lived first in Asshur, then in Nineveh. Nineveh remained the capital of Assyria from this time onward. Sennacherib’s palace in Nineveh was elaborately adorned with lively reliefs. The engineering skills of the time are also shown in the dams and aqueducts (esp. at Jerwan), which were built to insure a good water supply for the large parks and gardens around the city. Many captives, including Jews, were employed in these projects. In 681 B.C. Sennacherib was murdered by one or more of his sons. The details of the event are not clear and there appears to be some discrepancy between the OT and the Assyrian accounts (cf. *DOTT*, 70 – 73).

ESARHADDON (680 – 669 B.C.), Sennacherib’s son, had served as viceroy in Babylon, and when he followed his father on the Assyrian throne he immediately began to rebuild Babylon and restore the temples in other Babylonian cities. In the N, Esarhaddon came into considerable conflict, not only with the CIMMERIANS, but also with another Asian people, the SCYTHIANS (Ishkuzza). The Cimmerians posed such a threat that Esarhaddon gave his daughter as a wife to Bartatua (Herodotus calls him Protothyas), the king of the Scythians, in order to obtain help. In the W, Esarhaddon continued to exact tribute from the various city states, but with increasing difficulty. It was TIRHAKAH of Egypt who promoted opposition to Esarhaddon, but he swiftly replied with increased levies, which he used for his constructions at Calah and Babylon. Assyrian records name MANASSEH (Menasi), as being obliged to pay tribute to Esarhaddon, and the OT indicates that he was taken captive to Babylon for a time (2 Chr. 33:11).

The way was now open for a full-scale attack on Egypt itself. The first campaign in 673 B.C. failed, but in 672 the Egyptians under Tirhakah (Taharqa, Tarku) were defeated, Memphis and

Thebes were taken, and Assyrian governors were installed. Thus, for a time at least, Assyria's dream of controlling the Nile delta was fulfilled. Esarhaddon then sought to consolidate and secure his power. He appointed Ashurbanipal as crown prince of Assyria and Shamashshumukin as crown prince of Babylonia. He spelled out his terms of vassalage, and all of the rulers, no doubt including Manasseh, had to swear eternal allegiance to Asshur (cf. 2 Ki. 21:2 – 7, 9). Nevertheless, revolts did break out in the empire, and it was while Esarhaddon was on his way to Egypt to suppress a revolt there that he died and was succeeded by his sons. (For the subsequent history, see BABYLON V.D.)

III. Language and literature

A. Language. The language of ancient Assyria and Babylonia, called Assyro-Babylonian or Akkadian, belongs to the E Semitic group of languages (see LANGUAGES OF THE ANE II.A). The Akkadian system of writing was borrowed from Sumerian, the world's oldest written language. This CUNEIFORM script is not alphabetic but rather ideographic and phonetic. There were over 600 characters, each of which had one or more values. The combination of two characters could also have several values. The characters were inscribed in the soft clay of the writing tablets with a wedge-shaped instrument (see WRITING).

Assyro-Babylonian is the earliest recorded Semitic language; its history extends from c. 2400 B.C. into the 1st cent. A.D. and has been found anywhere from Persepolis to Egypt. Akkadian replaced Sumerian as a spoken language in the 3rd millennium B.C., though Sumerian, which is not Semitic, continued as a written language especially for religious purposes almost as long as Akkadian survived.

B. Literature. Among the vast quantity of tablets found, interesting types of word lists from the protoliterate period occur frequently. These are more or less standardized lists of the names of gods as well as of other words and concepts. The purpose seems to have been encyclopedic, as well as, perhaps, to provide spelling guides to pupils. From Old Babylonian times and on, these lists evidently served as vocabularies, Akkadian translations being added. Many of these vocabularies were arranged in three columns: the pictograph was in the middle column, the Sumerian pronunciation was given in syllabic form on the left, and the Akkadian equivalent, also in syllabic form, was given on the right. Some tablets contained a fourth column explaining the Akkadian word. Lists of Akkadian synonyms have also been found, as have paradigms of Sumerian words with Akkadian translations. Much of this literature must have been used for instruction in schools, though the actual encyclopedic character of the lists should not be forgotten.

Out of the earliest royal inscriptions, which were very simple, the Assyrians in particular developed a kind of literary form known as *annals*. The annals give detailed records of a king's exploits for any particular year. These are given in the third person and indicate that the Assyrians were able to take a more or less "objective" approach to historiography. The *chronicles* are similar to the king lists in their objectivity, but are more characteristic of Babylonia than of Assyria.

In Assyria there are, as well, certain chronological works referred to as "date lists" or "limmu lists." The chronological system of Assyria consisted in naming each year after a person who held the position of *limmu* or eponym. The king usually served as *limmu* for one year of his reign, but various other high officials in the government could also hold this office. For this system to be usable, it was, of course, necessary to keep a record of their sequence. Thus, various *limmu* lists have been found in addition to the king lists. One problem posed by these lists is that contemporary and overlapping

dynasties are given as though they were successive.

Religious literature is also well represented by various sets of tablets. These tablets usually contain omens gained from the inspection of such things as the liver of animals, or the movements and appearances of men, birds, animals, and planets. Along with these are texts recording observations concerning medicine, botany, chemistry, mathematics, geology, and law.

In addition to the materials noted above, a large quantity of literary compositions, in the true sense of the term, have been found. This includes myths, epics concerning the early kings, lamentations, hymns, tales, parables, and wisdom literature. One of the outstanding mythological texts is the so-called Epic of GILGAMESH, which tells of the search Gilgamesh made for eternal life and refers to the survival of Ut(a)napishtim through a flood by means of a specially built boat. There is also the Epic of Creation, called ENUMA ELISH (“When the gods”) after its opening words, which tells of how Marduk slew the monster Tiamat and created the world out of her body. An epic giving the Descent of Ishtar into the underworld also exists. There are also a number of legends including that of Sargon of Agade, who was saved at birth by means of a reed basket placed on the Euphrates River. (This account has been compared with the OT record of Moses’ survival.) There is also a legend of Etana, who flew to heaven on an

Assyrian limestone box with foundation tablets (c. 870 B.C., from Balawat, near Nimrud). These cuneiform texts give the titles and achievements of Ashurnasirpal II.

eagle, and the legend of Ena, the god who fought against Babylon. The wisdom literature includes the poem of the righteous sufferer, the so-called Babylonian Job, as well as many other works.

IV. Religion. In most respects, Babylonian and Assyrian religion differed little; indeed, the latter was derived from the former. This article will contain a general review of the basic features, a survey of the Mesopotamian pantheon, and a brief discussion of Ashur (also spelled ASSHUR), the Assyrian national god.

A. General features. The most basic feature of Mesopotamian religion in general was its pluralistic conception of deity. The many divine powers were seen in connection with various physical and natural phenomena. Each spirit was seen as constituting the will and the life force of the phenomenon with which it was associated. It was named according to its particular phenomenon and was pictured

in terms of it. Thus, the thunder was seen as coming from the mouth of a giant lion-headed bird. Those divine powers associated with such things as the earth, grain, flocks, and herds—that is, those things necessary for the economy—were of special importance, and the various images, temples, and rituals were designed to insure the “presence” of the god and to express the solidarity of humans with nature.

As this primitive religious consciousness developed, the forms of the divine powers gradually became more and more anthropomorphic. At first, some of the powers could be pictured in both human and nonhuman form, but the latter came to be more and more suppressed or even denied, and the anthropomorphic view became predominant. In a similar fashion, the god came to be more and more divorced from its natural phenomenon. That is to say, the phenomenon was seen as a distinct, nondivine entity, and the god was seen as the owner and controller of the phenomenon rather than as part of it. As further development took place in this same direction, the powers came to be seen as performing certain human functions and activities, particularly that of “ruler.” The development of Mesopotamian society and government shifted power from relatively insignificant local chiefs and headmen to a more centralized government and a more imposing sovereign, which were then the subject of feelings of reverence and awe.

Such changes provided the model upon which religious developments could take place. Thus, from the late protoliterate period, the term *en*, which means “lord” or “manager,” came to be applied to the gods (e.g., ENLIL, “Lord of wind”). Similarly, *lugal*, meaning “king,” was used in the formation of the names of deities (e.g., Lugalbanda, Lugalmarada, etc.). The gods were now in a position to declare war on one another, to be responsible for the social and economic welfare of citizens, and to live in manor houses (i.e., TEMPLES). This development had the effect of reducing man to a position of absolute dependence upon, and servility to, the gods. The maintenance and protection of the temples then became imperative, lest the relationship between the gods and men should be broken.

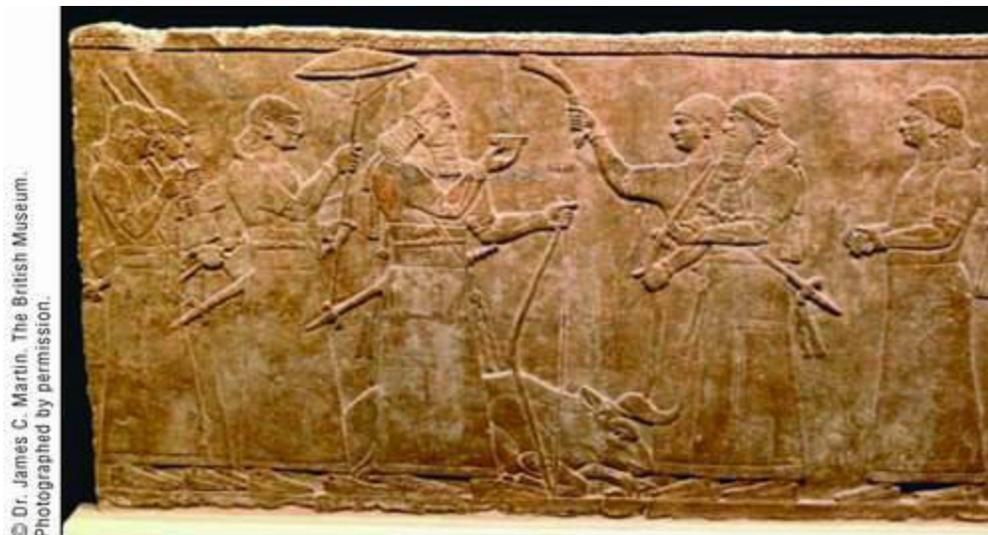

The last major development to take place in Mesopotamian religion in general was the rise of the national gods, Marduk of Babylonia and Ashur of Assyria. This development began to take place around 1800 B.C. The old pantheon still remained, but MARDUK and Ashur were seen as supreme. The other gods were subservient and, in fact, were sometimes seen as being only aspects of the one, unified, supreme, god. Thus, for example, Nabu is “Marduk” of accounting while Adad is “Marduk” of rain. The national gods, besides being responsible for internal matters, served also as the defenders of the nation against external attack. The *absolute* authority ascribed to these national gods tended toward the complete subservience, self-abasement, and humble submission, of mortals to the (sometimes inscrutable) will of the gods.

B. The pantheon. The Sumerian pantheon contained some 3,000 to 4,000 gods, making it impossible to mention any but the most prominent ones here. There was a large group of deities associated with the marshy regions between Sumer and the Persian Gulf. These all represented powers vital to the livelihood of marsh dwellers and all belonged to the family of Enki, who was the god of fresh water and therefore also the god of ablutions and lustrations. Enki was married and had a very large number of offspring. Asalluhe, the city-god of Kuv^or, was Enki’s son and was also active in lustrations, though he was evidently the god of thunder showers originally. Dumuzi-abzu was the god of fertility and new life, while Nanshe was goddess of fish and fishing, and Ninmar was probably bird-goddess.

There was a large group of deities belonging to the fruit-growers in the S along the Euphrates. Thus, Ningishzida was throne-bearer, though it appears he was originally a tree-god, while Damu was god of the sap. There were also gods of the herding and farming regions lying further to the N. Thus Nanna often is pictured as driving his herd of cows across the sky, and the emblem of Utu is the

bison's head. Ninsun ("Lady wild cow") was the embodiment of all that was thought to be good in a herd of cows. Similarly, Inanna, Shara, and Ishkur, for example, served as the gods of the shepherds, while Ninhursaga served as the god of the donkeyherders. As to the gods of the farmers, Enlil ("Lord of wind") was the most prominent. His breath or word was thus not only the raging storm but also the moisture laden breezes, as well as the wind that drives away the chaff at harvest time. Also serving as gods for the farmers were Ninlil, goddess of the grain, Ninunta, god of thunder and lightning, and Bau, goddess of the dog, besides many others.

The Akkadian pantheon is less well known than the Sumerian, though the general features were the same. There were gods of rain and thunder showers just as in the Sumerian herdsman's pantheon. There were also many gods of war and battle. The most significant feature of the Akkadian pantheon, however, was the existence of Il, the major god, and the

This panel from a palace in Nimrud (c. 860 B.C.) depicts King Ashurnasirpal pouring a libation over a dead bull.

triad of astral gods, namely, Sin (god of the moon), Shamash (god of the sun), and Ashtar or Ishtar (goddess of the morning and evening star). Ea, probably the river god, occurs frequently as well.

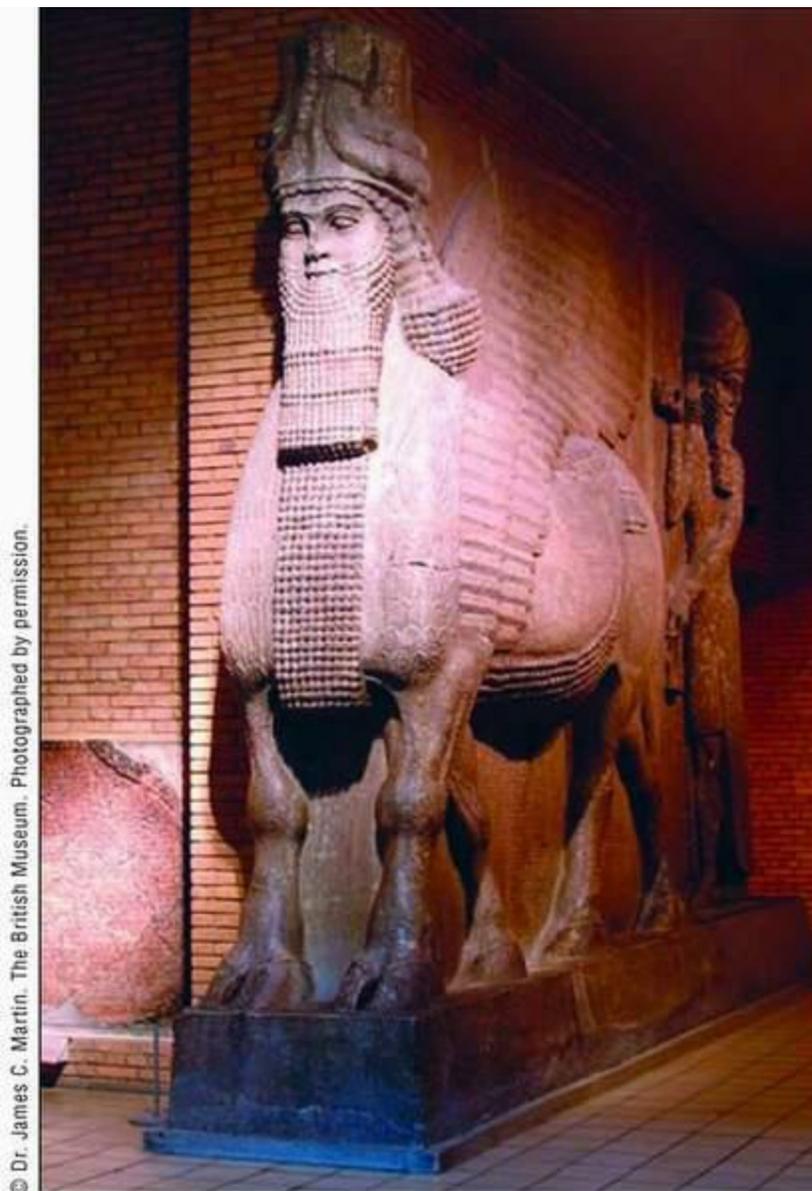

C. Ashur, the national god. A(s)shur was not only the city-god of the city of Asshur, but also the national god of Assyria. As mentioned above, he came into prominence in the 2nd millennium B.C. along with his counterpart, Marduk, in Babylon. From the time of Shamshi-Adad I (1813 – 1781) and onward, he was often identified with the Sumerian Enlil. Under Sargon II, Ashur often was identified with Anshar, while under Sennacherib, the achievements of Marduk were foisted upon him, a situation that reflects the changing political fortunes of the two countries in relationship to each other. As a result of all this, Ashur is not a truly distinctive god, nor does he have a real character of his own. He merely personifies the interests of Assyria as a nation.

D. The priesthood. The state cult, whose function it was to represent not only itself but also the citizens of the country to the gods, was directed by the priesthood. The priesthood consisted of a large class of officials living in and around the various temple complexes and organized according to rank. *Urigallu* was evidently the "high priest" and chief director of the temple and the cult, while *Shangammokhu* was the chief sacrificing priest. A whole college of priests were in charge of the daily ritual, and there were several classes of priests responsible for the recital of hymns, prayers, and laments. Other classes of priests performed the various libations, ablutions, and anointings. There

were also exorcists and the seers with whom the populace came into contact. Many women also worked on the temple staff as assistants in fertility ceremonies, as wailers, and as interpreters of dreams.

The sacrifices made were generally of two types. First, there were the regular sacrifices offered daily, weekly, monthly, or yearly; second, there were special sacrifices at special times, such as during war or other calamities. It was the king's duty to supply the offerings for the regular sacrifices, though the people could also add their private contributions. Various lists of offerings make it plain that large numbers of animals were slaughtered for sacrifice. Large quantities of fruit and vegetables also were offered.

V. Archaeological finds. Though interest in the ancient cities of Mesopotamia had not been lacking earlier, it was not until 1820 that the mounds of Kuyunjik and Nebi Yunus were given serious consideration as the possible site of the ancient city of NINEVEH. In that year, C.J. Rich planned these mounds, and in 1842 P. E. Botta began excavations there. In the following year, however, he transferred his search for Nineveh to Khorsabad, where he excavated Sargon's palace. The work was continued there by V. Place and later (1929 – 35) by the Oriental Institute of Chicago. In the meantime, A. H. Layard and H. Rossam carried out excavations at Kuyunjik and uncovered Ashurbanipal's palace there (1853 – 54). Layard had already unearthed

Assyrian human-headed winged bull and protective spirit (c. 710 B.C.). These enormous figures guarded one of the

four palaces at Calah. Excavations also were carried out at Asshur by the German school (1903 – 14). Many other archaeological expeditions have been carried out in Mesopotamia up until the present time, and a mass of material has been turned up that elucidates practically every phase of Mesopotamian life. (For details of the various expeditions, see S. A. Pallis, *The Antiquity of Iraq* [1956], 46 – 64, 266 – 384.)

A. Art. From the earliest site excavated, Jarmo in the N, comes a vast array of human and animal figurines. Most of the human ones are nude females in a sitting or squatting position. A similar type of figurine is found in the Hassuna and Halaf cultures as well as in the Ubaid period. The figurines are of clay and represent the first Mesopotamian attempts at sculpturing. Also from prehistoric times large numbers of small carvings in stone have been found. Most of these represent animals, including sheep, goats, pigs, birds, fish, scorpions, lions, and panthers. From the way in which these small sculptures were perforated, and, in one case, attached to a piece of string, it is probable that they were used as amulets.

From the 3rd millennium, large numbers of stone statuettes have been uncovered. Though coming mostly from S Mesopotamia, many were also found at Asshur and at Mari. Some of these figures are seated while some are standing and both male and female are represented. They appear in a great variety of dress and vary in height from a few inches to about three feet. The hands of the statuettes display an attitude of worship, and since the majority of them are found in temples, it is probable that they were meant to represent the worshiper in the presence of the deity. From the Old Babylonian period, sculpture in the round is rare. Perhaps the most outstanding example is a heavily bearded head, probably representing Hammurabi. Only a few statues of Assyrian kings are known.

Another variety of art work occurring in abundance in northern Mesopotamia is the glyptic, represented especially by stamp seals in prehistoric times. Geometric motifs are the most common, though plant, animal, and human figures also appear. Glyptic art reached a peak in the Middle Assyrian period. The scenes were arranged with

Battle scene from a palace in Nimrud (c. 728 B.C.). A vulture carrying human entrails follows Assyrian cavalry bringing down an enemy horseman.

delicacy and balance and portrayed religious as well as secular activities. There was some tendency toward astrological and divine symbolism in some of the outstanding works still being produced in the Neo-Assyrian period.

Various inlays and engravings are common in Mesopotamia as early as the protoliterate period. Vases, for example, were decorated with colored inlays held in place with bitumen or a kind of paste. For the decoration of buildings, mosaics were created using small colored cones of terra-cotta. The inlays were usually of stone, shell, mother-of-pearl, or paste. Statues were almost always provided with inlaid eyes and eyebrows, the details of which were made prominent by pigment-filled engravings. This kind of art is known from periods later than the early dynastic.

While there are some finds of ivory carvings from the early periods, the majority of ivory objects come from the Assyrian imperial period. These are widespread, and the excavations of Nimrud, in particular, turned up a large quantity of them. Many of the ivories have distinctively western motifs, and it seems probable that not only was ivory itself imported, but also that many of the objects are the product of craftsmen from the W.

There is also a vast array of art work in metal from the prehistoric and early dynastic periods. These include beads, pins, needles, tools, weapons, vessels, jewelry, and figures. The metals used include copper, gold, silver, and lead. From Nineveh there is an outstanding bronze head assigned to the Akkadian period. Little is known of metal-work in subsequent periods until the time of the Assyrian empire, from which major works have been recovered. The Assyrian palace gates, for example, were decorated with bronze reliefs containing motifs similar to the stone reliefs for which Assyrian art is especially famous (see below). Various iron objects also were found in Assyrian palaces.

A considerable amount of wall painting also is known, especially from late Assyrian times. The usual colors are white, black, red, and blue, and much of the work is representational and even geometric. Wall paintings were arranged in elaborately bordered panels that give the effect of tapestry, and the various elements making up the panel were stylized in such a way as to suggest the use of templates or other such devices. It may be that wall paintings were seen as a less expensive substitute for relief art.

Perhaps the best known, and in many ways the most impressive of all Assyrian art, are the bas reliefs. These come mostly from between the 9th and 7th centuries B.C., though many lesser examples are known from earlier times. From the 3rd millennium, examples of relief art on stelae, vases, and plaques are known. The stelae usually depict a victory scene of some ruler or, in some of the earliest examples, hunting scenes. The reliefs on vases, of various kinds of stone, most often consist of scenes involving animals, plants, and humans, and often appear to have religious significance. Some of the earliest plaques are square or nearly square, and the relief work on them is divided into three registers. The top register almost always depicts a seated man and woman attended by musicians and other servants at a banquet. The middle register usually

Assyrian hunting scene from the royal palace in Khorsabad (c. 710 B.C.).

depicts bearers of various gifts, while the lower register, though varying considerably, usually consists of a war chariot drawn by horse-like animals.

From the Old Babylonian period, a large number of other plaques made of clay have been found. These were made in molds and the usual nude female provides the most common subject. Various gods, goddesses, and mythological figures are depicted as well, however. Since these plaques could be produced in mass, they represented a kind of popular art.

The real high point of artistic achievement in Assyria, however, is seen in the vast array of reliefs decorating the walls of the palaces in Nineveh, Nimrud, and Khorsabad. Most of these reliefs are unabashedly secular in content and tone, in contrast to the earlier, Babylonian works, which generally had religious connotations. Surprisingly lifelike details of practically every area of life are

depicted, including landscape, cities, buildings, animals, chariots, weapons, and dress. A fairly common scene is that of king banqueting with queen while music is played, the gardens being decorated with severed human heads. Deities appear in some of the reliefs usually in symbolic form.

Of particular interest to students of the Bible are the stela and obelisk of SHALMANESER III from Nimrud, which mention Israel and depict JEHU, followed by Israelite tribute bearers, bowing before Shalmaneser. The siege of Lachish and the use of Judean captives to work on Sennacherib's building projects is depicted on palace reliefs at Nineveh. (For fuller details on this and related topics, see R. D. Barnett, *Assyrian Palace Reliefs* [1959]; H. H. Frankfort, *Art and Architecture of the Ancient Orient* [1954].) See also ART.

B. Architecture. Jarmo is the earliest site excavated in Mesopotamia, and several layers of houses have been uncovered. They generally have thin mud walls, sometimes with foundations of stone. It is difficult to detect any general plan or guiding principle in the arrangement of the dwellings. The various enclosures seem to be almost randomly arranged. Finds from the Tell Halaf period, however, indicate a fairly orderly arrangement of quadrangular rooms. Some round structures also were found.

At Tepe Gawra, buildings designed with a large oblong central room with smaller rooms flanking it on two sides were found. This "tripartite" structure came to be a persistent feature in much temple architecture in later periods. Even at Tepe Gawra, the central room contained certain furniture used in sacrifice and religious ritual. Several tripartite temples were discovered at Warka (biblical ERECH). They were usually built at ground level or on a slightly raised platform. One of the temples, which came to be known as the White Temple, was built on a high platform and was reached by a series of stairs or ramps.

While still in the protoliterate periods, temple architecture began to change from the tripartite form to a form in which the cultic chamber was located at the end of the building complex rather than in the center. This inner chamber was reached through a series of outer courts and rooms. The cult room itself was oblong and contained an offering table, a hearth, and a structure usually referred to as an altar. In the later protoliterate period, the houses at Khafajah were larger and more substantial and were planned around a large central court. There was only one entrance from outside, the court providing, in turn, access to the other rooms. The number of rooms varies, and various utilitarian objects found in the rooms suggest their various usages. There was usually one large room, probably the "master's room."

In the early historical periods, perhaps the most outstanding feature of architecture is the ZIGGURAT or temple tower, the best example of which is at UR. This is a solid mass of sun-dried bricks measuring 190 by 130 ft. at the base. The mortar between these bricks was strengthened by fibrous mats, and the outer surface of the entire structure was faced with smooth kiln-dried bricks. It appears that the ziggurat consisted originally of three stages with a shrine on top. Stairways gave access from one level to the other.

A phenomenal amount of building activity took place with the rise of Asshur as the capital of Assyria. Many temples from the period have been discovered, some with ziggurats attached. In Asshur itself, for instance, a double temple with a double ziggurat was found. This architectural activity continued into the neo-Assyrian period and is seen not only in Asshur but also in Nineveh, Calah, and Khorsabad. Khorsabad is of particular interest, built by Sargon II and planned almost in a square. It covered about 740 acres of land and was surrounded by thick walls. Two palaces were found within the city, one built on a 25-acre platform that stood at a height of about 45 ft. Within this palace there were a number of temples and a ziggurat, and several courts with many rooms attached.

With the fall of Assyria, the main architectural activity shifted to the S again, and a number of monuments from the period have been excavated there. See also ARCHITECTURE.

C. Functional objects. It appears that in all periods of history and even in prehistory, musical instruments were abundant. The earliest instruments actually preserved are a kind of bone pipe of the Ubaid period. Besides this, however, the various vases, plaques, and reliefs discovered in many periods often depict elaborately decorated musical instruments. It is evident that not only wind but also string and percussion instruments were used, sometimes individually and sometimes in concert.

Large numbers of beads of shell and stone, as well as other personal ornaments, evidently were used in all periods. In the royal tombs at Ur, many gold and silver ornaments were found. Though little actual jewelry from some of the later periods has been found, the various representations, especially on plaques, show the use of bracelets, armlets, beads, and earrings, not only on both men and women but also on animals. From the early periods especially, large amounts of cosmetic materials and toiletries have been found. Various small containers of copper, gold, silver, or seashell have been found containing lumps of orange, red, and black paint for cosmetic use. Copper razors and fine inlaid ivory combs and hairpins also have been turned up. Toilet sets containing a pointed and a chisel-like tool with a pair of tweezers and a small spoon have been found. The tools resemble manicuring tools, and the spoon may be an ear scoop.

The usual dress of men was a short skirt reaching to the knees, though a longer skirt was worn by dignitaries. Female costumes, on the other hand, covered the left shoulder and were fastened under the right arm. No outer garments are indicated, and in the pre-Akkadian period no shoes are known. At the high point of the Assyrian empire (9th – 7th cent. B.C.), these early traditions were basically followed, and a large variety of garments for the various dignitaries are shown. Sandals are, by this time, very common.

Vast amounts of pottery from all periods of Mesopotamian history have been uncovered. There is a continual change of shapes and decorations, and this fact is invaluable in dating the finds. The earliest Mesopotamian pottery was found in the sixth archaeological level at Jarmo. Pottery of the Hassuna period displays a more or less sophisticated decoration incised into, or painted onto, the surface. The Halaf period produced polychrome decorations in black and red on buff or white backgrounds. The patterns are geometrical and abstract. The Ubaid pottery is monochromatic, though with a large variety of forms and patterns. A whole group of pottery belonging to the Old Assyrian period and known as Habur ware was found in the N, and a whitepainted Mitannian ware originating farther to the W is known. Lamps of various kinds have been found, though it is impossible to say when the portable lamp first came into use in Mesopotamia. Two vessels with seven spouts from the protoliterate period have been found and may have served as lamps. Sea shells and shell-like objects of clay, stone, and metal with a special provision for the wick are common. Some of the lamps were decorated in relief.

Flint and stone tools, mostly blades of various kinds, are common in the earliest Mesopotamian periods. At Jarmo, bowls and cups of stone were present in levels antecedent to the introduction of pottery. Bone tools also were found at Jarmo and continue into the historical periods. Not until the Ubaid period do considerable amounts of metal tools appear. Copper chisels and axes are found here, along with stone club and hammer heads and terra-cotta sickles. The bow and arrow also was used in this period. In the later periods various metals, as well as flint, were exploited more fully for use in harpoons, spears, swords, knives, and adzes. In the Akkadian period the plow often is represented, and various other tools for tilling the ground, like hoes and shovels, are known from later periods.

The Assyrian reliefs show various shields, battering rams, and swords.

The Tigris and Euphrates were exploited as means of transportation, and many boats are known, mostly from models. Sails never are actually shown, though part of the hull structure in some boats suggests the presence of a mast. Oars with very wide blades are shown, as are holes for punting. Sometimes the gods are represented as traveling in boats and even as operating the boat. The Assyrian reliefs show large numbers of boats in a form virtually unchanged from earliest times. Chariots also played an important part in Mesopotamian transportation. Two-wheeled and four-wheeled models are known, as is a type of covered wagon.

VI. Social structure and social life

A. Social organizations. Organizations and associations within Mesopotamian society were generally either of a political or politico-religious nature or else of a professional nature. The two main politico-religious organizations in the cities were the temple and the palace. Both temple and palace were based on a kind of “household” concept. The palace was the household of the king, while the temple was the household of the god who, in a similar fashion to the king, had to be clothed and cared for. Members of these “households” were generally either slaves or persons of restricted freedom, and their numbers could easily be augmented, especially in the later periods, by the addition of foreign captives. As temple or palace had need of particular skills, craftsmen of various kinds could easily be brought into service. Both temple and palace were highly organized, and their economic systems were maintained through taxation, land holdings, trade and war. While both temple and palace functioned on more or less the same basis, there were still differences between them. There was also a considerable amount of variation in their organization, depending on the period or location in question.

The size and make-up of the palace depended mainly on royal decree, while the fortunes of the temple depended more upon the piety and generosity of the worshipers. In fact, from at least the time of Hammurabi, the social and economic importance of the temple was on the decline in spite of some lavish examples of sanctuaries from later times. The palace, on the other hand, steadily increased in importance and prominence over the same period and reached all time highs in the Neo-Assyrian empire and under the Neo-Babylonian kings.

The function of the temple generally was to provide sufficient material evidence of the divine presence and thereby to stimulate devotion. The anthropomorphic god and his “household” were maintained mostly by offerings of various kinds. The temple’s own workshops provided the manpower not only for the embellishment of the sanctuary directly but also for the manufacture of materials, which could be bartered and used for the beautification of the god’s house. Dedication to the temple of some of the spoils of war, including prisoners of war, was expected of the kings. Also, kings were encouraged to restore and embellish the many sanctuaries as special royal duties or privileges. On the other hand, however, in the late periods, representatives of the kings also were placed on the administrative boards of the temples, in order to insure the payment of taxes to the king. In fact, beginning at the end of the 2nd millennium, the Assyrian king was also the high priest and special representative of the god Ashur. The Assyrian situation after this time, therefore, was theocratic in a way that the Babylonian was not.

Outside the temple and palace precincts was, of course, the city as a whole. Those who lived within the city, but outside the walls of both temple and palace, were of more or less equal social status. Most appear to have been farmers who worked their plots of ground outside the cities during

the day and returned at night. The city was self-governed, its affairs being managed by an assembly under a presiding officer. The wisdom and leadership of the wealthy and/or older men seems to have been accepted happily. The influence of the presence of either temple or palace, or both, in a city could not of course be avoided, but from earliest times, there seems to have been a workable coexistence between the more or less independent city and the more or less independent temple or palace.

Among the professional organizations were various guild-like associations of merchants and craftsmen. These were most common before the end of the Old Babylonian period, though some survived much longer than that, to judge by some family names referring to various vocations. Members of certain guilds seem to have been restricted to certain areas of the cities. Membership in associations of exorcists and diviners seems to have been tightly controlled, requiring the passing of certain examinations and fitness tests. The scribes seem to have been organized in families as well and had to undergo extensive formal training for membership.

B. Slavery. While prisoners of war played a significant role in the national and royal interests under the Assyrian empire, there were never very many slaves in private possession. Slaves were usually debtors or children of the same; but those born in the house of a family enjoyed a special status, at least in the earliest periods, and later, slaves were allowed to work out in return for monthly payments to the master. Sometimes the master would even send the slave out for special training, which would of course increase his own returns. A lesser degree of servility was imposed upon certain “persons of restricted freedom,” and these were attached only to the temple or palace. Little is known of their status otherwise.

C. The family. In general, the concept of the family was small and restricted. In the later periods, however, family consciousness was more highly developed, as is indicated by the use of family names and by some emphasis on gentility and descent. Monogamy was the rule for the householder except in the Old Babylonian period. The oldest son received a larger portion of the father’s estate, though normally the entire estate was worked in common by all the sons to avoid extreme subdivision.

D. Social life. In general, it appears that kings and certain other rich people were able to live luxuriously and make their lives a veritable feast if they so desired. The Assyrian reliefs make this especially clear. For the humbler classes of citizens, whose days were spent in tilling the ground or doing other manual labor, life was generally very different.

Nevertheless, the monotony of their existence could still be relieved by two popular institutions, namely the beer houses and the brothels. The beer houses were generally quite small but abundant and were usually managed by women. A large variety of beers and especially of wines were available and seem to have produced the same corruption and drunkenness that are evidenced in some modern societies. The Code of Hammurabi, for example, makes provision for the protection of (drunken) customers against extortion by the management.

Free love was practiced everywhere, including the streets, parks, and public squares. The first tablet of the Gilgamesh Epic describes in dramatic detail such an affair between Enkidu and the harlot. The Babylonians in particular were acquainted with a number of devices designed to prevent pregnancy in such liaisons. For those who wished the privacy of such, there were the brothels (literally “Places of Pleasure,” or “Phallus-Houses”). Two kinds of prostitutes are known, those of

the street and those of the brothels, and while we have no actual indication of the fees, it is plain that as an occupation, prostitution was financially satisfactory.

H.G.ANDERSEN

Astaroth as'tuh-roth. KJV alternate form of ASHTAROTH (only Deut. 1:4).

Astarte as-tahr'tee. NRSV form of ASHTORETH.

Astath as'tath. KJV Apoc. form of AZGAD (1 Esd. 8:38).

astonishment. A state characterized by bewilderment, emotional disturbance, lack of clear thinking, and (sometimes) perceptual disorientation. The English term (including the verb *astonish*) is linguistically and psychologically varied and expressive, as are the corresponding Hebrew and Greek words (also translated with such synonyms as *amaze*, *astound*, *marvel*, *wonder*). In mild form, astonishment is experienced by everyone. In an extreme form, it may indicate conditions of lunacy (cf. Deut. 28:28, Heb. *timmahôn* H9451; note also the cognate verb *tamah* H9449, Isa. 29:9). See LUNATIC; TRANCE.

The Bible often speaks of astonishment as the human response to God's marvelous deeds: "Therefore once more I will astound [hiphil of *pālā'* H7098] these people / with wonder upon wonder" (Isa. 29:14). This concept is especially common in the Gospels. For example, when Jesus healed a demoniac who was blind and mute, Matthew tells us that "All the people were astonished [*existēmi* G2014] and said, 'Could this be the Son of David?'" (Matt. 12:23; for other Gk. terms, see e.g. 19:25; Mk. 10:32; Lk. 20:26). Luke records a similar response to the preaching and miracles of the apostles (Acts 3:11; 4:13).

astrologer. This term is used in the NIV and other English translations of Daniel to render the Hebrew word *kaś;dîm* H4169 (Dan. 2:2 et al.; Aram. *kašdāy* H10373 in 2:10 et al.), which could also be translated "Chaldean" (cf. NRSV and see CHALDEA IV). In the same passages, the KJV uses "astrologer" as a translation of *'aššāp* H879 (Aram. *'āšp* H10081), which means "enchanter." In addition, both the KJV and the NIV use "astrologers" term to represent a difficult Hebrew phrase in Isa. 47:13 (lit., "dividers of heaven"). The MAGI from the east mentioned in Matt. 2:1 (*magos* G3407) were high-ranking Persian priests expert in ASTROLOGY and other occult arts.

astrology. The observation of the sun, moon, planets, and stars for the purpose of determining the character of individuals and the course of events.

I. Description. Astrology is an ancient art, the history of which involves such diverse cultures as the Babylonian, Greek, Roman, Egyptian, Persian, Chinese, and Indian. It has most commonly been used as a means of divination, by which future events are predicted. A more cautious claim is that it serves to indicate circumstances and personality factors which tend to result in certain happenings, but not necessarily the events themselves. This approach is useful to astrologers, since they must face the ancient question as to why twins may have markedly different fates.

The data used by astrology are the movements of the heavenly bodies, specifically, those which appear in the zodiac, a circle or band of twelve constellations. The sun regularly cuts a path, called the ecliptic, across the zodiac. The planets move in and out of this sector at various intervals. The zodiac was easily observable to the ancients and was also useful for scientific purposes. It provided a more open and "objective" source for divination than did other methods.

Based on the observations and traditions of centuries, astrologers claim that certain heavenly phenomena are synchronous with earthly circumstances. While it is popularly assumed that astrology considers the planets to have actual influence, of perhaps a physical nature, this view is not universally held. One recent alternative to the theory of "influence" embraces the assumption of the psychologist Carl Jung regarding corporate experience.

The study of the zodiac is complicated by the fact that there has been more than one construction of the positions of the planets in the zodiac. The reason for this anomaly is precession, a slow gyration of the Earth's axis causing the equinox to rotate backward. The zodiacal signs have,

consequently, slowly moved out of their positions. The significance of this change seems to have been noted first by Hipparchus, around 120 B.C. There are thus basically two systems, referred to as the *tropical* and the *sidereal*. The latter, based on the positions of the planets against the actual constellations of the zodiac, is more precise and may well be the earliest form.

In each case, the zodiac is divided into twelve sections or “houses.” The “signs” of these are well known, from Aries the ram to Pisces the fish. The planets passing through these houses form geometrical patterns at various distances known as “aspects.” These are considered to be either beneficial or malefic. By plotting all the heavenly bodies pertinent to the sign under which an individual is born (date, hour, and place are taken into consideration), an astrologer draws up a celestial map known as a “horoscope.” Conclusions are drawn from this map regarding one’s personality, tendencies, etc., and thus predictions are made. These predictions may be rather general. When this information is applied to astrological readings pertinent to a given date in present or future, the prediction offered may be more specific.

II. History in biblical times. The earliest records of astrology have come from MESOPOTAMIA. It may be traced back as far as 2000 B.C. or earlier, but no certain evidence for the use of the zodiac is known before the 5th cent. B.C. Abundant materials are known from the 7th cent. B.C. By the next century it had spread to India and China and gained strength there. Egypt came under Assyrian influence at this time, but the Egyptians were more interested in calendrical matters, in which they excelled, than in divination. The most significant migration of astrological ideas was to Greece. Not only was popular GREEK RELIGION suited to astrology, but the scientific and philosophic outlook provided a rationale that commended astrology to intellectuals. A developing system of geometry, an awareness of natural laws and causal relationships, and the tendency to attribute divine personality to the stars provided an environment that not only fostered the use of astrology, but also attracted some of the finest scientific minds of Greece, Rome, and succeeding cultures.

During the Hellenistic age, further developments, religious, philosophical, and political in nature, advanced the popularity of astrology. The unification of the world under ALEXANDER THE GREAT was accompanied by a sense of empathy regarding the whole universe. It became even more natural to expect a correlation between stars and men. Belief in *Tyche*, “chance,” had given way to a resignation to *Heimarmene*, “fate.” Men turned to astrology, along with other methods of divination, to determine the circumstances one would have to deal with and to indicate ways of averting disaster. The introduction of the Julian calendar made astrological computations easier, and more people of all classes depended on it. The STOICS were congenial to astrology because of their concept of the unity of the universe. There were mutually compatible elements in many of the philosophical and religious systems of the day. Lucretius, an EPICUREAN, could not accept astrology, nor did Cicero.

An attempt was made by one Tarrutius in the 1st cent. B.C. to draw up a horoscope of Rome itself. Some of the Roman emperors seemed persuaded of the power of astrology. TIBERIUS made decisions in accordance with his horoscope. Since astrologers supposedly held the key to an emperor’s fate, their predictions could be utilized by those who opposed imperial despotism. For this reason, on more than one occasion when an emperor sent hostile figures such as critical philosophers and statesmen into exile, astrologers were likewise banished.

In spite of Jewish hostility to the “Chaldeans,” their influence gradually penetrated Judaism (see CHALDEA IV). In this case, as in others, the hellenization of the world brought through Jewish culture what would not have been accepted directly. Calendrical observances were important anyway, especially at Qumran: one document among the DEAD SEA SCROLLS has been interpreted as

astrological in nature. Astrologers were not permitted in Palestine or in the Jewish community at Babylonia. Nevertheless, by the time the TALMUD was compiled, this had changed. It mentions astrological practices, and even some well-known rabbis were open to astrology.

Astrology gained entrance not merely among the ignorant and superstitious of the ancient world, but also among Greek and Roman intellectuals and some Jews and Christians. It persisted through the centuries, claiming the attention even of such honored astronomers as Tycho Brahe and Johannes Kepler. Modern ASTRONOMY has rendered astrology even less plausible by revealing the vastness of the universe beyond the limited data astrology depended on. Its growing popularity during the last third of the 20th cent. came not from scientific but psychological and social factors, in answer to widespread desire for confidence, guidance, and harmony.

III. Biblical references. The Bible has been appealed to both in support of and in opposition to astrology. The most obvious reference is to the MAGI who saw the “star” of the infant Jesus (Matt. 2:1 – 2). The word *magus* had a plurality of meanings in the ancient world, but here probably refers to astrologers. It is possible that, being informed of the biblical prophecies of the coming Messiah, they were receptive to divine indication through a heavenly phenomenon. The current hypothesis that this indication was a conjunction of planets in a particular “house” of the zodiac, with both planets and house bearing certain significance regarding the Jews and government, is at least plausible. The fact that God could thus speak through this means does not, however, validate all astrology. (God once spoke through Balaam’s ass!) Nevertheless, this means of divination was used by Christians who reasoned that God’s creation was a unified vehicle for his will, and that belief in astrology accorded with the concept of predestination.

Some have attempted to see parallels between the twelve blessings of JACOB on his sons and the twelve signs of the zodiac, or to find astrological significance in the phenomena described in various passages in the Bible (Ezek. 1; Rev. 4; 6; 12; or in the precious stones of Rev. 21). While it is true that ancient astrologers made associations between specific planets and certain metals, colors, forms of life, etc., it is unfounded speculation to find such in these passages.

On the other hand, the Scriptures are clear in their warnings against dependence on astrologers and other practitioners of divination. For example, Isa. 47:13 speaks specifically against astrologers (lit., “those who divide the heavens”) who “make predictions month by month.” Some see a warning also in Isa. 14:12 and 65:11. Moreover, 2 Ki. 17:16 relates that the Israelites, who turned to idolatry, sorcery, and divination, also “bowed down to all the starry hosts”; 2 Ki. 23:4 – 5 repeats the charge and adds a specific reference to the constellations (cf. Deut. 4:19; 17:2 – 7; Job 31:26 – 28). Jeremiah cautioned the people not to be “terrified by signs in the sky” that troubled other nations (Jer. 10:2). There is probably also a reference to astrology in Amos 5:25 – 27 (cf. Acts 7:42 – 43). Daniel lived in the ancient cradle of astrology during the Babylonian captivity, so his specific rejection of the practice is especially significant (Dan. 2:27; the astrologers likewise failed to comprehend the handwriting on the wall, 5:5 – 16). Other Scriptures (e.g. Lev. 19:26, 31; Deut. 18:9 – 14; Isa. 8:19) have injunctions against various forms of DIVINATION.

W. L. LIEFELD

astronomy. The study of celestial bodies and phenomena. See also COSMOGONY.

I. Creation. The Bible affirms that God created the sun, moon, and stars, as well as heaven and earth (Gen. 1:1, 16; Ps. 8:3), and that everything is subject to his will (Job 9:7). See CREATION. At first

reading, the beginning verses of Genesis may be puzzling because they seem to imply that night and day occurred before God made the sun and moon. Actually, the record may be a good description of the earth's early development if the picture is drawn from the point of view of a hypothetical observer on the earth watching the gradual clearing of a misty atmosphere. At first the clouds became thin enough for night and day to be distinguished, and only later did the discs of the sun and moon, which already were in existence, become visible. Finally, even the stars could be seen.

It certainly would have been possible for God to accomplish the creation events in six ordinary days, but perhaps here is a place where biblical interpretation can be helped by science, which gives rather definite evidence that the whole process took a long time. The best information from the products of radioactive decay in meteorites suggests that the solar system was formed more than 4 billion years ago, while calculations of the life histories of some stars as they consume their internal nuclear fuel indicate they must have two or three times this age. Fossils of simple, single-celled micro-organisms have been found on the Ontario shore of Lake Superior in Precambrian rocks known through radioactive dating to be 1.9 billion years old. Measurements of the remnants from radioactive decay in the soil and dust brought back by the first astronauts to land on the moon gave ages around 4.6 billion years. Recent wavelength measurements (redshift) of the light emitted from the most distant visible objects in the universe indicate that they are over 13 billion lightyears away from us (that is, we see them as they were 13 billion years ago). If God took only six literal days for creation, then it is difficult to understand his purpose in arranging everything to appear as if long periods of time were involved.

A. Earth and sky. Job may show insight into the true nature of the world by his statement that God “suspends the earth over nothing” (Job 26:7), but elsewhere the biblical writers use more poetical terms, such as “the four corners of the earth” (Isa. 11:12, NIV, “quarters”; Rev. 7:1). Isaiah possibly was thinking of the circumference of the horizon, rather than a spherical earth, in his phrase “the circle of the earth” (Isa. 40:22).

In the KJV of Gen. 1:6 – 20, the word FIRMAMENT renders the Hebrew noun *rāqîa'* H8386, which usually refers to something stamped or beaten out like a sheet of metal (cf. Ezek. 6:11; 25:6, where the verb *rāqa'* H8392 is used of stamping the feet). The term probably means “solid covering” in Ezek. 1:22 – 26 and 10:1 (cf. NRSV, “dome”). However, for the description of the sky (Gen. 1:6 – 20; Ps. 19:1; Dan. 12:3), the more general meaning of “expanse” has been suggested (so NIV). This understanding still leaves the difficulty that the earth's atmosphere, which stores water as clouds and vapor (Gen. 1:7), is above the firmament in which are set the sun, moon, and stars (1:14 – 17), contrary to our present concept of the universe. (See also Ps. 148:4, “Praise him, you highest heavens / and you waters above the skies”)

Consequently an alternative interpretation accepts the usual meaning of *rāqîa'* and pictures the firmament as a solid canopy separating us from the heavens where the rain water is stored (for a

Hubble Space Telescope image of interacting galaxies NGC 2207 (larger) and IC 2163

different perspective, see R. C. Newman, *The Biblical Firmament: Vault or Vapor* [2000]). Then the opening of “the floodgates of the heavens” (Gen. 7:11) provided the rain of Noah’s flood (see FLOOD, GENESIS). Since the writer did not claim to be giving a scientific description, he was free to use images and figures of speech easily understood by his early readers to convey the message that God created and controls everything.

B. Big-bang and steady-state theories of creation. Our own galaxy, the Milky Way, probably consists of over 200 billion stars (some estimate 400 billion). The largest telescopes reveal that galaxies of various shapes and sizes populate the universe in all directions to at least 13 billion light years. The redshift observed in these galaxies (a displacement of their light spectrum toward longer wavelengths) shows that they are all receding from the earth with speeds proportional to their distances. This pattern is exactly what would result from an explosion, even if the solar system is not at its center, leading George Gamow to describe the formation of the universe as a *big bang* from an initial hot and dense collection of matter and energy. It is tempting to identify the fireball with the creation event of Genesis.

An alternative picture was presented by Fred Hoyle and his colleagues in their postulate that the universe is in a *steady state* and, therefore, must appear the same to all observers at all times. Since the distances between the galaxies are always increasing, this theory requires the spontaneous creation of new protons and electrons throughout the expanding universe to keep the average density constant. Hoyle rejected the universe with a unique creation event and proposed a universe that has existed forever, with matter continuously being created to fill the voids caused by the expansion.

This *steady-state* or *continuous-creation* theory is now seriously questioned, primarily as a result of the discovery in 1965 of weak radio waves that cannot be identified with any particular object, but which come uniformly from all directions of space. So far the only reasonable explanation attributes this radio emission to the remains of the explosion of the primordial fireball, which initially contained all the matter and energy of the universe at a temperature of a billion degrees or more. It now has cooled by expansion to only 2.7 degrees centigrade above absolute zero.

Further investigations seem to confirm this view. In 2003, the orbiting Wilkinson Microwave Anisotropy Probe made it possible to produce a high-resolution map of microwave light thought to have been emitted only 380,000 years after the initial explosion. Detailed analyses of the image

indicate that the universe is 13.7 billion years old (accurate to 1 percent), that atoms account for only 4 percent of its composition (73 percent is unknown “dark energy,” and 23 percent is unknown cold “dark matter”), that its expansion is accelerating (71 km/sec/Mpc, accurate to 5 percent), that it underwent episodes of rapid expansion called inflation, and that there is no physical reason to keep it from expanding forever.

II. The solar system

A. Sun and moon. According to Gen. 1:14 – 18, God provided the SUN and MOON to light the earth and to be signs for days, seasons, and years. The Hebrew day ended at sunset, while the year was marked by the time the sun required to make one complete circuit among the stars or to return to the same point on the horizon at rising or setting. The comment in Job 38:12, “Have you...shown the dawn its place,” refers to this variation of the position of sunrise due to the annual motion of the sun N and S of the celestial equator. The 29.5-day cycle of the moon’s phases defined the Hebrew month, beginning with the first appearance of the thin crescent just after sunset (cf. “From one New Moon to another,” Isa. 66:23). Although the Scriptures do not mention the procedure, it must have been necessary to add an extra month every two or three years to keep the months in line with the seasons, since twelve lunar months fall short of a year by almost eleven days (some of the Hebrew festivals are agricultural in nature; see AGRICULTURE; CALENDAR).

B. Eclipses. Several passages referring to future events give good descriptions of total eclipses of the sun and moon: “The rising sun will be darkened / and the moon will not give its light” (Isa. 13:10); “The sun will be turned to darkness / and the moon

© Dr. James C. Martin. The British Museum.
Photographed by permission.

Fragment of a Babylonian eclipse table (4th cent. B.C.). In this cuneiform text, vertical divisions represent intervals of 5 or 6 months; horizontal divisions represent intervals of 18 years.

to blood” (Joel 2:31); “I will make the sun go down at noon / and darken the earth in broad daylight”

(Amos 8:9); “The sun turned black like sackcloth made of goat hair, the whole moon turned blood red” (Rev. 6:12). The references to the blood color are especially appropriate for a total eclipse of the moon, since then it is illuminated by a part of the sun’s light, which is bent by the earth’s atmosphere toward the moon, thus making it a copper color. Other possible allusions to eclipses include Ezek. 30:18; 32:7; Matt. 24:29; and Rev. 8:12 (partial eclipses). However, the three hours of darkness at the time of the CRUCIFIXION (Lk. 23:44 – 45) definitely were not due to an ordinary solar eclipse, which can occur only at the time of the new moon (the moon would have been at the full phase for PASSOVER), and only for a few minutes in any location.

C. The long day of Joshua and the sun dial of Ahaz. One of the most remarkable astronomical events of the Bible occurred when both the sun and moon appeared to stand still in the sky at JOSHUA’S command while the Israelites won a battle over the AMORITES (Josh. 10:12 – 14). This statement suggests the earth may have temporarily stopped rotating on its axis, but such a change would have had massive physical consequences of a cosmic scale. If we believe God relates the degree of each miracle to the importance of the event, it seems more likely that keeping the sun and moon fixed in the sky for a battle with the Amorites was

Cuneiform tablet preserving a Babylonian diary of astronomical and meteorological phenomena observed during the year 331 – 330 B.C. It includes mention of Darius III’s defeat by Alexander the Great at the battle of Gaugamela in October of 331.

accomplished by some simpler means, such as an extraordinary refraction by the atmosphere. Alternatively, the story could be a poetical description of Joshua’s victory from the lost book of JASHAR, whose only other reference is in 2 Sam. 1:18.

Without the full context of the original, it is difficult to say how literally the account is to be taken. Still another interpretation notes that the Hebrew words translated “stand still” and “stopped” also could mean “be silent” or “cease”; and the comment that the sun “delayed going down” could be

rendered, “made no haste to come.” The sun and moon simply may have been darkened, probably by the storm that brought the hail (Josh. 10:11), thus prolonging the night (v. 9) so that the Israelites could continue their surprise attack. A refraction phenomenon also may have occurred when the shadow of the sun on the DIAL of AHAZ turned back ten steps as a sign that King HEZEKIAH would recover from his sickness (2 Ki. 20:9 – 11; Isa. 38:8). See also DAY, JOSHUA’S LONG.

D. Planets and meteors. The only planet to be mentioned explicitly may be Saturn as the star-god, under the names SAKKUTH and KAIWAN in Amos 5:26 (but this debatable reading involves a revocalization of MT; the NIV understands these words to be the terms for “shrine” and “pedestal”). The morning star (Isa. 14:12; 2 Pet. 1:19; Rev. 2:28; 22:16) is never a star, but any one of the planets Mercury, Venus, Mars, Jupiter, and Saturn when it is in position to be visible in the E just before sunrise. At times, two or more morning stars may be seen in the sky. However, the passages most likely refer to Venus, since it is the brightest and sometimes can be seen long after the sun is up. Meteors easily could fit descriptions such as “a great star, blazing like a torch, fell from heaven” (Rev. 8:10; cf. also Matt. 24:29; Mk. 13:25; Rev. 9:1; 12:4).

III. Stars and constellations. The Bible rarely mentions particular stars or constellations, except for the Bear, Orion, and the Pleiades (Job 9:9; 38:31 – 32; Amos 5:8). Constellation names would seem appropriate in these passages, but none of the adopted translations is completely certain. The rendering “Bear” (Ursa Major) follows from the similarity of the Hebrew words (*āš* H6933 and *ayiš* H6568 in the Job passages with the Arabic name *naš* (“bier”) for this constellation, more commonly known as the Big Dipper (also the Wagon or the Plough); however, some scholars prefer to see here a reference to the constellation Leo (“Lion”).

The name “Orion” renders Hebrew *kēsîl* H4068 (a form that is elsewhere translated “fool”), following the SEPTUAGINT of Job 38:31 (*Ōriōnos*, but Job 9:9 has *Hesperon*). The correct meaning of the Hebrew *kîmâ* H3966, which also appears in all three passages mentioned above, is uncertain, but most scholars follow the LXX (*Pleiados*) and take it as a reference to the Pleiades, a compact star cluster in the constellation Taurus. (In Amos 5:8 the KJV has “seven stars” instead of Pleiades, consistent with the ancient tradition of seven “sisters” in this cluster. Telescopes show that the cluster contains more than a hundred stars.) The Hebrew term rendered “constellations” in the NIV of Job 38:32 (NRSV, “Mazzaroth”) is taken by some as a name for the signs of the zodiac, the twelve constellations through which the sun passes during its yearly motion around the sky. See also ASTROLOGY.

Special interest attaches to the STAR OF BETHLEHEM. Although God need not have used an ordinary astronomical event to herald the INCARNATION, several natural explanations have been put forward for the star that appeared to the MAGI from the E and guided them to the birthplace of Jesus (Matt. 2:1 – 10). Certainly these men must have been familiar with the sky so that they would have noticed immediately any special arrangement of planets or a new object. Modern calculations show that during the possible years of Christ’s birth there must have been several close approaches of two or three planets, such as the conjunction of Venus, Mars, and Saturn on January 22, 12 B.C., or the approach of Venus and Jupiter within three arc minutes of each other on June 17, 2 B.C. These must have been notable astronomical events, but they do not easily fit the description of a single star that presumably reappeared frequently (every night?) during the journey, since the relative motions of the planets would separate them again in less than a day. (Cf. E. L. Martin, *The Star that Astonished the World*, 2nd ed. [1991].)

More likely possibilities are a comet or a new star, either a nova or supernova. A new star occasionally does appear in the sky due to an explosion in an existing star initially too faint to be seen without a telescope. The resulting tremendous increase in brightness suddenly causes the star to become visible for a period, sometimes even in daylight. A nova is the consequence of a modest perturbation that increases the star's luminosity only some ten thousand times. Such a relatively weak explosion will produce a new star brighter than the second magnitude on the average about every ten years, and fainter ones more frequently. They will remain visible for a month or two.

In the supernova explosion, the light may increase by a hundred million times and then fade gradually for a year or longer, but a hundred years or more usually elapses between these events. In A.D. 1054 in Taurus, the Chinese observed such a supernova, which initially was as bright as Venus. At this location telescopes have found the Crab Nebula (M1), which is still expanding at 600 mi. per second. It is a source of X-rays and radio waves as well as light and has a rotating pulsar at its center emitting bursts of energy about 30 times per second.

Whatever the Star of Bethlehem was, it ought to have been seen by others besides the wise men (although it has also been suggested that the sign may have been, at least in part, a local phenomenon). Among the ancient watchers of the skies, the Chinese kept the best records. From 32 B.C. to A.D. 13, they noted comets in 12, 10, and 4 B.C., and an object that appeared in March or early April of 5 B.C. in Capricorn and remained for over seventy days. A detailed description is given of the motions of the comet of 12 B.C., which had a large tail and was visible for fifty-six days beginning August 26th; this must have been Halley's Comet, which returns every seventy-six years. Since no motion was attributed to the object of 5 B.C., it may have been a nova or supernova. Whether any of these events can be identified with the star of the wise men depends on one's estimate of the birth date of Christ. See CHRONOLOGY (NT).

IV. Life on other worlds. The Bible gives no hint whether life exists elsewhere in the universe. As yet no astronomical observation has found any evidence for life outside our earth, either as simple forms or intelligent beings. Many believe it would be remarkable if God created so vast a universe of stars and galaxies without permitting life to develop somewhere else besides the earth. Measurements by telescopes, and especially by space probes, have shown that it would be difficult for life as we know it to exist elsewhere in our solar system. The surface temperature of Venus is 430°C, hot enough to melt lead. No living organisms were found in the rocks the Apollo 11 and 12 astronauts picked up on the moon. The night temperature on the surface of Mars is 100°C below freezing so that any organism would require some localized hot spot to keep alive.

Deep in the atmospheres of hydrogen, helium, methane, and ammonia found in Jupiter and Saturn there should be layers warm enough for biological activity, but the absence of a solid or liquid surface probably would permit the organisms to contact regions of temperature extremes where they would be destroyed. However, the existence of planets around other stars has now been confirmed, and it seems likely that some solar-type stars elsewhere in the Milky Way could have earth-like planets where some type of life would be possible. (See further S. Custer, *The Stars Speak: Astronomy in the Bible* [1977]; H. Ross, *The Creator and the Cosmos: How the Greatest Scientific Discoveries of the Century Reveal God*, 3rd ed. [2001]; P. Moore, ed., *The Astronomy Encyclopedia* [2002].)

D. C. MORTON

Astyages as-ti'uh-jeez (Ἀστύαγης, from Old Pers. *Arštivaiga*). The last king of the Median

empire (586 – 550 B.C.), the son of Cyaxares I (see MEDIA). When his father overthrew LYDIA, he made an agreement with its defeated king, Alyattes, that his son would marry the king's daughter, the princess Aryenis (Herodotus, *Hist.* 1.74). The daughter of this marriage, Mandane, was given to a lower-ranked Persian nobleman, CAMBYSES, as wife. According to HERODOTUS (*Hist.* 1.108 – 30), the old man Astyages, by reason of a terrifying dream he had had, was afraid of any son who might be born to Mandane. After another dream, Astyages plotted to take away such a child, which he did when his grandson CYRUS was born. The infant was exposed by his grandfather's palace steward, Harpagus, who nevertheless allowed him to live (the king took vengeance by butchering Harpagus's son and serving him as food). When Cyrus, who had been raised by a shepherd and his wife, grew to manhood, Harpagus rallied to him with a good portion of the Median Army, and Cyrus in two successful campaigns overthrew his grandfather, capturing the Median capital, ECBATANA, in 550 B.C., thus becoming "king of all Asia." Less accurately, one of the additions to Daniel says, "When King Astyages was laid to rest with his ancestors, Cyrus the Persian succeeded to his kingdom" (Bel 1:1).

W. WHITE, JR.

Asuerus azh'yoo-er'uhs. KJV Apoc. form of AHASUERUS (Tob. 14:15).

Asuppim uh-suhp'im (pl. of ^{אָסוּפִּים} H667). KJV transliteration of a Hebrew word that is more correctly interpreted as a common noun (1 Chr. 26:15, 17); the phrase of which it is a part is rendered "storehouse" by the NIV and other versions (the Heb. word occurs also in Neh. 12:25, where KJV renders it with "thresholds").

Asur ay'suhr (^{אַסּוּר}). A man whose descendants were among the temple servants (NETHINIM) under ZERUBBABEL (1 Esd. 5:31, KJV "Assur"; the name possibly corresponds to HARHUR in Ezra 2:51 and Neh. 7:53).

Aswan as-wahn'. See SYENE.

asylum. The right of asylum is codified in four biblical passages (Exod. 21:12 – 14; Num. 35:9 – 34; Deut. 19:1 – 13; Josh. 20:7 – 9). The purpose of this law was to provide a place where the accidental homicide might dwell. The place could be the altar of Yahweh or the CITIES OF REFUGE. The former is illustrated in the case of ADONIJAH, who entered the house of God and clung to the horns of the altar for fear of SOLOMON'S wrath (1 Ki. 1:50; 2:28).

M. Greenberg (in *JBL* 78 [1959]: 125 – 32) has pointed out that, contrary to the commonly accepted view of J. Wellhausen, the cities of refuge were not conceived by the Deuteronomic reformers as a replacement for the "local" altars, but they were early and necessary adjuncts to the asylum offered by the altar, since that was only a temporary expedient. Further, by noting only the humanitarian and political grounds for the law of asylum, some scholars missed the ancient religious reason for granting asylum (Gen. 9:5 – 6). Even shedding an innocent man's blood unintentionally still involved bloodguilt for which no kinsman of the slain could even pardon or ransom (Num. 35:31). Nothing can expiate an accidental homicide except the death of the high priest (35:25)! Life cannot be translated into any other terms.

W. C. KAISER, JR.

Asyncritus uh-sin'kri-tuhs (Ἀσύγκριτος G850, “incomparable”). A Christian in ROME, named with four other men, to whom PAUL sent greetings (Rom. 16:14). Mentioned first, he may have been the leader of this group of believers. The name is found in papyri and inscriptions but occurs rarely in sources from the city of Rome, which leads some scholars to believe that Asyncritus had migrated to the capital from other parts of the empire.

Atad ay'tad (אָטָד H354, “thornbush”). A threshing floor where the funeral cortège of JACOB stopped on its way northward to HEBRON (Gen. 50:10-11; some prefer to translate the whole phrase “the threshing floor of Atad” as a proper name, “Goren Ha-Atad”). Here the Egyptians mourned seven days for Joseph’s father, and therefore the place was given the name ABEL MIZRAIM, “mourning [or meadow] of the Egyptians”. A geographical problem is seen in the statement that Atad was “beyond the Jordan” (NRSV), since the direct route from Egypt to Hebron would be W of the river. It is possible that the cortege followed an old trade route through the Sinai peninsula or that the phrase should be translated “near the Jordan” (NIV). The site has not been identified.

Atarah at'uh-ruh (עֲטָרָה H6499, “crown”). The second wife of JERAHMEEL and the mother of Onam, mentioned in the genealogy of JUDAH (1 Chr. 2:26).

Atargatis uh-tahr'guh-tis (Ἀταργατῖς, from Aram. עֲתַרְעֵתָה, a juxtaposition of the names of two goddesses, (Atar and (Atah [=Anat]). Also known as Derceto (*Derketō*, Strabo *Geogr.* 16.4.27; cf. Diodorus Siculus *Bibl. Hist.* 2.4.2 – 3). A Syrian goddess of FERTILITY whose temple at Carnaim in GILEAD is mentioned in 2 Macc. 12:6 (*Atergateion*). Atargatis, regarded as a consort of HADAD, was one of the popular deities of the Hellenistic period. She was a type of the common mother-goddess figure, the counterpart of Aphrodite. She is related to the familiar ISHTAR or Astarte (cf. ASHTORETH in the OT), the symbol of fertility religion that JOSIAH had opposed (2 Ki. 23:13).

Atargatis is known in ancient literature as the Syriac goddess (*Syria thea*, Lat. *dea Syria* or *Dea-sura*), and was sometimes represented as half-woman, half-fish. The chief center of worship was in Hieropolis-Bambyke, in northern Syria; another important temple was in Khirbet Tannur (cf. N. Glueck, *The Other Side of the Jordan* [1940], 178 – 200). Her temples, cultic practices, and begging priests are described in detail in Lucian’s *The Syrian Goddess* and in the *Metamorphoses* of Apuleius. The priests, known as Galli, castrated themselves in frenzied orgies. The fertility motif is seen in the association of Atargatis with water, grain, fruit, and foliage. (See E. O. James, *The Cult of the Mother Goddess* [1959]; *DDD*, 114 – 16.)

W. L. LIEFELD

Ataroth at'uh-roth' (עֲטָרוֹת H6500, “crowns,” or perhaps “[cattle] pens”). (1) One of the towns built by the descendants of GAD in the TRANSJORDAN (Num. 32:3, 34) along with DIBON and AROER. It is mentioned by King MESHHA on his MOABITE STONE (lines 10 – 14) as being the city where “the men of Gad had always dwelt.” It apparently was built and used by Israel, prior to Mesha’s capture, as a border fortress against MOAB. Mesha claims to have attacked Ataroth and killed all its inhabitants (*ANET*, 320; see also JAHAZ). The site is usually identified with Khirbet (Aṭṭarus, 9 mi. NW of Dibon.

(2) A border town of the tribe of EPHRAIM, part of the territory of the ARKITES (Josh. 16:2, 7). It was apparently located between BETHEL and Lower BETH HORON, but the precise site has not been identified. Some believe that the town mentioned in v. 2 is the same as ATAROTH ADDAR in v. 5, but that the Ataroth of v. 7 was a different town on the NE boundary of Ephraim (perhaps modern Tell Sheikh edh-Dhiab or Tell el-Mazar, but see JOKMEAM). A. Alt (in *ZDPV* 69 [1953]: 1 – 27) had suggested that Ataroth and MIZPAH (in BENJAMIN) are only different names for the same place: the former for the premonarchic town, and the latter for the monarchic period beginning with ASA'S fortifications (1 Ki. 15:16 – 22). This theory puts too much strain on the preservation of the name Ataroth in the modern Khirbet (Atarah, especially since this small village at the foot of Tell en-Naṣbeh (see MIZPAH) is not an ancient site (it goes back only to Byzantine-Arabic times with no pre-Roman remains). Nor does the fact that Ataroth does not occur outside of the boundary descriptions of Joshua prove that it was replaced by Mizpah around 900 B.C., since there are five other names in this same category found in the second part of the boundary list.

(3) The KJV reads “Ataroth, the house of Joab” in 1 Chr. 2:54, but this phrase is better rendered as one proper name, ATROTH BETH JOAB (cf. NIV; some have suggested translating it, “the crowns [i.e., chiefs] of the house of Joab”).

W. C. KAISER, JR.

Ataroth Addar at'uh-roth-ad'uhr (עֲטָרוֹת אֲדָרָה H6501, “crowns of Addar” or “[cattle] pens at the threshing floor”). A town included in the boundary lists for the tribes of EPHRAIM and MANASSEH (Josh. 16:5; 18:13; the S boundary of the Joseph tribes coincides with the N boundary of BENJAMIN). The precise location is uncertain, though one suggestion is Khirbet Raddana, about 9 mi. NNW of Jerusalem. Some believe that this town should be identified with ATAROTH #2. Yehezkel Kaufmann (*The Biblical Account of the Conquest of Palestine* [1953], 28 – 33) has dealt with M. Noth's interpretation of these border lists. Kaufmann convincingly demonstrates that Josh. 16:5 – 7 describes the S and N borders of Ephraim by starting in the middle of each border, Ataroth Addar in one case and MICMETHATH in the other; it thus traces the border from this middle point westward and then eastward in one, and conversely eastward and then westward in the other.

W. C. KAISER, JR.

atbash at'bash. Also *athbash*. The rabbinic term for a cryptic device whereby the first letter of the Hebrew alphabet (*aleph*, א) was substituted for the last letter (*tau*, ט), the second letter (*beth*, ב) for the next-to-last letter (*šin*, ש), etc. No intensive study of *atbash* in the Bible has been made, but scholars believe there are at least three cases in Jeremiah. In Jer. 51:1 (LXX 28:1), the MT reads *lēb qāmāy* H4214, “the heart of those who rise against me” (followed by Aq., Symm., KJV; modern translations treat it as a place name, “Leb Kamai”). The SEPTUAGINT, however, reads *Chaldaious*, “Chaldeans” (cf. RSV), reflecting the Hebrew term *kaśdîm* H4169, which is the *atbash* of *lḇqmy*.

Similarly, Sheshach (*šēšak* H9263) in Jer. 25:26 and 51:41 is a cryptogram for Babel/Babylon (*bābel* H951). Secrecy cannot be the reason for this use of *atbash*, since ch. 51 contains plain references to Babylon. C. F. Keil (in KD, *Jeremiah*, 1:383) suggests that the cryptogram was employed to produce significant double meanings. In 51:1, the Chaldeans or Babylonians are thus characterized as people whose heart rises against God. As for the name Sheshach, Keil derives it from the verb *šākak* H8896, perhaps meaning “to crouch,” in allusion to the prophecy that Babylon would “sink [*šāqa* H9205] to rise no more” (51:64). See also RIDDLE.

Ater ay'tuhr (אָטֵר H359, perhaps “binder” or “crippled”). (1) The ancestor of a family that returned from the Babylonian captivity with ZERUBBA-BEL (Ezra 2:16; Neh. 7:21). The unusual Hebrew expression (*bēnê-āṭēr liḥizqiyyâ*, “the sons of Ater [belonging] to Hezekiah”) can be rendered “of Ater, namely of Hezekiah” (cf. NRSV), which might indicate that Hezekiah was an older family name; the NIV translates, “of Ater (through Hezekiah).” (In 1 Esd. 5:15 the KJV reads one name, “Aterezias.”) Ater was among those who sealed the covenant of NEHEMIAH (Neh. 10:17; in this passage, Ater and Hezekiah are listed as though they were two distinct individuals).

(2) Ancestor of a family of temple gatekeepers who returned from the Babylonian captivity with Zerubbabel (Ezra 2:42; Neh. 7:45; 1 Esd. 5:28 [KJV, “Jatal”]).

S. BARABAS

Aterezias uh-ter'uh-zi'uhs. KJV Apoc. form of ATER (1 Esd. 5:15).

Athach ay'thak (אֶחָד H6973, derivation uncertain). TNIV Athak. A city in the S foothills of the tribal territory of JUDAH to which DAVID sent booty taken from the Amalekites (1 Sam. 30:30). The site is unknown, unless the name is a variant (or scribal corruption) of ETHER, as some scholars believe.

Athaiah uh-thay'yuh (אֶתַיָּה H6970, perhaps “Yahweh has shown himself superior” or short form of אֶתַלְיָהוּ H6976; see ATHALIAH). Son of Uzziah and descendant of PEREZ; he was one of the Judahites who after the return from the Babylonian captivity lived in Jerusalem (Neh. 11:4). Some believe he is the same as Uthai (1 Chr. 9:4), but this identification is doubtful.

Athak. See ATHACH.

Athaliah ath'uh-li'uh (אֶתַלְיָהוּ H6975 and אֶתַלְיָהוּ H6976, possibly “Yahweh is exalted”; however, see HALOT, 2:904, and J. D. Fowler, *Theophoric Personal Names in Ancient Hebrew* [1988], 136). One woman and two men in the OT bore this name.

(1) The wife of JEHORAM, king of Judah, and daughter of AHAB, king of Israel (2 Ki. 8:18). She is called OMRI'S “daughter” (2 Ki. 8:26; 2 Chr. 22:2), which probably should be understood to mean “granddaughter” (cf. NIV and NRSV; some scholars argue that she was indeed a daughter of Omri and therefore Ahab's sister). Because peace prevailed in her time between the kingdoms of Judah and Israel, she married Jehoram, son of JEHOSHAPHAT of Judah (2 Ki. 8:16 – 17). It was a marriage of political convenience with disastrous spiritual results. Athaliah inherited the unscrupulous nature of her mother JEZEBEL. Her influence over her husband and her son AHAZIAH was for evil. She was responsible for introducing into Judah the worship of the Phoenician BAAL.

She was widowed after eight years on the throne, and her son Ahaziah succeeded his father (2 Ki. 8:26; 2 Chr. 22:2). Within a year Ahaziah, with Joram of Israel, was murdered by JEHU, at which time Athaliah destroyed all her grandchildren except Jehoash (see JOASH), who was stolen away and hidden by his aunt, JEHOSHEBA (2 Ki. 11:2; 2 Chr. 22:11). Athaliah usurped the Davidic throne for six years, c. 841 – 835 B.C. (E. R. Thiele, *The Mysterious Numbers of the Hebrew Kings*, rev. ed. [1983], 104). Under her sponsorship Baal worship was vigorously promoted (2 Chr. 24:7).

JEHOIADA, high priest and husband of Jehosheba (2 Chr. 22:11), led the revolt against Athaliah in her seventh regnal year (2 Ki. 11:1 – 16; 2 Chr. 23:1 – 15). Using as the occasion the changing of the palace guards on the Sabbath, and aided by the guards, Jehoiada had Joash proclaimed king. When Athaliah tried to thwart the uprising, she was evicted from the temple courts and killed at the horses' entrance to the palace. She died at the hands of the guards. (See P. Dutcher-Walls, *Narrative Art, Political Rhetoric: The Case of Athaliah and Joash* [1996].)

(2) Son of Jeroham and descendant of BENJAMIN; he is listed among the heads of families who lived in Jerusalem (1 Chr. 8:26).

(3) Descendant of Elam and father of Jeshaiiah; the latter is listed among those who returned with EZRA from the Babylonian captivity (Ezra 8:7; called "Gotholiah" in 1 Esd. 8:33).

C. L. FEINBERG

Athanasian Creed. See CREED.

Atharias ath'uh-ri'uhs. See ATTHARATES, ATTH-ARIAS.

Atharim ath'uh-rim (אֶתְרִים H926, derivation uncertain). According to Num. 21:1, the Israelites, during their wilderness wanderings, were attacked by the Canaanite king of ARAD "along the road to Atharim." Following some ancient versions, the KJV incorrectly translates, "the way of the spies" (as though the term were equivalent to *hattārîm*, ptc. of *tûr* H9365, "to spy out, explore"). Atharim may have been a town in the NEGEV, but the site is unknown. The road in question must have been a significant route, and it probably went from KADESH BARNEA N through AROER and ARAD and on to HEBRON (see Y. Aharoni, *The Land of the Bible: A Historical Geography*, rev. ed. [1979], 44, 58).

athbash. See ATBASH.

atheism. See THEISM.

Athenobius ath'uh-noh'bee-us (Ἀθηνόβιος). A "friend" of ANTIOCHUS VII Sidetes, king of SYRIA, who was sent to Jerusalem by the king to remonstrate with SIMON MACCABEE for the occupation of JOPPA and Gazara (GEZER) and the citadel of Jerusalem. He demanded that all the places taken should be given up, or that he pay 1,000 talents in silver. Simon refused to pay more than 100 talents, and Athenobius was obliged to return to Antiochus without achieving his purpose (1 Macc. 15:28 – 36).

S. BARABAS

Athens ath'inz (Ἀθῆναι G121). Chief city of the ancient city-state of Attica and capital of modern Greece.

I. Topography. The city is located about 5 mi. from the AEGEAN SEA on the narrow plain between Mount Parnes to the N, Mount Pentelicus to the E, and Mount Hymettus to the SE. It was originally settled by neolithic people because of its steep hill (later the ACROPOLIS), which was easily defended and had an accessible supply of water. Attica is one of the driest regions of GREECE, but the rainfall is sufficient for olive groves and vineyards. The export of olive oil and wine was one of the chief sources of the prosperity of classical Athens. In addition, there were excellent clay beds nearby for

pottery making, and silver and lead were mined at Laurium at the southern tip of Attica. Mount Pentelicus provided beautiful marble for local use and for export.

The city was enclosed by fortification walls throughout most of its history. During the Late Bronze Age a wall (the *Pelargikon*) was built around

Athens.

the perimeter of the Acropolis. Because of the Persian threat at the beginning of the 5th cent. B.C., the Athenians hastily fortified the expanded city and soon thereafter extended the walls down to the excellent port facilities of the Piraeus. Emperor HADRIAN encouraged the enlargement to the E of the city walls, which stood intact until the Herulian invasion in the 3rd cent. of the Christian era.

The classical and Roman city was located within roughly circular walls. The Acropolis occupied the S central portion. The AREOPAGUS Hill lay to the NW, the Pnyx Hill to the W, and the AGORA (marketplace) to the N. There were residential areas to the N, E, and S. Visitors to Athens such as Paul and Pausanias would have entered through the Dipylon Gate just beyond the Kerameikos (the old potters' quarter) cemetery and traveled along the Panathenaic Way through the agora to the Acropolis.

II. History. The Athenians described themselves as *hoi autochthontes* ("sprung from the earth") to indicate that their ancestors had inhabited the city without interruption. The site was originally settled on and around the Acropolis in the Neolithic Period. Tradition says that Athens was not affected by the Dorian invasion at the end of the Bronze Age and further that Nestor led the people of Pylos there

when the Dorians overran the Peloponnesus. During the Geometric Period (Early Iron Age) the city expanded in a northwesterly direction. At some time during the period the agora ceased to be used for burials, and it became the public center of the city. During the 6th cent., an archaic temple of Apollo and the old Bouleuterion were built, as well as the old temple of Athena on the Acropolis.

Athens emerged into history in the 6th cent. The city was first ruled by an oppressive aristocracy until the reforms of Draco. In 594 the constitution of Solon provided safeguards against mistreatment of the people, but it remained for the tyrants, Peisistratus and his sons, to bring prosperity and public confidence. Cleisthenes, at the end of the 6th cent., was the true founder of the democracy.

The role of Athens in the Persian War brought it to a place of great prominence. Even though the city was completely destroyed, the Athenians recovered quickly. The fleet that had a decisive part in the defeat of the Persians became the basis of a maritime empire. The years of Pericles' great influence (443 – 429) were the most glorious in Athenian history. Athens became a complete democracy, and by its encouragement of the arts nurtured one of the greatest periods in the history of mankind. The city was adorned with magnificent public buildings. The dramatists and historians recited its greatness. Athens attracted intellectuals from all over Greece and encouraged the study of philosophy, rhetoric, and science. Only the short-sighted foreign policies of its leaders led to the decline of Athens and to the Peloponnesian War.

Although deprived of its empire and wealth, Athens remained a center of art and literature in the 4th cent. B.C. A precarious democracy was restored for a time until Philip of Macedon conquered all of Greece. The Macedonian kings, as well as Egypt, Syria, and especially Pergamum, courted favor by benevolences to the city. In the 3rd cent., Athens joined the Achaean league, but soon thereafter lost its independence to Rome. In 86 B.C. the Roman general Sulla besieged the city and allowed his soldiers to loot it. Now poor and stripped of its commerce, Athens was reduced to a university center visited by many prominent Romans. The Roman emperors, particularly Hadrian, supported the city by their benevolences. The city continued to decline until the early 19th cent. A.D., when it was a mere village of 5,000. (See P. Gaindor, *Athènes de Tibère à Trajan* [1931], and *Athènes sous Hadrian* [1934]; E. E. Cohen, *The Athenian Nation* [2000]; E. B. Lytton, *Athens: Its Rise and Fall, with Views of the Literature, Philosophy, and Social Life of the Athenian People* [2004]; M. L. Smith, *Athens: A Cultural and Literary History* [2004].)

III. Monuments. Ancient monuments are numerous enough in Athens to give the visitor an insight into the glories of the past. Painstaking work has been done by the Greek Archaeological Service on the Acropolis, by the American School of Classical Studies in the agora, and by the other foreign schools in the city and its environs.

As one enters from any direction, the Acropolis dominates the city. The entrance to the hill is the Propylea, which like the Parthenon was built during the time of Pericles. The Parthenon, dedicated to Athena, is a building of the Doric order. It is 238 ft. long and 111 ft. wide at its base. The outer colonnade was made up of 46 columns, each 34 ft. high. The pediments at each end depicted mythological scenes; the birth of Athena on the E, the contest of Athena and Poseidon for Attica on the W. Above the inner colonnade ran a frieze depicting the Panathenaic procession. (See M. Beard, *The Parthenon* [2003].)

On the N side of the Acropolis is the Erechtheum, the common shrine of Erechtheus and

Athenian forum and Stoa of Attalus. (View to the N.)

Poseidon. Also on the hilltop can be found the fortification walls of Themistocles, the Temple of Wingless Victory, and the foundations of a number of older buildings. Below the Acropolis on the S side are the theater of Dionysius and the Odeum of Herodes Atticus.

The agora was the forum and marketplace of the ancient city. All that remains today are the foundations of buildings and the Stoa of Attalus, which stretched across the E side and has been faithfully reconstructed by the American School as a museum. The commercial area included the Stoa of Attalus and the S, E, and middle stoas along the S side. The W side consisted of the important public buildings of Athens: the circular Tholos, the office and dining room of the Prytaneum; the Bouleuterion or senate house; the Metroon the official archives; the temple of Apollo Patroos; and the Stoa Basileios. In front of the Metroon was a temple of Ares and the statues of the eponymous heroes of the city. Above the agora to the W on the Kolonos Agoraios stands the 5th-cent. temple of Hephaestus, one of the best preserved Greek temples. (See I. T. Hill, *The Ancient City of Athens* [1953].)

IV. Paul's visit. When the apostle PAUL visited Athens, the city still retained its reputation as a center of learning, although it was no longer prosperous. He noticed the magnificent public buildings and shrines that were still intact despite Sulla's barbarism (Acts 17:23). He came there because of the Jewish protests against his preaching in THESSALONICA and BEREIA. He witnessed in the agora and was called before the Areopagus Court, to which he gave an intellectual defense of the gospel. He mentioned an altar to the UNKNOWN GOD, which both Pausanias and Philostratus also observed. The synagogue (17:17) is unknown, but Jewish burials have been found in the Kerameikos. A few converts were made as a result of his preaching before he left for CORINTH (Acts 17:15—18:1).

athlete. Athletics is strenuous competitive physical sport or GAMES, requiring specialized training and involving a degree of formal organization in its performance. Though the Greeks contributed the word (*athlētēs*) and much of the ideal of athletics (see S. G. Miller, *Ancient Greek Athletics* [2004]),

the more ancient civilizations were already acquainted with the concept and practice of this sort of activity. The Egyptians engaged in competitions in wrestling, singlestick fighting, boxing, and possibly also rowing and archery. The OT provides little evidence for athletics, but references to wrestling, running, swimming, and ball play may point in this direction. The Romans adopted the athletic tradition of Greece and left their own imprint (cf. Z. Newby, *Greek Athletics in the Roman World: Victory and Virtue* [2005]).

In the NT the influence of hellenization is apparent in language and culture (see HELLENISM), with the result that general terms relating to athletic competition are frequent, especially in figures of speech and particularly in the Pauline writings. The verb *athleō* *G123* (“to contend for a prize, compete in a contest”) is used only twice in the NT, both times in 2 Tim. 2:5, which stresses the organized regulatory aspect of the games as an illustration of the place of discipline in the Christian life. Though there was no team sport in the

Greek games, the compound verb *synathleō* G5254, appears in Phil. 1:27 with a hint of team attitude (NRSV, “striving side by side”). Finally, the cognate noun *athlēsis* G124 occurs in Heb. 10:32 (“you stood your ground in a great contest in the face of suffering”). As the last reference suggests, basic to the meaning of these terms is the idea of effort; so much so, that the related adjective *athlios* (not found in the NT) shifted in sense from “struggling, competing,” to “miserable, wretched.”

Another verb, *agōnizomai* G76, also means “to enter a contest, to compete in the games.” Its only literal use in the NT is in 1 Cor. 9:25, where Paul commented that everyone “who competes in the games [*agōnizomenon*] goes into strict training.” The figure of the effort demanded in competition is applied to PRAYER. PAUL described EPAPHRAS as always “wrestling” in his prayers for the Colossians (Col. 4:12). Similarly, the apostle said to the Roman Christians: “join me in my struggle [*synagōnizomai* G5253] by praying to God for me” (Rom. 15:30), suggesting by this metaphor cooperation and teamwork as well as intensity of personal involvement. (See M. Brändl, *Der Agon bei Paulus* [2006].)

The intensity implied in this verb is indicated by its common rendering, “strive, struggle.” The Lord exhorted his hearers: “Strive to enter by the narrow door” (Lk. 13:24 NRSV). In the Christian battle Christ is the source of the believer’s strength, as Paul states: “To this end I labor, struggling with all his energy, which so powerfully works in me” (Col. 1:29). He uses both verb and noun when he encourages the youthful TIMOTHY by saying, “Fight the good fight [*agōnizou ton kalon agōna*] of the faith” (1 Tim. 6:12; cf. also 4:10). A compound verb is used in the appeal of Jude that the believers should “contend [*epagōnizomai* G2043] for the faith that was once for all entrusted to the saints” (Jude 3). Another compound is the basis for the rendering in Heb. 12:4, “In your struggle [*antagōnizomai* G497] against sin, you have not yet resisted to the point of shedding your blood.”

The cognate noun (*agon* G74) is used by Paul when he tells the Philippians that by their suffering they share the “struggle” in which he himself is engaged (Phil 1:30; cf. 1 Thess. 2:2, “opposition”). He also informs the Colossian saints of the great struggle he goes through in his concern for their spiritual welfare (Col. 2:1). This noun is used specifically of the spiritual “race” that we must run with perseverance (Heb. 12:1; for the same idea with the verb *diōkō* G1503, “press on,” cf. Phil. 3:12 – 14). Perhaps the most striking of all passages using athletic figures of speech is 1 Cor. 9:24 – 27: “Do you not know that in a race all the runners run, but only one gets the prize? Run in such a way as to get the prize. Everyone who competes in the games goes into strict training. They do it to get a crown that will not last; but we do it to get a crown that will last forever. Therefore I do not run like a man running aimlessly; I do not fight like a man beating the air. No, I beat my body and make it my slave so that after I have preached to others, I myself will not be disqualified for the prize.”

atonement. In Christian theology, the RECONCILIATION between God and human beings brought about by Jesus’ SACRIFICE; sometimes equivalent to EXPIATION. The necessity for reconciliation is the breach in the primal relationship between the Creator and the creature occasioned by the latter’s sinful rebellion. Because sacrifice is the basic NT category used to describe the death of Christ, atonement—which the OT SACRIFICES wrought in a ceremonial way—is the term commonly employed by theologians to describe the work of Christ. By the same token, because the meaning of Christ’s death is central in the NT, a much wider range of biblical teaching than that bearing on sacrifice has been

included in the theological discussion of atonement. What the Scriptures have to say about the nature of God, the significance of the law, the character of sin, the power of demonic forces, the meaning of salvation, and the final eschatological redemption of the world—all these are scriptural themes that have been more or less central in the various “theories” of the atonement.

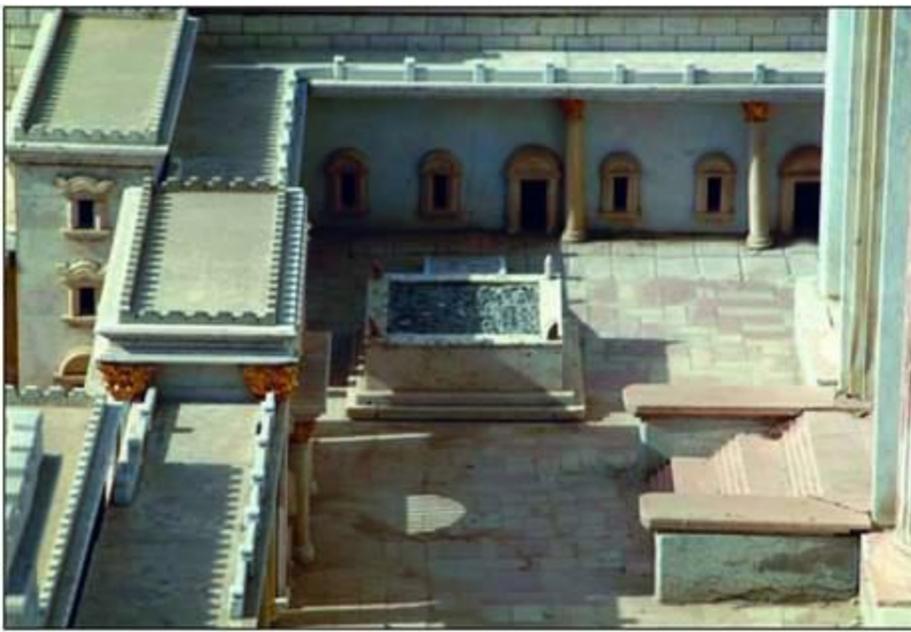

I. Vocabulary. Etymologically, the English term *atonement* (from *at one*, i.e., in agreement) signifies a harmonious relationship or that which brings about such a relationship, that is, a reconciliation. Behind this English word there are several Hebrew and Greek terms that do not correspond exactly one to another. (The circle of theological ideas is compatible, however.)

The initial question is the crucial one regarding the meaning of the Hebrew verb *kāpar* H4105 (cf. the nouns *kippurîm* H4113, “act of atonement,” and *kappōret* H4114, “mercy seat, atonement cover”). The fundamental idea of this frequently employed term seems to be “to cover” or “to wipe away [sin],” hence “to expiate, placate.” It is used to describe the effect of the sacrifices at the consecration of the high priest and the altar (Exod. 29:36 – 37; Lev. 8:14 – 15; Ezek. 43:20); of the annual sacrifices for the renewal of the consecration of the priest, the people, and the tabernacle offered on Yom Kippur (see A TONEMENT, DAY OF); and of the sacrifices offered on behalf of the individual, especially the sin and trespass offerings (Lev. 4:20; Num. 5:8) when the one sacrificing acknowledged his guilt and defilement. Sometimes translated “to make reconciliation,” “to purge away,” or “to reconcile,” the term is closely connected with the noun *ḥaṭṭāʾt* H2633 (in its meaning “sin offering”), which designates doing that by which atonement is realized. The relevant Greek terms are the verbs *hilaskomai* G2661 (“to make propitiation, make a reconciliation, atone for”) and *katallassō* G2904 (“to reconcile”), as well as their cognate nouns.

II. Atonement in the OT. It is important to note with respect to the sacrifices of the OT that they bear witness to the rupture of fellowship between God and the sinner, that they acknowledge the righteousness of the divine judgment upon the sinner, and, finally, that they constitute a divinely appointed provision for the sinner’s forgiveness and reconciliation to God. All of these ideas are basic to the thinking of the writers of the NT. Of course, in the NT the thought is added that the sacrifice of bulls and goats could never finally cleanse the conscience from the defilement of sin and appease an offended deity. Therefore the OT sacrifices have their fulfillment in the death of Christ, the true Lamb of God (Jn. 1:36), whom God has set forth to be a PROPITIATION through faith in his blood (Rom. 3:23 – 26); it is he who has obtained eternal redemption for mankind by his own blood, having entered once for all into the holy place not made with hands (Heb. 9:11).

The meaning of atonement in the OT is evidently foundational to the NT doctrine of Christ’s atoning work. The crucial material in this regard concerns the Day of Atonement, which has aptly

The altar of the temple was used for sacrificial atonement. (From a reconstruction of Jerusalem during NT times.)

been called the “Good Friday of the Old Testament.” Of the several passages alluding to this day (cf. Lev. 23:26 – 32; Num. 18; 29:7 – 11), Lev. 16 is of capital importance. The distinctive ceremonial involves many details, some of which are no longer perspicuous, but it is eminently clear that on this day there was the highest exercise of the high priest’s mediatorial office. Being a sinner himself and representing a sinful people, he discarded his gorgeous high priestly garments and, having bathed himself, assumed an attire destitute of all ornament, as fitting a suppliant suing for forgiveness. This attire was becomingly white, symbolizing the purity required of those who would enter into the presence of the Holy One of Israel. See PRIESTS AND LEVITES.

Being thus prepared and properly accoutered, the high priest performed the sacrifices that climax the whole system of purification in Leviticus. By these sacrifices, which involved the confession of sin (the priest laid his hands on the head of the scapegoat, confessing Israel’s transgressions, thus transferring them to the head of the goat, Lev. 16:21), and the sprinkling of the shed blood seven times toward the MERCY SEAT where the presence of the Lord dwelt, the priest made atonement for the sins of the people. Thus, by a ceremonial act at the central sanctuary, peace and fellowship with the God of the covenant were restored. The entire removal of the cause of God’s alienation was symbolically set forth, both by the giving of the life of one animal and the sending of another into the wilderness.

III. Atonement in the NT. It is this ceremonial of the Day of Atonement that constitutes the principal paradigm for the author of Hebrews in his interpretation of the DEATH OF CHRIST. In his use of the Levitical materials to illumine the meaning of Christ’s death, one has a striking example of the continuity-in-movement of redemptive history. What Christ did is analogous to what the high priest did in the OT. The author of this epistle knew nothing of the approach that contrasts the supposed OT view of God, as an angry Deity appeased by the shedding of blood, with the NT God of Jesus, who as a loving Father dispenses the favor of forgiveness freely to all his erring children. Rather, without the shedding of blood there can be no remission of sins (Heb. 9:22). All the symbols

Goats grazing on the hillside E of Bethlehem. In the time of the Bible, the sins of the people were placed upon the scapegoat, which was then led out into the wilderness.

and ceremonies in the OT teaching the atonement find their true meaning and fulfillment in the new covenant in Christ's blood (Matt. 26:28; Heb. 12:24). He is the suffering servant of the Lord who brings redemption to all mankind.

Along with this fundamental continuity of redemptive revelation there is discontinuity, a change brought about by the movement of history. The covenant in Christ's blood is a *new* covenant (see COVENANT, THE NEW). The writer to the Hebrews sharply contrasts the work of the high priest in the OT with that of Christ in the NT, particularly in terms of its efficacy. Whereas every year the ritual of the Day of Atonement was reenacted as the priest entered the Holy of Holies with the blood of the appointed victim, Christ has entered once and for all into the true sanctuary, not made with hands, into the presence of God, to make intercession for us with his own blood. He has secured a lasting deliverance for mankind. Access to God is no longer granted to the high priest alone, who himself was limited to restrictions of time, place, and circumstance. Rather Christ, the great High Priest, has opened a new and living way to God, a way by which all whose hearts are purged from the guilt of sin may at all times have free access to the Father. Having made atonement for sin, he has reconciled man to God (cf. Heb. 7 – 10).

The same basic interpretation of Christ's death prevails throughout the NT. According to Paul, one is justified by the blood of Christ (Rom. 5:9), for God has set forth Christ to be a propitiation ("sacrifice of atonement," NIV and NRSV) through faith in his blood (Rom. 3:25). Both Jews and Gentiles have been reconciled to God by the cross (Eph. 2:16). Christ has made peace by the blood of his cross, reconciling sinners to God in the body of his flesh through death (Col. 1:20 – 22). Christ suffered for all, bearing our sins in his own body on the tree, healing us by his stripes (1 Pet. 2:24; cf. Isa. 53). Therefore one can understand the saying of the Lord that the SON OF MAN came to give his life a ransom for many (Matt. 20:28), and join with the redeemed in the book of Revelation in ascribing praise to him "who loves us and has freed us from our sins by his blood" (Rev. 1:5 – 6).

IV. The doctrine of the atonement. In this all too brief survey of the biblical materials, we shall venture to outline a doctrine of the atonement, touching upon the questions commonly discussed by the theologians.

A. Its reason. The first point to be made is that the atonement originated with God; it was he who provided it. However one may trace the development of blood sacrifice among the Hebrews, there can be no doubt that in both the priestly and prophetic writings of the OT it is God who appointed the various rites, giving to Moses and those who followed him instructions concerning the manner in which they were to be rendered and the benefits which they secured to the worshiper. So it is in the NT. The atonement for sin provided by the death of Christ had its source in God. It is he who “was reconciling the world to himself in Christ” (2 Cor. 5:19).

The ultimate reason for this initiative is not to be found in any necessity laid upon God, but in his free and sovereign LOVE (Jn. 3:16). This is the ultimate of REVELATION; that is, the atonement finds its ultimate explanation in an unfathomable urge in God toward his sinful and alienated creatures. He has been pleased, for reasons known only to himself, to set his love upon those who are unworthy. The Lord has loved sinners with an everlasting love (Jer. 31:3), and in due time commended that love to them in that while they were yet sinners Christ died for them (Rom. 5:8).

This, then, is the final reason for the atonement. When Scripture says that God is love (1 Jn. 4:7 – 8), it teaches that love is no incidental aspect of God’s being, something he may choose to be or not to be at his pleasure. Rather, it is the essence of his being. Though people can discover no reason in themselves, no value or worth that would evoke that love, yet he loves them because he is God who is love. The Lord says that he set his love upon his people, not because they were greater in number than any other—for they were the fewest—but because he loved them (Deut. 7:6 – 8). That is, he loved them because he loved them! The reason for his love is hidden in himself whose name is I AM WHO I AM (Exod. 3:14). Even when his people, like an unfaithful wife, went whoring after other gods, the Lord loved them still (Hos. 11:8 – 9). “This is love: not that we loved God, but that he loved us and sent his Son as an atoning sacrifice for our sins” (1 Jn. 4:10). This “love divine, all loves excelling” cannot be frustrated at last; it is a love, says Paul, from which nothing can separate us (Rom. 8:38 – 39). The reason for this is that God’s love is not dependent upon anything in the sinner; it is a love which is sovereign and free.

B. Its nature. If love is the reason for the atonement, one may still ask why love should have taken this mode of fulfilling its urgent purpose. In answer to this question, the ancient fathers of the church placed great stress on a saying of Jesus recorded in Mk. 10:45 and Matt. 20:28, “the Son of Man did not come to be served, but to serve, and to give his life as a ransom for many.” To RANSOM someone means to redeem him by purchasing his release through the payment of a price. It was assumed that Christ gave his soul, in lieu of man’s, to the devil and paid the ransom price of the delivery from his powers. The theory was that since the first parents had sold their souls to the devil, he had a legal claim over men, which God, in justice, must satisfy. Hence, Jesus gave his soul as the ransom price for man’s release and “descended into hell,” as the APOSTLES’ CREED says. But having kept his bargain, it was impossible for Satan to hold him in hell. The third day he rose in triumph, taking with him all whom he had redeemed.

Of course, Jesus did not say that he came to give his life a ransom *to the devil*, and nowhere does the NT, in elaborating this redemption motif, make such an affirmation. It is true that the concept of ransom presupposes bondage, the need of release, and the payment of a price to obtain this release. But the primary emphasis of Scripture is upon what sinners are redeemed from, rather than to whom the ransom is paid. The overall implication of Scripture is that Christ’s atoning work finds its ultimate objective in God; it is God who is reconciled. It is most natural, when thinking of Christ’s

death as a ransom, to assume that the payment is to God in the sense that sinners owe him an uncompromised obedience, a debt they cannot render, but one paid by Christ on our behalf, through his own obedience unto death “even death on a cross” (Phil 2:8).

Though Scripture does not spell out a “ransompaid-to-the-devil” theory, it does teach that the redeemed are safe from Satan’s power; this is the truth contained in the ancient or “classic view” of the atonement known as *Christus Victor*. The devil has sinners under his power; as a cruel taskmaster he drives them to sin. But Christ by his death redeemed man from this thralldom. (Note Bunyan’s theological exactitude in the *Holy War* as he describes how Diabolus began to tremble at the prospect of Emmanuel’s imminent victory and clandestinely stole out to the gate of the city by night to hold a colloquy with the Prince. His claim to a right over the city of Mansoul was repudiated, and his effort to strike a bargain rebuffed. He was denounced as a usurper and forced to abdicate.) According to Heb. 2:14, Christ partook of mankind’s flesh and blood, that through death he might destroy him who has the power of death, that is, the devil. Paul referred to the triumph which Christ obtained over principalities and powers at the cross, making an open display of them (Col. 2:15). (Cf. G. Aulén, *Christus Victor* [1951].)

The question concerning why God’s love expresses itself by way of atonement, which the ancient fathers answered in terms of the ransom theory, was deeply probed in the 11th cent. by Anselm of Canterbury in his classic work *Cur Deus Homo*. His answer was that though prompted by his love to redeem us, God must do so in a manner consistent with his justice. The necessity of the atonement, then, is an inference from the character of God. Sin is a revolt against God, and he must inevitably react against it with wrath. Sin really creates an awful liability, and the inexorable demands of the divine justice must be met. The truth that God is love does not stand alone in the Bible. The God of the Bible keeps wrath for his enemies (Nah. 1:2); his “eyes are too pure to look on evil” (Hab. 1:13). The God of Jesus is to be feared as one “who can destroy both soul and body in hell” (Matt. 10:28). “The wrath of God,” wrote Paul, “is being revealed from heaven against all the godlessness and wickedness of men” (Rom. 1:18). Therefore the death of Christ is the way God shows that he is righteous in forgiving sins and in justifying the sinner who has faith in Jesus (Rom. 3:24 – 26). God justly demands satisfaction for one’s sins, and since by Christ’s death satisfaction is given, the sinner is forgiven and the punishment remitted. The essence of Anselm’s theory of the atonement—*vicarious* or *substitutionary satisfaction*—is the theory that has dominated the orthodox tradition.

The basic objections to this view drive one back to a kind of theological watershed, and it would take us far beyond the scope of this article to explore all aspects of the question. For one, it is argued that the idea of *satisfaction* is inimical to the fundamental insight that God is love, a sort of vestigial remnant from the imperfect view of the angry Deity portrayed in the OT. Furthermore, it is alleged, the notion of *vicarious* suffering is unethical. How could someone else merit the divine favor for men? Anselm, it must be said, never contemplated these questions seriously. For him it was assumed, on the basis of Scripture, that the character of God requires atonement. As for its vicarious character, he reasoned that only the God-man could render such atonement, since it is man who has offended and God against whom the offense was directed.

In the last analysis, the question is whether one believes the fundamental thought forms of Scripture to be a permanent and final revelation. For all the limitations in Anselm’s formulation, it appears to this writer that he grasped an essential aspect of the teaching of Scripture. According to Isa. 53, the Suffering Servant was wounded for *our* transgressions, *he* was bruised for *our* iniquities, the chastisement of *our* peace was upon *him*, and with *his* stripes *we* are healed. In the same vein is

Paul's affirmation that he "who had no sin" was made sin for us, "so that in him we might become the righteousness of God" (2 Cor. 5:21). Christ was not made a sinner in the sense of being inwardly polluted. Rather he was reckoned a sinner; our sin was imputed to Christ, even as his righteousness was imputed to us. In himself he bore the condemnation of sin so that to those who are in Christ Jesus there is now no condemnation (Rom. 8:1). He was made "a curse for us," in order to make man the righteousness of God in him (Gal. 3:13). Christ rendered a vicarious satisfaction for sin. It was not by substituting something in the place of the penalty, but rather by a vicarious enduring of the penalty. This is the essential point in Anselm's theory.

It should be noted that Anselm conceived of the satisfaction rendered by Christ solely in terms of his death; Calvary was the one great supererogatory act of history that relieved God of any necessity to punish the sinner. It is true that Scripture places the emphasis on Christ's death, but it should not be overlooked that his death, according to Scripture, is the climax of his life of perfect obedience (he "became obedient to death," Phil 2:8; cf. also Heb. 5:8). In Rom. 5:12 – 19 there is an express reference to Christ's one act of *obedience*, in contrast to the disobedience of the first Adam, an act of obedience by which the many are made righteous. And so Christ becomes the perfect High Priest, having not only removed the sanction of the broken law by being made a curse, but also having fulfilled the requirements of the law by his sinless life, thus achieving a perfect righteousness. See OBEDIENCE OF CHRIST.

A third theory of the atonement, sometimes referred to as the "moral influence theory," has its roots in the teaching of Abelard (1079 – 1142) and its flower in Protestant liberalism. According to this view, the basic meaning of atonement is what F. Schleiermacher has called "moral uplift," a new attitude toward life. There is no objective enmity on God's part; Christ's death has nothing to do with atonement in the sense of removal of divine alienation. Rather, Christ's faithfulness, even unto death, revealed the divine love and dissipated human mistrust of God, which is based on a misunderstanding of God's character. Thus people are justified by Christ's death, in the sense that through Calvary love is stirred up in men's hearts and they are led to repent of their sins.

Judged by the teaching of Scripture, this view is defective and inadequate; the very essence of the doctrine of the atonement is lost. Yet there is an essential element of truth, for the death of Christ has a profound influence on the beneficiaries. Because God is reconciled to the sinner in Christ, sinners are admonished to be reconciled to God. The Christian response to the death of Christ is to "rejoice in God through our Lord Jesus Christ, through whom we have now received our reconciliation" (cf. Rom. 5:8 – 11). Hence Paul can describe his work in the beautiful figure of a ministry of reconciliation. As an ambassador of Christ who had been entrusted with the message of reconciliation, he besought all people, on behalf of Christ, to be reconciled to God (2 Cor. 5:18 – 21). If the atonement is to become a personal reality in the individual life, there must be this radical, inward change, the response of love to love on the part of the sinner. (See also J. Denney, *The Death of Christ* [1951]; G. C. Berkouwer, *The Work of Christ* [1965].)

C. Its perfection. There are many aspects of the biblical doctrine of the atonement which may be included under this heading. Historically Roman Catholics and Protestants have been divided over the need of rendering a temporal satisfaction for postbaptismal sins, the former teaching that such satisfaction is rendered either in penance or purgatory. Protestants believe that Christ has rendered a full and complete satisfaction for all sins, so that the Roman Catholic teaching impinges on the perfection of Christ's atoning work.

Protestants have also urged the perfection of Christ's work against the sacrament of the mass,

which is allegedly a real, though not literal, reiteration of the sacrifice of Calvary. While they believe that the efficacy of Christ's atonement is continuously applied throughout the centuries, they do not believe that it is possible to enhance its efficacy by a constant repetition. In fact, the writer of Hebrews scores the inadequacy of the older order in that the sacrifices of the Aaronic priesthood had constantly to be repeated, bringing no final solution to the sin problem. But now Christ has once and for all put away sin by the sacrifice of himself, and by this one offering he has perfected forever those who are sanctified (Heb. 9:26; 10:14).

A word should be said about divine healing, which is commonly associated with faith but ultimately has to do with the atonement. "Faith healing" presupposes that in the atonement our Lord contemplated the body as well as the soul. So those who stress healing of the body, if they spell out their doctrine beyond a general faith in God, would say that the faith that heals is a faith in the Savior who himself "took up our infirmities and carried our diseases" (Matt. 8:17). Not to trust Christ for deliverance from the afflictions of the body, as well as the sins of the soul, is to impugn the perfection of his atoning work. Evangelicals have never doubted the efficacy of the atonement for the whole person, affirming the resurrection of the body, so that Christ's death becomes the "death of deaths" for all who die in him. But the obvious fact that all people die in a physical way has led the church as a whole to conclude that the redemptive benefits of the atonement, as far as the body is concerned, must await the *eschaton*, when there shall be no more curse, neither sorrow nor crying nor any such thing (Rev. 21:4).

D. Its extent. Perhaps the most discussed aspect of the atonement today is its extent, which is also an aspect of its perfection. Did Christ die only for the elect (limited or definitive atonement) or for all (universal atonement)? In the older Calvinistic-Arminian debate this question eventuated ultimately in the same result: not all people are finally redeemed by Christ's death, but only those who believe (the Arminians' emphasis), who are the elect of God (the Calvinists' emphasis). For theologians in the Arminian tradition, the doctrine of limited atonement is inconsistent with God's impartial love and with the sincere offer of the gospel to all. For theologians in the Calvinist tradition, a universal atonement restricts the power of Christ's work (his death does not actually redeem, it only makes redemption a possibility) and compromises the doctrine of grace (if Christ's death itself does not redeem, then the sinner contributes to his own redemption).

According to both traditions, there is only eternal separation from God for those who die outside of Christ. In contemporary theology, however, there has been much emphasis placed on the universal or cosmic scope of the atonement, and in many instances this universalism advocates in a forthright manner the restitution of every fallen, alienated creature to the fellowship of God. Unlike the older universalism that made all religions equally valid efforts to have fellowship with God, the new universalism is confessedly Christian; sinners are reconciled to God only by Christ. But all sinners are reconciled, and sooner or later they will be made to realize it. He is the Lamb of God who takes away the sin of the *world* (Jn. 1:29); God was in Christ reconciling the *world* unto himself (2 Cor. 5:19); in Christ shall *all* be made alive (1 Cor. 15:22); for he is the propitiation for the sins of the *whole world* (1 Jn. 2:2). This strand of universalism is stressed as pointing to the time of the restitution of all things of which Peter spoke in the first Christian sermon (Acts 3:21).

It is sometimes admitted that all people do not depart this life reconciled to God. But eventually they will be, it is averred, even though the reconciliation be delayed until they are "deep in eternity." However, there is no clear warranty in Scripture for this affirmation. In fact the uniform thrust of Scripture, for those who have come under the shadow of the cross, is that "now is the time of good

favor, now is the day of salvation” (2 Cor. 6:2). As for those who have not heard, they are described by Paul as “without hope and without God in the world” (Eph. 2:12). Unless one is ready, therefore, rather radically to amend the apostolic tradition and eliminate HELL, it would seem that one must not press the universal language of Scripture absolutely.

While one could desire that the atonement should embrace all people absolutely, it would appear that in the minds of the writers of Scripture the atonement is universal in the sense that sinners from every nation, tribe, people, and tongue shall one day stand before the Lamb clothed in white with palms of victory in their hands (Rev. 7:9). It is in this sense, then, that one should conceive the perfection of Christ’s atoning work. (See further J. Murray, *Redemption: Accomplished and Applied* [1955], 9 – 78; L. Morris, *The Atonement: Its Meaning and Significance* [1983]; H. D. McDonald, *The Atonement of the Death of Christ* [1985]; W. Grudem, *Systematic Theology: An Introduction to Biblical Doctrine* [1994], ch. 27.) See also SALVATION.

P. JEWETT

Atonement, Day of. The chief annual fast day in Judaism on the tenth day of the seventh month, TISHRI. The ritual is detailed in Lev. 16. On this day, when the temple or tabernacle still existed, the high priest entered the Holy of Holies to atone for the sins of Israel. Now it is called Yom Kippur (cf. Lev. 23:27 – 28, *yôm hakkippurîm H3427 + H4113*; LXX *hēmera exilasmou*). The NT refers to it as *hē nēsteia* “the fast” in Acts 27:9. PHILO JUDAEUS designated it “the feast of the fast,” and the MISHNAH called it simply “the Day” or “the Great Day.”

I. Relevant passages. The main passages dealing with this annual fast, including the legal enactments involved, are the following. (1) Lev. 16, the central passage; (2) Exod. 30:10, which refers to making atonement annually on the horns of the altar of incense; (3) Lev. 23:26 – 32, in the list of annual feasts, where the date is mentioned and where is ordered a holy convocation at the sanctuary, the fasting, an offering by fire, and rest from work; (4) Lev. 25:9, which says the JUBILEE YEAR was to commence on this day; (5) Num. 18, where duties and privileges of priests and Levites are given; (6) Num. 29:7 – 11, which gives laws connected with the sacrifices, namely, a holy convocation, fasting, rest from labor, the sacrifices of sin offering, burnt offerings, meal offerings, and drink offerings; (7) Ezek. 45:18 – 20, which presents a number of regulations for the festivals of Israel and the sacrifices.

II. The occasion for the day. Some have thought that the death of NADAB and ABIHU (Lev. 10:1) was the occasion for the Day of Atonement in order to emphasize God’s HOLINESS, which they had transgressed. One Jewish tradition connects the institution of the day with JACOB’S mourning for JOSEPH (Gen. 37:29 – 35; see *Jub.* 34:17). Those committed to the critical school of OT interpretation find the setting for the day in Ezek. 40 – 48. It is important to recall that the Year of Jubilee began on the Day of Atonement (Lev. 25:9), which some suggest was the conclusion of several New Year observances.

The critical opinion is that it is a composite record. T. K. Cheyne (in *EncBib*, 1:384) connects Lev. 16 with ch. 10 (with no explanation of how the intervening chapters came to be interposed in the text) and concludes that the regulations of the day are the outcome of an interesting development. With others, he holds that Ezekiel’s directions are prior to those of Lev. 16. It should be pointed out that the atonement for the temple occurs on the first day of the first month and, according to the SEPTUAGINT, on the first day of the seventh month (Ezek. 45:18 – 20), but no reference whatever is made there to atonement for sins. It is remarkable, indeed, that in the prophetic (some hold it may be symbolical)

portrayal of Ezekiel's temple, no mention of the Day of Atonement occurs.

III. The purpose of the day. The ritual of the day had in view one goal: to avert the wrath of God for the sins of the past year and to insure his continued dwelling among them. The shedding of blood and the sending off of the scapegoat were meant to cleanse the nation, the priesthood, and the sanctuary from sin. The entire meaning of the sacrificial system reached its climax, and the day has been well called the "Good Friday of the Old Testament."

This day was observed to remind Israel that in spite of all the daily, weekly, and monthly (on the new moon) sacrifices, sin was not fully atoned for. Always the offerer stood at a distance from God, unable to enter the holy presence of God, typified by the SHEKINAH cloud over the mercy seat. On this day the high priest was allowed by God to enter the Holy of Holies with blood as a representative of the people. See SACRIFICE AND OFFERINGS.

The basic principle underlying the Day of Atonement is that the offerings for sin throughout the year could not provide for or cover unknown ("secret") sins. Nevertheless, by these sins the sanctuary, the people, and the land were all rendered unclean. God could not be honored as he deserved under such circumstances. The Day of Atonement was instituted for the accomplishment annually of a complete atonement for all sin (Lev. 16:33). The whole priestly legislation was given its highest expression: God's holiness was recognized and satisfied by sacrifice. All the ceremonies and rituals of the day were meant to symbolize, as far as possible, a complete atonement for sin and the utter removal of the cause of God's displeasure. The Day of Atonement marked the highest exhibition of the mediatorial work of the high priest. In him all the people had access into the presence of God.

Z. Radovan/www.BibleLandPictures.com

The traditional ritual of Kapparot, performed on the eve of the Day of Atonement, symbolizes the transferral of guilt.

According to later Jewish theology, on New Year's day God determined the fate of every man on earth and on the Day of Atonement he sealed the decree. The intervening ten days of penitence (actually counting from the first through the tenth of Tishri) were observed in order to avert an unfavorable decree. Only unintentional sins were in view (Lev. 4:2, 13; Num. 15:24), as reflected in the MISHNAH'S warning: "He who says, I will sin, [because] the Day atones; to him the Day will bring no atonement" (*m. Yoma* 8:9; cf. Heb. 9:7, "in ignorance").

IV. The importance of the day. The Day of Atonement is the only fast day stipulated in the Mosaic law. In the two centuries before the advent of Christianity, it played a significant role in Judaism. References to it in the Mishnaic tractate *Yoma* and in other Jewish sources leave no doubt in the matter. Conceptually, the crucifixion accounts of the NT and the entire epistle to the Hebrews, along with Paul's letters, are directly related to it. The Day of Atonement was so central and vital to

Judaism that it outlived the destruction of the temple (A.D. 70) and the loss of the entire sacrificial system. The observance actually manifested that Israel believed the cleansing of their sins was accomplished by the prescribed rites given by God, and that the forgiveness and grace of God were extended to them and formed the basis for their continuance in fellowship with him as his covenant people. It demonstrated godly sorrow for their sins (indicated by their fasting). It realized the purification of the sanctuary defiled by the sins of Israel. Atonement was made for all the transgressions of the congregation. The consciousness of sin in Israel was deepened through the exercises of the day. God was propitiated for the year just past.

The day is not without spiritual significance and instruction for the Christian today. The more one compares the rituals of this day with what was accomplished perfectly by Christ on Calvary, the more the conviction is confirmed that all the rites of the Day of Atonement, and all the religious appointments in Israel, were only shadows preparing for the coming of finality in Christ (Heb. 9:24; 10:1).

V. The day as a fast. Although some scholars disagree, the words of Lev. 16:29 appear to indicate that the day was a fast: “This is to be a lasting ordinance for you: On the tenth day of the seventh month you must deny yourselves and not do any work” (cf. also 23:27, 29; Num. 29:7). It is also described as “a sabbath of rest” (Lev. 16:31; 23:32; literally, “a sabbath of sabbatism,” meaning perhaps “a most solemn sabbath”).

VI. Contents of Lev. 16. Basic to a proper understanding of the day is a close scrutiny of the details in Lev. 16. The chapter may be divided into four sections: (1) vv. 1 – 10, personal preparations by Aaron for the rites of the day, including his clothing and bathing, as well as information regarding the animals for sacrifice; (2) vv. 11 – 24, the ceremonies described in detail; (3) vv. 25 – 28, additional concluding directions for the ceremonies of the day; (4) vv. 29 – 34, directions for the congregation. The contents of these sections are so clearly interwoven and interdependent that the views which attribute the chapter to various sources cannot be substantiated. Modern attempts to disprove the unity of the chapter are far too arbitrary and subjective to be tenable.

VII. The rites of the day. The rites of the day were complex and minute, but all had meaning for the ultimate purpose of the day: atonement by sacrifice according to God’s specific appointment. As already seen, the feast was so important that, through the years, later observances added elements to the original arrangement. It is profitable to examine both types of observance.

A. Early observance. On this day the high priest removed his official garments of glory and beauty, clothed himself in white linen as a penitent with the rest of the nation, and then carried out the ceremonies of the day. (1) He offered a bullock as a sin offering for himself and the priests. (2) With a censer of live coals from the altar of incense he entered the Holy of Holies to fill the compartment with incense. (3) He sprinkled the blood of the bullock on the mercy seat and on the floor before the ark of the covenant. (4) He cast lots over the two live goats brought by the people. (5) Slaying one of the goats as a sin offering for the nation, he took the blood inside the veil and sprinkled it as before, thus making atonement for the holiest place. (6) He confessed the sins of the people over the live goat, placing his hands on its head. (7) He sent the live goat away into the wilderness. The live goat is called the scapegoat (i.e., the escape goat; see AZAZEL). Symbolically, it carried away the sins of the people (cf. C. L. Feinberg in *BSac* 115 [1958]: 320 – 33). (8) He clothed himself in his usual

apparel, offering now a burnt offering for himself and one for the people with the fat of the sin offering. The flesh of the bullock and the goat were burned outside the camp.

B. Later observance. In later times the feast gained in significance, so its ritual was greatly enlarged (cf. H. Danby, *The Mishnah* [1933], 162 – 72, for a translation of tractate *Yoma*). For instance, on the Day of Atonement the high priest had to bathe five times and perform ten washings. No matter how unobservant a Jew may be of the rites of Judaism, unless he has finally severed all ties with his faith, he still celebrates this day. In Judaism, after the close of the OT canon, the first day of the seventh month witnessed a blast of trumpets and a holy convocation (Lev. 23:23), which began a ten-day period of repentance.

In modern Judaism the Day of Atonement concludes the ten days of penitence, beginning with the Jewish New Year (Rosh Hashanah), which coincides with the biblical Feast of Trumpets. The ten days are set aside for spiritual meditation and preparation for the great Day of Atonement. (Together these ten days are known as “The Solemn or Awesome Days.”) The Day of Atonement, then and now, begins on the evening of the ninth of Tishri at sunset and lasts until the evening of the tenth (Lev. 23:32). Fasting includes no eating, drinking, washing, anointing, putting on footwear, and marital intercourse (*m. Yoma* 8:1). Children and the sick always have been exempt from the fast.

Because the high priest was the central personality throughout the ceremonies, he took up residence in the temple seven days before the festival (*m. Yoma* 1:1). He rehearsed the ceremonies he was to perform. On the eve of the day he kept an all-night vigil. In fact, men were especially delegated to keep him awake. After bathing (Lev. 16:4) and offering the burnt offering in the morning (Num. 29:8 – 11), he donned white linen (Lev. 16:4) and was prepared to conduct the rites. These rites consisted of (1) the sacrifice for the priests, (2) the sacrifice for the people, and (3) the scapegoat ritual. With the blood of the bullock (the sin offering) and with incense, the high priest entered the holiest (Lev. 16:12 – 14). After filling the compartment with a cloud of incense, he left to pray and again entered the Holy of Holies (in a second stage of the ceremonies) to sprinkle blood on the MERCY SEAT for the sins of the priests.

The sacrifice for the nation was a goat chosen by lot from two identical animals. This goat was slain and its blood sprinkled on the ark seven times. The veil and the horns of the altar of incense were also sprinkled. The live goat, designated “for Azazel” (Lev. 16:8, 10, 26 NRSV; NIV, “as a scapegoat”) as the first had been “for the Lord,” was taken by the high priest, who laid his hands on it, confessed the sins of the people, and then committed it to one especially appointed to lead it away into the desert amid the jeering and imprecations of the people. After this the high priest put off his garments and put on his usual apparel to offer burnt offerings with the fat of the slain bullock and goat (v. 24). The remains were carried outside the camp and burned. The people rejoiced and danced at sunset.

The rabbis claimed that the high priest sprinkled blood forty-three times on this day. The Mishnah indicates that whenever the high priest pronounced the ineffable divine name (YHWH), the congregation prostrated themselves and cried: “Blessed be the name of the glory of his kingdom forever and ever.” At the conclusion of the ceremonies of the day, so great was the relief of the people that they accompanied the high priest to his home where he entertained them at a feast. The people in general gave themselves to rejoicing; the young men and maidens danced in the vineyards (*m. Ta’anit* 4:8).

Today no sacrifices are offered, but the day is observed by abstaining from labor, by prayers, fasting, and multiplied confessions. The services are begun with the blowing of the ram’s horn (as

though to direct God's attention to the willingness of Abraham to offer Isaac according to the will of God, Gen. 22) and the recital of the solemn prayer called Kol Nidre ("All vows"). It is probably from the Middle Ages, and in it the worshipers petition God to forgive them for breaking vows they could not fulfill. Worship services are conducted the next day from early morning until sunset, when a blast of the ram's horn concludes the ceremonies of the day.

VIII. The silence of the historical books. Those who have studied the subject carefully have pointed out some problems connected with the Day of Atonement. Why, in view of all the elaborate injunctions for this day in Aaron's lifetime, is there so little evidence that it was observed in Israel's later history? Why are the historical books silent on the subject? Although critical scholars seek to relate Ezek. 45 to Lev. 16, the correlation is artificial and strikingly unconvincing. Differences between the two accounts are patent. Why is the Day of Atonement so inexplicably omitted in Neh. 8? The followers of J. Wellhausen conclude that all the legislation in the Pentateuch concerning this day belongs to postexilic times, so that the Day of Atonement was introduced in Israel shortly after the middle of the 5th cent. B.C. The background of the feast is supposed to be found in Ezek. 45 and the postexilic portions in Zech. 7:5 and 8:19. It must be clearly understood that in the days after the 5th cent. B.C. there is no more mention of the Day of Atonement than previously. All that can be pointed to is Sir. 50:1 – 21 (an evident reference to the observance), then Philo, and finally the NT (Heb. 6:19; 9:7, 13 – 22; 10:1 – 14). In all probability, Acts 27:9 is a reference to the day. Care must be exercised always in dealing with an argument from silence.

IX. Historicity of the day. It is an impossible task to excise, stylistically or logically, Lev. 16 from its fundamental place in the scheme of the book of LEVITICUS, or from the entire priestly system in Israel for that matter. Furthermore, it is both hopeless and useless to seek to dismember the chapter's closely knit and logically presented stipulations and rites. A historical difficulty of insurmountable proportions is this: if the ARK OF THE COVENANT no longer existed after the exile, and the prediction of Jer. 3:16 led Israel to expect no restoration or recovery of the same, how could the Day of Atonement have been inaugurated at that late date when its entire efficacy and worth were linked inseparably with that ark? Furthermore, since Ezekiel and his appointments are related to a distant future (a view that has much to commend it), the argument based on his regulations (which, it can be readily verified, differ widely from those of the Pentateuchal legislation) is pointless when it aims to credit him with influencing the legislation in Lev. 16.

X. NT references. The reference to the fast in Acts 27:9 is understood generally to point to the Day of Atonement, because it is the only one mentioned in the Mosaic law. Even a cursory reading of the epistle to the Hebrews will disclose that it moves in the atmosphere and ritual of the OT sacrificial system and, in particular, of the Day of Atonement. The aim of the sacred writer is unequivocal: it is to demonstrate the fulfilling finality of the central event of the Scriptures, the ATONEMENT of Christ on Calvary.

Hebrews explains the ritual of the day as a type of the atonement accomplished by Christ (Heb. 9 – 10). The High Priest is the Lord Christ. The blood is his blood shed on Calvary. As the high priest of the OT entered the holiest of all with the blood of sacrifice, the unmistakable evidence of forfeiture of life, so Christ has entered into heaven to appear before the Father in our behalf (Heb. 9:11 – 12). It is emphasized that the entrance of the high priest into the most holy, with blood, typified the appearance of Christ in heaven for us when he had purchased redemption for us (9:24 – 28).

The fact that the same sacrifices had to be repeated each year spoke clearly and conclusively that final atonement had not yet been achieved. Christ provided eternal redemption for the world (Heb. 9:12). The OT offerings served only to bring about a temporary and outward ceremonial cleansing; Christ's one sacrifice adequately provided inward cleansing of heart and conscience (9:13 – 14). Whereas the ordinary Israelite could not enter the innermost sanctuary, and only the high priest was permitted to do so one day annually, the believer today has constant access through grace to the very presence of the holy God (4:14 – 16; 10:19 – 22). The ceremonies of the day formally closed when the sin offering was burned outside the camp of Israel; Jesus suffered outside the gate of Jerusalem when he bore our reproach (13:11 – 12).

C. L. FEINBERG

atonement cover. See MERCY SEAT.

Atroth at'roth. See ATROTH SHOPHAN.

Atroth Beth Joab at'roth-beth-joh'ab (עֲטְרוֹת בֵּית יוֹאָב H6502, “crowns [or cattle pens] of the house of Joab”). Apparently a village near BETHLEHEM listed among the descendants of Salma in the genealogy of JUDAH (1 Chr. 2:54; KJV reads, “Ataroth, the house of Joab”). However, the words could be translated, “the chief ones of Joab's clan,” and be taken as a description of the Netophathites or of the towns of Bethlehem and NETOPHAH.

Atroth Shophan at'roth-shoh'fan עֲטְרוֹת שׁוֹפָן H6503, “crowns [or cattle pens] of Shophan”). A city of the Gadites built in the territory conquered from SIHON (Num. 32:35). The KJV reads, “Atroth, Shophan,” as though two places are meant (cf. Vulg. MSS, *Etroth et Sophan*). Some scholars identify the site with Rujm (Aṭṭarus, which is less than 2 mi. NE of ATAROTH of GAD).

Attai at'i (עֲתִי H6968, perhaps “timely, ready” or short form of עֲתִידָהּ H6970; see ATHAIAH). (1) Son of Jarha (an Egyptian slave) and descendant of JUDAH through JERAHMEEL (1 Chr. 2:35 – 36).

(2) A warrior, sixth in rank among the Gadite officers who served DAVID at ZIKLAG (1 Chr. 12:9). These Gadites “were brave warriors, ready for battle and able to handle the shield and spear. Their faces were the faces of lions, and they were as swift as gazelles in the mountains” (v. 8).

(3) A son of REHOBOAM by his favorite wife MAACAH; grandson of SOLOMON (2 Chr. 11:20).

Attalia at'uh-li'uh (Ἀττάλεια [some editions, Ἀτταλία] G877). A seaport in PAMPHYLIA in the S of ASIA MINOR. Returning to ANTIOCH OF SYRIA from their missionary journey, PAUL and BARNABAS embarked at Attalia (Acts 14:25 – 26), where they had presumably landed earlier, on their way from PAPHOS to PERGA (13:13). The city was founded by ATTALUS II of PERGAMUM between 165 and 138 B.C., and subsequently passed under Roman domination. It became an important seaport, minting its own coins, and in the time of Paul was apparently in the province of Lycia-Pamphylia (cf. A. H.

The seaport of Attalia.

M. Jones, *The Cities of the Eastern Roman Provinces* [1937], 130 – 45). Attalia later became a Roman colony, and today, with the name Andaliya (Antalya, Adalia), it is one of the principal seaports of Turkey. (There was another city called Attalia near Thyatira.)

K. L. MCKAY

Attalus at'uh-luhs (Ἀτταλος). King of PERGAMUM. Attalus to whom the Romans wrote commending the Jews (1 Macc. 15:22) was probably Attalus II Philadelphus who reigned from 159 to 138 B.C., for there seems to be no good reason for doubting that the Roman decree belongs to the year 139 rather than a century later, as implied by JOSEPHUS (*Ant.* 14.8.5; see *HJP* [1893], 1/1:266 – 67, but differently in rev. ed. [1973 – 87], 1:194 – 95). Like his father Attalus I and brother EUMENES II, he was a close ally of Rome. He was an able ruler and strengthened his kingdom by founding cities (e.g., ATTALIA) as well as by warfare and diplomacy. His nephew, who succeeded him, bequeathed the kingdom of Pergamum to Rome. When in 153 Alexander Balas claimed the Syrian throne from Demetrius I and thereby established Jonathan as Jewish high priest (1 Macc. 10), he was actively supported by Attalus. See MACCABEE.

K. L. MCKAY

Attharates, Attharias ath'uh-ray'teez, ath'uhri'uhs (Ἀτταρατης, Ατθαριας). An individual (or two individuals) associated with EZRA and NEHEMIAH (1 Esd. 5:40 [KJV, "Atharias"; NRSV, "Attharias"]; 9:49 [KJV and NRSV, "Attharates"]). These names, however, are probably variant representations of the Persian title TIRSHATHA, usually translated "governor" (e.g., Ezra 2:63) and applied to NEHEMIAH or to other Jewish leaders after the EXILE.

Attharias. See ATTHARATES.

Attica, Attic Greek, Atticism. See ATHENS; GREECE; GREEK LANGUAGE.

attire. See DRESS.

attitude. A state of mind or disposition.

I. Psychological definition and description. F. L. Ruch defines *attitude* as a “relatively stable, learned emotionalized predisposition to respond in some consistent way toward one or a group of objects, persons, or situations” (*Psychology and Life*, 6th ed. [1963], 641). Attitude represents both (1) an orientation toward or away from some object, concept, or situation, and (2) a readiness to respond in a predetermined manner to these or related objects, concepts, or situations. (This description combines features of definitions by G. W. Allport, *The Nature of Prejudice* [1954], and C. I. Hovland et al., *Communication and Persuasion* [1953].)

The term expresses something of an enduring, learned disposition to behave in a consistent way toward a given class of objects; a persistent mental and/or neutral state of readiness to react to a certain object or class of objects; not as they are but as they are conceived to be. The readiness state has a directive effect upon feeling and action related to the object. What the term seeks to convey overlaps in actual behavior with other psychological factors that are preparations for and attendant to response. *Attitude* is one of many terms that refer to an aspect of personality and behavior that are inferred to account for persistent and consistent behavior toward a family of related situations or objects. Specific attitudes are named in terms of the object with which they are concerned; they are often qualified to indicate the feeling component as well (e.g., “his negative attitude to religion”).

The first technical use of the term *attitude* was made by M. Calkins for such basic relations of the self to its objects as receptivity, activity, sympathy, egoism, etc. Later use includes such affectively toned states as expectancy or certainty. Interest has been shown in regard to sociological and psychological uses, both private and public, which might properly be made of the term. In particular, there is the matter of measurement. Instruments are developed which seek to elicit responses from persons and/or groups indicative of attitudes or opinions which they hold. Typically, the test items are stimuli of some sort of verbal statement concerning some situation, trend, issue, problem, or principle. Examples include the *Thurstone Attitude Scale*, which utilizes certain statements representing degrees of strength of a given attitude; the *Likert Attitude Scale* seeks degrees of steps of agreement; and the *Guttman* or *Cornell Scale of Attitudes*, composed of items to which higher or lower strengths of attitudes may be determined. Psychologists, such as Carl Jung, have suggested that there are “attitude types” prevalent among persons and/or groups, a classification of individuals that may be made according to their general way of reacting to stimuli.

II. Related biblical ideas. The term *attitude* does not appear in the KJV. Nor is there any specific word in the ancient languages that corresponds to it precisely, although the Hebrew noun *yēšer* H3671 is suggestive (“inclination,” Gen. 6:5; cf. also Deut. 31:21). However, the term *lēb* H4213, usually translated “heart” or “mind,” often comes close to the same idea (indeed, the Berkeley version with good reason renders it “attitude” in Ps. 26:2b). In the NT, note such Greek terms as *dianoia* G1379 (e.g., Lk. 1:51, “thoughts”), *ennoia* G1936 (e.g., 1 Pet. 4:1; NIV, “attitude”), *kardia* G2840 (e.g., Eph. 6:5, “heart”), and the verb *phroneō* G5858 (e.g., Phil. 2:5; NIV, “Your attitude should be,” lit., “Think in [or among] you”). In any case, one notes a profound concern for this concept throughout the Scriptures. There is a vital importance attached to that “inner posture and predisposer of behavior.” The biblical treatment of humans behavior gives special attention and importance to such aspects of personality and actions as are well expressed in the term *attitude*. Were the biblical writers writing in our time and with the English language, it is probable that they might make much use of the word. The Scriptures emphasize the importance of those inmost thoughts, feelings, and purposes of the soul. “For the word of God... judges the thoughts and attitudes [*ennoiōn*,

Atum. See RE.

augury. See DIVINATION.

Augustan Cohort (σπεῖρα Σεβαστή G5061 + G4935). This title, corresponding to Latin *cohors Augusta*, occurs in Acts 27:1 (KJV, “Augustus’ band”; NIV, “Imperial Regiment”) with reference to troops commanded by “a centurion named Julius” and has occasioned much speculation. A COHORT was normally a tenth part of a LEGION and was itself divided into six centuries, each under a CENTURION. A cohort, therefore, comprised 600 men. In the auxiliary troops the cohorts were the basic unit of division and each numbered 500 or 1,000 men. Each bore some honorific title (such as *gallica* or *fidelis*), and they were commanded by prefects or tribunes.

The Greek word in the present context, *speira*, normally translates the Latin *manipulus*, that is, a force of two cohorts (e.g., Polybius, *Hist.* 11.23.1), although elsewhere it seems to be used of a cohort (e.g., Acts 10:1; Jos. *War* 4.4.2). None of these usages, all of which contain a measure of uncertainty, relieves the difficulty of the present context. If the phrase refers to a true cohort, regular or auxiliary, why was it commanded by a centurion? Some scholars, following the great German historian T. Mommsen, suppose that the unit mentioned here was a special corps of imperial couriers called *frumentarii*, functioning as liaison officers between the emperor and his armed forces (W. M. Ramsay, *St. Paul the Traveller and Roman Citizen*, 14th ed. [1920], 315; R. J. Knowling in *EGT*, 2:516 – 17). On such an assumption, Julius would have been a legionary centurion detailed for this special task. This conclusion, however, does no more than account for the fact that it was a centurion who commanded this detachment. Was he, or the whole bodyguard, called Augustan?

The only contribution that can be made to this question is, first, the fact that there is archaeological evidence for a *cohors Augusta I* in SYRIA in the time of AUGUSTUS (H. Dessau, *Inscriptiones latinae selectae* [1954 – 55], 1:531, #2683). Second, it may be mentioned that JOSEPHUS wrote of a *turma* or cavalry called “Sebastian,” that is “Augustan,” the Greek word in the present context. Sebaste was SAMARIA, refounded by HEROD I under that name in honor of Augustus (but see F. F. Bruce, *The Acts of the Apostles*, 3rd ed. [1990], 511 – 12). There the problem must be left. Julius may have been a praetorian sent on a special mission to CAESAREA. (See further G. Webster, *The Roman Imperial Army of the First and Second Centuries A.D.*, 3rd ed. [1985], ch. 3.)

E. M. BLAIKLOCK

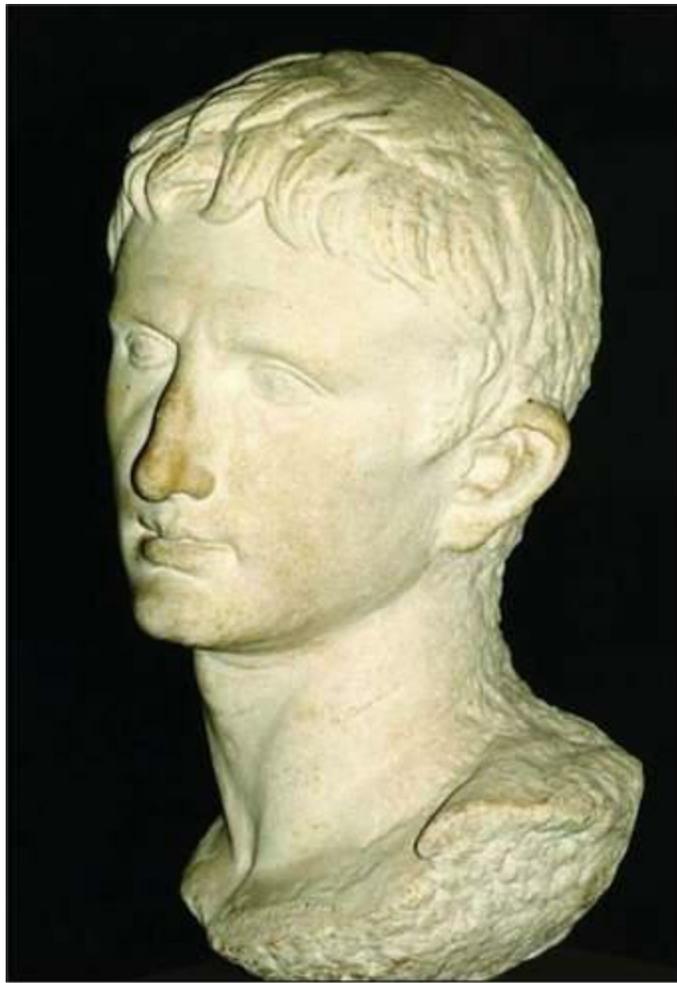

Augustine aw-gus’tin. Aurelius Augustinus, better known as Augustine of Hippo, was born in A.D. 354 in Latin-speaking N Africa (modern Algeria). His father was not a Christian, but his mother, Monica, raised him in the faith. Augustine rejected Christianity while still a teenager, and at the age 18 he became attracted to the MANICHEAN heresy. During his 20s he taught Latin rhetoric in various cities, including Milan, where he had a dramatic conversion experience in 386. Two years later he returned to Africa, and in 391, while visiting the city of Hippo Regius, he was ordained priest (in spite of his objections). A few years later he was appointed bishop, a position he held until his death

in 430.

Augustine's impact on the development of Christian theology is second to none, primarily because of two significant books, the *Confessions* and *The City of God* (a vindication of Christianity), but also because of numerous other treatises as well as his role in various controversies (such as the struggles over Pelagianism). Being ignorant of Hebrew and somewhat deficient in Greek, Augustine was not a biblical scholar of the same caliber as ORIGEN and JEROME, but he did make several important contributions to the field, especially through his treatise *De doctrina christiana*, a very influential discussion of the principles that should guide the interpretation of Scripture. (Useful treatments include P. Brown, *Augustine of Hippo: A Biography* [1967]; P. Bright, ed. and trans., *Augustine and the Bible*, new ed. [1999]; F. Van Fleteren and J. C. Schnaubelt, *Augustine: Biblical Exegete* [2001]; S. Lancel, *Saint Augustine* [2002]; J. J. O'Donnell, *Augustine: A New Biography* [2005]; note also the summary and extensive bibliography in *ODCC*, 128 – 30.)

Augustus Caesar aw-guhs'tuhs see'zühr (Αὐγουστος Καίσαρ G880 + G2790). Augustus was the honorific title conferred in 27 B.C. on Octavian (63 B.C. to A.D. 14), the adoptive heir of Julius CAESAR, who, by the hindsight of history, is called the first of the Roman "emperors." Constitutional crisis and recurrent civil war, the beginning of which may be arbitrarily dated at 133 B.C., had over the course of a full century destroyed the Roman republic. Chronic strife and political breakdown had demonstrated to Rome, to those parts of Italy still to be integrated with Rome, and to a Mediterranean world that had fallen under Roman control, the bankruptcy of the once powerful senate and the group of noble families which constituted it, and which by the right of ancient tradition and possession governed Rome. A political system that had been adequate to govern a city proved, as Rome expanded in her quest for a stable frontier, ill-equipped to govern an empire (in the geographic sense of that word, that is, the long irregular rectangle of lands that lay round the Mediterranean Sea).

The senate and Rome's central government had proved repeatedly unable to control the power of the commanders of the frontier armies; and frontier armies, with able generals to control and deploy them, were an unavoidable necessity caused by expanding military responsibility. The imposition of military solutions for constitutional problems, with the rivalries and conflict arising from the confrontation of armed groups, had long menaced law and order, and had accustomed Rome and the harassed Roman world to look for the intervention of the dynast and the "strong man." The senate itself, within the framework of constitutional law, had long accustomed the world to the legal subterfuge and expediency of emergency autocracy. Precedents of absolute power, designed to meet recurrent situations of tension and peril, strew the history of Rome in the 1st cent. B.C.

Marble bust of Augustus Caesar. Discovered at Pergamum (modern Bergama).

Julius Ceasar was last in the line of commanders who used military strength to promote their own interests or impose their own constitutional solutions on a politically moribund system. Emerging as victor from the Civil War against POMPEY, the champion of the senate that had sought to depose him, Caesar turned his great abilities of administration to restoring order and justice in a tormented land. Had subtlety and patience been a part of his genius, had he known how to appease and manage the senatorial oligarchy and maintain a fiction of republican rule, history might have recorded Julius—and not Gaius Octavius, who became Octavianus Caesar and, by senatorial decree, Augustus—as the first of the emperors of Rome. As it was, Caesar’s roughshod drive for efficient government, strong leadership, and political stability cost him his life. On March 15, 44 B.C., he fell to the daggers of senatorial opponents who resented his contempt for outmoded forms. It was one of the most senseless political murders in history. The murderers had no program save a vague archaism to which the eloquence of Cicero, Rome’s great orator and patriot, gave brief dignity.

Nor had the reactionaries reckoned on the forces they had loosed, and no one had thought of Octavian, recently adopted by Caesar, his legal son and heir, who at the moment was studying in Greece. With cool audacity, the nineteen-year-old boy came to Italy, claimed his inheritance, and found the land behind him. He had a flair for diplomacy and a genius for picking and using sound men, but he could not have won his astounding success had not immense moral and material forces, which he quickly learned to channel and manipulate, flowed in his direction. Civil war broke out again, and it was at Philippi in 42 B.C. that Octavian and Antony, Caesar’s one-time lieutenant, broke the remaining strength of the senatorial oligarchy. Cannily, Octavian remained in Italy. Antony moved E

to secure the Parthian frontier, which had broken amid Rome's preoccupations. It was a task for which he proved unequal, and the eastern Mediterranean survived the next few years only by the ineptitude and division of Rome's enemies.

It was here that CLEOPATRA, last of the Ptolemies, intervened to illustrate again the role of personality in history. The famous liaison of the Egyptian queen with Antony almost anticipated history and divided the empire. It was Octavian's opportunity. He held the true strength of Rome, for he was in possession of Italy and the west. War for the unity of Rome was inevitable, and at Actium, in 31 B.C., Octavian broke the naval might of Egypt and the east. He and his generals brought final order to the sadly tormented world, and in 27 B.C., after a semblance of "restoring the republic," Octavian received the title of Augustus.

The world longed for peace, and Augustus had given it the gift it needed so sorely. He succeeded where Julius failed, because he knew how to clothe autocracy in the semblance of republican forms. He called himself *princeps* or "first citizen." "Emperor" was a title held because he commanded all the military forces of the state. Augustus ruled by virtue of a concentration of old republican magistracies in his hands. He held little more than that which others, by the senate's vote and the people's gift, had held before, but he held all together. He gave a form of power to the senate and entrusted it with the provinces. In short, those who lived to bless the peace that Augustus gave were not aware of the sharp change that history chooses, looking back, to mark. Only the far-seeing knew that the republic was gone, and they, if they held this view, knew also that it had been long in virtual abeyance. The NT gives him but passing mention in a profoundly significant story: "In those days Caesar Augustus issued a decree that a census should be taken of the entire Roman world" (Lk. 2:1). (Cf. F. Millar, *The Emperor in the Roman World, 31 BC—AD 337* [1977]; F. Millar and E. Segal, eds., *Caesar Augustus: Seven Aspects* [1984]; R. Syme, *The Augustan Aristocracy* [1986]; K. Galinsky, ed., *The Cambridge Companion to the Age of Augustus* [2005].) See also TIBERIUS.

aul. See AWL.

aunt. The Hebrew word (*dôdâ* H1860, fem. of *dôd* H1856, "beloved," "uncle"), derived from terms of endearment used by young children, is used once of a father's sister (Exod. 6:20) and twice of the wife of a father's brother (Lev. 18:14; 20:20). The last two passages deal with prohibitions against incest.

Auranitis. See HAURAN.

Auranus aw-ray'nuhs (*Αυρανος*). The leader of an insurrection against Lysimachus in Jerusalem, described as "a man advanced in years and no less advanced in folly" (2 Macc. 4:40 NRSV).

Aurelius. See MARCUS AURELIUS.

aurochs. See WILD OX.

Auteas aw-tee'uhs. KJV Apoc. form of HODIAH (1 Esd. 9:48).

author. This English word, only in the sense of “one who begins or originates,” is used in several NT passages with reference to Christ. The writer of Hebrews calls Jesus the author (Gk. *archēgos* G795, “founder, prince, originator”) of our salvation and of our faith (Heb. 2:10 [KJV, “captain”]; 12:2 [in both passages, NRSV has “pioneer”]). It is significant that Peter refers to Jesus as “the author of life” in a context dealing with his death and resurrection (Acts 3:15, truly a fulfillment of Isa. 53:10 – 12). The Greek term appears frequently in the SEPTUAGINT with the sense “leader, prince,” a meaning found at least once in the NT, again with reference to Jesus (Acts 5:31). Some scholars argue that all the passages in which the word occurs speak of Jesus not so much as *originator*, but rather as the eschatological trail blazer who *leads* his people to salvation, faith, and life. The KJV uses “author” also as a translation of *aitios* G165 in one verse (Heb. 5:9; NIV, “he became the source of eternal salvation”). In one additional passage, the KJV supplies this word to clarify the meaning (1 Cor. 14:33, “God is not *the author* of confusion”; NIV, “God is not a God of disorder”).

Authoritative Teaching. A didactic Gnostic document preserved in the NAG HAMMADI LIBRARY (NHC VI, 3). Written originally in Greek (perhaps c. A.D. 200 in Alexandria), this tractate uses metaphorical language to describe the origin of the soul, its existence in the physical body, and its final salvation. (English trans. in *NHL*, 304 – 10.)

authorities, city. See CITY AUTHORITIES.

authority. This English term is used in the OT to translate a variety of words and expressions that refer to honor and power. In the NT it is used principally to render the Greek word *exousia* G2026 and indicates power rightfully held: the emphasis falling sometimes on the “authority” which the possession of the power rightfully gives, and sometimes on the reality of the “power” which conditions the right use of authority (cf. Jn. 1:12). The plural form is used by PAUL to designate evil and good angels as evil or good powers and authorities (Eph. 3:10; 6:12; Col. 1:16; 2:15). See ANGEL; DEMON.

Ultimate authority belongs to God as CREATOR and redeemer (see REDEMPTION). It is the basic conviction of all Scripture that “God is his own authority for the religious, and therefore the last for the race; and he is the only Authority man has in the end” (P.T. Forsyth, *The Principle of Authority* [1912], 146). Throughout Scripture God remains forever the source of human authority. To say that God is the ultimate authority in the realms of morals and faith is to be committed to the conclusion, which AUGUSTINE saw so clearly, that God’s authority and God’s self-disclosure are two sides of the same reality.

It is in his REVELATION that God’s authority is to be found: revelation is, therefore, the key to ultimate authority. In revelation God is seen as moral and redemptive, disclosing his authority. God’s revelation is demanding, urgent, and authoritative. God’s universal dominion over the world is his authority (cf. Exod. 15:18; Pss. 39:10; 93:1 – 2 et al.). As Lord and King of all nature and history, God has the unchangeable right to exercise authority over mankind. The Bible makes clear his sovereign right to demand OBEDIENCE, and to him all are held responsible and accountable.

Christ is the *locus* of God’s revelation and is, therefore, the incarnate authority of God. Since God’s will has been given personal embodiment in Christ, the Word made flesh, he becomes at once the final court of appeal and absolute norm to which the moral life of human beings must be referred, and the sure word and ultimate fact in which religious trust can be reposed. Divine authority finds its focus and finality in him. This is the reason the Gospels declare that his teaching caused astonishment

because he taught as one having authority (Matt. 7:29; Mk. 1:22; Lk. 20:2). The absoluteness of Christ's authority in the sphere of ultimate knowledge of God is asserted (Matt. 11:27), as is a like unique authority in the realm of a complete knowledge of people (Jn. 2:25). Christ's more-than-human authority is everywhere clear in the gospel records: it derives from his own nature as one within the Godhead, from his divine commission, from his fulfillment of the Father's will, from his work on behalf of sinners.

Jesus showed that he possessed authority in his own person by his attitude to the law (cf. Matt. 5:32 – 33) and by exercising the divine right to forgive sins (9:6 – 8; Mk. 2:10; Lk. 5:24). He presented his teaching as authoritative (Matt. 7:29) and claimed the right to judge hearts (Jn. 1:50; 2:24 – 25; et al.) and give eternal life (Jn. 17:2). Salvation is by faith in him (Matt. 10:32; 11:28 – 30; et al.). His authority continues by reason of his unbroken sonship with the Father (Matt. 28:18; Jn. 5:19 – 27; cf. Matt. 21:23 – 24; Mk. 11:28 – 29; 1 Cor. 15:24; Eph. 1:21; Col. 2:10; 1 Pet. 3:22; Rev. 12:10). He is “both Lord and Christ” and is the final authority as the ultimate revelation of God, being himself the divine sovereign of all and the Redeemer and King of all his people.

The authority of Christ is interpreted through chosen media. The Christ who is authoritative is the biblical Christ, for he is the only Christ known. This presentation of Christ was secured by his chosen apostles. They had a unique position as “elect and providential personalities” of the risen Lord (Forsyth, *Principle of Authority*, 377). Their elaboration and interpretation of Christ was not an intrusion upon revelation, but part of its scheme. They were men inspired of the HOLY SPIRIT to fill out to its fullness the revelation of Christ (see INSPIRATION). The apostles embodied the authority of Christ and from this point of view had no successors. They possessed a special apostolic authority (1 Cor. 12:28; Eph. 3:5; 4:11; 2 Pet. 3:2; Jude 17; et al.). They were the founders and builders of the CHURCH (Eph. 2:20). They were Christ's spokesmen with his own authority (cf. 2 Cor. 10:8); they felt no necessity to quote the Lord's specific words, but regarded their own as of him (1 Cor. 14:37; 2 Thess. 3:10, 12, 14; et al.; see APOSTLE). “I am not obliged to obey Paul because he is clever, or exceptionally clever, but I must submit to Paul because he has divine authority” (Kierkegaard).

The authority of God expressed in Christ and filled out by his chosen apostles is perpetuated in the written Scriptures. Although Christ wrote no book, the Scriptures are the product of his continued activity as ascended Lord through the Spirit, and as such they possess a like authority with him. “The Holy Spirit and the Apostles became correlative conceptions, with the consequence that the Scriptures of the New Testament were indifferently regarded as composed by the Holy Spirit or the Apostles” (A. Harnack, *The Origin of the New Testament and the Consequences of the New Creation* [1925], 49 n.). This brings the Spirit into relation with the Word, for the authority of Christ is mediated through the Word by the Spirit. This duality of Spirit and Word must be maintained, for herein lies the Christian principle of authority.

Authority exists independently of any appropriation of it. It must be recognized and received if it is to become decisive in experience. FAITH is the mode by which authority is appropriated. In the context of the duality of Spirit and Scripture, faith is the illumination of divine authority by the Spirit and the recognition of divine authority in the Word. A real authority is effective within experience, yet it is not the authority *of* experience, but *for* experience. It is an authority experienced. A certain authority spills over to church and creed because of their relation to Christ in his Word. The church is the community of those who have appropriated the authority of Christ within experience, and the creeds are the church's confession of its experience of Christ's authority. The individual experience of the believer, the community experience of the church, and the formalized experience of the creeds are not authorities in their own right. They all possess a derived authority, an authority that is real

only insofar as it derives from God's revelation in Christ and has its authentication in the Scriptures known and understood through the Spirit. (Cf. B. B. Warfield, *The Inspiration and Authority of the Bible* [1948]; H. Cunliffe-Jones, *The Authority of Biblical Revelation* [1948]; H. D. McDonald, *Theories of Revelation* [1963], esp. chs. 8 – 9.)

H. D. MCDONALD

Authorized Version. See VERSIONS OF THE BIBLE, ENGLISH V.

autumn. See PALESTINE V; SEASONS.

Ava ay'vuh. KJV form of AVVA.

Avaran av'uh-ran (Αυαραν, meaning unknown). Surname of ELEAZAR, fourth son of MATTATHIAS (1 Macc. 2:5; 6:43; KJV, "Savaran").

avarice. See GREED.

Aven ay'ven (אָבֵן H225, "emptiness, wickedness"). This name appears by itself only once in the NIV, "the Valley of Aven," probably the plain between the L EBANON and ANTILEBANON ranges (Amos 1:5; the LXX reads Ōn, perhaps a reference to BAALBEK). Elsewhere it occurs as part of another name, BETH AVEN. In the KJV and NRSV the name also occurs in Hos. 10:8 in what appears to be a derogatory reference to Beth Aven; however, some scholars prefer to take the word here as a common noun (cf. NIV, "The high places of wickedness"). Finally, the KJV uses the name in Ezek. 30:17 (following the MT), but it is better to vocalize the consonants as ōn, that is, HELIOPOLIS (cf. LXX and NIV; see also ON).

avenge. See VENGEANCE.

avenger of blood. Usual rendering of the Hebrew phrase, *gō'ēl haddām* (Num. 35:19 et al.). The meaning of the verb *gā'al* H1457 is "to loose, set free, redeem, vindicate, deliver as kinsman." In the case of homicide, it means to vindicate the human right to life, to free the land from the pollution that follows upon the spilling of blood without due cause. To avenge is not to seek revenge, but to take vengeance on behalf of someone, to redress a wrong by exacting from a wrongdoer satisfaction for an offense committed. The participle of this verb is *gō'ēl* ("redeemer, kinsman-deliverer, avenger"), which refers to someone—usually the nearest relative—charged with vindicating justice either by redeeming family property expropriated or sold under constraint or (in the case of the avenger of blood) by avenging the unlawful slaying of a family member.

The avenger of blood is a figure that appears in primitive justice. By ancient custom it was the right, indeed the duty, of persons (the nearest of kin) to avenge the slaying of a relative. This is perhaps why CAIN feared for his life after slaying ABEL (Gen. 4:14), and why LAMECH justified himself (vv. 23 – 24). It also is likely that Yahweh sanctioned this kind of retributive justice in the still uninstitutionalized society of the immediate postflood period when he announced the principle of reckoning and reprisal (Gen. 9:5 – 6).

Since individual blood vengeance was widespread in the ANE before the formation of the

people of Israel, it is evident that MOSES did not institute the custom. The Mosaic legislation did, however, recognize and allow it; the avenger of blood was a figure well known in Israel at least until the time of DAVID (2 Sam. 14:7 – 8). Significant, however, is the fact that the Mosaic legislation did not leave the custom of individual blood vengeance unregulated. For one thing, the Mosaic law made a distinction between accidental and deliberate homicide (Deut. 19:4 – 5; Num. 35:22). Second, it provided escape from the wrath of the avenger by establishing CITIES OF REFUGE to which any killer might flee in order to escape the immediate and nonjudicial judgment of the avenger (Num. 35:9 – 15; see also ASYLUM). Third, it interposed between the killer and the avenger the judicial judgment of the elders, the acknowledged representatives of society as a whole (Deut. 19:12). Fourth, it stipulated that no person should be put to death on the testimony of merely one witness (Num. 35:30). By these provisions the ancient custom of individual blood vengeance was in effect outlawed, the avenger now becoming little more than the public executioner.

The Lord commanded Moses to establish six cities of refuge “to which a person who has killed someone accidentally may flee” (Num. 35:11). Should the manslayer be waylaid and executed by the avenger before he arrived at the city, no recourse could be had in law against the vengeance. However, should the manslayer attain the safety of the city, he would be duly tried by the elders. If found innocent of deliberate killing (murder) he would be exempted from punishment, provided he remained in the city until the death of the high priest (Num. 35:25). Thereafter he could leave with impunity. If found guilty he would be denied further asylum and exposed to the wrath of the avenger.

Underlying this legislation is the general rule that a life is to be exacted for a life. Many Christians believe that this rule is a veritable principle and thus valid for all times. They consequently believe that capital punishment is an ageless and inviolable divine requirement. Other Christians believe that “life for life” is not a principle at all, and regard capital punishment as both inhumane and contrary to the gospel of love. Still other Christians, endorsing the principle of retributive justice, believe that capital punishment is permissible when effected through due judicial process, but that it is not mandatory and that, under the circumstances of our existence, it is not desirable. No Christian would today sponsor the ancient avenger of blood. See also VENGEANCE.

H. STOB

Avesta uh-ves'tuh. A body of Persian documents that constitute the primary text of ZOROASTRIANISM. The language in which it is written (an eastern dialect of Old Iranian) is thus called *Avestan*.

Avim, Avites ay'vim, ay'vits. KJV forms of AVVIM, AVVITES.

Avith ay'vith (עִיִּת *H6400*, possibly “ruin”). The royal city of a king of EDOM named Hadad son of Bedad (Gen. 36:35; 1 Chr. 1:46). Site unknown.

Aviv ah-veev'. See ABIB.

Avva av'uh (עַוָּא *H6379*, possibly “ruin”). KJV Ava. A city conquered in the 8th cent. B.C. by S HALMANESER V of ASSYRIA; its inhabitants were then resettled in SAMARIA (2 Ki. 17:24; cf. v. 31). It is probably identical with IVVAH, but the site has not been identified.

Avvim av'im (עִיִּיִם *H6399*, possibly “ruins”). KJV Avim. (1) A town near B ETHEL allotted to the

tribe of BENJAMIN (Josh. 18:23). Because the form can be interpreted as a gentilic, however, many scholars believe that it refers to a people group, perhaps the inhabitants of AI or AIATH.

(2) Alternate form of AVVITES in NRSV and other versions.

Avvites av'its (אֲוִיטִים H6398; see also AVVIM). KJV Avims (Deut. 2:23), Avites (Josh. 13:3; 2 Ki. 17:31); NRSV Avvim (Deut. 2:23; Josh. 13:3), Avvites (2 Ki. 17:31).

(1) The inhabitants of some villages in the S coastal region who were conquered by the CAPHTORITES (Deut. 2:23); they are later mentioned as continuing to live among the PHILISTINES or just S of them (Josh. 13:3).

(2) The inhabitants of AVVA (2 Ki. 17:31).

awe. See FEAR.

Awel-Marduk. TNIV form of EVIL-MERODACH.

awl. The Hebrew noun *marṣēa'* (H5345) occurs with its cognate verb (*rāṣa'* H8361, “bore, pierce”) in Exod. 21:6, while the noun is found alone in Deut. 15:17. In both contexts the term is used for the boring or puncturing of a slave’s EAR lobe as a mark of ownership and possible loss of legal status (see SLAVE). A similar custom appears to have been practiced in Mesopotamia. The restricted use of the noun may be due to the instrument’s being ritual or forensic in nature. It has no cognate in the other contemporary Semitic languages. Awls or punches of this type that have been excavated are about six inches in length and have a conical point. (The meaning “to bore” is more frequently expressed by the verb *nāqab* H5918, cognate to Akkadian *naqābu*; it involves the use of augers and other instruments on wood, metal, and stone, as in 2 Ki. 12:9 et al.)

W. WHITE, JR.

awning. This English term is used once to render Hebrew *mēkasseh* H4833, “covering” (Ezek. 27:7; KJV, “that which covered thee”), with reference to a ship’s covered deck, probably to protect the passengers from the sun. The awning was made of “blue and purple” woven material.

ax, axhead. Various Hebrew words are translated “ax” (“axe”) in the English versions. The one term specifically meaning “ax” in the modern sense is *garzen* H179, a bronze or iron implement for hewing wood, skiving stone, or using as a weapon (Deut. 19:5; 20:19; 1 Ki. 6:7 [NIV, “chisel”]; Isa. 10:15). An important occurrence is known from the SILOAM tunnel of HEZEKIAH, 718 – 687 B.C. (cf. J. C. L. Gibson, *Textbook of Syrian Semitic Inscriptions* [1971], 1:22; ANET, 321). Both the name and the object were of foreign origin. The Hebrew term *qardōm* H7935 (Jdg. 9:48; 1 Sam. 13:20, 21; Ps. 74:5; Jer. 46:22) is perhaps better translated “adze” (i.e., with a curved blade at right angles with the handle). The word “axhead” in 2 Ki. 6:5 translates Hebrew *barzel* H1366, “iron” (cf. also Deut. 19:5, “the head”). Some other terms could be variously translated “ax,” “chisel,” “hatchet.” In the NT, the

axle. See WHEEL.

Ayeleth Hashahar. See AIJELETH SHAHAR.

ayin i'yin (אֵיִן H6524, “eye, fountain”; cf. such place names as AIN and EN GEDI). The sixteenth letter of the Hebrew ALPHABET (אֵיִן, transliterated as ^אי), with a numerical value of seventy. It is named for the shape of the letter, which in its older form resembled an eye. Its sound, which probably involved a contraction of the pharynx (as in Arabic), is sometimes represented in the SEPTUAGINT with the letter *g* (e.g., the Heb. name *āmrā* H6686 becomes *Gomorra* G1202 in Gk., thus Eng. GOMORRAH).

Ayyah ah'yuh (אֵיִת H6509, fem. of אֵיִן H6504, “heap, ruin”). The possessions of the tribe of EPHRAIM are described as including “Shechem and its villages all the way to Ayyah and its villages” (1 Chr. 7:28; NJPS, “Aiah”). Here the KJV has GAZA, which reflects the reading of many Hebrew MSS (*azzā*, better transcribed as “Azzah”), as well as most MSS of the SEPTUAGINT (*Gazēs*; Codex B has *Gaian*), the TARGUM (^אזח), and the VULGATE (*Aza*). Some scholars favor this latter reading, in which case it would refer to an otherwise unknown site in the hill country (certainly not the Philistine Gaza). Those who prefer the reading Ayyah often identify it with AI (cf. esp. Neh. 11:31, where English versions use the form “Aija”) or with modern Turmus (^איזח (near SHILOH; see *ABD*, 1:532).

Azael ay'zay-uhl (Αζαηλος; Codex A, Αζαελ). One of the descendants of Ezra who agreed to put away their foreign wives (1 Esd. 9:34; KJV, “Azaelus”). He may be the same as the Azael mentioned earlier (v. 14 KJV; NRSV, “Asahel”).

Azaelus az'uh-ee'luhs. KJV Apoc. form of AZAEL (1 Esd. 9:34).

Azal ay'zuhl (אָזַל, prob. pausal form of אֲזַל H728, “noble”). An unknown place not far from

Jerusalem (Zech. 14:5; NIV, A ZEL). Some scholars emend the text to read (*ešlô*, “its side” (cf. RSV, “for the valley of the mountains shall touch the side of it”); others emend to *yāšōl*, that is, Wadi Yašul, a tributary of the KIDRON.

Azaliah az’uh-li’uh (אֲזַלְיָהוּ H729, “Yahweh has reserved” or “Yahweh has been noble”). The father of SHAPHAN the secretary, who brought to JOSIAH’S attention the Book of the Law that HILKIAH the high priest had found in the temple (2 Ki. 22:3; 2 Chr. 34:8).

Azaniah az’uh-ni’uh (אֲזַנְיָהוּ H271, “Yahweh has heard”). The father of Jeshua, who was one of the Levites that affixed their seals to the covenant of NEHEMIAH (Neh. 10:9).

Azaphion uh-zay’fee-uhn. KJV Apoc. form of ASSAPHIOTH (1 Esd. 5:33).

Azara az’uh-ruh. KJV Apoc. form of HASRAH (1 Esd. 5:31).

Azarael, Azareel az’uh-ray’uhl, az’uh-ree’uhl. KJV forms of AZAREL.

Azareel az’uh-rel (אֲזַרְעֵל H6475, “God has helped”; cf. AZRIEL). KJV Azareel (Azarael in Neh. 12:36). Frequently the theophoric elements *’el* and *’yah* in Hebrew names are interchanged, so this name is equivalent to AZARIAH.

(1) One of several Korahite warriors who joined DAVID at ZIKLAG (1 Chr. 12:6; cf. vv. 1 – 2). These soldiers may have been Levites from the family of KORAH, but some argue that the reference is to a different Korah or even to a locality in the tribe of BENJAMIN.

(2) Son of HEMAN, the king’s seer (1 Chr. 25:18, called UZZIEL in v. 4 [note that King Azariah is usually called UZZIAH]). The fourteen sons of Heman, along with the sons of ASAPH and JEDUTHUN, were set apart “for the ministry of prophesying, accompanied by harps, lyres and cymbals” (v. 1). The assignment of duty was done by lot, and the eleventh lot fell to Azareel, his sons, and his relatives.

(3) Son of Jehoram; he was an officer over the tribe of DAN during David’s reign (1 Chr. 27:22).

(4) A descendant of BINNUI, listed among those who had married foreign wives (Ezra 10:41; in 1 Esd. 9:34 [KJV, “Esril”], Azareel is listed as a descendant of Ezora). Instead of “the descendants of Binnui” (Ezra 10:38, following LXX), the KJV follows the MT and reads “Bani, and Binnui.”

(5) Son of Ahzai and descendant of IMMER; Azareel’s son, AMASHSAI, was one of the priests who came to live in Jerusalem after the exile (Neh. 11:13).

(6) One of the musicians who took part in the procession when the wall of Jerusalem was dedicated (Neh. 12:36); perhaps identical with #5 above.

A. K. HELMBOLD

Azariah az’uh-ri’uh (אֲזַרְיָהוּ H6482 and אֲזַרְיָהוּ H6481, “Yahweh has helped”; cf. AZAREL, AZRIEL). The name Azariah is one of the most common in the OT, being attributed to approximately thirty persons, although in some cases it is difficult to distinguish between them. In the APOCRYPHA, the corresponding Greek form is usually rendered “Azarias” by the KJV.

(1) King of Judah, more frequently known as UZZIAH (2 Ki. 14:21; 15:1, 6 – 8, 17, 23, 27; 1 Chr. 3:12; cf. AZAREL #3, who is also called UZZIEL).

(2) Son (grandson?) of ZADOK, listed among the chief officials under SOLOMON and called “the

priest,” possibly indicating that he was the high priest at that time (1 Ki. 4:2); maybe the same as #6 or #7 below.

(3) Son of NATHAN and an official in the court of SOLOMON (1 Ki. 4:5); possibly Solomon’s nephew (cf. 2 Sam. 5:14).

(4) Son of Ethan and descendant of JUDAH (1 Chr. 2:8).

(5) Son of Jehu and descendant of Judah (1 Chr. 2:38 – 39).

(6) Son of AHIMAAZ and grandson of Zadok (1 Chr. 6:9; for this and the following items, note that 6:1 – 81 corresponds to MT and LXX 5:27—6:66). It is thought by some that the statement, “it was he who served as priest in the temple Solomon built in Jerusalem” (v. 10b), applies to him. If so, he may be the same as #2 above.

(7) Son of Johanan and grandson of #6 above (1 Chr. 6:10). If the comment that he served as priest in Solomon’s temple applies to him, this Azariah may be the same as either #2 above or #14 below (for the latter, see KD, *Chronicles*, 117 – 18). Some think, moreover, that he should be identified with #19 below.

(8) Son of Hilkiah and descendant of Zadok, included in several genealogies (1 Chr. 6:13 – 14; 9:11; Ezra 7:1; Neh. 11:11; 1 Esd. 8:1 [KJV, “Ezerias”]; 2 Esd. 1:1). These lists do not correspond exactly (cf. H. G. M. Williamson, *Ezra, Nehemiah*, WBC 16 [1985], 91 – 92, 351).

(9) Son of Zephaniah, listed in the genealogy of KOHATH (1 Chr. 6:36).

(10) Son of Oded and a prophet during the reign of ASA; he inspired the king to destroy the idols and to renew the temple worship (2 Chr. 15:1 – 15).

(11) Son of JEHOSHAPHAT (2 Chr. 21:2, where NIV and NJPS distinguish between Azariah and AZARIAHU); when JEHORAM, also son of Jehoshaphat, became king, he killed all his brothers, including Azariah (v. 4).

(12) Son of JEROHAM and a commander in the Judean army that deposed ATHALIAH and enthroned JOASH (2 Chr. 23:1).

(13) Son of Obed and a colleague of #12 above (2 Chr. 23:1).

(14) The chief priest under King UZZIAH, who protested the king’s intrusion into the priest’s office (2 Chr. 26:17, 20); possibly the same as #18 below.

(15) Son of Jehohanan (Johanan), a leader in Ephraim who protested against the capture of Judeans by the Israelite army, supplied them with food and clothing, and released them (2 Chr. 28:12).

(16) Father of Joel, who was a Kohathite that served during HEZEKIAH’S reign (2 Chr. 29:12); possibly the same as #18 below.

(17) Son of Jehallelel; he was a Merarite who served during HEZEKIAH’S reign (2 Chr. 29:12).

(18) The high priest under HEZEKIAH (2 Chr. 31:10, 13); possibly the same as #14 or #16 above.

(19) Son (or descendant) of Meraioth and an ancestor of Ezra (Ezra 7:3; 2 Esd. 1:2 [KJV, “Aziei”]).

(20) The son of Maaseiah and a priest who assisted NEHEMIAH in building the wall (Neh. 3:23).

(21) A companion of ZERUBBABEL in the return from the EXILE (Neh. 7:7).

(22) A man who stood to the right of EZRA as he read the law (1 Esd. 9:43, not mentioned in the parallel passage, Neh. 8:4).

(23) A Levite who assisted Ezra in instructing the people in the law (Neh. 8:7; 1 Esd. 9:48 [KJV, “Asrias”]).

(24) A priest who signed Nehemiah’s covenant (Neh. 10:2; possibly called Ezra in 12:1).

(25) A participant in the dedication of the rebuilt wall of Jerusalem (Neh. 12:32).

(26) Son of HOSHAIAH and a leader in the group who opposed Jeremiah's counsel (Jer. 43:2; cf. 42:1 NRSV, following LXX [MT, JEZANIAH]).

(27) One of DANIEL'S three companions, renamed Abednego, whom Nebuchadnezzar condemned to the fiery furnace (Dan. 1:6, 7, 11, 19; 2:17; 3:12 – 30; 1 Macc. 2:59; 4 Macc. 16:21; 18:12). See AZARIAH, PRAYER OF; SHADRACH, MESHACH, ABEDNEGO.

(28) A descendant of IMMER and one of the priests who had married foreign wives (1 Esd. 9:21, called Uziah in Ezra 10:21).

(29) A Jewish leader who, against the orders of Judas MACCABEE, attacked JAMNIA and was routed by the enemy (1 Macc. 5:18, 56 – 60).

(30) A name used by the angel RAPHAEL (Tob. 5:13; 6:7, 14; 7:1, 9; 9:2).

M. C. TENNEY

Azariah, Prayer of az'uh-ri'uh. An apocryphal addition to the book of DANIEL (see APOCRYPHA). Together with its companion piece, the Song of the Three Young Men (or Song of the Three Children), the Prayer of Azariah was inserted in the LXX (see SEPTUAGINT) between Dan. 3:23 and 24, where it is found also in the VULGATE and in Roman Catholic editions of the Bible. Among the various additions to Daniel (see also BEL AND THE DRAGON; SUSANNAH), only this material inserted in ch. 3 is truly supplemental, in the sense of being related to the actual story of the book. In separate editions of the Apocrypha, the Prayer of Azariah and the Song of the Three Young Men are treated as one distinct work, consisting of sixty-eight verses (= LXX Dan. 3:24 – 97). The prayer itself, including an introductory comment, covers the first twenty-two verses (Pr. Azar. 1 – 22 = LXX Dan. 3:24 – 45); it is then followed by a brief narrative (Pr. Azar. 23 – 28 = LXX Dan. 3:46 – 51) and by the “song,” that is, a poem in which Azariah and his companions praise God (Pr. Azar. 29 – 68 = LXX Dan. 3:52 – 97).

The prayer is put on the lips of Azariah (also known by his Babylonian name, Abednego) as he and the other Hebrews stood in the center of the fire into which they had been thrown by King NEBUCHADNEZZAR (see SHADRACH, MESHACH, ABEDNEGO). It begins with a doxology, followed by a declaration that God is just, and that the judgment he had brought upon Jerusalem was deserved by reason of the sin of the people (Pr. Azar. 3 – 10). Thereupon an eloquent plea is made for the Lord to remember his covenant and to accept the sacrifice of humbled spirits and contrite hearts in lieu of the sacrificial ritual that can no longer be performed (vv. 11 – 17). A vow of faithfulness follows, together with prayer for deliverance and the confounding of the enemy, that it might be known to them that the Lord alone is God (vv. 18 – 22).

The piety of the prayer is thoroughly Jewish, and certain phrases of it bear striking resemblance to material in the PSALMS (cf. esp. the reference to the sacrifice of a contrite heart and humble spirit with Ps. 51:17; cf. also Isa. 57:15). The prayer is also similar in tone to that of Daniel in Dan. 9:4 – 19, and this could well have prompted an editor (who presumably also added the introductory narrative portion, as well as that which links the prayer with the following hymn) to insert it into an appropriate place elsewhere in the book.

After the prayer, the editor of the Greek text remarks (or was this once a part of the MT?) that the fire into which the three had been thrown continued to be fed, becoming so great that it burned those near the furnace, but that the angel of the Lord came down and protected the three (Pr. Azar. 3:23 – 27). Thereupon they are said to have sung a great doxology “as with one mouth” (*hōs ex henos stomatos*, v. 28). The song is sometimes divided into two sections: an ode addressed directly to God (vv. 29 – 34) and a psalm addressed to the creation and to God's people (vv. 35 – 68). The latter is

built on the repeated words “Bless the Lord,” followed by the refrain “sing praise to him and highly exalt him for ever,” which occurs in identical pattern thirty-two times in succession (except for a slight variation in v. 52). This calls to mind the similar liturgical rhythm of Ps. 136, where the repeated refrain is, “His love endures for ever” (cf. Pr. Azar. 67 – 68). The idea that all the various works of the Lord are to bless or praise him may well be derived from the same idea in Ps. 148. The song (*Benedicite omnia opera*) has found an enduring place in the liturgy of the Christian church and is included in the Anglican *Book of Common Prayer*, where it stands in the Morning Service as an alternate to the *Te Deum*.

In Pr. Azar. 66 there is reference to the names of the three Israelites, who are to bless the Lord for deliverance from the fiery furnace. It is likely, however, that this verse is an addition of the editor who is responsible for the insertion of this material into Dan. 3. The joyful praise of the song stands in marked contrast to the penitential prayer that precedes it, and thereby any essential connection between the two seems ruled out. The fact that there is nothing specific referring to the immediate circumstances in which Azariah and his friends found themselves seems to indicate that the prayer had its own history independent of, and prior to, its insertion into the text of Daniel by a later editor.

It has been plausibly conjectured that the expression of despair and national contrition contained in the prayer could well find its background in the climax of the attempts of ANTIOCHUS IV (Epiphanes) to completely “hellenize” the Jewish nation (c. 168 – 165 B.C.). The song, like the prayer, was composed independently (i.e., without reference to the story of Dan. 3) and seems to derive from a time when Israel was very grateful for the blessings of the Lord upon the nation, and it has been suggested that this could well fit the period of the Maccabean restoration. If the date of this material remains unknown, so also does its author(s), of course, but it may have been written originally in Hebrew, since this was the customary language of prayer and the Greek style contains a number of Hebraisms.

The Greek text, which is practically identical in both the Old Greek (“Septuagint”) and Theodotonic recensions, is available in editions of the LXX, often not only as an insertion in the book of Daniel, but also as a constituent part of the hymn collection known as the *Odes*, which is appended to the Psalms (see A. Rahlfs, *Septuaginta*, Odes 7 – 8). (See D. J. Harrington, *Invitation to the Apocrypha* [1999], ch. 9; D. A. deSilva, *Introducing the Apocrypha: Message, Context, and Significance* [2002], ch. 10.)

D. A. HAGNER

Azariahu az’uh-ri’uh-hyoo (עֲזַרְיָהוּ H6482, “Yahweh has helped”). KJV and NRSV, Azariah. Son of JEHOSHAPHAT (2 Chr. 21:2). See AZARIAH #11.

Azarias az’uh-ri’uhs. KJV Apoc. form of AZARIAH.

Azaru az’uh-roo (Αζαρου) [Codex B, A Αζαρου]). KJV Azuran. An ancestor of a family that returned from the EXILE with ZERUBBABEL (1 Esd. 5:15). His name is omitted from the parallel lists (Ezra 2:16; Neh 7:21), but perhaps he should be identified with AZZUR (Neh 10:17).

Azaz ay’zaz (עֲזַז H6452, prob. short form of עֲזַרְיָהוּ H6453, “Yahweh is strong”). Son of Shema and descendant of REUBEN; his son BELA and other Reubenites settled in a large area of TRANSJORDAN (1 Chr. 5:8).

Azazel uh-zay'zuhl (עֲזַזֵּל H6439, derivation uncertain). Three times in the ritual of the Day of Atonement reference is made to one of two goats being consigned to Azazel (NIV, “the scapegoat,” Lev. 16:8, 10, 26; see ATONEMENT, DAY OF). Uncertainty still attaches to its origin and significance. Several interpretations have been advanced: (1) The name describes the animal itself as “the goat that departs” (from ^{(ēz} H6436 and ^{)āzal} H261), thus the traditional rendering of (e)scapegoat. This view is inadmissible, since the goat was released *to or for* Azazel. (2) The name is derived from a Semitic root ^{(zl} (“to remove” in Arabic) and refers to the “entire removal” of sin (cf. BDB, 736). (3) The common rabbinic view was that it designated the area to which the goat was released as a rugged or desolate place. The main difficulty with this and the previous view is that the parallelism of v. 8 virtually demands a personal name in apposition to “the Lord.” (4) Most scholars (some of whom derive the name from ^{(āzaz} H6451 + ^{)el} H446, “fierce god”) accept that Azazel is the leader of the evil spirits of the wilderness, possibly to be identified with DEMONS (Deut. 32:17; Ps. 106:37; 2 Chr. 11:15). In *1 Enoch* Azazel appears at the head of the rebel angels.

The significance of the Azazel ritual depends on the provenance of the Day of Atonement. Critical scholarship sets it in the postexilic period, while allowing that it developed various ancient rites, including the offering of a scapegoat to Azazel. However, it is unlikely that the Jews in the exilic period would have deliberately introduced a specifically pagan concept. Moreover, the view of a late date for the Day of Atonement has been seriously weakened by archaeological discoveries in Babylonia and Ugarit which show that there were rituals connected with the New Year festivals analogous to the Day of Atonement. The consigning of a goat to Azazel was probably one of many features adapted from contemporary cultic life in the Mosaic period and incorporated into the Israelite cultus, receiving an entirely different significance in the process. Leviticus 17:7 precludes the view that the goat provided a sacrifice for Azazel; in all likelihood this custom meant no more than a symbolic transfer of sin from the realm of society into that of death. (Cf. R. de Vaux, *Ancient Israel* [1961], 507 – 10. For an analysis of early Jewish interpretation, see L. L. Grabbe in *JSJ* [1987]: 152 – 67. For the broader cultural context, see D. P. Wright, *The Disposal of Impurity: Elimination Rites in the Bible and in Hittite and Mesopotamian Literature* [1987]. See also *DDD*, 128 – 31.)

A. E. CUNDALL

Azaziah az'uh-zi'uh (עֲזַזִּיָּהוּ H6453 “Yahweh is strong”). (1) One of the Levites assigned to play the harp when the ARK OF THE COVENANT was brought to Jerusalem (1 Chr. 15:21).

(2) Father of HOSHEA; the latter was an officer over the tribe of EPHRAIM during the reign of DAVID (1 Chr. 27:20).

(3) One of the temple supervisors under CONANIAH, who was in charge of the contributions during the reign of HEZEKIAH (2 Chr. 31:13).

Azbazareth az-baz'uh-reth (Ασβασαρεθ [Codex B, Ασβακαφαθ]). KJV form of the Greek name used in 1 Esdras for ESARHADDON (1 Esd. 5:69 [LXX v. 66]; Vulg. *Asbasaret*).

Azbuk az'buhk (עֲבוּקִי H6443, derivation unknown). The father of a certain man named Nehemiah; the latter ruled part of BETH ZUR and helped the better-known NEHEMIAH rebuild the wall of JERUSALEM (Neh. 3:16).

Azekah uh-zee'kuh (אֶזְקָה H6467, possibly “hoed [ground]”). A Palestinian town that existed from before 1300 B.C. through Byzantine times. Azekah, a fortified city S of the Valley of AJALON, is identified with Tell Zakariyeh, a triangular mound about 1,000 by 500 ft., which rises about 350 ft. above the Valley of ELAH, modern Wadi es-Sant. It was located 3 mi. NW of SOCOH, about 9 mi. N of Eleutheropolis (Beit Jibrin), and 15 mi. NW of HEBRON. On a plateau at the top of the tell there remains a wall and towers of ancient fortifications. The Byzantine city of Azekah may be Khirbet el-(Alami just E of the tell. The site was partially excavated in 1898 – 1899 by Frederick J. Bliss and R. A. S. Macalister for the Palestine Exploration Fund. (See *NEAEHL*, 1:123 – 24.)

When JOSHUA defeated the AMORITES near GIBEON, he chased the remnants of the coalition to Azekah (Josh. 10:10 – 11), which lay in the SHEPHELAH (15:35). It was a point on the battle line of the Philistine-Hebrew campaign in which DAVID slew GOLIATH (1 Sam. 17:1). Following the revolt of the northern kingdom, REHOBOAM fortified the city with a large walled stockade (2 Chr. 11:9). Possibly Rehoboam was actuated by the invasion of SHISHAK (c. 918 B.C.), and these fortifications may be the ones seen in modern times. Perhaps

Azekah.

the “covering” of Isa. 22:8 (NIV, “defenses”) refers to the fortress of Azekah (cf. H. Tadmor, *JCS* 12 [1958]: 22 – 40, 77 – 100).

Azekah was one of the last towns to fall to NEBUCHADNEZZAR before he attacked Jerusalem c. 588 B.C. (Jer. 34:7). In LACHISH letter # 4, Hoshaiah, who commanded a garrison N of Lachish,

© Dr. James C. Martin

The bald hilltop of Azekah. (View to the SW.)

informed his superior Yoash at Lachish that he could no longer see the signals (fire or smoke) from Azekah N of his post. This indicated that Azekah had already fallen. (Cf. *ANET*, 322; *DOTT*, 216 – 17; G. Ernest Wright, *Biblical Archaeology* [1956], 179). After the EXILE the city was reoccupied (Neh. 11:30).

A. K. HELMBOLD

Azel ay'zuhl (אֶזֶל H727, “noble”). (1) Son of Eleasah and descendant of King SAUL through JONATHAN (1 Chr. 8:37 – 38; 9:43 – 44). (2) NIV form of AZAL.

Azem ay'zuhm. KJV alternate form of EZEM.

Azephurith uh-zef'uh-rith. KJV Apoc. form of ARSIPHURITH (1 Esd. 5:16).

Azetas uh-zee'tuhs (Αζητας). The ancestor of a family that returned from the EXILE with ZERUB-BABEL (1 Esd. 5:15; his name is omitted in the parallel passages, Ezra 2:16; Neh. 7:21).

Azgad az'gad (אֶזְגָּד H6444, possibly “Gad is strong,” or from Pers. *izgad*, “messenger”). Ancestor of a family that returned from the EXILE. They returned in two contingents, one with ZERUBBABEL (Ezra 2:12; Neh. 7:17; 1 Esd. 5:13 [KJV “Sadas”]) and the other with EZRA (Ezra 8:12). Azgad (or a descendant representing the clan) was among those who signed NEHEMIAH'S covenant (Neh. 10:15).

Azia az'ee-uh. KJV Apoc. form of UZZA (1 Esd. 5:31).

Aziei az'uh-ee'i. KJV Apoc. form of AZARIAH (2 Esd. 1:2).

Aziel ay'zee-uhl (אֶזִּיֵּל H6456, prob. “God is [my] strength”). One of the Levites who played the lyre when the ARK OF THE COVENANT was brought to Jerusalem (1 Chr. 15:20; called JAAZIEL in v. 18;

some also identify him with the first JEIEL listed in 16:5).

Aziza uh-zi'zuh (עֲזִיזָה H6461, “strong one” or short form of עֲזִיזָהּ H6453 “Yahweh is strong”; see AZAZIAH). One of the descendants of Zattu who agreed to put away their foreign wives in the time of EZRA (Ezra 10:27; apparently called “Zerdaiah” in 1 Esd. 9:28 [KJV “Sardeus”]).

Azmaveth (person) az'muh-veth (עֲמֻתָּהּ H6462, possibly “Mot [Death] is fierce”). (1) A member of DAVID'S military elite known as the Thirty; he was apparently from BAHURIM (2 Sam. 23:31, “the Barhumite”; 1 Chr. 11:33, “the Baharumite”).

(2) The father of two warriors named JEZIEL and PELET, from the tribe of BENJAMIN. Both men were ambidextrous stone slingers and archers. They joined David at ZIKLAG while David was fleeing from SAUL (1 Chr. 12:3). He may be the same man as #1 above.

(3) Son of Jehoaddah (or Jarah/Jadah) and descendant of King SAUL through JONATHAN (1 Chr. 8:36; 9:42).

(4) Son of Adiel and supervisor of the royal treasuries in Jerusalem during David' reign (1 Chr. 27:25).

W. C. KAISER, JR.

Azmaveth (place) az'muh-veth (עֲמֻתָּהּ H6463, possibly “Mot [Death] is fierce”). A town in the Judean hills listed between ANATHOTH and KIRIATH JEARIM in postexilic census lists (Ezra 2:24; called “Beth Azmaveth” in Neh. 7:28, and “Bethasmoth” [KJV, “Bethsamos”] in 1 Esd. 5:18). This village supplied some of the singers for the dedication of the temple (Neh 12:29). It has been identified with modern Hizmeh, c. 5 mi. NNE of Jerusalem.

W. C. KAISER, JR.

Azmon az'mon (עֲצְמוֹן H6801, “strong” or “[place of] bones”). A site on the S border of the tribe of JUDAH (Num. 34:4; Josh. 15:4). Possible identifications include (Ain el-Qeseimeh (a spring about 10 mi. NW of KADESH BARNEA, but see KARKA) and (Ain Muweiliḥ (a few miles closer to Kadesh Barnea).

Aznoth Tabor az'noth-tay'buhr (אֲנוֹת תְּבוֹר H268, possibly “peaks of Tabor”). A place in the SW border of the tribe of NAPHTALI, evidently in the area of Mount TABOR (Josh. 19:34); some scholars identify it with Khirbet el-Jebeil, about 3 mi. N of the mountain.

Azor (person) ay'zor (Ἀζώρ G110). Son of Eliakim, included in Matthew's GENEALOGY OF JESUS CHRIST (Matt. 1:13 – 14).

Azor (place) ay'zor (Ἀζώρ). According to some MSS of the SEPTUAGINT, a town within the tribal territory of DAN (Josh. 19:45). (See NEAEHL, 1:125 – 29.)

Azotus uh-zoh'tuhs (Ἀζωτός G111). Greek form of ASHDOD (Acts 8:40).

Azriel az'ree-uhl (עזריאל H6480, "God is my help"; cf. AZAREL, AZARIAH). (1) A chief of the half-tribe of MANASSEH, E of the Jordan; he and six other men are described as "brave warriors, famous men, and heads of their families" (1 Chr. 5:24). The larger context of the passage focuses on how the Reubenites, the Gadites, and the half-tribe of Manasseh were successful in enlarging their territories but fell into idolatry and were taken captive by the king of Assyria (1 Chr. 5:18 – 26).

(2) Father of JERIMOTH; the latter was an officer over the tribe of NAPHTALI in the reign of King DAVID (1 Chr. 27:19).

(3) Father of Seraiah; the latter was one of the officers sent by King JEHOIAKIM to arrest JEREMIAH and BARUCH (Jer. 36:26).

Azrikam az'ri-kuhm (עזריקם H6483, "my help has arisen"). (1) Son of Neariah and descendant of DAVID through ZERUBBABEL (1 Chr. 3:23); scholars differ regarding the precise way to reconstruct this genealogy.

(2) Son of Azel and descendant of SAUL through JONATHAN (1 Chr. 8:38; 9:44). Perhaps the same as #4 below.

(3) Son of Hashabiah and descendant of LEVI through MERARI (1 Chr. 9:14; Neh. 11:15).

(4) A high-ranking official during the reign of AHAZ. Described as "the officer in charge of the palace," Azrikam was slain in battle by ZICRI, a warrior from Ephraim (2 Chr. 28:7).

Azubah uh-zoo'buh (עזובה H6448, "forsaken"). (1) Daughter of Shilhi, wife of king ASA, and mother of King JEHOSHAPHAT (1 Ki. 22:42; 2 Chr. 20:31). (2) Wife of CALEB son of HEZRON; she was apparently the mother of Jeshar, Shobab, and Ardon (1 Chr. 2:18 – 19 NIV). The Hebrew text is very difficult, and some believe that she was Caleb's daughter. It is also possible that JERIOTH was not a second wife but another name for Azubah.

Azur ay'zuhr. KJV alternate form of AZZUR.

Azuran uh-zoo'ruhn. KJV Apoc. variant of AZARU (1 Esd. 5:15).

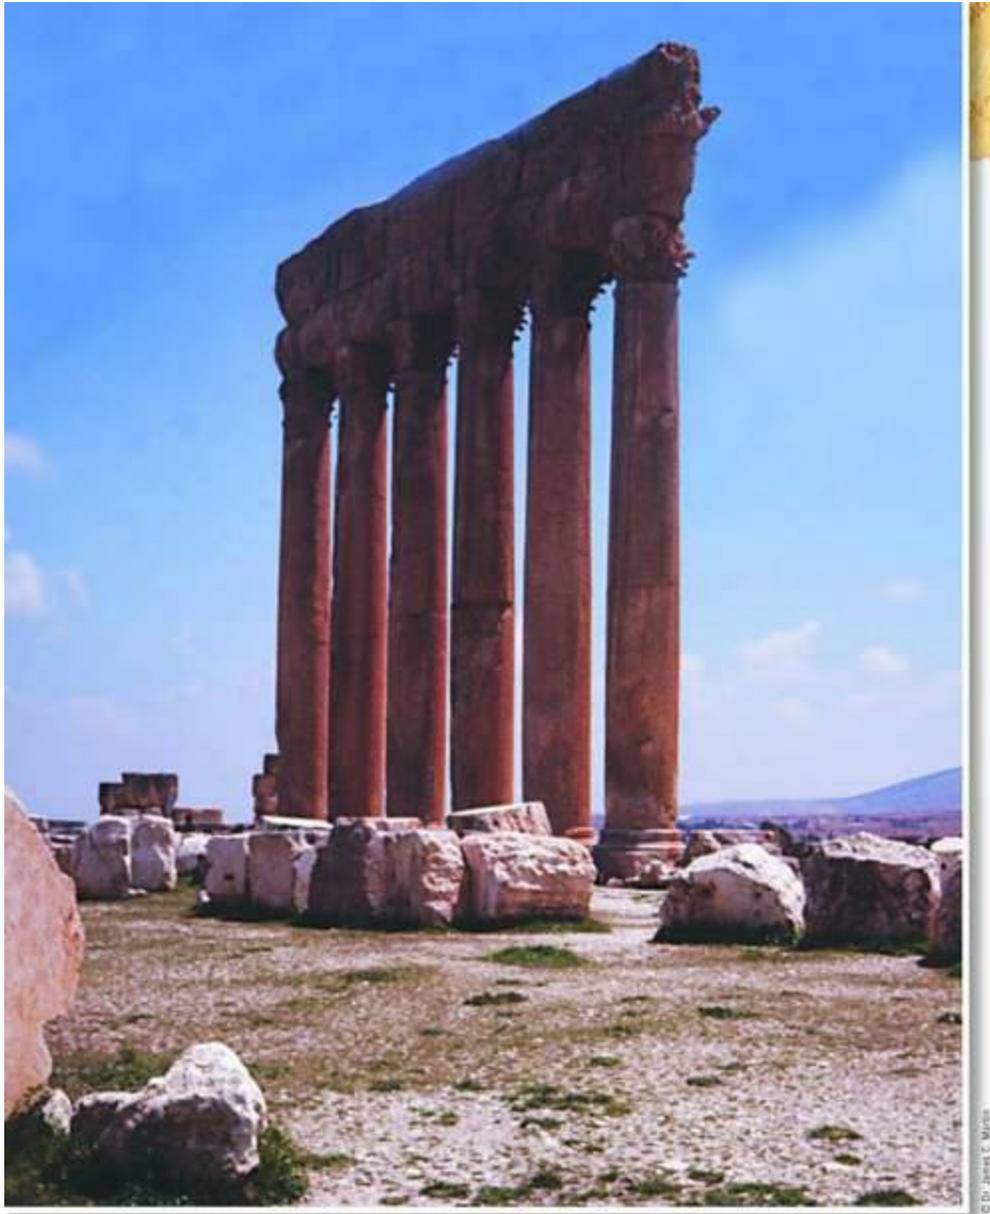

Azzah az'uh. KJV alternate form of GAZA (Deut. 2:23; 1 Ki. 4:24; Jer. 25:20).

Azzan az'uhn (עזן H6464, "strong" or "[God] has shown strength"). Father of PALTIEL; the latter was a leader from the tribe of ISSACHAR, chosen to help distribute the territory W of the Jordan among the various tribes who settled there (Num. 34:26).

Azzur az'uhr (עזר H6473, possibly "helper"). (1) Father of HANANIAH; the latter was a false prophet from GIBEON in the days of King ZEDEKIAH (Jer. 28:1; KJV, "Azur").

(2) An Israelite leader who sealed the covenant with NEHEMIAH after the return from Babylon (Neh. 10:17).

(3) Father of JAAZANIAH; the latter was one of a group of Israelite leaders against whom EZEKIEL was told to prophesy (Ezek. 11:1; KJV, "Azur").

Corinthian columns from the Roman temple at Baalbek.

B. A symbol used to designate CODEX VATICANUS. See also SEPTUAGINT; TEXT AND MANUSCRIPTS (NT).

Baal (deity) bay'uhl, bah-ahl' (בעל *HI251*, "owner, lord"). The name of the principal Canaanite deity and of two persons. The Hebrew term is used frequently as a common noun with such meanings as "owner, master, lord, citizen, husband." As a place name it occurs once by itself (1 Chr. 4:33 NRSV; the NIV has BAALATH, following a LXX variant), otherwise in combination (e.g., BAAL GAD, Josh. 11:17; KIRIATH BAAL, 15:60); in the latter case, the original form was probably Beth-Baal-X, "the house [habitation] of the lord of X." Baal is also part of such personal names as JERUB-BAAL (Jdg. 6:32), BEELIADA (1 Chr. 14:7), Esh-Baal (i.e., ISH-BOSHETH, 2 Sam. 2:8), and MERIB-BAAL (1 Chr. 8:33 – 34), which may reflect a pagan background, referring either to the Canaanite god directly or to Yahweh in syncretism with Baal. It is also possible, however, that in some cases the names are

simply references to Yahweh as “master” (cf. G. B. Gray, *Studies in Hebrew Proper Names* [1896], 138 – 46). See also BAAL (PERSON).

Most occurrences of Baal in the OT designate the Canaanite deity. The reference may be local, when it is qualified by the place-name (e.g., “Baal of Peor,” Num. 25:3) or by some other limiting characteristic (e.g., BAAL-BERITH, “Baal of the covenant,” Jdg. 8:33); otherwise, it refers to the great cosmic nature-god. The etymology of the word suggests that Baal was regarded as the owner of a particular locality, thus limiting the use of the word to people who were no longer nomads, but settled on the land. These local baals were believed to control fertility in agriculture, beasts, and mankind. It was highly important to secure their favor, therefore, particularly in an area like Palestine with few natural streams or springs and with an uncertain rainfall. This led to the adoption of extreme forms in the cultus, including the practice of ritual prostitution (Jdg. 2:17; Jer. 7:9; Amos 2:7) and child-sacrifice (Jer. 19:5). The plurality of local gods led the Hebrew prophets to group them under the plural form *habbē’ālîm* (e.g., 1 Ki. 18:18).

The most important use of the title in the OT is its reference to the great active god of the Canaanite pantheon, who controlled rain and fertility. An equation with HADAD, the AMORITE god whose nature and functions were almost identical, seems clear. The probability is that Amorite settlers brought their gods with them in the great westward migratory movement early in the 2nd millennium B.C., the name of Hadad changing to Baal as they settled in CANAAN. In process of time Baal became the region’s chief deity. Some scholars believe that part of this process can be traced in the texts from UGARIT.

The original head of the Canaanite gods was doubtless EL, but Baal is described, not as the son of El, but as the son of DAGON, another Amorite deity, probably a vegetation or grain god. Temples to both Baal and Dagon have been discovered at Ras Shamra (the site of ancient Ugarit), but not one dedicated to El himself. In the Ugaritic texts El is a rather nebulous figure, a “father of years” who dwells at the “Source of the Two Deeps” and conveys his instructions by messengers, suggesting both his age and his remoteness. Moreover, Ashirat (the biblical ASHERAH), the consort of El, appears to be in process of transfer to Baal, a development that hints further at the latter’s displacement of El. It is perhaps of significance that the OT links Baal and Asherah together (e.g., Jdg. 3:7).

Baal’s importance at Ugarit is unquestioned. His name appears more than 150 times in the texts, the form Aliyan Baal (Baal the Strong) is found seventy times, and the compound BaalHadad on approximately twenty occasions. He is connected with Mount Sapon, the “mountain of the gods of the north,” usually identified with the modern Jebel el-Aqra, N of Ras Shamra, in a way that is reminiscent of Mount Olympus, the home of the Greek pantheon (cf. the reference to Yahweh in Ps. 48:1 – 2). Another frequent description of Baal is “the rider of the clouds,” which echoes the reference to Yahweh in Ps. 68:4 (cf. 104:3). In the sculptures Baal is shown with a helmet adorned with the horns of a bull, the symbol of strength and fertility. In one hand he grasps a club or mace, possibly symbolic of thunder, and in the other a spear embellished with leaves, which may portray both lightning and vegetation. In Aramean sculptures Baal stands upon a bull, which may connect with

Bronze statuette of a storm-god, probably Baal, with bull and serpent; discovered at Hazor (1500 – 1000 B.C.).

the calf-images made by AARON and JEROBOAM I (Exod. 32:4; 1 Ki. 12:28), these being regarded, in all probability, as pedestals for the invisible Yahweh (see CALF, GOLDEN). ANATH, often referred to somewhat euphemistically as “the virgin Anath,” was both consort and sister to Baal and shared his several adventures. (See A. S. Kapelrud, *Baal in the Ras Shamra Texts* [1952].)

In the numerous texts discovered at Ras Shamra, two main myth-complexes concerning Baal may be distinguished. The first concerns a crucial conflict with Prince-Sea Judge-River (prob. only one god is indicated, the Lord of Waters) who has tyrannized the gods. Baal, with the assistance of the artificer-god, Kothar wa-Khasis (“the Skillful and Percipient One”), defeated his opponent, who was henceforth confined to his proper realm. Some scholars would equate Prince Sea with Lotan “the twisting serpent,” the LEVIATHAN of the OT. This conflict with the dragon or chaos monster is a recurring element in the mythology of the FERTILE CRESCENT that has influenced the language and thought-forms of the OT. The concepts have been thoroughly demythologized, however, and connected with Yahweh’s absolute sovereignty over all the forces of this world. This Canaanite myth concerning Baal’s victory provided a convenient and forceful illustration of that sovereignty. The origin of the DAY OF THE LORD may be the occasion when Yahweh’s victory over the forces of chaos was celebrated, possibly at the New Year Festival in the Jerusalem temple, in a rite that developed from a Canaanite prototype.

The second myth-complex has no such echo in the OT. It has to do with the realm of the FERTILITY CULT and its dying-rising god motif. Aliyan Baal, at the height of the summer drought (i.e.,

when vegetation is dying and the land parched) was slain by MOT (Death). Anath searched for the body with the assistance of the sun goddess, Shapsh. She found it, and after numerous animal sacrifices (seventy each of buffaloes, cows, small cattle, deer, mountain goats, and roebucks), Baal was restored to life and reigned over Mot, thus assuring life and fertility for the year ahead. This myth was acted out with a background of sympathetic magic at the Canaanite New Year Festival and, with its vital connection with the desired fertility, was doubtless the most important feature of the cultic year. It was attended by the appropriate response from the worshipers, culminating in the grossly sensuous rites accompanying the sacred marriage, in which ritual prostitution of both sexes was a prominent feature.

There is evidence that Baal and other Canaanite deities were worshiped in Egypt, but without becoming a serious menace to the native Egyptian religion. The situation was otherwise in Israel, where, through the processes of syncretism, the worship of Yahweh was profoundly influenced and threatened by alien elements from the Baal cults. This development was due to two main factors: (1) The Israelites did not drive out the Canaanites, but intermarried with them, thus raising the problem of the interrelationship of Yahweh and Baal. (2) Yahweh had given Israel a considerable victory over the Canaanites and his supremacy was unquestioned. Most Israelites at that time associated him with the wilderness, in which they had spent the major portion of their lives. In Canaan they were dependent upon the fertility of the land, which, in popular thought, was controlled by the Baal gods. Many, therefore, conceived it wise to pay deference to these deities. This tendency was probably accelerated by the sensuous appeal of the Canaanite cultus. In process of time their Yahweh worship became Canaanized, and although Yahweh continued to be worshiped, the attributes and even the name of Baal became attached to him.

These syncretistic tendencies are illustrated, both in editorial comment and actual example, in the book of Judges (e.g., Jdg. 2:1 – 5, 11 – 13, 17, 19; 3:5 – 7; 6:25 – 26). As already mentioned, they are reflected in various theophoric names (e.g., Jerub-Baal, Jdg. 7:1). Such usage was probably in all innocence, Yahweh being regarded as the “owner” or “husband” of Israel. The Samaria OSTRACA, dating from c. 780 B.C., show that this tendency was particularly prominent in the northern kingdom; for every two names in the lists compounded with the name of Yahweh, one was formed with Baal. The northern kingdom was more susceptible to the inroads of the native Canaanite cults than was the more isolated and largely agricultural kingdom of Judah. Thus Israel supported the deliberate attempt by the Phoenician princess JEZEBEL to obliterate Yahweh worship (cf. 1 Ki. 18:4) and make Baal (prob. Baal-Melqart) the official god. Only 7,000 Israelites remained true to Yahweh (19:18), but the crisis was averted by the decisive action of the prophet ELIJAH (ch. 18).

The 8th-cent. prophets recognized the dangers inherent in the situation and called the people back to a belief in Yahweh alone and to a cult purified of its Canaanite accretions. Hosea prophesied that the name of Baal would no longer be employed of Yahweh (Hos. 2:16 – 17), and he and Jeremiah pointed out the dangers of a Canaanized Yahweh cultus to a people who were quite unaware of their apostasy (e.g., Jer. 2:23). Once this *was* realized, the name of Baal was regarded with abhorrence, and editorial treatment was applied in many instances to names in which it occurred. Often the word for “shame” (*bōšet* H1425) was substituted, as in the forms JERUB-BESHETH (2 Sam. 11:21), ISH-BOSHETH (2:8), MEPHIBOSHETH (9:6), and even in contexts where the Canaanite deity himself was mentioned (e.g., Jer. 3:24; 11:13; Hos. 9:10). Only after two major reformations aimed at the elimination of Baal worship (2 Ki. 18:4 – 6; 23:4 – 15) and the chastisement involved in the national disaster of 587 B.C., did a majority of the Jews finally forsake the last vestiges of Baal worship and turn in contrition to Yahweh, the covenant-God. (See further John Day, *Yahweh and the Gods and*

Goddesses of Canaan [2000]; M. S. Smith, *The Early History of God: Yahweh and the Other Deities in Ancient Israel*, 2nd ed. [2002]; A. R. W. Green, *The Storm-God in the Ancient Near East* [2003]; *DDD*, 132 – 39.)

A. E. CUNDALL

Baal (person) bay'uhl, bah-ahl' (בעל *HI252*, “owner, lord”). (1) Son of Reaiah and descendant of REUBEN through Joel; Baal's son Beerah was a clan leader deported by TIGLATH-PILESER (1 Chr. 5:5 – 6; some scholars, following the Syriac version, identify this Baal with Bela in v. 8).

(2) Son of Jeiel and descendant of BENJAMIN (1 Chr. 8:30; 9:36).

Baal (place). See BAALATH #2.

Baalah bay'uh-luh, bah'uh-luh (בעלה *HI267*, “lady, mistress”). (1) An alternate name for KIRIATH JEARIM, first mentioned in connection with the border designating the territory of JUDAH (Josh. 15:9 – 10; 1 Chr. 13:6). Baalah may have been an ancient Canaanite name reflecting the worship of a goddess (cf. “Baalat,” *DDD*, 139 – 40).

(2) One of the “southernmost towns of the tribe of Judah in the Negev toward the boundary of Edom” (Josh. 15:29; cf. v. 21). The site is unknown, though it has been variously identified with BAAL-ATH BEER, BALAH, BEALOTH, and BILHAH.

(3) Mount Baalah was a ridge on the N border of Judah, NW of EKRON (Josh. 15:11); it is often identified with a hill named Mughar (cf. BAALATH #1).

Baalath bay'uh-lath, bah'uh-lath (בעלת *HI272*, “lady, mistress”). (1) One of the towns included in the territory allotted to the tribe of DAN (Josh. 19:44); the site is usually identified with modern el-Mughar (cf. BAALAH #3). It is probably the same city that was later rebuilt by SOLOMON (1 Ki. 9:18; 2 Chr. 8:6; but some believe that these verses refer to Baalah #3).

(2) The NIV, following a SEPTUAGINT variant, reads “Baalath” in 1 Chr. 4:33 (NRSV and other versions, “Baal,” following the MT). The name is evidently an alternative form of the Simeonite border town of BAALATH BEER.

Baalath Beer bay'uh-lath-bee'uhr, bah'uh-lath-bee'uhr (בעלת באר *HI273*, “mistress of the well”). A border town, possibly the shrine of a goddess, in the southern part of the territory allotted to the tribe of SIMEON; it may be the same as “Ramah in the Negev” (Josh. 19:8; but see RAMAH #4). It is elsewhere called Baal (1 Chr. 4:33, where NIV follows a LXX variant in reading “Baalath”). Its location is uncertain; see BAALATH #2.

Baalbek bay'uhl-bek (from Baal of Beqa^c, “Lord of the Valley”). Ancient city in the BEQA^c plain, which separates the LEBANON and ANTILEBANON mountains. Still known as Baalbek, it is located some 40 mi. ENE of Beirut. The Greek name for it was Heliopolis, “city of the sun” (to be distinguished from HELIOPOLIS in Egypt). The city stood on an acropolis that commands a view of the very fertile valley. The sanctuary flourished during earlier times, declined during the Hellenistic and early Roman periods, only to revive in importance during the later Roman empire. The great builders of Roman Baalbek were the emperors Antoninus Pius and Caracalla, the latter perhaps because his mother was Syrian.

The ruins of the city cover a vast area and are world famous. Trial soundings in the vicinity of the Roman temples have revealed foundations of numerous earlier buildings. The temple of Jupiter, originally built to the storm-god HADAD, was a massive building 290 ft. long by 60 ft. wide. It was surrounded by a peristyle of nineteen Corinthian columns on each side and ten each on the front and rear. The columns were 62 ft. high and 7.5 ft. in diameter. The temple was built on a large artificial terrace 24 to 42 ft. high. Part of the wall of the enclosure is made up of massive blocks approximately 62 by 14 by 11 ft.

The temple of Bacchus, forty yards to the S, is a smaller but better preserved example of the Corinthian style of architecture. In the vicinity of the temples are a propylea, forecourt, and grand court, all of which contain numerous ancillary buildings. In the middle of the modern town, a quarter of a mile from the Acropolis, there is a small, round temple that was dedicated to Venus or Fortuna. (See F. Ragette, *Baalbek* [1980].)

In Amos 1:5, where the MT has ^ʾāwen (see AVEN), the SEPTUAGINT has *Ōn* (vocalizing the Hebrew ^ʾôn), that is, Heliopolis, not likely a reference to Baalbek.

A. RUPPRECHT

Baal-Berith bay'uhl-bi-rith', bah'uhl-bi-rith' (בעל ברית *HI253*, “lord of the covenant”). A god worshiped by Israel after the death of GIDEON (Jdg. 8:33). ABIMELECH, Gideon's son, took seventy pieces of silver from the house of this god to hire followers in his time of rebellion (9:4). It is possible that Baal-Berith and EL-BERITH (9:46) are alternate ways of referring to the same god (cf. F. M. Cross, *Canaanite Myth and Hebrew Epic* [1973], 39), but some scholars believe that two different sanctuaries with two distinct deities were found in SHECHEM. The idol was undoubtedly worshiped by the Shechemites during, and particularly after, Gideon's time. (See *DDD*, 141 – 44.)

J. B. SCOTT

Baale of Judah bay'uh-lee, bah'uh-lee. The KJV rendering of *ba^ʿaĕlē yĕhûdâ* in 2 Sam. 6:2, where NRSV has “Baale-judah.” The NIV correctly interprets it to mean “Baalah of Judah,” that is, KIRIATH JEARIM, the place from which DAVID left to bring up the ARK OF THE COVENANT to Jerusalem (2 Sam. 6:2). See BAALAH #1.

Baal Gad bay'uhl-gad', bah'uhl-gad' (בעל גדר *HI254*, “lord of fortune”). A Canaanite town, located “in the Valley of Lebanon below Mount Hermon”; it marked the northern extremity of JOSHUA'S conquests (Josh. 11:17; 12:7; 13:5; cf. the last reference with Jdg. 3:3, which suggests a connection between this town and Mount BAAL HERMON). The exact location is unknown, but it should be near the Damascus road on the NW slope of Mount HERMON. One of several possible sites is Tell Haush (about 7 mi. N of Ḥaṣbayya; see further Z. Kallai, *Historical Geography of the Bible* [1986], 226 – 27).

J. B. SCOTT

Baal Hamon bay'uhl-hay'muhn, bah'uhl-hay'muhn (בעל המון *HI255*, “lord [or] possessor] of abundance”). A place mentioned in the Song of Songs as a fertile region where SOLOMON had a vineyard (Cant. 8:11). The context would indicate that its fruit was exceptionally fine. The location of this place is not known (one suggestion is Khirbet Bel^ʿameh, 12 mi. SE of MEGIDDO, but this modern site is usually identified with BILEAM = IBLEAM). Some scholars see in the name a connection with the

Phoenician deity Baal Ḥammon (cf. M. H. Pope, *Song of Songs*, AB 7C [1977], 686 – 88). It is possible that a real vineyard was not intended and that the reference is only a poetic expression.

J. B. SCOTT

Baal-Hanan bay'uhl-hay'nuhn, bah'uhl-hay'nuhn (בעל הנן HI257, “Baal [or the master] has been gracious”). (1) Son of Acbor and one of “the kings who reigned in Edom before any Israelite king reigned”; he was Shaul’s successor (Gen. 36:38 – 39 [cf. v. 31]; 1 Chr. 1:49 – 50).

(2) A man from GEDER who was in charge of DAVID’S “olive and sycamore-fig trees in the western foothills” (1 Chr. 27:28).

Baal Hazor bay'uhl-hay'zor, bah'uhl-hay'zor (בעל הזור HI258, “lord of the court”). A location near the border of EPHRAIM where ABSALOM’S sheepshearers had gathered (2 Sam. 13:23). It was here that Absalom planned a feast for his brothers, also inviting his father DAVID, who did not accept. In this remote place marked by rugged limestone slopes, Absalom avenged the rape of his sister TAMAR by having AMNON killed. It was possibly a mountain home, being more than 3,000 ft. above sea level. The site is identified with Jebel el-(Aṣur, some 5 mi. N of BETHEL; some equate it with HAZOR #3, mentioned in Neh. 11:33 (not to be confused with the better-known Hazor N of the Sea of Galilee).

J. B. SCOTT

Baal Hermon bay'uhl-huhr'muhn, bah'uhl-huhr'muhn (בעל הרמון HI259, “lord of Hermon [consecrated place]”). A mountain that marked the S border of the land occupied by the HIVITES, whom God had left to test Israel (Jdg. 3:3). It also marked the N border of the half-tribe of MANASSEH (1 Chr. 5:23). This last reference associates (or even identifies; cf. NIV) Baal Hermon with SENIR and Mount HERMON; it may be one of the peaks comprising the mountain. See also BAAL GAD.

Baali bay'uh-li, bah'uh-li'. KJV transliteration of *ba'li* (“my BAAL,” that is, “my master”), a name used by some in HOSEA’S day to describe God (Hos. 2:16). Because of this name’s pagan associations, God preferred and demanded that he be called *’išî* (“my husband”), which emphasized the covenant relationship he had established between his people and himself.

J. B. SCOTT

Baalim bay'-uh-lim, bah'uh-lim. KJV transliteration of *habbē'ālîm*, plural form, with definite article, of BAAL (Jdg. 2:11 et al.).

J. B. SCOTT

Baalīs bay'uh-lis, bah'uh-lis (בעליס HI271, possibly “the lord is salvation” [if an orig. ש is mistakenly represented with ס]). King of AMMON in the early 6th cent. B.C. (Jer. 40:14). He sent ISHMAEL son of Nethaniah to kill GEDALIAH, the governor of Israel appointed by NEBUCHADNEZZAR, king of Babylon. Gedaliah, not believing the report, defended Ishmael’s character to his own hurt (40:16). The murder occurred soon after Jerusalem was captured (41:1 – 2). Baalīs is probably to be identified with Ba'al-yiś'a (“the lord is salvation”), whose name is found in a seal discovered in 1984 at Tell el-(Umeiri, near Amman. (See L. T. Geraty in AUSS 23 [1985]: 85 – 110; also the articles by L. G. Herr and R. W. Younker in BA 48 [1985]: 169 – 72 and 173 – 80.)

Baal Meon bay'uhl-mee'on, bah'uhl-mee'on (בעל מעון *H1260*, “lord of the dwelling [*or of refuge*]”). A city built by the tribe of REUBEN across the Jordan (Num. 32:38; 1 Chr. 5:8). It is described, along with BETH JESHIMOTH and KIRIATHAIM, as one of the glorious cities on the frontier of MOAB (Ezek. 25:9). Baal Meon is also called BETH BAAL MEON (Josh. 13:17), BETH MEON (Jer. 48:23), and probably BEON (Num. 32:3). MESHACH, king of Moab, claimed to have built Baal Meon, making a reservoir for it (MOABITE STONE, line 9; Beth Baal Meon is also mentioned on line 30; see *ANET*, 320 – 21). Possession must have passed alternately between Moab and Israel several times in its history. The city is to be identified with Ma'in, about 10 mi. E of the DEAD SEA and 3 mi. SW of MEDEBA.

J. B. SCOTT

Baal Peor, Baal of Peor bay'uhl-pee'or, bah'uhl-pee'or (בעל פעור *H1261*, “lord of Peor”). Also Baal-peor. The “Baal of Peor” was a local deity (see BAAL) worshiped by the Israelites while encamped at SHITTIM in MOAB (Num. 25:3 – 5). The heinous nature of the sin, which involved licentious practice with Moabite women (Num. 25:1 – 2), was not soon forgotten, as is clear from subsequent references (Ps. 106:28; Hos. 9:10). In the latter passage, the idol is called “shameful” and the Israelites are described as having become “vile.” The term Baal Peor is also used as a place name equivalent to Mount PEOR (Deut. 4:3; Hos. 9:10). In some passages, it is ambiguous whether the single name Peor refers to the deity or to the place (cf. Num. 25:18; 31:16; Josh. 22:17). One cannot be certain whether the place was named after the deity or vice versa. (Cf. *DDD*, 147 – 48.) See also BETH PEOR.

J. B. SCOTT

Baal Perazim bay'uhl-piray'zim, bah'uhl-pi-ray'zim (בעל פרצים *H1262*, “lord of breaches [i.e., breach-maker]” or “lord of Perazim”). A name given to the place where DAVID smote the PHILISTINES after he was made the king of Israel (2 Sam. 5:20; 1 Chr. 14:11). The place was so named because the Lord “broke out” (*pāraz*, *H7287*) against David’s enemies there. It is thought to be the same place that Isaiah calls “Mount Perazim” (Isa. 28:21). Although the exact site is not known, two locations have been suggested: one is the modern Sheikh Bedr, NW of Jerusalem; the other and more likely identification is ez-Zuhur, 4 mi. SW of Jerusalem.

J. B. SCOTT

Baalsamus bay'uhl-say'muhs, bah'uhl-say'muhs (Βααλσαμους). One of the seven men who stood on the right side of EZRA as he read the law to the people (1 Esd. 9:43; the name seems to correspond to MAASEIAH in the parallel passage, Neh. 8:4).

J. B. SCOTT

Baal Shalishah bay'uhl-shal'uh-shuh, bah'uhl-shal'uh-shuh (בעל שלשה *H1264*, “lord of Shalishah [third part?]”). KJV Baal-shalisha. The home of the unnamed man who brought to ELISHA twenty loaves of barley bread and some heads of new grain by which 100 people were fed (2 Ki. 4:42). Such was the miracle at this time that some food remained after all had eaten. The location of the site is uncertain, partly depending on what is meant by GILGAL (v. 38). Suggestions include modern Kefr Thilth (20 mi. E of Qalqiliyeh in central Palestine, overlooking the plain of SHARON), Khirbet Sirisyah

(some 3 mi. farther N), and Khirbet Marjame (about 16 mi. NE of Jerusalem). There is some evidence that Baal Shalishah was an extremely fertile area (cf. *b. Sanh.* 12a).

J. B. SCOTT

Baal Tamar bay'uhl-tay'mahr, bah'uhl-tay'mahr (בעל תמר *H1265*, “lord of the palm tree”). The place where the Israelites awaited the pursuing Benjamites, when the nation went to war to punish the tribe of BENJAMIN for the violent rape and death of a Levite's concubine (Jdg. 20:33). Its precise location is not known, but it was near GIBEAH of Benjamin (some 3 mi. N of Jerusalem) on the way to BETHEL (another 8 mi. farther N). One scholar (I. Press, *A Topographical-Historical Encyclopaedia of Palestine* [1951, in Heb.], 1:115) has linked Baal Tamar to the Palm of DEBORAH, which was located between RAMAH (about 3 mi. N of Gibeah) and Bethel (Jdg. 4:5).

Baal-Zebub bay'uhl-zee'buhb, bah'uhl-zee'buhb (בעל זבוב *H1256*, “lord of the flies”). A PHILISTINE god of whom King AHAZIAH inquired after he had fallen from his upper room in SAMARIA (2 Ki. 1:2). Baal-Zebub was the local deity (see BAAL) of the city of EKRON and evidently had a considerable reputation for the king to seek an oracle from him. God sent ELIJAH to rebuke Ahaziah for this faithless act (1:3, 6), and punished the king by declaring that he would surely die (1:16). The name is peculiar. Some have speculated that he protected his worshipers from flies, or that he sent messages swiftly as a fly moves, or (in view of the ubiquity of flies) that he was an ever-present and all-seeing god. Because of the difficulty presented by the name, other scholars argue that it was originally Baal-Zebul (from *zēbul* *H2292*, “lofty dwelling,” or cognate to Ugar. *zbl*, “prince”) and that it was deliberately distorted by Hebrew scribes as a way of mocking pagan worship (see further *DDD*, 154 – 56). The name appears as “Beelzebul” in NT MSS (Matt. 10:25 et al.), but probably for a different reason; see BEELZEBUB.

J. B. SCOTT

Baal Zephon bay'uhl-zee'fon, bah'uhl-zee'fon (בעל צפון *H1263*, “lord of the north”). A place by the RED SEA near which God told the people of Israel to encamp before crossing the water (Exod. 14:2). They appeared trapped in an area described as being somewhere between MIGDOL and the sea, close to PI HAHIROTH. This place was so shut off that Pharaoh would believe the Israelites were “in confusion, hemmed in by the desert” (v. 3). One can assume that they were on a peninsula (cf. v. 9 and Num. 33:7). It was from this place that the people viewed the approaching army of Pharaoh. Some cried out against MOSES for leading them into a trap. Moses stood firm before the people and challenged them to trust God at this time. From here they crossed the sea on dry land, and at this point the armies of Egypt entered in pursuit, only to be swallowed up by the sea.

The exact location of Baal Zephon is not known. However, there is a god of the same name known from the texts found in UGARIT (cf. *DDD*, 152 – 54). This god is clearly associated with several Egyptian sanctuaries, including one in the port of TAHAPANHES (modern Tell Defenneh, 22 mi. SE of Rameses and 27 mi. SSW of Port Said; cf. G. E. Wright, *Biblical Archaeology* [1962], 62). Some scholars believe that Baal Zephon was an earlier name for this city. Several other sites are possible, depending on one's view of the route of the exodus. (See also J. Simons, *The Geographical and Topographical Texts of the Old Testament* [1959], 239, 242, 249; C. Pfeiffer, *Egypt and the Exodus* [1964], 52 – 53; G. I. Davies, *The Way of the Wilderness: A Geographical Study of the Wilderness Itineraries in the Old Testament* [1979], 81 – 82.) See EXODUS, THE.

Baana bay'uh-nuh (בַּעְנָן *HI275*, perhaps “son of oppression”). (1) Son of AHILUD; he was one of twelve district governors of SOLOMON commissioned to supply provisions for the royal household (1 Ki. 4:12). He may have been a brother of Jehoshaphat the recorder (v. 3).

(2) Son of HUSHAI; he was another of Solomon’s district governors (1 Ki. 4:16; KJV, “Baanah”).

(3) Father (ancestor?) of a certain ZADOK who helped to repair the walls of Jerusalem under the supervision of NEHEMIAH (Neh. 3:4); possibly the same as BAANAH #3.

N. B. BAKER

Baanah bay'uh-nuh (בַּעְנָה *HI276*, perhaps “son of oppression”). (1) Son of Rimmon; he and his brother RECAP were captains in the army of ISH-BOSHETH, king of Israel during the time when DAVID was king of Judah in HEBRON. Learning of the death of ABNER (the real power behind Ish-Bosheth), Baanah and his brother plotted to unify the kingdom under David. They journeyed to Ish-Bosheth’s house and, arriving when the king was taking his noontime nap, eluded the doorkeeper and murdered the king in his bed. They took his severed head to David in Hebron expecting commendation and probably advancement from the king. David, however, angrily accused them of murdering an innocent man in his sleep. He ordered them killed, their hands and feet severed, and their bodies publicly hung by the pool in Hebron (2 Sam. 4:2 – 12). Since Rimmon was from BEEROTH, some scholars believe that he and his sons were Gibeonites (see GIBEON), known for their hatred of SAUL and his family (2 Sam. 21:1 – 9; but see P. K. McCarter, *II Samuel*, AB 9 [1984], 127). If so, the murder of Ish-Bosheth, Saul’s son, may have been an act of revenge.

(2) A man of NETOPHAH and father of HELED (Heleb); the latter was one of David’s renowned Thirty (2 Sam. 23:29; 1 Chr. 11:30).

(3) A leader who returned with ZERUBBABEL to Judah after the EXILE (Ezra 2:2; Neh. 7:7; 1 Esd. 5:8 [KJV, “Baana”]). He is probably to be identified with the Baanah who affixed his seal to the covenant of NEHEMIAH (Neh. 10:27), and the same as BAANA #3.

N. B. BAKER

Baaniah bay'uh-ni'uh. KJV Apoc. variant of ZABAD (1 Esd. 9:33).

Baanias bay'uh-ni'uhs. KJV Apoc. form of BENA-IAH (1 Esd. 9:26).

Baara bay'uh-ruh (בַּעֲרָא *HI281*, possibly “passionate” or a variant of בַּעַל *HI252*, “owner, lord” [see Noth, *IPN*, 40]). One of the three wives of SHAHA-RAIM, a Benjamite who lived in MOAB (1 Chr. 8:8). It is possible that Baara divorced her and HUSHIM because they did not bear him any children.

Baaseiah bay'uh-see'yuh (בַּעֲשִׂיָה *HI283*, derivation uncertain). An ancestor of ASAPH, the Levite musician (1 Chr. 6:40 [MT v. 25]; some scholars prefer the reading MAASEIAH, found in a few Heb. MSS and supported by versional evidence).

Baasha bay'uh-shuh (בַּעֲשָׁא *HI284*, perhaps short form of some such name as “Baal [the lord] has heard” [see *HALOT*, 1:147]). Son of Ahijah and third king of the northern kingdom of Israel (c. 909 –

886 B.C.); he was founder of the kingdom's second dynasty (1 Ki. 15:16—16:6). The prophet HOSEA charged Israel with making kings but not at Yahweh's direction or in consultation with him (Hos. 8:4). The history of this kingdom proved to be a long succession of dynastic changes, nine in all, in which Baasha was the first conspirator. The dynasty of the initial king, JEROBOAM, never reached beyond his son, NADAB, who was overthrown by Baasha son of Ahijah, of the tribe of ISSACHAR (1 Ki. 15:27).

Immediately upon overthrowing Nadab, Baasha took two steps to secure his reign, neither of which was successful. First, he slew all the remaining members of the house of Jeroboam (1 Ki. 15:29). Second, he attempted to build a fortification at RAMAH against ASA, king of Judah, but the latter stripped the temple of its gold and silver to make a league with BEN-HADAD of ARAM, and Baasha was forced to withdraw from Ramah to TIRZAH (15:18 – 21; 2 Chr. 16:1 – 6). Asa used the abandoned materials to build GEBA of Benjamin and MIZPAH, and war continued between him and Baasha all their days (1 Ki. 15:32; cf. Jer. 41:9). After twenty-six years, the last two under Baasha's son ELAH, an official named ZIMRI conspired against Elah and reigned in his stead, thus ending Baasha's dynasty (1 Ki. 16:8 – 10).

Although Baasha was used of Yahweh to bring judgment upon the house of Jeroboam (1 Ki. 15:29 – 30), he incurred the divine wrath by following the pattern set by his dynastic predecessor (16:7). The prophetic denunciations of the sins of Jeroboam (14:11, through Ahijah), Baasha (16:3 – 4, through JEHU), and AHAB (21:19, through ELIJAH) classes the three together and manifests the violent fate that awaited them: those who died in the city were to be devoured by dogs, and those who died in the open country by the birds. See ISRAEL, HISTORY OF VII.

J. J. EDWARDS

babblers. The Greek term *spermologos* G5066 means literally “picker up of seeds,” or more clearly, “one who maintains himself by picking up bits of scraps,” so perhaps “scavenger” would be a better translation than “babblers.” Apparently this colloquialism was used only in the early Hellenistic age and is not found in the classical Attic literature. Its only use in the NT is in an offhand remark attributed to the EPICUREAN and STOIC philosophers who listened to PAUL'S address on the AREOPAGUS (Acts 17:18). It seems to be a direct quote from one of their attacks upon Paul's preaching. The translation “babblers” is also used by the NRSV to render a Hebrew phrase that means literally “one who opens his lips” (Prov. 20:19); moreover, the KJV uses it incorrectly to render another phrase (“master of the tongue”) that really means “charmer,” apparently with reference to a pagan shaman (Eccl. 10:11). The NIV uses the verb “babble” to render Greek *battalogeō* G1006, with reference to the meaningless PRAYER of pagans (Matt. 6:7).

W. WHITE, JR.

Babel bay'buhl (בבל H951, from Akk. *bāb-ilī*, “gate of God”). The Hebrew term, which refers to BABYLON, is rendered “Babel” only in Gen. 11:9, at the conclusion of what is popularly known as the story of the Tower of Babel. With a play on the Hebrew verb *bālal* H1176 (“to mix, confuse”), this verse mocks the city where this structure was built: “That is why it was called Babel—because there the LORD confused the language of the whole world.” The name thus has become a synonym for the confusion caused by the language barriers that God imposed because of the human pride displayed in the building.

The account clearly reflects a Babylonian background. The incident takes place on a plain (Gen. 11:2), and BABYLON was situated in a wide plain. The construction was of manufactured bricks and

tar, less solid than the cut rocks and mortar used in Palestine (v. 3). The Hebrew perspective here reflects a note of sarcasm: “Imagine! They had to use brick instead of stone and asphalt instead of mortar!” The Babylonian Epic of Creation (ENUMA ELISH), discussing the construction of celestial Babylon, says: “For one whole year they molded bricks. / When the second year arrived, / They raised high the head of Esagila equaling Apsu” (tablet 6, lines 60 – 62; see *ANET*, 68 – 69). BRICKS (both sun-dried and fire-baked), along with asphalt (see BITUMEN), provided building material in MESOPOTAMIA. Likewise, the combination of a temple tower with a city is typical for the Mesopotamian landscape. In the great cities, especially the holy capitals, of Mesopotamia, the temples were the most impressive buildings, and the tower that arose from the temple area was its supreme glory and splendor. This tower, called in Akkadian *ziggurratu*, was built in terraces, or stories, each of which was smaller than the one below it. See BABYLON (OT) IV.D; ZIGGURAT.

L. L. WALKER

Babi bay’bi KJV Apoc. form of BEBAI (1 Esd. 8:37).

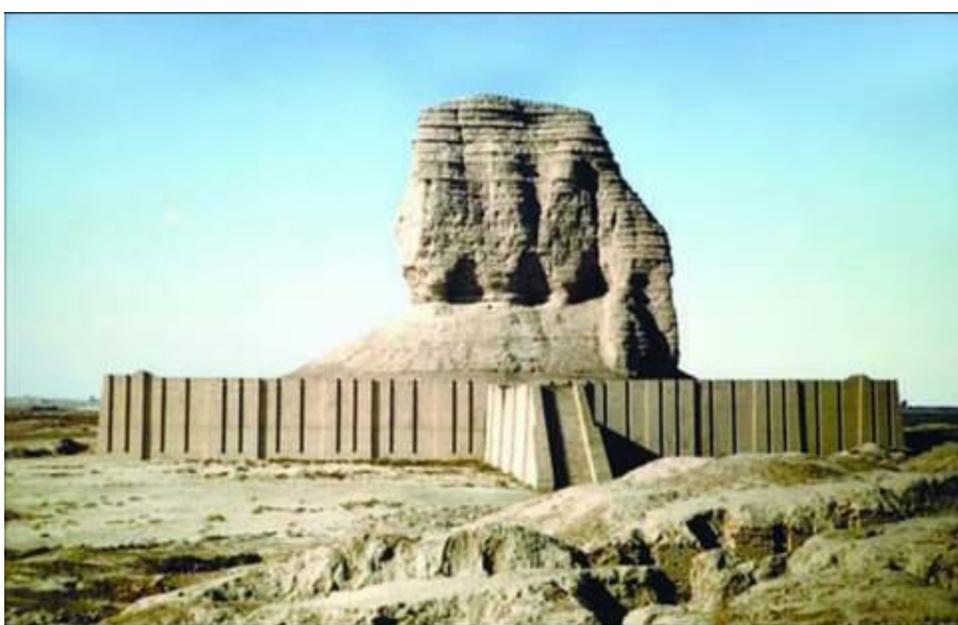

baboon. The Hebrew word *tukkiyyîm* H9415 appears only in the list of cargo brought to SOLOMON from either E Africa or India (1 Ki. 10:22; 2 Chr. 9:21). Traditionally, it has been rendered PEACOCKS (cf. KJV and NRSV), but this meaning cannot be corroborated. The word should probably be related to Egyptian *ky(t)*, referring to some kind of monkey (W. F. Albright, *Archaeology and the Religion of Israel* [1956], 212 – 13 n. 16), possibly a baboon. See also APE.

baby. This English term is sometimes used literally in the Bible to denote an infant or very young child (e.g., Ps. 8:2, “out of the mouth of babes,” KJV), including MOSES (Exod. 2:6), JOHN THE BAPTIST (Lk. 1:41), and JESUS CHRIST (Lk. 2:12). Its figurative use in the NT may reflect the imagery of spiritual REGENERATION (new birth): young Christians, as well as believers who are undeveloped or stunted in their spiritual growth, are referred to as “babes in Christ” (1 Cor. 3:1 KJV; NIV, “infants”) and as “newborn babies” (1 Pet. 2:2). Just as human babies can assimilate only milk, not solid food, so spiritual infants can grasp only fundamental or basic doctrines (cf. also Heb. 5:12 – 14).

D. A. BLAIKLOCK

Babylon (OT) bab’uh-luhn (בָּבֶל H951, from Akk. *bāb-ilī*, *bāb-ilāni*, “the gate of god[s]”; Gk. Βαβυ- λών G956). Capital of the land of Babylonia, S Iraq, from which the land takes its name (see ASSYRIA AND BABYLONIA).

I. Name. Throughout the OT, Babylon was thought of as the symbol of the confusion caused by godlessness (Gen. 11:9; see BABEL). The most persistent meaning of the name was “gate of god” (Babili). There is no evidence for the view that the name was originally non-Semitic. Rarely from c. 2100 B.C., and frequently in the Neo-Babylonian period, the city was called *Tintirki*, “life of the woods,” possibly because at the time it may have been well surrounded by date groves. Another common name for the city was *Eki*, “canal area,”

The Babylonian Empire.

because of the key part played in the local irrigation system. The name *š šēšak H9263* (Jer. 25:26; 51:41) may be related to a rare ideographic writing of the name for Babylonia (*Šēški*), though it is commonly assumed to be a cypher for the name of Babel (see ATBASH).

II. Location. Babylon lay in the land of SHINAR (Gen. 10:10), and its general situation in Babylonia has never been in dispute. The precise site now is marked by the ruin-mounds of Bâbil, Qasr, (Amran ibn Ail, Merkes, and Homera, and the modern village of Junjummah, c. 6 mi. NE of the town of Hillah and about 50 mi. S of modern Baghdad. The river EUPHRATES runs by the ruins, which extend over several square miles.

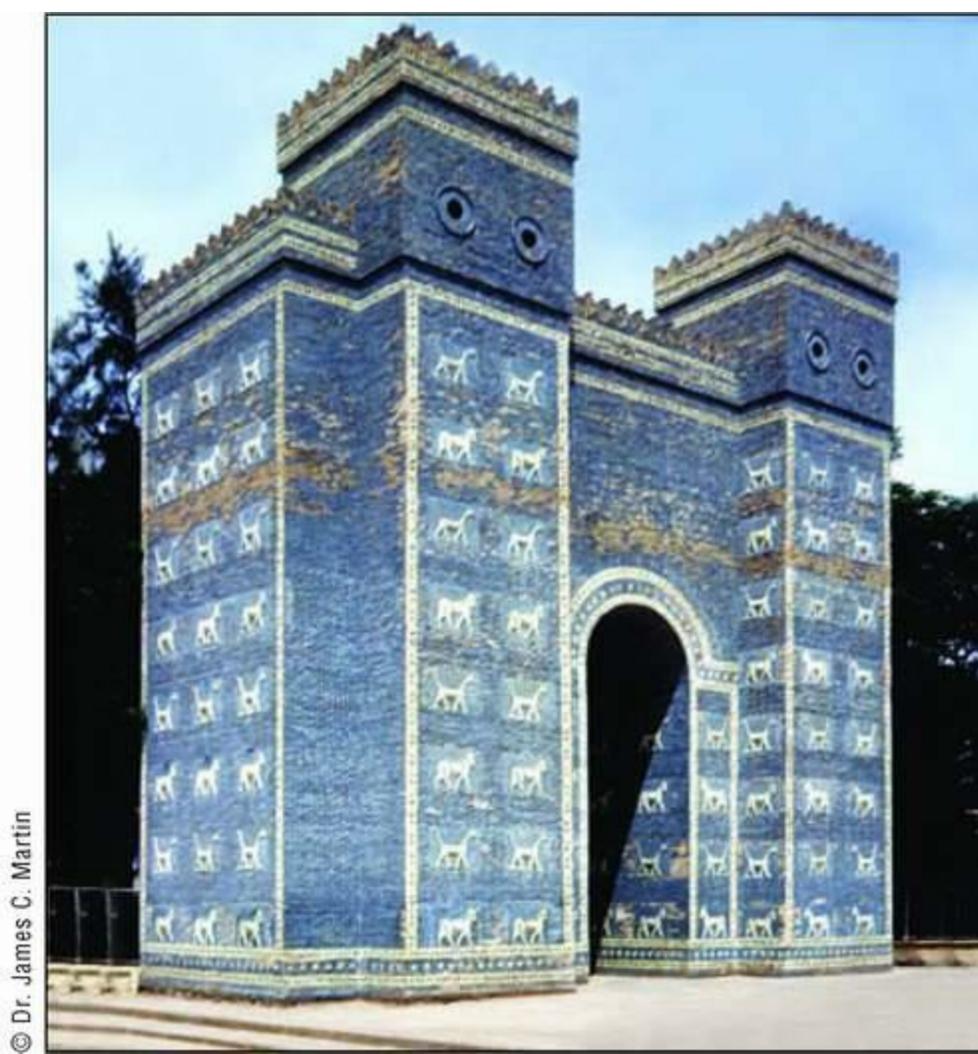

III. Identification. Early travelers sought to identify Babylon with the upstanding remains of the ZIGGURAT towers at Aqarquf, W of Baghdad, or at Borsippa, 7 mi. SSW of Bâbil, because of the tradition of the “Tower of Babel” (Gen. 11:1 – 11). Benjamin of Tudela correctly described the ruins without identification, which first may be attributed to Pietro della Valle in A.D. 1616. Some of the

early explorers sought to incorporate the ruins of Borsippa within a greater Babylon, but this is disproved by inscriptions. Some of these were brought to Europe by the Abbé de Beauchamp in A.D. 1784, and later by C. J. Rich, representative of the East India Company in Baghdad, and thus led to the confirmation of the identity of the ruins with the ancient capital of Babylon itself.

IV. Excavation. Rich made soundings in the two largest mounds, Bâbil and Qasr, which he mapped in A.D. 1817. Though spasmodic work was carried out by A. H. Layard and others in 1850 and by the Frenchmen Fresnel and Oppert, much of the time the site was in the hands of locals who dug for inscribed tablets, and these were found in abundance. A major expedition by Die Deutsche Orient Gesellschaft under Robert Koldewey in 1899 – 1917 laid a firm foundation for Neo-Babylonian archaeology, though only part of the citadel area was uncovered (cf. R. Koldewey, *The Excavations at Babylon* [1914]). Remains of earlier occupation in the Old Babylonian period were uncovered only in a limited area owing to the high water table. Further work has been carried out by the Germans under H. Lenzen since 1956 in conjunction with the Iraq Department of Antiquities, who have undertaken clearing and restoration work in the citadel area (Procession Way, Ninmakh Temple, and the Royal Palace Throne Room) as well as having constructed a museum and rest house on the site.

A. The citadel (Qasr). Babylon had two citadels, the northern one built outside the N wall by NEBUCHADNEZZAR II. Both it and the southern citadel were entered by the Ishtar Gate, a 40-ft. high double tower decorated with alternate rows of glazed relief brickwork depicting the *mušnuššu-dragon* of MARDUK and the bull of HADAD. Many changes in the building level in antiquity mean that the outstanding remains now visible are thus largely the massive foundations for this edifice.

Outside the gateway lay the small temple dedicated to Ninmakh (now reconstructed). It was built by Labashi, the architect, for ASHURBANIPAL (669 – 627 B.C.) and measured 163 by 106 ft. Hundreds of female figurines in clay found here testify to its use and popularity. The Ishtar Gate led to the sacred Procession Way and to both citadels, which together formed a single defense for the palace complex to the S. The citadel in Neo-Babylonian times seems also to have been used as a “museum” to display objects and inscriptions from earlier periods within and without Babylon. Here were found a stela of the HITTITE god Teshup from Zinjirli (7th cent.) and inscriptions of the Assyrian kings Adad-nirari III and Ashurbanipal from Nineveh. The “Lion of Babylon,” a massive basalt sculpture depicting a lion trampling a fallen human enemy,

Reconstruction of the Ishtar Gate at Babylon.

also may be of Hittite origin, though a similar design is also to be seen on the ivories of the 7th cent. from Nimrud.

The southern citadel incorporated a royal palace c. 350 x 200 yards grouped around five courts. One of these (197 by 164 ft.) gave access to the throne room (165 by 143 ft.), with its wall covered with glazed bricks forming friezes of garlands, palmettes, and rosettes in blue, white, and yellow. It may well have been in this palace, with its harem and domestic quarters attached, that BELSHAZZAR gave his feast to more than one thousand guests (Dan. 5:1, 5). The extensive and lofty walls built by Nebuchadnezzar would have been an impressive place for the writing to be seen by all. This area was reopened by the Iraqi Government in 1968.

The NW corner of the citadel, near the Ishtar Gate, was occupied by a building at a lower level comprising a series of vaults which, to judge by the discovery of documents made there, were used as administrative quarters or stores for the palace. It has been suggested that these were the substructure for the “Hanging Gardens” described by HERODOTUS. This was a palace built on ranges of lofty terraces on which were laid out trees and gardens watered by special hoists. They were said to have been constructed by Nebuchadnezzar on his marriage to Amytis, daughter of Astyages the Mede, to cement the alliance and to remind her of her hilly homeland.

B. The walls. Babylon was encircled by a double system of defenses, each comprising two walls. The inner *Imgur-Bēl* was 21 ft. thick and reinforced with towers at 60-ft. intervals. The outer wall

(Nimit-Enlil) was 11 ft. in width and also had protruding watchtowers. About 6 ft. outside these ring walls lay a brick-lined quay wall to contain the waters fed from the Euphrates River, which formed a flood defense. The walls were initially the work of the AMORITE kings of the First Dynasty but were strengthened by the last Assyrians to hold Babylon, ESARHADDON and ASHURBANIPAL, and by the successive rulers of the Chaldean line. Of the latter, it was Nebuchadnezzar who added an outer wall E of the Euphrates to enclose his Summer Palace (“Bâbil”) to the N and to run for 17 mi. to defend the plain between the city and the outskirts, thus

Excavation of Babylonian palace.

forming an enclosure within which the local population could retreat and camp in time of war. Later writers (e.g., Ctesias) describe the outer city walls as running for 42 mi. with the inner walls extending for 2.5, 4.5, and 7 mi. respectively, with the middle wall 300 ft. high, and its towers reaching 420 ft. The wall behind the moat was said to be 50 royal cubits. Herodotus declared that the city walls were 480 furlongs, that is, a circuit of 56 mi.

Inscriptions show that eight gates gave access to the inner city; of these, four have been excavated: the Ishtar Gate to the N; Marduk (Urash) and Zababa to the E; Urash to the S. There were also the thus far undiscovered gates of Sin (N), Enlil and Shamash (S), and Adad (W). To these three major gates must be added four minor ones, to the N and S. On the W only one gate, built by Nebuchadnezzar II, gave entrance to the New City on the right bank of the Euphrates.

C. Streets. The city was planned on a symmetrical basis, with the main thoroughfares linking the city gates running parallel or at right angles to each other. Each street had its expressive name, the most distinguished being the “Procession way” (*Ai-ibūr-šabū*, “the enemy shall not prevail”) which began at the Ishtar Gate and ran E of the southern citadel for more than a thousand yards before it turned westward by the sacred precincts of Esagila, Marduk’s temple, to the seven-piered bridge that spanned the river to the New City. This road was 40 – 50 ft. wide and paved with stone, some inscribed “I am Nebuchadnezzar, King of Babylon...I paved the road of Babylon with mountain stone for the procession of the mighty lord Marduk. May Marduk, my lord, grant me eternal life!” Such an inscription is typical of many in Babylon of the time of Nebuchadnezzar, whose boast recorded in Dan. 4:30 is justified.

D. The temple area. The sacred precinct of Babylon now lies in the Sahn, S of Qasr, near (Amran ibn

(Ali, whose mausoleum dates from c. A.D. 680. The dominant feature was the temple tower (ziggurat) Etemenanki (“the house of the foundation of heaven and earth”), standing in an irregular courtyard measuring 460 x 408 x 456 x 412 yards and entered by twelve gates. It is likely that the main entry was kept closed except for the annual procession of the gods Marduk and Nabu. One inscription (Esagila tablet) and the description by Herodotus (*Hist.* 1.187) show that the ziggurat had a square base (c. 300 yards) and rose eight stories to the small temple of blue enamel brick that topped it. Ascent was by staircases to the first platform (as at Ur) and thence by ramps or stairs diagonally to each upper and smaller level, thus giving the appearance to Herodotus of a “circular stair.” The total height was c. 300 ft. However, excavations in 1913 yielded little evidence in support of this picture of the “Tower of Babel,” since the site had been robbed heavily in the preceding centuries by locals searching for building materials. The site is now a deep depression, hence its name (“Sahn”).

The tower also overshadowed the adjacent temple of Marduk, the city’s prime deity, called Esagila (“the house of the uplifted head”). Since Shulgi of Ur restored the shrine in 2100 B.C., most kings who revered Babylon had maintained it in repair. It thus remained in use until about the 1st cent. A.D. despite the successive sackings of Babylon. Within the sanctuary, with its walls of gold and alabaster pillars supporting the cedar roof beams, Marduk was shown sitting on his throne with his sacred bed nearby. The temple area measured 470 x 270 yards and also housed chapels for Nabu and his wife Tashmetum in Ezida (“the house of knowledge”) and lesser divinities. The texts list more than fifty shrines within the city, fifteen of them built by Nebuchadnezzar. Babylon was certainly conspicuous for its many statues (Jer. 50:38), and one text alone tells of “180 open-air shrines for Ishtar” and more than 1,800 niches, pedestals, or sacred places for other deities.

E. Other areas. East of the temple area the mound of Merkes was found to contain private houses of all periods, from the First Dynasty to the Parthians. Here too was a temple to ISHTAR of Akkad (Emeshdari). To the NE at Homera was the debris as removed by ALEXANDER THE GREAT in clearing the city for his planned reconstruction and also a Greek theater.

V. History

A. Foundation. The book of Genesis ascribes the founding of Babylon to NIMROD (Gen. 10:10) and makes it contemporary with early ERECH (modern Warka) and AKKAD (Agade). Babylonian tradition commonly considers any religious site to have been created by the deity to whom it was dedicated, hence Marduk, but he did not come into prominence until about the 18th cent. B.C. The earliest literary reference is by Sharkalisharri c. 2250 B.C. when he removed earth from the city to found Agade nearby, which his father Sargon had begun, to preserve the sanctity and continuity of the site (cf. 2 Ki. 5:17).

B. Second millennium. The Ur III kings appointed governors over the city before the Amorite invasion led to the founding of the First (Semitic) Dynasty of Babylon under Sumu-Abum (1894 B.C.), who restored the walls. The sixth king of the line, HAMMURABI (1792 – 1750), enlarged the city and made it a prosperous capital and trading center. It was in Esagila that Hammurabi set up the copy of his laws as a report to Marduk of his stewardship as king. With the capture of the city by the Hittites c. 1595 and its subsequent occupation by Kassites, Babylon lost much of its power and splendor. Sometimes under governors ruling on behalf of Assyrian overlords, at other periods she

harbored a series of local dignitaries who sought to keep out the surrounding tribesmen.

C. First millennium. Assyria was drawn into the politics of Babylon when SHALMANESER III was called to intervene in a dispute for the throne among the sons of Nabu-apla-iddina. He settled the quarrel, offered sacrifices in Marduk's temple, and treated the inhabitants with respect. The mother of his son and successor, Adad-nirari III (870 – 783 B.C.), was Samuramat, possibly the classical Semiramis who, according to Herodotus, did much to embellish the city. TIGLATH-PILESER of Assyria left a native king Nabu-nasir on the throne until his death in 734. The southern tribes under Ukin-zēr of Amukkani thereupon seized Babylon, and to regain it Tiglath-Pileser first negotiated to win over his rival Marduk-apla-iddina (MERODACH-BALADAN) of Yakin and was successful until, on the death of SHALMANESER V in 722/1, Merodach-Baladan proclaimed Babylon's independence by taking "the hand of Bel" and the title "king of Babylon" (Isa. 39:1). With Elamite support he was able to repulse an Assyrian advance at Dēr and hold the city for ten years.

SARGON II led a successful Assyrian attack on the S in 710 B.C., being welcomed into Babylon, where he celebrated the New Year festival but only adopted the title of "viceroy of Marduk." Marduk-apla-iddina was allowed to remain as sheikh of his tribe. In 703 he made another bid for power, and it was probably at this time that he wrote to HEZEKIAH and sent an embassy to urge him to join the anti-Assyrian league (2 Ki. 20:12 – 17). Isaiah's opposition to such a pact was soon vindicated. Merodach-Baladan ousted the Assyrian puppet king and prepared to meet Sennacherib's counter attack. The men of Babylon, ill supported by the Elamites and the local tribesmen, were defeated near Kish. Babylon was plundered and given in charge of an Assyrian nominee.

Scarcely had the Assyrian army withdrawn than intrigues developed again. In 700 B.C. SENNACHERIB mounted a major offensive to remove Bēl-ibni and replace him by his own youngest son, Ashur-nadin-shuma. A further expedition in 695 caused the Elamites to react by capturing Ashurnadin-shuma and putting their own governor, Mushezib-Marduk, in his place. This led to prolonged hostilities that culminated in a bloody battle at Hallule on the Tigris. Sennacherib thereafter besieged Babylon for nine months and sacked the city. The statue of Marduk was removed with some of the sacred soil. Such drastic action established peace for the rest of Sennacherib's reign, but was never to be forgiven by the people of Babylon.

ESARHADDON, who followed his murdered father to the throne (681 – 669 B.C.), had firsthand experience of the city, where he had acted as governor for some years. His father's decree calling for "the devastation of the city for seventy years" was rescinded. He rebuilt the city, introduced an efficient administration, and returned many of the refugees. His son Shamash-shum-ukin was made "crown prince of Babylonia," while ASHURBANIPAL was chosen as "crown prince of Assyria." This arrangement worked well for twelve years after Esarhad-don's death. Dissension between the new ruler and his brother mounted with the growing restlessness of the southern tribes. Ashurbanipal advanced on Babylon in 651 and besieged the town for three years until, in despair, Shamash-shum-ukin set fire to his palace and perished in the flames. The Assyrians then installed Kandalanu as governor.

D. The Chaldeans. According to the contemporary Babylonian Chronicle, Babylon regained its independence during the last years of Ashurbanipal. Kandalanu died in 627 B.C., and a governor of the Sea lands, NABOPOLASSAR, rallied the tribes. He broke out from besieged Erech in 626 and cleared Babylon from the Assyrians for the last time. Six weeks later the people invited Nabopolassar to be their king. Defensive measures were taken, and the gods of outlying shrines were

brought in for safekeeping. However, the Assyrians were now themselves torn by internal strife and rebellion among their vassals, and were in no position to attack the city in force.

Nabopolassar's son NEBUCHADNEZZAR used the city as the base from which he marched on many campaigns to SYRIA and PALESTINE. The Babylonian Chronicle records his defeat of the Egyptians at CARCHEMISH in 605 B.C. and his hurried return to Babylon from RIBLAH on hearing of his father's death. On 6/7 September 605, Nebuchadnezzar claimed the throne but soon left for further operations. In 604 JEHOIAKIM of Judah became his vassal (2 Ki. 24:1), only to rebel three years later after the Egyptians had beaten the Babylonian army in open battle. In 598 Nebuchadnezzar "called up his army and in the month of Kislev of his seventh year marched to Palestine to besiege the city of Judah. On the second day of Addar he captured the city and seized its king. He then appointed a king of his own choice and, taking much tribute, went back to Babylon" (Babylonian Chronicle; cf. *ANET*, 564).

This precise date for the fall of Jerusalem on 15/16 March 597 B.C., the capture of JEHOIACHIN, and his substitution by a Babylonian nominee, Mattaniah (ZEDEKIAH), accords with the OT accounts of the same events (2 Ki. 24:10 – 17; 2 Chr. 36:5 – 10; Jer. 37:1). Skilled craftsmen from Judah were deported to assist in the immense building program then current at Babylon, where in Esagila and other temples the spoils of war were dedicated to be displayed on state occasions (cf. 2 Chr. 36:7; Dan. 5:3). Tablets from the vaulted rooms by the Ishtar Gate include four that list rations given to "Yau^hkin of Judah" (among other westerners from Ashkelon, Tyre, Sidon, and Egypt). Five sons of Jehoiachin also are mentioned, as well as five carpenters from Judah, presumably captives from the siege of Jerusalem. These texts are dated to various years between 595 and 569 B.C. (Cf. A. Parrot, *Babylon and the Old Testament* [1958].)

The Babylonian Chronicle notes an insurrection in Babylonia in Nebuchadnezzar's tenth year (595/4), and a legal document of the following year records a decision to appropriate the land of a man put to death in Babylon for high treason. These details have been compared with Hananiah's prophecy that in the same year the yoke of the king of Babylon would be broken (Jer. 28:2), perhaps indicating that the plot was widely known and approved.
